A CASE OF REFLECTED LIGHT

Goldberg and Another v. *Waite and Waite, architects.*
Chancery Division. Before Mr. Justice Bennett.

For the Plaintiffs — **For the Defendants**

Expert Witnesses

P. J. Waldram. — *J. Swarbrick.*

Counsel

Mr. Swords, K.C., and Mr. Belsher. — *Hon. Stafford Cripps, K.C., and Mr. H. C. Nesbitt.*

SO much litigation has already been occasioned by disputes concerning "ancient lights" that one shudders at the prospect of a new factor being introduced which would immensely increase the number of such cases brought before the courts. Learned counsel may argue for days concerning the incidence of *direct* light upon buildings, and yet fail to agree upon the correct interpretation of the facts brought to their notice, so what will be the confusion when they are called upon to discuss the still more difficult problem of *reflected* light?

It is a matter of interest both to architects and building owners that recently a dispute concerning reflected light has been brought into court and an important judgment pronounced.

In our issue for June 11 we published a summary of the evidence given in the case *Goldberg and Another* v. *Waite and Waite*. In view of the fact that this is the only case in which a definite judgment has been given regarding the interpretation of the "Prescription Act" in respect of reflected light, as opposed to light received directly from the sky, it is quite clear that it will be, at all events for some time, the leading case relating to this subject.

In this case the plaintiffs made their claim in respect of the obstruction of two windows at the back of a house in Great Russell Street. Until the month of May, 1927, light was admitted to these windows over an oldish building known as Bedford Court Mansions, which was distant from the face of the windows some 37 feet. The height of Bedford Court Mansions from the ground level to the roof is 87 feet. In May, 1927, the defendants began to build upon a site, including a garden, situated between the plaintiff's premises and the Mansions, and immediately questions arose between the parties with regard to the alleged obstruction of light.

It was not disputed that a considerable amount of light formerly coming through the windows of the two rooms particularly in question was reflected from the walls of Bedford Court Mansions, walls which were built of gault bricks, affording a very good reflecting surface.

In this particular case the plaintiffs were able to prove to the satisfaction of the judge that, owing to the obstruction of light, the rental value of their premises was diminished by £15 per annum. The question was whether defendants could be held answerable for commensurate damages.

Mr. Justice Bennett was, in fact, required to decide whether a right to reflected light can be acquired by prescription. He pronounced the opinion that "if such a right were granted, it would seem that the owner of the dominant tenement would be entitled to obtain an injunction against the owner of the wall, being the servient tenement, from growing creepers upon the wall which would diminish the reflective capacity of the wall, or from painting the wall with a colour which made it less valuable as a reflecting medium, or from pulling down a wall, supposing it to be made of gault bricks, which are a good reflecting material, and substituting for those bricks some bricks which were less valuable as a reflecting medium." In the absence of any authority, he declined to decide for the first time that an easement for light by reflection can be acquired under the Prescription Act, and he therefore dismissed the action with costs.

If the decision had been otherwise, it would have opened the door to endless litigation. Every time a stucco façade was replaced by one of brick, even if the latter were no taller than its predecessor, the occupants of the buildings at the other side of the street would have a right to object. While approving Mr. Justice Bennett's verdict, we may yet be grateful to the plaintiffs for having had the courage to put the issue to the test.

INDIA'S NEW HOME IN LONDON

On Tuesday next, July 8, the King will formally open India House, Aldwych, W.C., the new headquarters of the High Commissioner for India.

The main entrance has pillars on either side, supported and crowned, respectively, by carved elephants' heads and tigers. Above the doorway is a carved crown and star. On the façade also are a row of gilt and coloured plaques of carven stone bearing the crests of the twelve provinces of India, and a frieze inscribed with Hindu and English characters indicating the purpose of the building.

As much as practicable of the material used in the ornamentation and construction of the building has been brought over from India. Sir Herbert Baker and A. T. Scott were the architects.

NEWS & TOPICS

Sir Mervyn Edmund Macartney, F.S.A., F.R.I.B.A., architect to the Dean and Chapter of St. Paul's Cathedral since 1906, knighted upon the occasion of the reopening of the Cathedral, last week.

ARCHITECTURE IN THE PUBLIC SCHOOLS

THE teaching of architecture in the schools is one of the most important objects to which educationists can address themselves, and it was with particular interest that I read the report of the joint conference between the Association of Headmasters of Secondary Schools in Essex and the West Essex Chapter of the Essex, Cambridge and Herts. Society of Architects, which was held recently in order to discuss this burning question. Sir Charles Nicholson, in opening the discussion, remarked that the idea of treating architecture as a school subject is comparatively new. So it is. I find that on the occasions when I am privileged to meet representatives of the rising generation of boys being educated at the Public Schools, they show an interest in architecture such as was by no means common among us in my own schooldays. The desire to learn about buildings is certainly present, and our schoolmasters would be losing a great opportunity if they failed to take advantage of this healthy curiosity concerning an art possessing such a great intellectual range and content as does that of architecture.

*

Unfortunately the boys are often given much too restricted a notion concerning the nature of style in architecture. It is largely due to Ruskin's influence that for very many schoolmasters "architecture" is almost synonymous with "mediæval church architecture." With a high sense of enthusiasm the conscientious usher will take the boys on a pilgrimage to the parish church. The dates and styles are all noted: how the nave was "Early English," the aisles were "Decorated," and how the chancel had incontinently blossomed into the "Perpendicular." This is well and good. But it would show an even greater appreciation of architecture if the students were invited to examine the streets of the nearest town, to exercise their critical intelligence not upon the archæological aspects of one particular type of building, but upon the designs of all buildings, including the most modern ones. The choice of architectural books, too, is very important; but in this respect excellent advice is available. It would be difficult to decide what place, if any, architecture should have in the curriculum of the schools. Is it too much to suggest that an hour a week in the higher forms should be devoted to this subject?

CREAMING THE VICTORIANS

Although we may not all be aware of it, it is certain that just now we are creaming the Victorians. I did not see the Ascot frocks except in the pictures of that sartorial "come back." I went West instead and studied the gardens of Madresfield Court, which were opened to the public for a charity's sake. The Beauchamp mansion has a narrow moat, out of which the mediæval buttressed walls rise for a few feet; most of the building is Gothic Revival, in the hard brick and stone manner of 1860. The gardens appear to have been remodelled about the same time, and they are a delightful medley of formalism and frolic.

*

I looked over step and terrace between classic vases direct to a hayfield and thence to Bredon Hill, and slipt through a yew hedge, punctuated with Roman Emperors, immediately into a vagrant path ragged with weeds; then crossed an avenue like a Tee-square edge, passed through a piece of orchard drifted high with moon daisies, and found myself in the Clipt Close of the Garden of the Peacocks, whence it was but a step to the strict order of the cabbage and the bean. At one point I felt it was all a design, like strawberries and cream; at another, that it was a delightful accretion, like boiled eggs, watercress, jam and shrimps. But the character of the whole was undeniably Victorian.

WATER-ROADS

Mr. A. P. Herbert's novel of canal life is a reminder of this neglected form of transport. It seems a peculiar thing to have to suggest that we should attempt to remove the congestion on a vast network of roads upon which we are spending millions of money, by making use of another network of waterways which cost us very little, yet I have heard this suggestion of Sir Frank Baines described as ingenious, as though the idea of canals carrying goods from place to place were novel and strange. Actually, these waterways are capable of taking a continuous stream of traffic night and day. They are roads—vibrationless and inexpensively maintained roads—not one jot less efficient for being comparatively slow and exceedingly beautiful.

MALVERN HILLS STILL IN DANGER

Not only are the sides of this noble range being carried away to form aggregate and road metal, but the shape of the hills is being altered by the quarrying. Wherever the skyline has been jagged, the grandeur of the range falls away, as any person of culture can see. I think, however, it takes an architect to analyse the disturbing effect of those quarries which come close to the skyline without actually "breaking" it—just as skylights or dormer windows too near a roof ridge destroy the sense of security, so where the verdure is narrowed to a thin strip round the uncovered stone, the serenity and feeling of rest depart from the hills.

THE TRANSLATION OF FOREIGN ARCHITECTURAL BOOKS

The translation of architectural books is a fairly difficult matter, owing not only to the limited public but to the technical nature of these works, for which there is a natural dearth of expert translators. It is lucky for us that the photograph serves us nearly as well as words, and in this we are in a happier position than the doctors or the engineers. The formation, by the Association of Special Libraries and Information Bureaux, of a Panel of expert translators should have its uses for us in a small way, for there must be a mass of contemporaneous and past literature published abroad that would do us a deal of good could we but read it. We do not, for instance, read much of German contemporary architectural literature, and still less of Scandinavian, and our photographs are only two-thirds of the story, I feel sure.

WELWYN'S TENTH BIRTHDAY

The last child of his ideals that Ebenezer Howard lived to see born has just celebrated its tenth birthday, by the unveiling, on a central site at Welwyn, of a memorial to its founder. Welwyn, although its inhabitants already number nine thousand, belongs to the future; but the future also belongs to Welwyn, for to the limits of its confines in space represented by many acres, and in time by nine hundred and ninety-nine years, its destiny has been

In Provence : Drawn in pen-and-ink by Leonard Squirrell, R.E.

decided by its architects and its lawyers. Its architects have decreed that here only, on the east side of the railway, shall Welwyn's industrial activities have being; here and here the homes of its artisans; here and here its residential quarters, recreation grounds, shops and public gardens; and here, surrounding its central *place*, its banks, hotels, and important public buildings. There are to be no afterthoughts and makeshift expedients at Welwyn such as mar towns that grow by force of circumstances. By the devices of lawyers all tenures are leasehold, and for nine hundred and ninety-nine years Welwyn, in fact as well as in spirit, will belong to its City Fathers—now represented by the Directors of the Company. Private enterprise, which may at any time within the next thousand years seek to trespass upon common enjoyment of life—if only with an unruly chicken-house or an advertisement hoarding—will be discouraged with the gracious words—" Oh no, you don't."

THE PICTORIAL ART OF LEONARD SQUIRRELL

The exhibition of drawings and paintings is, in these days of enterprise and activity in all forms of creative work, an increasingly frequent event. The media and technique now in employment are almost as varied as the subjects chosen. Presented with such a bewildering pageant of pictorial art, even the picture-loving public is doubtless finding it difficult to differentiate between what is great art, what is only moderately good, and what is at present merely experimental. Among the many artists of the day there are some who have not yet received the appreciation they deserve, but who will, without doubt, be recorded in the future as being among the great painters of this day. Leonard Squirrell, R.E., is certainly one.

★

A quiet, retiring, but persevering worker, he is steadily pursuing his way towards some work of tremendous importance. In even his smallest production the distinguishing qualities of power, as well as facility, are obvious. In his monochrome work especially, viz., his line and wash drawings, his etchings and aquatints, may be noted those particular characteristics of tonal depth and breadth of treatment—the latter very difficult of attainment in etching—which mark the work of the great English aquarellists and Dutch etchers of the past. As may be seen at the present exhibition of his work at Ipswich, Mr. Squirrell has not only admittedly derived inspiration from Cotman, Muller, Rembrandt, Shotter Boys and others, he possesses innately much of the bigness of outlook which has left them as landmarks along the great road of pictorial art. It seems also that the power which they possessed to make use of various media with equal facility has descended upon him.

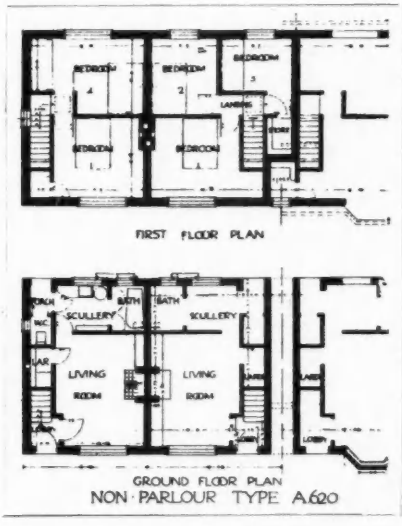
★

As a worker in pastel—a medium that has lately come into prominence again—his productions are perhaps more remarkable than any which have been exhibited since the revival of its popularity. Among his aquatints, his recent work, " Fletcher's Mill, Wrentham "—on view at the exhibition at the Royal Institute Galleries, now being held by the Society of Graphic Arts—is wonderfully fine, both in design and execution. Of his lately developed line and wash drawings, two splendid examples are to be seen in the Black-and-White Room at this year's R.A. Exhibition. His pen-and-ink illustrations, of which one of a little set of Provence is here reproduced, are really a most illuminating lesson upon how this medium may be used to illustrate, in a simple way, devoid of mannerisms, subjects of architectural interest.

ODD AND EVEN DATES

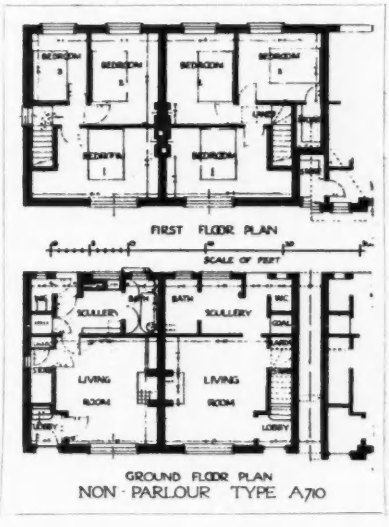
The A.A. are erecting a new type of road sign which bids fair to drive any type of motorist off the roads entirely. On the top section of the sign appears the word " Unilateral." Not content with this, there follows below the motto, " When the dates are even, please pull up this side." On the other side of the road is the same thing, only " — odd — ". The idea is that cars stopping by the pavement shall be concentrated on one side of the road, so that there will be greater freedom for traffic on the remaining width, and I have no doubt that it is a very good idea, and a successful one. But the complication it adds to the already highly specialized science of driving a car within the law of signs and lines and knobs and traps is more than my poor brain can cope with. Time was when any care-free man could drive a car, looking at the pleasant things he passed by. That time is past. Not only have you to know a hundred regulations, but of all things forgettable—the date.

ASTRAGAL



A block of six houses on Queen's Drive, near Mill Bank, Larkhill estate.

The walls are of local rustic bricks, and the roofs are covered with tiles.



CITY OF LIVERPOOL HOUSING SCHEMES

DESIGNED BY L. H. KEAY
(Director of Housing)

OUTSIDE the activities of the London County Council, the City of Liverpool claims to have accomplished greater work in connection with housing than any other English local authority. Whilst the number of houses erected since the war is less than that erected in the City of Birmingham, Liverpool

Ground- and first-floor plans of two of the most recent types of non-parlour house. These houses are among the smallest types built by the Corporation, but are complete with the usual equipment provided in the larger houses. Electric light and a domestic hot-water supply are installed in each house.

A block of three houses at the junction of Queen's Drive and Mill Bank, Larkhill estate. All houses on important thoroughfares are connected by wing walls, as shown on the left of the illustration. This ensures privacy for the gardens and screens the clothes when exposed for drying. These wing walls take the place of wooden fences. Privet will be planted to form the front hedge.

has for many years been the pioneer city, particularly in respect of the clearance of unhealthy areas. Prior to 1919, no less than 2,895 dwellings in the central areas of the city had been provided.

In the more recent work on the various estates, particular care has been bestowed on the preparation of the layouts, and in designing the houses the best local traditions have been followed. Since 1919, 19,300 houses have been erected, and during the period October 1, 1926, to September 30, 1929, 6,029 houses were actually completed.

In addition to the erection of self-contained cottages, considerable progress is being made with the erection of tenements in connection with slum-clearance schemes. Two typical schemes are Holly St. and Burlington St.

Two unhealthy areas of approximately 8 and 7½ acres of land are now being replanned, and it is hoped to commence work at an early date.

Shops at Broadway, Norris Green estate. The projecting bay was provided to mask the difference in the first-floor levels of the shops.

A particularly interesting feature of the scheme is the shopping centre on the Norris Green estate (see illustration below). The Corporation did not restrict the design of the shop fronts, but insisted on a uniformity of lettering on the fascia of the verandah and of the colour and material of the sun blinds.

The housing department is in charge of the director of housing, Mr. L. H. Keay, F.R.I.B.A., who has had previous municipal experience at Birmingham and Norwich. The department is entirely self-contained, and as such is the largest in the country, the whole of the layouts of estates, including road works, sewerage, erection of houses, shops, etc., management, lettings and maintenance being under the supervision of the director.

City of Liverpool Housing Schemes.] [*By L. H. Keay.*

The Shopping Centre, on the Norris Green estate. The verandah runs completely round the arcade, and enables customers to walk under cover to any of the twenty-five shops in the crescent. It does not, however, affect the natural lighting of the shops.

A view of Mather Avenue, Springwood estate, looking across the square. Every effort has been made to preserve the fine trees growing on many portions of this estate, and a large area of land has been set apart as a public open space and recreation ground.

Queen's Drive, opposite Derby Lane, on the Knotty Ash estate. A view looking into the square. For typical plans, see page 7.

A group of houses, Norris Green estate. In preparing the layout special care was again taken to retain the groups of trees, of which there are but few on this estate, which is the largest to be developed by the Corporation.

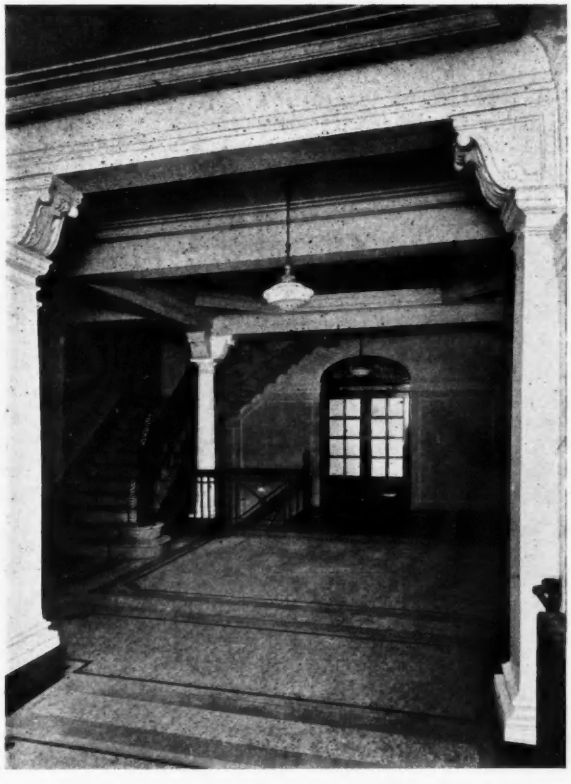
A view of the Melrose Road tenements at the corner of Owen and Melrose Roads. Accommodation is provided for 260 families. The walls are of common bricks, with a cream cement frieze. The roof is of tiles.

City of Liverpool Housing Schemes.] [*By L. H. Keay.*

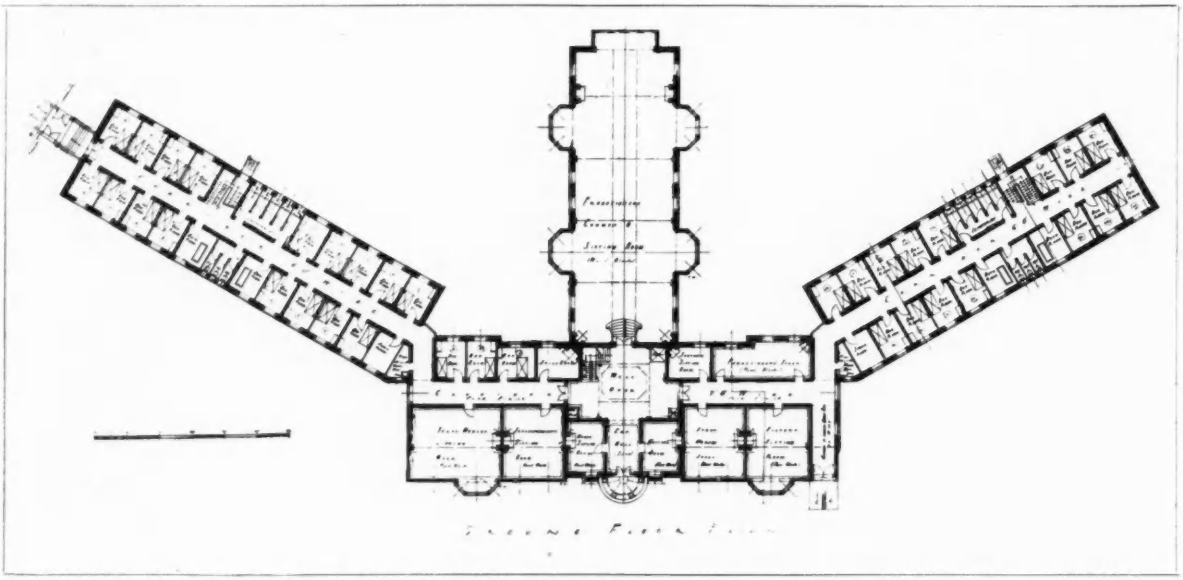
Another view of the Melrose Road tenements, showing screen walls and self-contained cottages that have, in many instances, been built between the blocks to hide the backs of the tenements from the public thoroughfares.

THE LIMBERT NURSES' HOME, NEAR MANCHESTER

DESIGNED BY A. J. MURGATROYD



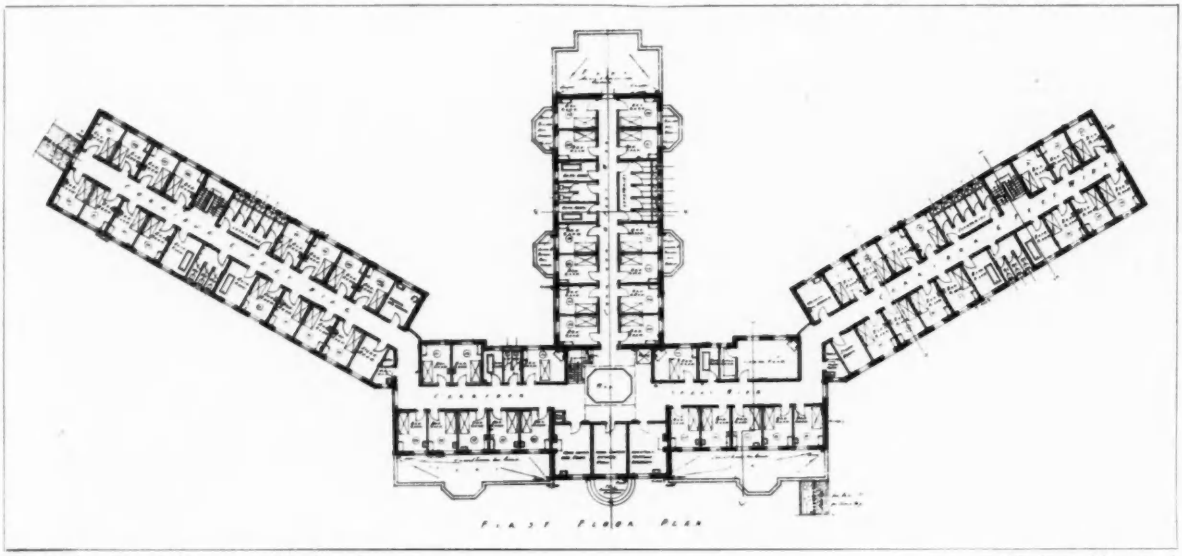
The new nurses' home at Crumpsall Institution, erected for the Guardians of the Manchester Union. Accommodation is provided for about 220 nurses. Features of the building are the probationers' recreation hall, and sitting-rooms for the matron, etc.



ONE of the latest important events concerning the Guardians of the Manchester Union was the opening of the Limbert Home at the Crumpsall Institution. This new building will accommodate some two hundred and twenty nurses, and provides a few extra rooms for sick cases. The cost, including furnishing, was about £80,000.

Among the chief points the architect had in mind when designing the home was to secure perfect lighting in all the corridors, staircases, etc., and ample ventilation throughout the building. Each nurse has the control of the ventilation to her own bedroom, and each extract shaft is independent of

The main entrance; and the entrance hall. The building is faced with red stock bricks with artificial stone dressings; the roof is covered with tiles. The architect's working drawing of the entrance and part of the main front is reproduced on page 14.



Ground-floor plan. Every care has been taken to secure the safety as well as the comfort of the nurses. The building is of fireproof construction and, in addition to the central staircase, there are staircases in both wings, and an escape staircase in the central block.

any other, all the flues terminating at the ventilators in the roof, in which electric fans work throughout the day and night.

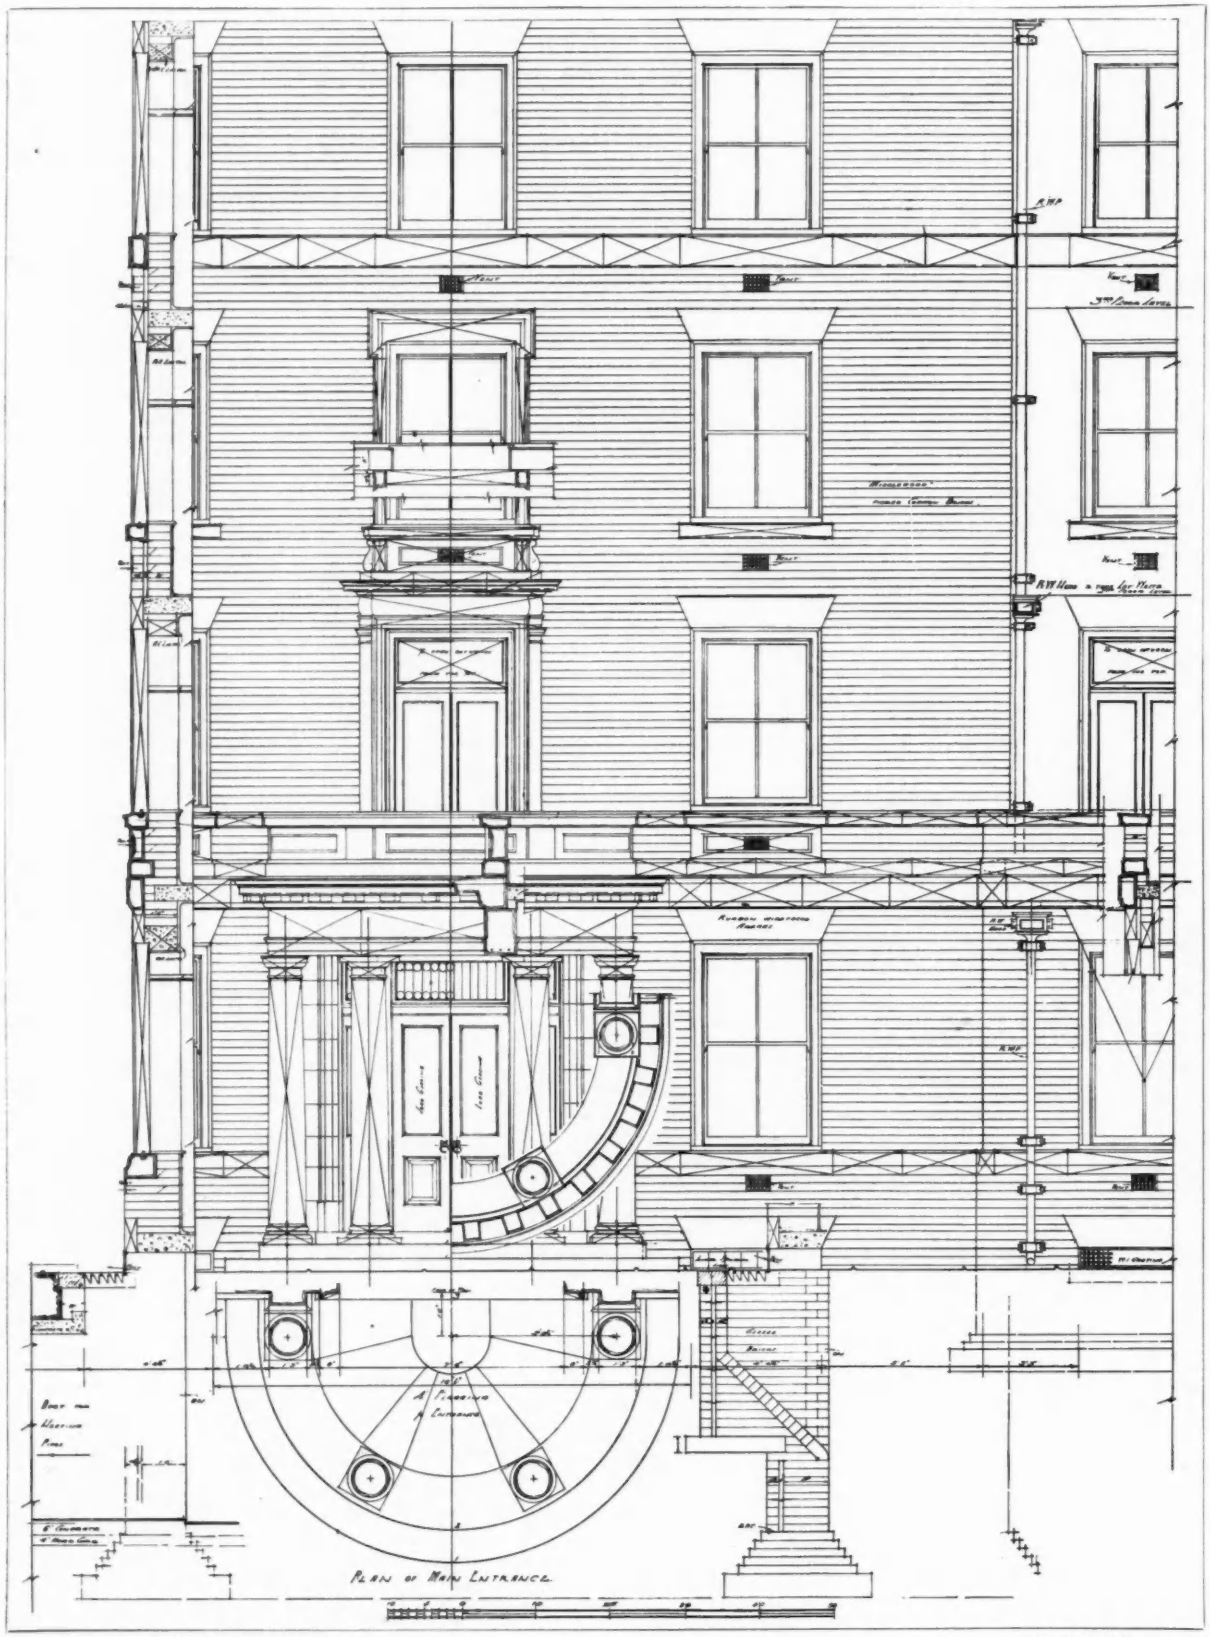
On the ground floor is a large recreation and dance room for the probationers. It is some 100 ft. long by 35 ft. wide. There are also rooms for the matron in charge, superintendents, staff nurses and sisters, and silent and study rooms. On the upper floors are separate wardrobes for each nurse, shampooing rooms, and rooms where the nurses can wash small articles of clothing, such as stockings, handkerchiefs, etc. In the central hall are an electric passenger lift and a food and coal lift communicating with all the upper floors. On the top floor are sick rooms, bathroom, kitchenette, separate linen stores, housemaid's cupboard, and accommodation for five inmates and a nurse in charge. In addition to the fireplaces in the general rooms, the building is warmed by a central heating system. The home is connected by a covered way with the old nurses' home and general staff dining-room and cook house.

The building is named the Limbert Home as a compliment to the present Clerk to the Infirmary Committee, Mr. G. S. Limbert, and as a mark of the Guardians' respect for his long services.

The building was opened by Mr. Hugh Fay, J.P., the Chairman of the Board, who was presented with a gold key by Mr. Murgatroyd, the architect. Mrs. J. Murphy, J.P., unveiled in the main entrance hall the bronze tablet bearing the names of those of the committee of the Guardians who had chiefly been interested in the Limbert Home.

The Limbert Nurses' Home, near Manchester.] *[By A. J. Murgatroyd.*

First-floor plan. The accommodation shown is typical of that provided on all the main upper floors. In addition to the bedrooms there are shampooing rooms. Special facilities are included for washing small articles of clothing, such as handkerchiefs, stockings, etc.



The probationers' recreation room on the ground floor is about 100 ft. long by 35 ft. wide. The floor has been specially designed for dancing, while four large bays, two on either side, enhance the hall's amenities, when in use as a sitting-room.

The Limbert Nurses' Home, near Manchester.] [*By A. J. Murgatroyd.*

On the ground floor also is the sitting-room of the superintendent. Adjacent, similar rooms are provided for the matron in charge, staff nurses and sisters. All these apartments are planned in the central portion of the home and around the main entrance hall.

C

The Limbert Nurses' Home, near Manchester.] [*By A. J. Murgatroyd.*

A portion of the architect's working drawing of the principal elevation, showing the main entrance. The words "The Limbert Home" are cut in the cornice over the semicircular porch, as shown in the photograph reproduced on page 11.

ENGLISH PRECEDENT No. 122

DOORWAY, No. 32 HIGH STREET, WARWICK

This stone doorway dates from the third quarter of the eighteenth century and is typical of several doorways in the town.

The detail of the Roman Doric order is good, except for the attenuated pilasters. The floral rosettes in the metopes are delightfully varied. The curled scrapers are probably contemporary.

—[C. M. C. ARMSTRONG]

LETTERS FROM READERS

Art and Technology

SIR,—The leading article in last week's issue of the JOURNAL on "Art and Technology" touches upon a vital issue. There is no doubt that the teaching of art and technical science must be much more intimately associated if a modern version of the "Arts and Crafts" spirit is to be revived.

But I fancy that the weakness which Lord Eustace Percy indicates as existing is not being overlooked, and that certain officers of the Board of Education are doing their utmost to study this question, and find a solution. I feel that the "philosophy of art" will emerge of its own accord when men skilled in art and technology will be able to co-operate under any administrative scheme which overcomes the difficulties—very real—of what must, in effect, be a sort of dual headship of the combined school; for, in practice, men skilled in both departments are extremely rare.

Personally, I believe, therefore, that changes in organization and curriculum are a first and necessary step.

HOWARD ROBERTSON

Building Density Bylaws

SIR,—This part of Slough, as you are aware, is a rapidly-growing manufacturing district, and until April 1 this year was under a Rural District Authority. Building has been rapid—mostly of the £550 parlour-type, semi-detached house at twelve to the acre—and most of the land (which is very costly) has been taken up. These houses are sold in co-operation with building societies, either to occupiers or to speculators, and the capital repayments and interest, together with rates, amount to about 25s. per week. In either case this can be regarded as rental, because, even where the occupier is the purchaser, a large number will not complete the purchase, owing to the fluctuating character of the employment available. The average wage of a factory worker is not more than 55s. per week. The result is that the houses are overcrowded, and the object of the Town Planning Regulations is defeated.

The following letter was addressed by this Association to the Ministry of Health on June 6 and their reply is awaited :

DEAR SIRS,

As a result of a decision at our annual general meeting (20th ult.), I am instructed to ask you to consider an increase in the density at present allowed in the Urban District of Slough, viz., twelve to the acre, to an amount of not less than twenty to the acre. This is in support of action contemplated, or already taken, by the Slough Urban District Council.

As you are well aware, this is now an industrial area, inhabited very largely by factory workers whose wages rates vary between forty-five and sixty-five shillings for a normal working week.

There are very few working-class houses built to rent in this district (representations were recently made to you by the N.U.R. on this subject), and workers are therefore compelled to purchase cottages by instalments, which, including rates, amount in most cases to 25s. per week.

The result is that the present *density bylaw has become a farce*, as workers are *compelled* to sub-let or take in boarders. There are probably 100 people to the acre at present in the populated parts.

Our members are of the opinion that the building of dwellings in continuous rows, or as masionettes or flats, would result in a much cheaper dwelling, and less people to the acre, under better conditions.

I am, therefore, instructed to ask for the relaxation of bylaws to that end.

Yours faithfully,

C. MAURICE WHITE,
Joint Hon. Secretary,
Farnham Ward Ratepayers' Association.

There has recently been some prospect of a scheme for concrete flats, built with 6-in. cavity walls, which would let at 9s. 6d. per week. The scheme was proposed by a building trust. We sought technical advice, and were warned of the risk of the concrete "sweating." There appears to be divergence of opinion on the point, and we would like to know what the collective verdict of the architectural profession is upon this method as applied to *small dwellings*. Are there many such concrete cottages in existence? And are they satisfactory?

Our own view (we are uninstructed laymen) is that we should prefer to see the local Council build dwellings of their own, without contribution from the Exchequer or the rates, to let at inclusive rentals, which, we feel, could not be lower than 10s. 6d. per week, and should not be higher than 15s. per week. We think that the lower figure could be reached by building rows of flats, having ground and first floors, four rooms on each floor, separate front and back entrances, and small separate back gardens, with separate entry from rear. The cost would have to be not higher than £650 per pair. Is this practical politics?

The question is important; its significance is national, not local. Briefly stated, it is this : Is it now possible to build a dwelling which can be let at an economic rental within the reach of the lower-paid workers without sub-letting?

Yours faithfully,

C. MAURICE WHITE,
Hon. Secretary.

Priced Bills of Quantities

SIR,—Regarding the question of access to the builder's priced estimate, the clause in the 1909 contract is a survival of old practice which today is more honoured in the breach than in the observance.

The chief reason for the change is the tendency for the architect and contractor to trust each other not to abuse the convenience which access to the bill always affords to both sides in considering alternatives, etc.

In actual practice, the bill is checked by the quantity surveyor before the contract is signed, and a copy of the prices lies in his office for use for certificate purposes throughout the course of the contract. The architect rarely sees it, and even if he did, his knowledge of prices is not usually sufficient to enable him to judge whether certain items are cheap or dear. In my experience our leading practitioners would not descend to change their specification to get bargains from the contractor for clients.

If pressed to reduce their estimates, they might very naturally select the most expensive items to substitute cheaper materials or construction, but they would do so quite regardless of the question as to which carried the greater profit. That is a risk the contractor has to run. Within reasonable limits the architect is within his right in doing this, and it is a conclusive argument in favour of the consistent pricing of the original estimate.

I have known cases in which the contractor has been badly hit by such changes, but not by intention, either of the architect or the surveyor.

The builder's best protection is to avoid contact with those who have abused the privileges allowed by him in allowing his priced bill to be used for reference.

HENRY J. LEANING

Conference Pleasure Trips

SIR,—In Astragal's notes on the R.I.B.A. Norwich Conference this year he remarks that he remembers no other Conference having arranged an excursion programme with an item bearing no relation to business but which was "pleasure pure and undiluted." He cannot, then, have been at the first Conference held after the war and arranged by the Liverpool Architectural Society. This programme included an excursion on the River Mersey at the invitation of the White Star Line in their tender "Magnetic." Many visitors to that Conference must still remember with pleasure that trip.

KENNETH CAMERON

Architects and New Materials

SIR,—The note in your issue of May 28, page 836, is in our opinion

very well put. It is true in every respect, and we hope it will receive the attention it deserves.

We fear that professional men appreciate even less than the general public the very great speculative risk both of capital and reputation involved in backing new inventions and processes from which, in the end, their clients derive benefits of economy, comfort, safety, convenience and pleasure. Engineers, and especially architects, do not, we repeat, sufficiently realise the obligation they owe to their profession and to their clients with regard to the improvements that may be realized in adopting new ideas as they become commercialized.

It is generally accepted that if a new idea or process has any merit it will win through in the end, and moreover, that the best of similar processes or articles will ultimately succeed against its competitors, but this is not necessarily so. Many valuable ideas have been lost owing to insufficient financial backing to see them through the difficult initial period.

If the architect would give the commercial exploiter the advantage of his technical advice, many initial errors and failures could be avoided. Moreover, in cases where initial failures do occur, an expert investigation might easily disclose both the reason and the remedy at once. The architect should, as you indicate in your note, realize that the commercial exploiter or manufacturer, even if not a technical man, may quite easily, nevertheless, have the fullest practical knowledge regarding his material; and he should be most careful not to depart from his advice or instructions without the most careful investigation.

But the greatest help of all which the architect can give is to be receptive of and sympathetic to new ideas, and to investigate these as soon as they are brought to his notice, to estimate their possibilities, study their applications, compare them with similar processes, and finally to pass a considered technical judgment upon their scope and upon their merits.

We quite realize that to expect architects individually to do this would be generally asking too much, but surely there is no reason why their associations, in combination perhaps with other learned associations, should not have an organization to work along these lines. We are not suggesting that the results of the investigations should be published, but only that they should be given to the manufacturers and exploiters of new ideas and materials and to members of the associations comprising the organizations, who would then use the advice for the benefit of their clients in the future.

MANUFACTURER

Settling-Up Honeywood : vi

RIDDOPPO COMES TO THE BOIL

BY KARSHISH

(H. B. CRESWELL)

Sir Leslie Brash, the owner, has complained that the electric bells, and the Riddoppo paint used inside the house, have gone wrong; an idea that the drains are defective is combated by both Spinlove, architect, and Grigblay, builder; a heavy bill of extras is in the offing, and the kitchen door jammed and spoilt a dinner-party. These, however, are the only uneasinesses that have, so far, marred the Brash's enjoyment of what is evidently a well-planned and soundly-built house.

BRASH TO SPINLOVE

Dear Mr. Spinlove, 30/4/26.

It was with considerable astonishment—will you permit me to say—that I read the copy of Mr. Grigblay's report on the sanitary abnormalities obtaining at Honeywood; as this, so far from elucidating the circumstances elaborated in your letter on the subject, intimates no reference whatever to many of them. This is a matter I will take an early convenient opportunity of investigating in oral conversation with you as, also, other important matters somewhat lightly—if you will pardon me—touched on by you.

Yours sincerely,

" *Oh, what a tangled skein we weave,*
When first we practise to deceive! "

SPINLOVE TO GRIGBLAY

Dear Sirs, 1/5/26.

Sir Leslie Brash rang up today and told me that the kitchen door in some way jams against the handle of the cupboard, and the servants were not able to get into the kitchen. Will you please send someone over to put things right. The cupboard door had better be hung the other way round and a spring catch fixed so that it remains fast when closed.

Sir Leslie Brash also spoke of the Riddoppo paint as developing serious defects. He had previously referred to this matter in a letter. I reminded him that it was used by his orders and against my wishes and your advice. Could Mr. Grigblay call or send over a painter to see what can be done?

Yours faithfully,

Spinlove seems to have suffered puncture! There is a note of moral deflation in this letter. Our young friend makes no attempt to put the blame on the builder, as he has taught us to expect, but actually accepts responsibility for the kitchen door fiasco. He seems also to have given ground deplorably in the matter of Riddoppo. Apparently Grigblay's urgent representations have made no impression on him. Is Mr. Spinlove losing heart? If so, he had better give up practice at once. The letter that follows offers some explanation.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 1/5/26.

I write to confirm telephone conversation this morning.

I still think that the stuffy smell complained of is that given in Mr. Grigblay's report. As I explained, my own report to you was partly based on private messages from Mr. Grigblay. In any case the condition is not, I am quite sure, due to faulty drains or to any defect in the building work.

I am unable to say to what the defects in the Riddoppo paint are due. You will remember that I never recommended it, and Mr. Grigblay also objected to using it. As arranged, I have asked Mr. Grigblay to see what can be done.

I am very sorry indeed for the accident of the kitchen door. I have today written to Grigblay with instructions for alterations that will prevent anything of the kind happening again.

I have this morning enquired by telephone, and find that the breakdown of the bells was caused by a large nail driven into the wall of the pantry by one of your servants.

Yours sincerely,

Brash, we may judge, has been truculent over the telephone. The bell-wiring does not seem to have been done as well as it should. Presumably, the electric light wiring was drawn in through tubes, and the bell wires ought to have been run in the same way.

GRIGBLAY TO SPINLOVE

Dear Sir, 3/5/26.

We shall be obliged if you will inform Sir Leslie Brash that we cannot advise him re Riddoppo, as the paint is composed of ingredients which are a trade secret, and we know nothing of it. He will remember that we refused to take responsibility for painting with same and only did so by his orders on the understanding that he took responsibility for the results.

Yours faithfully,

If, as Grigblay claims, he is not responsible for the defects in Riddoppo, it would be a grave error in judgment for him to offer any opinion on the nature or cause of them, and much more unwise for him to have anything to do with reparation.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 4/5/26.

I wrote to Mr. Grigblay asking him to see what could be done to make good defects in the paint, and I enclose copy of his letter in reply.

Yours sincerely,

Spinlove has no business to pass on Grigblay's disclaimer without comment or explanation. His duty, as architect and arbiter under the contract, is to master the facts, to hold the scales between owner and builder, and to maintain the rights of each.

BRASH TO SPINLOVE

Dear Mr. Spinlove, 7/5/26.

Although I have in the past had no occasion to form a particularly favourable opinion of Mr. Grigblay's good manners, I confess that I was completely taken aback with surprise at the high-handed style in which he has indited his communication to you intimating his refusal to make himself amenable to my desire that he should apply himself to the reparation of the failure of the paint; but you must permit me to say that I was even more astonished at the detached aloofness of your communication covering its transmission. What the man intends to signify by saying that I, *I* of all people, who have had nothing to do with it, am responsible for the disintegration of Riddoppo—unless he is going off his head, which is precisely what I should anticipate of the fellow—I entirely fail to comprehend. What have I to do with the "results" of his work? This, you must permit me to intimate, is a most preposterously impudent suggestion for a builder to propound, and I make strong objection to your affirmative acquiescence in such an extortionate proposition. I desire that you will at once require Mr. Grigblay to perform his duties, for I divine that the reserve held back by me as security for the reparation of defects is to reimburse me for losses due to unjustifiable refusals. I am not, I apprehend, to be at the mercy of the contractor!

Yours sincerely,

Brash is precipitating disaster, for he has evidently forgotten the circumstances in which he ordered Grigblay to paint with Riddoppo.

SPINLOVE TO GRIGBLAY

Dear Sirs, 8/5/26.

I sent Sir Leslie Brash a copy of your letter on the subject of Riddoppo, and I have received one from him in which he disclaims responsibility for the failure of the paint, as he has had nothing to do with it, and renews his request that you will give immediate attention to the matter.

Yours faithfully,

This letter strengthens the earlier impression that Spinlove is held by other activities and is fed up with Honeywood. He has, however, adopted an impossible position in standing aside while builder and owner fight the matter out for themselves.

GRIGBLAY TO SPINLOVE

Dear Sir, 10/5/26.

We will thank you to kindly note and to politely inform Sir Leslie Brash that Riddoppo paint is his own concern and no sort of business of ours, as he knows well enough without being told. We used the stuff by his orders on the undertaking he gave to accept full responsibility for failure of same, after we had objected and refused to take responsibility, which please note and see correspondence.

We also will thank you to respectfully point out to your client that we called attention to the defects he has just discovered for himself, nearly six months ago, and warned him before the painting was finished what would happen, and he ordered us to go on and finish in spite; and also politely inform him with our respectful compliments that it will save him a bit of unnecessary trouble if he gives up trying to put the blame for his own obstinacy on to us, and kindly notes that we politely refuse to have anything further to do with his mistakes, having completed our contract to instructions, and decline to pickle off, burn off, scrape off, hack off or touch up or have any further hand with new novelty super or other painting at Honeywood of any kind whatever or for any consideration whatever; and if Sir Leslie Brash wants our advice, the advice we respectfully send him is to leave off trying to put the blame where it does not belong, and ask those to set him right who set him wrong, and that is the people who manufactured and supplied the paint to us at his orders.

Yours faithfully,

Grigblay is warming up, and no wonder! This "respectful" and "polite" message is evidently dictated by him. The general run of letters from his firm is apparently the work of a secretary.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 11/5/26.

I sent Mr. Grigblay your message, and his reply is much what I expected. He disclaims all responsibility for Riddoppo on the ground that you accepted responsibility when you ordered him to use it. He recommends that you should apply to the manufacturers, or to the suppliers, for advice on the matter.

I do not know what more I can do, as I know nothing of the composition of the paint, which is a secret. As you will remember, I always advised against its use and disclaimed responsibility for the result.

Yours sincerely,

It is ridiculous for Spinlove to suppose that he can stand aside as though he were the disinterested spectator of a dog fight. At the same time, it must be admitted that the line he takes is strictly consistent with his disclaimer of responsibility, so that except that he is precipitating a break with his employer he has not, as we had good reason to fear he might, prejudiced his own nor Grigblay's position.

BRASH TO SPINLOVE

Dear Mr. Spinlove, 12/5/26.

I was astonished to peruse your communication transmitting Mr. Grigblay's impertinent asseverations of refusal and denial of responsibility. Am I to understand that you are desirous of taking sides with the preposterous claims of the builder against me? Have I to remind you that, as my accredited architect, it is encumbent upon you to protect my interests and enforce on the contractor the due observance of his obligatory duties? If so, I apprehend I have been seriously mistaken in the character of the gentleman to whom I have entrusted the management of my building operations. The paint in the house is displaying disastrous signs of ocular disintegration which develop increasingly, and my architect refuses to stir a finger in the matter because he objected to the paint and is "not responsible" forsooth!

The whole matter is perfectly unendurable and beyond bearing, and I desire that you will intimate to Mr. Grigblay with necessary emphasis that, unless he forthwith immediately agrees to restore and renew the defective paint in a properly permanent and workmanlike manner, I shall engage the services of some other building contractor to do the work, and subtract the amount of the cost as a deduction from the next payment I am asked to make to him, for I divine that the purpose of the security retained by me is designed as applicable to this purpose.

Yours sincerely,

In the event of a builder refusing, or failing to satisfy his covenant, to make good defects, the retention money may be applied as Brash proposes; but it can only be so applied after formal warning and notification to the builder, and only if the defect in question is due to improper workmanship or materials for which the builder is responsible.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 14/5/26.

I think you must have forgotten what occurred at the time you directed me to order Grigblay to paint with Riddoppo, and I therefore enclose copies of various letters that passed, including—in case you may not have kept copies of them—your letters to me.

It seems clear that Grigblay cannot be held responsible for the failure of the paint. He also asks you to excuse him from expressing an opinion of the cause of the defects or from having anything to do with renovations, and for the reason I gave, namely, that he knows nothing of the paint the ingredients of which are a trade secret. When you read the letters you will see that Grigblay called attention to defects before the painting was finished, but that you ordered him to complete; and you will also see that I always strongly objected to the use of Riddoppo and disclaimed responsibility for the results of using it.

Yours sincerely,

Spinlove is certainly keeping on safe ground, but his detachment seems chiefly due to his being sick of Honeywood. The proper action for him to take would be to study the case exhaustively and give the best advice he can, and—instead of leaving his client to find his own way—guide him to the wisest course and, possibly, contrive a compromise. However, Grigblay is too wary ever to have anything more to do with Riddoppo either on the walls of Honeywood Grange or in the tin.

LADY BRASH TO SPINLOVE

Dear Mr. Spinlove,

We have a small party here on Friday and hope you will come to tennis in the afternoon and stay the night.

It is all getting into the carpets and I shall have to take them up if it goes on and they do not stop it and so *dreadfully* noisy to walk on ! ! I hope they will do it soon and have finished with once for ever. It is all so very trying isn't it and so stuffy, it seems as if we should never be able to settle down but Mr. Grigblay says wait for the summer so I suppose we must it will not be long now I am thankful to say.

How beautiful all the blossom has been lately.

Yours sincerely,

Monday.

BRASH TO SPINLOVE

Dear Mr. Spinlove, 17/5/26.

I have re-perused your communication and the transmitted copies of enclosed correspondence a second time. My previous recollection of the matter had, as you correctly divine, escaped my memory, but Mr. Grigblay's proposition that by intimating willingness to take responsibility for ordering I made myself liable for eventual default of persons other than myself is—you must permit me to point out—most excessively preposterous, as I shall get an early opportunity of requesting my legal advisers to authoritatively confirm. If, as Mr. Grigblay impudently contends, the liability of defective blemishes is not his responsibility, then it is the responsibility of the manufacturers, and it is for them to decide the dispute between themselves; and my precise directions to yourself are that the progressive disintegration shall be immediately arrested and necessary reparations proceeded with without delay. The matter is now *imperatively urgent*, as the little flakes of paint cannot be removed by brushing the carpet, and have to be individually picked off with the thumb and finger, a duty so laboriously irksome to the domestic staff that it is performed in a perfunctorily imperfect manner, and particles of Riddoppo are, for this cause, on all sides being *trodden into the carpets* with resultant consequences you may conjecture.

As I do not apprehend that I have at any time intimated that I regard you as responsible for the disintegration, your disclaimer of responsibility appears to me—if you will permit me to be perfectly frank—somewhat unnecessarily premature; nor do I perceive, as you intimate, that you disclaimed liability for any prognosticated eventual results.

Yours faithfully,

Brash's gracious intimation of "his willingness to take responsibility for ordering" was in these words: "I do not know what the man [Grigblay] means by 'responsibility' and—if I may be permitted to be perfectly frank—I do not care. I give the order and the responsibility for giving the order is mine. Mr. Grigblay's responsibility is to do what he is told at once."

The history of the matter as recorded in "The Honeywood File" is briefly as follows:—

Brash writes to Spinlove giving glowing advertisement accounts of a wonderful New Novelty Super-Paint called Riddoppo, and directing Spinlove to use it. Spinlove objects that he knows nothing of Riddoppo and that the well-tried paint specified by him gives the best possible results. Brash grows peppery, and retorts that for Spinlove "to asseverate condemnation of a paint of which he admits he knows nothing, is a little wanting in logical reasoning," and insists on Riddoppo being used. Spinlove gives the order to Grigblay, who replies that he knows nothing of Riddoppo and has failed to obtain any satisfactory accounts of it, and that he "cannot accept responsibility for same." Brash, on hearing this, objects, angrily, at being "dictated to"; and delivers himself as first above quoted. Spinlove thereupon writes to Grigblay: "I am instructed by Sir Leslie Brash to order you to paint with Riddoppo. Sir Leslie Brash accepts all responsibility."

Those are the facts, and if, as they appear to show, Brash is responsible for the paint having been ordered, then, in that case, Grigblay is responsible to Brash for properly applying the paint; Brash is responsible to Grigblay for the integrity of the paint; the manufacturers are responsible to Brash, Brash is responsible to Spinlove, Spinlove to Brash, Spinlove to Grigblay and Grigblay to Spinlove—all in different degrees and on different issues—so that when Grigblay described the approaching disaster as a "mix up" his term was not inappropriate. If Brash had not interfered there is no doubt that Spinlove, with Grigblay's experience and integrity to back him, would have completed the house with sound paintwork; but had things by any chance gone wrong, Brash would have been secure under the contract and his remedy would have been the simple one of requiring Grigblay to repaint. He has brought all this trouble on his own head.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 18/5/26.

I have told Mr. Grigblay the position you are taking. I will not reply to your letter as we shall be able to talk matters over during the week-end.

With kind regards,

Yours sincerely,

SPINLOVE TO GRIGBLAY

Dear Sirs, 19/5/26.

I communicated the contents of your letter to Sir Leslie Brash and sent him copies of the earlier correspondence. He says that in ordering Riddoppo he did not make himself responsible for defects due to improper materials or workmanship. He calls on you to make good at once as the carpets are being spoilt; and holds that the matter is for you and the paint manufacturer to settle between you. He is consulting his solicitors to decide what action to take if you refuse.

Yours faithfully,

Spinlove is not content to stand aside and watch the dog fight: he must, it seems, urge them on by throwing the animals one at the other.

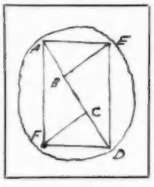
GRIGBLAY TO SPINLOVE

Dear Sir, 20/5/26.

We note Sir Leslie Brash's views on responsibility for the failure of the paint, and have nothing to add to our last *re* same.

Yours faithfully,

[NEXT WEEK: VII—THE LITTLE BILL OF EXTRAS.]



QUESTIONS THAT ARISE

Cutting from Logs

A. E. writes: "*Every student knows that the strength of a wooden beam varies inversely with the depth, but I have a practical problem in sawing up the timber on this estate, and that is how to decide on the strongest beam that I can cut from a sound log. We do all our own building and repairs and fell and season a fair quantity of timber annually. My woodman usually works by rule of thumb, but I should like to be sure I am at times not cutting to waste.*"

The strongest beam is one whose breadth is to depth as 5 to 7, and the log should be cut as follows:

Draw a diameter of the log AD and divide into three equal parts, AB, BC, CD. Erect perpendiculars at B and C on opposite sides of AD, intersecting the circumference of the log at E and F. Join AE-ED and AF-FD, and the rectangle so formed will be the strongest beam obtainable from the log. For rough construction the wavy edges at A, E, D and F do not matter.

P. T.

Tube Wells

H. A. W. writes: "*I propose to build for a client a small house in Devon, on a hill where water service is not available. I understand that the most effective and at the same time cheapest well is that known as a 'tube' well. Would you give me full particulars as to the nature of this type of well, and how it is formed?*"

Driven tube wells are applicable for many conditions of strata which, though hard and compact, are not composed of actual rock. This type of well is simply and quickly sunk, but before determining whether it is suitable for the particular case, it is desirable, if possible, to ascertain the depth at which water is found in the district, and also to inquire into the geological strata likely to be encountered, since this type of well is not suitable for beds of stiff clay or true rock.

Briefly, the well consists of a hollow tube, which may be from $1\frac{1}{4}$ in. to 6 in. in diameter, composed of any number of lengths, according to the depth required. The first tube driven, i.e. the lower end of the well, is equipped with a series of holes in the first 2 or 3 ft., and the point is prepared as a driving or piercing tip. In sinking the tube a vertical hole is first made in the ground with a crowbar, and in this hole the first length of tube is inserted. The top of the tube is furnished with a socket and driving cap, and rigidly attached to this cap is a spindle or guide, over which the driver or monkey slides, being hauled up and dropped by means of ropes and pulleys. When the first tube has been driven to within a few inches from the ground, the driving cap is removed and a further length of pipe added to the original one. The driving cap is screwed to the new length of pipe and the driving procedure continued.

Periodically the tube is sounded by means of a plumb bob in order to detect the presence either of water or of soil which has entered the tube through the perforations in the lower end. The soil is cleared at intervals, by means of clearing-out tubes and flushing with water, a pump being attached to the clearing-out tubes and gradually lowered until the whole of the debris has been removed from the pipe, when the clearing-out tubes are withdrawn. In some cases recourse is had to a "sand tube," similar to the ordinary well point, but protected by a perforated brass sheet fixed over the drilled part of the tube, the holes in the pointed pipe being then drilled very much larger than in the ordinary well tube. The tube is driven and cleared in the usual manner.

When water has been reached, the pump is attached to the well tube and started by pouring water into the top to force the air from the pipe. The first delivery is always more or less muddy; but by manipulation of the pump, so that the column of water held in the well tube is released suddenly, the water is forced through the perforations in the bottom length, and the surroundings of the bottom well tube disturbed. Repetition of this action forces the water in and out of the perforations, and thus allows the finer particles to be pumped out, while the larger are drawn round the well tube to form a natural filter.

The depth to which tube wells may be driven is entirely governed by the nature of the soil. They commonly are sunk to 60 or 70 ft. and even more, and under some conditions, due to underground pressure, the water may rise to within the 28 ft. of the surface which represents the limit of capacity of an ordinary lift pump. When the water has to be lifted from a greater depth it is advisable to drive a larger tube well, so that the working barrel of the pump may be placed within lifting reach of the water.

The conditions indicated by H. A. W. suggest serious doubt as to the applicability of the driven tube well, particularly on a hill in Devon where the strata are largely Devonian sandstone. It is probable that a very considerable depth in any case would be required to strike water, unless a casual spring were encountered. In the event of the strata being hard, a bored tube well would be necessary, and the cost be proportionately greater, possibly up to £2 a foot, apart from the deep well pump and engine.

A better indication could be given if your correspondent would state the exact location, so that reference could be made to the geological maps of the area.

As an alternative, a better proposition might be to construct underground storage of, say, 20,000 to 50,000 gallons and collect surface water, since the rainfall provides a reasonable supply throughout the year. Without fuller particulars of the requirements, however, it is difficult to give more definite advice.

A. H. H.

Colouring Granolithic

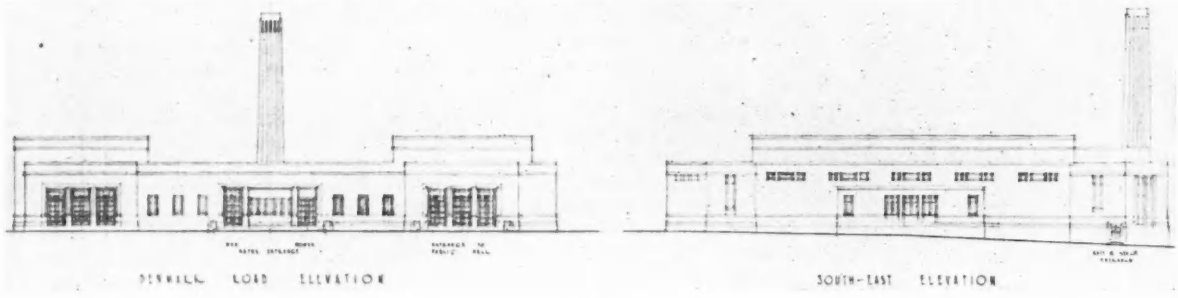
T. R. writes: "*I am laying a granolithic floor, and it has been suggested that this might be permanently coloured, instead of finishing with the usual effect obtained by plain granolithic. Is it possible to get a good uniform colour, or is the colouring likely to be patchy? I have heard of this work being done, but have never attempted it myself. I should be glad to have any hints towards making a satisfactory job.*"

Coloured granolithic is quite effective if the builder carries out the work carefully to instructions.

The bed should be laid with Portland cement concrete, well wetted, to receive 1-in. granolithic finish. The granolithic should be laid in, say, 10-ft. bays, and the wooden screeds struck as soon as possible, so that the making good will give an evenness of colour.

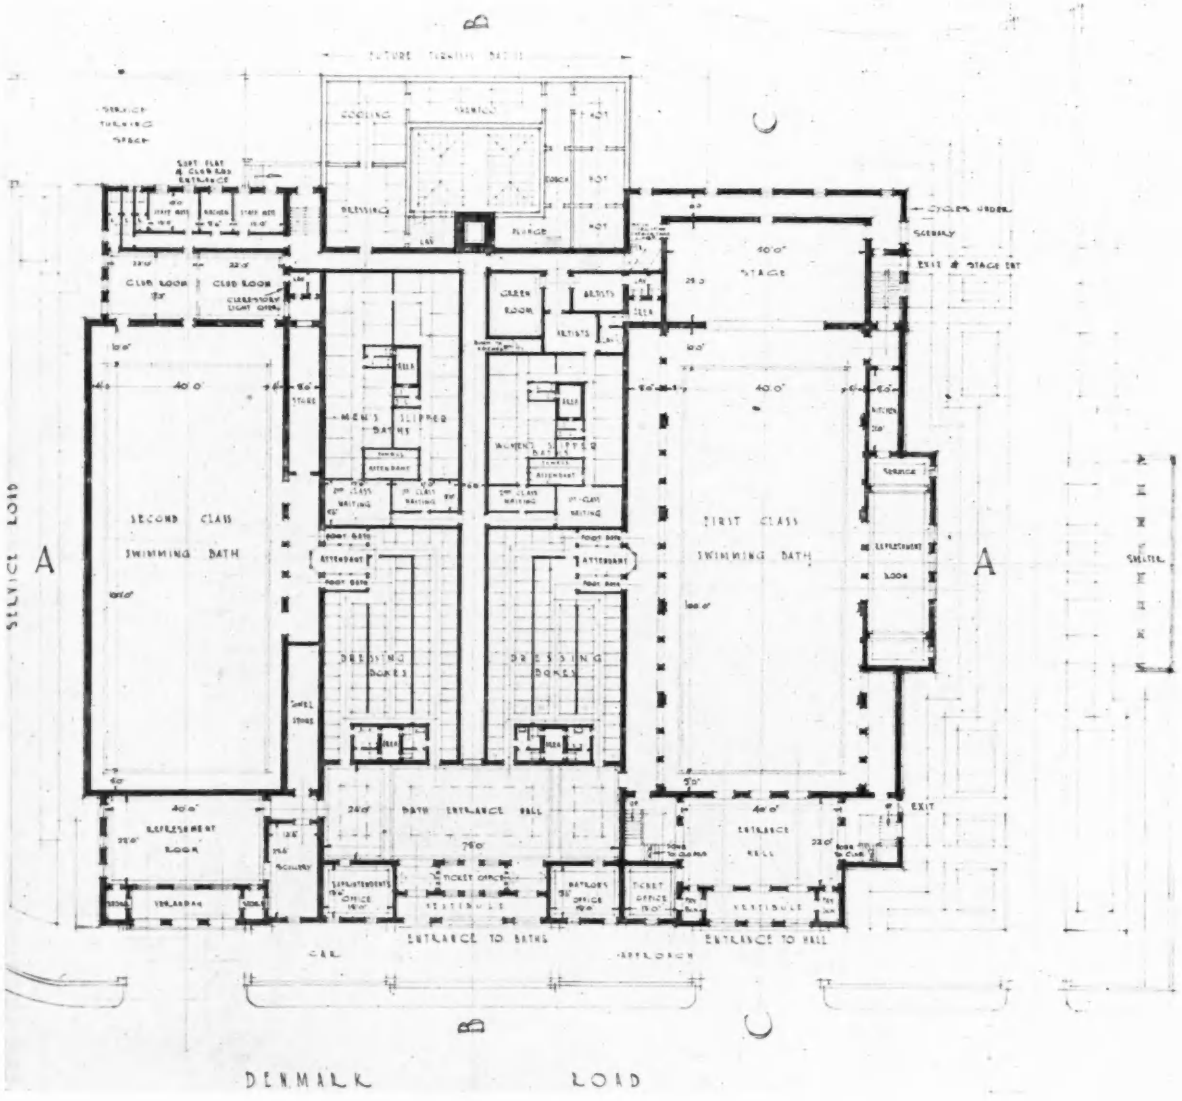
The work should be trowelled off smooth within an hour of laying, and the granolithic should be mixed to the following proportions:

Three parts of granite chippings to pass a $\frac{1}{4}$-in. ring and one part of coloured Portland cement. The whole to be turned over twice when dry and well entered. To every bushel of Portland cement add three quarts of red oxide, vegetable black, or other coloured powders required. To be mixed dry with the cement and passed through a fine wire mesh to dispose of any lumps.



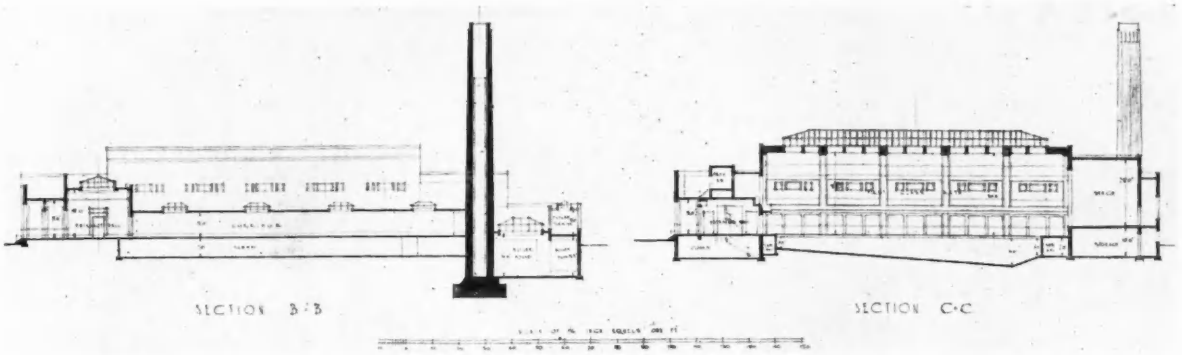
The whole of the work must be kept free from lime, and no dry cement must be added when trowelling. Otherwise the chief factors towards success lie in careful gauging and trowelling off.

G. O. W.



Mr. William John Locke, the well-known novelist, left £24,505 (net personalty, £24,484).

KINGSTON PUBLIC BATHS COMPETITION: WINNING DESIGN



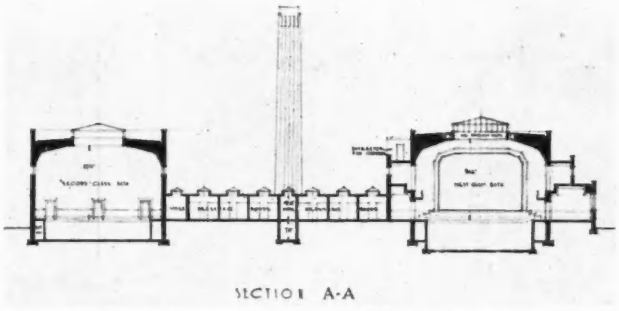
BY VICTOR BAIN AND ALLAN JOHNSON

The south-west and south-east elevations. *The main entrance is in the centre of the Denmark Road front; to the right is the entrance to the first-class bath when it is used as a public hall.*

Ground-floor plan. The first-class swimming bath has a pond 100 ft. long by 40 ft. wide, and is entered from the dressing-boxes under the direct supervision of the attendant. The building has been specially planned for mixed bathing.

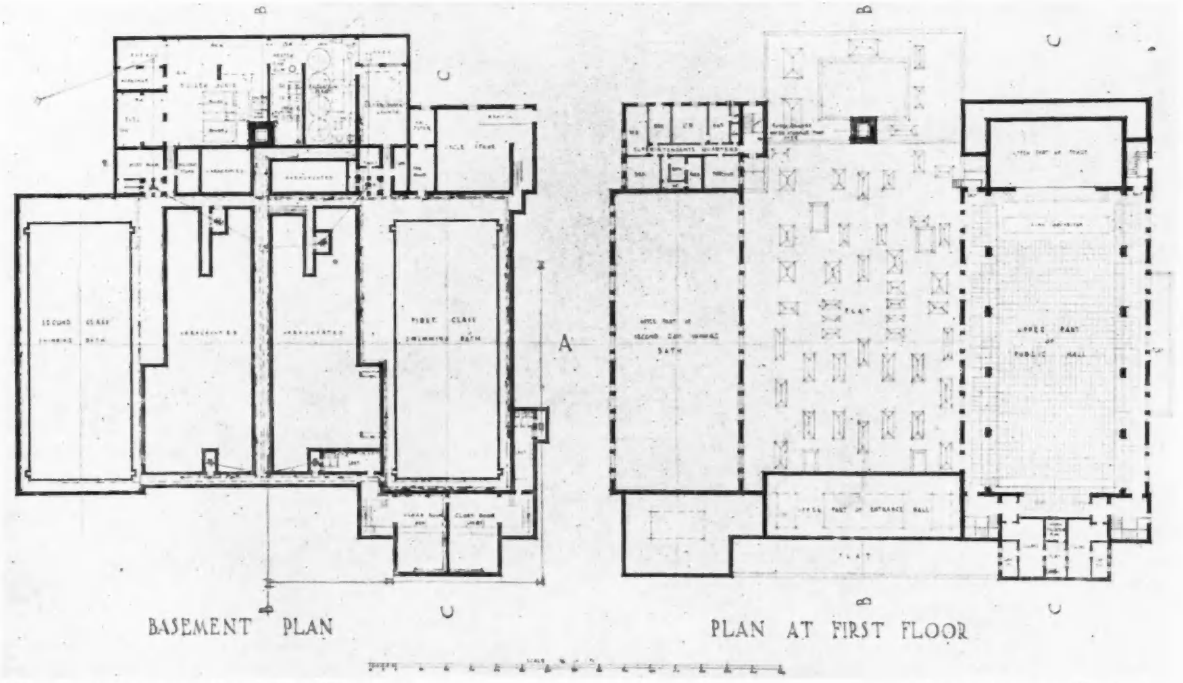
Section BB through main entrance hall, corridor and chimney; and section CC through entrance to public hall, first-class swimming bath, to be used in winter as a public hall, and stage. Nearly all the accommodation is planned on the ground floor.

THE following awards were made by the assessor, Mr. J. Ernest Franck.



First premium (£300), Victor Bain and Allan Johnson, Leeds.

Second premium (£200), F. J. Horth and H. Andrew, Hull.



Third premium (£100), C. B. Smith, London.

Fourth premium (£50), L. H. Bucknell and R. Ellis, London.

In his report the assessor says that all the competitors have placed the principal entrance either in Denmark Road or from an open space opposite to the junction of Penrhyn Road and St. James' Road. His own suggestion would be to make a wide paved approach on the south side, joining Denmark Road to Grange Road, and place the principal entrance on the new approach. This would solve the traffic problem and give a fine open vista to the main front.

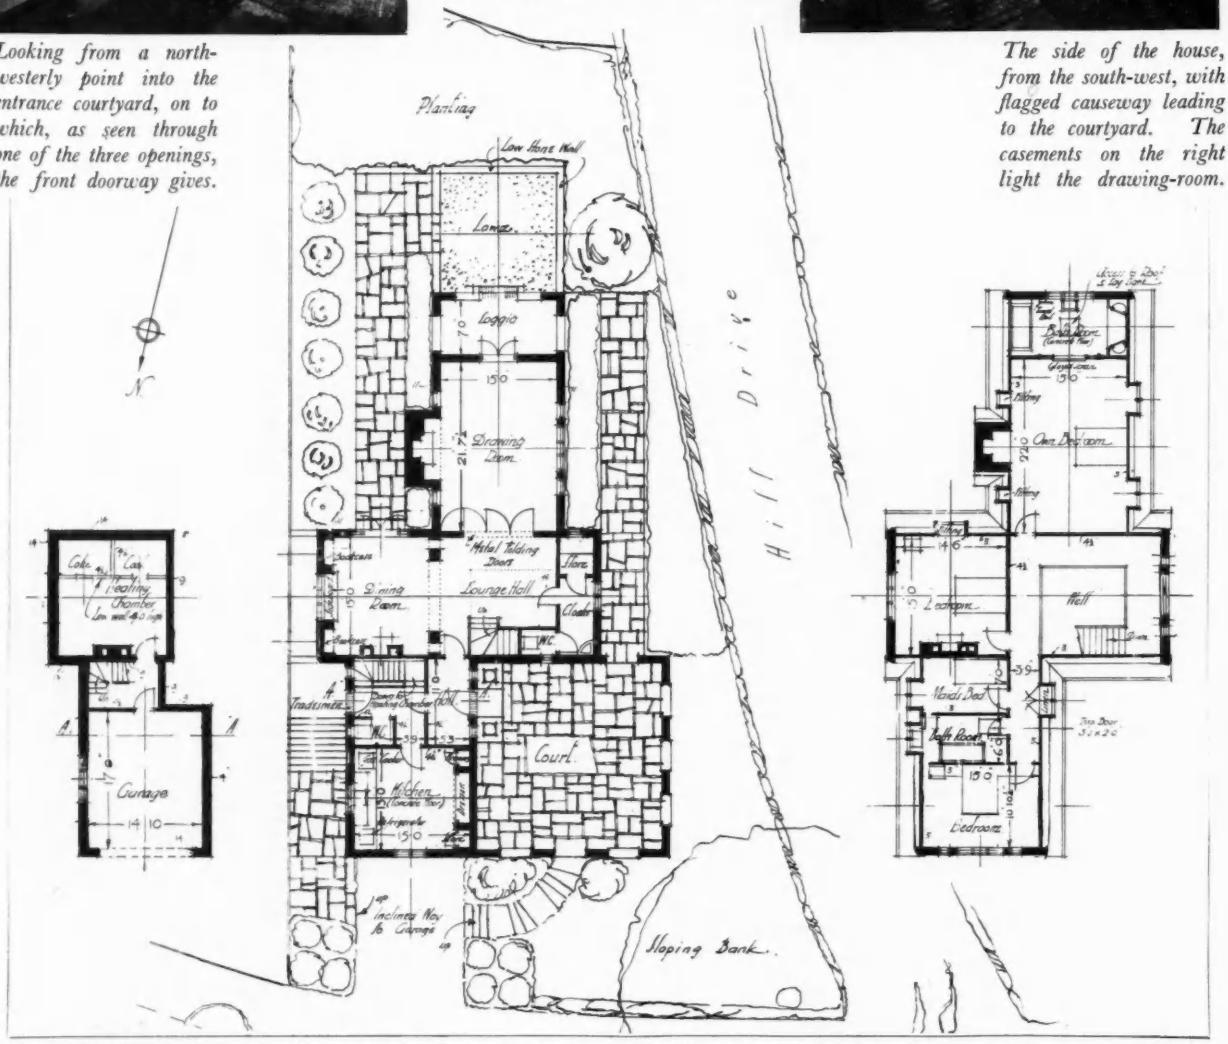
Section AA through second-class swimming bath, dressing boxes, corridor, first-class swimming bath, and refreshment room.

Kingston Swimming Baths Competition: Winning Design.] *[By Victor Bain and Allan Johnson.*

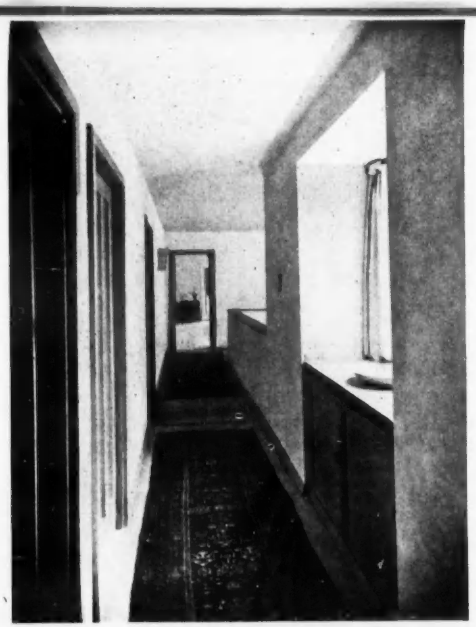
Plans of basement and first floor. The superintendent's quarters on the first floor consist of parlour, living room, scullery, larder, coal, three bedrooms, bathroom and w.c. In the basement are the boiler house, filtration plant, establishment laundry and cycle store.

HOUSE AT NORBURY, S.W.

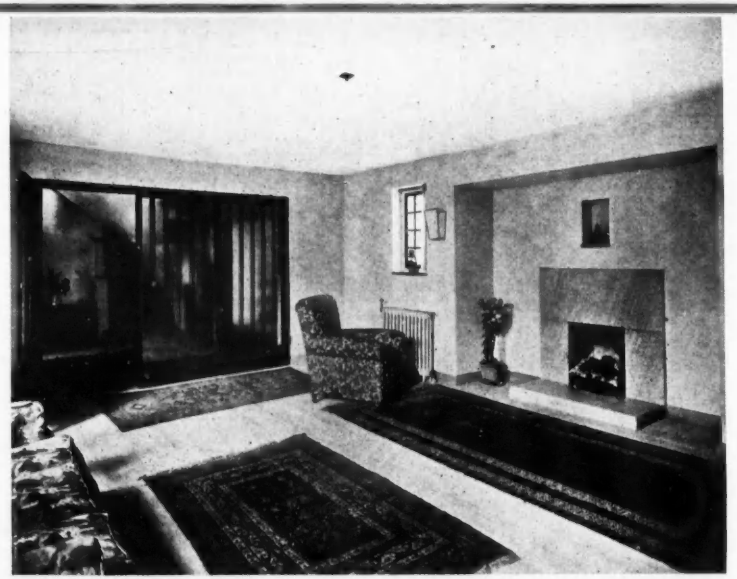
DESIGNED BY
G. ALAN FORTESCUE



WITH the narrow, irregular site, sloping down from south to north, in view, it was decided to plan the main front facing towards a side road on the west, and to turn the difference in levels to account by placing a garage and heating chamber under the entrance hall and kitchen, and dining room, respectively. The house is built with 11-inch cavity walls, rendered externally with two coats of Portland cement, roofed with tiles of half-round Spanish type, fitted with metal casements.



Looking from a north-westerly point into the entrance courtyard, on to which, as seen through one of the three openings, the front doorway gives.

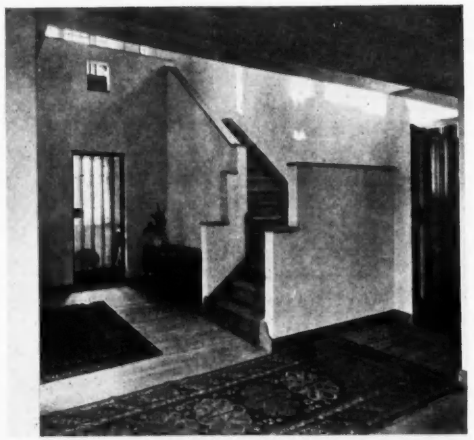


The side of the house, from the south-west, with flagged causeway leading to the courtyard. The casements on the right light the drawing-room.

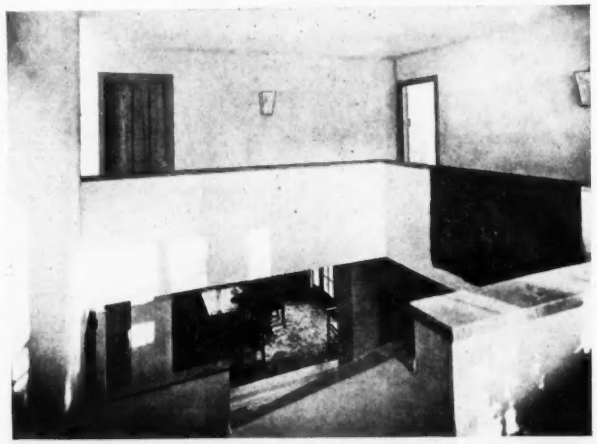
The architect's drawing of the site and ground-floor plan, with, on the left, the basement quarters, and, on the right, the first floor, indicate the conditions imposed and the manner in which they have been met. Extensive use has been made of stone flagging, and this, together with the courtyard and the southerly-looking loggia, heightens the suggestions of sub-tropical character induced by the design itself.

The first-floor corridor, looking towards the best bedroom. There is a linen-cupboard under the window seen on the right, and beyond is the landing surrounding the stair-well.

A dove-grey marble surround embellishes the fireplace in the drawing-room. The walls were finished parchment colour, the plaster being left from the wood float. On the left are glazed metal folding doors to the large lounge hall, forming, together with the open dining-room, an L-shaped suite unusually spacious. The floors are of narrow oak boarding, secret-nailed and polished.



One of the glazed metal doors—that between the entrance and lounge halls—of which sole use is made in the principal entertaining rooms. A glimpse is seen of the front door beyond.



House at Norbury, S.W.]

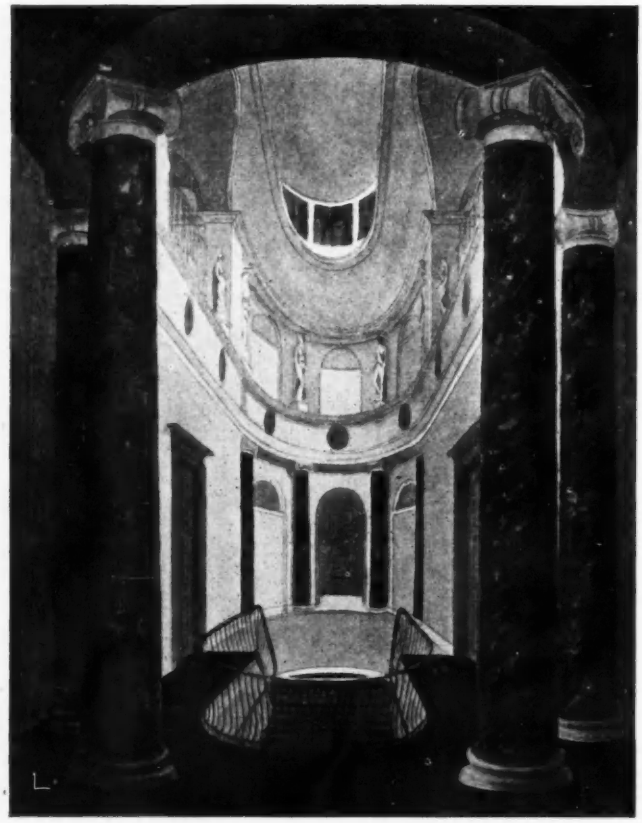
The dining-room, from the lounge hall, showing at the far side the recess expressly designed for the sideboard, with a high window above it; and, on the left, the built-in gas fire.

The stairs are of solid 4½-in. brickwork, plastered both sides, and capped—like the window sills—with green marble. The metal door leads to the cloakroom; above is an opening to pass a beam of westerly sunshine from the landing.

[*By G. Alan Fortesçue.*

The stairs, with a glimpse of the dining-room, seen from the landing above, which surrounds the staircase well on three sides, the line of the third side being prolonged to form the bedroom corridor.

LITERATURE



SOANE'S LECTURES

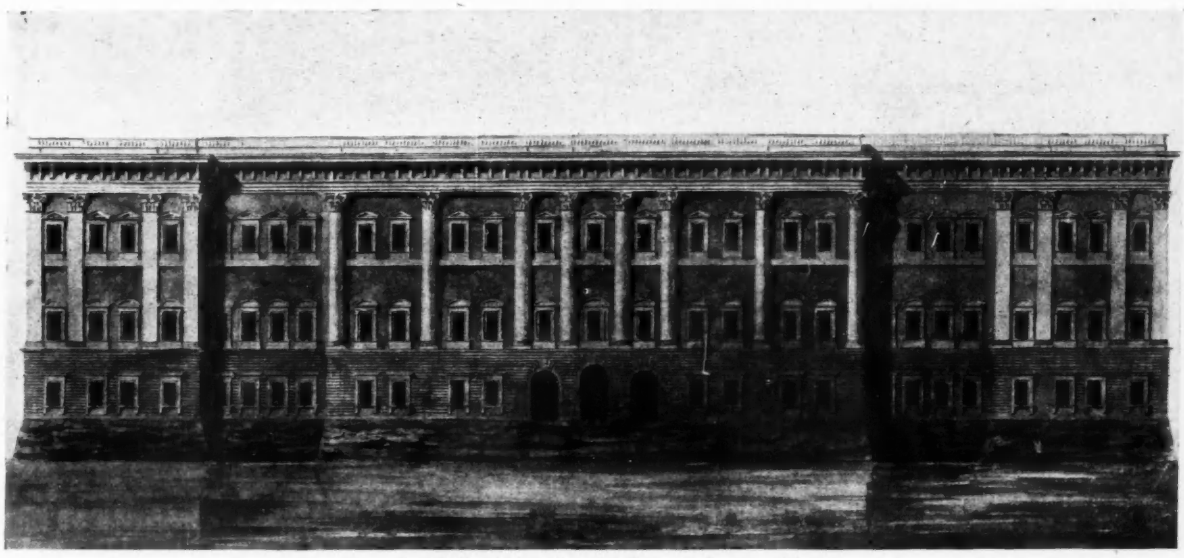
SIR JOHN SOANE lived and worked in a time of transition very like our own, when Europe was exhausted by a great war and endeavouring to adjust pre-war finance to post-war conditions. It was, also, a time when new ideas in religion, politics and business were in the air, and men were prepared to accept new thoughts. Although the Napoleonic wars deprived Soane of the great opportunities he might have had, the limitation of cost that they imposed probably stimulated his inventive faculties, as similar conditions are stimulating the imagination of Continental architects today; his later work surely justifies the title that he has been given—" the first of the moderns."

Another factor that has brought his name into prominence of recent years is the demolition of the greater part of his masterpiece, the Bank of England, where, however, the exterior walls are being preserved in an attempt at the same time to respect Art, Sentiment and the Ancient Lights of the adjoining buildings.

Like so many innovators, Soane was subjected to much abuse and contumely during his lifetime, and, in spite of his merits, he did not have the permanent influence on the course of architectural history that he might have had. In the first place, with the exception of the Bank, he did not carry out any work of prime importance. Had his scheme for rebuilding the House of Lords been built, it has been suggested that its influence might have been far-reaching in reinforcing the Renaissance tradition and helping it to withstand the shocks delivered by the Gothic revivalists, and so preventing the chaos that reigned during the second half of the nineteenth century.

Such speculations, though fascinating, are fruitless, and we must face the facts as they are and consider the work that he actually left. Besides its originality, it shows a scholarly appreciation of Greek architecture and an understanding of the principles upon which it was based, but without pedantic insistence on precedent. His admirably logical mind is well shown in the interiors that he designed, where he rejects the cornice and other projecting members, obtaining his effects by incised lines, in the form of grooving or fluting, which, when employed in his plaster domes and vaults, produced some of his most unusual and characteristic effects.

Staircase, Buckingham -House, Pall Mall. Sir John Soane, 1794. Drawn by G. Basevi. (Destroyed.)



[*From* Sir John Soane, R.A., Lectures.

In the year 1806 Soane was appointed Professor of Architecture at the Royal Academy Schools, and he took his duties in no light spirit. In spite of his large practice, he devoted three years to the preparation of his lectures, which, however, were not published until recently, when Mr. Arthur T. Bolton, in conjunction with the editor of the *Architectural Association Journal*, printed them from the ten manuscript volumes in the Soane Museum. The preparation of the lectures, besides entailing a great deal of reading, necessitated the making of many large drawings, and his pupils and assistants made no less than 2,000, mostly measuring 4 ft. by 2 ft., some of which are extremely fine; a selection of 120 are reproduced in half-tone in this volume, the Editor having selected those illustrating less familiar buildings. This stupendous work shows how seriously Soane took his duties and the high degree of public spirit that animated him.

The lectures themselves cover the entire architectural field as it existed at the beginning of the nineteenth century. Soane traces, in the usual way, the development of architecture from the earliest period with, of course, special emphasis on Greece and Rome and upon Palladio in the Renaissance. The mediæval epoch is by no means ignored or considered unsympathetically. In England he devotes most space to a critical examination of the works of Inigo Jones and Vanbrugh, for whom he had a great admiration; while Robert Adam, who at the time he was writing was sadly out of fashion, receives generous praise.

Although the bulk of the lectures are devoted to the historical and the critical, practical considerations are not ignored. He fully realized the importance of good construction, and many of the drawings are diagrams of constructional methods in various materials. He also deals with such allied subjects as dry rot, methods of heating, town planning and gardening, and the leasehold system.

In his introduction the Editor gives a list of some of the students who attended these lectures; they included H. L. Elmes, C. R. Cockrell, Gilbert Scott and Raphael Brandon. While the latter two do not seem to have been affected, Cockrell and Elmes were undoubtedly profoundly influenced, as is shown by St. George's Hall, Liverpool, the one important building that shows unmistakable traces of the influence of his practice and teaching. Mr. Bolton is certainly to be thanked for arranging for the publication of these lectures, which are so valuable for sound criticism of the architecture of the past (which is for the most part acceptable today), and for their

BRISTOL AND BATH REGIONAL PLANNING SCHEME

THOSE who have read the novel, *Jew Süss*, will remember the vivid description of the country over which the story ranges. The author, wishing to indicate in as few words as possible the historical setting of the novel, adopted a method that Hardy used in the *Dynasts* and presented his readers with a living and moving map, to be seen sometimes in the whole, and at other times in its nearer, smaller parts. This remarkable achievement of dramatization should hang by the desk or bedside of every town planner, for it contains the spirit of his job.

A regional report, because it addresses itself to local government officials and others who are presumed to be interested in the administration and development of the country, has no chance of being read *and acted upon*, unless the information which it has to bring is set forth in such a way as will make good reading. Regional reports are largely advisory. They are informative, bringing to committees appointed to administer comparatively new town-planning legislation, facts, knowledge *and opinions* hitherto unknown. The attitude of mind which it is the work of regional reports to foster is not always that of small officials. It is broad and impersonal. It co-ordinates and overrides; it is inimical to personal speculation and all profits made at the expense of the community.

It will be seen, therefore, that, however willingly these reports are accepted by those who have asked for them, the fight for the principles of regional planning has only its preliminary skirmishes in the open; the word must penetrate into the jungle beyond before good can come of it.

These reflections have arisen while reading the Regional Report which Professor Patrick Abercrombie, in collaboration with Mr. Brueton, has prepared for the district of Bristol and Bath. The interesting country covered by the report stretches from the line of the Avon, north to the Cotswolds and south to the Mendips, and contains, in violent contrast, all the features of urban and rural growth. Rather more than half the report is devoted to a more than usually thorough survey of the region, and it is written as a story of the growth, from earliest times, of this tract of England, told in as dramatic a manner as the subject allows, and illustrated at every turn with maps and photographs—the maps as useful as they are decorative.

The dramatic presentation of fact as part of a slowly unfolding story would make the survey interesting reading without the inclusion of a landscape survey. This very useful section of the report, laying particular stress upon what is usually taken for granted, opens up new prospects for regional planning, as it seeks to further the labours of the C.P.R.E.

It reads naturally with later proposals for a system of regional open spaces, special landscape and rural reservations, which Commander Hilton Young's Amenities Bill would make possible.

There is a careful study of disfigurements in which occurs the best analysis of the ribbon development phenomena I have ever read.

Part I. of the report having described the region, Part II. outlines its suggested development. The whole is then again described in order to indicate the effect of the scheme upon every place in it, while in the last part the methods of realizing the scheme are indicated, together with a chapter on landowners, whom everyone wishes to interest in town planning.

Throughout, this report breathes the spirit of growth and change, directed by a study of present-day problems in the light of an imaginative study of the past. E. MAXWELL FRY

THE SKETCH CLUB

SIXTH SESSION

CLEARLY, members have yielded to the roving impulses engendered by these summer days; nor can the hanging committee remain immune. With appetites whetted by private glimpses of the firstfruits of the Holiday Sketches Competitions, they already range far afield. This time the sketches are left to tell their own tale, and it is one of holidays. Particulars of the Competitions, the first closing on July 15, appear on advertisement page xlvi.

IN PARLIAMENT

[BY OUR PARLIAMENTARY REPRESENTATIVE]

Post-War Housing Subsidies

AT question-time in the House of Commons Mr. Greenwood informed Sir K. Wood that the total amount paid in housing subsidies from 1918 to the present date was £86,954,799. The amounts paid in the twelve months up to June 30, 1928, and June 30, 1929, were £9,810,454 and £10,781,252 respectively.

Mr. Winterton asked the Minister of Health, whether, in order to reduce the present housing shortage, he was prepared to consider the question of extending the present housing subsidy to owners of small plots of ground in order to enable them to build houses thereon for their own occupation.

Mr. Greenwood said that the suggestion would require legislation, which he could not see his way to introduce.

Prices of Parlour and Non-Parlour Houses

Mr. Greenwood told Sir K. Wood that the following statement showed the average price of non-parlour and parlour houses, respectively, included in contracts let by, or in direct labour schemes of, local authorities in England and Wales, during each month since June, 1928 :—

Month.	Year 1928-29.		Year 1929-30.	
	Non-parlour houses.	Parlour houses.	Non-parlour houses.	Parlour houses.
	£	£	£	£
June ..	356	426	355	404
July ..	366	434	337	377
August	349	417	348	409
Sept. ..	365	429	347	423
Oct. ..	369	427	344	419
Nov. ..	354	417	341	427
Dec. ..	338	429	370	404
Jan. ..	341	422	321	434
Feb. ..	344	393	346	416
Mar. ..	336	420	338	410
April ..	348	401	346	395
May ..	344	406	328	395

Town-Planning Schemes

Mr. Greenwood further informed Sir K. Wood that the number of town-planning schemes finally approved and put into force since the beginning of June, 1929, was four, the number approved between June, 1928, and June, 1929, was four, and the number approved prior to June, 1928, was 26.

Slum-Clearance Schemes

Sir K. Wood asked the Minister of Health if he would state the number of slum-clearance schemes confirmed, fully completed, and in course of execution since June, 1929, and similar information up to June, 1928 and 1929, respectively, or latest convenient date.

Mr. Greenwood said the last complete year in respect of which figures were available on the subject was that ended March 31, 1930. The following statement accordingly gave the desired information, so far as it was available, for that and the two preceding years :—

—	Period.		
	April 1, 1927, to March 31, 1928.	April 1, 1928, to March 31, 1929.	April 1, 1929, to March 31, 1930.
Slum clearance schemes :			
Confirmed during the period ..	18	10	—
Completed during the period ..	8	14	17
In course of execution at end of period ..	98	94	77

Asked by Sir K. Wood how many buildings had been taken possession of by local authorities, including those taken only for the purposes of making schemes efficient under improvement or reconstruction schemes, since June, 1929, or the latest convenient date—

Mr. Greenwood said that the only available information related to the number of buildings acquired by local authorities in connection with approved slum-clearance schemes. For the period between June 30, 1929, and March 31, 1930, that number was approximately 700.

Housing (Rural Workers) Act

Sir K. Wood inquired of the Minister the number of houses, since June, 1929, up to the latest convenient date, each month, on which work had been finished or was in progress under the Housing (Rural Workers) Act, by local authorities, and similar information up to June, 1928 and 1929.

Mr. Greenwood said that returns showing progress under the Housing (Rural Workers) Act, 1926, were rendered quarterly, and it was therefore not possible to give monthly figures. The following statement showed the number of dwellings on which work was finished during each quarter since that ended June 30, 1927, and the number on which work was in progress at the end of each such quarter.

Quarter ended :	Number of Dwellings on which work was :	
	Finished during the Quarter.	In progress at the end of the quarter.
June 30, 1927	—	5
Sept. 30, 1927	—	16
Dec. 31, 1927	11	89
Mar. 31, 1928	33	176
June 30, 1928	118	328
Sept. 30, 1928	181	518
Dec. 31, 1928	283	563
Mar. 31, 1929	210	594
June 30, 1929	270	616
Sept. 30, 1929	296	632
Dec. 31, 1929	267	650
Mar. 31, 1930	253	771

Mortgage by Building Societies

Mr. Clynes, the Home Secretary, informed Sir K. Wood that the Chief Registrar of Friendly Societies informed him that the total amount advanced on mortgage by building societies from 1901 to 1929 was in round figures £607,000,000, and that the amounts advanced each year since 1918 were as follows :

	£
1918	6,970,986
1919	15,840,961
1920	25,094,961
1921	19,673,400
1922	22,707,799
1923	32,015,720
1924	40,584,606
1925	49,822,473
1926	52,150,941
1927	55,886,903
*1927-1928	11,189,159
1928	58,664,684
1929	74,718,746

*Advances which were not included either for 1927 or 1928 owing to alteration of year-end, for which returns were abstracted, from December 31 to January 31.

State-Assisted Houses

Mr. Greenwood informed Mr. Ramsbottam that during the twelve months ended May 31, 1930, the number of completed houses ranking for subsidy was 99,124. The corresponding number during the previous twelve months was 107,439.

Mr. Simon asked the Minister of Health if he would give the number of houses finished under the various Housing Acts, and the number without subsidy for each quarter from June, 1929, onwards.

Mr. Greenwood said that the following statement gave the desired particulars so far as State-assisted houses in England and Wales were concerned :—

Quarter ended.	Number of State-assisted houses completed during the quarter under the :		
	Housing, Town Planning, etc., Act, 1919.	Housing, etc., Act, 1923.	Housing (Financial Provisions) Act, 1924.
Sept. 30, 1929	18	39,227	17,730
Dec. 31, 1929	14	—	14,507
Mar. 31, 1930	—	—	10,571

Returns as to houses erected without State assistance were obtained half-yearly only. The number of such houses of a rateable value not exceeding £78 (or £105 in the Metropolitan Police District) erected during the six months ended in September last was 38,298, and during the six months ended in March last, 53,393.

The Government's Slum Bill

Standing Committee A of the House of Commons, which is considering the Housing (No. 2) Bill, have agreed to Clause 23, which provides for Exchequer contributions to the expenses of local authorities in providing accommodation for persons displaced from slum areas. The State grant is based, under the Clause, on the number of persons removed from slum conditions and re-housed, the amount being fixed at £2 5s. per head in urban areas, £2 10s. in rural areas, and £3 10s. in congested areas, where tenements of more than three stories are to be built on land costing more than £4,000 an acre. The grants are intended to enable the persons displaced to pay the rents of their new dwellings, and will be payable annually for a period of 40 years.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquirics concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

DUDLEY SCHOOL COMPETITION. Latest date for submission of designs.

LAW REPORTS

REVOCATION OF RIGHT TO STALL SITE

Pennington and Others v. *Jarvis. King's Bench Division. Before Mr. Justice Rowlatt*

THIS action concerned a dispute as to the right to revoke a licence granted in respect of a stall on a yard, plaintiffs, the landlords, claiming an injunction to restrain defendant from trespassing on their soil in a passageway at Watford, approached from the High Road, by carrying on part of his business there.

Plaintiffs, the landlords, held a lease of the land, including the right of the soil in the passageway, and shops being erected, the defendant held a lease of one from the plaintiffs, carrying on a grocery business. The plaintiffs granted the defendant a licence to erect a stall on a certain area, reserving the right to revoke the licence in certain events. The local authority having acquired the market rights of Watford, plaintiffs revoked the licence. As the defendant continued to place goods on the spot plaintiffs brought this action, contending that defendant was trespassing.

Defendant submitted that the plaintiffs had no real ground for revoking the licence and claimed the right to continue the stall.

His lordship said the defendant felt some sort of grievance, but that did not justify his action. It was quite clear that the defendant had no right to put his goods and generally carry on business on the soil in question. It was fallacious to say he had done it because he lost his licence for the stall. Under these circumstances plaintiffs were entitled to their injunction with costs.

ALLEGED BREACHES OF BUILDING COVENANTS

Brighton Downs Estate Co. v. *Hardiment. Chancery Division. Before Mr. Justice Farwell*

THIS was an action by the Brighton Downs Estate Co. against the defendant for an injunction restraining alleged breaches of covenants in the conveyance to the defendant of five-acre plots on the defendant's estate.

Mr. Roxburgh, for the plaintiffs, said their complaint was that, although the covenants prohibited the erection of more than one detached house or a pair of semi-detached houses on each plot, and the granting of any right-of-way, the defendant had built three bungalows on one plot and proposed to erect twenty-six altogether, thus creating a miniature estate in the centre of the plaintiffs' property.

Mr. Harvey, managing director of the plaintiff company, admitted that, owing to war conditions, the housing problem and the cost of materials, some of the plot-holders had obtained considerable concessions from the company, but no general right was conceded. Supposing the defendant was right in his contentions, the company would have no control over the estate and it would become a number of miniature estates.

Evidence was called on behalf of the plaintiff company to show that the effect of the proposed erection by the defendant of twenty-six bungalows would be seriously to depreciate the value of the unsold plots.

The defence set up was a denial of any breach of the stipulations in the conveyances, a plea of laches and acquiescence on the part of the company, and an assertion that the company, by allowing the erection of huts, etc., had converted the estate into a "shack town," to the depreciation of the defendant's property.

Evidence was called to show that there was no concealment as to the erection of the three bungalows, and that the effect of the erection of twenty-six bungalows on the value of the unsold plots would be *nil*.

Mr. Bonner, for the defendant, contended that the restrictive covenants were ambiguous and difficult to understand, and submitted that where they had stipulations of the kind the law would not enforce them. Here there had been so much acquiescence by the plaintiff company in changes of the original building scheme, that the company had disentitled themselves to an injunction and were barred from enforcing as against the defendant the covenants in question. Under the original building scheme the plot-holders purchased their plots on the understanding that there would be a mutual enjoyment of the amenities of the estate. Could the company allow some plot-holders to do what they liked and bind others to their covenants?

Mr. Roxburgh, replying, said the language of the covenants was perfectly clear. He was not asking for a mandatory injunction with regard to the three bungalows already erected, but he did ask for an injunction to restrain further breaches. Plaintiffs had done nothing to disentitle them to the relief they sought in this respect.

His lordship granted the plaintiff company an injunction restraining any further erections and the granting of rights-of-way, except to the owners of the existing bungalows, and the defendant must pay the costs of the action. What the defendant had done, he said, formed breaches of the covenant of his conveyances. The failure of the company to enforce the restrictions against other purchasers did not amount to a repudiation of the contract. The covenants reserved to the company the power to vary all or any of the stipulations. He had to consider that what the defendant proposed to do was to produce something on his plots in the nature of a small building estate of his own, and to commit a very serious breach of the covenants. The company had been easy-going, but their breaches had been merely unpleasant or unsightly and not serious. Under these circumstances he was bound to give them the order he had already indicated.

Mr. Bonner asked that the injunction should be stayed pending an arbitration before a local commissioner under the Law of Property Act.

His lordship granted the injunction for six months, and said if no application was then made to vary or discharge it, it would become perpetual.

COMPETITIONS OPEN

July 5.—The Worthing Corporation invites competitive designs for the erection of municipal buildings, etc., proposed to be erected in Chapel Road, Worthing. Assessor: H. V. Ashley, F.R.I.B.A. Premiums: £300, £250, £150 and £50. Application for particulars of the competition, etc., should be made to J. Kennedy Allerton, Town Clerk, Worthing. Deposit £1 1s. Latest date for submission of designs: July 5.

July 5.—The Royal National Eisteddfod of Wales, 1930. Competitions in the arts, crafts and science section. Assessor: Percy E. Thomas, F.R.I.B.A. The drawings are to be delivered to W. H. Protheroe, General Secretary, Eisteddfod Office, Llanelly, not earlier than July 1, 1930, nor later than July 5, 1930.

July 31.—The Luton Town Council invites architects to submit designs for the proposed town hall, which is to be built on the site of the old town hall at an approximate cost of £250,000. Assessor: Sir Brumwell Thomas, F.R.I.B.A. Premiums: £500, £300, £200 and £100. Particulars may be obtained on application to W. Smith, Town Clerk, 2 Upper George Street, Luton. Deposit £2 2s. Latest date for submission of designs: July 31.

July 31.—The Dudley Education Authority invites architects having an office within a radius of fifteen miles of Dudley to submit competitive designs for a Council school to accommodate 320 children, to be erected on the Brewery Fields estate; also a school for 400 children on the Priory estate. Assessor: Herbert T. Buckland, F.R.I.B.A. Premiums: £150, £100, and £50. Applications for conditions of the competition, etc., should have been made to J. Whaley, Director of Education, Education Offices, St. James's Road, Dudley, by April 30. Deposit £1 1s. Latest date for submission of designs: July 31.

August 30.—The Carlisle Corporation invites British architects to submit designs for the façade to English Street and the Victoria Viaduct, suitable for shops and business premises. The site was previously occupied by the Prison. The total length of the frontage is approximately 358 ft. Assessor: Francis Jones, F.R.I.B.A. Premiums: £300, £200, and £100. Particulars of the competition, etc., may be obtained from Percy Dalton, A.M.INST.C.E., A.R.I.B.A., City Engineer, 18 Fisher Street, Carlisle. Deposit £1 1s.

September 1.—The Bangor (Co. Down) Borough Council invites architects or town planners to submit designs in competition for laying out the sea front within the Borough. Assessor: Professor Patrick Abercrombie, F.R.I.B.A. Premiums: £150 and £50 for first and second places, respectively. Copies of the conditions and plans will be forwarded on application to J. Milliken, Town Clerk, Borough Council Offices, Bangor, Co. Down. Deposit £1 1s. Latest date for submission of designs: September 1.

September 30.—The Isle of Man Education Authority invites architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums: £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs: September 30.

No date.—The General Syndicate, Ltd., invites architects to submit competitive schemes for the development of a site at Liverpool, fronting St. John's Lane, Queen Square and Rose Street. Premiums: £250, £100 and £50, for first, second and third prizes, respectively. Particulars, etc., are obtainable on application to the Secretary, the General Building Syndicate, Ltd., 36 St. Martin's Lane, W.C.2.

The awards in the Competition for the Proposed Drinking Fountain, Blackheath, have been made as follows:—

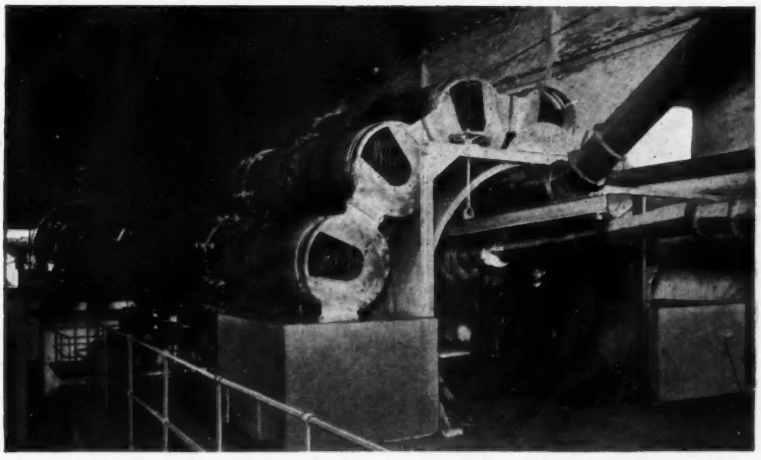
1st Premium £50, Ernest G. Theakston, F.R.I.B.A., of Wendover, Bucks.

2nd Premium £20, T. G. Richards, of 5 Stratford Place, W.1.

3rd Premium £10, G. I. C. Highet, A.R.I.B.A., of Bamborough, Horsell, Woking.

TRADE NOTES

On July 7 and 8 a conference of some of the foreign affiliations of Messrs. Holophane, Ltd., will be held at their offices in Elverton Street, Vincent Square, S.W.1. Among those present will be representatives from twenty-three countries. On the evening of July 7, a dinner will also be held at the Trocadero Restaurant, Piccadilly Circus, W.1, when speeches will be made by Dr. J. W. T. Walsh, President of the Illuminating Engineering Society, Professor Dr. J. Teichmuller, Director of the Lichttechnisches Institut, Karlsruehe, and Messrs. G. Grey Wornum, F.R.I.B.A., Howard Robertson, F.R.I.B.A., and J. S. Dow, Hon. Secretary of the Illuminating Engineering Society.



The rapid development through which the cement industry has passed during the last two or three decades is nowhere more apparent than in the process of burning. For this the invention and evolution of the rotary kiln is largely responsible. The accompanying illustration is reproduced from a booklet, describing the tunnel works at West Thurrock, Essex, just issued by the Tunnel Portland Cement Co., Ltd., and shows the latest of the company's four kilns. The kiln is 300 ft. long, and is capable of producing 100,000 tons a year. It will be noted from the illustration that the cooler forms an integral part of the kiln. This is a new type, known as the Unax kiln, which has been introduced by Messrs. F. L. Smidth and Co., Ltd., and is claimed to be one of the most efficient in existence. It is stated in the booklet that after the reconstruction of the works in 1911 the output was 60,000 tons a year, which was doubled immediately before the great war broke out. The output at present is 280,000 tons per annum. From the illustrations it is apparent that every care has been taken to construct a factory on the most efficient and economical lines. Not only has the best machinery been installed, but the works have been laid out in a way that ensures that the various manufacturing processes are easily and efficiently controlled. This is of the utmost importance when manufacturing a high-class product.

THE BUILDINGS ILLUSTRATED

Following are the names of the general contractors and some of the sub-contractors for the buildings illustrated in this issue:

City of Liverpool Housing Schemes (pages 7–10). Norris Green Estate: Principal contractors: Unit Construction Co., Ltd., Wilson Lovatt and Sons, Ltd., Hy. Boot and Sons (London), Ltd., and W. J. Simms, Son, and Cooke, Ltd. Larkhill Estate: Principal contractors: C. J. Doyle and Wm. Griffiths, Sons and Cromwell, Ltd. Melrose Road Tenements: General contractors: Unit Construction Co., Ltd. Springwood Estate: Principal contractors: J. Jones and Sons (Woolton), Ltd., and J. W. Jones and Sons, Ltd. Work on the Holly Street and Broadway sites were executed as follows: Holly Street, Wilson Lovatt and Sons, Ltd., demolition, excavation and foundations; Trussed Concrete Steel Co., Ltd., Reinforced Concrete Engineers, reinforced concrete; Penarth Co., artificial stone; Keele Tileries, Ltd., Keele hand-made tiles; Langley (London), Ltd., roofing felt; Pollock Bros., plaster. Broadway, Norris Green Estate: Unit Construction Co., Ltd., excavation, foundations and plaster; Trussed Concrete Steel Co., Ltd., Reinforced Concrete Engineers, reinforced concrete; Pearson Bros. and Campbell, artificial stone; G. W. Lewis Tileries, Ltd., Rosemary hand-made tiles; Langley (London), Ltd., roofing felt; International Trading Co., wood block flooring; T. Jones & Co., electric wiring; Morris Bros., plumbing; E. Wilson & Co., iron staircases; "Fosalsil" partitions by J. H. Sankey and Sons. "Workwell" grates and mantel register boiler grates manufactured by Triplex Foundry, Ltd., and supplied through M. T. Grey & Co., Ltd., for both jobs.

The Limbert Nurses' Home, near Manchester (pages 11–14). General contractors, J. Gerrard and Sons, Ltd., who were also responsible for the excavation, foundations, reinforced concrete, fireproof floor construction, plumbing and joinery. Subcontractors: Limmer and Trinidad Lake Asphalt Co., Ltd., dampcourses and asphalt; Middlewood Brick Co., facing bricks; J. C. Edwards (Ruabon), Ltd., facings for brick arches; F. M. and H. Nuttall, Ltd. (fixer only), stonework; Empire Stone Co., Ltd., artificial stone; Robinson and Kershaw, Ltd., structural steel; W. Marsden & Co., floor and wall tiling; "Fosalsil" blocks from J. H. Sankey and Son, Ltd.; Luxfer Ltd., patent glazing; Combined Concrete Construction Co., Ltd., wood-block flooring; Brightside Foundry and Engineering Co., Ltd., central heating; Edison Swan Electric Co., Ltd., electric light fixtures; Morrison, Ingram & Co., Ltd., sanitary fittings; Marley Bros., Ltd., door and window furniture; Humphries, Jackson and Ambler, Ltd., steel casements to lavatories and w.c.s; Automatic Sprinkler Co., Ltd., iron staircases; Hindshaw & Co., decorative plaster; Brookes & Co. (1925), Ltd., metalwork; John Line and Sons, Ltd., wallpapers; Newton Chambers & Co., Ltd., gas mantels, stoves, grates, and water tanks; Peter Ford and Sons, Ltd., "Pytho" plaster (plasterer, James Ward); Etchells, Congdon and Muir, Ltd., lifts.

One of the four latest kilns at the works of the Tunnel Portland Cement Company, Ltd. It is capable of producing 100,000 tons a year.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

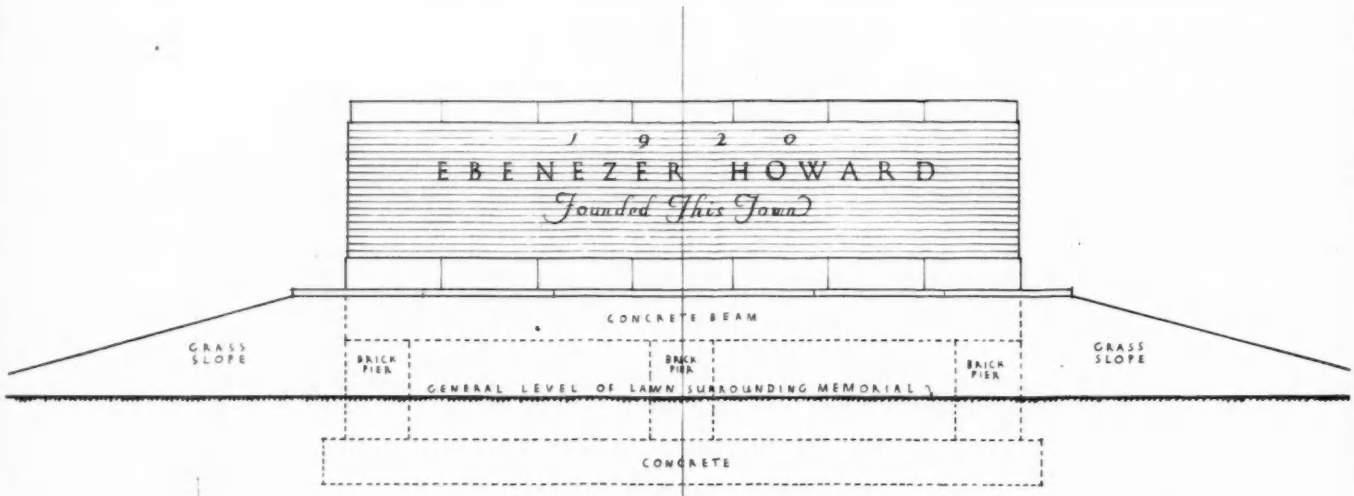
SCALE DETAILS:

A WEEKLY SERIES

THE HOWARD MEMORIAL, WELWYN GARDEN CITY, HERTS.

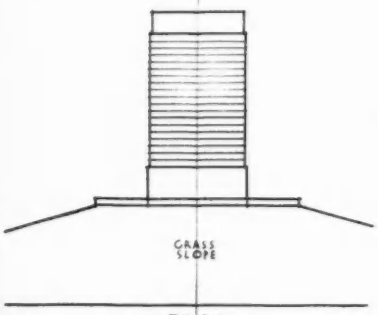
DESIGNED BY LOUIS DE SOISSONS

THIS Memorial to the late Sir Ebenezer Howard, who founded Welwyn Garden City in 1920, was unveiled on June 22 last by the Earl of Lytton.



It is a plain rectangular mass of brickwork, with a capping and base of Portland stone, and is raised on a grassy slope, where it occupies a commanding position between the buildings flanking the main gardens of the town leading up from the railway station. Designed with an eye to the growth and future value of the newly-planted poplars in the composition, this work serves not only as a memorial in the usual sense, but chiefly as a reminder of the fulfilment of Sir Ebenezer's great ideal.

The inscription is formed of individual letters cut, in the studio of Mr. Eric Munday, out of $\frac{3}{16}$-in. sheet bronze, afterwards primed and covered with 22-carat English gold-leaf. There is a freshness and individuality about letters thus made which is almost impossible of achievement when stock cast letters are used.



The drawings overleaf show elevations and section of the memorial to $\frac{1}{4}$-in. scale, a miniature layout plan, and part of the inscription, half full size.

The drawings may be read with architect's scales.

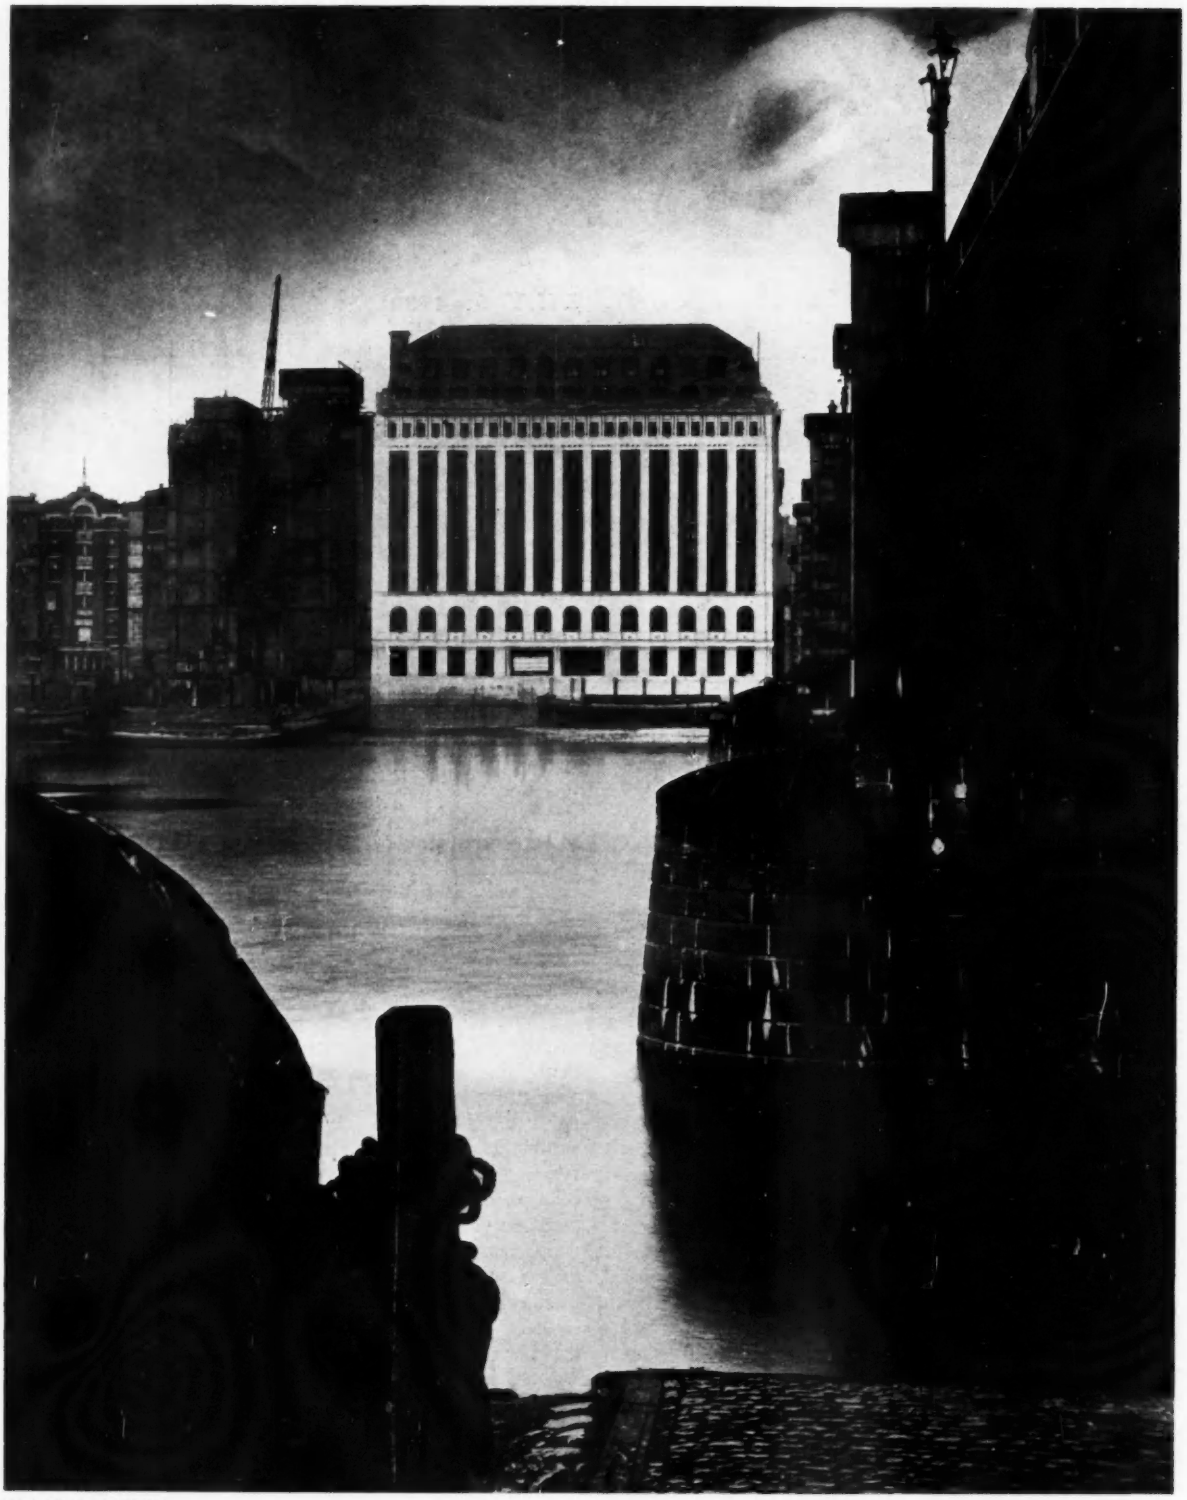
FORTY-FIVE CHURCHES

"Build us churches as good as you know how, no matter what tradition lies behind us."

COINCIDENT with the completion of the work of restoring St. Paul's Cathedral comes the recognition by the English Church of the need for more churches for that Greater London that lies upon the outermost fringes of the Metropolis. Funds are being collected and a programme of building entered upon that will see the erection of forty-five or so new churches in forty-five very new suburbs.

The building of these churches, though not exactly comparable with other periods of similar activity, is one of a series of attempts on the part of the church to cope with the movements and expansions of population. The feverish church building activity that gave Wren his opportunity to stamp the City of London with a character ineradicable by later building, coincided with a marked increase in population and a new order of living. Luckily for us today, building then meant stone, and money was to be had for the work.

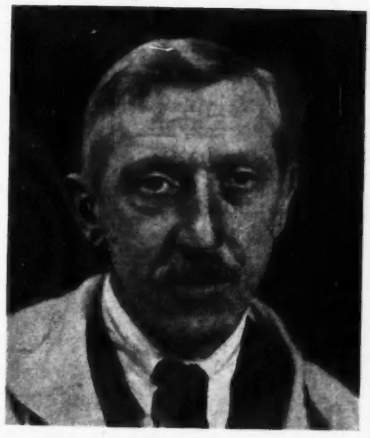


The next really serious attempt to catch up with arrears found the church the ministers to a flock so numerous, and so poorly endowed with worldly goods owing to the effects of an industrial revolution that had severed rich from poor, that the Commissioners at the time found themselves faced with two problems. The first that concerned them was a matter of style. Were the new churches to be Gothic or Classic? The second problem was lack of money. Despite the example of Wren, and in the face of a sermon-preaching age, they decided that Gothic alone was holy; and so it was left to the architects of the time to produce churches that looked like Gothic, but cost no more than meeting-houses. A number of these churches mercifully collapsed; a number exist today, thin and melancholy spectres; and one or two, by good fortune, were first-rate buildings, only marred by hasty erection in poor materials.

The point of this historical resuscitation is patent when one looks round the suburbs today and asks oneself how, and in what manner, shall new churches represent the aspirations and the great dignity of the English Church in the midst of these myriad little villas and mock cottages. Are they, like the banks, to go back to the Georgian tradition in order to weld modern methods of building with accepted architectural formulæ? Are they to evolve a church type suited to the sermon? Or are they to throw in their lot with the mock Tudor cottages and hark back to the vanished past?

After all, forty-five churches is an ambitious programme of work, and one for which there must be some mental preparation, and some preliminary manifestation of faith in a form of building that is peculiarly adapted to the needs of these congregations.

For instance, in the vast new suburbs of Liverpool, built generally in red brick and tiles, there have arisen fine churches, built also in brick and tiles, in a manner more Italian than otherwise, but with the marks of English handling and something else that may arise out of the wise elimination of useless ornament. We remember also the church that was built for the ill-fated war-town at Gretna—this another variant of the same theme. Then there are the east-end churches out of which Mr. Edward Maufe and others have created a type entirely new and eminently suited to the dual nature of a ministry that gathers society together for prayer and play. In these churches, themselves revivals in part, inasmuch as they owe their inspiration to past forms, one finds nothing of the bigoted narrowness of slavish copyism, nor yet does one feel in them a lack of the quality of devotion. Rather the reverse; for because the truest expression of religion must be framed in understandable terms, so architects, working in a style that gives them the widest scope for their powers, achieve something nearer the truth than would be possible if their hands were tied by a too stringent ecclesiology.



We see other countries working out their salvation in terms of their own making, and we envy the happiness of their lot. If the English Church when it sets about building will say to the architects, "Build us churches as good as you know how, no matter what tradition lies behind us," we too may be happy; and the church better served than it expected.

VINTRY HOUSE

A photographic study of the new headquarters of the Worshipful Company of Vintners, Southwark Bridge, London, taken from the south side of the Thames. The building has a frontage to the river of some 140 ft. The Portland stone elevations are fitted with metal windows. Between the stone piers on the upper part of the façades, each floor level is punctuated by a horizontal treatment of bronze panels, toned green. The bronze mullions, however, retain a golden hue. In the mansard roof, which is covered with green slates, the window frames are painted brown. Mr. A. H. Kersey was the architect.

NEWS & TOPICS

Professor Richard Garbe, A.R.A., F.R.B.S., *whose carved ivory figure "Autumn," reproduced overleaf, has been awarded the Silver Medal of the Royal Society of British Sculptors, as the best sculpture of the year. He is Professor of Sculpture at the Royal College of Art, and has three exhibits in the Tate Gallery.*

WESTMINSTER ABBEY SACRISTY ABANDONED

IN the keenly-contested matter of the Abbey Sacristy an unexpected turn has been taken, not indeed by any solution of the problem of its position, but by abandonment of the project. The anonymous donor, who in 1928 offered to provide a Sacristy, has declined to accept the plan offered in place of the original scheme. Mr. Walter Tapper made the first design; and the Dean had a full-size model erected. General criticism intervened; and the Dean referred the matter to the Royal Fine Arts Commission. A year ago they reported unfavourably; but the Dean subsequently announced that the work would proceed. Again his hand was stayed; another committee recommended the reconsideration of the Poets' Corner site. And now—*basta!*

THE L.C.C. AND CHARING CROSS

The composition of the Charing Cross Bridge Scheme Advisory Committee has now been announced. The L.C.C. is certainly to be congratulated upon its wisdom in assembling such a representative body of men to discuss the intricate problems involved. It appears that the Minister of Transport is not to be represented, because he wishes to be free to examine the report on its merits and to examine it from the financial point of view. As, however, it is well known that the Minister of Transport has worked in close association with the L.C.C. and has hitherto supported its policy over Charing Cross Bridge, his absence from the Committee and his *role* as an independent judge will in effect strengthen the position of the L.C.C. when the time comes to weigh the evidence of the Committee. Sir Percy Simmons was careful to state that the Council would not be bound by any decisions of the Advisory Committee. Yet, it is scarcely conceivable that its recommendations could be ignored *in toto*, and we may rest assured that a body presided over by Sir Leslie Scott, K.C., and including among its members Sir Reginald Blomfield, Mr. Raymond Unwin, and Mr. Longstreth Thompson (representing the R.A., the R.I.B.A., and the Town Planning Institute respectively), will produce a scheme very different from the one which Parliament rejected.

FROM SLUM TO SLUM

A serious situation is arising in relation to many of the post-war subsidized housing schemes, where, owing to the high rentals charged to tenants and purchasers, both overcrowding and under-occupation are the rule. I touched on this subject some months ago in referring to the housing schemes at Hull; and now from several other sources the same story is told again. A letter to the editor, published last week, sets forth a typical case at Slough with admirable clarity. Whether it be, as some suggest, that the zoning of houses at twelve to the acre adds too much to the capital cost, or whether it be merely the high cost of building combined with the high rate of loan interest, or all three, it is becoming obvious that an increasing mass of the population cannot afford to pay the rents or instalments asked for the typical Council house, and they are therefore driven to making little slums of their houses by filling them with sub-tenants or else they move out of the housing schemes back into the real slums.

*

It is very depressing, and it is a very urgent matter, that this large section of the population, earning under £3 a week, should be housed economically. If the State is unable to bear the burden of making up their losses, then architects and builders *must* learn how to build them houses for less money : in blocks if necessary, in terraces and long formations even. It can be done, and if we don't do it, it will be done so badly that one shudders to think of the future.

PUZZLE : FIND THE HORSE

In Roy Campbell's *Adamastor*, published the other day by Faber and Faber (writes Mr. W. S. Purchon), I came across the following verse which seems to me to apply not only to certain recent literary efforts, but also to be of some interest to your readers in an extended application to architectural activities :

On some South African Novelists

You praise the firm restraint with which they write—
I'm with you there, of course :
They use the snaffle and the curb all right,
But where's the —— horse?

I hope to make some observations on architectural criticism next week.

THE BLACK CURSE

Whilst the worker in this enlightened age labours under conditions rendered as hygienic as possible by the expenditure of vast sums of money, not only on adequate heating and lighting but on dental, surgical and welfare work generally, too often his home life is spent under the dreariest of conditions, due to the grime and gloom diffused by the chimneys of the self-same factories in which he spends his working hours, and without the ameliorations that money can bring. Sir Francis Goodenough, in his presidential address to the Royal Sanitary Congress at Margate last week, laid particular stress on the damage done to the health and happiness of workers in our towns and cities through coal smoke cutting off a large percentage of sunshine. He spoke of the vital importance of rousing public opinion to the foolishness of burning crude coal wherever gas, electricity or coke could be used—and there are few circumstances in which one or other of these alternatives cannot economically displace it. We now have efficient drains, pure water and clean milk, but the time has not yet arrived when we can boast of untainted air.

*

An instance of the proneness of the general public to sacrifice hygienic considerations in its inability to recognize vitamin D in terms of £ s. d. was stressed in the same address. The flue as a means of ventilation is not given

the important consideration it should have, and a danger which is arising as an outcome of the problem of hygienic heating is the growing tendency of builders to erect houses with flueless bedrooms. This is done on the assumption that electric fires only will be used, and in the belief that flues are not then necessary. In point of fact, in a large proportion of cases electricity is found to be too expensive for general use; a cheap oil stove or flueless gas stove is installed, and the result is a state of affairs utterly unhygienic at the best, and at the worst fraught with positive danger to life. Here is a matter in which public opinion needs education.

DWARFING ST. PAUL'S

After celebrating the restoration of St. Paul's dome with such very great pomp, it will be a deplorable anti-climax if we do not take advantage of the renewed pride in the great Cathedral to save it from further danger. There is one obvious circumstance which from time to time has already given cause for apprehension, namely, the rebuilding of the structures aligning upon St. Paul's Churchyard. The leases of these are gradually falling in, and we may confidently expect that the existing buildings will be replaced by others very much taller. But the cutting of deep foundations for these latter will undoubtedly disturb the soil surrounding the Cathedral and render its fabric less secure.

★

And besides this question of structural engineering there is an æsthetic consideration—one which we cannot ignore. The present balance of scale between the Cathedral and its neighbours will be entirely upset if tall commercial buildings are to be allowed to rear their heads so near to it. The time-honoured predominance of the Cathedral will cease and there will be an unpleasant conflict of architectural claims. Is it too late to suggest that the L.C.C. should pass a special building regulation forbidding the erection of taller structures around St. Paul's Churchyard? Even if it were necessary to compensate building owners for any sacrifices which the enforcement of such a policy would entail, the Metropolis is surely rich enough to bear this expense.

" SOUVENIR, SIR? YESSIR ! "

The pinching of souvenirs is a queer habit. It is human, I suppose, and as deeply embedded in the personal complex as that other habit of leaving initials on the tops of towers and in the nameless depths. But who would think that bits of the Burlington Arcade would comfort anybody—even Americans? I would as soon have a lump of asphalt from Victoria Street as a piece of the porter's lodge from Piccadilly. The demand is met, of course. Shopkeepers in the Arcade keep a stock of Regency fragments to hand to visitors craving for mementoes, and they go happily away. If it were not that age is a necessary constituent in the composition of a souvenir, architects might leave a stock of wedges and moulding ends as a protection for their joinery.

"Autumn," the ivory carving for which Professor Garbe has been awarded the silver medal of the R.S.B.S.

GAS-MASKS FOR BEETLES

Peace finds uses for some of the worst horrors of war. A church in Austria, riddled by the death watch beetle, was thoroughly doused with poison gas as a means of curing the disease. All openings were sealed up, the place was filled with gas, and left so for a week. It is not yet recorded whether the gas penetrated as far as the fastnesses of the beetles' lairs, but I have a mental picture of antiquaries and such people pacing their studies restlessly, waiting for the telegram that brings the glad tidings of complete victory over the death watch—and another, of Dame Nature, implacable as ever in the face of outrage, instigating measures for the protection of the beetle legion. Unless they can be annihilated at one stroke, who knows but what the insect of a century—or two, or five—hence may be hatched with a natural gas-mask?

DOING THE WRONG THING

The ordinary man must sometimes think us very odd. For years we have been telling him to look after his old buildings, not to destroy wantonly, to respect the past. When, in excess of zeal, the worthy publican strips the plaster from a fine old gable and leaves its beams showing glaringly black against white, like a pair of braces against an evening shirt, he gets the shock of his life when we tell him that he has done the wrong thing. " Oh," says he, " I've made it just like it was in the old days of half-timbering. Real genuine beams, those are ! "

★

It's hard to explain what one means by " surface," and how seldom black and white was to be met with in the past; and so, discouraging. But it must be done; knowledge must be acquired even if it hurts, and I know many workmen who would understand at once what we mean. But they are usually silent fellows, and not given to advising their mates.

" HOARDINGS " IN THE SKY

Under the above title *The Morning Post* of the 4th instant announced the newest form of advertisement, which has the appearance of a hoarding 120 ft. long and is towed by aeroplane across the firmament. It seems that an " ad." covering 2,000 sq. ft. can be exhibited in any " flying weather." On the same day I read in a letter published in *The Architectural Review* that advertising magnates habitually read Richard Jefferies and W. H. Hudson; no doubt it was these authors who drew their attention to the wasted fields for advertisements aloft. They should also read Wordsworth, who remarked " My heart leaps up when I behold a rainbow in the sky " (how much more a cup of Oxo), and they should study Shelley's " Cloud," which is full of good ideas for days when visibility is but moderate.

ASTRAGAL

The site on which the Streatham Astoria is erected is on Streatham High Road. The front and side elevations are treated in stone and multi-coloured bricks, and the roof is covered with tiles. The wood shutters to the top story windows are painted green.

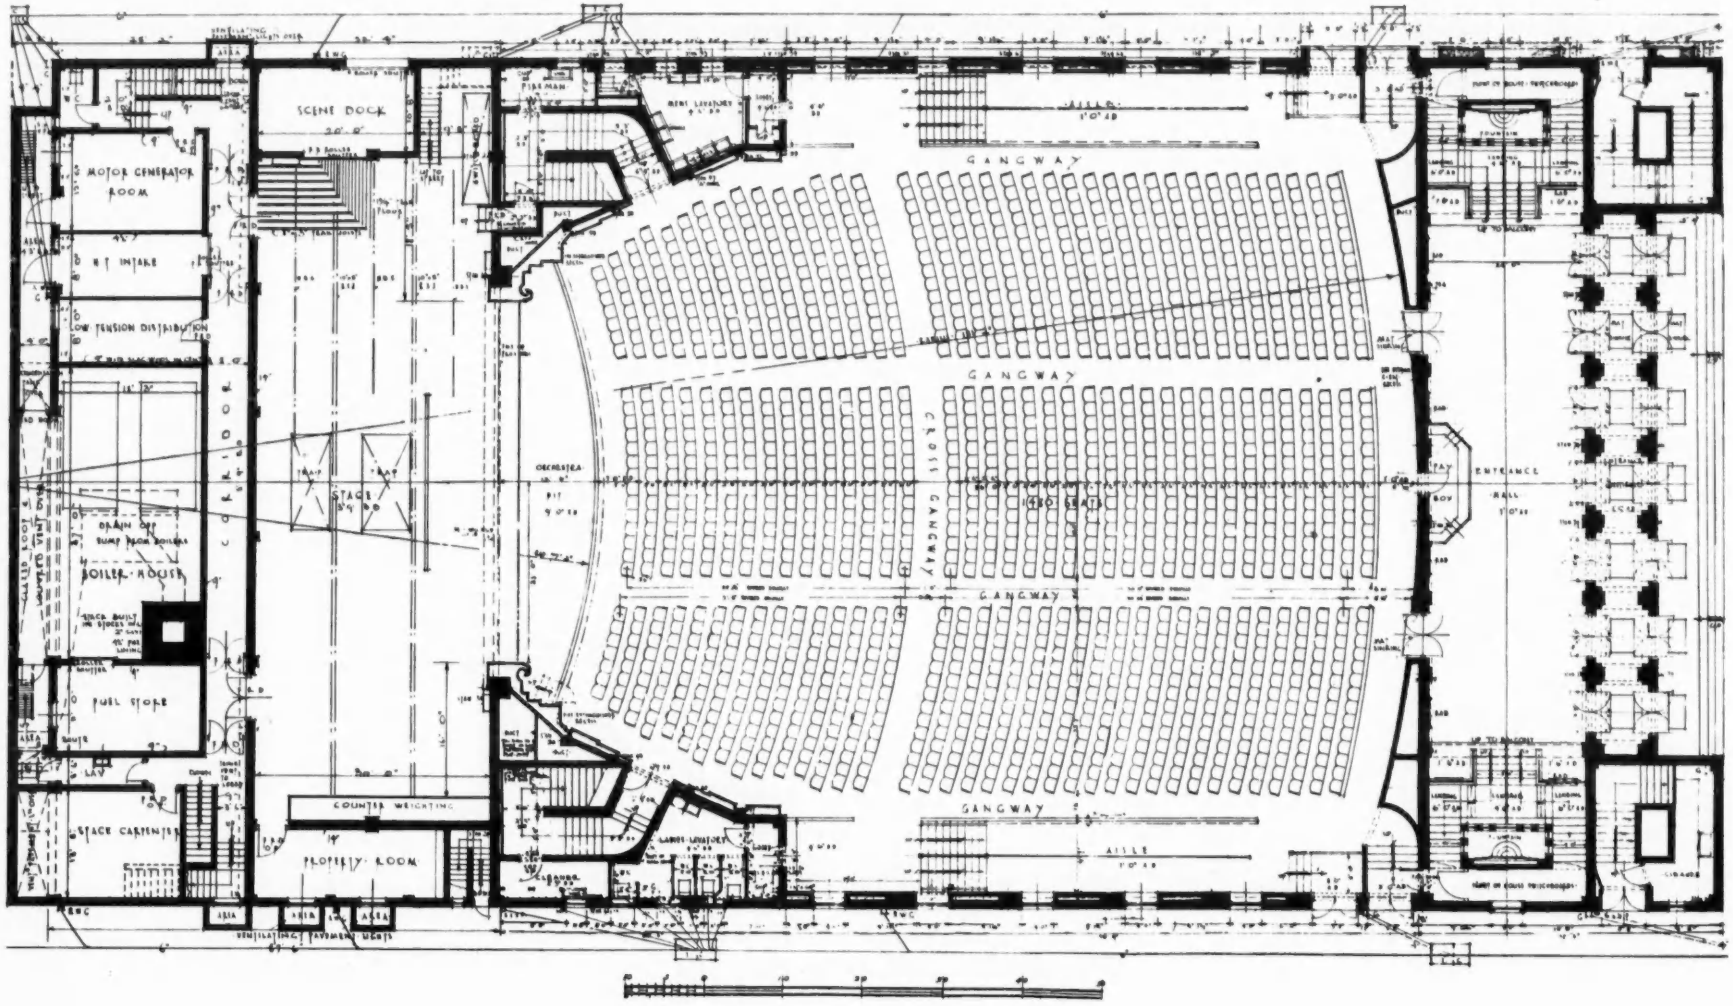
THE LATEST ASTORIA: STREATHAM

DESIGNED BY E. A. STONE

THE Streatham Astoria, the most recently completed of the large cinema theatres which are being provided in the outlying districts of London, was formally opened last week by the Mayor of Wandsworth.

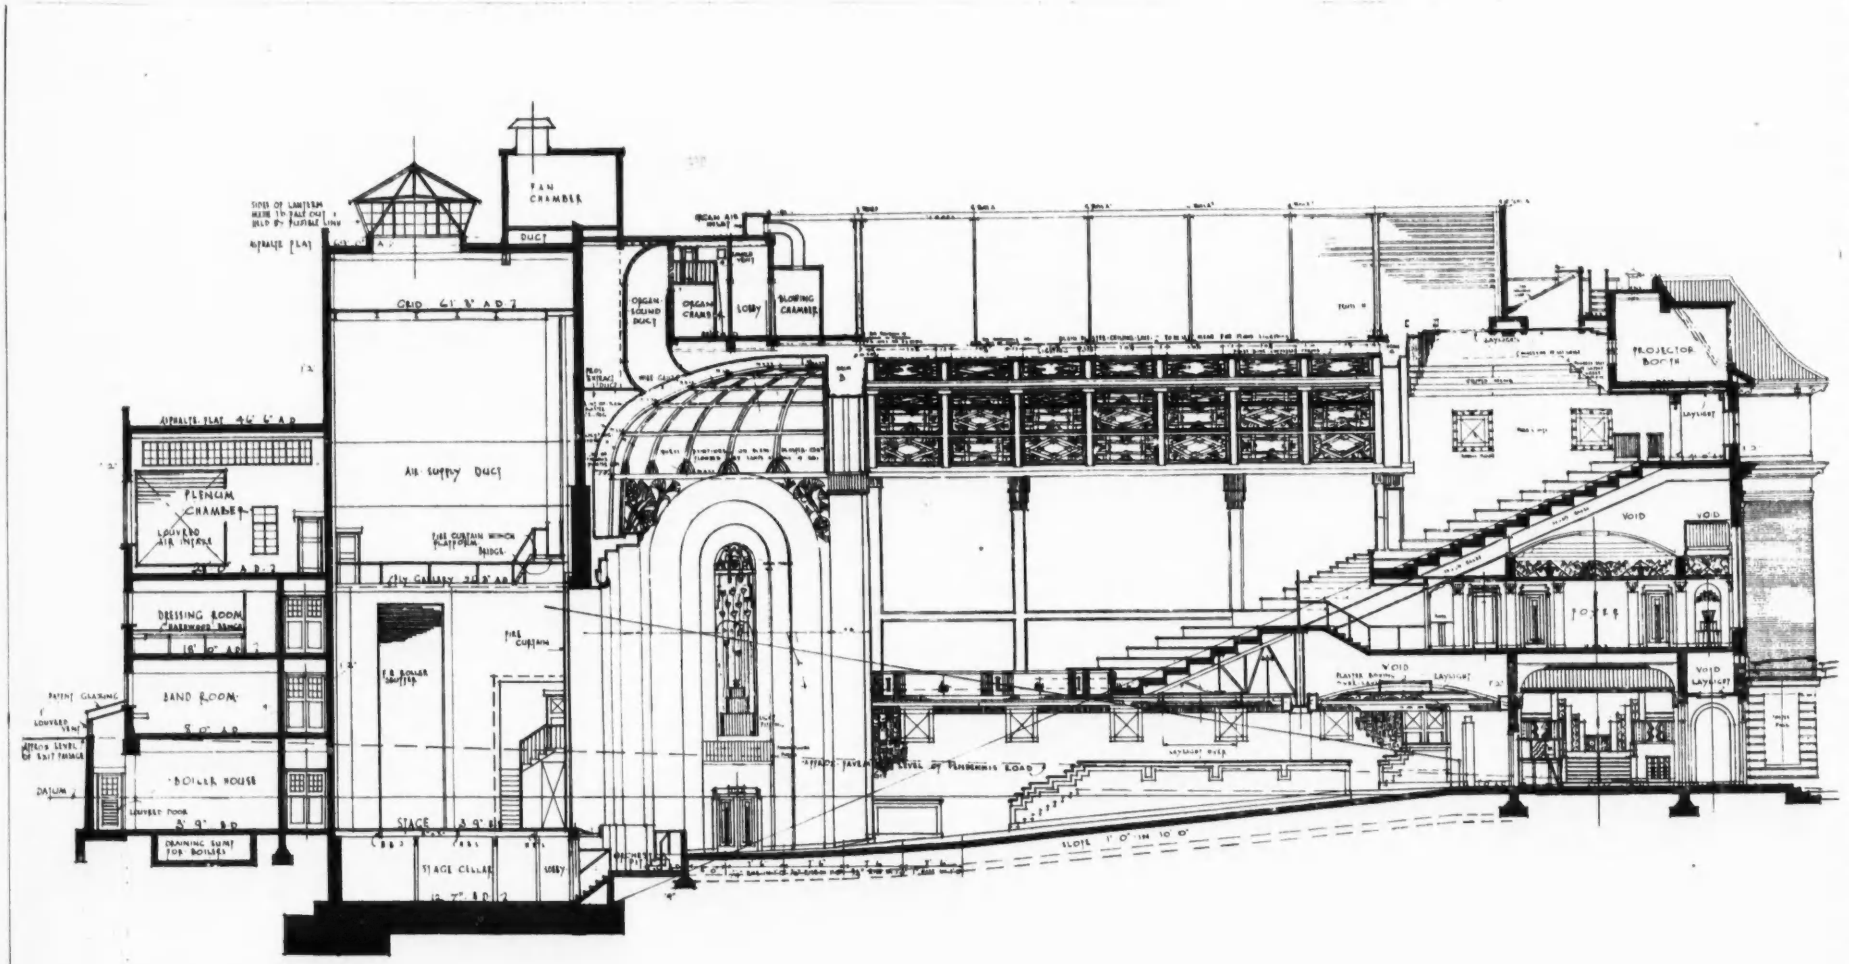
In the auditorium the predominant colour is pure vermilion, all mouldings and embellishments being black and gold. There are two ceilings, one above the other. The lower ceiling is formed of perforated grilles in panels, and is hung about two feet from the main ceiling, which is plain and light in colour, in order to reflect concealed lighting through the grilles below. The ceilings are supported between two arches, one at the proscenium end and the other at the back of the theatre over part of the balcony. The remainder of the balcony has a flat stepped ceiling covered with narrow reeding.

The flank walls of the balcony are divided into three bays by pilasters, the caps of which form glass and metal light fitments. Filling the whole of these bays are two large mural decorations in highly-coloured relief: one represents a hunting scene with horses and chariots and lions, and the other a river scene with boats, the backgrounds being modernized Egyptian landscapes.



Flanking the proscenium are two arched recesses over the exit doors from the stalls, the tops filled with modelled lunettes and a stepped glass light fitted on a curved and fluted base below. Tableau curtains are of gold trimmed with bright aluminium plates. The seating is green on a carpet of golden brown, cream and black, in a repeat pattern of fan-shaped lotus flowers.

Some 8,000 lamps are employed to provide the colour and effect lighting for the stage and auditorium. The whole of the stage section is equipped with automatic sprinklers, and the safety curtain installed is said to be the largest and most formidable piece of machinery in any theatre in Great Britain. In the event of a fire on the stage, at the same time as the safety curtain descends a switch is operated which reverses the circulation of air and draws any smoke in the auditorium away from the audience towards an extract in the ceiling.



Staircases lead to the foyer through openings in the shorter walls at both ends of the entrance hall. On the half-landings are lighted and glazed fountains, enclosed by metal grilles set between square pillars of silver mosaic, with responds, of the same design and material, forming the dado of the walls opposite. The metal work of the balusters and the radiator grilles is finished in silver.

The ladies' rest-room is unique. It has a triple-coved cornice and glass box lighting at frieze level.

The settee is specially designed with floodlights in the back to fit under a coloured relief mural decoration of an Egyptian female figure bathing amidst lotus flowers. The lower part of the panel is covered with grooved glass, to represent water, fixed into a chromium plated metal frame. The walls are stone colour, and the dressing-tables, with metal legs in the form of leaves, have lighted glass tops.

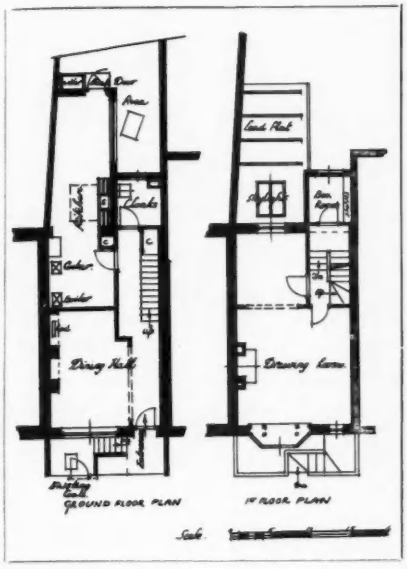
Ground-floor plan. Seating accommodation is provided for 1,480 in the stalls and 1,094 in the balcony, a total of 2,574. A perfect view of the stage and screen is obtained from every seat, while the acoustic properties are such that a stage turn or "talkie" is clearly audible from every part of the vast area covered by the stalls and balcony. Ample exits are provided, and the whole theatre is rendered fire-resisting in accordance with the regulations of the London County Council. The house contains its own complete power unit, beyond the stage.

The Streatham Astoria.] [*By E. A. Stone.*

Longitudinal section. A fully-equipped stage is provided, complete with counterweighted scenery. Beyond the stage are a large number of well-lighted and equipped dressing-rooms for the use of artistes. Air which has been washed, dried and warmed, is forced into all parts of the theatre at ceiling level, and is finally extracted from under the seats. This circulation is in progress continually whilst the building is occupied. Particular care has been taken to ensure that no draughts are produced. The auditorium has a false ceiling.

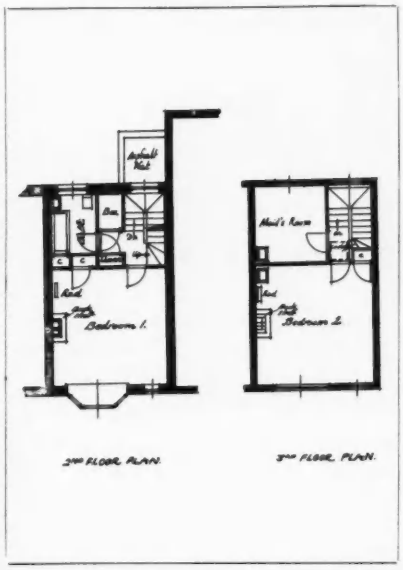
The entrance hall has a coved and fluted silver cornice, resting on grooved pilasters, with black, green, and silver modernized caps. Wall surfaces are pale biscuit, streaked vertically with green and silver, in plastic paint texture.

The foyer has a semi-vaulted ceiling and an open plaster frieze supported by square piers with lotus caps. Walls are dull red. The frieze, in bright green, gold and black, is flooded by concealed lighting.



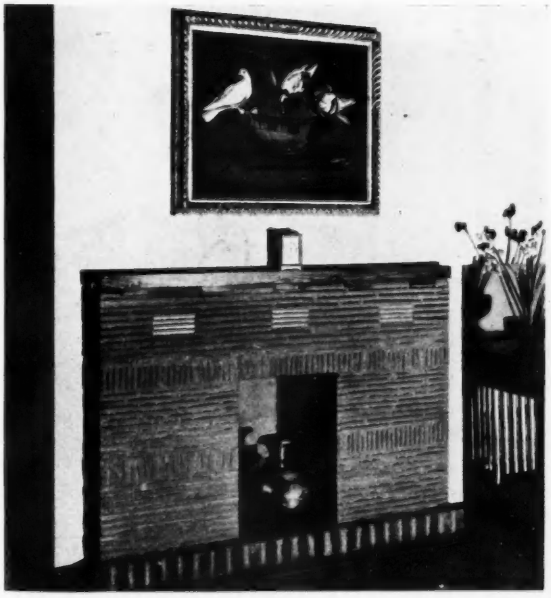
The Streatham Astoria.] [*By E. A. Stone.*

The proscenium opening is framed by a broad coved architrave fitted for concealed lighting, and is surmounted by an open red, black and gold treillage in the form of a semi-dome. The close wire mesh of the organ grille is masked by a painting in keeping with the mural panels on the balcony walls.



A SMALL HOUSE IN BROMPTON, S.W.

DESIGNED BY ALCOT BATHER

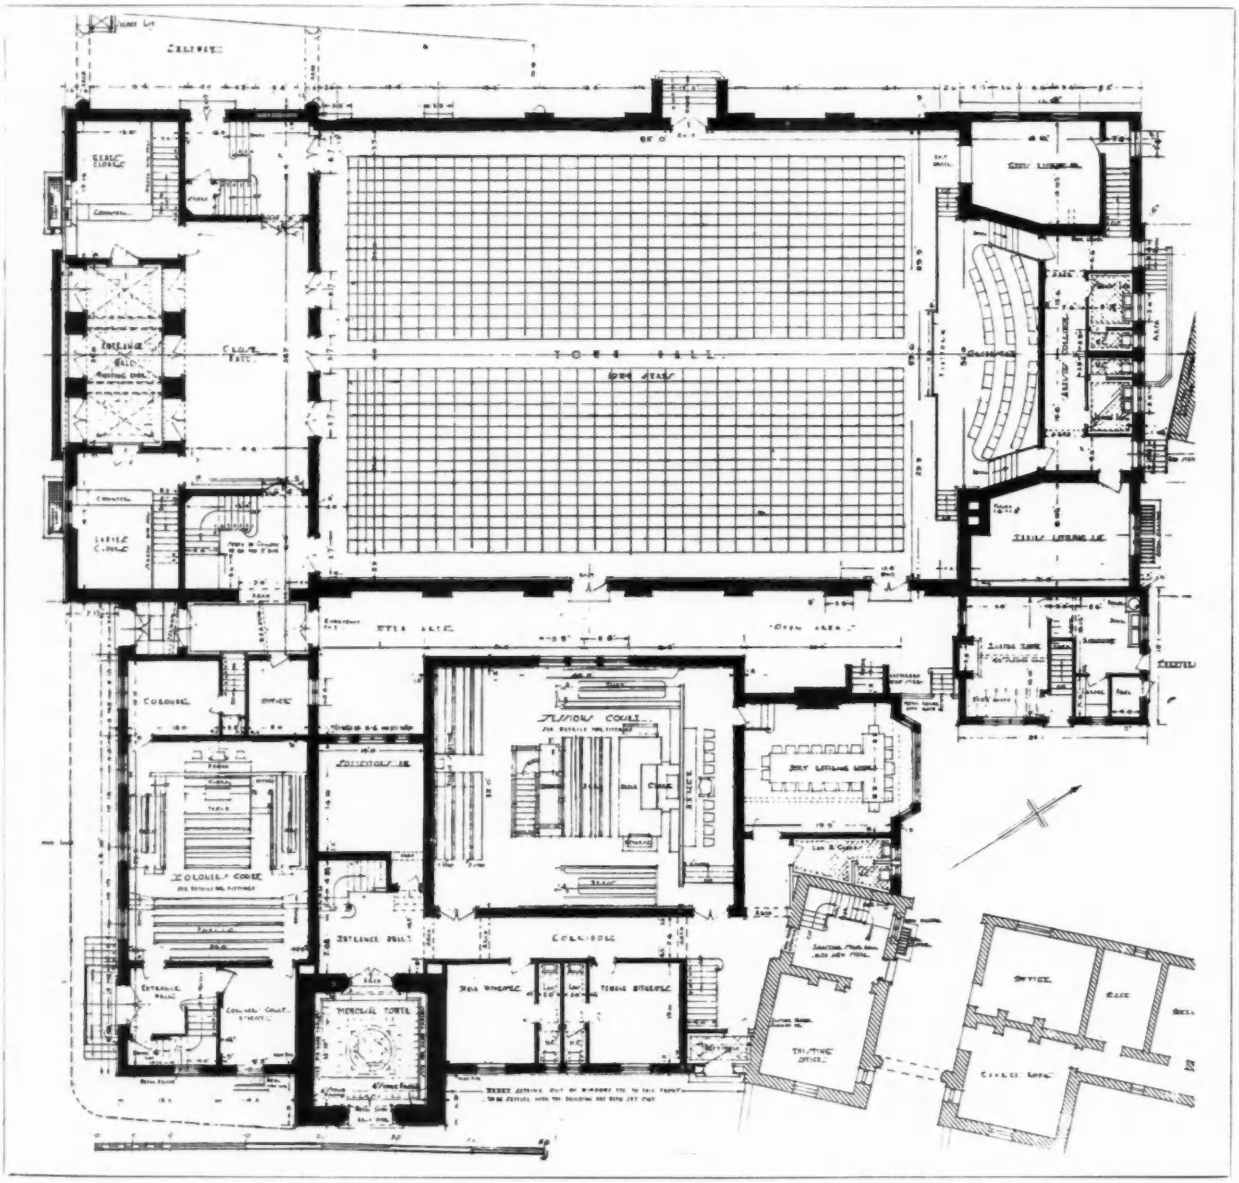


The elevation of No. 25 Montpelier Row. The site was a very narrow one, the front measuring only one-third of the depth.

THIS house is situated in a quiet, though popular, street in the west end of London. The elevation is finished with rough cast. A coping of pantiles and the projecting bay windows to the first and second floors, the former emphasized by a plaster fan, serve to give character and individuality to a limited frontage. A low parapet wall in patterned brickwork screens the entrance from the pavement, and the front door is treated with a grass-green paint, stippled on an ivory-white background. Metal casements and leaded lights are used throughout.

Internally, the joinery work is treated with Solignum and wax-polished, paintwork being entirely eliminated, with the exception of the bathroom and kitchen. The living-rooms have parquet floors, and the treatment of the fireplaces in sand-faced tiles and with brick hearths has received special consideration. All bedrooms have fixed lavatory basins.

The fireplace in the dining hall; and a corner of the drawing-room, showing the oriel window and fireplace. The internal decoration of the house generally is in a soft shade of buff, except in the drawing-room, which is finished with dove-grey distemper.



PUBLIC BUILDINGS, DUDLEY, STAFFORDSHIRE : ERECTED FROM DESIGNS SUBMITTED IN COMPETITION BY HARVEY AND WICKS

THE designs of Messrs. Harvey and Wicks for the new public buildings and war memorial at Dudley were awarded the first premium in an open competition, promoted by the Corporation and assessed by Mr. W. Curtis Green, A.R.A. There were fifty-five competitors.

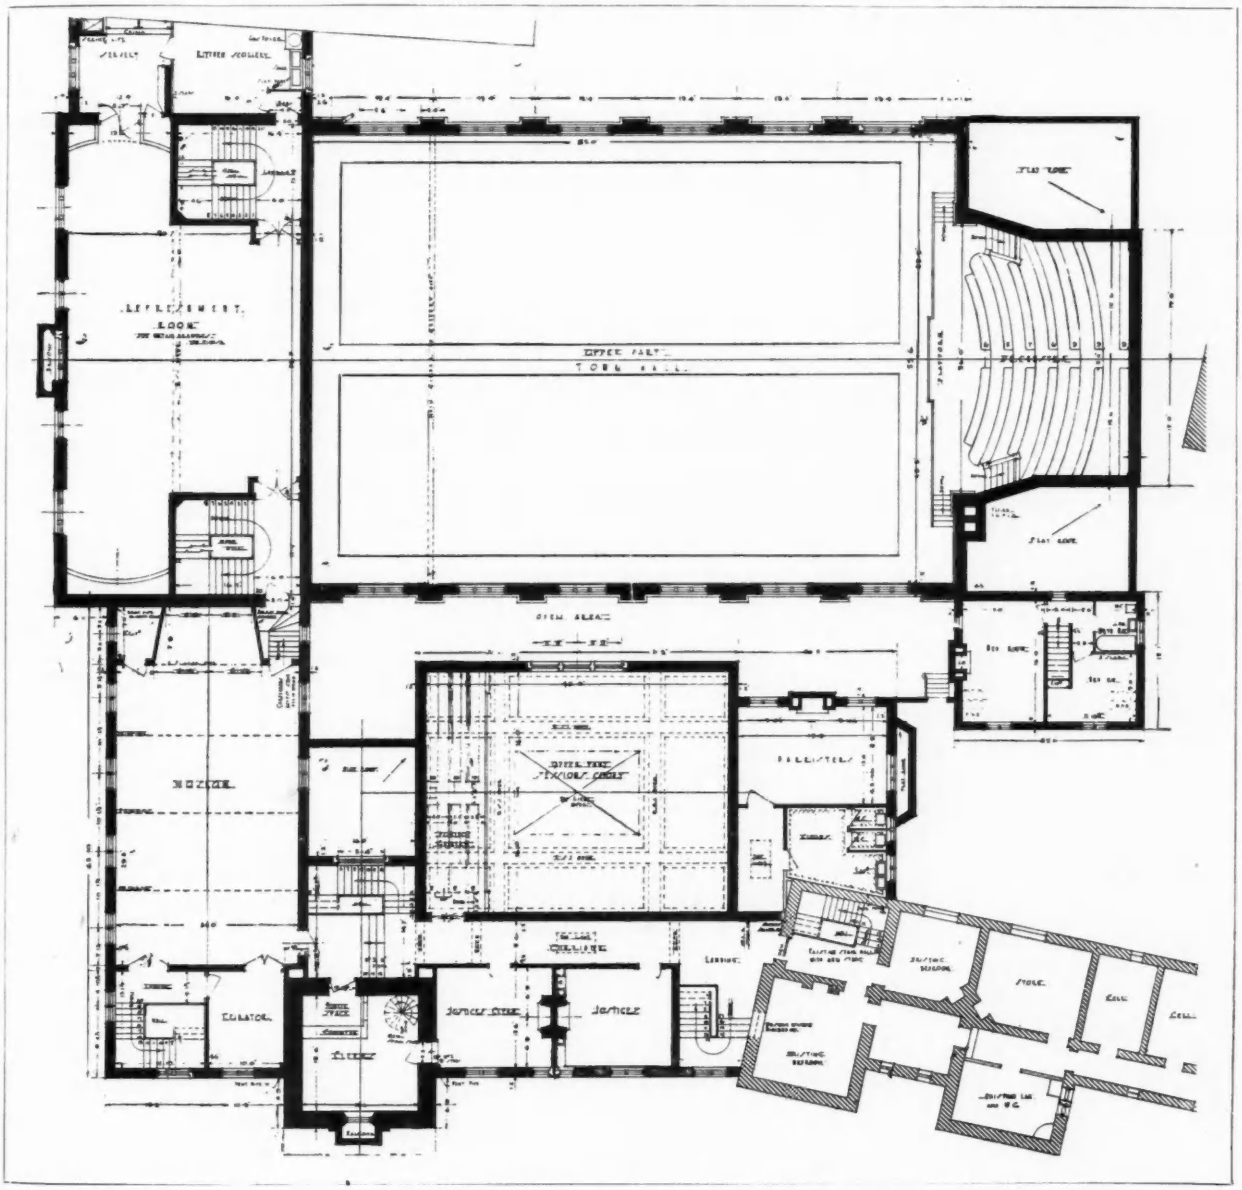
The most striking feature of the buildings when approached from Stone Street is the war memorial, which takes the form of a clock tower. Inside is a memorial chamber, over the entrance to which, cut in the stone, are the following lines, written specially for the memorial by the late Thomas Hardy, O.M. :

> If you think, have a kindly thought,
> If you speak, speak generously
> Of those who as heroes fought
> And died to keep you free.

Above, in the tympanum of the window, is a carved and decorated

Ground-floor plan. The public buildings occupy a site at the corner of Priory Street and St. James Road, extending from the old police buildings to the public library. The accommodation includes a town hall and offices, war memorial, sessions court, grand-jury room, and coroner's court. Buildings previously existing are shown hatched ; new work, in black.

panel with the figures of St. George and the Dragon. The memorial chamber is built in stone and has a simple ribbed stone-vaulted roof, springing from stone corbels in the four corners, carved in the form of the national emblems—rose, thistle, shamrock and daffodil. The keystone of the roof is carved and pierced, and contains the lamp to be lit and kept always burning as a symbol of the great sacrifice of the 1,000 men of Dudley whose names are carved on the walls of the chamber.



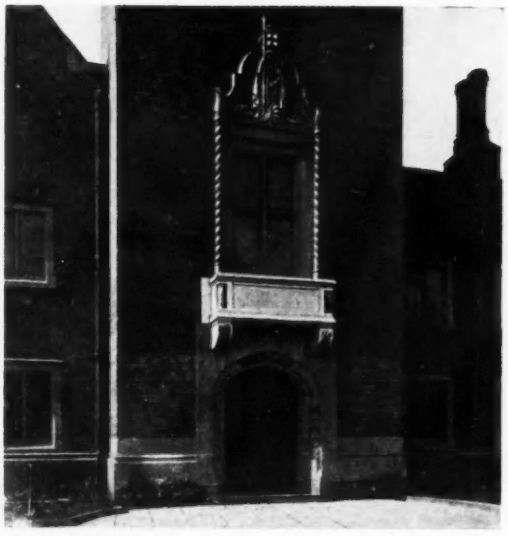
The frontage to St. James Road is occupied by the town hall buildings, coroner's court, and Brooke Robinson museum. The central window of the refreshment room is carved and decorated with the Dudley arms, and has a balcony in which is cut in stone the following inscription :

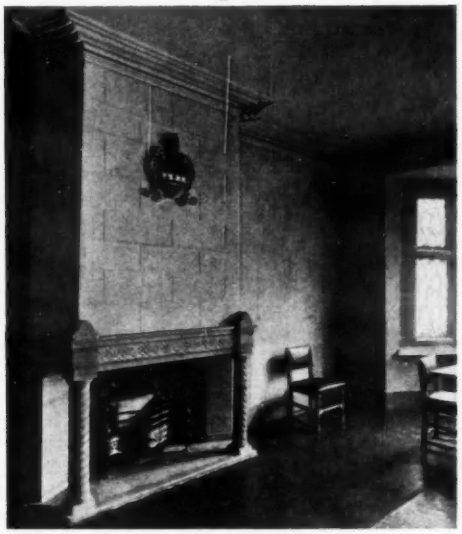
> This building was erected and the works of art in this building were placed herein under the provisions of the Will and Codicil of Brooke Robinson, Esquire, for many years M.P. of this Borough, of which he was a native, in memory of his wife, Eugenia Frederica Louisa, and her father, George Richmond Collis, Esquire.

The town hall accommodates 1,500 people. It has a spacious platform and orchestra recessed behind a proscenium arch, and a large gallery at the other end.

The hall is decorated with modelled plasterwork, which will lend itself to rich colour. The ceiling is segmental in shape and the walls are panelled to a height of 6 feet in oak, and pierced above with tall stone mullioned windows.

The principal artificial light is from projectors concealed in boxes at the foot of the windows. These projectors throw the light on to the ceiling, from which it is reflected with a soft and even distribution. Glare and the distraction of hanging fittings are avoided.

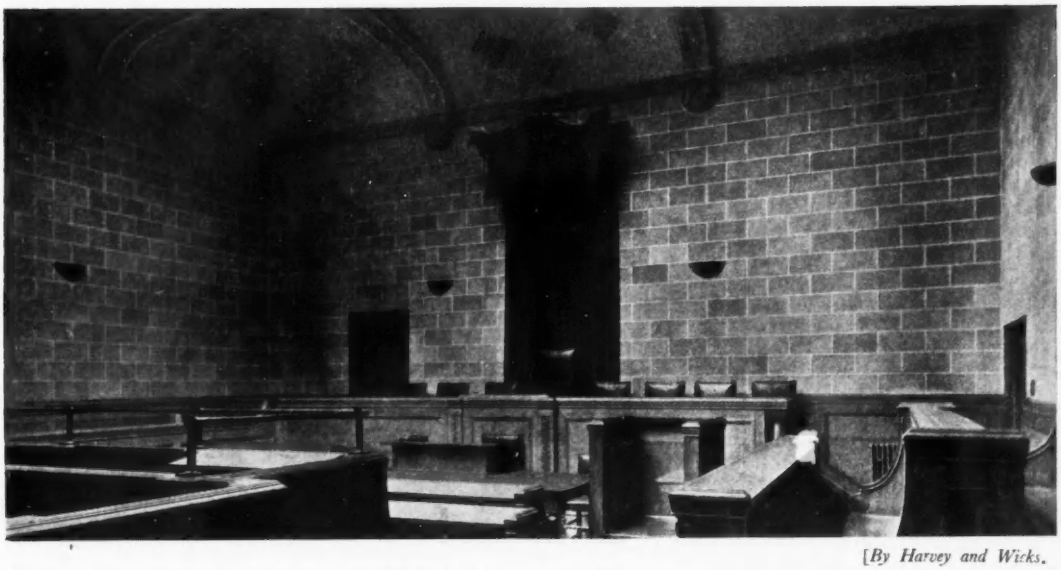




On the first floor are the museum and refreshment room, and the upper parts of the town hall and sessions court, both of which are two floors high. In the museum is the collection of the late Brooke Robinson, for some time a Member of Parliament for the borough, under whose will the building has been erected as a memorial to his wife, and her father.

C

The buildings have been specially designed with a Tudor influence to harmonize with the old public buildings. The battlemented tower on the right is part of the old police buildings. An important feature is the clock tower, which forms the war memorial of the borough.



Public Buildings, Dudley.]

The balcony at the base of the war memorial tower ; and the fireplace in the grand-jury room. As will be seen from the general view, the only enrichments on the tower are the entrance and windows, of carved stone, and the brilliantly-painted clock dials.

The town hall is entered from St. James Road through recessed and carved archways having wrought-iron gates. Over the archways are tall stone-mullioned windows lighting the refreshment room. The central window is richly carved, and decorated with the borough arms of Dudley.

[*By Harvey and Wicks.*

The sessions court is panelled and entirely furnished in oak, and contains a gallery across one end for the use of the public. In close proximity to the court are the grand-jury room and the apartments of the magistrates, barristers, solicitors and witnesses.

Settling-Up Honeywood : vii

THE LITTLE BILL OF EXTRAS

BY KARSHISH

(H. B. CRESWELL)

Sir Leslie Brash, the client, is concerned for "the purity of our sanitary provisions," but Spinlove, the architect, and Grigblay, the builder, consider that nothing is wrong. Certain minor defects have been complained of, but the only serious matter is the failure of the inside paint-work, for which, however, both Spinlove and Grigblay disclaim responsibility. There have been indications of a heavy bill for extras, but no exact particulars have yet been forthcoming although the architect has repeatedly asked for them.

GRIGBLAY TO SPINLOVE (PERSONAL)

Sir, 24/5/26.

I happened along Honeywood way and looked in, as Jossling is clearing up after finishing road which I hope is to your approval, and I just write to drop you a hint that the old gentleman is still worrying over his defective drains, as I gather you have nothing to do with a sanitary expert he has called in. There was a very young gentleman, with two handy-men to help him, had been putting the water test on the vertical soil and filling the pans to the brims, and so on up to the second floor servants', like a piano-tuner at work, till he had near 30 foot head of water above the first man-hole—so Jossling told me—and enough to burst the pipes. I found him down at the disconnecting chamber with a parcel of rockets and boxes of matches to find out with smoke how much damage he had done with water.

The drains don't ventilate Mr. Grigblay he says, I've put three rockets in and been waiting half an hour and I can't see any smoke out at top yet. You're in too great a hurry I told him; you keep at it another hour or two with all the rockets you've got there, and you'll see a bit of smoke right enough. This sucking expert had wetted all the pipes right up, and made them stone cold, and then expected to find a nice draught! However, a fashionable gentleman drove up in a saloon and rang the front bell; Jarrad, of Quince and Jarrad, patronized by Royalty—I've seen something of their doings before now. Jarrad didn't get asked in to tea, it seems, for he soon came round to find out how his young hopeful's drain-bursting experiments were getting on; and then they brought a pressure pump and other gear from the saloon and so I left him to go running his nose round the joints like a terrier dog, and rub the skin off same as he does at his Royal Palace to try and catch a whiff of smoke after he's pumped up the ten pounds or whatever the pressure is they keep on their mercury gauges and contraptions. I hope no harm will come Sir, but his kind are very mischievous fellows that get their living finding fault with other people's work, and the more faults they find the bigger men they hold themselves out to be. I thought best to let you know what was going forward, and if you hear any complaints perhaps our good friend Mr. Potch will have a kind word or two to say to Mr. Jarrad or to anyone else who claims he knows better ways of finding fault with other people's drains than what Potch does.

Apologizing for troubling you but thought you better know what is afoot.

Yours truly,

Brash, as we have noticed, commonly does not know the right thing to do; or, when he knows, frequently does not do it. He ought to have told Spinlove he wanted the drains tested by an independent authority, and either left Spinlove to nominate someone or directed him to employ Quince and Jarrad. To go to the firm behind his architect's back is, if not a definitely hostile step, a sharp reminder to Spinlove that he has lost his employer's confidence. Brash's insensitiveness, however, probably exonerates him from any intention of wronging Spinlove; and Spinlove has invited this treatment by his unaccommodating attitude and his impatience at the suggestion that all is not as it should be. Grigblay's apprehensions are justified, though his contempt for Messrs. Quince and Jarrad is not at all likely to be. Mr. Potch is the District Surveyor who brought Spinlove much trouble while the house was being built.

SPINLOVE TO GRIGBLAY (PERSONAL)

Dear Mr. Grigblay, 26/5/26.

Yes, you are correct — I have heard nothing of any drain testing; but as I am sure everything is right no amount of testing can find anything wrong.

I am obliged to you for writing.

Yours truly,

Spinlove is in a fool's paradise indeed, if he can welcome the approach of the sworn tormenter of drains—for to that dire body I divine Quince and Jarrad to belong.

(Continued on page 54)

GRIGBLAY TO SPINLOVE (ENCLOSURE TO LETTER OF 29/5/26 : SEE PAGE 54)

INTERIM SUMMARY OF VARIATIONS

(I have numbered the items and added in italics the thoughts likely to be awakened in Spinlove.)

	AMOUNT OF CONTRACT £18,440 0 0	
1.	Alterations to kitchen .. .. say	400 0 0
	("My goodness! It cannot possibly amount to as much as that! I told Brash 'about £100'—but that was before I had made the working drawings. Tinge must measure carefully. Damn!")	
2.	Piping ditch (Day-work account)	114 5 6
	("Damn! I told Brash £20. They must have included other work on the time-sheets. I ought to have insisted on the day-work vouchers being sent in regularly. Tinge must check carefully.")	
3.	Pulling down and altering partitions and restoring. (Day-work)	137 9 0
	("Pity it is not more. Serves B. right for letting Lady B. interfere.")	
4.	Extension and alteration of drains (Day-work)	84 17 6
	("That must be the fish-tank extension. No business of mine, thank goodness!")	
5.	Extra price picked facings (Hoochkoft)	92 0 0
	("What the . . .! Why, they agreed to send picked after I refused to allow extra! No go, my friends!")	
6.	Cutting out defective and making good (Day-work)	8 14 0
	("Hoochkoft and Grigblay can settle that between them. I told H. I would not have the soft underburnt bricks, and G. that he was not to use them.")	
7.	Raking and pointing to order in lieu of plain struck joint (Day-work)	49 6 3
	("Frost got at the joints. That's all right—Act of God. Tinge had better fix rate and measure. No justification for day-work—besides, how could they separate the time when the joint was struck as the bricks were laid?")	
8.	705 yds. sup. pointing to order in lieu of plain struck joint at	

8.	795 yds. sup. pointing to order in lieu of plain struck joint at 4½d. per ft.		134	3 0
	("Oh, I see! So the last item was for raking and pointing joints damaged. Oh! Right!—but Tinge must check the measure and rate.")			
9.	Work in draining cellar (Day-work)		84	17 9
	("Oh, Lor! Twice what I expected! All that tunnelling through walls, I suppose! Wish I had checked day-work vouchers at the time.")			
10.	Extra foundations to order (Day-work)		66	3 9
	("What's this? 'To order'? Not mine. There was a little give and take, certainly. Tinge would have measured the whole if there had been talk of any extra. No go, my lad!")			
11.	Timber garage outhouse (as estimated)		372	10 0
	("Very cheap too, and a clinking design, I will say. Old B. very pleased. A decent old boy.")			
12.	Extension of washing place (Day-work)		54	9 0
	("Why couldn't B. take my advice and include it with the building? He was sure to want it. Would have saved him money. Must be measured, anyhow. Day-work is all nonsense.")			
13.	Terrace steps (special charge as notified)		11	6 3
	("Don't know anything of this. Lady B. perhaps.")			
14.	Alterations to back stairs to order (Day-work)		41	12 0
	("That mistake of mine! They've charged far too much. Must question it.")			
15.	Alteration to ground-floor window heads (Day-work)		65	10 0
	("I won't allow it. It was Grigblay's mistake, not mine. Anyhow I never sanctioned an extra.")			
16.	Repairs and new bottoming to Entrance Road (as estimate)		62	0 0
	("A low charge. Wish I had got estimates for everything; but how the deuce can one, with all the interferences and hurry?")			
17.	Renewing two broken catch pits (Day-work)		4	13 0
	("They ought to have included for these when they estimated for the road repair. Out it goes!")			
18.	Oak floor to kitchen passage (To order)		14	12 0
	("Lady B. I forgot this. They never had order for extra.")			
19.	Waterproofing chimneys (estimate)		42	10 0
	("Not done yet.")			
20.	Various minor works and attendances		192	6 8
	("Ridiculous! I must have particulars. They must show the orders for all extras.")			
			2,033	5 8

EXTRAS ON PROVISIONS

("Expected this. Not altogether my fault.")

21.	Grates and range (Chiddle, etc.)		22	0 0
22.	Electric wiring (Poggle)		21	5 0
	("I couldn't know they would want so many points.")			
23.	Electric light fittings		48	4 6
	("Well, I told Brash what was allowed.")			
24.	Sanitary fittings (Wide)		53	17 0
	("He did it with his eyes open.")			
25.	Radiators (additions and alterations)		28	0 0
26.	Locks and furniture		32	4 9
	("I cut this too fine.")			
27.	Casements and glazing (Watkins)		13	10 6
28.	Special opening gear (do.)		27	7 0
	("This was absolutely necessary.")			
29.	Extra journey money *re* (do.)		11	13 3
	("When Lady B. sent the man away, I suppose.")			
30.	Balance of small variations		21	13 8
	("What does this refer to?")			
	Total		279	15 8
	Profit		48	3 0
	("What a nuisance! Tinge must check the profit charge carefully.")		327	18 8

			2,033	5 8
			327	18 8
	("Oh, I say!")		2,361	4 4

SAVINGS ON PROVISIONS

31.	General contingencies		100	0 0
	("I thought it was £300—but now I remember I cut off £200 when I was trying to get down the contract price. By Jove, that's unlucky! Damn!")			
32.	Well (omitted)		135	8 0
	("I wish I had not cut down that provision so much")			
33.	Saving on ram and piping, etc., in lieu of pump		21	0 0
	("I expected a much larger saving. Oh, dear! This must include the special pipe and tank linings the analyst recommended. That is not my fault, anyway.")			
34.	Omission of return terrace wall	say	100	0 0
35.	Entrance gates		4	2 4
	("Every little helps.")			
36.	Omission of sun dial		59	1 0
37.	Various credits and allowances		32	4 5
	("What does that mean?")			
	Total		451	15 9
	Profit		16	14 0
	("Why have they allowed such small profit?")		468	9 9

		468	9 9
Total		1,892	14 7

("Oh, Lor! There will be an awful row about this! Brash has no idea of how things are. Anyhow, it's not my fault. I saved him the cost of the well, too. Let's see how much of all this am I actually responsible for?")

GRIGBLAY TO SPINLOVE

Dear Sir, 29/5/26.

As requested, we send you herewith summary of variations and shall be glad to receive certificate for £1,300 further on account. We have heavy commitments just at this time, and as the amount fell due in the middle of February last we shall be glad to receive your certificate and Sir Leslie Brash's cheque without further delay. The account, we may point out, now stands as follows :

	£	s.	d.
Contract	18,440	0	0
By variations account ..	1,892	14	7
	20,332	14	7
Less 5 per cent. retention	1,016	11	6
	19,316	3	1
Already certified ..	18,000	0	0
Due February 10th ..	1,316	3	1

This is the third or fourth application Grigblay has made for payment on account of extras, in respect of which Spinlove had previously certified only for £500.

So far as may be judged, the cost of making good omissions and defects due to oversights and mistakes of the architect is just about £400 ; and if Spinlove had provided against water driving into the chimneys and rising in the cellar, and so forth, the contract price would have been increased, so that his guilt in inflating costs is represented by an even smaller sum. In fact, having regard to the unavoidable small accidents and unforseeable contingencies that attend all building operations, a man of far more experience than Spinlove would be well satisfied to have no larger sum to account for. Spinlove, however, has unfortunately misled Brash with inadequate estimates given off-hand, but it did not appear that Brash attached importance to those estimates, nor that he would have abandoned the work had he been given exact ones. Spinlove has also let the account get out of hand : he has not kept himself informed of the state of affairs ; and he has neglected to enforce the contract conditions that extras shall be formally authorized, as such, at the time the work is done ; and he has not enforced the condition requiring the day-work vouchers, showing the time and materials expended on additional work which from its nature cannot be estimated by measurement, to be rendered week by week. This is bad ; but so many alterations were made by Brash, and there were so many interferences with the contract arrangements, that some excuse may be made for Spinlove. He did, in fact, warn Brash at the beginning of the building operations that, if the contract arrangements were interfered with, it would be impossible for him to safeguard extras.

The most indigestible part of the account is, however, the large excess of expenditure over the sums provided in the contract as "provisions" to meet the cost of work done by specialists, and of fittings subject to choice. These appear under the subheading "Extras on Provisions." The provision for general contingencies (item 31) was reduced by Spinlove from three to one hundred pounds, when he was trying to bring down the amount of the tender to a figure commensurate with Brash's swallow ; and it seems likely that he pared down the provisional sums originally allowed by him at the same time, and with the same object. It is a great temptation to an architect to let his hopes for the best overrule his judgment, in this way ; but it is a counsel of weakness and folly, or even worse, for his client supposes the contract sum covers the equipment he needs and, for the architect knowingly to mislead him, for the purpose of committing him to the undertaking, is dishonest. We cannot, however, take Spinlove to task, for we do not know the facts. What we do know, however, is that in the course of a year or two extras mount up, all unbeknown, in a most embarrassing way ; and that building-owners, after they are habituated to the contract price and warmed with enthusiasm for the undertaking, are prone to indulge their ambitions, and sometimes even try to forget past extravagances lest they shall discourage new ones.

It will be noticed that in imagining Spinlove's reflections on the summary so obligingly drawn by Grigblay in a form that analyses the account and saves Spinlove that trouble, I have represented him as accepting Grigblay's charge for pointing to make good damage by frost. This is a peep ahead on my part.

SPINLOVE TO GRIGBLAY

Dear Sir, 31/5/26.

I have duly received your Interim Summary of Variations, for which I am obliged, but I am concerned to notice that the total is even higher than you led me to expect. There are a number of charges that want explaining and others I certainly cannot allow, and I should like Mr. Grigblay to make an appointment to meet me here to go into the account, as soon as ready, bringing with him orders for extras, day-work vouchers, etc., supporting your charges. Also particulars of "Various minor works" £192, and reasons why the charge for picked bricks is made. I expressly arranged with Hoochkoft to supply at their original quoted price, as I informed you at the time.

When I have been into matters with Mr. Grigblay, I will arrange for Mr. Tinge to take up the account. Some of the items charged day-work will have to go into a measured account.

Yours faithfully,

I cannot see Grigblay spending hours unravelling day-work sheets to Spinlove's satisfaction, but perhaps he will temper the wind to the shorn lamb and send round the estimating clerk who has charge of the account. This clerk, however, would not be able to explain or justify the charges. The proper course will be for Spinlove to push his head into the papers ; get explanations from the builder on obscure points ; settle contentious matters with him, and then refer the account for Tinge to arrive at the exact figures.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 31/5/26.

I have at last received an "Interim Summary" of the account from Grigblay ; the exact figure has still, I am afraid, to be determined by the Quantity Surveyor, and there are certain charges which I cannot agree to—at least not without explanations—but I am very sorry indeed to say that the total is a good deal more than I expected. I am afraid the extras have mounted up very much, although you were perhaps prepared for this. I enclose a brief summary showing how the account stands, but this is not the final figure, which, I hope and trust, will be substantially less.

If I can give you more information, will you let me know ? The final account will not be ready for several weeks, I am afraid.

I enclose note of my own charges in respect of the last two certificates, which I omitted to send at the time. Will you please accept my apologies for my forgetfulness ?

Yours sincerely,

This is not, I fancy, the best of all possible occasions for Spinlove to apply for payment of his fees, even though he apologizes for not having done so before ; and our young friend's amiable characteristic of identifying himself with the torment his client suffers in parting with his money is here particularly inappropriate. We see Spinlove cringing before a lash he in no way deserves, and which he would have no reason to fear if he did not show he expected it. He invites Brash to be dissatisfied with his architect ; he tells him he had no idea the total would be so large, and apologizes for the amount, thereby avowing that he was neglectful in not keeping himself informed ; and he takes responsibility for matters which do not lie at his door at all. He is "very sorry indeed" for the total of the account ; he is "afraid" the extras have mounted up, although he supposes Brash expected they would ; he does not know how it has all happened, and he is "afraid" the account will not be ready for several weeks, although the delay is an unavoidable circumstance with which he has nothing to do, and only Brash's undisciplined impatience will suffer from it. If Spinlove's purpose had been to represent himself in the worst light, he could scarcely have devised a neater or more complete way of doing it.

His letter is the more absurd for the finished tact he displays in the document that accompanies it—the "brief summary" which is to inform Brash how the account stands. Spinlove, it will be seen below,

tumps the whole of the total balance of extras on to Brash by the adroit device of appropriating the whole of the credit items, totalling £468 9s. 9d., to himself, and cancelling them out against the extra expenditure for which he is personally responsible. The document is, in fact, not so much a statement of account between Brash and Grigblay as an apportionment of guilt between Brash and Spinlove. We may, I think, admire his ingenuity without being positively noisy in our applause. The facts set forth, however, are true ; the figures are exact, the information is what Brash asked for. Brash undoubtedly ordered the extras laid to his charge, and is responsible for the inflation of the account by the total of them, precisely as stated. At the same time . . . . However, the point for astonishment is that Spinlove should cover a document so conclusive of his innocence by a letter so eloquent of guilt.

SPINLOVE TO BRASH (ENCLOSURE)

SUMMARY OF EXTRAS

Ordered by

SIR LESLIE BRASH

	£	s.	d.
Approximate cost alterations to kitchen.. ..	400	0	0
Piping Ditch	114	5	6

[NEXT WEEK : VIII—BRASH GOES IN OFF THE DEEP END]

IN PARLIAMENT

[BY OUR PARLIAMENTARY REPRESENTATIVE]

Housing Position

AN opportunity for a debate on the housing position was afforded in the House of Commons last week by the bringing forward of the Ministry of Health Vote.

Sir Kingsley Wood, from the Conservative benches, declared the present position of housing to be grave and disquieting. According to the official returns, there were at this moment 32,000 more building operatives unemployed than there were at this time last year. The Government by their policy and performance had paralysed the building trade, checked the output of building, done nothing to reduce the cost of housing, and failed to make adequate provision for the poorer-paid members of the community, whose needs were the greatest. Figures showed that for every five houses erected under the Conservative Administration two years ago, only one had been erected under the Labour Government today. The figures for houses under construction were certainly very depressing. In March, 1929, there were 65,018 houses under construction. In March of this year that figure had actually gone down to 28,177. In April, 1929, the number was 62,441, and in April, 1930, the figures were 30,888. In May, 1929, the number was 68,522, and in May, 1930, the number had fallen to 33,332. The price of houses had also risen. In March, 1926, the average price of a common parlour house was £448; in March, 1929, £336; and in March this year, £338. The position under the Housing (Rural Workers) Act, however, showed an improvement. Two great aids to national housing needs—private building and the great contributions of the building societies—had in no small measure this year saved the housing situation.

Slum Clearance Schemes

Mr. E. D. Simon, a Liberal, also criticized the Government, and urged them to take bolder measures. The Slum Clearance Bill, for instance, was a " timid Bill."

Sir Tudor Walters, another Liberal, said they would never deal efficiently with the problem of cheap houses and slum clearance until they had constituted a separate and definite department from the Ministry of Health—a National Housing Board—which could take the matter in hand and put some dynamic into it. They should go in for a twenty years' programme, and organize the materials and resources of the building trade.

Eventually, Miss Lawrence, replying for the Government, said this had not been a bad year for housing. By every test that it was possible to apply it would be proved that this year was very much better than last year as far as housing results were concerned. The total number of houses built by local authorities and also by private enterprise was up. The total number built between March, 1928, and March, 1929, was 169,532, and no fewer than 201,812 had been built from March, 1929, to March, 1930. The local authorities were once again coming forward with their work, and getting into their regular stride.

As the result of an exceptionally long final sitting, Standing Committee " A " has completed consideration of the Housing (No. 2) Bill, which embodies the Government's proposals for dealing with the slum clearance problem. The measure will now come before the House for the Report stage.

State-assisted Houses

Mr. Simon asked the Minister of Health whether he would give the number of houses finished in each year ending September 30 from 1923 to 1929, under the Housing Acts of 1923 and 1924, and by unassisted private enterprise, and similar figures for the six months to March 31, 1930.

Mr. Greenwood said that the following statement showed the desired particulars for England and Wales :

Period	Number of houses completed with State assistance under :		Number of houses completed without State assistance.*
	Housing, etc., Act, 1923.	Housing (Financial Provisions) Act, 1924.	
Year ended :			
Sept. 30, 1923	991	—	52,749
,, 1924	30,934	—	73,032
,, 1925	78,409	12,385	66,735
,, 1926	84,431	46,489	65,689
,, 1927	115,073	97,316	60,313
,, 1928	47,969	53,792	64,624
,, 1929	78,826	53,516	71,083
Six months ended :			
Mar. 31, 1930	—	25,078	53,393

* (1) Houses having a rateable value exceeding £78 (or £105 in the Metropolitan area) were excluded.

(2) The figures given in this column included houses erected by local authorities without State assistance. The number of these houses is ordinarily negligible, but in the half-year ended March 31, 1930, there were 1,605 such houses, presumably houses which were intended, but were not completed in time, to obtain subsidy under the Act of 1923.

Mr. Greenwood informed Sir K. Wood that the amount paid in housing subsidies since June 30, 1929, was £11,370,843.

ARCHITECTURE AT THE CAPE

A farmhouse of the Dutch period at Weltivreden. Buildings of this period, 1670, possess many qualities of individuality and charm. "The walls are thick and rough in surface, covered with a flaky texture of dazzling white limewash; the thatch is silver-grey and mushroom-brown, with a velvet-like sheen which varies with the hour. The plasterwork is rich and bold, yet graceful and pleasing in form, casting long shadows at midday and catching the sun's rays at dawn and at sunset."

THE wide eaves usually adopted in hot countries were never employed by the Dutch. Nevertheless, writes Mr. H. H. McWilliams, in the July issue of *The Architectural Review*, a Cape Dutch farmhouse is never hot in summer, either in appearance from the outside or in temperature within. The dazzling white walls are always broken with patches of shadow from the trees which surround the house, and in many examples a vine-covered trellis carried by great piers extends the total length of the front or occupies the courtyard.

The most important feature of the Cape house, writes Mr. McWilliams, is its gables. Of these there are many patterns, which for variety of form and grace of outline excel their prototypes in Holland. Nearly all of them are based on European examples, although in later days other influence became so pronounced that the tradition was barely observed. There are three types: First Period, 1670—Dutch; derived from examples in Holland. Second Period, 1690; French influence on First Period. Third Period, 1750; Oriental influence on First and Second Periods.

From prints and engravings such as they had at their disposal, and trusting a great deal to memory, the settlers tried to reproduce the gables of their home country, but the plastic nature of their medium softened outlines and mouldings until they lost all trace of their classic origin.

After the second English occupation in 1805 the true art of plasterwork in the country was lost. It was run to imitate stone mouldings, and it was rusticated and patterned in stone joints. One of the most disastrous fashions came into effect during the reign of Victoria the Good, when corrugated iron was invented.

Since then, many gables have been shorn off for what can only be known as "South Africa's Curse."

The back of Dauphine in Franche Hoek. Transitional design.

Dutch crow-step gable at Rustenburg.

In Stellenbosch village. Late Transitional period.

ENGLISH PRECEDENT No. 123

THE REGENT BRIDGE, EDINBURGH

In the Regent Bridge the Roman idea is expressed. A complete equilibrium reigns, and the light screen is carried without effort and with an enormous enhancement of scale.

Close at hand is Robert Adam's Register House, and the roadway is carried on past the Calton Hill.

—[J. MURRAY EASTON]

LETTERS FROM READERS

Art and Technology

SIR,—Your leading article on this subject (June 25) is provocative of thought and should prove helpful. Contrary to usually accepted opinion, England still leads in the encouragement of craftsmanship. The pity is that the bulk of building enterprise is not directed by architects. For many years past the London Construction Group, a society composed of architects, builders and engineers, has had co-ordination of interests in view. In fact, it is common knowledge that some of the precepts of the Group have been put into action.

As most thinkers view the subject, craftsmanship is neither a cult nor a form of arty snobbishness. Craftsmanship might be defined as work showing individuality. The question of the machine as an aid to production does not entirely eliminate the human element. Whereas one branch of craftsmanship is free and approximate, the other is distinguished by dead accuracy. The ultimate difference between the two branches is that of effect only. To carry the simile farther, let us think of free sketching and mechanical drawing; both have a specific value. It remains, therefore, for the architect and the builder to adjust the differences and to allow scope for the individual who is entrusted with the production of definite objects in selected materials.

The national intuition for structural craftsmanship, a legacy of the Middle Ages, has never died out. The present issue demands investigation and a constructive policy in the technical schools and training centres. The Trade Unions, moreover, should be told quite forcibly of the value of the apprenticeship system. If the workers understood that the morale upon which their work depends is threatened they would welcome a modern guild system.

Today practically six-sevenths of the population centre in the towns; the green and pleasant places have been denuded of their original stock. There is a sordid trickle of urbanization which is a symptom of apathy and despair. Architects and builders have been eager to snap up skilled craftsmen of country extraction, because they know that the best workers represent the folk-lore aspect of the building trades. But the supply of such men cannot go on for ever. Today the building trade is largely recruited in haphazard fashion. Standardization, substitute materials, insensate haste, foreign art movements and town life, have each and severally combined to crab individual attainment. The astonishing thing is that craftsmanship and pride in work has survived at all. But despite the forces of the devil, love of doing well does continue with a never-lowering tenacity. The technical schools, a product of our teeming population in cities and towns, do, to some extent, cater for the time-honoured branches of insular building. The young men trained in these schools do ultimately find employment by hook or by crook. If they could pass from the technical schools to the status of apprentices under reputable builders, the chief obstacle to improvement would be surmounted.

Speaking for the architectural schools, it is only fair to say that young architects are instructed in the treatment and the assembling of materials. It is not all style, modernism, design, or what you will. The London Construction Group is, in my humble opinion, the body best qualified to advise the Trade Unions. Perhaps it is not too bold to suggest that Professor Lethaby is the best ambassador to state the case.

A. E. RICHARDSON

Group Specification

SIR,—Specifications, like eggs, should be classified. Their usefulness all depends upon what service you wish to make of them; the Rough Egg Merchant would tell you that in the case of the curate's egg it was a waste of a "good" egg. This goes to show that all eggs, when classified, are serviceable in one way or another. Can we not also classify specifications for their respective uses?

If the object of a specification is to describe, in the main, the materials and labour not clearly defined upon the drawings, then a specification may be said to be governed by the amount of detail or information shown upon the drawings, and we may have a lengthy or a brief specification according to circumstances. Thus, a brief specification, where detail and information were not given upon the drawings, would not be unlike the curate's egg—good in parts, but unsuitable.

In the above remarks no reference has been made to kind: hen eggs, duck eggs, turkey eggs, and ostrich eggs. Just as we have different kinds of eggs (with variations in each kind), in a like manner we have different kinds or types of specifications, with their variations. We are dependent upon hens for hen eggs; we are also dependent upon the kind of contract for the type of specification.

Building contracts may be roughly divided in two kinds as follows: (a) Those in which bills of quantities form part of the contract, and (b) those in which bills of quantities *do not* form part of the contract, or where there are *no* bills of quantities. In the former case the estimate is based upon the particulars given in the bills of quantities, whilst in the latter case it is the specification and the drawings and the conditions of contract upon which the estimate is based. Again, in the former case the bills of quantities are subject to review, and any discrepancy between them and the executed work constitutes a variation on the contract; whilst in the latter case the specification is not generally subject to review, and there can be no variation in the consideration (amount of the contract) without the consent and agreement of the parties, irrespective of whatever may be shown upon the drawings or described in the specification or omitted therefrom. Hence, where quantities *do not* form the basis of the contract, or where *no* quantities are supplied for an equitable contract, the specification together with the drawings should describe or show everything down to the minutest detail; where bills of quantities are supplied and they form the basis of the contract, only technical instructions as to fixing and location need be described in the specification.

Referring again to my remarks on eggs, we find hen eggs are the most common, so are sub-contractors; duck eggs come next, so do general contractors; then turkey eggs corresponding to specialists, and ostrich eggs corresponding to special tradesmen. All these people have to be catered for; and suppose we assign to each class the corresponding kind, some may require a particular size and quality and, even in the case of hen eggs, a particular colour of shell. But suppose, as is suggested in the group system, we put all the different kinds of eggs in one basket, who is to take charge of the basket, or will each be allowed to sort out his own? Even if the group system can be made to accommodate them without any breaking of eggs, we should still have to consider the services to which specifications are to be put, and the different types of specifications to suit the different kinds of contracts.

It is essential that the specification should take the form most suitable for its purpose. The group system should be applicable in a limited number of cases, but they would only constitute a small minority. The form the specification should take should rest solely, in my opinion, with the specification writer. The first and foremost thing required of him is to study the circumstances of the case, and then prepare the specification accordingly.

T. SUMNER SMITH

Priced Bills of Quantities

KARSHISH REPLIES

SIR,—The letters on this subject persuade me that my comment was more to the point than I had supposed. Mr. Leaning has relieved me of the task of stating the facts; but as I have not made myself clear to Mr. Willis and Mr. Downe and, for some reason, have enraged Mr. Jelly, I should like to say that I think these gentlemen overlook the fact that, under the contract and by custom, the architect is constituted arbiter between owner and builder; and that his duty to one is as binding as to the other. Another cause of confusion is expressed by Mr. Downe when he says the architect is entitled to assume that builders can carry out at a profit all items they have priced. The assumption is not justified.

A builder tenders a lump sum. The acceptance of his tender sets up the contract. The Priced Bills form no part of the contract (Articles of Agreement, 4). The contractor furnishes the architect with a priced copy of the Bills for the purpose of giving effect to the stipulations of Clause 13 of the conditions, only (Conditions, 3). This sole purpose is the valuation, by the quantity surveyor, of variations (Conditions, 13). The verification of the Priced Bills (Conditions, 3) is for the purpose only of determining that Priced Bills have been furnished, and no errors or incompleteness in them will relieve the builder from his obligation to perform his contract. The rates the builder affixes to the items are his own affair, and unless, or until, it may become necessary to measure variations, they have no existence.

It will be seen, therefore, that the contract specifically debars the architect from informing himself of the contract rates, and that the builder has a right to expect that the architect will, in effect if not in fact, keep the Priced Bills sealed. An architect can have no objection to thus keeping them unless he intends to take advantage of being their legal custodian by secretly informing himself of the builder's rates; and as his only purpose in so doing is either to save himself trouble, or ingratiate himself with the building owner, or get some sly advantage over the builder, he is clearly false to his trust and acting dishonestly.

If, as Mr. Leaning says, this breach of faith by architects is becoming common, then I agree that the Priced Bills ought to be placed in the charge of the quantity surveyor; but as, under the contract, they are furnished to the architect, their handing over would establish that he cannot be trusted.

It is these considerations which lead me to the opinion I have expressed; and the evidence of your correspondence, I think, enforces it.

KARSHISH

Settling-Up Honeywood

SIR,—I am looking forward to Bloggs's comments on Architect's and Quantity Surveyor's queries, and think he and Grigblay should prove more than a match for Spinlove, even backed by his Q.S.

NATHANIEL LLOYD

Doric Architectural Club

SIR,—As we are mentioned in the letter from the Ionic Architectural Club published in your issue for June 25, we thought you would be interested to receive a few particulars of our club.

We organized the Doric Club in January, 1928, with twelve members; since then we have more than doubled our membership. The objects of the club were to bring together the junior assistants and pupils of Oxford architects, in order that they might further their knowledge in architecture, and to help them to take full advantage of the splendid facilities offered to them in this city.

These objects have been maintained, and numerous lectures, debates and design and sketching competitions have been organized which have done much to create enthusiasm and interest. It is now safe to say that all eligible young men in Oxford are members. Last year a public exhibition of members' work was given. This proved very successful and was greatly appreciated both by the profession and the general public.

We now have as President Sir Michael Sadler, K.C.S.I., C.B., D.LITT., Master of University College, and Mr. William Walcot, F.R.I.B.A., is Vice-President.

I have been requested by my Committee to forward you these particulars of the club, and have pleasure in enclosing an illustration of its badge, which has only quite recently been adopted.

A social outing with the Ionic Club was recently held, and on July 12 we are acting as hosts to them on the occasion of their visit to Oxford.

May I, on behalf of the club, take this opportunity of congratulating you on the excellence of your publication. The many recent improvements have greatly increased its popularity with our members, and several are contemplating entering your Sketching Competition.

K. A. STEVENS,
Hon. Secretary.

Architects and New Materials

SIR,—You recently referred to the fact that in the use of modern materials many errors are due to ignorance as to their use by the designer and not necessarily the fault of the material employed. These remarks of yours apply very exactly in the case of concrete. Here is a material from which many architects and engineers are deriving the greatest benefit, one which has been rapidly improved during the last few years, and is today very different from that which was originally used.

The making of cement is a highly technical problem, and some of the best chemical brains of the country are employed upon it. But the interest to the manufacturer does not end here. He also continues to advance by research the manifold uses of this material combined with various aggregates. This work is mainly to assist the architect to obtain more attractive effects, and to assist the engineer. For instance, investigations are being made by which it is hoped to reduce the amount of material required to carry the same loads. It is quite possible for either two architects or two engineers using the same materials to obtain two entirely different results, the poorer result being due to lack of exact control over the mix.

To obtain success today it is essential that architect and manufacturer should work in closer co-operation. Full credit for the design of a building should go to the architect, but it is not forbidden to the manufacturer to have a feeling of pride in the same building, because his materials have been used in it, and used to the best advantage. It was therefore with some gratification that we saw your remarks, and if, as a result, a greater use is made of the services which the manufacturers place at the disposal of the architects and engineers, they will have served a very good purpose.

R. A. B. SMITH,
The British Portland Cement Association, Ltd.

QUESTIONS THAT ARISE

Roof Truss

G. F. R. writes: "*What is your expert's opinion as to the truss illustrated upon the accompanying drawing, to span 25 ft? It is proposed to build up the truss in best yellow deal with the members spiked or bolted together, and I shall be glad to know if the various members are thought to be of the required section, and if the ½ in. tie rod is strong enough. The building is a single-story village hall.*"

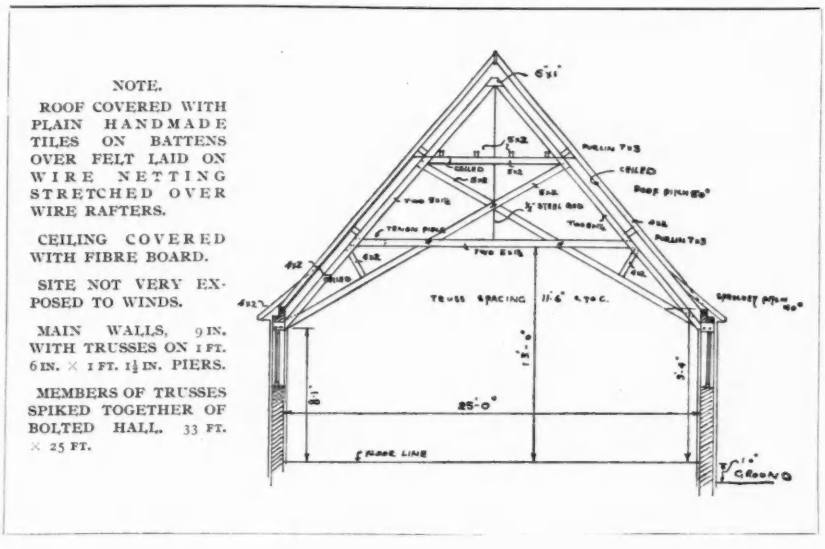
The truss, as shown in the accompanying sketch, is sound in design and economical, and would probably stand quite well all the stresses put upon it, but suitability is more a matter of the safety factor which it is desired to allow. Although it is stated that the roof is not very exposed to winds, even in sheltered positions such stresses are very indeterminate and liable at times to be excessive; hence the general desirability of a broad margin of safety.

Quite apart from any question of collapse, the wide spacing between trusses gives a certain flexibility in the roof which tends to a general deterioration of the structure and covering, particularly if unusual stresses are repeated, and in a permanent structure it is desirable to reduce this flexibility as far as is reasonably practicable. I consider it would be cheaper, for this purpose, to introduce the extra truss rather than increase the general weight of the members. The wider spacing would make stiffer main members desirable and also stiffer purlins, and preferably thicker battens for the tiles. The extra truss, however, would give greater stiffness to the whole roof structure, and give a better distribution of the weight on the walls.

If it is preferred to keep to the truss spacing, 11 ft. 6 in., while still aiming at a generous safety factor, the dimensions of the main truss members and the purlins should be increased slightly. The exact position of the structure and the wind pressures to which it might be exposed alone can indicate whether it will be satisfactory to accept the existing design, for although it might prove perfectly satisfactory for an indefinite period the factor of flexibility above mentioned certainly suggests aiming at a more definitely rigid construction, and this, as stated, I consider would be best attained by an additional truss.

A. H. H.

Damp in Chimney Stacks



W. B. H. writes: "*I am putting 4 lb. lead damp-proof courses in all chimney-stacks of brick just above the flashings or soakers and stepped up by ¾-in. rise and 2¼-in. horizontal runs—which fits both brickwork and a roof at 52½ degrees pitch. The brickwork has to be built in header bond at the flanks of chimney-stacks to permit of this.*

"*Which is the best way of inserting damp-proof courses into existing chimney-stacks which need them? I find after the work had been built some years the brickwork got saturated with wet last winter, and eventually water dripped on to first-floor ceilings or even soaked into roof timbers touching the stacks.*"

It is difficult without the fullest particulars to answer any question, but with regard to the lead damp-course which this correspondent says he is now building into his stacks, I would deprecate so much stepping. The trouble is caused by penetration on the whole exposed surface of the stack, and the best dampcourse is lead carried through and turned up inside the flues so that moisture draining down the inside may be caught in what amounts to a small gutter, and drain outwards.

With regard to the old stacks, the only way of inserting slate or lead d.c. is to take down the stacks and rebuild them. He might try the British Knapen System, which would possibly cure the damp question, but when inserting the porous tubes, damage might be done to the lining of the flues. Again, a good deal depends on the position of the stacks, but it is worth looking into.

DELTA

Glazed Bricks

SIR,—Can you give us any information on the causes of flaking and spalling in glazed bricks? We have a building in which flaking of the glaze is taking place on most of the vertical joints. It is a large single-story industrial building about 30 ft. high. The wall panels, between piers, are of 14-in. brickwork, built wholly in cement mortar (cement and sand) in English bond. The external facings are local, well-burnt, purple-flashed bricks, and were pointed as the work proceeded. The internal facings are glazed bricks; a brown dado, green string, and remainder white, and were all pointed down on completion in white cement. There is an asphalt damp-proof course, and the stone window-sills are all bedded upon lead seatings. Work was completed about twelve months ago.

Quite recently we have found that the glaze is being flaked off the vertical edges of the brown glazed bricks. The bricks themselves seem quite sound. No defects of glaze appear in the centres of the bricks, and practically none in the horizontal joints. The cement pointing is perfectly firm and hard, but exhibits a white, powdery scum (which does not show upon the bricks, however). Both the green- and white-glazed bricks are entirely free from defect.

The matter is serious, the more so as its remedy seems likely to be either an expensive or an unsatisfactory one. We shall be glad, therefore, if you can give us any information which will be of use in determining the cause of the defects, or any suggestions for dealing with it.

"GLAZE"

[The Editor invites readers to reply to the above inquiry.]

THE SPECIFICATION WRITER

The Group System: ii

BY A. SEYMOUR REEVES

IN some cases *GROUP I: STRUCTURAL AND CARCASS WORK* may be lengthy; in others, it may be very short. The proportions in concrete and mixing of the same will have been given in the general clauses, as also the definition as to bricks, quality of timber, and similar points. The drawings and the general clauses may provide so much information that little more is needed in the statement of structural work. But with buildings of some complexity, further information in documentary form will be advisable or necessary.

It is best to start with work below ground floor, commencing with foundations, concrete and brick, or masonry, and following with walls up to ground floor or dampcourse. If vertical dampcourses are required, they would be dealt with here.

The basement floor will be defined thus :

Basement floor : Lower bed, 9 inch concrete with ¾ inch asphalt on top, joined to vertical asphalt with angle fillet. Upper bed, 6 inch concrete.

Work above ground floor will follow, commencing with the horizontal dampcourse, any points in connection with walls and piers, from ground floor up to roof. The structure of floors, if of concrete, the thickness and reinforcement, any necessary information as to patent floors, templates for R.S.J's., bases for stanchions, etc.

Then will follow :

ROOFS

Pitched roofs

Particulars of trusses, etc. Sizes of all timbers. Roof boarding and battens. Slating or tiling. Flashings, soakers and gutters, rainwater pipes. In the case of several pitched roofs of differing spans and treatment, it is best to deal with each roof in a complete group of clauses rather than to make one clause cover all trusses, another all rafters, etc. With gutters, the structure, of wood or concrete, and the lining, lead or asphalt, to be defined. In the case of eaves, cornices or soffits, their definition would appear together with the roofs to which they belong.

Flat roofs

Structure, in timber, concrete, or patent blocks. Covering: lead, asphalt, etc. Cesspools, gutters and r.w. pipes.

EXTERNAL FACINGS, ETC.

Any information under this head would appear here, whether in brick, rough cast, masonry, or other material. In the case of a city building, with a front and back elevation and practically no flanks, the simplest way is to deal with each separately. Thus, if a cornice is to be covered with lead, that would be defined here, with all necessary information, also copings to parapet walls, and *external* lintels to windows and doors. (The internal lintels to windows and doors would appear with the windows and doors.) Plinths or skirtings would be defined as required.

As the general clauses will have given the necessary information as to materials, there is no need for lengthy descriptions. So long as the information is provided on the points required, brevity of statement is advisable.

This will complete the first group comprising structural and carcass work.

INTERNAL FINISHINGS

The group system perhaps can be more helpful in this section than in any other. With a large building containing a variety of finishings this method can provide clear definition to a degree that is far beyond anything that trade classification can attain.

The method recommended by the conference is that which describes each room, or group of rooms with similar treatment, the description to cover surfaces, doors, windows, fireplaces, fittings, and number of radiators and lighting points. External doors to appear with the corridors or lobbies from which they open. Steps for external doors to be defined with the doors.

Example :

BASEMENT

Ceiling	..	Limewhiten soffit of concrete.
Walls ..	..	Portland cement plain face 1 inch thick, twice limewhitened.
Floor ..	..	1¼-inch granolithic paving.
Skirting	..	1 in. by 6 in. granolithic chamfered.
Doors ..	..	1½-in. deal four-panel square framed, hung with one pair 4-in. steel butts to 4 in. by 3 in. rebated and rounded and painted four oils. Fit with rim locks and furniture P.C. per set. Lintels of cast concrete, 9 in. by 3 in., with smooth faces and reinforced with ——.
Windows	..	Steel frames and casements P.C. — per foot super. Build in same and point with cement fillet. Glass, 26 oz. Paint four oils.
Light Points	..	Three.

GROUND FLOOR

Vestibule

Ceiling	..	Fibrous plaster (including cornice) to be supplied by a selected firm P.C. — to be fixed by contractor on rough fir grounds and painted three oils and one enamel.
Walls ..	..	1¼-in. marble slabs.
Floor ..	..	1¼-in. marble squares in black and white.
Skirting	..	1 in. by 7 in. white marble.
Doors	..	2 in. oak in six panels bolection moulded outside and flush on other, hung folding with 1½ pairs brass butts to each leaf, 4 in. by 3 in. oak moulded frame, 3 in. by 1¼ in. oak moulded architrave. Fit with rebated mortice lock (etc.). Oil and polish. Lintel, 9 in. by 3 in., concrete as before.
Steps ..	..	1¼-in. white marble treads with rounded nosings and 1-in. risers to match, all on concrete core.
Light Points	..	One.

Main Office

Ceiling	..	Keene's cement twice whitened.
Walls ..	..	Keene's cement dado 3 ft. 6 in. high, painted four oils. Lime plaster above twice distempered.
Rail ..	..	Dado rail, 2 in. by 3 in. deal moulded, painted four oils.
Floor ..	..	1¼-in. pitch pine blocks laid in mastic, with double borders.
Skirting	..	1¼ in. by 6 in. deal moulded, painted four oils.
Doors ..	..	1½-in. deal, moulded both sides (describe all work, including frames or linings, ironmongery, fanlights, glass lintels, jambs).
Windows	..	As basement, but glazed with ¼-in. plate glass. Window boards 1¼-in. deal, with rounded nosing. Jambs, Keene's cement. Concrete lintel, 9 in. by 6 in.
Cupboards	..	(Describe any fittings in full.)

Radiators	..	Four.
Light Points	..	Six.

Manager's Room

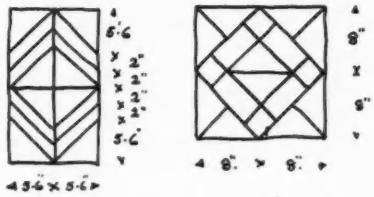
Ceiling	..	Fibrous plaster as vestibule.
Walls ..	..	Mahogany panelled and moulded dado, with 1½-in. framing 5 ft. high, with moulded capping and blocked skirting as detail, all french polished. Keene's cement above dado painted four oils.
Floor ..	..	1¼-in. oak blocks laid basket pattern, wax polished. (Doors and windows, if differing from previous types, will be fully described, also fittings.)
Fireplace	..	Grate and chimneypiece will be supplied by a selected firm P.C.—— Contractor to form opening 2 ft. wide, with concrete lintel and set grate chimneypiece and tiled hearth. (Any concrete slab for hearth to be defined here.)
Radiators	..	Two.
Light Points	..	Two.

Every room in the building does not require a separate description. Only those with differing treatment need be separated, those which are similar will be grouped. If all deal is painted, and all plaster distempered, that can be stated in a general clause. Where there is to be differentiation, however, separate definition is advisable.

(To be concluded)

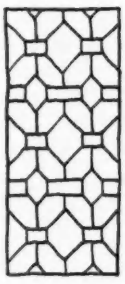
COKE breeze and clinker, on account of their cheapness, have come into very general use as aggregates in concrete. And their lightness has given them additional attraction where reinforced concrete is concerned. When in contact with steel, however, even in conditions and positions usually regarded as dry, corrosion is a possible danger. This particular risk is sufficiently serious to have been the subject of investigation at the Building Research Station, where it has been conclusively shown that it is the sulphur compounds, in the breeze and clinker, rather than their porosity and permeability to damp, that are responsible for certain failures due to the cause indicated. The Building Research Special Report, No. 15, published at the price of 6d. by H.M. Stationery Office, gives the results of the tests, indicating also the relative behaviour of various types of these materials.

Fireproof Glazing



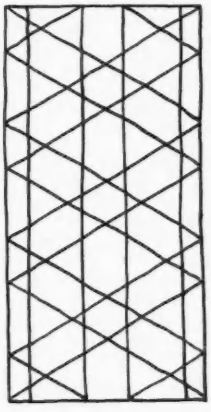
THE London Building Acts (Amendments) Act, 1905, Clause 7, Part II, requires the glazing of certain parts of buildings, where normally lead cames would be used, to be carried out with a metal having a melting point not lower than 1800° Fahrenheit. Further, the glass shall be not less than ¼ in. thick, and the squares shall not exceed 16 sq. ins. in size. Panels of such glazing shall not exceed 2 ft. either way, but they may be joined together by metal division bars, so that a door or window panel can be built up. The metals permissible under the Act for this glazing, both for cames and bars, are iron, steel, copper and bronze. The two last metals are most frequently used for the cames on account of their greater pliability, and steel for the strengthening bars. Thus, within the limits of the L.C.C. regulations, a wide range of possible designs is open to the architect which has never been fully exploited. In the majority of buildings one too often observes the line of least resistance to have been taken, and squares of 4 ins. by 4 ins. or 3 ins. by 5 ins. are repeated with the wearisome monotony of a prison grating.

Copper and bronze will not bend so freely as lead, but, bearing in mind this limitation, an almost infinite number of patterns can, with the aid of simple mathematical calculations, be designed.



SIMPLE DEVELOPMENT OF THE L.C.C. UNIT

Take an example of triangles: any triangle with a base of 8 ins., and a perpendicular to it from the apex of 4 ins., will comply with the Act. In a recent instance panels in the doors, 8 ins. by 4 ins., were glazed with fire-resisting glazing, and the architect has divided this into three triangles, the largest being 16 sq. ins. The result is interesting and practical. Parallelograms combined give further variety.



FURTHER COMBINATIONS OF THE UNIT OF AREA

DESIGN ADAPTED FROM OLD ENGLISH LEAD GLAZING

Many of the geometrical patterns in old leaded glazing are suitable for copper and can be adapted into pleasing designs for fanlights, glazed doors, or peepholes in swing doors.

A wider field of inspiration may be found in the Eastern geometrical forms, and especially the Indian and Arabic pierced lattice panels. The variety of these forms to be found in stone and wood is endless, the piercings are small, and many of those executed in the eighteenth and nineteenth centuries have a surprisingly Western feeling. Even the coarser forms of the pierced earthenware panels suggest schemes of simple squares and rectangles more inviting than the chessboard squares of the staircase doors in the office block.

DESIGN ADAPTED FROM AN ARAB LATTICE

The grisaille designs in mediæval stained glass often suggest appropriate motifs, but these must be used with discrimination, as the curved forms of the cames, while possible to make, are expensive, and the feeling of the material may easily be lost in a poor imitation of lead glazing.

The possibilities of treatment are endless, and a further variety can be obtained by using the ribbon cames together with the wider ⅛-in. and ¼-in. H-shaped bars; but curves and natural forms that suggest lead glazing are best avoided.

PANTILUS

Comparative Costs of Heating

THE numerous factors which have to be considered in estimating the ultimate cost and value of any one heating system, as compared with another, render absolutely comparative determinations almost impossible. There is much information, however, to be obtained from an account of a series of experiments and observations, extending over five years, which were

given by A. H. Barker, M.INST.C.E., at the Joint Gas Conference at Birmingham recently.

The tests were conducted in a private house specially equipped with the necessary apparatus to give practical comparative results. With regard to heating, it was shown that gas boilers can only be employed for such purposes as central heating and the supply of hot water in a circulating system at a cost in gas of about 3·7 times the cost of solid fuel; that the general use of coal fires to produce the same results as are obtained by a good system of central heating costs 2·7 times as much as when coke is burned in the boilers; that gas fires in a continuously used room cost about 2·2 times as much as the corresponding coal fires, while in an occasionally used room the actual cost is less than coal fires, depending on the degree of use. The electric fires in the same conditions are found to cost from 1·57 to 1·98 times as much as the gas fires. A point which is emphasized is that the cost of gas and electric fires does not represent their true economy, as coal fires, for example, involve additional costs in labour, chimney cleaning, and extra cost in re-decoration.

The question of heating as applied to large buildings is similarly subject to no absolute rule, and a very interesting example is seen in a description, presented before the Institution of Civil Engineers by the same author, of the electrical heating and ventilating installation of Bourne and Hollingsworth's premises in Oxford Street, London, W. The building is believed to be one of the largest to be heated and ventilated solely by electrical power, and probably, so far, the only one in which the whole of the power is controlled and regulated by electrical means from one central control chamber. The decision to use electrical power was based on purely economic considerations, since the use of any of the alternatives—i.e. solid fuel, oil and gas—involved ultimate cost, trouble and possible damage which outweighed the higher initial cost of electric power. Apart from the trouble of delivering large quantities of solid fuel and the dust associated with the removal of the ashes, it was considered that the heat, fumes and smoke of a boiler-house would cause a serious nuisance both on the premises and to surrounding property.

The use of gas would have involved the consumption of not less than 20,000 cubic feet of gas per hour, with consequent huge quantities of combustion products, with their smell and corrosive condensate. The necessity for drawing a large part of the air required for the ventilation of the building from the roof made it impossible to contemplate the release into the atmosphere near the fresh air inlets of the 100,000 cubic feet of products of combustion per hour which would have been involved. Other considerations related to the possible damaging effect on the valuable fabrics and materials in the premises.

The ventilation system adopted is a pure plenum system, with closed windows, by which a slight excess of pressure is maintained in the building, to exclude dust-bearing currents of air from the street. The warming of the building is effected partly by warming the plenum air by electrically-heated coils and partly by direct electrical radiators in the shops. This installation, although representing unusual conditions, is a good example of extraneous factors necessitating a much wider view of heating costs than is usually taken. A. H. H.

THE British Engineering Standards Association has recently issued comprehensive conversion tables of inches to millimetres and millimetres to inches, covering both fractional and decimal subdivisions of an inch. The tables of inches and fractional subdivisions of an inch give the conversions of every 1/64th of an inch up to and including 12 inches, whilst those for inch measurements in the decimal system give the conversions of every 1/1000th of an inch up to 1 inch. The table of conversions of millimetres to inches gives the conversion of every millimetre from 1 to 1000.

Included in the publication, which is obtainable from the offices of the Association, 28 Victoria Street, S.W.1, at the price of 2s. 2d., post free, is a table giving conversion factors for linear, square and cubic measures, weights, stresses, pressures and weights per unit length, for various measures common in engineering. The published figures have been checked by the National Physical Laboratory, and the publication is printed from stereotype plates, so that there may be no risk or errors resulting from displacement of type.

Standardization of Electrical Wiring Accessories

A DEVELOPMENT of distinct interest and importance as regards electric wiring contracts is just announced by the firms comprising the Cable Research Committee. This constitutes the introduction, as from the end of June, of a complete range of new and improved accessories which have been standardized for use with all the wiring systems of the members.

The development of the electrical industry, and its rapidly increasing application in domestic and similar establishments, has been accompanied by a mass of accessory fittings, the sizes and features of which vary with every maker. Complete standardization of all such appliances is not yet within sight, but the present move will be welcomed by all users who appreciate the effect of economy of time in installation which will result. In future it will not be necessary for any contractor to stock more than one type of accessory to use with any particular type of cable to enable installations to be carried out on any of the systems concerned.

The companies adopting this standardization are British Insulated Cables Ltd., Callender's Cable and Construction Co., Ltd., W. T. Glover & Co., Ltd., W. T. Henley's Telegraph Works Co., Ltd., the Macintosh Cable Co., Ltd., St. Helens Cable and Rubber Co., Ltd., and the Union Cable Co., Ltd. The various wiring systems of all these concerns are catered for in the new list of accessories. The apparatus will be sold under the "C.R." trade mark, which will stand as an indication that they embody the results of the co-operative investigation and research of the firms associated in the Cable Research Committee.

W. T. Henley's Telegraph Works Co., Ltd., have already issued three lists covering respectively their Twin, "Nomet" and "Bondit" wiring systems. These cancel corresponding lists of earlier dates and any models shown in the cancelled lists which do not appear in the new ones will not be supplied after the existing stocks are exhausted. The accessories dealt with in the new lists cover fixing clips and saddles, bonding, fittings, joint boxes, protective steel covering, earthing clips, porcelain connectors, cleats and similar details. A commendable feature of the joint boxes is their simplicity and ease in fitting. The clamps are arranged inside the box, in the case of metal sheath wiring, so as to ensure ease and speed of inserting the wires. For use with metal sheath wiring with bonding conductor, the internal bonding clamps are replaced by a terminal pillar for the reception of the copper bonding conductor, which is incorporated in the cable. These boxes are of tinned brass, while those for the non-metal sheathed wiring are constructed from high-grade bakelite and embody fixed terminals. The joints and bonding can be readily inspected by simply removing the cover, without removing any screws or disturbing the bonding arrangements. Alterations or additions to the connections can easily be made. This move for standardization can be accepted as an important advance in the manufacture of electrical accessories, and one which will be very welcome to the wiring contractor.

LITERATURE

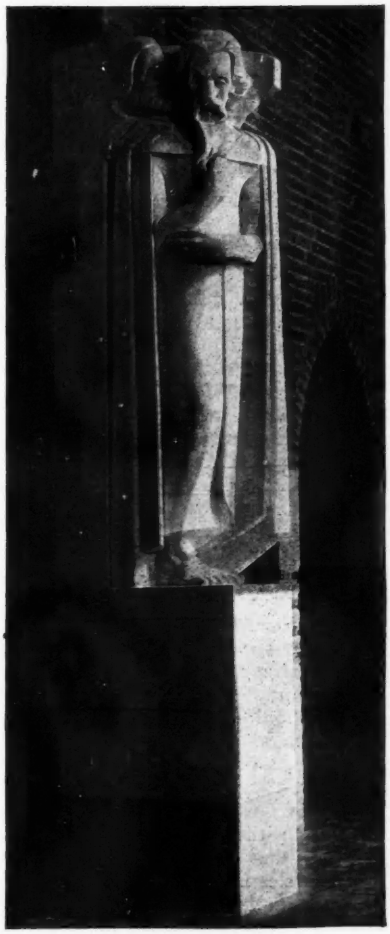
APPLIED SCULPTURE

THIS book is a treasury. The gathering of its riches has been laborious; the result is most praiseworthy if not completely satisfying. How could it be? There are thousands of good sculptors alive today, and many workshops in addition to the studios, where skilled craftsmen ply their trade. Mr. Aumonier has sought entrance to both with much success. But choice there had to be, and from among the many sculptors of the world it is difficult to choose; more difficult to choose from the multiple productions of the workshop. Both things have here been done in a single album, and it is open to question if the two products would not have been better served by being kept apart.

An encouraging fact that emerges during the turning of these handsome pages is that the sculptors are realizing that their real function is architectural, and the craftsmen that theirs is structural. This is altogether desirable.

There is, however, a good deal of sculpture illustrated which is not architectural either in conception or content. For the want of better words it is known as ideal sculpture; it is the statement of beautiful form apart from any practical utilization, and it is all to the good that illustrations of these pieces should be seen so that a proper realization of the strides that sculpture has made during the present century shall be made. This progress has been great, but even greater that of applied sculpture, which is the real subject of this volume.

It is the architectural application of sculpture, both structural and ornamental, that gives importance to most of the plates. The modern spirit has given to both architecture and sculpture life that has changed the forms of this art and craft. The trend is architectural rather than ornamental, however, and now, apart from form, the problem which confronts designers is the placing of sculpture.



First and foremost, it must be organic with the building, and in these plates it may be seen that this is being realized.

Again, what is of the greatest moment, and more than justifies the toil of its preparation, this book will show the way to those who may not, up to the present, have completely seen it. Those who have most clearly realized this necessity and observed it in the new way are W. A. van de Winkel and Hildo Krop of Holland, and Gutfreund and Stursa of Czechoslovakia. Theirs is the structural view.

Many fine plates illustrate the older, and conventional, application of ornament, and show also immense improvement. Others illustrate the growth in taste and usefulness of the detached members of a building which are not actual parts of the structure, but add to its dignity and interest.

A complete review of the world's sculpture is not possible. Some fourteen countries are here represented, and there remains the work of Belgium, Spain, Hungary, Russia, Finland and Iceland for attention, inasmuch as there are great sculptors—for instance, Einar Jonsson in Iceland and Aaltonin in Finland—who are completely obsessed by the architectonic sense.

Some 136 individual sculptors and firms are dealt with, but Kafka and Saloun in Prague, José Clará of Barcelona, are not included. Jan Stursa, the Czech, as great a master of form as Rodin, is inadequately represented, and the examples of Joseph Bernard do not represent his strong architectonic feeling.

[*From* Modern Architectural Sculpture.

Church at Scheveningen, Holland. C. M. van Moorsel, architect; W. A. van de Winkel, sculptor.

The selection of English work is very good, but there are significant names omitted—Katherine Maltwood, Phyllis Clay, and Charles Wheeler.

Judged by what it contains rather than by what it omits, *Modern Architectural Sculpture* is a work which must be in the hands of every sculptor and architect as well as those of every lover of modern sculpture, all three categories which are daily increasing in knowledge and numbers.

THE TIMES "CHURCH AND EMPIRE" NUMBER

THE special "Church and Empire" Number of *The Times* for June 25 had some excellent illustrations of English and Dominion cathedrals, and as well a reproduction of the famous isometric projection of St. Paul's by Messrs. Brook-Greaves and Allen. I think it is a fact that in spite of broadcast services never was the importance of religious *buildings* so much realized by all religious bodies as now, and so *The Times* has included more pictures of buildings than of bishops. The average man, who may be put down an indifferentist in religion, is very strongly in favour of order and decency and a civilized life, and sees in the normal shape of a church something which expresses his ideal of civilization; i.e. the central steeple or dome and its supports, the four arms of the cross, do correspond to his governmental idea of a dominant central authority and federated branches. Internally, both the Abbey and St. Paul's make the beauty of that idea very clear to him; externally, Salisbury and Canterbury proclaim its imperial grandeur across many miles of country. The haunting fear that, as a result of the world's many changes, European culture may be "sanded up," as has happened to Chinese culture, is dispelled by the thought of these vast cathedrals.

P. M. S.

LAW REPORTS

FISHING RIGHTS

Whitley v. *Stumbles. House of Lords. Before Lords Hailsham, Warrington, Atkin, Thankerton and Macmillan*

THIS was an appeal by the plaintiff, Mr. H. Whitley, from a decision of the Court of Appeal, affirming a decision of a King's Bench Divisional Court, setting aside a judgment of the County Court judge sitting at Kingsbridge County Court, Devon. The case was reported in THE ARCHITECTS' JOURNAL when it was before the King's Bench Divisional Court and the Court of Appeal.

The appellant was the landlord of the Royal Sands Hotel at Slapton, Devon, and the respondent, Mr. Alfred Percy Stumbles, was the tenant. The respondent's predecessor in title held the hotel with certain exclusive rights of fishing in Slapton Ley, which adjoins the hotel, and it was alleged that the pike-fishing amenities were an attraction to visitors. The respondent desired a new lease of the premises. The matter went to a referee, who held that the tenant had a right to a new lease, together with fishing rights. The County Court judge held that the fishing rights were not "premises" within the meaning of the Landlord and Tenant Act, 1927, and remitted the matter to the referee. The respondent appealed, and the Divisional Court of King's Bench held that the tenant was entitled to the inclusion of the fishing rights in his lease. The Court of Appeal affirmed that decision. The landlord now appealed.

The House of Lords now dismissed the appeal, holding that the word "premises" in section 17 (1) of the Act was not limited to lands and buildings, and that the respondent, who held the lease with fishing rights, was entitled, on the grant of a new tenancy, to have the fishing rights included in the new lease.

MANOR FINES

The Prince of Wales as Lord of the Manor of Kennington v. *Bradshaw. Chancery Division. Before Mr. Justice Farwell*

THIS was an action by the Attorney-General for the Prince of Wales as Lord of the Manor of Kennington, which forms part of the possessions of the Duchy of Cornwall, for the decision of a point whether he was entitled, under the new Law of Property Act, to the payment of a fine on the death of a copyhold tenant.

Mr. Geoffrey Lawrence, K.C., the Attorney-General to the Prince, said defendant was Mr. Hercules Montague Edwin Bradshaw, a grandson of Mr. Octavius Bradshaw, a late tenant of the Manor, and executor and trustee of the estate for the purposes of the Settled Land Act. The contention of the defendant was that no fine was payable, and that the manorial incidents were to be extinguished by the payment by him of compensation calculated upon his age, which would materially reduce the amount.

Mr. Wilfred Green, K.C., for the defendant, contended that no fine had become, or would on any occasion become, payable by reason of the death of the grandfather. Researches showed that no such custom existed in any manor at all.

His lordship decided in favour of the Prince of Wales for payment of the fine and costs. He held that modern legislation did not intend to deprive the lord of the manor of the fines to which he would be entitled under the old law on the death of the tenant and subsequent admittance of the heir or divisee.

ALLEGED NUISANCE BY KEEPING DOGS

Gladstone v. *Murray Wilson. Chancery Division. Before Mr. Justice Farwell*

THIS was a motion by Mrs. Alice Sidney Gladstone, of 26 Holland Park Villas, Kensington, against Mr. Geo. Murray Wilson and his wife, Mrs. Lilian Murray Wilson, who reside next door to the plaintiff, for an injunction to restrain them from keeping or permitting to be kept on their premises or any part thereof any dogs so as to cause a nuisance to the plaintiffs.

Mr. Vaisey, K.C., for the plaintiff, said his client was the freeholder and occupier of her premises, and had lived there since November, 1927. At that time the defendants kept in their house one adult poodle. Shortly afterwards they acquired another poodle, and by the summer of 1929 they had two other poodles. Later, four puppies were born, and now the defendants had eight dogs on the premises. Up to October, 1929, the noise made by the dogs was not unreasonable, but since that date there had been continual barking day and night, which prevented sleep. Plaintiff had made many complaints to defendants, but nothing had been done to abate the nuisance.

Plaintiff's evidence in support of this was read, and a number of affidavits by servants and neighbours supported it.

The defendant, Mrs. Murray Wilson, asserted that her dogs were being made the scapegoats of all the dogs in the neighbourhood. She understood that the case was not coming on till October, and she had not prepared any evidence, being busy with dog shows.

His lordship granted an interim injunction.

At the second hearing Mr. Vaisey, K.C., represented the plaintiff, and defendants now appeared in person and consented to the motion being treated as the trial of the action and the injunction being made perpetual.

His lordship made the order accordingly, with costs.

MERCHANDISE MARKS ACT

Hamilton Trading Co. v. *London Chamber of Commerce. Tower Bridge Police Court. Before Mr. Griffith-Jones*

THE Hamilton Trading Co., Ltd., of 127-129 Newington Causeway, were charged in a prosecution under the Merchandise Marks Act with having sold paint with the false trade description of white lead paint, and were fined £15 and £25 costs. The prosecution was instituted by the London Chamber of Commerce, and was conducted by Mr. C. W. Measor, barrister, instructed by Messrs. White and Leonard.

Evidence was given that there were advertisements in the window of the Hamilton Trading Co.'s shop of "white lead paint." Mr. H. D. Menear, painter, on December 17, bought a 7-lb. tin, asking for "white lead paint as advertised in the window." Messrs. Friend, painters, on December 30, bought another tin upon a written order, for "7 lb. genuine white lead paint." Mr. Russell-Smith, analyst, said that his analysis showed that the lead contained in the tins was only ·04 per cent. of the pigment, over 78 per cent. of the pigment being barium sulphate and over 13 per cent. being zinc sulphide, and that in his view this was a low grade lithopone. Reference was made to the British Engineering Standards Association Standard Specification for white lead paint as showing that this should consist of not less than 76 per cent. of white lead.

The defendants stated that they had purchased the tins from Messrs. E. B. Blackwell, Ltd., of Bedford Road, Clapham, labelled "superfine white paint containing genuine English stack white lead," and had written that they "were under the impression that it was quite in order to invoice this paint as white lead paint," but that since the matter had been brought to their notice they had altered their practice of sale.

The Magistrate said that this was a very proper case for the London Chamber of Commerce to have brought.

THE ARCHITECTS' DIARY

WEDNESDAY, JULY 9

R.I.B.A., 9 Conduit Street, W.1. Exhibition of Models, masonry specimens, drawings and photographs of St. Paul's Cathedral. 10 a.m. to 8 p.m. (Saturday 5 p.m.) **10 a.m.**

ROYAL ACADEMY, Burlington House, S.W. Summer Exhibition open to the public. Open until September. **10 a.m.**

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. International Exhibition of Modern Commercial Architecture. Open until July 12. **10 a.m.**

LIVERPOOL SCHOOL OF ARCHITECTURE. At the Walker Art Gallery, Liverpool, Annual Exhibition of Architectural Drawings, open to the public until July 19, from 10 a.m. to 6 p.m. **10 a.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Exhibition of English Mediæval Art in the North Court. 10 a.m. to 6 p.m. (Thursdays, 10 a.m. to 10 p.m.) "Architecture (1)." By L. O. Faraker. 3 p.m. **10 a.m.**

SIR JOHN SOANE'S MUSEUM, 13 Lincoln's Inn Fields, W.C.2. Open every Tuesday, Wednesday, Thursday and Friday until September next. 10 a.m. till 5 p.m. **10 a.m.**

KINGSTON-UPON-THAMES PUBLIC BATHS COMPETITION. Exhibition of designs at the Tiffin Boys' School (old building) until July 23. 12 p.m. to 8 p.m. **2 p.m.**

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. At Scarborough. Annual Meeting and Conference. Until July 12.

INTERNATIONAL ACETYLENE CONGRESS. To be held at Zurich, July 9 to 12.

UNIVERSITY OF LONDON, University College, Gower Street, W.C.1. Exhibition of Egyptian and Palestinian Antiquities. Until July 26. 10 a.m. to 5 p.m. (July 15 and 25, 6.30 to 8 p.m.) **10 a.m.**

AUCTIONEERS' AND ESTATE AGENTS' INSTITUTE. Annual Provincial Meeting at Hotel Metropole, Brighton. July 9–11.

THURSDAY, JULY 10

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Architecture (2)." By L. O. Faraker. **12 noon.**

BRITISH MUSEUM, W.C.1. "Origins of Architecture—I. Greek," By Cecil Hallett, B.A., F.S.A. **12 noon.**

FRIDAY, JULY 11

THE ARCHITECTURAL ASSOCIATION, 36 Bedford Square, W.C.1. Annual Prize Giving and Exhibition of Students' Work. Prizes to be distributed by His Excellency the Swedish Minister, Baron Palmstierna. The Exhibition will be open daily from 10 a.m. to 6 p.m. until August 1. **3.30 p.m.**

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Annual River Trip. Visit to the West India Docks. The party will leave Westminster Pier at 2 p.m. Tickets 8s. 6d. (including tea). **2 p.m.**

SATURDAY, JULY 12

Sunrise, 4.56 a.m. Sunset, 9.14 p.m.

MONDAY, JULY 14

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Ironwork." By L. O. Faraker. **3 p.m.**

R.I.B.A., 9 Conduit Street, W.1. Executive Committee Meeting. **4 p.m.**

TUESDAY, JULY 15

TOWER OF LONDON, E.C.3. "The Tower in Norman Times." By Allen S. Walker. **11 a.m.**

WEDNESDAY, JULY 16

ARCHITECTURAL ASSOCIATION, 36 Bedford Square, W.C.1. Annual Excursion to Denmark and Sweden, returning to London on July 29. Particulars of the tour, etc., are obtainable from F. R. Yerbury, Secretary, Architectural Association.

INTERNATIONAL CONFERENCE of Union Internationale des Villes and Pouvoirs Locaux. At Liége. July 16–17.

THURSDAY, JULY 17

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to Letchworth Garden City by motor coach, leaving Lancaster House at 1.30 p.m. Price of tickets, 5s. The First Garden City, Ltd., have invited the party to tea at the Institute, Letchworth. **1.30 p.m.**

FRIDAY, JULY 18

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Special Lecture at the R.I.B.A. Galleries, 9 Conduit Street, W.1, on "Modern Architecture of Europe and America." By Maurice E. Webb, D.S.O., M.C., F.R.I.B.A., and Howard Robertson, F.R.I.B.A., S.A.D.G. Chairman: Carmichael Thomas, Chairman of Council, The London Society **6.30 p.m.**

BRITISH STEELWORK ASSOCIATION. At the Institution of Mechanical Engineers, Storey's Gate, S.W.1. "Skyscrapers in America." By G. E. J. Pistor. 5.30 p.m. (Tea will be served at 4.45 p.m.) **5.30 p.m.**

INTERNATIONAL CONFERENCE of Union Internationale des Villes and Pouvoirs Locaux. At Antwerp. July 18–19.

R.I.B.A., 9 Conduit Street, W.1. Finance and Housing Committee Meeting. **4.30 p.m.**

SATURDAY, JULY 19

Sunrise, 5.4 a.m. Sunset, 9.8 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. Indian Section: "Architecture." By Miss M. Chamot. **3 p.m.**

MONDAY, JULY 21

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "English Seventeenth-Century Furniture." 3 p.m. Both lectures by L. O. Faraker. **12 noon.**

R.I.B.A., 9 Conduit Street, W.1. Council Meeting. **4.30 p.m.**

TUESDAY, JULY 22

TOWER OF LONDON, E.C.3. "The Tower in the Middle Ages." By Allen S. Walker. **11 a.m.**

WEDNESDAY, JULY 23

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to the New Whitelands Training College, Putney Hill, S.W., designed by Sir Giles Gilbert Scott, who, with Lady Scott, will entertain members to tea after the visit. **3 p.m.**

THURSDAY, JULY 24

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "French Eighteenth-Century Furniture." By L. O. Faraker. **12 noon.** "Italian Furniture." By Miss M. Chamot. **7 p.m.**

BRITISH MUSEUM, W.C.1. "Origins of Architecture—II. Roman, etc." By Cecil Hallett, B.A., F.S.A. **12 noon.**

FRIDAY, JULY 25

R.I.B.A., 9 Conduit Street, W.1. Visit to U.S.A. Arrival of S.S. "Ascania" at Plymouth.

SATURDAY, JULY 26

Sunrise, 5.13 a.m. Sunset, 8.59 p.m.

SOUTH-EASTERN SOCIETY OF ARCHITECTS. **Visits to Leeds Castle, Chilham or Bodiam, etc., organized by the Canterbury and Tunbridge Wells Chapters.** Particulars of the visits are obtainable from the Hon. Secretaries of the Chapters.

MONDAY, JULY 28

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Italian Decoration." By Miss M. Chamot. **3 p.m.**

TUESDAY, JULY 29

TOWER OF LONDON, E.C.3. "The Tower in Tudor Times." By Allen S. Walker. **11 a.m.**

THURSDAY, JULY 31

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Alfred Stevens." By Miss M. Chamot. **3 p.m.**

LUTON TOWN HALL COMPETITION. Latest date for submission of designs.

DUDLEY SCHOOL COMPETITION. Latest date for submission of designs.

SOUTHPORT MARKET HALL COMPETITION. Latest date for submission of designs.

LIVERPOOL SCHOOL RESULTS

Following are the results of the examinations which have just been held in the Liverpool University School of Architecture. Students in the fifth year who obtain their Degree of B. Arch. (open to those who have matriculated) or Diploma in Architecture (open to students registered as Probationers, R.I.B.A.) are exempted from the R.I.B.A. Final Examination. All those who pass during the third year are exempted from the R.I.B.A. Intermediate Examination.

FACULTY OF ARTS, DEGREE OF B. ARCH.

FIFTH EXAMINATION

Honours in Architectural Design	*Honours in Architectural Construction*
Class I	*Class I*
Harper, D. R.	Hughes, J.
Holford, W. G.	*Ordinary Degree*
Stephenson, G.	Archer, Hilary
	Dawbarn, C. Y.
	Hutton, C. W.

FOURTH EXAMINATION

(*For Honours in Architectural Design*)	Nelson, J. O.
Harper, D. R.	Stephenson, G.
Harrison, E. J.	Worsnip, J. V.
Holford, W. G.	(*For Honours in Architectural Construction*)
Miles, Marjorie	Mitchell, T. N.

THIRD YEAR

Bell, G. P.	Littler, F. H.
Blair, W.	Meiring, A. L.
Coates, U. A.	Naudé, D. F. H.
Fidler, A. G. S.	Nayel, M. K.
Gearey, K. W.	Policansky, M.
Gonsall, H. E.	Rathmell, M.
el Hakeem, M. M.	Smith, R. V.
Hope, A. H.	Stammers, Constance
Horsburgh, E. R.	Thomson, W. K.
Hubbard, R. P. S.	Wilkinson, J. G.
Jones, D. M.	Wormald, E.
Lake, H. J.	

SECOND YEAR

Alcock, J. P.	Hollings, Phyllis G.
Alleyn, J. H.	Jensen, R. A.
Allsop, H. B.	Martinez, A. G.
Berwick, Kathleen R.	Mason, G. R.
Brown, J. H.	Norcliffe, H.
Coutts, G. A.	Rice, A. E.
Cowin, D. M.	Robson, H. S.
Edgar, J. C.	Ross, I. P.
Fletcher, Rosemary S.	Sharaby, A. G. H.
Goulding, G. E.	Tyson, P. S.
Griffith, W. A.	White, R. le R.
Holden, G. T.	

FIRST YEAR

Burnett, L. H.	Tipper, K. B.
Hinchcliffe, Kathleen	Williams, A.L.
Thearle, L. B.	

DIPLOMA IN ARCHITECTURE

FIFTH EXAMINATION

Distinction in Architectural Design	*Ordinary Diploma*
Kenyon, G.	Fairless, C. L.
Wright, J. H.	Morter, P. S. P.
	Owen, H.
	Woods, H. J.

FOURTH EXAMINATION

(*For Distinction in Architectural Design*)	Morter, P. S. P.
Banister, H.	Owen, H.
Fairhurst, R. F.	Parker, R. G.
Fairless, C. L.	Timmis, G. J.
Furbur, E. R.	Weerasinghe, O. F.
Hewitson, T. T.	(*For Distinction in Architectural Construction*)
Kelly, R. H.	Ormrod, F. J. M.
Kenyon, G.	Stirrup, G.

THIRD YEAR

Beckett, S. H.	McIntosh, Jean
Bennett, A. C.	Mayo, Mary I.
Berger, L.	Parkinson, J. L.
Copnall, S. L. W.	Peace, F. N.
Crighton, A.	Plews, C. E.

Fawzi, A. H.	Sergent, W. H.
Fowler, H. S.	Twemlow, W. J.
Jones, J. G.	Vincent, H. J.
Kidd, J. W.	Walls, H. F.

FIRST YEAR

Bullen, A.	Gilling, M. G.
Clokey, T.	Gray, J.
Cummings, K.	Macdonald, A. E.
Dodd, D. M.	Montgomery, F. G.
Dufty, A. R.	Redfern, B. E.
Fraser, Elizabeth J.	Roberts, A. H.
Gibbons, R. F.	Timmis, G. C.

Following are the results of the Liverpool School of Architecture Scholarships and Prizes, 1929-30.

Lord Waring Travelling Scholarship in decoration, £50, open to all years, W. G. Holford, fifth year.

Holt Travelling Scholarship for design and measured drawings in the third year, £50, R. P. S. Hubbard.

Holland and Hannen and Cubitts Prize for working drawings, £10 each: fourth year, F. J. M. Ormrod; third year, A. Roberts; second year, J. R. Baxter.

John Rankin Prizes for sketch designs, £10 each: fourth year, T. T. Hewitson; third year, M. El Hakeem.

John Lewis Partnership Prize for furniture design in the fourth year, £10, T. T. Hewitson.

Gordon Selfridge Prize for design in the second year, £10, J. R. Baxter.

Anthony Minoprio Prize for the best set of rendered drawings in any year, £5, F. H. Littler, third year.

The Architects' Journal measured drawing prize for the second year, £5, A. G. Martinez.

COMPETITIONS OPEN

***July 31.*—The Luton Town Council invites architects to submit designs for the proposed town hall, which is to be built on the site of the old town hall, at an approximate cost of £250,000. Assessor: Sir Brumwell Thomas, F.R.I.B.A. Premiums: £500, £300, £200 and £100. Particulars may be obtained on application to W. Smith, Town Clerk, 2 Upper George Street, Luton. Deposit £2 2s. Latest date for submission of designs: July 31.**

***July 31.*—The Dudley Education Authority invites architects having an office within a radius of fifteen miles of Dudley to submit competitive designs for a Council school to accommodate 320 children, to be erected on the Brewery Fields estate; also a school for 400 children on the Priory estate. Assessor: Herbert T. Buckland, F.R.I.B.A. Premiums: £150, £100, and £50. Applications for conditions of the competition, etc., should have been made to J. Whaley, Director of Education, Education Offices, St. James's Road, Dudley, by April 30. Deposit £1 1s. Latest date for submission of designs: July 31.**

July 31.—The Southport Borough Council invites local architects to submit designs for a new Market Hall. Assessor: Percy Worthington, F.R.I.B.A. Premiums: £100, £50, £35, and £20. The hall is to contain fifty-six stalls and a manager's office. The site is 191 ft. by 95 ft. The estimated cost is £13,500. Conditions may be obtained from the Town Clerk, Municipal Buildings, Southport. Latest date for submission of designs: July 31.

August 30.—The Carlisle Corporation invites British architects to submit designs for the façade to English Street and the Victoria Viaduct, suitable for shops and business premises. The site was previously occupied by the Prison. The total length of the frontage is approximately 358 ft. Assessor: Francis Jones, F.R.I.B.A. Premiums: £300, £200, and £100. Particulars of the competition, etc., may be obtained from Percy Dalton, A.M.INST.C.E., A.R.I.B.A., City Engineer, 18 Fisher Street, Carlisle. Deposit £1 1s.

September 1.—The Bangor (Co. Down) Borough Council invites architects or town planners to submit designs in competition for laying out the sea front within the Borough. Assessor: Professor Patrick Abercrombie, F.R.I.B.A. Premiums: £150 and £50 for first and second places, respectively. Copies of the conditions and plans will be forwarded on application to J. Milliken, Town Clerk, Borough Council Offices, Bangor, Co. Down. Deposit £1 1s. Latest date for submission of designs: September 1.

September 30.—The Isle of Man Education Authority invites architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums: £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs: September 30.

No date.—The General Syndicate, Ltd., invites architects to submit competitive schemes for the development of a site at Liverpool, fronting St. John's Lane, Queen Square and Rose Street. Premiums: £250, £100 and £50, for first, second and third prizes, respectively. Particulars, etc., are obtainable on application to the Secretary, the General Building Syndicate, Ltd., 36 St. Martin's Lane, W.C.2.

The R.I.B.A have issued the following notice in connection with the competition for the proposed pavilion, Menai Bridge: The Competition Committee call the attention of members to the fact that the conditions of the competition are not in accordance with the Regulations of the R.I.B.A. The Competitons Committee are in negotiation with the promoters in the hope of securing an amendment. In the meantime, members should not take part in the competition.

THE BUILDINGS ILLUSTRATED

Following are the names of the general contractors and some of the sub-contractors for the buildings illustrated in this issue:

The Streatham Astoria (pages 43–46). General contractors, Griggs and Son. Sub-contractors: London Brick Co. and Forders, Ltd., Fletton bricks and roof tiling; Wiggins, Sankey & Co., Ltd., facing bricks; Ragusa Asphalte Paving Co., Ltd., asphalt; Stuart's Granolithic Co., Ltd., artificial stonework; Asbestos Cement Building Products, Ltd., asbestos roof tiling; F. Knight & Co., ironmongery; J. W. Gray & Co., lightning conductors; Morris, Singer & Co., steel sashes and windows; Williams and Williams, Ltd., lantern lights, laylights and patent glazing; H. H. Martyn & Co., Ltd., and J. Starkie Gardner & Co., Ltd., ornamental metal handrails, grills and balustrades; F. A. Norris & Co., wrought-iron staircases; Ed. Wood & Co., Ltd., constructional steelwork; British Reinforced Concrete Engineering Co., Ltd., steel reinforcement; Carrier Engineering Co., Ltd., heating and ventilation; J. TRADE NOTES

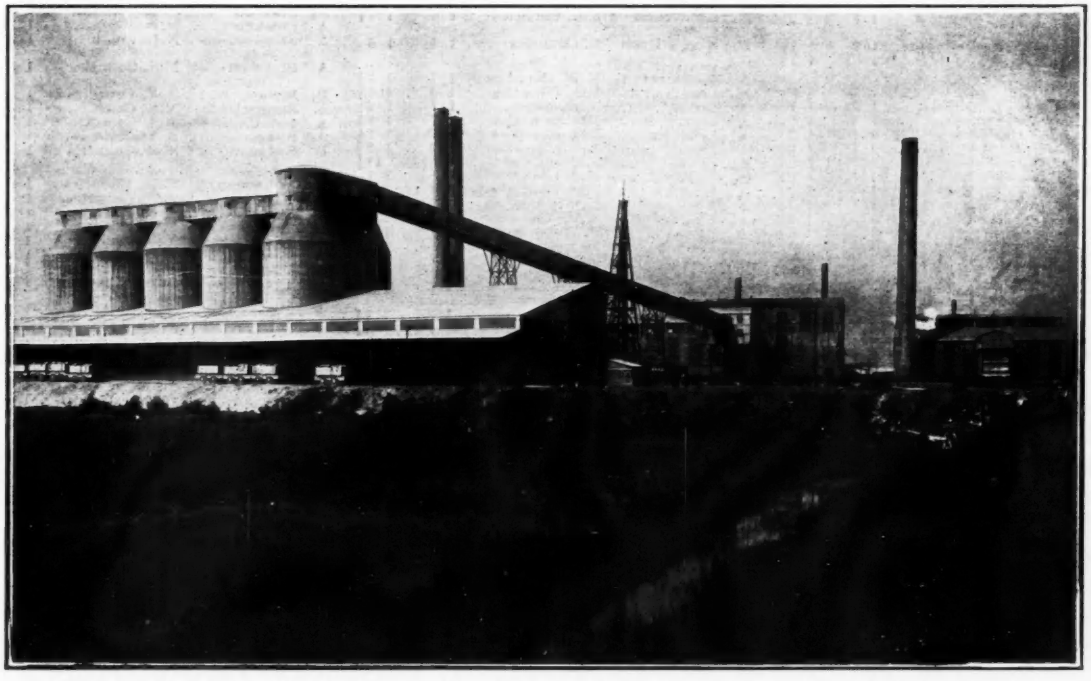
At the invitation of the Cement Marketing Company, Ltd., a party of nearly a hundred architects and civil engineers recently visited the Kent works of the Associated Portland Cement Manufacturers, Ltd., at Stone. Interest was added by taking the river route to the works from Westminster Pier. On disembarking at the loading jetty of the works, the party were provided with voluminous white smocks and check caps. At this jetty the raw materials are unloaded, and also the finished products are dispatched. Ships up to 3,000 tons capacity can be berthed.

Evidence of the magnitude of the undertaking was provided by the ten huge storage silos. These hold 1,750 tons of cement each. From here the party passed to the boiler-house and generating station, from whence electric power is supplied to the whole of the plant. They then inspected the slurry-mixing and storage tanks, of which there are five: one for clay slurry, four for cement slurry. The total capacity of these is 2,500 tons. A light railway and numerous conveyors transport the materials on their way to the various operations.

The first part of the manufacture takes place at the wash mill, where chalk and clay are mixed with water to form cement slurry. From here the slurry passes to the separating plant and the tube mills. The raw liquid is passed by pumps to the kilns, where, by means of coal-dust under pressure and heated air, it is converted into "clinker" at the rate of 600 tons per day. Four tube mills, 36 feet long and 6 feet in diameter, are used to grind the clinker to produce the finished product. A thousand horse-power is required to drive these mills alone, which gives some idea of the power required throughout the works.

Finally, visitors inspected a series of coloured exhibits, showing the diversity of uses to which concrete might be put, and giving a conception of the architecture of tomorrow.



S. W. B.

*

Prior to the erection of the new P.L.A. floating landing-stage at Tilbury, opened recently by the Prime Minister, passengers had to proceed to and from their vessels by means of tenders or proceed to the docks to join or leave the boats. This new landing stage furnishes such facilities for the landing of ships' passengers that it now places Tilbury on a level with other ports which in the past have proved more popular than London to ocean travellers. The largest vessels using the port can berth at any level of the tide and at any hour of the day or night. The new floating stage consists of a platform 1,142 ft. long by 80 ft. wide, constructed of heavy steel girders with a timber deck. It projects some 370 ft. into the river, and was designed by Mr. F. Palmer, C.I.E., consulting engineer to the P.L.A. The lighting is likely to prove one of the most important factors in the success of the new landing stage, permitting, as it does, all-night activities. The scheme was evolved as a result of collaboration between the Electrical Department of the P.L.A. and the Illuminating Engineering Department of the G.E.C. Another particularly interesting lighting installation is at Ipswich. Here street lighting by means of Wembley lanterns and 300-watt Osram lamps has been adopted in the main thoroughfares. The installation is somewhat unusual in that the lighting units are fitted to the trackless tramcar trolley standards. By employing an anti-vibratory device it has been found that this practice is an excellent one by which to secure adequate illumination of the town's principal thoroughfares without recourse to erecting special lighting standards. The trackless trolley standards are spaced some 120 ft. apart, and with the lanterns mounted at a height of about 20 ft. it has been found that the illumination is ample from every point of view. The installation embraces St. Matthew's, Westgate, Tavern and Carr Streets, and was carried out by the Ipswich Corporation Electrical Department.

*

Building and Lighting is the title of a new series of advice bulletins, the first of which has just been issued by Messrs. Philips Lamps, Ltd. Light, whether natural or artificial, is indispensable to architectural form. Surely, therefore, it is stated, the ideal state of affairs would be for the architect to be fully conversant with the science of illumination, so that he need not consult a lighting specialist, and so that he may design the building in full recognition of all the possibilities of modern illumination. These and other ideas have led Messrs. Philips Lamps, Ltd., to issue this publication. The firm's object is to bring these comparatively simple technical problems within the direct province of the architect, so that in whatever way they are solved, he will handle them as part of his work, and they hope to bring to his notice any advances which may be made in the unexplored province of "light."

The works of the Associated Portland Cement Manufacturers, Ltd., at Stone, Kent, a visit to which is described above.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Broken brick or stone, 2 in., per yd.	£0	11	6
Thames ballast, per yd.	0	10	0
Pit gravel, per yd.	0	15	0
Pit sand, per yd.	0	12	6
Washed sand, per yd.	0	13	0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

Portland cement, per ton	£2	8	0
Lias lime, per ton	2	0	0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.

Transport hire per day:

Cart and horse	£1	3	0	*Trailer*	£0	15	0
3-ton motor lorry	3	15	0	*Steam roller*	4	5	0
Steam lorry, 5-ton	4	0	0	*Water cart*	1	5	0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0	1	6
SPREAD and level, including wheeling, per yd.	0	1	6

FILLING into carts and carting away to a shoot or deposit, per yd. cube . 0 10 6
TRIMMING earth to slopes, per yd. sup. 0 0 6
HACKING up old grano. or similar paving, per yd. sup. 0 1 3
PLANKING to excavations, per ft. sup. 0 0 5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.
IF left in, add to above prices, per ft. cube . 0 2 0

HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0	2	1
DO. 6 in. thick, per yd. sup.	0	2	10
PUDDLING, per yd. cube	1	10	0
CEMENT CONCRETE, 4-2-1, per yd. cube	1	17	6
DO. 6-2-1, per yd. cube	1	12	6

DO. in upper floors, add 15 per cent.
DO. in reinforced-concrete work, add 20 per cent.
DO. in underpinning, add 60 per cent.

LIAS-LIME CONCRETE, per yd. cube	£1	14	0
BREEZE CONCRETE, per yd. cube	1	7	0
DO. in lintels, etc., per ft. cube	0	1	6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0	3	9
FINE concrete benching to bottom of manholes, per ft. cube	0	3	0
FINISHING surface of concrete spade face, per yd. sup.	0	0	9

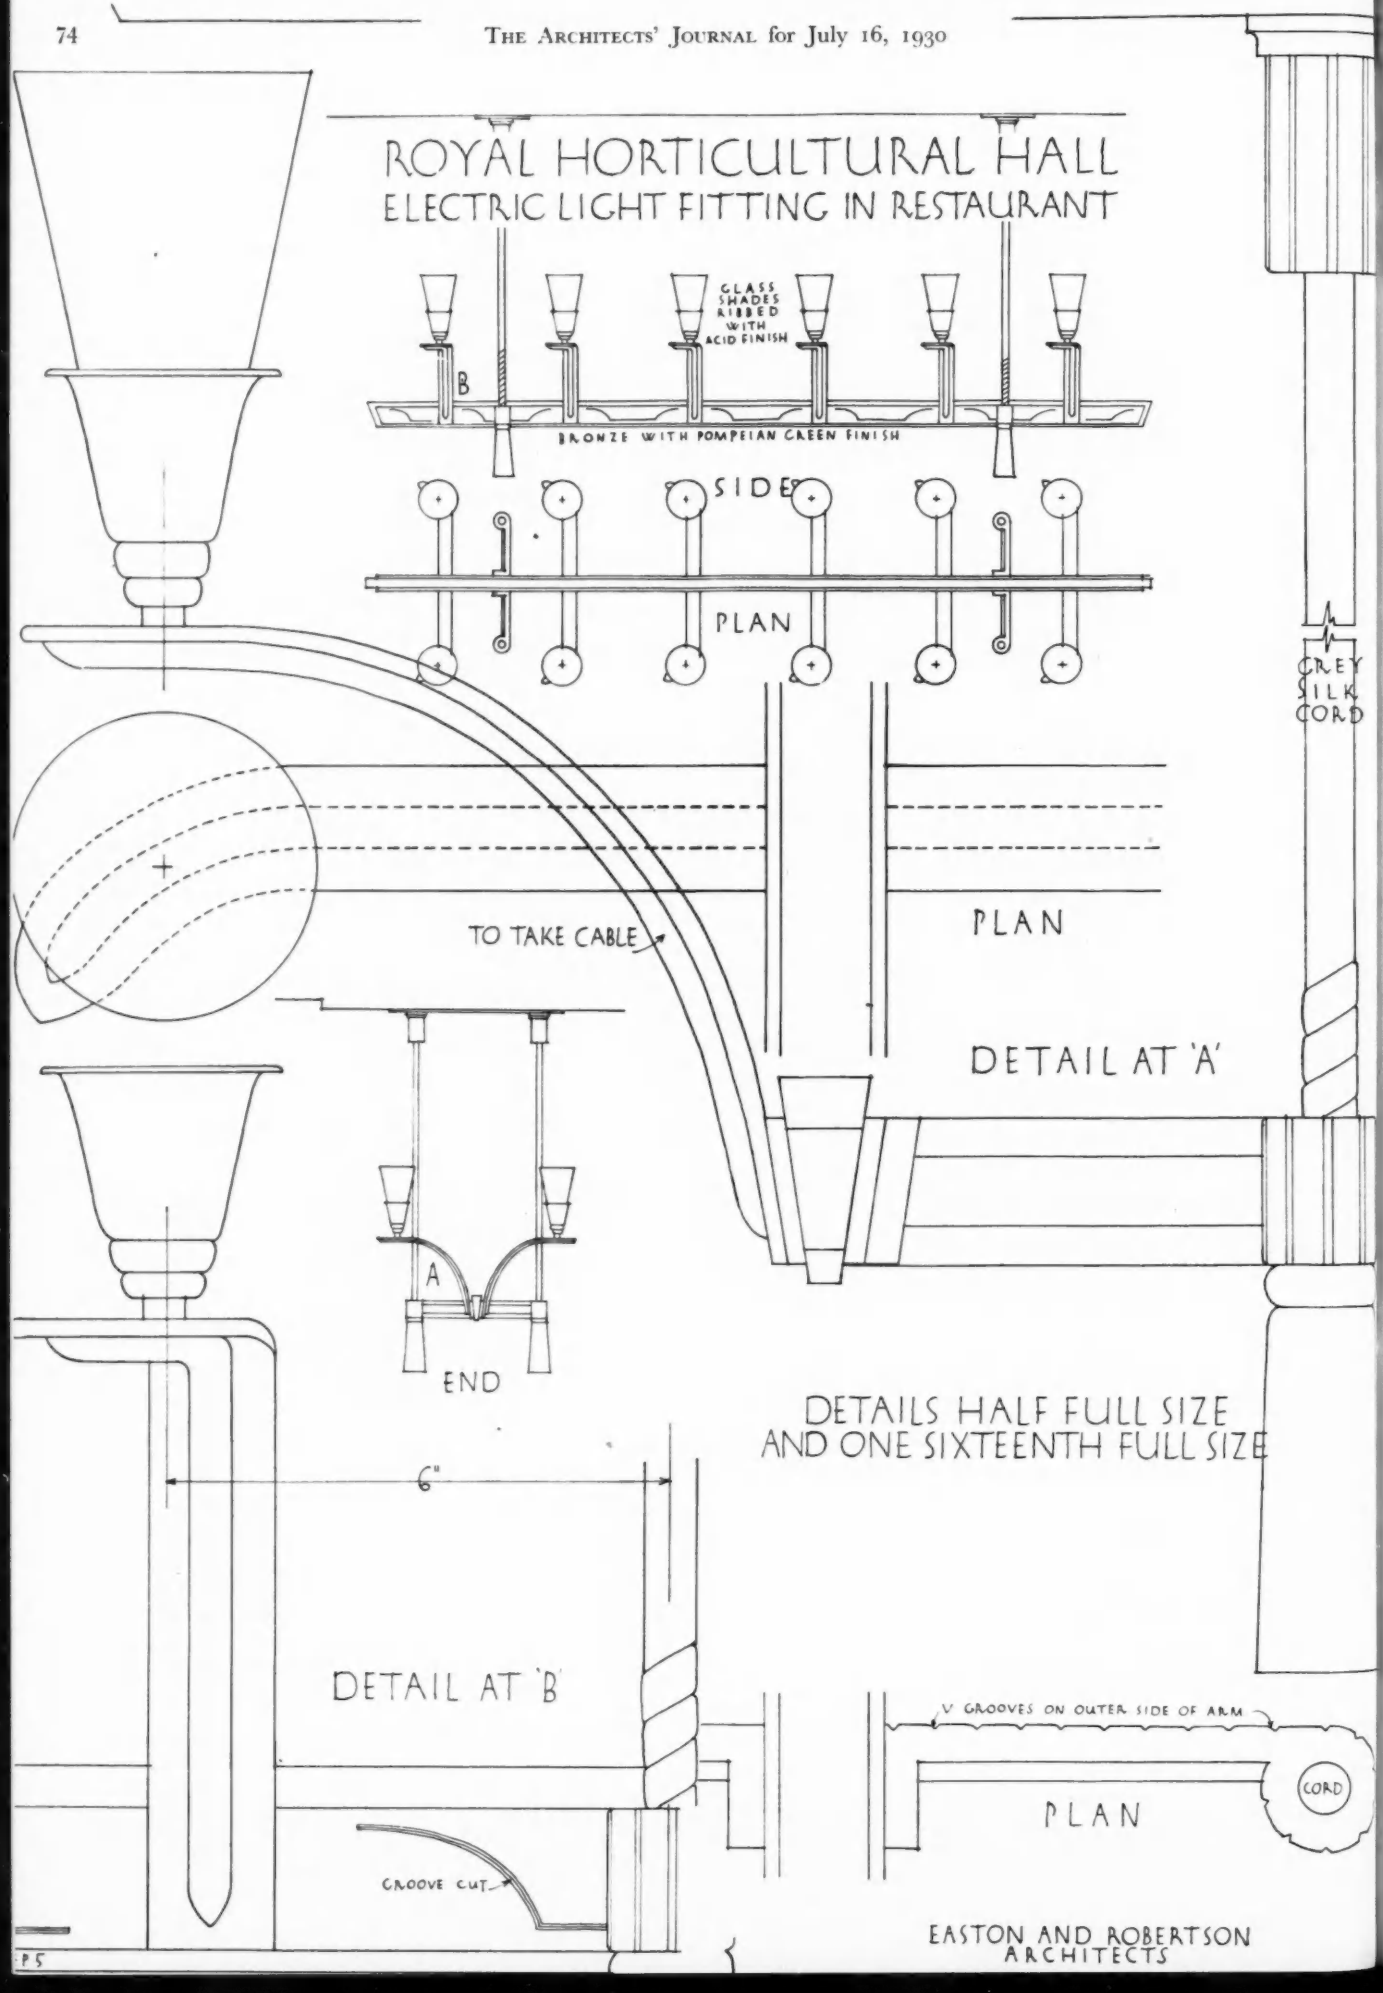
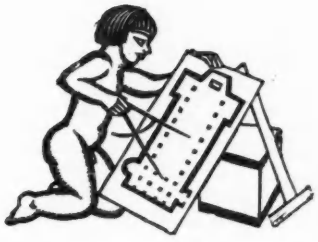
A WEEKLY SERIES



LIGHT FITTING IN THE RESTAURANT, ROYAL HORTICULTURAL HALL, LONDON
DESIGNED BY EASTON AND ROBERTSON



THIS fitting consists in principle of a main horizontal member from which branch twelve arms carrying goblet-shaped opal glass bowls, to conceal the lamps themselves. It is of bronze, finished in Pompeian green, and is supported by four stout silver silk cords fixed to bronze rectangular ceiling plates.

The incised decoration on the sides of the principal member suggests leaf shapes—in fact the whole design has a very definite character in tune with natural plant forms. The architects have had the foresight to provide swellings in the arms, which contain the electric cables feeding the lamps effectively and invisibly.

The drawing overleaf may be read with architect's scales—6ins.; and ¾in.=1ft.

THE ARCHITECTS' JOURNAL

WEDNESDAY, JULY 16, 1930

IN THESE LEAN YEARS

" As architects . . . . we are anxious that each town hall, civic building and planning scheme is done as well as contemporary talent can do it . . . that the system of public competition will constantly select the best."

IT will be remembered by historians of the future as a curious historical fact that the lean years succeeding the Great War saw not only the building of the million houses that were needed to make good the arrears of the war period, but a greater mass of municipal building than had ever arisen before. It will have been discovered that the arrears were by no means confined to houses, and that much of the municipal rebuilding was work held up for five years; but round and about the year 1930, it will have been noticed, an unprecedented glut of bricks and mortar coincided with a financial and industrial depression remembered long after as a crisis which the nation barely survived, suffering as it then was by the secession from the Empire of some of its greatest possessions and markets.

This year, 1930 through which we now move, is indeed heavy with events and portents. We do not know clearly whether we are bankrupts returning to solvency, or good men on the road to ruin; and when we look about us and see unemployment all round, stagnation within and fierce competition without, we have moments of fear and of trembling. " Is this the time," we ask, " for such municipal extravagance ? Is this the time for towns whose inhabitants cannot afford the rents of council houses; when the rates of good business property are so behindhand that payment can hardly be pressed for fear of collapse all round; when industry wanes and idleness waxes ; is this the time to spend hundreds of thousands on town halls and offices, new streets and civic centres? "

It is a question not to be answered out of hand, for the Government sees it as being one means of spending money and so keeping men employed; and perhaps the Government says to itself that there are many ways of spending money. There are roads and railways, electrification and drainage—and there is also the erection of buildings in good bricks and lasting mortar, worth so much today and not too much less in days to come.

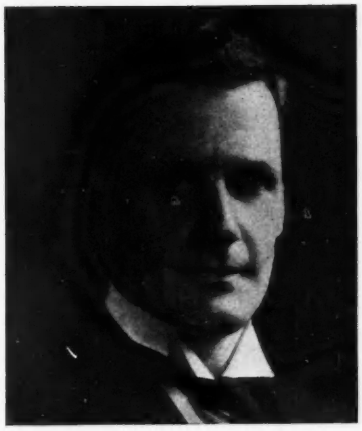
And also perhaps there may be something in the notion that when business is slack the time has come to reorganize the office and straighten things up. Goodness knows that most English towns are in need of straightening and rebuilding—the last places for depressed men to live in.

We can hardly blame a town such as Derby, when, in response to an invitation by the Government to say just how it could usefully spend some money, it answers by drawing up a great scheme of central civic improvements. And who is to say that the money is not very well spent, provided that the improvements are of a quality likely to increase the attractions and prestige of an otherwise gloomy spot ?

For ourselves, we would say that in the midst of an enormous outpouring of money for relief and maintenance of unemployed, and for many works the value of which is hard to find, we see this building as something fairly concrete and useful. As architects, it concerns us still further that it should be something much more than building for building's sake, as so much relief work is apt to be, and we are anxious that each town hall, civic building and planning scheme is done as well as contemporary talent can do it.

With this in view it is our hope that the system of public competition will constantly select the best that can be got, so that in the end, when it becomes a matter of looking back on these times, it may be said that money poured freely in those lean years, but left a fine legacy of good building.

STOCKHOLM EXHIBITION, 1930. THE MAIN RESTAURANT.



An epitome of the architectural philosophy that has resulted here in many remarkable "functional" buildings by E. G. Asplund, architect of Stockholm's circular library and chief architect to the Exhibition.

Tiers of variegated sunblinds and their shadows play an important part in this composition, their form being emphasized by the lettering, so admirably chosen to co-operate with the sunblind supports and balcony rails as a foil to the huge plate-glass walls of the restaurant.

This remarkable building will surely help many waverers to appreciate the beauty in modernist architecture.

Further illustrations of the Exhibition appear on pages 82–86.

NEWS & TOPICS

Thomas Pierson Frank, who, in his forty-fifth year, has been appointed to succeed Sir George Humphreys, Chief Engineer of the London County Council, on his retirement, next November. Mr. Frank is City Engineer of Liverpool, and previously held similar appointments at Huddersfield, his native town, Plymouth, Cardiff and elsewhere.

ARCHITECTURAL CRITICISM

THE brilliant quarterly review called *The Century*, published in New York, has some severe comments to make on the dearth of architectural criticism; but we in this country have also reason to take the editorial words to heart. Is it true that here also critics of buildings are apt to be cowards and pay too great deference to the God of Commerce? In America it is complained that if there is any approach to æsthetic discussion at all it is almost invariably favourable. In particular the new skyscrapers are too much praised, although ninety per cent. of them are in some way " botched." According to *The Century*, nearly every skyscraper put up today is designed with the purpose of securing a maximum rental out of a given plot of ground. Hence the building is limited in height and controlled in design almost wholly by considerations of profit, engineering difficulties and building laws. So much has been said about the interesting forms which have resulted from the operation of the zoning laws that the naked truth about this matter is somewhat disconcerting. The buildings are set back where the law demands and not set back where it does not. The result is a series of lopsided monstrosities and proportions dictated by legal rather than by æsthetic canons.

★

Obviously it would be unjust if a critic were to blame the architect for the lack of symmetry in a building, when this defect is due to economic circumstances. The task of constructive criticism in such an instance is to direct public attention to the baneful effect of the building regulations themselves, and to suggest their amendment in such a manner that they take account of architectural factors. Where, however, the artistic faults of a building, whatever they be, can justly be attributed to the architect himself, it is the function of criticism to announce this fact fearlessly. It will be remembered that four years ago we issued a *questionnaire* to our readers, inviting them to give their views on this particular subject, and that there was a general consensus of opinion in favour of candid criticism of new buildings. It is just a question of the terms in which the comments are couched. Criticism that is at the same time courteous and based upon a reputable standard of æsthetic judgment is not resented by members of the profession.

LONDON'S NEW CHIEF ENGINEER

Thomas Pierson Frank, M.INST.C.E., F.S.I., was last week appointed Chief Engineer to the L.C.C. in succession to Sir George Humphreys. Mr. Frank comes to London from Liverpool, where he took over from Mr. Brodie, who will long be remembered as the maker of fine roads. Here Mr. Frank will be faced with one of the toughest problems ever presented to an incoming official, for the committee that started its labours last Thursday, if they emerge from them successful, will have achieved the more than human.

THE INDUSTRIAL SOUTH

The growth of the industrial south is one of the remarkable things of modern times. During the last five years out of 77,667 new factories established in the Midlands and South of England more than 40,000 are in the south, in and about London, Essex, Middlesex, Oxford, north of the Thames and elsewhere. Places like Slough are growing into towns with large populations and all the terrible signs of pig-headed industrialism; while north of London at Hayes, Southall, and fanwise round the northern suburbs are springing up miles of new factories. Even the Great West Road, planned to be one of the entrances of London, has, in places, the look of a motor track leading to an absolute fun-fair of comic factories. It is as though London were now the absolutely irresistible magnet for all the money in the country.

THE CUSTOM HOUSE TO GO

It is announced that the Custom House in Lower Thames Street is likely to be given up before long, so that the site may be occupied by an extension eastward of Billingsgate Fish Market. For some time past the building, large as it is, has proved inadequate for the staff who have to deal with the business of the largest port in the world, and on a new site elsewhere a new and much larger building is to be built. The Custom House was originally built by David Laing, a pupil of Sir John Soane, and is a rather lifeless work of a heavy if very dignified period of English architecture. The long room that occupies a great deal of the ground floor space was later reconstructed by Smirke. It is to be hoped that as much information as possible will be obtained, by measurement and photography, of what is good in the design before it vanishes, like so much of classic London, into the limbo of things forgotten.

NEW VENICE

During the last few years (writes a correspondent in sending me the accompanying snapshot) a new Venice has grown up on the Isola di S. Elena. It is essentially modern, though it contains no buildings which can be compared with recent work in Paris, Berlin or Vienna. By introducing traditional Venetian features, such as chimney-stacks and windows, the new buildings have been kept in harmony with those in the older part of the city. The general layout is far from formal. Indeed, the impression given is of an almost haphazard arrangement of streets and squares. At the centre is a triangular-shaped public garden, from which streets radiate to the outer circle of houses. Between these latter and the shore of the lagoon extends a wide belt of tree-planted grass. This space is unenclosed and forms an ideal children's playground. Most of the houses are divided into flats, and the ground floors of many are occupied by shops and cafés. Brick is the building material used, the roofs being tiled, and the floors formed of pre-cast hollow concrete beams. Externally, walls are cement-

rendered and colour-washed in all shades of cream, red and yellow. There are no canals, but concrete-paved streets without footways. As yet, pedestrians are safe from wheeled traffic. The Duce's plans for a road bridge connecting Venice with the mainland is complete, but is strongly opposed by the citizens.

THE LEANING TOWER OF PISA

It is just three years (writes a correspondent in Italy) since a Commission was appointed by the Italian Government to enquire into the question of the stability of the famous Tower of Pisa. The Commission, after making an exhaustive study of the site and taking numerous observations to discover the causes which have led to the increasing inclination of the tower, has now sent in its report to the Minister concerned, accompanying it with an album of photographs showing different experiments that have been undertaken. Certain works of underpinning and strengthening are stated to be absolutely essential to protect the structure and to arrest any further increase in the lean of the tower. There is no immediate danger of a collapse, but the works must not be unduly delayed. The total cost of the necessary repairs and other works is estimated at a sum not exceeding twenty millions of liras, say, £220,000 sterling (he concludes. It is a vast sum !); and the Minister is putting the matter before the Head of the Government, Signor Mussolini, with a view to the provision of the necessary funds.

A POST FOR AN ARCHITECT-GARDENER

An exceptional post is advertised on page xxxii of this issue. A firm of landscape gardeners and nurserymen has realized the truth of a matter I advocated as long ago as last February, namely, that the planning of public and private parks is in need of stimulus from the architect. Accordingly this firm is seeking applicants for the post of head designer from men with education, social experience, and a knowledge of architectural principles. And there should be many applicants of the right type, trained in abstract design, i.e. to co-operate with the universe in the production of beauty. Architects already have been called to shipbuilding and the arranging of theatre scenery, and are recovering bridges and factories from that born poacher, the engineer.

IS THERE A FUTURIST GARDEN?

The squires of the last three centuries are the ancestors of landscape design. They not only bred dogs, horses and pheasants and cows—they bred beauty in these beasts to adorn the English landscape. They were forever replanning their estates with woodlands, groups of trees on hill and artificial mound, lakes and watercourses, parks and cornfields. Kingsley's eurt line, "There's blood on your foreign shrubs, squire," is but one of the many expletives which show the importance of the class against which it was hurled. But not only for the traditionalist but for the modernist the expert must design. It is in the latter process he will get his fun (or his despair). Who knows but what flower beds on a mechanistic plan may help to naturalize mechanics? But may heaven shield us from mechanical flowers and trees.

PRIZE DISTRIBUTION AT THE A.A.

On Friday last, July 11, the Architectural Association terminated the school year with the presentation of prizes and scholarships. The awards were distributed by His Excellency Baron Palmstierna, the Swedish Minister in London. This was peculiarly fitting in view of the A.A.'s approaching visit to Sweden, where the Exhibition of Decorative Art is attracting the attention of Europe. Incidentally, those who are unable to attend the visit will find at the A.A. a show of photographs taken recently at the exhibition by Mr. Yerbury. In welcoming His Excellency, the President, Mr. Grey Wornum, spoke of the honour conferred upon the A.A. by his presence, and said that it was one more proof of the affection subsisting between the two countries. Speaking of the school, he referred to the change that took place at the beginning of the session, when Mr. Howard Robertson relinquished the sole charge of the school and two practising architects were appointed to help him. The council thought the experiment justified in every way.

The new Venice: a view of recent buildings erected on the Isola di S. Elena, which is as yet unconnected by bridge.

★

Baron Palmstierna had some wise words to say to young architects. He told them to let their imaginations take flight without, however, forgetting traditional ways. Let their work be national. Let them, as architects, lead the building trade, and let them also join hands with painters and sculptors, so that the three arts might benefit by their mutual support. Mr. Robertson, in proposing a vote of thanks, said he was struck with His Excellency's remarks. They should pay regard to tradition, but they must invent. Architecture must be modern, and it was the policy of the school so to arrange the curriculum as to combine the good qualities of past, present and future. ASTRAGAL

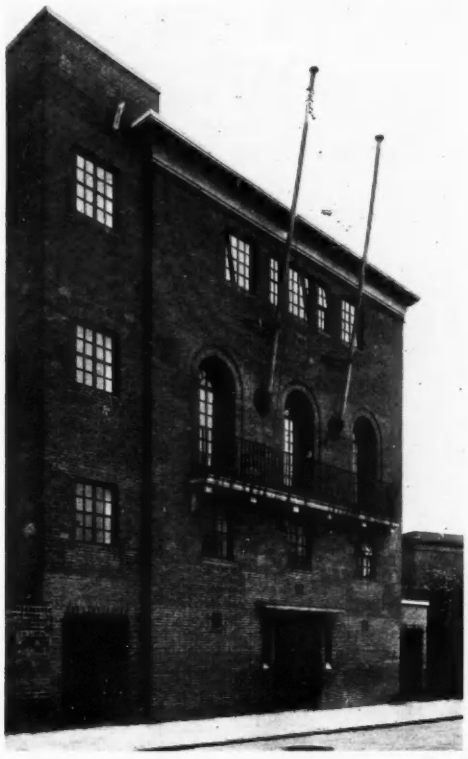
Charing Cross Bridge Scheme Committee

The following is a complete list of the names of the persons who have accepted appointment on the Charing Cross Bridge Scheme Advisory Committee and of the authorities or societies they represent:

Chairman—Sir Leslie Scott, K.C.

Sir Giles Gilbert Scott, R.A., Royal Fine Art Commission; Sir Reginald Blomfield, R.A., Royal Academy of Arts; Dr. Raymond Unwin, F.R.I.B.A., R.I.B.A.; Mr. William Wylie Grierson and Mr. Ernest Frederic Crosbie Trench, Institution of Civil Engineers; Mr. Dendy Watney, Surveyors' Institution; Mr. F. Longstreth Thompson, Town Planning Institute; Mr. L. Silkin and Sir Percy Simmons, London County Council; Captain J. F. C. Bennett (Mayor), Westminster City Council; Mr. George Brittain, Lambeth Metropolitan Borough Council; Brig.-Gen. the Hon. Everard Baring and Sir Herbert A. Walker, Southern Railway Co.; Mr. Frank Pick, Underground Electric Railway Co.; Mr. C. F. Leach (vice-chairman of the Authority), Port of London Authority.

The L.C.C. Improvements Committee also recommend that Captain G. S. C. Swinton be appointed a member of the committee.



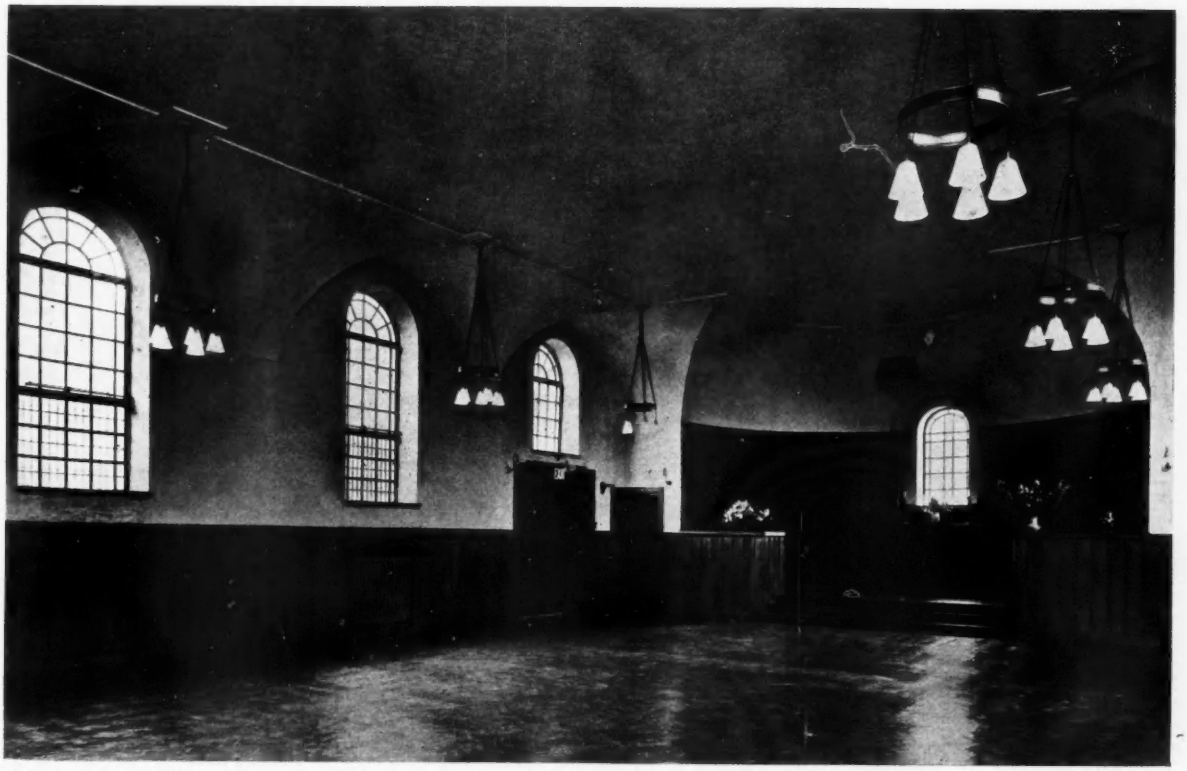
KINGSLEY HALL, BOW

DESIGNED BY C. COWLES-VOYSEY

KINGSLEY HALL was built as a settlement for social work in Bow. It was required that the building should be adaptable for many different purposes and that the site, somewhat restricted for the provision of the accommodation required, should be fully utilized. The site is a rectangle, with a frontage of 50 ft. to Powis Road and a depth of 80 ft. The ground floor is occupied by the assembly hall, an entrance vestibule, a sanctuary, or rest room, and a classroom.

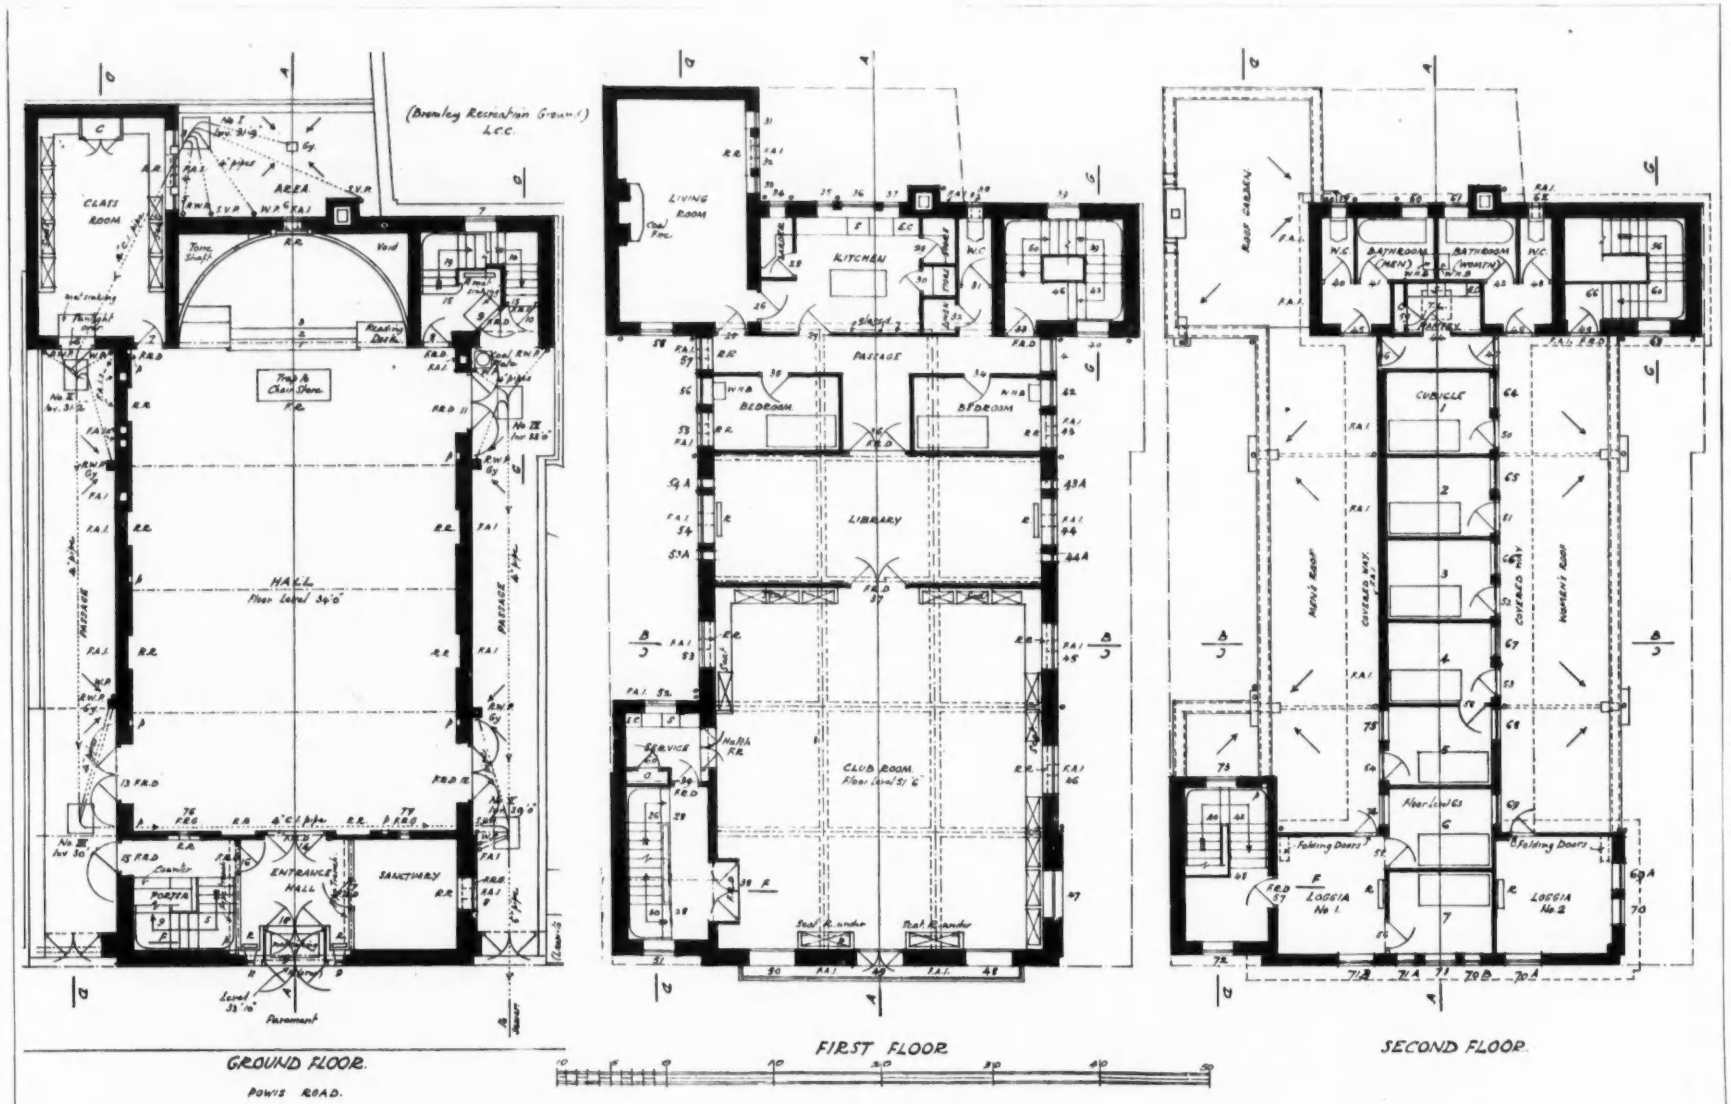
Owing to the restricted height of the assembly hall and the conflicting nature of the requirements it was not thought possible to obtain an ecclesiastical character. The treatment and decoration of the hall therefore are of a restrained and simple character. Provision is made for the installation of a small organ.

The sanctuary, or rest room, adjoins the entrance. It is finished in the same materials as the hall (see page 81) and is always open for public use.



The elevation to Powis Road. The building has been erected as a settlement for social work in the district.

The classroom has independent access and was designed for use as a platform retiring room in connection with the hall, and for Sunday school purposes.

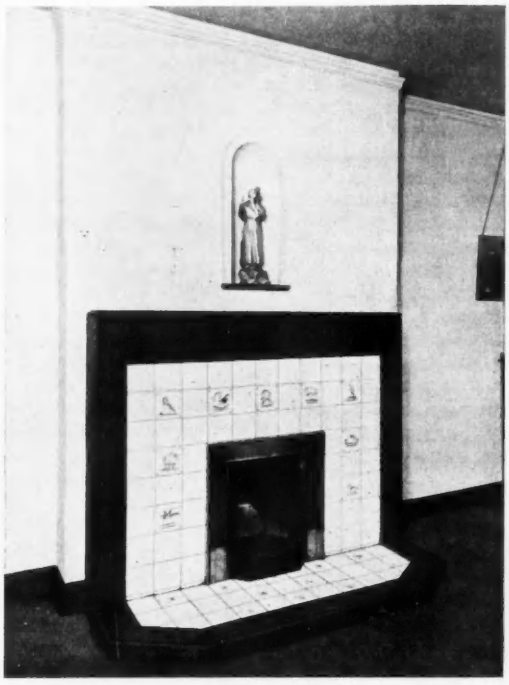


In the basement are the organ motor room, chair store, boiler house, meters and switch rooms. Lavatories in connection with the assembly hall are placed on a mezzanine floor.

On the first floor is a club room for general use by the boys' clubs and other groups. Adjoining is a refreshment buffet. On this floor also are the library and a self-contained flat for the settlement workers. Above this are a roof-garden and further living accommodation.

The exterior of the building is faced with 2-in. Dutch sand-faced bricks with a base of 2-in. Staffordshire blue bricks, the cornice and balcony being in concrete faced with white cement. The structure is of fire-resisting construction, and the finish generally is of a bright and cheerful character, designed to be permanent and clean.

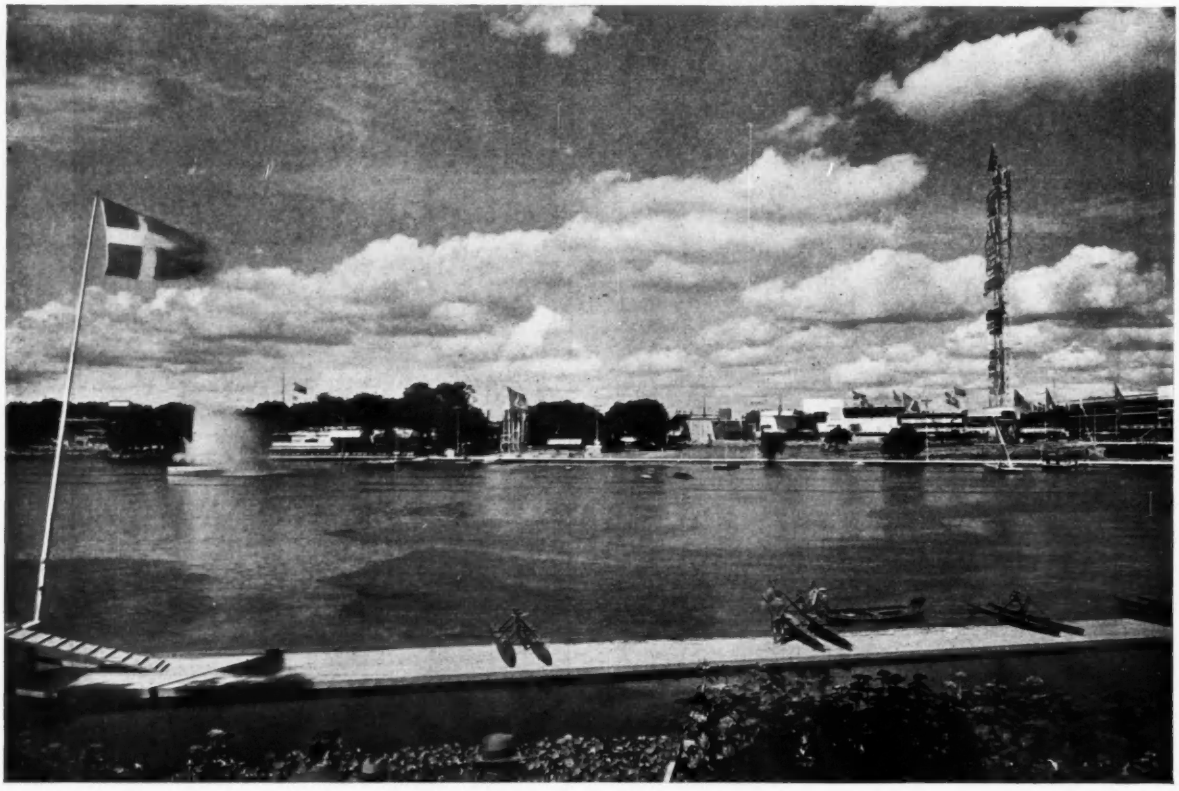
The assembly hall, excluding the platform, is 40 ft. 6 ins. long by 30 ft. wide. It has been designed as a "multi-purpose" hall, which is to be used for religious purposes on Sundays. Seating accommodation is provided for 250 persons.



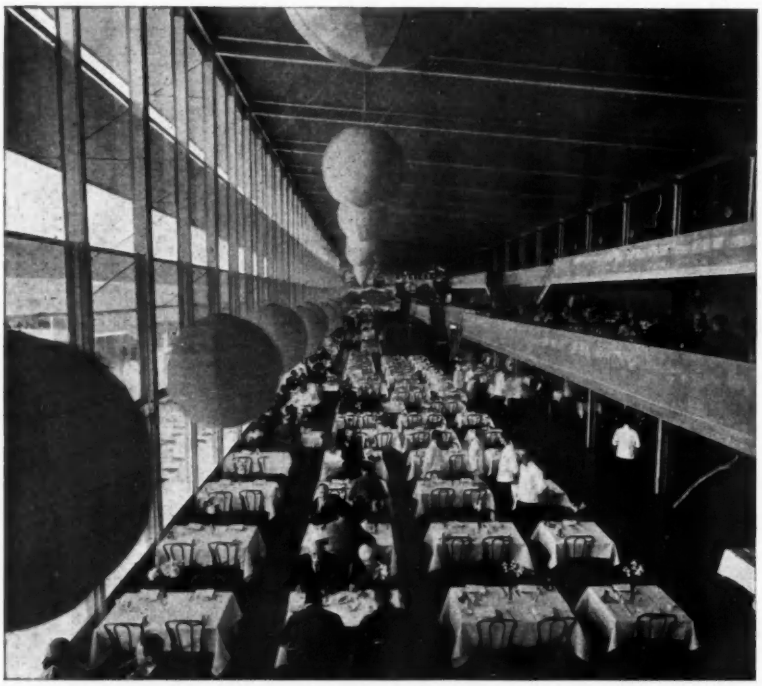
Kingsley Hall, Bow.] [*By C. Cowles-Voysey.*

Ground, first and second-floor plans. Between the ground and first floor is a mezzanine floor containing the upper part of the assembly hall, and men's and women's lavatory accommodation. On the ground floor to the left of the assembly hall, at the platform end, is another exit, not shown on the plan, similar to that on the right. The right-hand bedroom on the second floor beyond the library has been converted into a handicraft room.

The fountain in the roof garden masks a chimney-stack.



Fireplace, with white and painted tiles, in living-room.



Kingsley Hall, Bow.] [*By C. Cowles-Voysey.*

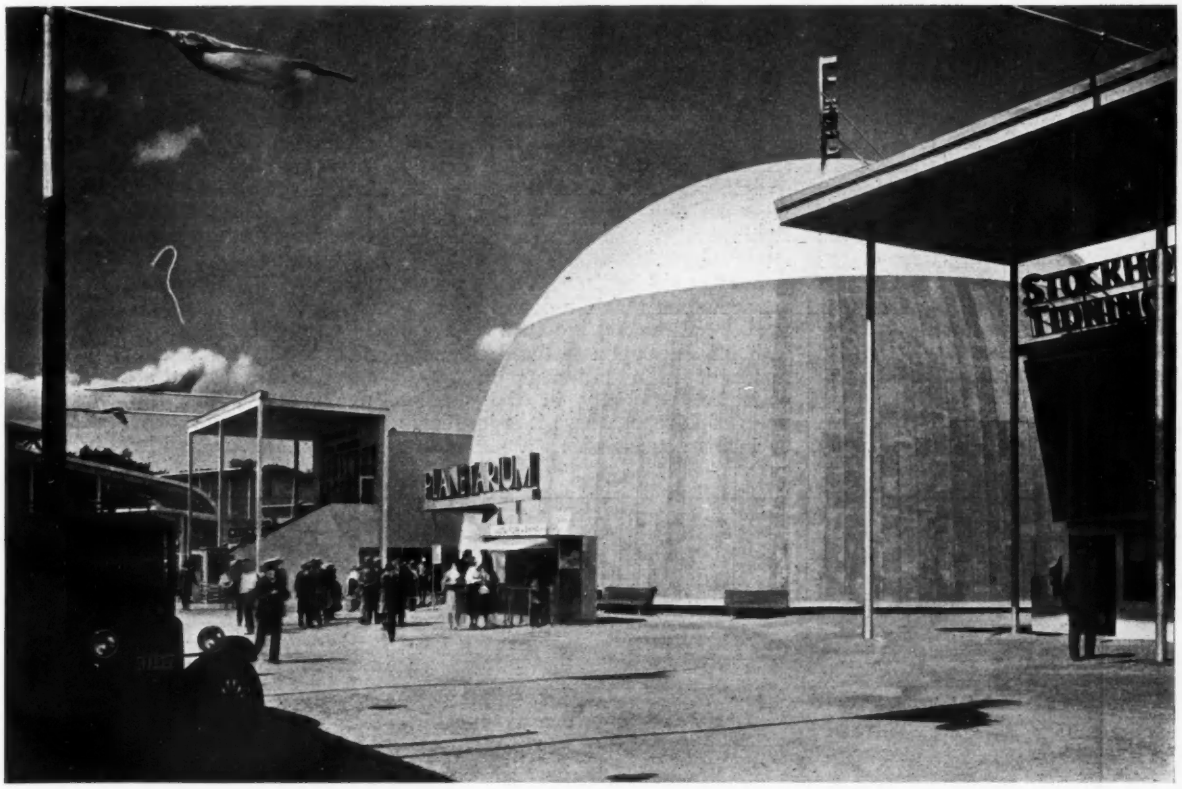
The platform in the assembly hall. The panelling is of oak, grey in tone, and the upper parts of the walls and the ceiling are in rough textured acoustic plaster, finished with a wood float, and washed a warm ochre colour.

On the ground floor to the left of the assembly hall, at the platform end, is another exit, not shown on the plan, similar to that on the right. The right-hand bedroom on the second floor beyond the library has been converted into a handicraft room.

A general view, taken from Djurgården on the other side of the bridge. The vast Advertising Mast is thrown into great relief, as the only prominent vertical in a mainly horizontal composition. On the left is the raft-fountain.

Interior of Restaurant. The use of spherical lights in rows breaks the monotony and yet emphasizes the horizontality of the whole. Note the reflective surfaces of the balconies.

STOCKHOLM



Functionalism

(*E. G. Asplund*

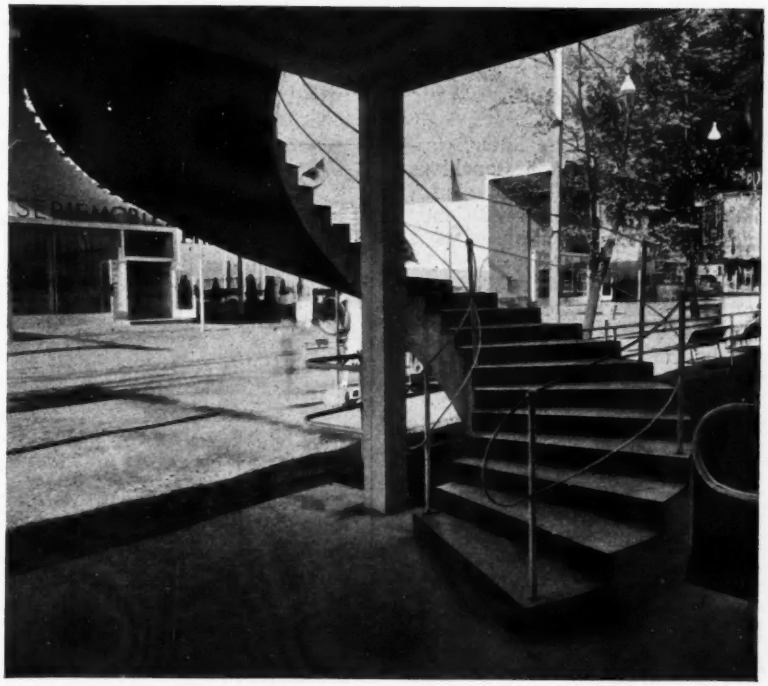
BY ROBERT

WHEN we think of Exhibitions Wembley naturally looms large in the mind's eye. Thus we automatically compare the Stockholm Exhibition with Wembley. At first, this may seem reasonable enough, but the actual differences are so great that in fairness to Wembley they must be recorded.

Wembley, to begin with, was much larger, and this alone made a visit to Wembley a portentous affair. Its site, too, was very different. The Empire Exhibition was placed in very ordinary Home Counties scenery, while the Stockholm Exhibition stands alongside a large expanse of natural water, Djurgardsbrunnsviken, at the end of the "Diplomat City" and opposite the Open-Air Museum, Skansen. This area is well wooded, and the Exhibition has many trees round it. It has, too, a greater proximity to Stockholm than Wembley

The strange blue and silver planetarium on the Corson. This feature stands out in great contrast to the horizontality of neighbouring buildings, and looks particularly beautiful when seen between silver birches from the water-side gardens.

EXHIBITION



Boldly Expressed

Architect)

HURD

had to London. Again, the intent of the Exhibition at Stockholm is very different.

The directors wish to bring to our notice the Swedish effort to develop the mass production of staple articles that are bright, pleasing and artistic, as well as labour-saving and utilitarian, for domestic purposes (domestic in a very wide sense). The architect, Mr. E. G. Asplund, has therefore built far more for the actual exhibition of goods than we did. At Wembley one had the semblance of permanent buildings, e.g. the India Pavilion and the Government Pavilion—which were only *partly* exhibitive of goods, existing as well in themselves for educational purposes; they were not only booths for commercial display. Thus the Nigerian Pavilion, the South African Pavilion and others had none of the characteristics of "functionally" designed buildings. The architecture of

This serpent up the back of which we step to see the display of Nordiska Kompaniet apparently maintains this elegant position by its continual jaw-grip of the terrace below.

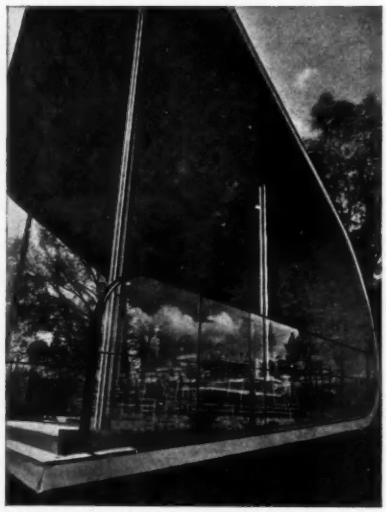
the main exhibition halls at Stockholm is dominated by the idea of good showmanship, based on a knowledge of display and refined taste. A pleasing simplicity and purity of line results, the light colouring of the outside walls becoming in effect an harmonious and unobtrusive frame for the exhibits themselves. Huge glass windows, brilliantly illuminated by night, enable the passers-by to get a good view of the exhibits after the closing time of the halls. Architecturally, the main point about the Stockholm Exhibition is that it is the boldest and most consistent exhibition of functionalist design in terms of its own characteristic beauty that we have yet had.

The entrance and Kommisariat form one building, the former being a lofty porch at the side of the latter, supported by slender rectangular stanchions and flying the flags of all nations. An introductory note of modern efficiency is struck by the chromium-plated steel entrance gates, a welcome substitute for the lumpy turnstiles we had at Wembley and often pass through on our way to see athletics or the Royal Academy.

After battling with the surge of guide and badge vendors inside the gates, we find ourselves walking parallel to but above the water, along the "Corson"—a terrace pathway past the stands displaying yacht and motor-boat building and various railway innovations. We pass the beautiful hemisphere of the Planetarium, which, with its blue and silver colouring, looks like nothing so much as a heavenly body, itself captured by an enterprising and resourceful astronomer for a few months, and moored at the Exhibition for the delectation of visitors. (What earthly ruse could have lured this lovely body from its heavenly course?)

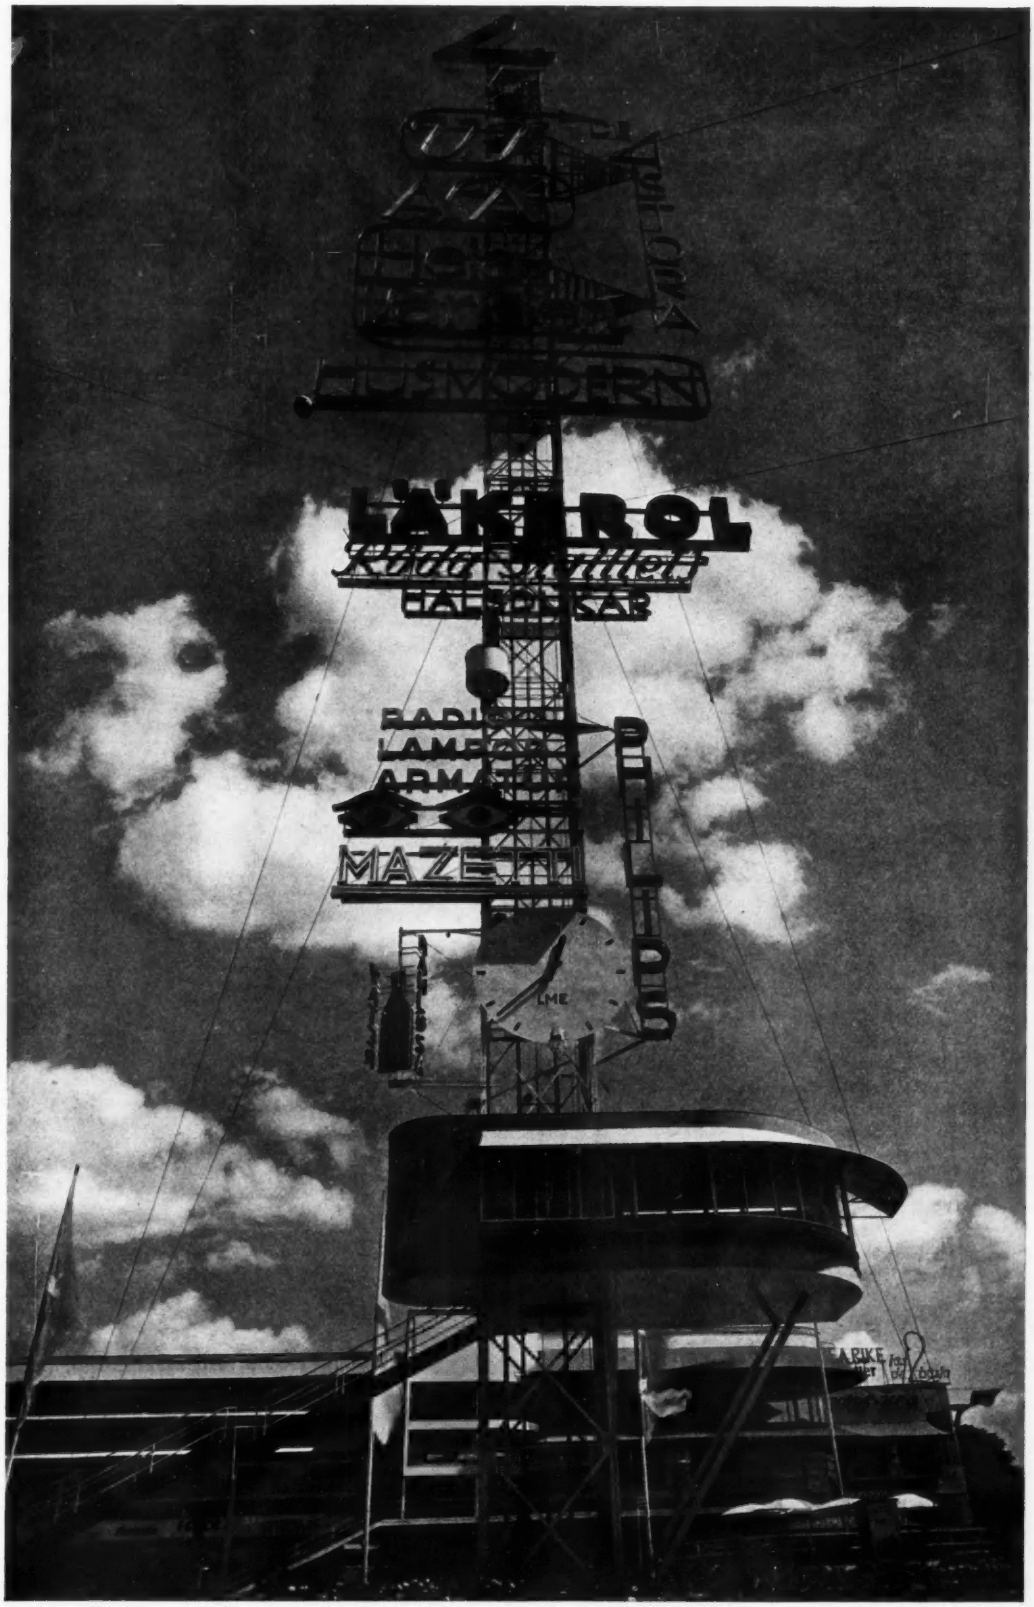
This path opens on to the large square holding 50,000 spectators, seating 10,000, with a large stage impressively functionalistic in appearance, to house an orchestra. I listened to an open-air orchestral concert here, and can testify to the remarkable success of the acoustically-curved sounding-board. What is perhaps the most striking group in the whole Exhibition is visible from here—the Advertising Mast, with the main restaurant behind it. I see no reason why Asplund's boldly conceived Restaurant (Paradiset) should not have a wide influence upon the future development of such buildings in many countries, especially in the sunnier parts of Europe, where it is justifiable to include sunblinds as a permanent part of the design. In this case the horizontal effects of sunblinds and their shadows, cast along both straight and curved walls, has been fully exploited, while from inside, as has been noticed elsewhere, the long strips of clear night sky that become visible later in the evenings between the lengths of variously coloured canvas produce a startlingly original and charming effect.

From the Restaurant one proceeds alongside the water to the Specimen Houses, designed by different architects in competition, and not by the Exhibition architect, Asplund. It is not possible in a general article to go into much detail, but this part of the Exhibition made one realize immediately that Asplund had, in the main Exhibition buildings, evolved a comparatively happy manner of developing his exteriors, yet remaining primarily a "functionalistic" architect, whereas these lesser buildings seemed too casual in exterior design and were often crude in their anxiety to display the real flesh and bones of the limbs beneath the skirt. Inside these houses, however, surprise after surprise greeted the visitor. Such economy of spacing, combined with actual spaciousness, such charm of colour, depending with great daring almost entirely on large planes of colour, and such a display of modern furniture and plumbing, delighted and shocked one into a stupor of unforeseen and incredible domestic amenities.



A path across the bridge leads to the Aquarium and to the terrace from which one gains a good general view of the Exhibition.

Before referring to the exhibits themselves, it is necessary to draw attention to the lighting of the Exhibition at



Stockholm Exhibition.] [*By E. G. Asplund.*

A full view of the Orchestra from the waterside. It is possible for 10,000 seated, or 50,000 standing, to hear music of all kinds, clearly and without distortion, in the open auditorium.

The copper-lined sounding board over the orchestra. The stanchions and sounding-board edges are panel-lit.

Stockholm Exhibition.] *[By E. G. Asplund.*

The 250 feet Advertising Mast, which is vividly lit at night. The low crow's-nest accommodates important persons wishing to listen to the music. At the top is the sign of the Exhibition—two aeroplane wings joined at one end.

night—an important ingredient of its architectural delights. Asplund has so arranged his Exhibition buildings that their large, brightly-lit windows help materially to illuminate the surrounding neighbourhood, thus reducing the necessity for "street lighting." He has also arranged panel lighting down the stanchions and along the roof lines of the entrance pavilion, the orchestra stand, and elsewhere, which give the Exhibition a bizarre effect from a distance—long thin sticks of light frankly revealing, even at night, the purity of the functionalist design of the buildings. In addition, there are two "stunts" which intrude on any general view—the Advertising Mast, a curious wardrobe of coloured electric signs dominated by two staring eyes; and an illuminated fountain on a raft in the middle of the lake, continually changing colour at the whim, it was said, of four men who sit in a sub-marine cabin playing bridge—dummy casually turning on this or that switch causing the fountain to dance in green on the lake or soar golden into the night sky.

It is difficult to know what exhibits should be mentioned. The writer was particularly impressed, however, by those of two firms, Orrefors and Svensk Tenn. Of Orrefors glass there is little need to speak here, save to emphasize the importance of watching Simon Gates work; but we do not know as much of Swedish Pewter (Svensk Tenn) over here as we should. The possibilities of this material, after many years of neglect, are being revealed once more, and some of the designs for light fittings, mirrors and tea sets, to take only a few examples, epitomize the Swedish capacity for instilling a peculiarly ingenious graciousness into nearly everything that they touch.

There has been considerable uneasiness, both before and after the opening ceremony, as to the success of Asplund's Exhibition buildings. Perhaps recent architectural successes of a more traditional nature in Stockholm—Ostberg's City Hall, Ivar Tengbom's Concert Hall and Match Trust Offices—rather tend to over-emphasize Asplund's functionalist approach to his problem. In spite of this, however, one cannot hesitate to congratulate the director, Dr. Gregor Paulsson, and Mr. Asplund on having achieved, in spite of opposition, this remarkable array of buildings which so successfully embody the architectural ideals of the present day. It is impossible to doubt the sincerity of Asplund's work or the efficiency of the result. Most of us, too, have been overjoyed at the spectacle that greeted us at the end of our long journey to Stockholm—and that, after all, is a fairly sound test.

Stockholm Exhibition.] [*By E. G. Asplund.*

Looking along the Corson towards the entrance, showing buildings typical of this Exhibition. In the distance, on the right, is the hangar, sheltering the yacht exhibit. Clock faces without figures are common in Stockholm, and the prevalence of flags is another feature not confined to the Exhibition itself.

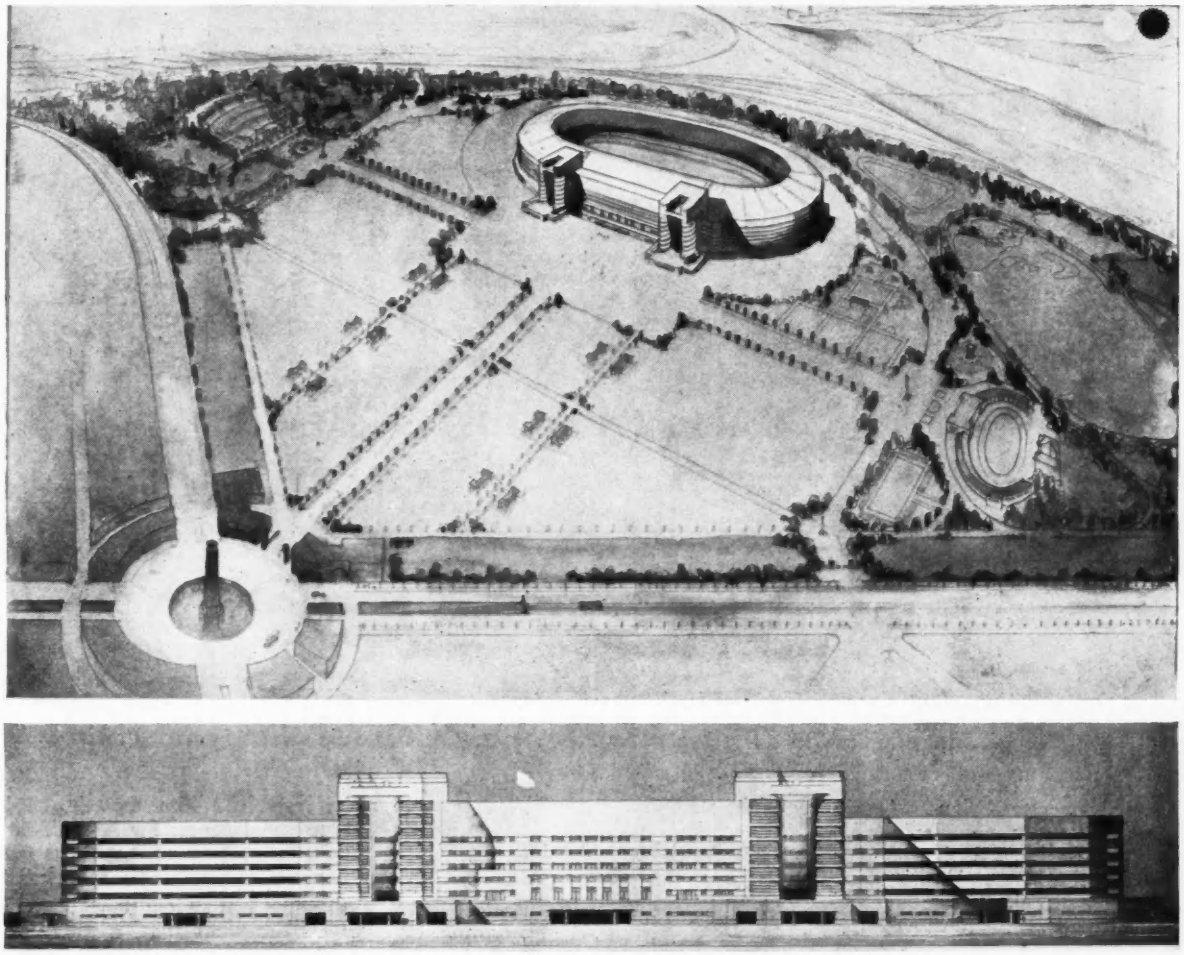
THE WORK OF THE SCHOOLS: i—LIVERPOOL

BY E. MAXWELL FRY

THE yearly review of school work might be a more important event than it is if we could devise some plan of co-ordinating the drawings; and there is no reason why, with the opportunities for free study and unimpeded expression which the schools possess, they should not produce between them the guide to good architecture that we lack in these times.

The Liverpool Sketchbook has been a means of disseminating ideas in past years, but for some reason or other it does not reappear as it should do, when there are drawings waiting to be published as fine and as imaginative as those which I am about to discuss.

I know that to some extent the work of the schools is a reflection of what is taking place in the world at large. One has seen the A.A. invaded by Sweden, as Liverpool was by America. One has seen a deal of immature and half-digested ideas, and one realizes how often each drawing is an education to the student, and how little it may be the result of constructive thinking. Nevertheless one of the tangible benefits of the corporate functioning of the school system is lost to the profession at large so long as the results of school work, the very rich harvest of drawings of all kinds, the portfolio of contemporary design, is not available for the study of those who no longer share the first years of adventure.



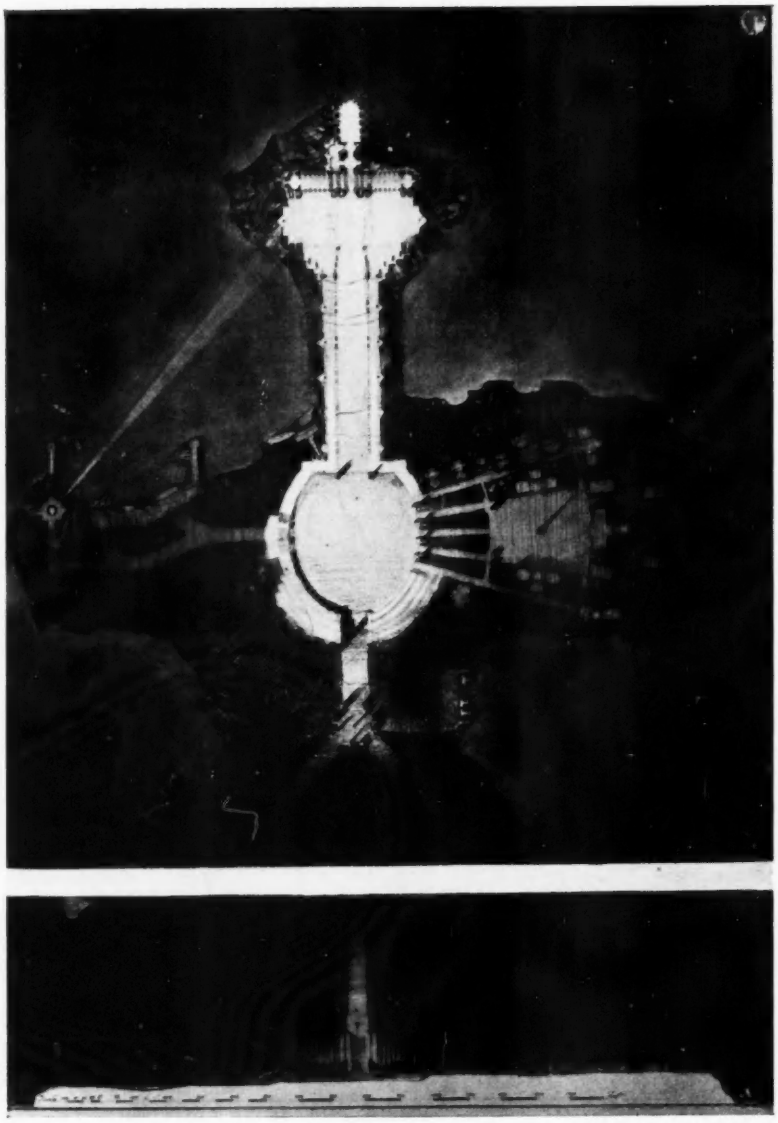
Gathered together in the various schools are hundreds of young men who for five years or so spend most of their time thinking of design. These men are guided by others whose architectural outlook is wide and inquiring. The former bring life, zeal and imagination to their work. The latter add to these qualities a sense of continuity; and out of their joint labours should be welded an instrument capable of registering great events and fine shades.

All this the school system has done and is doing for architecture, but I put forward a plea that some more tangible exposition of policy than such scattered notes as these can produce be offered to the world. The waste of material is otherwise on their heads.

It would seem unfair to write of a school's work on the sole evidence of a batch of photographs if these were not so full of imagination and of so high a standard that they are better able to sound their own announcement.

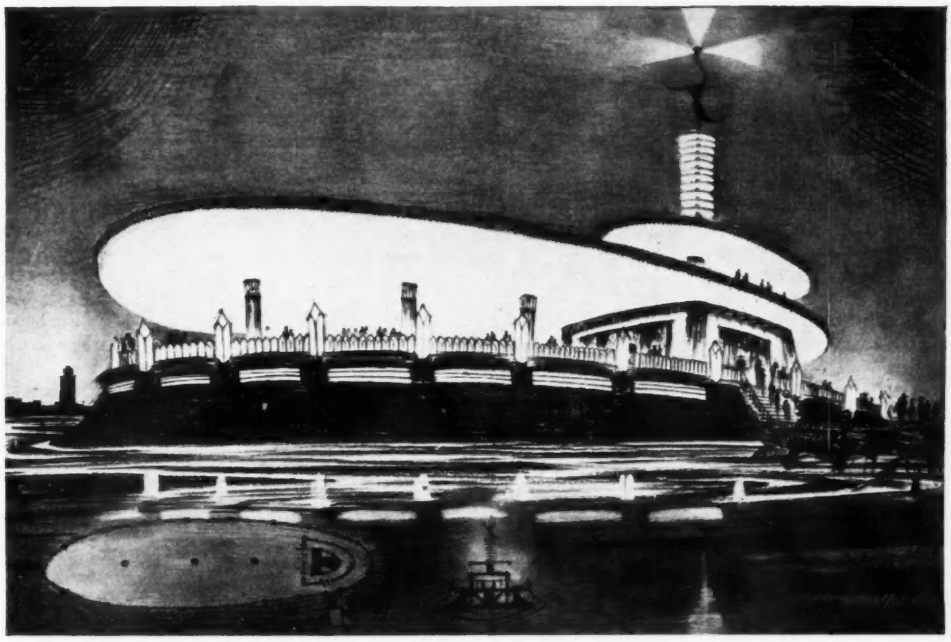
There is reproduced here a selection that includes work from three years of the school, some highly finished presentations and others of the more inconsequential order of sketch designs.

Would that there had been space to reproduce all the four drawings illustrating



A reinforced concrete stadium for the city of Liverpool. By John Hughes, Liverpool University School of Architecture. Fifth year thesis. Perspective view; and principal elevation.

a design for a stadium, standing within a sports and recreation centre, by John Hughes. The nature of the project may be grasped from the rendered elevation and the working drawing of the entrance blocks.

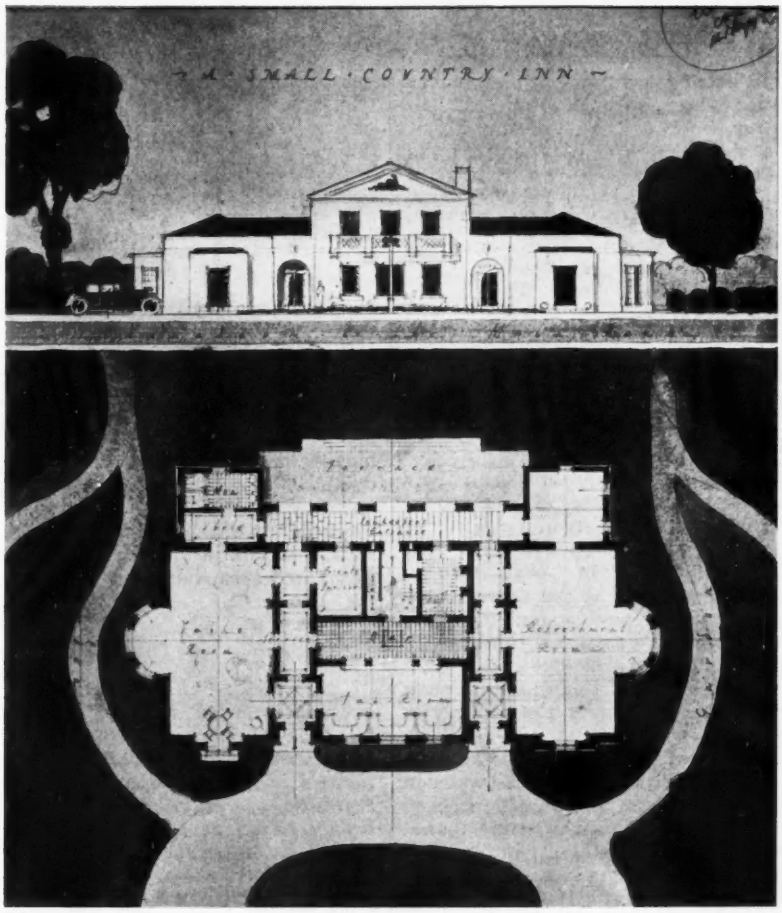


One has only to think of the Wembley Stadium to realize how this drawing is a more than competent expression of reinforced-concrete design. Concrete design will never progress until, as here, the basic idea of the designer is founded on the essential lightness of concrete construction, a lightness which is only really apparent when the material is used with the greatest economy, as one finds it used in the Royal Horticultural Hall, and in an earlier essay in concrete stadium design, the centre court at Wimbledon.

The working drawing will not reproduce with sufficient clearness to allow of a minute inspection of the plan, with the ingenious system of ramped ways that show so logically on elevation, and control the complicated system of circulation in and out of the stadium. Everything appears to be worked out and shown without redundancy on this drawing, which suggests the office of a well-tried engineer rather than the table of a fifth-year student; and I have no doubt that it will stand the criticism of specialists in so far as its mathematics are in question.

The two-day sketch design of W. G. Holford, of a subject dear to the studios for good reasons, is a magnificent piece of draughtsmanship, reminiscent of the very best work of the Parisian ateliers of time past. I will not attempt to discuss the merits of the design, because such things as these are so obviously a question of how far a man's imagination can lead him that it becomes more the business for a professor on the spot to compare it with its fellows than for one removed to analyse its good and its bad points. Sufficient for the day to recognize that someone has let himself go in a fine, grand manner and produced something that lifts him into another sphere. There can be

A monument to the founding of the United States of Europe. By W. G. Holford, Liverpool University School of Architecture. Fourth-year programme, two-day sketch design.



A barge for dancing. By A. M. Best, Liverpool University School of Architecture. Fourth year, six-hour sketch design.

little wrong with the spirit of a school that engenders this sort of effort.

The six-hour sketch design representing a barge for dancing, by A. M. Best, is the product of one Monday's high endeavour. Professor Reilly has always stressed the value of sketch designs as a means of stimulating imagination and training students in rapid presentation, and blessed is he whose nimble pencil and active brain produce gaieties such as this dancing barge. It is not so much that the world is full of people wanting dancing barges designed for them, as that the spirit which is necessary for a sketch design is one of the mainsprings of more serious design, and is of the full flavour of life into the bargain.

Finally, we seek the quieter pastures of the third year, and find in this pleasant and dignified scheme for a country inn something as worth having as other and more pretentious projects I could tell of. The plan is good, so long as one forgets some of the baser prejudices of modern publicans, and the whole design could be built fairly well as it stands, and be an ornament to one of the new roads.

These drawings have been selected from others to cover as far as possible the work of the various years of the school. If one judges the whole by the best, it can show that the Liverpool school's standard is rising, a matter for congratulation to both students and staff.

Elevation and ground-floor plan of a small country inn. By R. P. S. Hubbard, Liverpool University School of Architecture. Third year, two-day esquisse.

QUESTIONS THAT ARISE

Supply of Water

C. K. writes: "*The —— Corporation have bought a disused coal-mine which has been flooded for many years. They are pumping the water which, after treatment, is supplied to the town. This water has the effect, in periods of from two months or more, of filling up the flow pipes from fire-back boilers with a hard encrustation and necessitating heavy expenditure by property owners in taking out the fireback boilers and replacing the pipes. The water does not form this solid crust in the pipes unless it is almost at boiling point. (Many motor-car radiators have the same trouble if water from the local supply is used.)*

"*I should be glad of your expert's opinion as to whether any claim could be made with success, against the Corporation, for redress, for costs of repairs and replacements of the pipes?*"

The question before me is whether persons aggrieved by the state of the water supplied to them have a right of action against the local authority for damage they have suffered as a result.

Before one can express a final opinion on the matter it may be necessary to consider any local Act of Parliament giving powers to a local authority to supply water.

In the absence of anything to the contrary contained in any local Act of Parliament for the time being in force, a local authority constructing or purchasing any waterworks must provide and keep therein a supply of pure and wholesome water (Public Health Act, 1875, section 55). If the water is unwholesome a complaint lies to the Ministry of Health (see Public Health Act, 1875, sec. 299, and Statutory Rules and Orders, 1920, No. 2126), who, if satisfied after due inquiry that the local authority has been guilty of the alleged default, must make an order limiting a time for the performance by the authority of its duty in the matter of such complaint (Public Health Act, 1875, sec. 299). The Courts have no jurisdiction except if the order is disobeyed, when they can enforce it by mandamus (*Passmore* v. *Oswaldtwistle Urban District Council* (1898), A.C. 387), or the Ministry of Health can appoint some person to carry the order into effect.

The duty of supplying pure and wholesome water is performed if the water in the mains is pure and wholesome, even although it is of such a nature that it becomes contaminated in passing through the service pipes (see *Milnes* v. *Huddersfield Corporation* (1886), 11 App. Case 511).

It would appear that the liability of the local authority is limited to supplying water for "domestic purposes."

I have no information before me as to the nature of the property to which water is supplied or the purposes for which water is used, that is to say, whether it is used for "domestic purposes" within the meaning of the Act.

Assuming that the water is not pure and wholesome before it flows through the pipes, and that it is used for "domestic purposes" within the meaning of the Act, any ratepayer aggrieved can recover damages from the local authority (see *Simpson* v. *South Oxfordshire Water and Gas. Co.* (1908), 1 K.B. 917). E. F. I.

Petrol Station

E. S. writes: "*I have been trying to earn a living by keeping a small petrol filling station on a road at a spot where cars often stop to picnic in the summer. The County Council have served me with a notice that my station must close in six months, as it is in what they choose to call a prohibited area. I acquired the property some twelve months ago, and it has been built over three years. Can the Council force me to clear out? They have mentioned that they would consider a claim for compensation?*"

Under section 2 of the Petroleum (Consolidation) Act, 1928, County and Borough Councils have powers to make bylaws regulating the appearance of filling stations and prohibiting their erection in certain areas.

If your correspondent goes to the Council offices he is entitled to inspect without charge the plan showing the extent of these prohibited areas. As this station was in existence before the making of the bylaw, compensation is offered.

The Council have the power to prohibit the use of the building as a petrol station within a definitely scheduled prohibited area, but must compensate the owners. G. H. G.

Re-use of Old Tiles

J. K. writes: "*I should be grateful for information as to the best method of specifying the following:*

"*I am making an addition to an old half-timbered house which has a tiled roof, and demolishing some outbuildings, which include a large barn, also roofed with similar old sand-faced tiles. I have carefully examined the roofing, and the majority of the tiles, if taken down carefully, can be re-used. On measuring up the roofs I find, allowing, say, for the re-use of 70 per cent. of the existing tiles, that I have about one-third of the amount required for roofing the new addition. Would it be safe to specify that the builder is to allow for fixing a given number of squares of existing tiling, so that he could know roughly the amount of new tiling actually required?*"

I have found by experience that I have been deceived regarding the number of tiles on an old roof fit for re-use. A builder may be keen to save as many of the tiles as possible; on the other hand, the haste to clear the site, or the prospects of a loss of time on the work, may leave the stock of sound tiles less in size than the broken tiles heaped for carting away.

I think the safest way is to specify that the builder is to allow for carefully removing, cleaning and stacking on the site all sound tiles from the old roofs. Specify that new tiling is to be supplied and fixed to the new roofs.

The number of old tiles available can be checked, used, and the amount deducted from the builder's price at current rates for tiling. The builder will probably score on cartage, but a saving will be effected on the contract price, whereas if the number of old tiles estimated for re-use had been insufficient, an extra would necessarily arise on the contract. W. A. D.

Cracking to Party Wall

"Owner" writes: "*I am the owner of a row of terrace houses. The party wall between two of them has for some time shown signs of cracking which recently has become much worse. A builder who does my repairs tells me that the wall is dangerous and must be pulled down. This would be very expensive for me, as house property does not pay now. The upper floors which were redecorated some two years ago are perfect. Is there any method other than that my builder suggests?*"

It would appear that the cracks are due to settlement of the foundations. If the cracks do not extend above the ground floor the wall should be shored up at each end and the adjoining windows braced across. Remove the weight from the wall by strutting up all floors (it is presumed the joists run into the wall) and distribute the weight on the ground by cills.

The wall should be needled immediately above the ground floor every 7 ft., and the needle posts must be carried down to solid ground. The defective basement wall can then be taken down in short lengths, and the foundations excavated to get a sound bearing. In rebuilding it is necessary that the new work be built tight up to the underside of the old. As this is a delicate piece of work it should not be done without consulting an architect.

J. D.

ENGLISH PRECEDENT No. 124

OLD HOUSE, MILTON REGIS, SITTINGBOURNE, KENT

This remarkable timber front is nearly the last remaining example to be found of its period in the once prosperous inland port of Milton Regis, though the type is reproduced even in Early Georgian houses in adjoining streets with delightful results. It is a pity that, Sittingbourne being an industrial town, there is little impetus towards saving a building that would be prized in a better situation.

—[E. MAXWELL FRY]

LETTERS FROM READERS

Priced Bills of Quantities

SIR,—May I venture to contradict the statement of Karshish in his reply on this subject when he says that the rates have no existence until it may become necessary to measure variations?

The contractor is only required to supply a "copy" (R.I.B.A. contract, 1909, without quantities), and therefore they have a very definite existence in the builder's office in the hands of his estimator or surveyor, and it is just because the architect's "duty to one is as binding as to the other" that I expressed the view that it was unfair that one party alone should have access to such rates.

If the quantities are part of the contract (which in my own experience is almost universal and, in my opinion, fairer to all concerned) the priced bill should, as Mr. Leaning pointed out, be also available for valuations for certificates, and even if they are not part of the contract this use would appear to be one of the purposes of the contract referred to in clause 3 of the R.I.B.A. conditions.

ARTHUR J. WILLIS

SIR,—In the form of agreement when quantities do not form part of the contract, provision is made in Clause 3 for the copy of the estimate to be sealed or not, and I do not see that any argument arises. Either they are sealed, or they are not sealed, and in the latter case the architect has access to the copy of the estimate.

When quantities do form part of the contract (and this I believe to be the usual case where a quantity surveyor is employed), a different form of agreement is provided.

In that event I should have thought that it was necessary for the priced bills to be carefully inspected so that the architect can be sure that they do not contain any prices likely to be unfair, either to the contractor or to the client, before they are signed.

If the architect is not to have access to the bills during the progress of the work, how can he inform his client of the probable cost of variations, when the contractor may have put an absurdly high price against items on which he expected extras?

I do not see anything in the form of agreement when quantities form part of the contract to suggest that they should be kept under seal, and I should like to know if Karshish is contending that they should be so kept under these circumstances.

FELIX J. LANDER

Group Specification

SIR,—I am in doubt as to what Mr. T. Sumner Smith, in his letter on specifications in your issue dated July 9, means by several types of specifications. He mentions two distinct types, and these varied according to the information shown on the drawings. As far as I am aware, the practice in and around Oldham is to supply but one type of specification, and then only when bills of quantities are not supplied.

In obtaining tenders without bills of quantities the usual practice is to supply a specification with the drawing. I regret to say that these specifications as a general rule describe only, and even then but indifferently, the things shown on the drawings, so that in estimating it is invariably the one who omits to take note of things not shown on the drawings or described in the specification that gets the job.

A specification is considered necessary only when bills of quantities are not supplied. The bills of quantities serve both purposes. Very rarely are quantities and specification prepared and supplied for the same job.

LYNN C. DOYLE

Profit on P. C. Items

(Reply to "Surveyor")

SIR,—I was interested in "Surveyor's" reply to "P. C." in your issue for June 18.

I have considered including in my specifications a clause regarding settlement of profit in connection with variations on P. C. items and provisional sums, where the builder has only the specification and drawings to price from.

I have, however, come to the conclusion that generally there is very little in the variations as regards savings on work of this type, and have usually found that contingencies have come to the rescue of extras on these items.

The first of the methods, which suggests that the builder be asked to state the percentage of profit required on these items, might be usefully employed where, on an alteration job, there is a possibility of a client finding it necessary to make a substantial saving on a provisional item. This occasionally happens when an unforeseen extra crops up.

In any case, the clause should be worded to give the builder the opportunity of not adding profit if he does not wish to add it, but he must state this in his tender.

I disagree with the second method suggested by "Surveyor," in which the builder is informed that he will be allowed a certain percentage. I have known quite a number of builders in keen tendering forgo profit, especially on provisional sums, and rely upon cash discount only.

This method only asks the builder to add a profit which possibly he might not add.

W. A. D.

Cost of Houses

SIR,—In discussing the urgent problem of working-class houses Astragal states that "architects and builders must learn how to build houses for less money." This is surely unfair to both architects and builders, who could and would build cheaper and equally hygienic houses if they were not hampered in almost every district of England by antiquated bylaws.

If one also thinks of the expensive plumbing now required by the higher standard of living expected by all classes of society, and the extraordinary love of privacy in his domestic life of the working man, which has caused every scheme of communal kitchens and wash-houses to fail, it will be clear that the high cost of building is due rather to the British public itself than to the architect and builder.

As soon as the workman will be content with a standard of living comparable with his wages, and ceases to elect Socialist members to his local Councils, then houses will be able to be built for him at a rent adapted to his pocket.

L. E. WILLIAMS

Damp in Chimney-stacks

SIR,—I am much obliged by your expert's reply, published in your issue for July 9. I hoped that some other method of inserting dampcourse into chimney-stacks than taking down and rebuilding might be known to your readers, and that my query might elicit such, with details of an admittedly difficult operation.

My reason for stepping the d.c. in the stack is to leave no body of brickwork between the d.c. and the roof to get soaked with rain. This is a good reason and I see no objection to it. Of course also my d.c. goes through to the flue and is turned up on the inside.

I hope that you will print this letter because the information it gives may be of use to others, as well as the information it seeks being useful to me.

W. B. H.

Water Roads and their Possibilities

SIR,—I welcome the timely reference in your issue for July 2 to the "Water Roads" of England. It certainly is

strange that, at a time when road congestion is slowing up industry almost to a standstill, it should be necessary to remind business people that they should make greater use of our waterways.

You point out very properly that these waterways are capable of taking a continuous stream of traffic night and day. It would be well if business men would realize that elementary fact. Many of them are still deplorably out of touch with the possibilities of canals and with their more recent development.

They apparently still think of canals as a system of derelict waterways along which a few boats convey any merchandise for the delivery of which there is no particular hurry. They fail to realize that, as a result of the amalgamation of five important canals in this country, the Grand Union Canal now provides a through route by "water road" from Brentford or the Regent's Canal Dock, Limehouse, to Birmingham, and that the time taken in transit of goods from point to point is very little, if any, in excess of that normally taken by rail transport with its inevitable siding delays.

At the busiest hour of the working day, when roads leading from the docks through the industrial East of London are choked with vehicles, you may see dozens of barges, some carrying as much as 100 tons of merchandise, pressing on to their journey's end noiselessly, efficiently and without confusion.

And there is ample room for considerably more craft than are already on the canal.

The steady-going canal tortoise meets fewer impediments on its journey than the more spectacular road and railway hare; and it often gets there first.

L. BYGRAVE,
GRAND UNION CANAL COMPANY

The Sketch Club

SIR,—Many thanks for producing so well my two sketches, "Ballaugh Old Church" and "The Old Pier, Douglas."

I also received with pleasure a copy of THE ARCHITECTS' JOURNAL from you, with particulars of the new competition. May I congratulate you on your policy —as usual, foreseeing.

Unfortunately I shall be prohibited from entering, as I cannot take my holiday until the end of September this year; otherwise I should certainly have entered.

I shall, however, still derive a great deal of pleasure (as I am doing whenever sketches appear now) from seeing the "prints of other people's holidays."

Again many thanks.

WILFRID T. QUAYLE

Settling-Up Honeywood: viii

BRASH GOES IN OFF THE DEEP END

BY KARSHISH

(H. B. CRESWELL)

¶ *The owner, Sir Leslie Brash, has just received from Spinlove, his architect, a "brief summary" of Grigblay, the builder's, preliminary statement of account.*

BRASH TO SPINLOVE

Dear Mr. Spinlove, 2/6/26.

Eighteen hundred and ninety-two pounds! Is *eighteen* hundred the sum you intended to intimate when you informed me you anticipated additional extras accruing to "several" hundreds? So you did not anticipate so largely augmented a figure, but supposed that I was prepared for it; and the final amount is still to be eventually ascertained, and you *hope* it will be a substantially reduced figure, and you will not agree to these monstrously extortionate inflations without "explanations"! Explanations, indeed! Permit me to emphatically indicate that I will certainly require something more than mere *explanations* of this scoundrelly attempt to victimize me. Is this the gentleman of high professional attainments who undertook to safeguard his employer's interests and protect him from the inordinate rapacity of building contractors—whom I was always well aware to be no better than packs of thieves and robbers? Is this the Associate of the Royal Institute of British Architects of impeccable credentials, specially recommended to my favourable attention for his distinguished achievements, who allows himself to be cajoled and humbugged and swindled as long as "explanations" are given? The matter has taken a most serious magnification of aspect, and you may inform Mr. Grigblay that, explanations or no explanations, I will not so much as condescend to consider his preposterous account unless he cuts it down by *at least one half*.

£400 for alterations to kitchen! The claim is perfectly monstrous. The kitchen arrangements, may I remind you, were not increased in dimensions by the corrective emendations. I certainly anticipated a small extra cost to reimburse the builder for his trouble in adapting the work he had previously performed; but four hundred pounds! and as "approximate cost"! Does this intimation signify that, if I consent to the additional charge, the fellow is to be at liberty to further augment the amount?

Then, "piping ditch—£114." Will you permit me to ask leave to remind you that you quoted me £20 for that work—and that I hold your letter tendering the offer? *That* item of cost of £114, at any rate, will not, I warn you in anticipation, be amenable to any "explanations"; for I definitely repudiate any intention of paying more than the previously stipulated sum. "Time lost by Sir Leslie Brash's orders"! When did I order time to be lost? Preposterous! "Various minor alterations — two hundred pounds"! Does my architect seriously propound the suggestion that I should disburse any sums this saucy fellow demands without even being previously informed under what pretence the exaction is extorted? "Extra journey money"—what does that portend, may I be permitted to ask? I was prepared for an additional extra in respect of various grates and fittings, but what conceivable excuse is propounded why I should be mulcted for electric wiring and casement gear and heating radiators and drains and waterpipes; and why, may I venture to inquire, has the fellow made no deductions for the saving on the well and pump which you previously held out as an inducement to me to sanction the alternative arrangement? And where, pray, has the £300 saving been deducted, which you informed me had been included in the contract to reimburse expenditure for additional extra work which might eventually become unforseeably needful, and which you asseverated must be reserved for that express purpose? Am I to understand that Mr. Grigblay has appropriated those credits, and that you have failed to detect the fraud?

It is necessary that I should make an early opportunity of conferring verbally with you without delay, as the whole matter has attained most serious proportions. Eighteen hundred pounds! It is the most monstrous and unheard-of imposition that ever was attempted; and if Mr. Grigblay or my architect supposes that I am a gentleman who will meekly submit to such bare-faced robbery and extortion, he will regretfully find himself very greatly mistaken.

Yours truly,

Poor old Brash! He has let himself go

with a vengeance, and it is to be hoped he felt better afterwards.

SPINLOVE TO THE VERY REVEREND THE DEAN OF RUNCHESTER

Dear Uncle Harold, 5/6/26.

I do not know who to turn to for advice. I have just finished a house for a certain Sir Leslie Brash, and the enclosed is a copy of a letter I have received from him in reply to one of mine covering a summary of the builder's Statement of Account. There is rather a heavy bill of extras, but that is not altogether my fault; and, whether it is or not, how can I allow anyone to write to me as he does? I want to do the right thing and to avoid quarrelling with him, but how is it to be done? Can you tell me what you think I ought to do? and can you write at once, please? My love to Auntie and yourself.

Your affectionate nephew,

Apparently, Brash has aroused unrighteous impulses in Spinlove, who feels the need of a little spiritual guidance to ginger up his humility, console his wounded pride, and enable him to swallow the affront without doing violence to his self-respect.

SPINLOVE TO FREDERICK DALBET

Dear Fred, 5/6/26.

Look what your friend Brash has written to me! How can I answer such a letter without hopelessly quarrelling with him? The whole bother about the extras is really his fault and not mine—or most of it is, anyway. Did you ever read such disgraceful abuse? As it was you who introduced me to Brash, I feel you might be able to help smooth things over. Hurry up with your reply.

Yours,

JIM.

Spinlove's position is made difficult by the fact that he is so much younger a man than Brash; but, if he were not, Brash would scarcely have written as he did, nor would he make those allowances to which Spinlove's youth and inexperience entitle him.

DALBET TO SPINLOVE

Dear Jim, 6/6/26.

I don't see what I can do. Tell the old bounder to go to blazes. I warned you he was peppery, and he has gone in off the deep end this time, that's all. He has always been nice to me—but then I am not his architect. Cheer up!

Yours,

THE DEAN OF RUNCHESTER TO SPINLOVE

My dear James, 7/6/26.

We were all most pleased to hear from you again, as it seems a very long time since you wrote either to your aunt or to myself.

Patience, my dear boy, patience! Nothing is to be gained by hasty action of any kind. As you have often heard, no doubt, to forgive all is to understand all—or rather the other way about; and your wish not to quarrel with your employer, but to do the right thing, is highly commendable and just what your aunt and I would expect of you. Be not cast down; fight the good fight, and above all, as Hamlet says, "To your own self be true, and it must follow as the night the day that thou canst not then be false to any man."

I think if I were you I should be inclined to send Sir Lindsay Brosh a small token of esteem—a brace of trout if you happen to be fishing, or a souvenir of your recent travels; or failing these, possibly a copy of my *Pensées from Parnassus*, which I shall be glad to autograph and send you for this purpose. The fact that the author is a near relative would give the gift the character of a spontaneous expression of goodwill.

We gather from your letter that you are unaware that your aunt was seriously indisposed for several weeks during the winter.

Your affectionate uncle,

With all respect to the Dean, Hamlet does not speak the words quoted and, though the maxim is admirable of its kind, it is not the kind of maxim Spinlove wants.

However valuable advice on technical points and on questions of principle may be, it is worse than useless for Spinlove to ask for direction in matters touching his personal relations with others. He must brace himself to draw the decision from his own inwards, where alone it is to be found. To turn to friends, as he here does, is to turn tail and to confirm the indecision he seeks to escape. He expects others to understand conflicting reactions of his own soul which he cannot himself interpret.

Neither Dalbet nor Uncle Harold the Dean have made any attempt to put themselves in the supplicant's shoes, but—as can only be expected—show themselves much more concerned to adopt a pose flattering to their own self-esteem than to solve Spinlove's difficulty. Even if they were in possession of the whole history, and succeeded in identifying themselves with Spinlove's plight, the quarrel would be theirs and not his, for their individualities are different; and, for the same reason, their advice, however sound for themselves, would be valueless for him. The boisterous, good-humoured resentment of Dalbet, and the ingratiating affability of the Dean, might meet their respective cases excellently had Brash become involved with them; but it would be wildly inappropriate for Spinlove either to tell Brash to go to blazes or to present him with a copy of uncle's new book.

No one can help Spinlove. So far from getting help from his friends, their letters can only increase his perplexity and aggravate his indecision. By yielding to the impulse to ask advice at all, he surrendered not only his belief in himself, but his power to decide; and he has allowed a shrinking admission of defeat to fill days which should have been applied to arriving at decision.

BRASH TO SPINLOVE

Dear Mr. Spinlove, 9/6/26.

May I be permitted to apprise you that I have received no communication from you anent my urgent request for an immediate appointment.

Yours sincerely,

GRIGBLAY TO SPINLOVE

Dear Sir, 7/6/26.

Our Mr. Tobias, chief prime-costing, will call at your office with vouchers, etc., at 11 on Wednesday, for the purpose of going into the account with you, as arranged over phone.

Yours faithfully,

Their Mr. Tobias will not be able to give Spinlove the sort of information he chiefly needs. A builder's prime-costing clerk deals only with the pricing and collection into the account of workmen's time-sheets and merchants', store-keepers', carters' and other vouchers allocated to it by the foremen and others. What Spinlove chiefly wants is the authority, or justification, for the various extra charges. Bloggs, the foreman, could give him the facts, but Bloggs, of course, is now in charge of other work, and perhaps far afield.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 10/6/26.

I have not replied to your letter as I have expected that on reflection you would wish to withdraw it.

Yours sincerely,

This is a capital move. The evasion is neatly managed, and Brash is warned, and in such a way as to encourage him to reconsider his position.

BRASH TO SPINLOVE

Dear Mr. Spinlove, 11/6/26.

I was taken aback with natural surprise on receipt of your communication. I indited my protest in terms which the circumstances suitably warranted, and you must permit me to remind you that it is yourself I have to thank for the necessity of doing so. I consider that the suggestion of withdrawal—though it might meet the very natural desires of a professional gentleman in your situation—is not one that is properly appropriate to the occasion, and I must request an adequately complete reply without further delay.

Yours sincerely,

PS.—I shall be obliged if you will transmit a copy of my letter as I omitted to make a transcription of it.

Brash has had eight days in which to calm down. He seems to have written his offending letter in an hour of liver-inspired fury, and has quite forgotten what he said. Spinlove ought to be able to find his cue here. It is unfortunate Brash kept no copy of his letter or he would probably have accepted Spinlove's invitation to withdraw.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 12/6/26.

As you ask, I enclose copy of your letter, and in accordance with your instructions reply to it in as completely adequate a manner as I can.

In disparaging my concern for the large total of the extras, you forget that that concern was not on my own account but on yours, and also that it is not I who am responsible for the figure, but yourself. I warned you at the beginning that if you interfered with the work the extras would mount up, and that it would be impossible for me to keep control of the cost if you gave orders direct to the builders. You paid no attention to the warning, and now wish to saddle me with the consequences of your having ignored my advice.

The value of the kitchen alteration is a question of fact to be ascertained by the quantity surveyors, and I am no more responsible for the cost of the work than I am for the ordering of it, as a moment's reflection will surely show you. The amount is an approximate figure, because the exact figure has still to be ascertained.

I regret that I misjudged the probable cost of piping the ditch, and I think that, on examination, Grigblay's figure will be found to be in error; but I did not "quote" for the work. What I did was all that any architect can offer to do, namely, to give his opinion of probable cost. Only the builder quotes (i.e. estimates or tenders), and in this case Mr. Grigblay was not called on to do so, as you did not ask for an estimate. The exact cost will be proved by vouchers recording the time and materials expended on the work, which the quantity surveyor will embody in the account when I have examined and certified them as properly to be included in it.

It is such vouchers as these, furnished by the builder, that I referred to when I spoke of "explanations." Your assumption that I used the word in a sense that made it idiotic, instead of in an exact technical sense, can only be explained by an intention to affront me.

Other items you mention it will be necessary for me to see you about, for, as the works they refer to were ordered without my knowledge, I have naturally little knowledge of them.

The £300 contingencies was cut down to £100 in order to reduce the tender to a reasonable figure; and this sum and the saving on the well, and certain other credits, have been set off, in the brief summary I sent you, against the cost of other works that became necessary. [*Ahem!*] The final statement of account will be laid before you when I receive it. I am not responsible for the delay, which is due to the intricacies arising from the many extras and variations ordered by yourself.

The extras on wiring, radiators, water supply and drains are due to extensions and alterations of completed work ordered by you or by Lady Brash, or made necessary by interferences with other work, and they have nothing whatever to do with me. The extras on fittings is the excess of the cost of goods you yourself chose after I had informed you of the provisional amounts included in the contract to cover them.

Your aspersions on Mr. Grigblay are, so far as I know, without any kind of justification; and you have, I think, had abundant opportunities during the past two years of forming a very different opinion of him.

I think, Sir Leslie, that you wrote in haste and in anger, and that you will wish to make amends for references to myself which seem to me openly contemptuous and intended for no other purpose than to affront me. In that confidence I will here merely say that, however mean an opinion you may hold of my capacities, I think I am entitled to a chance of explaining technical matters before being abused because you yourself do not happen to understand them.

Yours sincerely,

This is a remarkable letter for Spinlove to have written; but although some of his explanations are thin, we have before noticed that he always comes out strongest when his apprehensions are involved. We have also observed Mr. Spinlove to be a temperamental person, torn by conflicting impulses of vanity and prudence, in whom self-control is schooled by terror. Here, however, we find him expressing himself forcibly, as the circumstances require, but with restraint and cool purpose, and enough of courtesy—in presuming good intentions in his opponent—to rob the frankness of his retort of offensiveness. This letter of Spinlove's, however, as well as that to which it replies, has a colour foreign to professional correspondence: they suggest a quarrel between men whose friendly relations are proof against frank interchanges.

BRASH TO SPINLOVE

My dear Mr. Spinlove, 14/6/26.

I certainly was not aware of the asperity of language into which my natural rancour at the very inflated extortions of Mr. Grigblay betrayed me, and I desire to entirely withdraw my disparaging inferences anent yourself, which I greatly regret and for which I offer you my profuse apologies. They certainly are such as I had no intention of intimating, nor do they represent my opinion; in fact, I have to regretfully admit that I wrote hastily and in a moment of heated indignation, and I hope you will entirely eliminate from your mind all memory of my accidental and quite unpremeditated lapse from discreet language.

As regards the various matters expounded in your communication, I still consider that your elucidation is—if you will permit me to say so—very far from completely satisfactory, and it is imperatively desirable that I should discuss the whole aspect of the situation with you.

I enclose cheque for £270 further on account of your fees. You will comprehend that until some explanation of the inflated sum upon which the percentage is computed was forthcoming, this disbursement was not one I could reasonably contemplate.

Yours sincerely,

It is to be noticed that by putting himself in the wrong in one matter, and having to make a withdrawal, Brash has disorganized his whole line, and is even reduced to paying up as a step towards re-establishing his fortifications. This, however, is not the first occasion when Brash has justified Dalbet's original description of him as a "real good sort." He here again reveals himself as a man whose foibles overlie generous instincts.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 15/6/26.

Many thanks indeed for your extremely kind letter. I need not tell you what very great pleasure it gave me. Of course, I am delighted to accept your apology and withdrawal, and will now forget all about the matter—in fact, I have already put it entirely out of my mind, and I am only sorry I felt obliged to make the protest, as I feel sure you will realize I could scarcely avoid doing or I should not, I need hardly say, have put you to so much trouble.

I confirm appointment with your clerk by telephone today to see you here on Wednesday morning next. I shall before then have discussed matters with the builder.

I enclose form of receipt for cheque, for which I am much obliged.

Yours sincerely,

This is much more like the Spinlove of old acquaintance. If he did not so obviously mean well, his client would be likely deeply to regret that he ever gave way an inch.

[NEXT WEEK: IX—A SANITARY CONSULTANT COMES ON THE SCENES]

SOCIETIES AND INSTITUTIONS

R.I.B.A. COUNCIL MEETING

FOLLOWING are notes from a recent meeting of the R.I.B.A. Council :

The Ancient Monuments Board for England : The President was nominated to represent the R.I.B.A. on the Ancient Monuments Board for England.

The Court of Governors of the University of Sheffield : Mr. C. M. E. Hadfield, F.R.I.B.A., was appointed to represent the R.I.B.A. on the Court of Governors of the University of Sheffield.

Joint Committee on School Lighting : Mr. John Swarbrick, F.R.I.B.A., was appointed to represent the R.I.B.A. on the Joint Committee on School Lighting which has been set up by the Illuminating Engineering Society.

Report of the Conference on Plumbing : The report of the Conference set up to consider and report on the question of damage to plumbing work caused by frost was approved. The report will be published in the *R.I.B.A. Journal* and also in pamphlet form.

The Fellowship : The Council, by a unanimous vote, elected Mr. E. H. Henderson of Canberra, Australia, to the Fellowship.

Membership : The following ex-members were reinstated :

As Associate : Lieut.-Colonel Raymond Synnot.

As Licentiates : William Pearson Holgreaves, Walter Potts.

R.I.B.A. INTERMEDIATE EXAMINATION RESULTS

The R.I.B.A. Intermediate Examination qualifying for election as Student R.I.B.A. was held in London from May 30 to June 5, and in Manchester from May 30 to June 4, 1930.

Of the 187 candidates examined, 80 passed and 107 were relegated. The successful candidates are as follows :

Ashley-Smith, E. T.
Belsey, A. J. G.
Billington, P.
Bradford, W. N.
Brown, A.
Brown, C.
Brown, L. A.
Brown, V.
Carter, F. H.
Chantrey, G. H. B.
Chapman, E. B.
Church, A. G.
Clayton, T. H.
Coker, W. E. G.
Cook, J. H.
Cortis, H. W.
Davis, C. H. R.
Deleuse, J. E.
Denbigh, G. D.
Elgey, C.
Fairweather, J. McD.
Farnsworth, J. E.
Fleming, D. E.
Fox, C. F.
Goffey, A. E.
Gott, A. F. E.
Gratrix, H. H.
Hardwick, J.
Hey, J. A.
Huddy, G. V.
Hunt, W. J.
Ind, L. C.
Israel, L.
Kemp, R. C.
Kilner, L.
Kirk, S. F.
Lang, R. B.
Law, C.
Lawton, E. A.
Light, F. J. G.
Lindy, K. J.
Little, R.
Lowe, G. C.
Marsden, W.
Maskell, S. J.
Moncrieff, H.
Munro, C.
Nicklin, N. C.
Normington, H. A.
Page, R. J.
Pearce, A.

Wheatley, N.
Wilkinson, A.
Williams, I. M.

R.I.B.A. STATUTORY EXAMINATION

The R.I.B.A. Statutory Examination for the office of District Surveyor under the London Building Acts, and the Examination for the office of Building Surveyor under Local Authorities, will be held at the R.I.B.A., London, on October 15, 16 and 17, 1930. The closing date for receiving applications for admission to the examinations, accompanied by the fee of £3 3s., is September 24. This examination fee of £3 3s. will henceforth include the issue of the Certificate of Competency, if such be granted. Full particulars of the examinations and application forms can be obtained from the Secretary, R.I.B.A.

R.I.B.A. INTERMEDIATE EXAMINATION

Newcastle-upon-Tyne will be one of the centres for the R.I.B.A. Intermediate Examination to be held in November 1930, provided sufficient candidates wish to take the examination at that centre.

PORTRAIT OF THE PRESIDENT

Sir John Lavery, R.A., has kindly consented to paint the presidential portrait of Sir Banister Fletcher which will be presented to the Royal Institute of British Architects in 1931.

NORTH WALES ARCHITECTURAL SOCIETY

Quite a number of the members of the above Society availed themselves during the last week of the invitation of Mr. Clough Williams-Ellis to inspect his model settlement at Port Meirion, near Portmadoc.

Mr. Williams-Ellis personally conducted the members over the estate, and afterwards extended his hospitality by entertaining them and their ladies to tea on the terrace of the hotel.

Port Meirion is well worth a visit, if only to give one a glimpse of Mr. Williams-Ellis's vivid imagination, for were it possible for a visitor to be able to get rid of the idea of being in Wales, the buildings and layout would at once suggest an old-time village on the banks of the Mediterranean.

INTERNATIONAL CONGRESS OF ARCHITECTS AT BUDAPEST

The Twelfth International Congress of Architects will be held this year at Budapest from September 6 to 13. All architects and others interested in architecture are invited to take part in the Congress.

Among the subjects to be discussed are the following :—

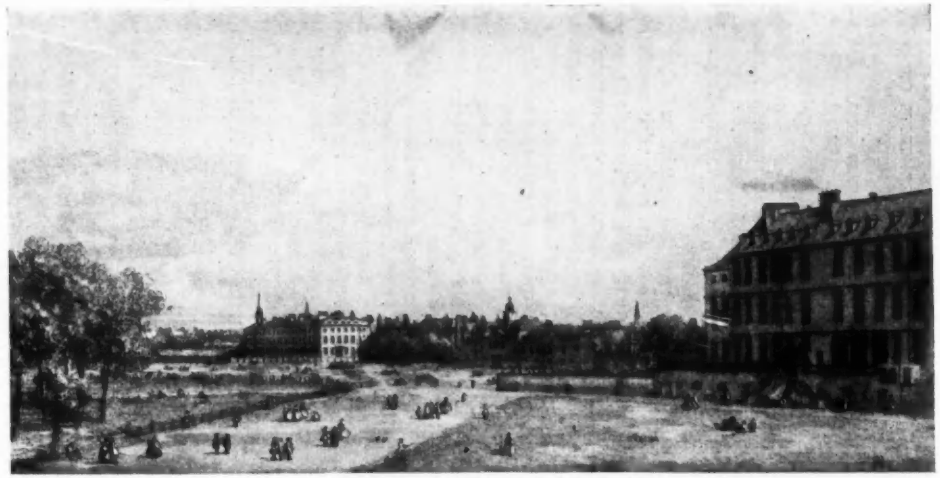
1. Reform of the special training of architects in accordance with practical requirements, and with special regard to the knowledge expected from modern architects in the domain of finance, economics and organization.
2. Representative bodies of architects.
3. Protection of the artistic copyright of architects in international relations.
4. The rôle of the architect in industrial construction.
5. Architectural acoustics.

Messrs. Thos. Cook and Son, Berkeley Street, W., have been appointed hotel and travel agents, to whom all applications for membership of the Congress should be addressed.

Architects' Benevolent Society

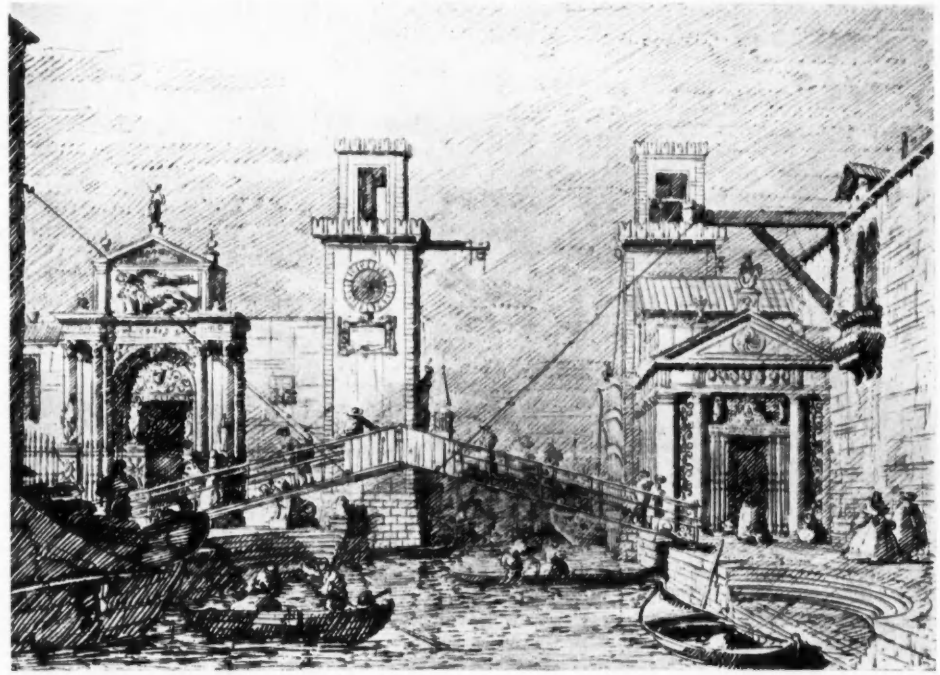
The Architects' Benevolent Society (Insurance Department) have issued an interesting leaflet to describe a sound investment to provide for retirement, either in the form of a capital sum or as an income for life. Assuming a person will be thirty years of age next birthday, it is stated that a premium of £34 1s. 8d. per annum (less income tax rebate—present rate 2s. in the £) will, at the present rate of bonus, provide £1,842 at age sixty—a profit of £922; and his life has been assured for £1,000, plus accrued bonuses, during the whole period. At maturity the amount of £1,842 may be taken in cash, or alternatively, at present rates, would provide an annuity of £170.

For an additional annual premium of £2 5s. 4d. the following benefits may be included : In the event of a serious breakdown in health continuing for longer than six months, the person would receive an annuity of £100, in monthly instalments of £8 6s. 8d., during the remainder of the incapacity up to age 60. Payment of this benefit does not interfere with the sum assured under the life portion of the policy. No part of the premium is payable during any period a person may be in receipt of disablement benefit, but the policy continues to share in the profits. It is claimed that there is no other method of providing for the future and obtaining such an excellent investment with equal security and protection. Further particulars can be obtained from the Architects' Benevolent Society, 9 Conduit Street, London, W.1.



THE SKETCH CLUB

SEVENTH SESSION



DRAWINGS BY CANALETTO

1. View of the Salute, Venice, between the column of St. Mark and the Libreria.
(Windsor Castle Collection, No. 7445. Pen. 232 × 182 mm.)

2. The Horse Guards Parade, London.
(British Museum Collection, No. 1868–3–28–305. Pen with wash. 345 × 689 mm.)

3. The Entrance to the Arsenal, Venice.
(Windsor Castle Collection, No. 7462. Pen. 271 × 376 mm.)

NOTES

1. THE view is seen as a whole; three buildings in clear sunshine, related by a certain "weight" which they have in common; each building is given its own fully-worked-out definition, but the touch is adapted to show the true relation of each to the other in space; it is a modeller's work.

2. THIS was drawn not later than 1749, as these old buildings of the Horse Guards were demolished in 1749–50. A soft hazy day, very English; the line used for the shapes of buildings, and the wash for the colour and tones, are so exquisitely united as to make this a poet's work.

3. A FINELY balanced composition, with the ropes of the bridge leading the eye through the two side masses to the centre tower. The hot sky is drawn with vigorous parallel lines like a rain of blows. The architecture is solid and convincing; the various planes are exactly given—the drawing of an engineer.

4. THIS is Canaletto's rendering of the English sketcher's favourite subject, a quaint small town, with grey weathered tower, irregular open space

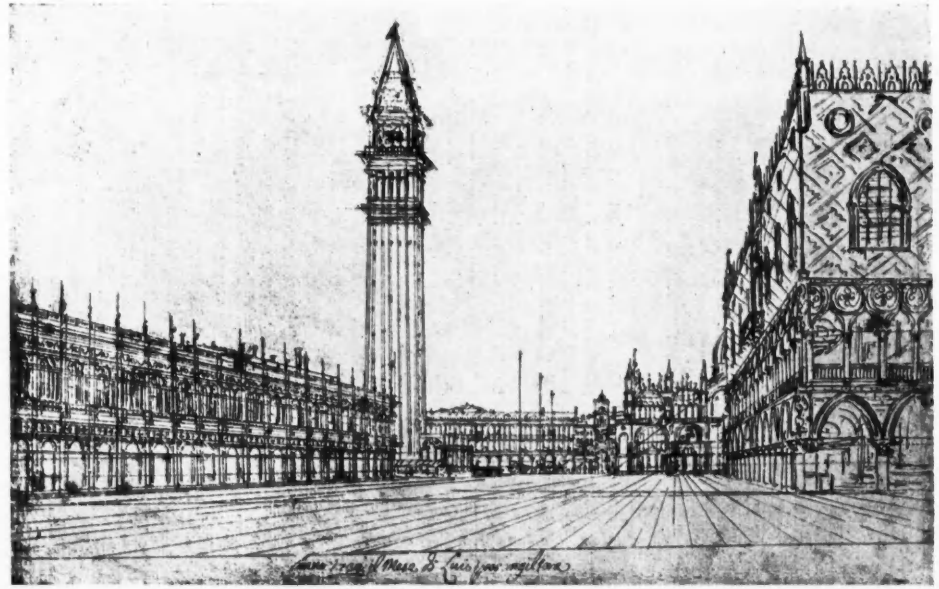
solid and convincing; the various planes are exactly given—the drawing of an engineer.

3. The Entrance to the Arsenal, Venice.
(Windsor Castle Collection, No. 7462. Pen. 271 × 376 mm.)

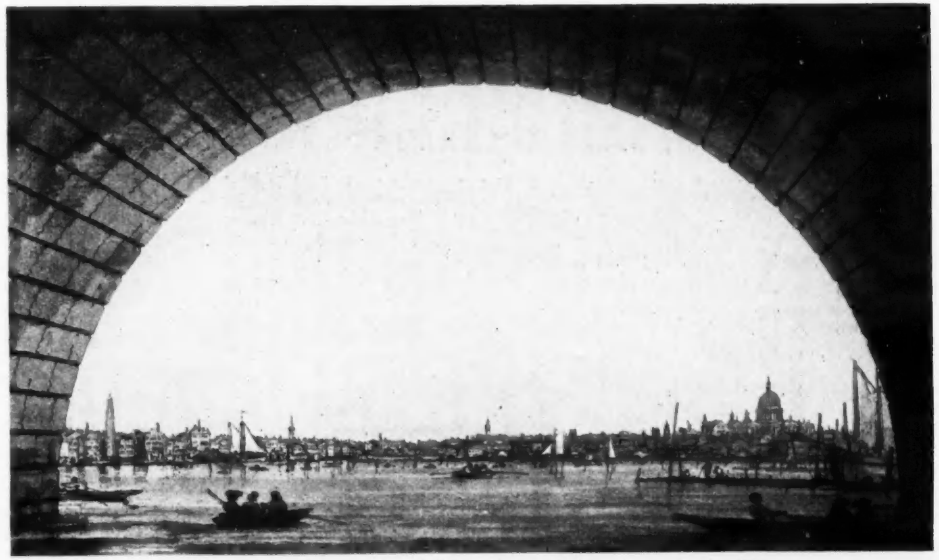
4. THIS is Canaletto's rendering of the English sketcher's favourite subject, a quaint small town, with grey weathered tower, irregular open space, which he calls a piazza, the classical bit, the gables and cool shadows. Though it is more dignified, less picturesque to him than to us, still, this is a sketcher's work.

5. THE drawing is singular as having no figures; presumably the artist made this record of the perspective from a picture with which he was parting. In spite of that he became sufficiently absorbed to make, not only a record, but a thing of art, with so strong a sense of space that one can almost walk into the piazzetta—a draughtsman's work.

6. CANALETTO was doubtless in England during the completion of the bridge. The drawing is faultless, the soffit of the arch, the flatness of the water and the distance of the tiny spires and chimneys in the centre, are equally convincing; but the indicated colour of the arch and sky make this the work of a colourist.



P. M. S.



4. View of Warwick.
(British Museum Collection, No. 1900-11-12-1. Pen with wash.)

NO apology is due for presenting a "one-man" show devoted to the work of a master of the art and craft of sketching so universally recognized as Canaletto. Londoners have lately had two opportunities of studying his work—an exhibition held a year ago and the Italian Exhibition. The present small "loan collection" is made possible by the publication of a book by Detlev, Baron von Hadeln, from which the pictures are reproduced. A review of it, including some biographical facts, *appears on page 100.*

Members are reminded that there are still two Holiday Sketches Competitions open to them. *See page xvi.*

5. The Piazzetta, Venice.
(Darmstadt Print Room, ref. A.E. 2248. Pen. 258 × 548 mm.)

6. View through an arch of Westminster Bridge towards the City.
(Windsor Castle Collection, No. 7561. Pen with wash. 287 × 481 mm.)

LITERATURE

ESPECIALLY SPAIN

WE should all read this book again, for, containing some of Mr. Belloc's best writing, especially the chapters on Spain, it treats of the soul of architecture and its marriage with the earth. Each city is described with exact discrimination of its dignities, of its weight of years and of historical importance, of the burden of its beauty in respect to the place of its foundation, and to its art. Spain is strongest in the gravity of its appeal—" the grave, profound appeal of Spain, heavy with dignity," where " tradition is an influence . . . a vital memory."

But I think Mr. Belloc makes a mistake in belittling the Arab architecture as a thing of " weak plaster," for although parts of the Alhambra are stucco, the Gate of Justice and the outer walls of the castle, and much of their work elsewhere is of stone and brick; their design was often monumental, and the Giralda at Seville, if flimsily built, could not have survived its heavy Christian belfry. The Moors also were great irrigators, and their work of this sort must have increased vastly the fertility of the soil. Mr. Belloc is on surer ground when he says they were so nearly successful because they were so nearly European.

Mr. Warre's illustrations are some of the most sympathetic I have ever seen; he has no fireworks, but holds his pencil like a devotee's candle to each building.

P. M. STRATTON

Many Cities. By Hilaire Belloc. Second impression. Illustrated by Edmond L. Warre. London: Constable & Co., Ltd. Price 10s. 6d.

DRAWINGS BY CANALETTO

(*See "The Sketch Club," pages 98–9.*)

THIS beautiful book contains an introduction on the life and drawings, a *catalogue raisonné* of the latter, sixty-three full-page reproductions of the drawings, and nine of works by the pupil, Bernardo Bellotto, who is sometimes confused with him. Canaletto used the pen for all his drawings, and a brown ink; in some cases to the line was added a wash of grey ink.

The design of even the sketchiest of his works in this genre is always carefully studied, and the subjects are given a rich effect by the introduction of numerous figures in groups, by the alternating thick and thin lines, and by the ending of the lines with a spot, produced by a sudden stopping of the pen.

Antonio Canal was born on October 18, 1697. His father, a theatrical decorator, taught him his own profession. In 1719 Antonio went to Rome to draw views, his mind being possessed by the great architecture in the Italian cities. He returned to Venice about 1721 and there started his friendship with an Englishman, Joseph Smith, later consul, and a perfect patron. Smith bought innumerable drawings and pictures from Canaletto, as they were made; other Englishmen also approved the artist's work so much that he visited England in 1746, staying till 1750, and again in 1751, returning in 1755 to Venice, where he died in 1768.

Canaletto's favourite subject was architecture, from the grandest and best preserved palace to the obscurest ruin, and he frequently added to the picture of a building various other buildings from his imagination.

Canaletto's drawings are not merely studies for his pictures, those great rigid, conscientiously truthful, masterpieces, in which the personality of the artist has been kept disciplined, almost imprisoned: the drawings are a parallel activity produced by a different mood, a frame of mind in which the subject is instantly realized and almost instantaneously reproduced with the pen, or pen and brush, before the moment of intense joy has gone, and has been succeeded by the critical and doubting spirit.

To all architects who care for the delineation of buildings as real works of art in themselves, apart from the fortuitous advantage of site, use, and historical interest, Canaletto is the supreme draughtsman, and these reproductions will give great pleasure.

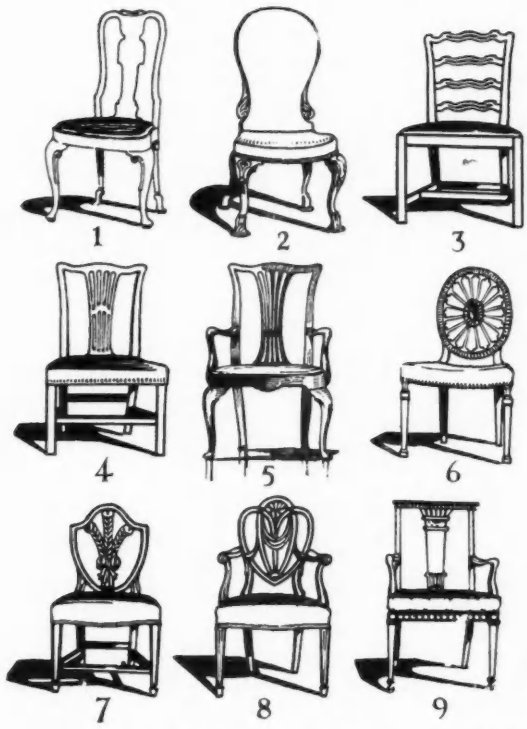
The Drawings of Antonio Canal called Canaletto. By Detlev, Baron von Hadeln. Trans. Campbell Dodgson. Duckworth and Co., Ltd. £3 3s. net.

WRITERS ON LIME AND CEMENT



THERE is always a certain amount of interest in a survey of the literature on any subject, particularly when it can be traced back a couple of thousand years. Whether such a survey, however, has any real value to the practical man and technologist depends entirely upon his activities. The compiler of this volume has presented not so much a collection of technical information as a bibliography of literature dealing with lime and cement. The statement that Cato (234–149 B.C.) in his *De Re Rustica* dealt with the subject of lime and mortar is interesting, though not very informative to those who are not in a position to refer to the work in question, and the same applies to the references to contributions by Marcus Vitruvius Pollio and Caius Plinius Secundus. Beyond these references, no further literature is recorded by Mr. Spackman until the fifteenth century.

From that time onwards various writers discussed the question of lime and cement, though the number recorded prior to the year 1800 is only twenty-one. The next century was

From Many Cities] [*By Hilaire Belloc.*

Cathedral and Roman bridge, Salamanca.

1. *Walnut chair (1710) with cabriole legs.*
2. *Early Georgian development of the cabriole leg.*
3. *Mid-Georgian ladder-back chair.*
4 *and* 5. *Simple Chippendale types in mahogany.*
6. *Carved mahogany chair (an Adam type).*
7 *and* 8. *Hepplewhite types (late eighteenth century).*
9. *Inlaid mahogany armchair (Adam type).*

From Modern Home Furnishing.] [*By John Gloag.*

more prolific, and references to contributions by something like 300 writers are given in the present volume. It is impossible from the brief particulars given to form a correct estimate of the respective values of these contributions; but it is clear that until Smeaton, in 1791, described the building of the Eddystone Lighthouse, the vital importance of the clay constituent in lime was not realized. The experiments by Pasley in 1829 probably rank as the next contribution of real technical value, and his second book in 1838 presented information which is as true today as it was when first enunciated. General Pasley's comment in a discussion before the Institution of Civil Engineers in 1837, to the effect that Smeaton's researches were the only ones of value, is very largely confirmed by present-day information.

It is obvious from a perusal of the summaries of early literature that only during the last sixty or seventy years has any real advance been made in the understanding of the nature and chemistry of cement. Le Chatelier, in 1882, took a big step forward in his microscopic examination of thin slices of Portland cement clinker in polarized light, and his research on the constitution of hydraulic cements, published in Paris in 1887, unquestionably formed the starting point of much of the later valuable research work.

So far as the present volume is concerned, although it carries its chronological record up to 1928, it cannot be regarded as a compilation of technical information. It will doubtless be appreciated by students of the subject who have use for a comprehensive list of literature on lime and cement, and the brief indication of the nature of much of this literature which Mr. Spackman gives will probably be found helpful; but for practical purposes it is only necessary to make reference to the work of recent years.

The book, however, does stand as a monument to the compiler's industry in collecting the literature relating to this subject. Whatever real value it may have in the field of industrial activity would have been increased by a clear indication on the compiler's part as to the works which he considers most serviceable for the students today.

A. H. HAYES

MODERN HOME FURNISHING

THIS most admirable little book from Macmillan's Sixpenny Self-Help Library should be enjoyed by general readers as well as by those who intend to furnish a house.

The scope of the book is indicated by the opening sentence: "This book is concerned with the furnishing of small and moderately-sized houses and flats." The author, however, is better than his word, and gives advice on possible decorative schemes as well. Mr. Gloag is a well-known author for these subjects, and his guidance always valuable. A few chapter-headings show the ground covered: "Furnishing and what it implies"; "Buying Furniture"; "Old Furniture"; "Modern Furniture"; and chapters devoted to the various rooms.

After some discerning criticism of the commercial and the gimcrack, the principles underlying really good furniture are set out—and this sound furniture need not be expensive.

The latter part of the book deals with the furnishing and decoration of rooms, suggesting how to work out suitable modern schemes according to individual taste. The style is readable and pleasant, and the matter full of knowledge and practical wisdom, which will appeal alike to the experienced and the unpractised.

Modern Home Furnishing. By John Gloag. Macmillan's Sixpenny Self-Help Library. London: Macmillan & Co., Ltd., and Eyre and Spottiswoode (Publishers) Ltd. Price 6d.

LAW REPORTS

BLOCKS OF FLATS: QUESTION OF ASSESSMENT

Towle (H.M. Inspector of Taxes) v. *Improved Industrial Dwellings Co., Ltd. Before Mr. Justice Rowlatt*

THIS was an appeal by the Crown and a cross-appeal by the company in regard to the method of assessing blocks of flats owned by the Improved Industrial Dwellings Co., Ltd.

It appeared that prior to 1927 the flats had been assessed as separate flats, but for the year ending April 5, 1927, they had been assessed on a new basis in groups. The complaint of the company was that the assessment in groups deprived them of a large allowance for repairs which they would have been entitled to if the flats were assessed separately. The flats came within the purview of the Valuation (Metropolis) Act, 1869, and were assessed in the valuation lists for 1925 as separate flats. The gross values of the respective flats as several hereditaments were not liable to be reassessed for rating purposes during the quinquennial period ending 1930.

In the present case the assessment which the owners appealed against included all the flats in one group or block approached from the street by a separate entrance. The amount of the assessment had been arrived at by adding together the gross values shown in the valuation list of all the flats in the group covered by the assessment. The result was that the allowance for repairs was reduced and the company contended that no allowance for loss of rent could legally be claimed unless the whole of the flats in any group were empty at one and the same time.

The submission on behalf of the company was that each of the flats was a separate house and that the assessment in groups involved an alteration of the valuation lists.

On behalf of the Crown it was contended that they could assess the property in groups under Rule 8 (*c*) of No. 7 of Schedule A, which provided that the assessment should be made in respect of "any house or building let in different apartments or tenements and occupied by two or more persons severally. Any such house shall be assessed and charged as one entire house or tenement."

After long legal argument his lordship said the point was that the values of the component parts were to be taken and added for the purpose of arriving at one assessment. So far as he could see, Rule 8 had nothing to do with the valuation, but with the aggregation of assessments. He came to the conclusion that the company's argument was not sound, because when one had entered within the main walls and under the roof, one had entered the house or building, which included several tenements. He allowed the appeal of the Crown and dismissed the company's cross-appeal with costs.

RIGHTS OF DEMISE

Peech v. *Best and Others. Court of Appeal. Before Lords Justices Scrutton, Greer and Slesser*

THIS was an appeal by the defendants, Mr. J. T. Best, Mr. E. G. de Mestre and Mr. R. M. Freemantle, builder, of Twyford, Hants, against a judgment by Mr. Justice Avory at the Winchester Assizes, awarding the plaintiff, Mr. S. B. Peech, of Twyford Lodge, Twyford, £100 damages for infringement of certain sporting rights.

The defendant, Mr. Best, was the owner of an estate of about 700 acres near Winchester, which was primarily agricultural land. During the war a large part of it was used as a military camp. In July, 1921, Mr. Best demised to the plaintiff for fourteen years the exclusive right of shooting in, over and upon Hazeley Farm, Twyford, the lessor covenanting to preserve the sporting amenities as far as possible. Later Mr. Best sold twelve acres of the farm to Mr. de Mestre, for use as training stables, covenanting to indemnify Mr. de Mestre against claims for disturbance of sporting rights. Mr. Justice Avory held that there had been a substantial interference with the sporting rights and awarded plaintiff £100 damages.

The Court, after hearing the legal arguments, came to the conclusion that after the establishment of the training stable, it would be doubtful if there would be a game bird left within a quarter of a mile, and held that that constituted an infringement of the sporting right for which the tenant was entitled to damages. They dismissed the appeal with costs.

Cornu, P.

Honourable Mentions:
Banks, R. L. — Meadley, A. R.
Koh, C. Y. — Sprott, F.
Gick, Miss M.

THIRD YEAR COURSE:
A.A. Travelling Studentship (value £31 10s.):
Crowley, Miss M.

Holloway Scholarship (*tenable for two years*) (value £300):
Drake, L. A.

2nd Prize (books, value £10 10s.):
Ashton, R.

Honourable Mentions:
Mayorcas, E. — Bickerton, Miss B.
Kent, E. C. — Westwood, B. P.

FOURTH YEAR COURSE:
R.I.B.A. "*Henry Jarvis*" *Scholarship* (*for construction*) (value £50):
McDonald, D. C. — Nunn, A. V.

Year Prize (books, value £10 10s.):
Gibson, A. G.

"*Alex Stanhope Forbes*" *Prize* (*for the best colour work during the year*) (books, value £5):
Cutler, D. G.

Honourable Mentions:
Stark, D. R. — Laidler, G. G.
Ledeboer, Miss J. G.

FIFTH YEAR COURSE:
A.A. Travelling Studentship (value £50):
Nisbet, J. V.

"*Henry Florence*" *Travelling Studentship* (value £50):
Scott, R. D.

Honourable Mentions:
Linfield, G. R. — Porter, H. G.
Luke, H. S. — Roth, S. H. J.

The following students have qualified for exemption from the R.I.B.A. Intermediate Examination:

Ashton, R. — Brandon-Jones, J. B.
Benjamin, Miss R. E. — Brett, R. K.
Bickerton, Miss B. — Cooper, A.
Bishop, H. G. — Crowley, Miss M.
Brandt, J. B. — Darby, J. P.
Drake, L. A. — March, S. G. R.
Dugdale, M. A. S. — Maw, Miss Z.
Farrow, J. W. — Mayorcas, E.
Gascoigne, Miss A. R. — McGrenera, W. J.
Haigh, M. W. — Milner, D. L.
Hebeler, B. A. — Ram Sinh, K.
Heymann, H. B. — Richards, C. A.
Hutcheson, W. R. — Ryder, Miss M.
Hicks, J. F. — Rowlands, Miss B.
Jackson, Miss P. D. — Searle, C. J.
Kent, E. C. — Skinner, R. T. F.
Lambert, S. G. — Tripe, A. C.
MacCann, J. P. — Westwood, B. P.
Mallows, E. W. N.

On satisfactory completion of the five-year School Course, and a period of six months' office experience, the following students have qualified for the Diploma:

Girard, A. H. (*Honours—Decoration*).
Beveridge, G. R. (*Honours—Construction*).
Nisbet, J. V. (*Honours—General Work*).
Blades, Miss B. A. — Playne, E.
Harris, L. D. — Penn, W. H.
Linfield, G. R. — Randall, G. F.
Lewis, G. N. — Minns, Mrs. M.
Luke, H. S. — Roth, S. H. J.
Lavers, R. S. — Scott, R. D.
Parr, J. W.

Medal presented annually by the Société des Architectes Diplômés par le Gouvernement, Paris, to the best Diploma student of the Year:
Nisbet, J. V.

Royal West of England Academy School of Architecture (Affiliated with the Architectural Association):
Prize in Design (value £5 5s.):
Taylor, A. R.

THE BARTLETT SCHOOL OF ARCHITECTURE

The following awards have been made at the Bartlett School of Architecture, University College, London:

Entrance Exhibitions: 1. W. B. Galloway, Whitgift Middle School, Croydon: 2. A. E. Rogers, The Royal Grammar School, Guildford.

Donaldson Silver Medal, E. F. Starling. (Subject to confirmation by the R.I.B.A.).

Herbert Batsford Prize: L. T. Wilkins.

Ronald Jones Prizes: Renaissance Architecture, J. C. B. Price. Mediæval Architecture, P. B. Dunham.

"The Architects' Journal" Prize (for the best final design produced in the day school by a fourth year degree or diploma student): D. A. Stewart.

"The Builder" Prizes (for the best sets of measured drawings of old work): Senior, D. A. Stewart. Junior, A. P. Ciregna and F. E. Kerswill (equal).

"Building" Prize: E. L. W. Davies and D. A. Stewart (equal).

Neal Prize: Subject: A Departmental Store, B. Spence and H. F. Hoar (equal).

The following have obtained the Certificate in Architecture:

P. S. Antonio — R. L. de Wet
Olive G. V. Briggs — F. A. Howard
H. A. E. Burton — J. K. G. Sarjeant
A. P. Ciregna — Evelyn S. A. Walston
S. A. Comben — A. G. Wise

The following have obtained the Certificate in Town Planning:

F. H. Carr — H. G. M. May
K. F. Giraud — Beatrix J. Phillipson
Jessie M. Greig — H. Sandford

Company Meeting.

RUBBER ROADWAYS

The annual general meeting of Rubber Roadways Limited was held on Monday, July 7, at the registered office, 2, 3 and 4 Idol Lane, Eastcheap, London, E.C.

Sir Stanley Bois (chairman of the company), who presided, said: It is with some satisfaction that your board are able to record certain definite progress in the activities of the company. I have on previous occasions stressed the fact that development of new uses of rubber, is, unfortunately for producers, extremely slow. Rubber roadways are no exception in this respect, but the progress made has been definite and encouraging. Your company, in spite of many difficulties and set-backs, has carried this important use of rubber through experimental stages by means of subsidies and grants, and the demonstration areas which have been laid have proved that a rubber roadway is a technical success. The initial cost has been a stumbling-block, but your board have never lost faith in their view that this almost unsuperable obstacle will eventually be overcome.

A few years ago first cost was visualized at the high figure of £5 per square yard. Last year a scheme of finance was propounded on a basis of £4 per square yard. I am now able to state that, as a result of intensive experiment and investigation, one firm has found it possible to market a rubber paving block at a price of between £2 10s. and £3.

You will no doubt have observed that in the House of Commons the other day the Minister of Transport stated that, as the cost of rubber paving blocks very substantially exceeds that of the more expensive types of other suitable paving materials, he does not see his way to urge local authorities to use this particular material. I venture to suggest that this statement ignores the whole argument in favour of rubber because, when dealing with the initial cost of any form of road surfacing, regard must be paid to the merits of each type and the ultimate cost.

There is no other material to compare with rubber, which possesses such anti-abrasive and shock-absorbing properties. Further, there is no doubt that the advantages of rubber paving, if expressed in terms of pounds, shillings, and pence, mean a large saving in maintenance costs which, taken over a period of years, would more than counterbalance the higher initial cost. The increasing strain of modern road transport demands a more efficient road surface, and I can think of no other material than rubber to fill the bill.

Announcement

The directors of the Midland Bank Limited announce an interim dividend for the half-year ended June 30 last at the rate of 18 per cent. per annum less income tax, payable on July 15. The dividend for the corresponding period of 1929 was at the same rate.

THE ARCHITECTS' DIARY

WEDNESDAY, JULY 16

R.I.B.A., 9 Conduit Street, W.1. Exhibition of models, masonry specimens, drawings and photographs of St. Paul's Cathedral. 10 a.m. to 8 p.m. (Saturdays, 5 p.m.) **10 a.m.**

ARCHITECTURAL ASSOCIATION, 36 Bedford Square, W.C.1. (1) Annual Excursion to Denmark and Sweden, returning to London on July 29. Particulars of the tour, etc., are obtainable from F. R. Yerbury, Secretary, Architectural Association. (2) Annual Exhibition of Students' Work open daily from 10 a.m. to 6 p.m., until August 1. **10 a.m.**

ROYAL ACADEMY, Burlington House, S.W. Summer Exhibition open to the public. Open until September. **10 a.m.**

LIVERPOOL SCHOOL OF ARCHITECTURE. At the Walker Art Gallery, Liverpool, Annual Exhibition of Architectural Drawings, until July 19, 10 a.m. to 6 p.m. **10 a.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Exhibition of English Mediæval Art in the North Court. Open until September 21, 10 a.m. to 6 p.m. (Thursdays, 10 a.m. to 10 p.m.) **10 a.m.**

SIR JOHN SOANE'S MUSEUM, 13 Lincoln's Inn Fields, W.C.2. Open every Tuesday, Wednesday, Thursday and Friday until September next. 10 a.m. till 5 p.m. **10 a.m.**

KINGSTON-UPON-THAMES PUBLIC BATHS COMPETITION. Exhibition of designs at the Tiffin Boys' School (old building) until July 23. 2 p.m. to 8 p.m. **2 p.m.**

UNIVERSITY OF LONDON, University College, Gower Street, W.C.1. Exhibition of Egyptian and Palestinian Antiquities. Until July 26. 10 a.m. to 5 p.m. (July 15 and 25, 6.30 to 8 p.m.) **10 a.m.**

INTERNATIONAL CONFERENCE of Union Internationale des Villes et Pouvoirs Locaux. At Liége. July 16–17.

THURSDAY, JULY 17

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to Letchworth Garden City by motor coach, leaving Lancaster House at 1.30 p.m. Price of tickets, 5s. The First Garden City, Ltd., have invited the party to tea at the Institute, Letchworth. **1.30 p.m.**

COUNCIL FOR THE PRESERVATION OF RURAL ENGLAND. At R.I.B.A., 9 Conduit Street, W.1. "Control of Floods in the Thames Valley." By A. B. Buckley, O.B.E., M.INST.C.E. The Chair will be occupied by The Earl of Mayo. **3.30 p.m.**

FRIDAY, JULY 18

R.I.B.A., 9 Conduit Street, W.1. Finance and Housing Committee Meeting. **4.30 p.m.**

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Special Lecture at the R.I.B.A. Galleries, 9 Conduit Street, W.1, on "Modern Architecture of Europe and America." By Maurice E. Webb, D.S.O., M.C., F.R.I.B.A., and Howard Robertson, F.R.I.B.A., S.A.D.G. Chairman: Carmichael Thomas, Chairman of Council, The London Society **6.30 p.m.**

BRITISH STEELWORK ASSOCIATION. At the Institution of Mechanical Engineers, Storey's Gate, S.W.1. "Skyscrapers in America." By G. E. J. Pistor. 5.30 p.m. (Tea will be served at 4.45 p.m.) **5.30 p.m.**

INTERNATIONAL CONFERENCE of Union Internationale des Villes et Pouvoirs Locaux. At Antwerp. July 18–19.

SATURDAY, JULY 19

Sunrise, 5.4 a.m. Sunset, 9.8 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. Indian Section: "Architecture." By Miss M. Chamot. **3 p.m.**

MONDAY, JULY 21

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "English Seventeenth-Century Furniture." 3 p.m. Both lectures by L. O. Faraker. **12 noon.**

R.I.B.A., 9 Conduit Street, W.1. Council Meeting. **4.30 p.m.**

BOARD OF EDUCATION REFRESHER COURSE FOR TEACHERS IN ART SCHOOLS. At the Victoria and Albert Museum, South Kensington, S.W.7. "Craftwork as an Element of Education." Inaugural Address by the Rt. Hon. Lord Riddell. Chairman: Sir Henry Richards, C.B., LL.D. (Senior Chief Inspector of Schools).

TUESDAY, JULY 22

TOWER OF LONDON, E.C.3. "The Tower in the Middle Ages." By Allen S. Walker. **11 a.m.**

WEDNESDAY, JULY 23

R.I.B.A., 9 Conduit Street, W.1. Tite Prize Final Competition.

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to the New Whitelands Training College, Putney Hill, S.W., designed by Sir Giles Gilbert Scott, who, with Lady Scott, will entertain members to tea after the visit. **3 p.m.**

BOARD OF EDUCATION REFRESHER COURSE FOR TEACHERS IN ART SCHOOLS. At the Victoria and Albert Museum, South Kensington, S.W.7.

A discussion on "Is Painting a Craft?" will be opened by Mr. Percival Tudor-Hart. Capt. Claude Flight, R.B.A., will reply. Chairman: Mr. Charles Marriott.

THURSDAY, JULY 24

R.I.B.A., 9 Conduit Street, W.1. Victory Scholarship Final Scholarship.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "French Eighteenth-Century Furniture." By L. O. Faraker. 12 noon. "Italian Furniture." By Miss M. Chamot. **7 p.m.**

BRITISH MUSEUM, W.C.1. "Origins of Architecture—II. Roman, etc." By Cecil Hallett, B.A., F.S.A. **12 noon.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Light and Colour." By S. H. Groom, B.A. **12 noon.**

FRIDAY, JULY 25

R.I.B.A., 9 Conduit Street, W.1. Visit to U.S.A. Arrival of S.S. "Ascania" at Plymouth.

SATURDAY, JULY 26

Sunrise, 5.13 a.m. Sunset, 8.59 p.m.

SOUTH-EASTERN SOCIETY OF ARCHITECTS. Visits to Leeds Castle, Chilham or Bodiam, etc., organized by the Canterbury and Tunbridge Wells Chapters. Particulars of the visits are obtainable from the Hon. Secretaries of the Chapters.

MONDAY, JULY 28

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Italian Decoration." By Miss M. Chamot. **3 p.m.**

TUESDAY, JULY 29

TOWER OF LONDON, E.C.3. "The Tower in Tudor Times." By Allen S. Walker. **11 a.m.**

WEDNESDAY, JULY 30

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "The Weather." By S. H. Groom, B.A. (Illustrated by Lantern Slides.) **3 p.m.**

THURSDAY, JULY 31

BOARD OF EDUCATION REFRESHER COURSE FOR TEACHERS IN ART SCHOOLS. At the Victoria and Albert Museum, South Kensington, S.W.7.

"Are Art Schools assisting Industry?" By Henry G. Dowling, F.R.S.A., F.I.B.D., of John Line and Sons. Chairman: Alfred Shuttleworth, A.R.C.A. (Secretary of the National Society of Art Masters).

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Alfred Stevens." 3 p.m. "Modern Sculpture." Both lectures by Miss M. Chamot. **7 p.m.**

LUTON TOWN HALL, DUDLEY SCHOOL and SOUTHPORT MARKET HALL COMPETITIONS. Latest date for submission of designs.

SATURDAY, AUGUST 2

Sunrise, 5.24 a.m. Sunset, 8.48 p.m.

SATURDAY, AUGUST 9

Sunrise, 5.35 a.m. Sunset, 8.35 p.m.

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Architecture." By L. O. Faraker. **12 noon.**

SATURDAY, AUGUST 16

Sunrise, 5.46 a.m. Sunset, 8.22 p.m.

THURSDAY, AUGUST 21

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Architecture." By Miss M. Chamot. **3 p.m.**

SATURDAY, AUGUST 23

Sunrise, 5.56 a.m. Sunset, 8.8. p.m.

SATURDAY, AUGUST 30

Sunrise, 6.8 a.m. Sunset, 7.53 p.m.

MONDAY, SEPTEMBER 1

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. September 1 to 6.

SATURDAY, SEPTEMBER 6

Sunrise, 6.19 a.m. Sunset, 7.37 p.m.

XII. INTERNATIONAL CONGRESS OF ARCHITECTS. In Budapest. September 6 to 13. Opening of International Exhibition of Architectural Designs in the Picture Gallery of the Hungarian Scientific Academy. **10 a.m.**

FRIDAY, SEPTEMBER 19

R.I.B.A., 9 Conduit Street, W.1. Exhibition in the R.I.B.A. Galleries of Drawings submitted in competition for the Archibald Dawnay Scholarship (10 a.m. to 7 p.m.; Saturdays, 2 p.m.) **10 a.m.**

IN PARLIAMENT

[BY OUR PARLIAMENTARY REPRESENTATIVE]

The Government's Slum Bill

THE report and third reading stages of the Housing (No. 2) Bill have been completed in the House of Commons, and the Bill will now have to go before the House of Lords. There is no likelihood of the Upper House dealing at all drastically with these slum clearance proposals, and the Bill should, therefore, become law in a very short time.

During the report stage, Mr. Greenwood, the Minister of Health, moved the following new clause: "A local authority, in preparing any proposals for the provision of houses, or in taking any action under this or the principal Act, shall have regard to the natural amenities of the locality and the desirability of preserving existing works of architectural, historic, or artistic interest, and shall comply with such directions, if any, in that behalf as may be given to them by the Minister." He explained that his object was to meet a point raised in Committee to ensure the preservation of buildings of historic or artistic interest. The clause would mean that local authorities would be free to act as they thought best, but that people interested in the preservation of these buildings would be able to take action and approach the Minister of Health, who could then make such regulations as he thought fit.

The new clause was welcomed by members of all parties. The general opinion of the House was, perhaps, best voiced by Sir Tudor Walters, who said that, with all his enthusiasm for housing, he did not want this particular period of English history to stamp itself and its building record with some of the ugliest productions in history. There was grave danger, in providing houses, of destroying ancient monuments and houses of historical interest which it would be quite easy to preserve. Do not let them combine vandalism with their enthusiasm for housing. Let them have artistic taste and regard for amenities, as well as for the need of working-class houses.

The new clause was added to the Bill.

The dimensions of the houses to be built for rehousing purposes gave rise to a good deal of discussion. Mr. Jowett moved a new clause to provide that the dimensions of these houses should not be less than the minimum requirements laid down in the Housing Act of 1923.

Mr. Greenwood at first resisted the amendment, but, yielding to pressure from all parts of the House, he agreed to deal with the matter in the House of Lords, and to provide that in all these slum clearance schemes houses to be built would conform to the standards of the Acts of 1923 and 1924.

On this assurance, the new clause was withdrawn.

On the third reading, Sir Kingsley Wood expressed the fear that under the Bill there would be very little building, and very little mitigation of the unemployment in the building trade this year.

Mr. Greenwood, in his reply, did not pretend that slums which had been in the making for 400 years would be destroyed in four months, but the Bill, he claimed, was the first comprehensive measure to deal with this particular problem in a new and more effective way.

Mr. E. D. Simon, for the Liberals, welcomed the Bill as far as it went. In his opinion, however, it was a timid and half-hearted measure.

The third reading was agreed to without a division.

State-assisted Houses

At question-time Dr. Vernon Davies asked the Minister of Health if he could give any estimate of the percentage of the cost per house to be borne by local authorities under the Housing (No. 2) Bill at the present level of building prices.

Miss Lawrence said that at the present level of average building prices a contribution of £3 15s. per house for forty years was equivalent to rather more than 16 per cent. of the total cost per house.

Cost of Production in Germany

Mr. A. M. Samuel asked the Secretary to the Overseas Trade Department whether he would compile a list of the cuts in the principal competitive export selling prices made by German industrialists in order to reduce German unemployment, and circulate the information among British industrialists as soon as possible.

Mr. Gillett (Secretary, Overseas Trade Department): I assume that the hon. Member has in mind the recent arbitration award in the German iron and steel industry which has resulted in a reduction of wages and prices. The new scale of inland selling prices for steel has been reported to my Department and has already appeared in the Press. Any information that may become available as to adjustments of export prices in this and other trades will be communicated to the British interests concerned.

Mr. Samuel: Is the hon. gentleman not aware that in Germany the producers are making a general cut—quite apart from iron and steel—embodying the fall in the price of raw materials, and the general reduction in the cost of production in Germany?

Mr. Gillett: I understand that the cases to which the hon. gentleman refers do not relate to the export trade, but are confined to the home trade.

Mr. Samuel: Will the hon. gentleman indicate where I refer to any particular cases? I refer to the whole range of prices.

COMPETITIONS OPEN

July 31.—The Luton Town Council invites architects to submit designs for the proposed town hall, which is to be built on the site of the old town hall, at an approximate cost of £250,000. Assessor: Sir Brumwell Thomas, F.R.I.B.A. Premiums: £500, £300, £200 and £100. Particulars obtainable from W. Smith, Town Clerk, 2 Upper George Street, Luton. Deposit £2 2s. Latest date for submission of designs: July 31.

July 31.—The Dudley Education Authority invites architects having an office within a radius of fifteen miles of Dudley to submit competitive designs for a Council school to accommodate 320 children, to be erected on the Brewery Fields estate; also a school for 400 children on the Priory estate. Assessor: Herbert T. Buckland, F.R.I.B.A. Premiums: £150, £100, and £50. Applications for conditions of the competition, etc., should have been made to J. Whaley, Director of Education, Education Offices, St. James's Road, Dudley, by April 30. Deposit £1 1s. Latest date for submission of designs: July 31.

July 31.—The Southport Borough Council invites local architects to submit designs for a new Market Hall. Assessor: Percy Worthington, F.R.I.B.A. Premiums: £100, £50, £35, and £20. The hall is to contain fifty-six stalls and a manager's office. The site is 191 ft. by 95 ft. The estimated cost is £13,500. Conditions obtainable from the Town Clerk, Municipal Buildings, Southport. Latest date for submission of designs: July 31.

August 30.—The Carlisle Corporation invites British architects to submit designs for the façade to English Street and the Victoria Viaduct, suitable for shops and business premises. The site was previously occupied by the Prison. The total length of the frontage is approximately 358 ft. Assessor: Francis Jones, F.R.I.B.A. Premiums: £300, £200, and £100. Particulars of the competition, etc., may be obtained from Percy Dalton, A.M.INST.C.E., A.R.I.B.A., City Engineer, 18 Fisher Street, Carlisle. Deposit £1 1s.

September 1.—The Bangor (Co. Down) Borough Council invites architects or town planners to submit designs in competition for laying out the sea front within the Borough. Assessor: Professor Patrick Abercrombie, F.R.I.B.A. Premiums: £150 and £50 for first and second places, respectively. Copies of the conditions and plans will be forwarded on application to J. Milliken, Town Clerk, Borough Council Offices, Bangor, Co. Down. Deposit £1 1s. Latest date for submission of designs: September 1.

September 30.—The Isle of Man Education Authority invites architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums: £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs: September 30.

No date.—The General Syndicate, Ltd., invites architects to submit competitive schemes for the development of a site at Liverpool, fronting St. John's Lane, Queen Square and Rose Street. Premiums: £250, £100 and £50, for first, second and third prizes, respectively. Particulars, etc., are obtainable on application to the Secretary, the General Building Syndicate, Ltd., 36 St. Martin's Lane, W.C.2.

TRADE NOTES

Messrs. Pharaoh Gane & Co., Ltd., are the sole agents in this country and the Irish Free State for the two new waterproof and insulating building boards, Thermasote and Homasite, placed recently upon the British market by the Pantasote Co., Inc., of New York City.

Thermasote is intended primarily for all kinds of interior work: shops, offices, garages, sports pavilions, bungalows, etc. One of its most popular uses is for the panelling of walls, when it is nailed to the studding, the joints being covered with wood battens. The finished work can be left untreated or stained or painted. Another widely known use for the material is that of a plaster base. For this purpose it is applied with wire mesh over joints, thus forming a key, after which the plastering is done in the usual way, without the use of laths. Many other uses readily occur to mind, such as for ceilings, underflooring and partitions. Many claims are made for the sound-deadening, heat-resisting, waterproofing and other properties of the material.

Homasite may be regarded as the corollary of Thermasote. It has similar weather-resisting and other properties, but is manufactured particularly for exterior work. It is thick, dense and rigid, and the large sheets in which it is made eliminate joints in most jobs. Nails, it is claimed, can be driven into it, without fear of fracture and splits.

All the buildings for the base headquarters of the Byrd Expedition in the Antarctic are covered entirely on the outside with Homasite, and the interior walls and roofs are lined with Thermasote. The Pantasote Co. have received a radiogram from the expedition stating that the boards are still in good condition, and that the headquarters are comfortable all winter.

At the offices of Messrs. Pharaoh Gane & Co., Ltd., 9-13 King William Street, London, E.C.4, the managing agents for the United Kingdom and Ireland, may be seen a large number of photographs showing the uses to which the boards may be applied, and of the various public buildings, hospitals, offices and dwelling-houses in which the material predominates.

*

Messrs. Dorman Long and Co., Ltd., have secured the following contracts: Claridge's Hotel, London. Supply and erection of approximately 1,100 tons of structural steel. New building to house the staffs of Cables and Wireless, Ltd., and of Imperial and International Communications, Ltd., Victoria Embankment. Supply and erection of approximately 4,300 tons of structural steelwork, British throughout, manufactured and fabricated at the works. Rebuilding of Lever House, Victoria Embankment. Supply and erection of approximately 4,500 tons of structural steel to be used in the rebuilding of Lever House.

*

The famous marble floor of St. Mark's, Venice, has been reproduced in rubber for Glasthule Church, Co. Dublin. Samples of the actual marbles were sent to the Macinlop works in Manchester, where the reproduction was accomplished. The architect for the work at Glasthule Church was Mr. J. J. Robinson, F.R.I.A.I., M.S.A., P.P.A.A.I.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

KINGSLEY HALL

Following is a list of the specialists, general contractors and some of the sub-contractors for Kingsley Hall, Powis Road, Bow, illustrations of which appear on pages 79-81. General contractors, Limpus and Son, Kingston Hill. Clerk of works, Mr. A. W. Howard. Sub-contractors: Ames and Finnis, bricks; A. D. Dawnay and Sons, Ltd., structural steel; Stevens and Adams, wood-block flooring; Rosser and Russell, Ltd., heating; Grierson, Ltd., electric wiring; Osler and Faraday, electric light fixtures; Pontifex and Son, Ltd., sanitary fittings; Welstead, Ltd., casements; Bainbridge Reynolds, metalwork; Martin van Straaten & Co., tiling.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

SCALE DETAILS:

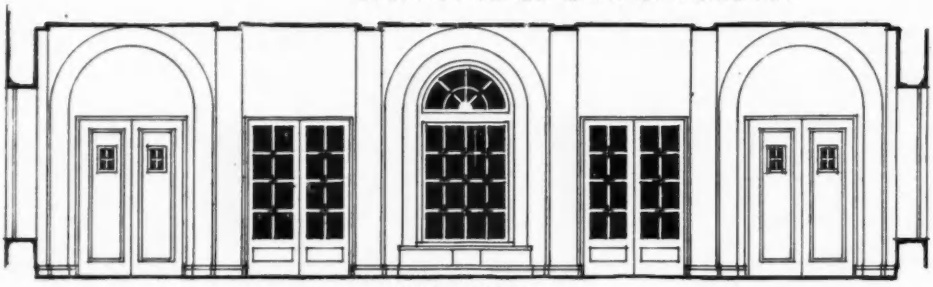
A WEEKLY SERIES

NARTHEX OF THE FIRST CLUBLAND CHURCH, WALWORTH, S.E.

DESIGNED BY EDWARD MAUFE

THIS cell, which acts as a buffer between the body of the church and the open porch at the east end, has a barrel-vaulted ceiling with intersecting barrels in three of its five bays, which thus become square, groined, vaulted compartments. Looking at the east wall (to the left, in the photograph), the two outer pairs of doors give on to gallery staircases, while the two centre pairs, which are glazed, give, together with the central semicircular-headed window placed between them, on to the porch. The three pairs of doors in the west wall, all of which are in oak, give access to the church.

The narthex is finished throughout in a rough plaster, with a skirting of Portland stone. The cross-strip lighting fitting will be noticed in the photograph, which also shows the treatment of the cork composition flooring and the generous mats placed on the through axes.



The arrow on the plan reproduced overleaf shows the view-point of the photograph.

The drawing may be read with architect's scales—$\frac{1}{8}$ in.; and 6in.=1 ft.

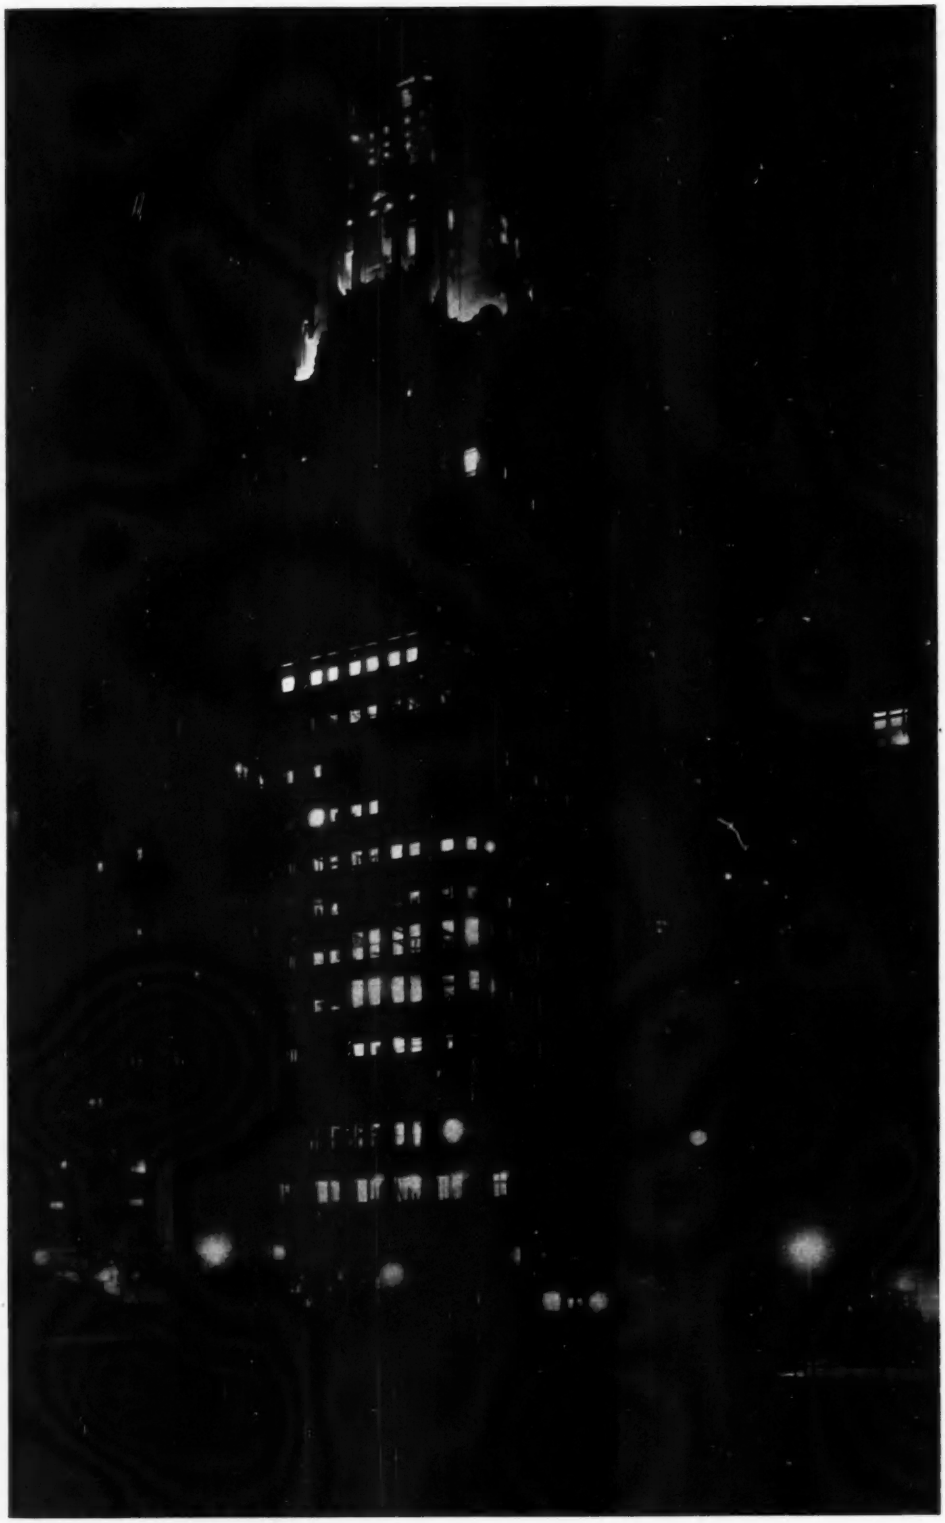
PROFESSIONAL TOLERANCE

A Lesson from Wren and Vanbrugh

PUBLICATION of the sixth volume of the Wren Society, formally reviewed elsewhere, opens the door anew to speculation upon the involved origins of Greenwich Hospital—an exercise of a kind perennially intriguing to the practical side of the architect's mind. But he may also draw from these collated documents a lesson in psychology too valuable to be overlooked.

History's pages are too often soiled by stories of jealousy and pettiness marring the dealings of great artists with their brothers. It is, then, all the more refreshing to find so charming an example of tact, forbearance and fine good fellowship as existed between the veteran Sir Christopher Wren and John Vanbrugh, a man thirty-two years his junior, his subordinate and in some ways his rival, in spite of occurrences which would assuredly have led to friction and discord between men of less generous temperaments. Wren seems to have taken an immediate liking to the young man, who gave up successful play-writing, as he himself had given up mathematics, and, with as little training, had suddenly blossomed into a full-blown architect.



Their first recorded professional contact occurred when Vanbrugh was appointed Controller of the Board of Works in 1702—some three years only after his first essay in architecture at Castle Howard. Wren was obviously impressed with his capabilities, welcomed his collaboration and, from the start, allowed him to exercise a considerable influence on the design of the later buildings at Greenwich. Up to recently it has always been assumed that it was only from 1716, when Vanbrugh was made Surveyor in his stead, that his influence was seen, but it is now clear that it actually goes back much earlier.

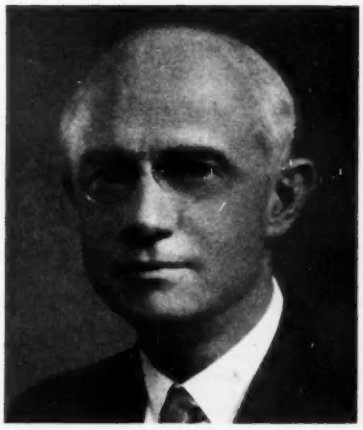
A year or two after their first association an event occurred which might have disturbed the harmony of their relations. This was the appointment of an architect to design the palace that Queen Anne decided to build for the Duke of Marlborough. Wren and Vanbrugh both submitted models, and the design of the younger man was selected. This may have been a severe blow to Wren's pride and prestige; but, if so, he bore no resentment, and we read that he went down to Woodstock later on to report on the probable cost of part of the scheme. It is true that he was seventy-two years of age at the time and had an immense practice, but it is not an invariable rule that artists are reconciled to the loss of an important commission merely because they are elderly and busy.

Apart from such rivalry, there were several incidents in their official association which might have led to friction. Soon after his appointment Vanbrugh found serious irregularities in the Office of Works, which he did his best to persuade Wren to investigate and rectify. But Wren was old and easy-going, and allowed things to drift; so Vanbrugh took matters to Godolphin over his head, being careful, however, to make it plain that he made no suggestion of dishonesty on Wren's part.

Again, ten years later, Vanbrugh prepared a memorandum on the reorganization of the Office of Works and the reform of abuses, which he submitted to the Treasury. These incidents do not seem to have ruffled the calm of their friendship, and, when Vanbrugh was offered the Surveyorship, either before or after Wren's dismissal, he wrote to a friend that he " refus'd it, out of Tenderness to Sr. Chr. Wren."

Wren's character had no trace of meanness or smallness in its composition, and Vanbrugh was a man with a sense of humour, and infinitely good-natured. Wren's remark on hearing that he had been dismissed from the post of Surveyor-General gives the key to a character of peculiar nobility: " Now fortune commands me to apply myself more closely to Philosophy." If he took so great a blow with such fortitude it is but natural that the smaller disappointments that came to him through the good-natured Vanbrugh should have been taken in a similar spirit of philosophic calm.

NIGHT PIECE IN NEW YORK:
THE AMERICAN RADIATOR BUILDING



"Though possibly ugly at first, architects have attained such skill in using the material at their disposal that today this tall-building architecture is universally held up as a great contribution to creative art." *(See the lecture on "The Art and the Economics of Skyscrapers," by George E. J. Pistor, Treasurer of the American Institute of Steel Construction, on pages 133-4 of this issue.)*

Sir Walter Peacock, Honorary Associate of the R.I.B.A., who, after twenty-two years' service as secretary of the Duchy of Cornwall, is retiring, and will be succeeded by Major H. McCormick.

NEWS & TOPICS

George E. J. Pistor, Treasurer of the American Institute of Steel Construction, Incorporated, author of the lecture, "The Art and the Economics of Skyscrapers," summarized in this issue (pages 133-4).

R.I.B.A. BYLAWS AMENDED

ARCHITECTS are no more fond of reading legal documents than are other people, yet it behoves all members of our profession to study with care the amendments to the R.I.B.A. Bylaws, which have just been published. The principal alterations concern the terms upon which Licentiates are admitted. In order that the R.I.B.A. should truly represent the profession it is necessary for it to include in its ranks the largest possible number of reputable practitioners, and nothing is gained by setting up a standard of academic attainment, the rigid enforcement of which would so restrict the number of R.I.B.A. members as to render the Institute impotent to control the professional activities of the great majority of practising architects. With the object of extending the range of its influence, the R.I.B.A. has now decided to open the Licentiate class to "any former Licentiate of the Society of Architects, who upon the amalgamation of the Society with the Royal Institute, became a Student of the Royal Institute, and who satisfies the Council that he possesses the qualifications which entitle him to such election."

★

Another important amendment designed to facilitate the entry of the proper kind of recruit to the architectural profession is an act of decentralization, whereby nominations for membership by candidates practising within the province of an Allied Society, instead of going to the Council of the R.I.B.A., are dealt with by the Council of the Allied Society. This is an excellent arrangement, because it relieves the central governing body of a good deal of routine work, while it renders the scrutiny of nomination forms more effective if this work is undertaken by architects practising in the same district as that in which the candidates themselves reside.

RETIREMENT OF SIR WALTER PEACOCK

During the past quarter of a century the estates of the Duchy of Cornwall in London and the West of England have been entirely remodelled. A somewhat similar transformation took place at the close of the eighteenth century, when Sir Thomas Tyrwhitt was Secretary to the Prince of Wales. The process of reorganizing the Kennington Estate and the Manors of Somerset, Devon and Cornwall began as far back as 1908, when King George was Prince. Sir Walter Peacock's administration proves that the King's personal interest in the smallest details had the effect of sweeping away slum areas and obsolete buildings which had been neglected for years. So, before the housing question had become accentuated, at a time when the spoliation of the courtyards was still distant, the policy of the Duchy of Cornwall was directed to the preservation of local amenities.

★

Sir Walter Peacock brought scholarship and artistic acumen to his management of the estates. Keenly interested in architecture and the social traditions which make up the story of England, he identified the county policy of the Duchy with agriculture and stock breeding. In his mind the estates exist as one of the Crown ornaments, to be handed on unspoiled from one Royal life tenant to another. Sir Walter Peacock is well known in architectural circles. He is an Honorary Associate of the Royal Institute of British Architects, and he has recently been appointed a member of the Royal Fine Arts Commission.

POULTRY CONGRESS ARCHITECTURE

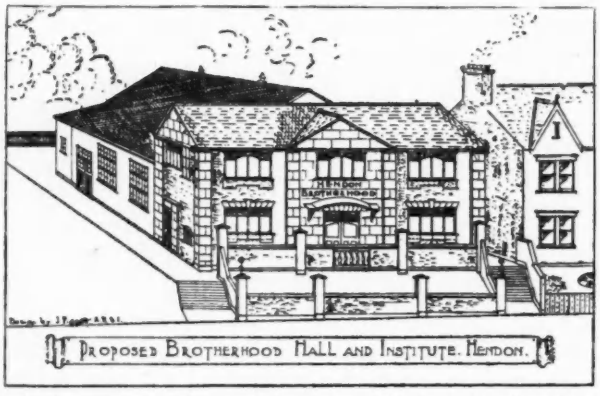
When Erich Mendelsohn was recently in England he doubtless surprised architects by declaring (in effect) that the Crystal Palace was the earliest "modern" building, and even now the most interesting in England. This pronouncement will doubtless induce architects to look again. If they wish to do so they could not do better than see the Palace during the current week, during which the exhibition in connection with the World's Poultry Congress (July 22–30) is staged. The vast building can certainly never have been seen to greater advantage, for not only is the heterogeneous show of statuary and things in glass cases for the most part discreetly hidden, but the main floor is occupied by an orderly layout of well-designed stands, handled with just that degree of playfulness suitable to ephemeral exhibition architecture.

★

The general atmosphere of the main nave and two transepts is one of light, air, and grey-blue paint. In the temporary exhibition layout the happy choice of strong yellow, relieved by black stencilling, with exhibitors' names in good "Trajan column" black lettering on a milk-white fascia, has been adopted throughout, and while a standard design, in several variants, has been enforced, with obvious advantage to the exhibition as a whole, the degree of departure from the standard which has been allowed here and there shows a judicious control, striking the mean between regimentation and licence. Mr. J. S. Lee, the Congress architect, may be congratulated on his achievement, which anyone who has been connected with

the staging of exhibitions will appreciate as being no easy one. Some of the stands show a humorous freedom in design which relieves what might be a dull exhibition—notably Denmark's modernist tower of butter-tubs and the egg-marketing skyscraper of National Mark boxes.

AEROPLANE INFLUENCE ON LONDON'S BYLAWS



While a growing number of professions, associations and the like, combine to urge the L.C.C. to bring its antiquated building regulations up to date, that body gazes out to horizons unknown and considers what may be done to provide garage and other accommodation in Central London. It wonders how the Thames, the roofs of big buildings, etc., may be adapted for the alighting and taking off of liners of the skies. Actually, the L.C.C. bylaws have done and are doing their best to hinder the development of flat roofs in Central London, since they were drawn up before steelwork was a workable proposition and have never been thoroughly revised since that date. In any case, however, it will be the consolidation of aircraft services in accessible aerodromes that will occupy the attention of the L.C.C., for, like the omnibus, aeroplanes are impossible unless the element of promiscuous and scattered termini in Central London is entirely eradicated. Herein lies the great difficulty, as all passengers who have hung about Croydon waiting to get to France will rise up and tell you.

LONDON'S COMMEMORATIVE PLAQUES

It has been pointed out that in some cases where new buildings replace buildings of historic or literary association, there is a tendency to forget to incorporate the commemorative plaques, probably because they are regarded as not "going" with the new buildings, or because the house-breakers have destroyed them. This is a pity, because London is enriched by the associations these plaques evoke, and the plaques themselves are beautiful things, as well done as it is possible to do them, and ornaments to whatever type of building they may be placed upon.

PRIVATE ENTERPRISE OR DIRECT LABOUR ?

Nottingham is engaged in mighty controversy over the question of whether a large building contract for housing is to be carried out by private competitive enterprise or direct labour. It appears that direct labour will cost £12,000 more than the other, and public opinion wants to know why the Housing Committee should rely on direct labour and municipal management when it starts its work with such an enormous loss. It has been proved by other businesses that the system of creating a building department as a means of saving the amounts that would otherwise go into contractors' pockets is a system that does not work in practice, because it is removed from the healthy impetus to competition, and has no guide to show where economy is reached or passed, and when the business is a municipality and its members salaried officials the losses are correspondingly greater.

PROPOSED BROTHERHOOD HALL AND INSTITUTE. HENDON.

No fewer than twelve foundation stones of this proposed building were recently laid.

PRESERVING A MAGNIFICENT APPROACH

When the Cambridge Preservation Society bought a large area of land on and below Madingley Hill with the object of keeping inviolate the most beautiful approach to Cambridge, they did a bold thing. They spent some £26,000 in doing so and have received to date only £11,000 or so in subscriptions and donations. They hold that the lovely country that surrounds Cambridge is as much a part of it and of its educational influence as are the time-worn stones of the colleges, and that a villa-ridden background would spell disaster to the well-being of the University. What they save for the town is indeed of greater value pound for pound than any building upon which thousands are spent, and it is to be devoutly hoped that the money they ask for will be given them, and more still if they can show how and where it may best be spent.

SOUTHAMPTON'S BAR GATE

How to preserve an ancient gateway, that all but blocks the principal and narrow shopping street of Southampton, without loss of character has long been a standing problem with the citizens of that town, and it is unfortunate that being advised to keep the ancient walls and increase the number of openings, they can find nothing better to do than leave the Bar Gate stranded in the midst of a newly created *place*, although it is so obviously a gateway through a wall. Deprived of its setting, it will be but a poor thing and barely worth the keeping, looking, with a circus of modern shops about it, like a bear in a drawing-room. Southampton is growing so rapidly, and, on the whole, so unwisely that it can ill afford to play tricks with its few remaining antiquities, and it is therefore much to be hoped that Mr. H. P. Cart de Lafontaine, who is advising them, will be supported in his desire to preserve the true character of the Bar Gate. If he cannot do this, it would be better blown up, so that the twentieth century may breathe naturally.

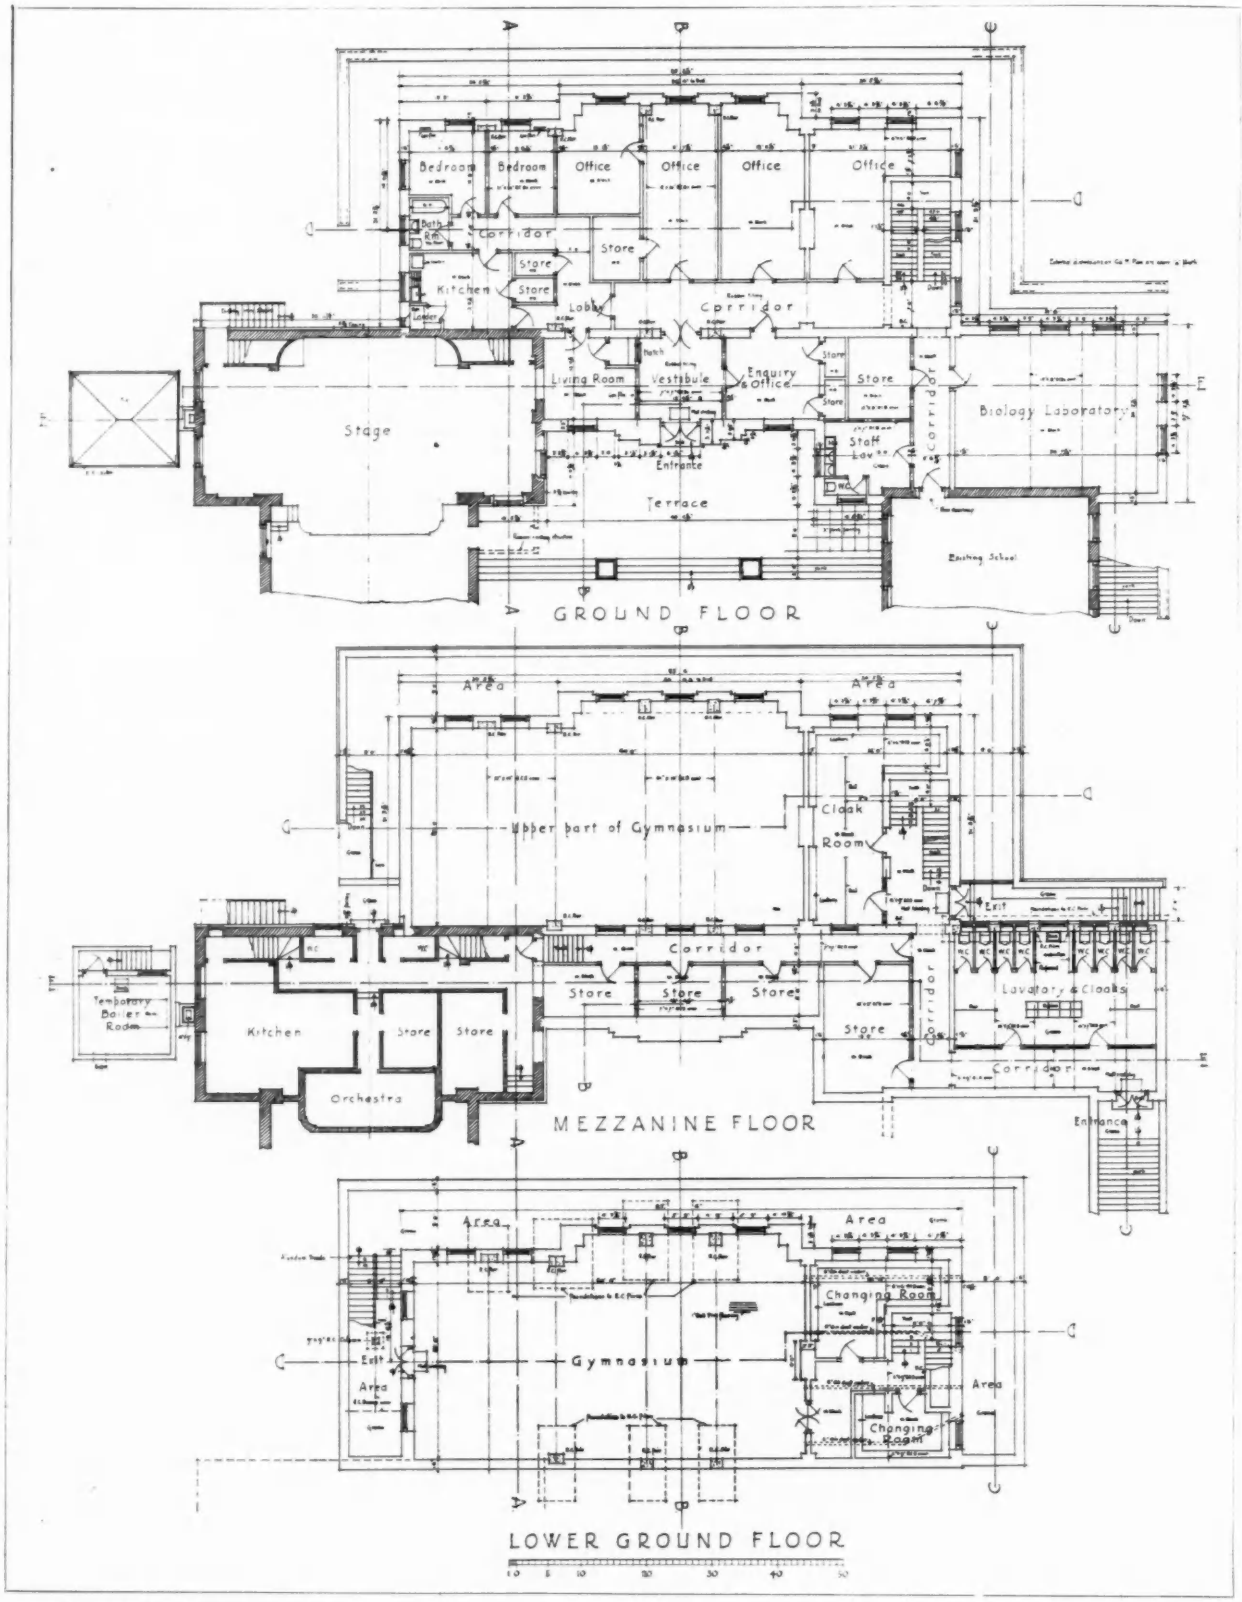
BROTHERHOOD AT HENDON

A Hendon friend sends me a cutting from the local *Times and Guardian*, containing a reproduction of the design for the new Brotherhood Hall and Institute, which I give on this page. The design is the work of J. Piggott, A.R.S.I. I am not myself an expert in Brotherhood Halls; nor do I count so much as a single A.R.S.I. among my many friends; nevertheless, I should say this design was worth careful study.

ASTRAGAL

HOLIDAY SKETCHES COMPETITIONS

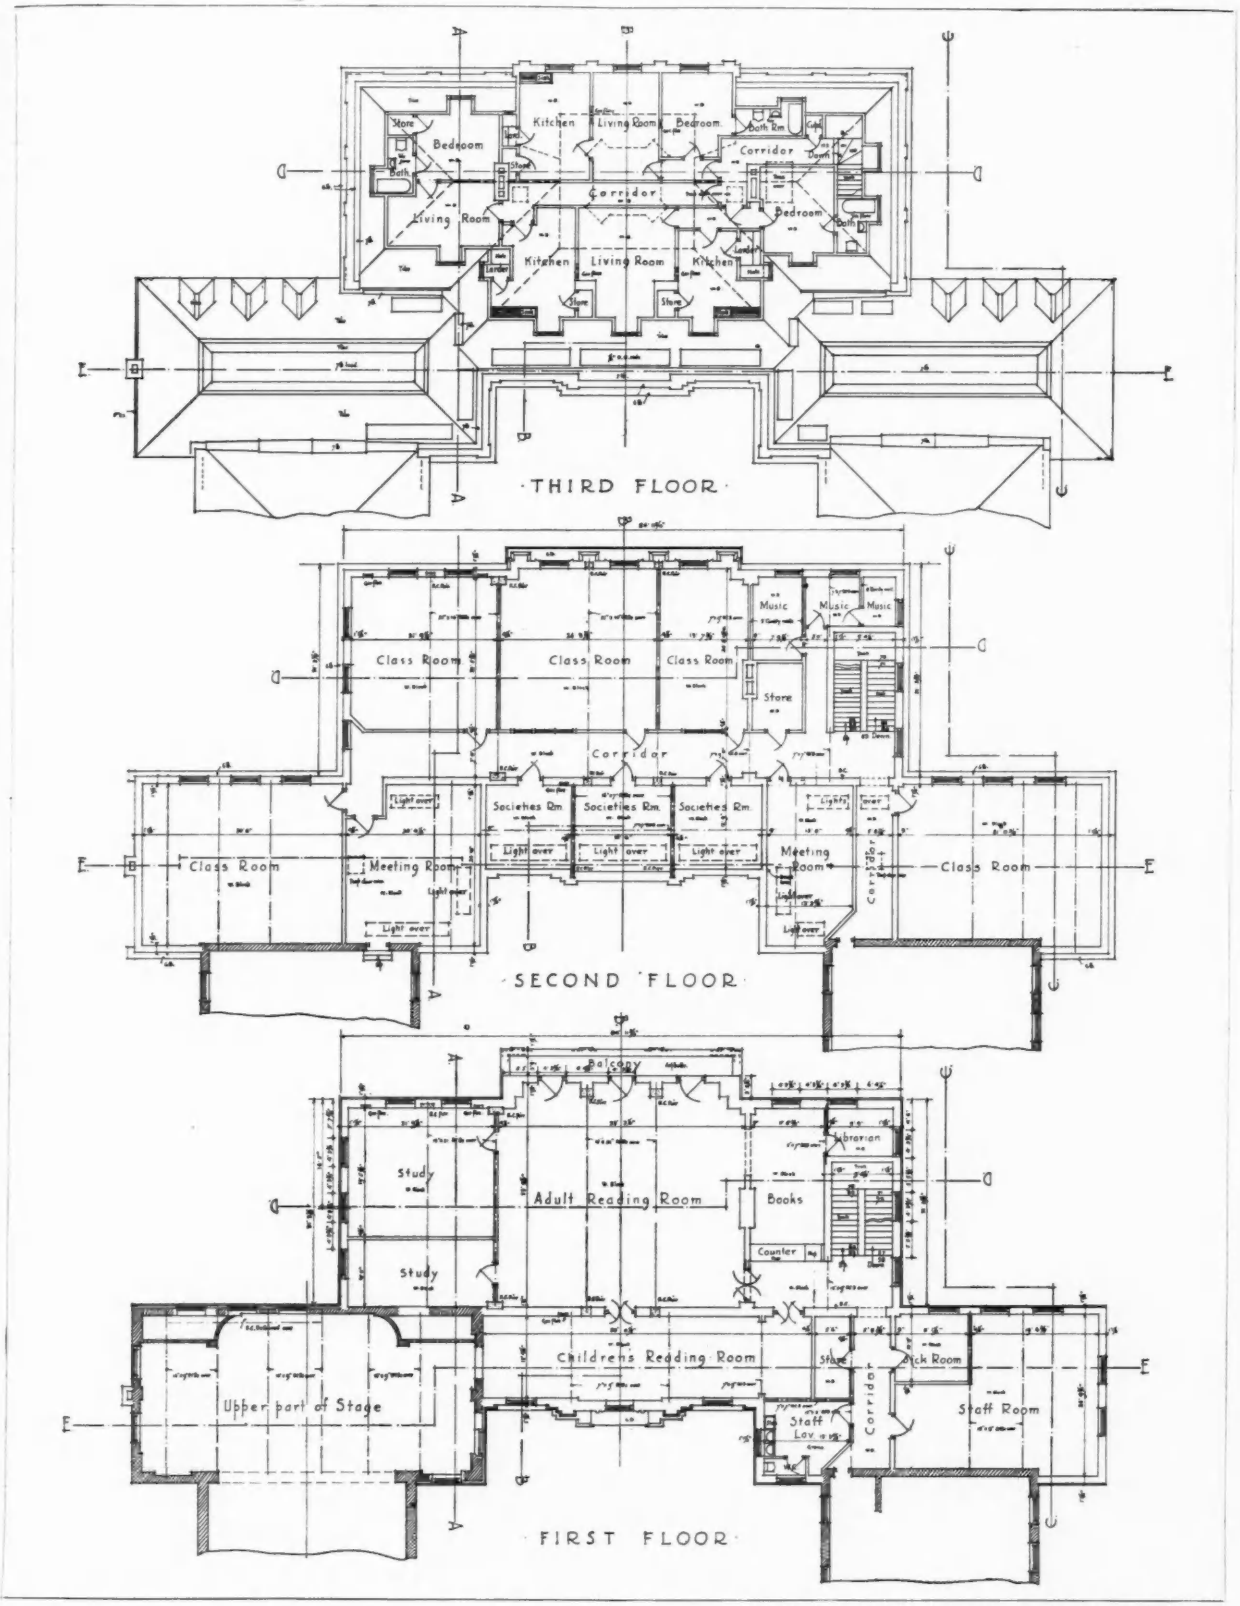
Entries for the June Competition are now closed, and the result will be announced on August 6; they have produced so rich a harvest, both in quantity and quality, that adjudication will be a formidable task. The July and August competitions are still open; see particulars on p. xliv.



The garden side of Crewe Hall, which was opened by the Queen last Saturday. The building is named after Lord Crewe, first chairman of the Hampstead Garden Suburb Institute, who has resumed his work there after the break caused by his ambassadorship in Paris.

CREWE HALL, HAMPSTEAD GARDEN SUBURB

DESIGNED BY CHARLES HANSCOMB, IN ASSOCIATION WITH SIR EDWIN LUTYENS

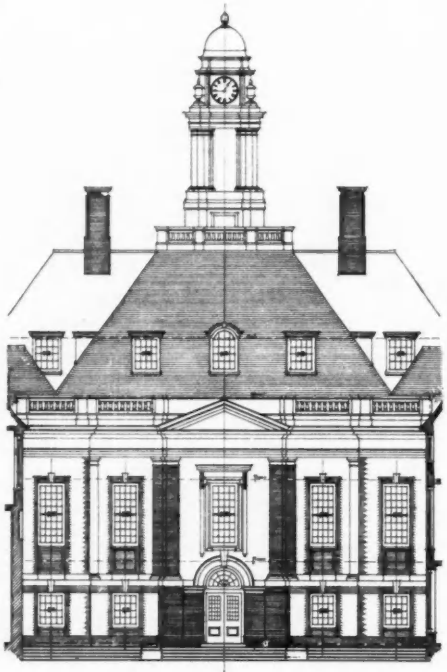


ON Saturday afternoon last, Crewe Hall, the latest and third section of the Hampstead Garden Suburb Institute, was opened by the Queen, who was received by Lord Crewe, president and chairman of the Institute Council, after whom the hall has been named; and Mr. Harold Lacey, principal and secretary of the Institute. Among those present were Dame Henrietta Barnett, Lord Lytton, Sir John and Lady Davies, and the chairmen of the Middlesex County Council and the local district councils. The Institute buildings stand in Central Square : on the hill where the educational and social life is centred.

The Institute was started in 1909 by Dame Henrietta Barnett, and the first building was erected from the designs of Sir Edwin Lutyens. This was a single hall, and was opened by Canon Barnett in 1909. In this hall the organized social life of the suburb was consolidated. As no one could suggest a name descriptive of the many uses to which the hall would be put, it was designated The Institute. Three years later, in 1912, Doctor Sophie Bryant began the Henrietta

Crewe Hall, Hampstead Garden Suburb.]

Lower ground, mezzanine and ground-floor plans. The new building is the third block of the Hampstead Garden Suburb Institute, and connects two previously erected, but not shown on the plans here reproduced. It has been built to house the Henrietta Barnett School. Parts of the older portions of the buildings are shown hatched on the plans reproduced on this and the facing page.

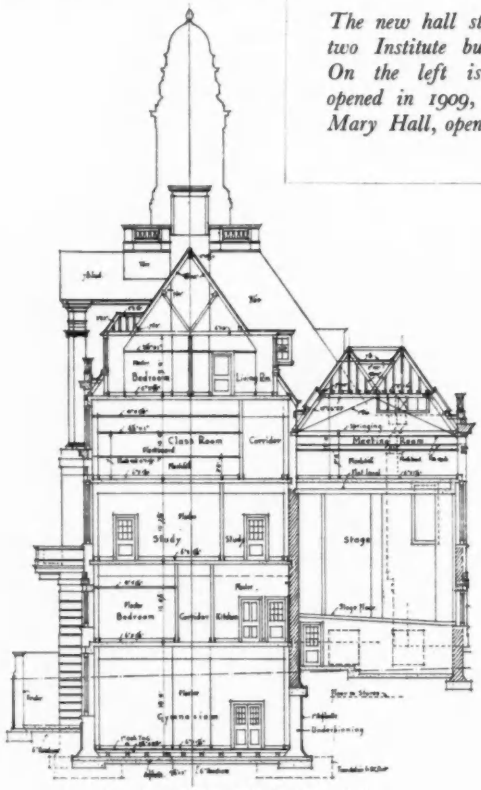


[*By Charles Hanscomb, in association with Sir Edwin Lutyens*

First-, second- and third-floor plans. The new hall contains the principal's room, offices, staff room, students' common room, art rooms, laboratory, research library, book room for children, gymnasium, classrooms, music rooms, orchestra room, woodwork room, seven storerooms for books, equipment and dramatic properties, four changing-rooms and residential flats for the use of the staff.

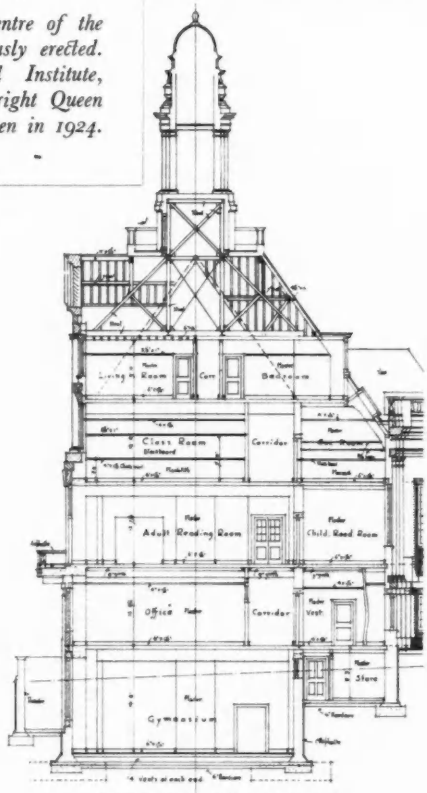
Barnett School with six children. Today it boasts 1,800 fee-paying members of its classes and societies, besides the uncounted hundreds who attend the concerts, debates, lectures, conferences, plays, and other educational activities of the Institute.

It was in 1918 that a public company was formed for the management of the Institute, and Lord Crewe became the first president of the governing council. During the same year the Queen laid the foundation stone of the second addition to the Institute, designed by Sir Edward Lutyens in association with Mr. J. C. Soutar, and afterwards known as the Queen Mary Hall. This stone, alas! stood carefully covered for nearly five years, for the devastating war had shattered all the building intentions of the committee. However, the hall was finally erected at a cost of £14,000, and was opened by the Queen in 1924. In 1923 a stage was built at a cost of £3,000 from the designs of Mr. F. J. Watson Hart, and it was here that the Play and Pageant Union won the cup of the British Drama League this year.



FRONT ELEVATION

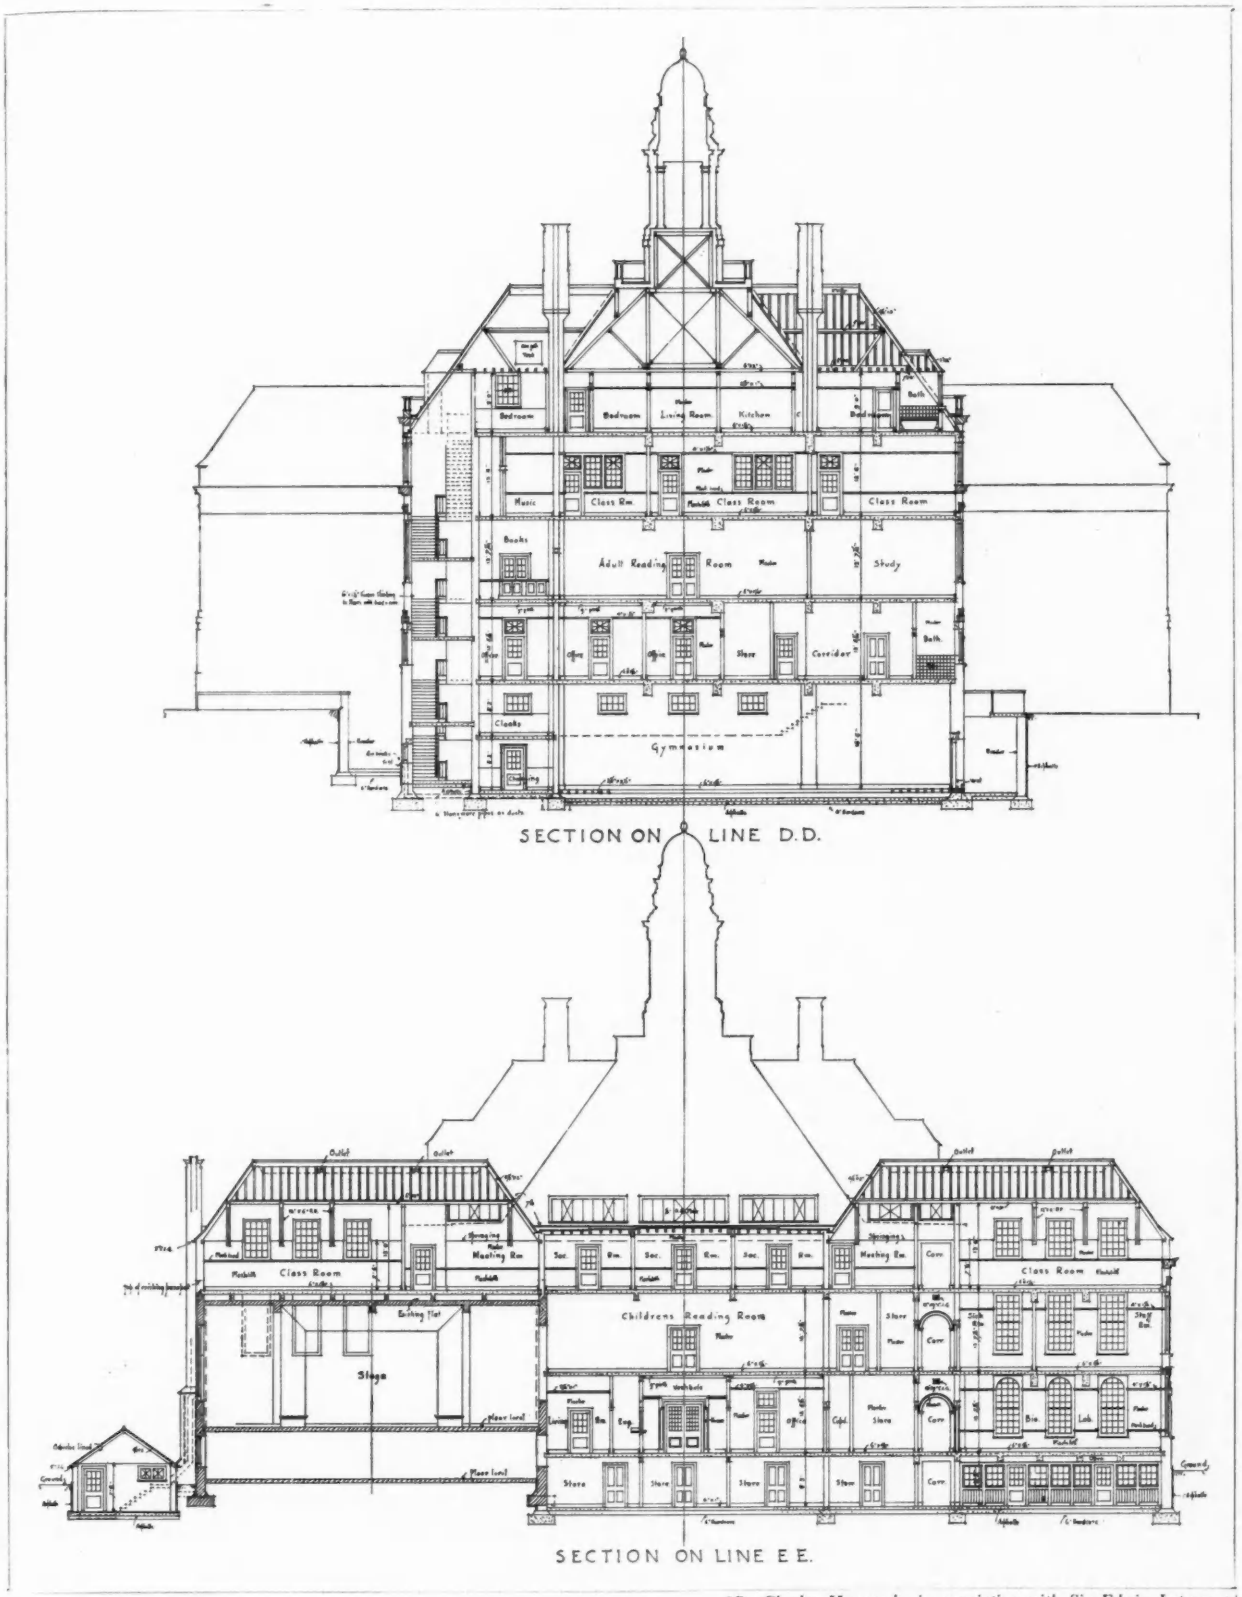
The new hall stands in the centre of the two Institute buildings previously erected. On the left is the original Institute, opened in 1909, and on the right Queen Mary Hall, opened by the Queen in 1924.



As it stands today, this unique suburb Institute has cost £63,000, and of this sum the Middlesex County Council have contributed £25,000. The new building has resulted in a substantial expansion in the numbers and activities of the Henrietta Barnett School. The seven new classrooms provided, together with the existing rooms in the Queen Mary Hall and the old hall, will accommodate 400 pupils of the high school and 100 boys and girls of the preparatory.

The further plans of the council include the laying out of the garden, the building of a fully-equipped school of art, and the erection of hostels for the students.

The proposed garden scheme has been designed by Mr. R. Hardy-Syms. Immediately surrounding the Institute buildings will be a sunk area, with terraced slopes planted with flowering shrubs. This has been specially contrived to bring the base of the buildings into view. The Institute does not serve only the needs of the garden suburb, but provides education for families brought there by the "Tube."



SECTION ON LINE A.A.

SECTION ON LINE B.B.

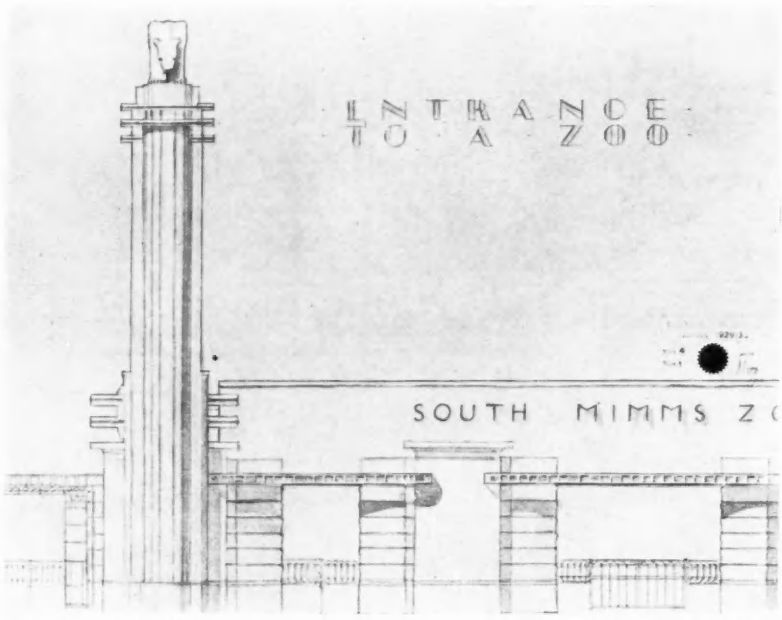
Crewe Hall, Hampstead Garden Suburb.]

The sections on this and the facing page are reproduced to the same scale as the plans (pages 116 and 117) with which they should be compared. In planning the new building the architects have availed themselves of the opportunity to place a classroom and a meeting-room above the stage, which was erected in 1923 from the designs of F. J. Watson Hart.

[By Charles Hanscomb, in association with Sir Edwin Lutyens.

The longest apartments in the building, as will be seen from these two sections, are the gymnasium, and the adults' and children's reading-rooms. The gymnasium measures 60 ft. by 30 ft. and extends in height through two floors, a distance of about 16 ft. The adults' reading-room is 50 ft. long by 12 ft. 6 ins. wide, and the children's, 38 ft. 3 ins. by 33 ft. 9 ins.

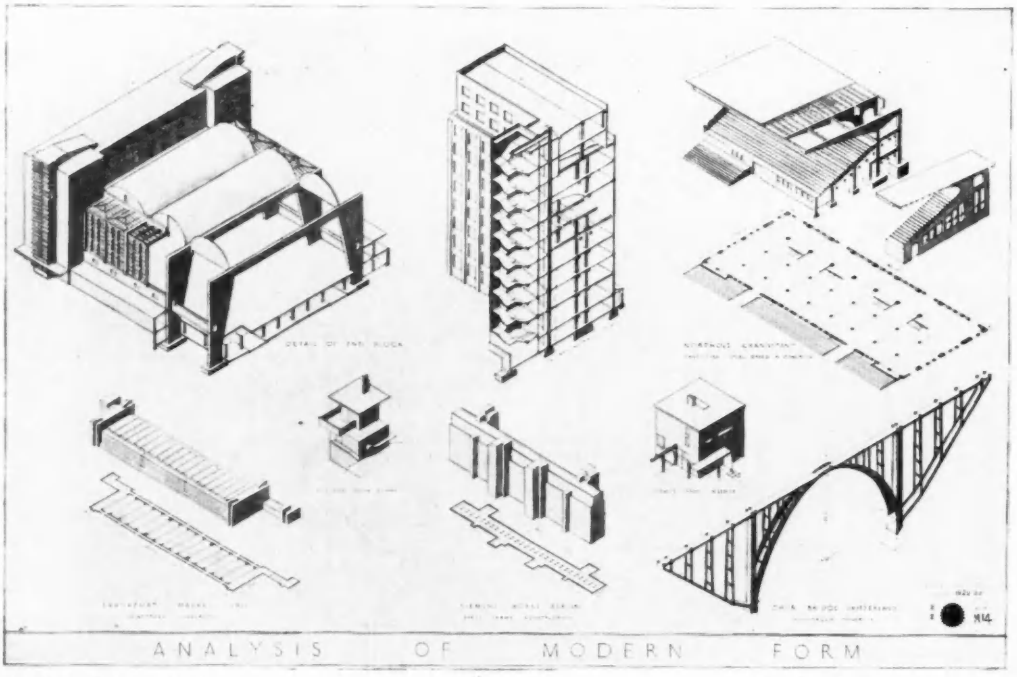
THE WORK OF THE SCHOOLS: ii—LONDON



Architectural Association

BY M. L. ANDERSON

IT is not always easy to write about an exhibition; not, at least, when nearly all the work shown is sound and space is limited. Under such weight of odds the conscientious efforts of the critic have been known to dissolve into a more or less arbitrary selection of two or three particularly striking but possibly quite unrepresentative exhibits.



This year's exhibition of work by students in the A.A. school is therefore something of a relief for the critic. The general level of design is of the high standing to which one has become accustomed: the draughtsmanship often far better than one has any right to expect. Certainly there are exhibits which shine with greater lustre than their surrounding neighbours, but one is saved from having to take refuge in discussing individual works, because there is a matter of deeper significance, and that is the purpose which underlies the work of each year, runs through the whole school and gives vitality to every subject which has been set.

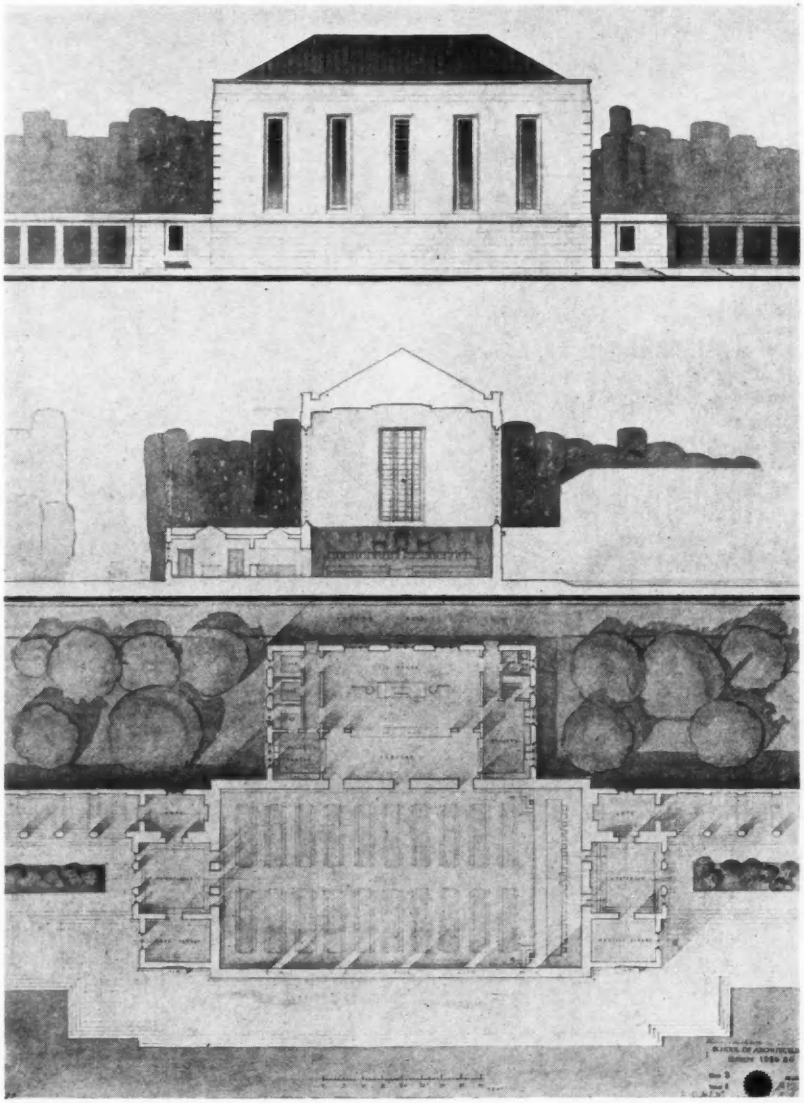
One traces the influence of a continuity of thought, which begins in the First Year, is founded upon well-defined precepts, and pursues its course to the Fifth Year. The whole affair is comparable with a well-organized factory: certain definite principles (like raw materials) are developed and elaborated, and, in due course, two or more link up and continue as a single entity until yet another (duly refined and understood) is brought in to join it.

Architectural Association.] [*By Miss C. J. Dillon (Fourth Year).*

The entrance to a zoo.

Architectural Association.] [*By E. Mayorcas (Third Year).*

Among the works treated are Frankfurt Market Hall, the Siemens Works, Berlin, Northolt Grand Stand, and the Chur Bridge, Switzerland.



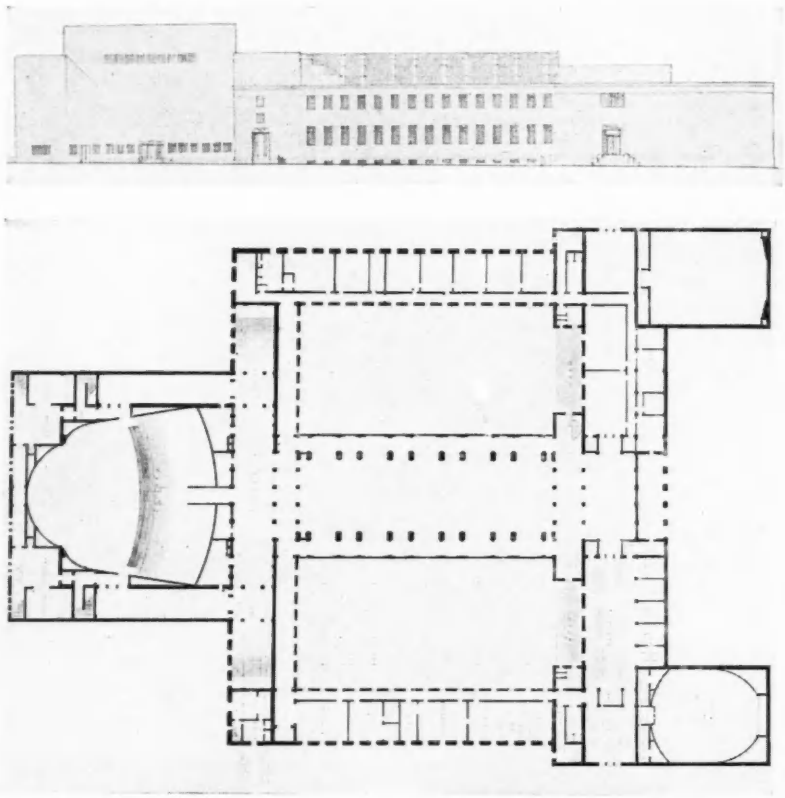
In this way the various elements, such as draughtsmanship, construction, traditional form, planning and so forth, are each dealt with in sequence.

In the First Year, therefore, the work is, of course, purely elementary in character. Time is devoted to the study of plane and solid geometry, free-hand drawing, lettering, projection of shadows, and analysis of pattern. A problem in design is set; and this appears first of all as a sketch. Later, the sketch is resolved into perspective and a model is made, while the construction is also worked out. First Year work also includes study of the Greek Orders, and of decoration. Running through the course is a series of six-hour sketches.

In the Second Year these studies are developed and applied. Architectural History, Design and Construction are studied, and special attention is given to the matters of composition and proportion as exemplified by classic work.

The impression has grown up in some quarters that the Architectural Association's modern tendency is developed and encouraged at the expense of traditional forms. Only a single glance is needed at this year's exhibition to show that this idea is a fallacy. Thought is certainly encouraged along modern lines, but before anyone is allowed to develop his propensities in this direction, it is made quite certain that he has a thorough grounding in the principles of traditional form and proportion. Thus, in the Second Year, study is devoted to Classic, Mediæval and Renaissance forms, and it is not until the Third Year that any attempt is made to analyse Modern form.

Work of each period is analysed, first according to the requirements of the plan, and subsequently in the relation of the plan to the elevation. One cannot help feeling that there would be far less ink spilt in condemnation of the modern movement if its exponents had had the opportunity now given to the A.A. students to form sound ideas of classic work. It may be that this method of teaching will actually stimulate present members of the school towards a modern expressionism; and, if it does, we shall be forced to admit that nobody has a better right to design in the modern manner, because an appreciation of tradition will be the basis of their lines of thought.



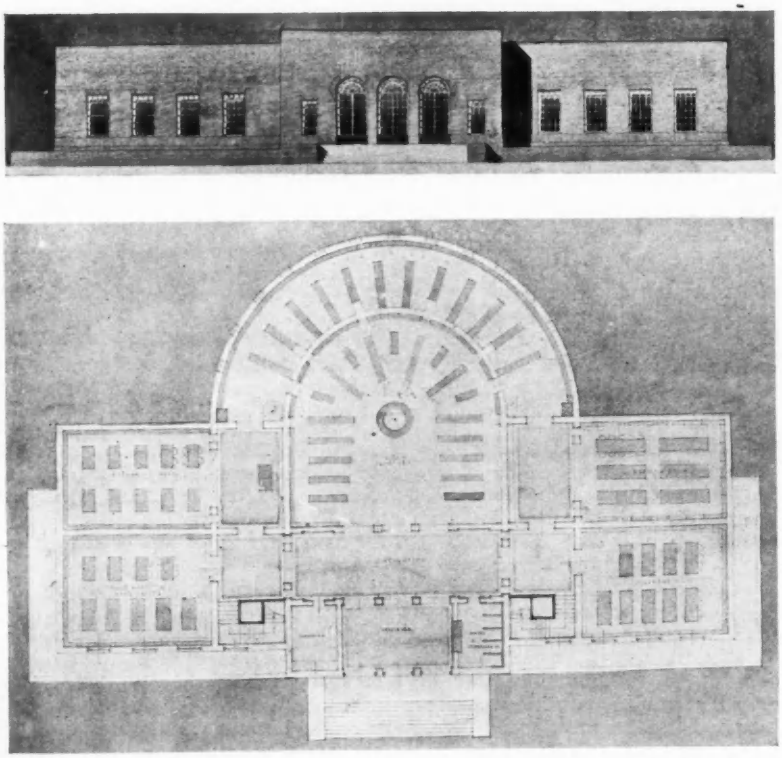
Architectural Association.] [*By E. C. Kent (Third Year).*

A school dining hall.

It is particularly interesting to trace the close co-ordination of plan, structure and elevation. Each of these elements is clearly analysed as an independent entity, so that when the time comes in the Third and Fourth years for more advanced design, it is a poor sort of individual who cannot make some sort of a show in the co-ordination of the three.

The A.A., in short, is teaching its students to do, subconsciously, what is often an effort to men who have not had the advantage of a school training. It is not merely content for students to draw out Orders or to measure up traditional buildings; it definitely sets out to show the reason for everything —the *reason* why the Orders have found æsthetic acceptance throughout the ages; the *reason* why mediæval architecture came about and why, in its better forms, it is fundamentally satisfactory. And, in so doing, it shows, *ipso facto*, that the Orders cannot be used unreasoningly today; that it is a mistake to build jam factories in the Byzantine manner; and, more directly, why and how modern building demands an expression of its own.

University College, Bartlett School.] *[By B. A. Stewart (Fourth Year).*



An Imperial museum: elevation; and first-floor plan.

University College

BY JOHN GREENIDGE

THE annual exhibition of work which marks the end of the academic year at the Bartlett School of Architecture at University College carries one gently along through the drama of architectural design. There are no shocks and few improprieties. The curtain rises to disclose the inevitable Greek setting, in most cases very well handled, to the tune of the variations on the Orders. After the well-known classical prologue, life is epitomized as the drama proceeds. From modest beginnings with the private school and village hall our hero is promoted from the provincial market hall to the departmental store, where he obviously makes good behind long bands of plate-glass. One must suppose that his affluence is such that, like the Duke of Wellington, he cannot now do without a fine town house. During his career Empire Free Trade has been tried and has presumably proved successful. A huge Imperial museum rises as a mark of regenerate national prosperity due, partly no doubt, to clear thinking and the economic design of such things as telephone exchanges and concrete signal-boxes; till, when the curtain falls, we find him satisfied and thinking of retiring on the loggia of the superb seaside bathing pavilion that he has generously presented to his native town.

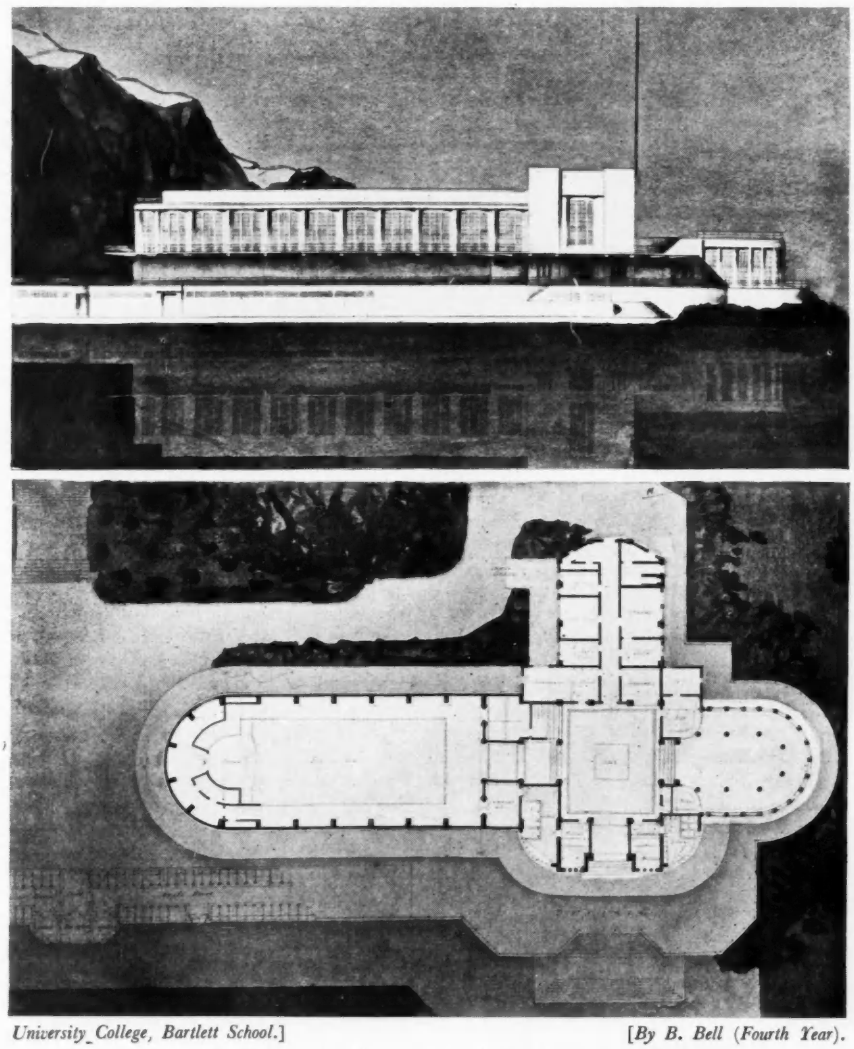
As for the Private School, R. H. C. Finch has designed a building of nice taste with a simple, compact and economic plan. P. B. Durham has

University College, Bartlett School.] *[By Arthur G. Wise (Third Year).*

A small library in a garden city: rendered elevation; and ground plan.

separated the house by a yard or so, but with no very satisfactory link treatment, from the school which, in end elevation, might be for all the world a boiler-house. In both these designs the working drawings, though possibly correct, seem rather tentative and scratchy; and why are half-inch working details still presented on hot-pressed Whatman? The Village Hall by the same designer has a section of real beauty owing to the well-designed roof-truss construction, but perhaps the external effect might have been happier with more wall and not so much roof.

A. G. Wise's Provincial Market Hall would certainly provide an imposing focal point to a small town, but one feels the curvilinear green roof to be a little too much. This is a well-rendered drawing, and so also is the same author's Small Library in a garden city. The elevation is neat, plain and inviting of quiet study—or repose. Perhaps the elevation might have been more effective with subtler breaks to diffuse the one solitary, rather hard shadow.



A. H. Devereux's Departmental Store is a promising example of the Hamburger band façade, but the monotony might have been got over by a slight variation in the widths of the bands of glazing.

Of the Town House designs, that of N. Brandon-Jones is the most pretentious and at the same time the most successful, although the central arch and portico treatment is on the heavy side. N. F. Sanders exhibits a well-rendered drawing, but the pavilion ends project much too far and are further emphasized by a pilaster treatment which might well have been omitted. The other designs for this subject, with an upper story and plinth story below, are much less pleasing.

Of the large monumental buildings D. A. Stewart's Imperial Museum is the most interesting. The elevation is quiet and refined, a refreshing antidote to the prevailing vulgarization of the Empire and a straightforward expression of an ingenious plan. There is, however, a dreadful " swarm " of galleries, all exactly alike, the identity of any one of which might baffle even the curator. The parabolic section of the Empire hall is fine and is echoed in plan by the peculiar shape of the assembly hall stage.

Among the designs for modern buildings Miss Olive Briggs shows a library elevation of the bookcase type with a plan which, in spite of the elimination of passage rooms, remains loose and workable. Alan Marlow's Telephone Exchange admirably expresses its purpose and is accompanied by a well-thought-out and neatly expressed working drawing. E. L. W. Davies's Parish Hall has a nice Cotswold character, but what a horrid proscenium arch !

As examples of careful draughtsmanship and arrangement there are two fine Gothic details of a college chapel and a presentation of a pagoda-like building by Arthur Wise, consistent equally in touch and tone.

University College, Bartlett School.] [*By B. Bell (Fourth Year).*

A seaside bathing pavilion : rendered elevation ; and layout.

The main front has a south-westerly aspect, allowing the advantage of windows in three of the walls of the lounge, on the left.

The garden front, showing the arcaded treatment of the loggia, and, on the left, a similar archway, leading to garage and kitchen, etc.

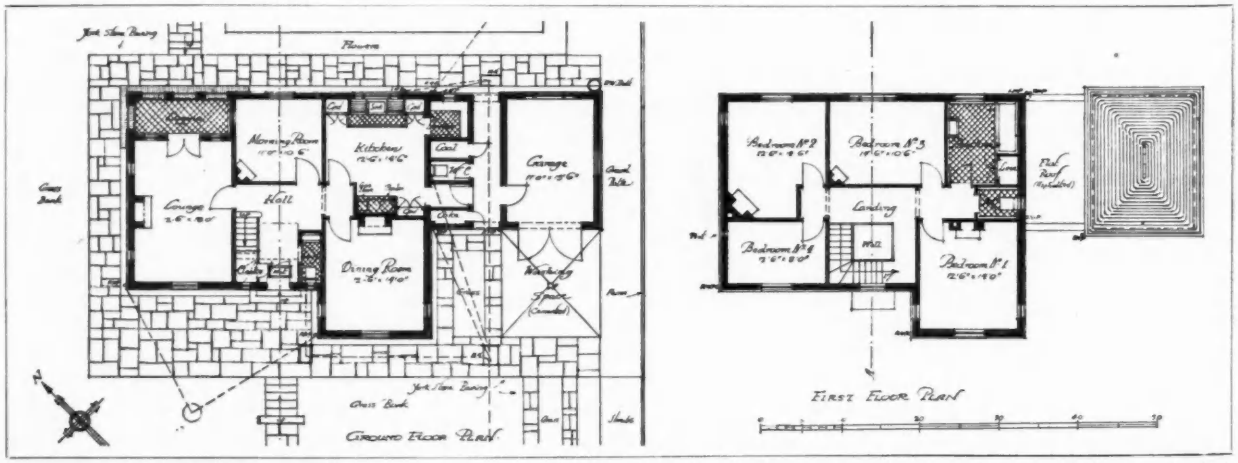
HOUSE AT ABBOTS LANGLEY, HERTS.

DESIGNED BY ALWYN R. DENT

"BROOMDENE," Abbot's Langley, has main walls constructed of 9-in. brickwork, with white cement finish, above a plinth of Luton grey bricks. The roof is covered with antique tiles. The wood casement windows are painted white, fitted with dark-green louvred shutters, and each has a small metal ventilating pane, opening outwards.

The ground floor gives a lounge, 18 ft. by 12 ft. 6 ins., opening on to a tiled loggia. The dining-room, in the other limb of the L-shaped plan, is adjacent to the kitchen, which is tiled to a height of 6 ft., and has, in addition, a tiled recess for the boiler, which heats radiators in the lounge, hall, and landing, and for a gas stove. The sink has teak draining boards and glazed cupboards on each side.

The accommodation also includes a lavatory and "cloaks" in the hall, and a small study or morning-room. The lounge alone has a coal fire; the remaining rooms have gas fires, and also electric heating points, in addition to the radiators indicated. On the first floor are four bedrooms, bathroom, and w.c., the bathroom being tiled to 6 ft. high with Dutch tiles, and floored in cork tiles laid on concrete.



A garage, 11 ft. by 15 ft. 6 ins., is connected to the house by a covered way, separating it from the service quarters.

The house is banked up on two sides, and surrounded with a terrace of York stone slabs, finished rough with varying tints; and stone strips, with grass between, form a runway for a car, about 100 ft. long, from the garage to the front gates.

The total cost of the work was approximately £2,500, which includes about £200 for stone paving, terracing, and gates, etc.

A view of details of the front door, which is flanked, on either side, by a cloakroom and a lavatory.

The ground- and first-floor plans indicate a layout shaped like the letter L. The ground plan shows the stone slabbing, of which extensive use was made in the vicinity of the house and for a runway for a car between the garage and the entrance gates.

ENGLISH PRECEDENT No. 125

ENTRANCE PORTICO, NATIONAL GALLERY, ST. MARTIN'S PLACE, W.C.

Wilkins, who designed the National Gallery, always just failed to produce the qualities of breadth, unity and grandeur. The motifs which he used with great skill are detailed with refinement, and there is a great deal in this, as in his other works, that is architecture of a high order; yet this composition is too cut up and too disproportioned as between surface and modelling, mass and detail, ever to be lastingly satisfying.

The beautiful figure that sits above the central projection cannot influence the design because of its isolation over the central bay.

—[E. MAXWELL FRY]

LETTERS FROM READERS

Architectural Criticism (Skyscrapers)

SIR,—Astragal (in your last issue) is quite right to let your readers "into the know" of the skyscraper. It is only in the very rare instance where it has a large open space near it that it can be seen as a whole. Having in England removed the languors of Test matches by giving them four days only, don't let us go back from that merry attitude by giving *longueurs* to architecture or any other art. The painter of a picture 600 feet high will soon be up the pole himself, and who wants an opera lasting 300 days? A composition beyond a certain size becomes a decomposition, and the only remedy is to disintegrate it into a series like the Forsyte Saga (not sago, O printer: that would be *too* small!).

You will say, a poor devil has to do his best for his client. I tell you what my best will be—the lower part of *my* skyscraper, the only part to be seen without a periscope, mind you, will be of the rarest quality in line and mass, emphasized with sculpture from the best chisel in America, and forming a platform from which will be built the remaining 540 feet of scraper, made merely as an artisan makes an implement, such as a bean-stick or a lift, entirely for use, to be in fact an implement of shelter.

But as far as architecture goes, a short façade and a merry one for me.

P. M. STRATTON

Priced Bills of Quantities

SIR,—Karshish considers that I am confusing matters by expecting that each of the items contained in the bills should be priced by the builders at a profit, and appears to feel that he can adopt Mr. Leaning as a rearguard; but this gentleman tells us that the builders in pricing have to risk the architect, in reducing his estimate, cutting out expensive items: and this "is a conclusive argument in favour of the consistent pricing of the original estimate."

It is clear that Mr. Leaning means that it is advisable for the builders to price all items, allowing a suitable profit to each.

Karshish now informs us that the bills do not form part of the contract, the price being a lump sum.

Let us really state this correctly, for it is all so very confusing, especially to the younger members of the profession.

There are, of course, two forms of the 1909 contract issued by the Institute—one for use where the bills form part of the contract, and the other where they do not.

Karshish does not enlighten the uncertain mind as to this, but prefers to paint a disturbing picture around the latter form, which I assume he approves. Personally I am all for the bills forming part of the contract. For the whole of the contract documents to repose in the hands of the builders for their continual scrutiny is equally necessary to the person who has *complete control* of the work—none other than the architect.

W. A. DOWNE

SIR,—Settling-up Honeywood is a most delicious yarn, and Karshish gets over a good deal of interesting and instructive comment in the course of it.

But who are we to suppose priced the quantities? Certainly not Grigblay himself, as he is revealed as temperamentally unsuited to it. If and when it comes to arbitration, I suppose "the ghost will walk." But as regards the question of sealed quantities, very few builders object to unsealed copies remaining with the surveyor. It is when they are asked to deposit them with young architects, fresh from the schools, that the question arises.

Most builders have, at some time or another, known architects to produce priced copies of quantities, belonging to competitors, in support of an argument over pricing. This, though not commented upon, leads them to suppose that if left unsealed their quantities may be similarly misused.

In saying this, I am not imputing any want of good faith; it is simply want of experience.

J. R. TAYLOR

Concrete for Housing

SIR,—In your issue for July 2 Councillor C. M. White asks whether concrete houses are damp; and the question, put in this form, suggests that he shares the common but mistaken belief that only concrete houses are damp and that brick-built houses are not so.

If the internal surface of a brick wall is left unprotected by lath and plaster there will be condensation from a humid atmosphere; and only slightly more so, because of its smoother surface, does concrete gather moisture. For its protection there are now a number of excellent wall linings, the outcome of experience and experiment, which are an absolute guarantee against the dampness that brought discredit on concrete in its early days when papered or distempered without such protection. The walls of the concrete house on the works of the Portland Cement Company at Greenhithe, Kent, built by our system four years ago, are "bone dry," and look as though they would continue so for a hundred years.

The following are opinions on the subject:

Lt.-Col. Levita, Chairman of the L.C.C. Housing Committee, publicly stated that "as to alternative methods of building, concrete cottages had come to stay, and he could not see why they should not be as comfortable as brick houses, less expensive, more durable, *free from damp*, and less costly of upkeep."

A Government Committee of eminent building authorities, appointed in 1925 to consider new methods of housing construction, reported "that in their opinion one of the best methods of substantially supplementing the output of houses is the use of concrete placed or poured *in situ* between steel shutters, and that this method is a proved success, promising more houses and more permanent structures than any other alternative to brick construction which it had had before it."

Moreover, the Technical Committee of the National Housing Council has publicly recommended the building of concrete houses poured between shutters, and advocated their widespread adoption.

Perhaps the answer to your correspondent's further question as to whether concrete houses are satisfactory habitations, is to inform him that in America, where they are in this matter certainly more progressive, concrete as a material for building houses has practically wiped out time-honoured brick.

In 1920 America made twelve thousand million bricks, and concrete then represented only 22 per cent. of the total output of these two materials. In 1925 brick consumption had fallen to 6½ thousand million and the proportion of concrete increased to 50 per cent. The year 1928 saw a further big decline in bricks; and as the progressive use of concrete in this country is closely following the lines of America, it would seem safe to predict that in ten years' time brickwork will represent not more than 25 per cent. of the total output of these materials.

Another prejudice which dies hard is that the 6-in. concrete wall of a small house is of inadequate strength for its purpose. So frequently was this urged by those whose interests in brick were paramount, and so widespread did it become, that the Government Building Research Board conducted a series of tests of the relative strengths of brick and concrete, and this was the result: "The tests indicate clearly the great strength of even 6 to 1 concrete, mixed wet, in comparison to brickwork, the average of the two concrete columns being 1,370 lb. per sq. inch as against 700 lb. per sq. inch—the

average of the five brickwork specimens —i.e. approximately double." (*The Stability of Thin Walls.* Government Building Materials Research Committee, Special Report No. 3, 1921.)

With regard to the thermal conductivity of brick in comparison with concrete, a section of a concrete wall poured by the system adopted by my company was submitted to the Government Department of Scientific Research for determination of heat transmission. The result showed that the heat transmitted through 1 sq. ft. of the wall was ·328 B.T.U.'s per sq. ft. per hour for 1° F. difference in temperature, between faces, or 7·9 B.T.U.'s per 24 hours. This transmission through a 6½-in. concrete wall was 7·9 units, and through a 9-in. brick wall 16·3 units. It is thus shown that to the transmission of heat and cold a 6½-in. concrete wall made by our system offers more than double the resistance of a 9-in. brick wall; and no less a degree of superiority is manifested in the elimination of internal condensation.

The Borough Council of Croydon has concrete houses in Church Street which were built half a century ago, and they are an object-lesson on concrete construction. They stand solid and sound as any house in the district, showing fewer signs of wear and deterioration than brick houses built a few years ago. The tenant of one of these houses described it to a local newspaper as being "as solid as a rock and dry as a bone." They were poured *in situ* and not built of concrete blocks.

The question, "Are there many concrete cottages in existence?" can be answered by stating that nearly every city and town in Great Britain has included concrete houses in its building schemes, and where they have been poured *in situ* they have given unqualified satisfaction.

W. A. J. GAVIN,
The Seven Cities Housing Trust, Ltd.

Cost of Houses

SIR,—Mr. Williams, in his letter in your last issue, mentions the question of antiquated bylaws as having an effect upon the cost of building. This is undoubtedly the case, but it applies also to the whole system of building, which is equally antiquated. Building is a traditional craft occupation which is being only very slowly changed to meet new social and industrial conditions. Factory methods, where they have been applied to large-scale production of other commodities, have resulted in considerable reductions in cost, and with the extension of mass production, coupled with increased consumption, prices could be even further reduced. It has become necessary to apply this economic development to building as the old craft processes tend to relegate it to the realm of a luxury like most products of hand labour.

If a product is a necessity, failure to maintain an economic level having a proper ratio to all other productions and to wages and the standard of living may endanger the internal peace of the State. Housing must be placed in such a category, and progress in the economy of production has become an urgent need, whatever breaks with traditional methods and expression it entails. To achieve the desired result of cheaper housing, building must inevitably become a matter of the rapid assembly of ready-made parts. The producer and the consumer must adjust themselves to changed conditions, and vested interests in obsolete methods and unreasoned prejudices alike be abandoned. The problem should be faced with an entirely open mind; it is amenable to scientific and economic research, provided it is approached from the proper standpoint.

The demand for a higher standard of living on the part of the weekly wage-earner is the result of education and the subconscious suggestion of advertising; this is all to the good. The economic adjustments necessary to bring about increased purchasing power will have to be solved, not only in this interest, but in the interests of the principle of the expanding market as an essential for the modern commercial system. The difficulty is related to production. Our powers in this respect have increased amazingly in certain directions, but not equally all through, so the economic balance has been disturbed. Building is certainly one of the backward trades as regards relative economical production.

I agree with Astragal that architects are partly to blame; our eyes look backward rather than forward, and we fail to avail ourselves of modern means and methods and to give æsthetic expression to our age.

R. A. DUNCAN

Group Specification

SIR,—Being a student studying the subjects of quantity surveying and specification writing, I am at a loss to understand the divergence of ideas which have arisen in recent letters from readers under the above heading.

In your issue for July 9, Mr. T. Sumner Smith states: "If the object of a specification is to describe, in the main, the materials and labour not clearly defined upon the drawings . . ."; and in your issue for July 16 Mr. Lynn C. Doyle states, with reference to specifications supplied in and around Oldham: ". . . these specifications as a general rule describe only, and even then but indifferently, the things shown upon the drawings." Should not a specification describe in full the whole of the materials and give fixing instructions, irrespective of whether they are shown upon the drawings or not; and should not this also apply regardless of whether the bills of quantities do or do not form part of the contract? STUDENT

LITERATURE: SIXTH VOLUME OF THE WREN SOCIETY

RECENT research has made necessary the revaluation of several architectural reputations and the rewriting of the architectural histories. Attributions of authorship that have been accepted by writer after writer have now, by more thorough investigation, been proved to be erroneous. The group of buildings known as Greenwich Hospital, besides being an epitome of the development of English Renaissance architecture, provides several excellent examples of corrections that must be made in the future. It has been definitely stated by most architectural writers of the past that Inigo Jones designed both the Queen's House and the completed part of Charles II's Palace, and that Wren was responsible for the major part of the remainder. It has now been established by Mr. Gotch that John Webb was the sole author of Charles II's building, and the editors of the Wren Society volume now show conclusively that Vanbrugh had a much greater share in the design of the hospital than had hitherto been suspected. Mr. Bolton, in fact, says in the introduction that "the share of Sir Christopher Wren, apart from his general control as Surveyor-General and his official position as Surveyor to the Hospital, can almost be limited to the idea of the grand layout, more particularly with regard to the placing of the inner blocks in their relation to the main vista, and to the preceding great forecourt to the river."

There is no building in the country which has so complicated a history or on which so many architects have worked during a long period of years than Greenwich Hospital. The tangle of their various shares in the design would probably never have been unravelled without the help of some organization such as the Wren Society, as the information upon which judgment depended was scattered to the

four winds and could only be brought together by means of photographs. The illustrations, for instance, in the volume under review are taken from the collection of the Victoria and Albert Museum; the Royal Naval Museum, Greenwich; Sir John Soane's Museum, London; the Libraries of Worcester and All Souls College, Oxford, and from the Bodleian Library. Relevant extracts from the seven volumes of minutes of the Commissioners of Greenwich Hospital, now in the Record Office, are printed and take up some forty pages. This mass of material, here brought together for the first time, makes possible a critical examination of the authorship of the buildings erected by William and Mary and their successors.

When Dutch William and his wife decided to found an institution for the care of naval men disabled by war or old age, a Commission was appointed, John Evelyn, the diarist, being nominated treasurer and Sir Christopher Wren, surveyor (he offered to work gratis), and asked to prepare a scheme for adapting Webb's Charles II block to house the men. From the drawings that survive, and are reproduced in the volume, it is possible clearly to follow the development of the scheme by Wren and those who succeeded him. He prepared a plan on the lines of Webb's palace, ignoring the Queen's House and putting a domed building on the main axis and facing down an open courtyard towards the river. The scheme was opposed by Queen Mary, as it entailed the destruction of the Charles II wing and the blocking of the view from the Queen's House, and was consequently abandoned. Wren then prepared a scheme for adapting Webb's Charles II block and supplementing it by a lower building adjoining it, called the Base Block, and this scheme received the Royal assent in 1696 and is known as the Warrant Design. The next development was to duplicate this block on the other side of the axis of the Queen's House, forming a court 300 ft. square, partly enclosed on the landward side by the Chapel and the Great Hall, with wards beyond, arranged on the pavilion principle and connected by colonnades. In passing, one may remark that this pavilion principle of hospital planning was in advance of the time. These schemes were all prepared before 1702, when Queen Anne succeeded to the throne. On her accession the committee dealing with the hospital was reorganized and supplemented by additional members, including John Vanbrugh, who, as the minutes show, gradually took over the control from Wren, who ceased to attend in 1710, although he did not resign until six years later. Soon after his appointment Vanbrugh prepared a most ambitious and amusing scheme for completing the space between the river court and the Queen's House, which has been worked out by Mr. Bolton and reprinted as illustrations in the text; this scheme, however, came to nothing. As Mr. Bolton points out, Vanbrugh's exuberance was restrained by Wren's general supervision and by the standard set by the two earlier buildings that he had to respect. Those factors account for a higher standard of detail than one usually associates with Vanbrugh's work.

In the letterpress the editors have reprinted extracts from several works bearing on the history of the hospital. These include excerpts from Wren's *Parentalia*, and a rare pamphlet by Nicholas Hawksmoor published in 1728. The manuscripts printed include various papers by the architects and a memorandum by Sir J. Thornhill about payment for his painting the Greek Hall, mentioning that Reubens had £10 a yard for the ceiling of the Banqueting House. He eventually received £3 a yard for the ceiling and £1 for the walls.

The bulk of the text is taken up by the extracts from the minutes mentioned above. These are of first importance and give much information as to progress and methods of working. From them it is seen that the directors met frequently, sometimes once a week, made all the contracts and passed the accounts, and generally looked after the clients' interest.

The present volume is of the same excellent format as the preceding ones, but is considerably fatter, containing 102 pages of text instead of sixteen in the first volume, while there are fifty-three collotype plates where the first volume had thirty only. The editors cannot be sufficiently commended for their painstaking efforts, and it is to be hoped that the number of subscribers will increase to enable them to extend the work even further.

GRAHAME B. TUBBS

IN PARLIAMENT

[BY OUR PARLIAMENTARY REPRESENTATIVE]

Universities and the Road Traffic Bill

STEPS to safeguard the ancient fabrics of the universities from damage caused by vibration from heavy traffic were taken by the House of Commons on the Report stage of the Road Traffic Bill, when Mr. John Buchan moved an amendment to give the governing body of any university which receives grants from public moneys the right to make application to the Minister of Transport, and for the Minister to hold a public inquiry with a view to making regulations dealing with motor traffic in the area concerned. The principle behind the amendment was the simple one that where the State by a grant of public funds declares its belief that a university was doing work of national importance, it should make certain that the facilities for that work were not impaired.

The amendment applied to all universities in receipt of a grant, whether they were old or new, but it applied in a special degree to the older English universities where there were ancient fabrics situated often in narrow and easily congested streets.

In the case of the University of Oxford, continued Mr. Buchan, the situation was really grave. Oxford unhappily was the meeting-place of two great lines of through heavy traffic—between the Midlands to the South, and between London and the West. By-passes in themselves would not solve the problem, because a great deal of motor traffic came to Oxford for the purpose of visiting the city. Every day there were hundreds of private cars and scores of motor coaches full of tourists, and the High Street, Oxford, was as congested as the Strand in London. From that situation two very grave consequences followed. The first was that the fabrics, especially the ancient fabrics, were in danger of structural damage. The second was that academic life on these busy streets was practically impossible. The dreaming spires of Oxford had long since ceased to dream, or, if they dreamt nowadays, their dream must be nightmare ! He readily admitted that they could not restore the academic peace which Oxford and Cambridge enjoyed for so many centuries. Those days had gone, never to be recalled. But surely it was right that a university should be allowed to procure regulations so as to enable it to conduct its business in reasonable peace.

Sir John Withers, who seconded, said the position at Cambridge was exactly similar.

Mr. Morrison, the Minister of Transport, accepted the amendment, which was agreed to.

Housing Progress

During the discussion of the Scottish Estimates, Mr. Adamson, the Secretary

of State for Scotland, gave figures showing Scottish housing progress. He said that at May 31 last, under all forms of State-assistance in Scotland, 110,136 houses were erected. These probably accommodated about 495,000 people, or perhaps one-ninth of the working-class population in Scotland. But at least another 100,000 houses were required before housing conditions could be regarded as reasonably satisfactory. Prices continued to fall; during the last five years the average reduction in cost was estimated at approximately £75 per house. On March 30 of this year there had been approved, under the Housing (Rural Workers) Act for improvement or reconstruction, 4,184 houses, for which grants totalling over £336,000 had been advanced. Improvements had been effected to 2,406 of these houses, and grants amounting to £204,670 had been paid by the Government.

Mr. Hore-Belisha asked how many houses had been built during the twelve months ended June 25, 1930, showing separately the number that had been built with State assistance and private enterprise, respectively; and what were the corresponding figures for the previous twelve months.

Miss Lawrence said that figures for houses built without subsidy of a rateable value not exceeding £78 (or £105 in the Metropolitan Police District) were only available in respect of the six months' periods ending in March and September respectively. The figures for the twelve months ended in March were as follows :

Year ended March 31	Private Enterprise without State Assistance.	Private Enterprise with State Assistance.	Local Authorities.	Total.
1929 ..	64,740	49,069	55,723	169,532
1930 ..	90,086	50,124	61,850	202,060

Settling-Up Honeywood : ix

A SANITARY CONSULTANT COMES ON THE SCENES

BY KARSHISH

(H. B. CRESWELL)

Sir Leslie Brash, the owner, has made bitter complaint of the "extras," although he is accountable for them; and of the failure of the paint, although he ordered it in face of objections by his architect, Spinlove, and the builder, Grigblay. Complaint has also been made of smells in the house, which Brash attributes to "blemishes in the sanitary provisions."

BRASH TO SPINLOVE

Dear Mr. Spinlove, 14/6/26.

I write to intimate that some weeks ago a medical practitioner, called in to attend a member of the domestic staff who had developed asthmatic symptoms, informed Lady Brash that attacks of this disorder may be provoked by *defective sanitary provisions.* This practitioner is not our own medical adviser, but is employed by me to minister to the domestic staff, and since his responsibilities are small his fees are, of course, low; but I understand he has good credentials and is well thought of by the local population, among whom —and this is of special import—he *must have gained exceptional experience of the effect of obnoxious effluviums.* His statement to Lady Brash has, therefore —you will not be surprised to hear— definitely established my most unfavourable prognostications.

As you had previously intimated inability to determine what curative measures to adopt, and Mr. Grigblay had no recommendations to propose, I communicated with Messrs. Quince and Jarrad, Consulting Sanitary Specialists. These gentlemen are employed by certain of my acquaintances, and also by Royalty and by members of the aristocracy, and *any* opinion of theirs is accordingly conclusively final. Mr. Jarrad attended to the matter himself personally, and made exhaustively thorough explorations and tests, and I enclose his report. I make no comment of any kind whatever. The report is exactly what I expected; the sanitary work has been disgracefully badly done, and will have to be drastically renovated— however, I will make no comment. My architect has failed me, the builder, instructed and supervised by him, has defrauded me, and it is a providential mercy that we are all alive and in relatively good health today; but, as I say, I make no comment, but confine myself to requesting you to *read* the report (enclosed)—simply to read what these authoritative experts say of our sanitary provisions, and then to favour me with explicit assurances that the necessary renovations will be put in hand at once, and of the date when they will be completed, as it will be necessary to vacate the house. No doubt you may wish also to offer some observations justly appropriate to the occasion.

As the necessity for employing the services of Messrs. Quince and Jarrad was due to remission of care on the part of Mr. Grigblay in performing his duties, and his refusal to give attention to the emendation of defects, I shall most certainly deduct their fee of twenty guineas from the next payment due to Mr. Grigblay.

Yours sincerely,

We may conclude it was under pressure from Lady Brash that the doctor yielded the admission that defective drains may precipitate attacks of asthma in a person subject to them.

QUINCE AND JARRAD TO BRASH (ENCLOSURE)

Sir, 12/6/30.

We have the honour to say that in accordance with your instructions we visited Honeywood Grange on the 3rd of this month and made an exhaustive examination of the sanitary works, and now have the pleasure to enclose our Report.

We have the honour to be, Sir,

Your obedient servants,

At first glance, this letter might be a command to attend a State function at Buckingham Palace. It is beautifully typed in green on an exquisite linen paper self-edged like a bank note, and is headed in embossed gold lettering, with an address adjoining Cavendish Square and with the statement that Messrs. Godolphin Quince and Hartington Jarrad are Consulting Sanitary Specialists, Patronized by Royalty and by the Nobility and Gentry.

The report covered by the letter extends to seven typed foolscap sheets, with a printed heading reproducing the intelligence gilded on the letter, and stating, in italics, that passages typed in red are so rendered for the purpose of calling attention to them. A glance shows that these red letterings all refer to points to which Messrs. Quince and Jarrad take exception ; that there are a considerable number of such passages ; and that, for greater emphasis, they are all typed in capitals.

The report is evidently based on an exhaustive survey and is the skilled work of men of highly specialized knowledge and wide experience in a restricted field ; but while Spinlove's task was to provide Honeywood with a well-devised and soundly-executed drainage system that was in no way unnecessarily costly, Quince and Jarrad pursue a fantastic ideal of theoretic perfection in which cost has no consideration. With that qualification, and except that it makes no allowance for those differences of opinion which exist in the theory and practice of

sanitation, as in everything else, and confines itself to adverse criticism, the report is fair. It does not, however, except by implication, say what should be done to meet the objections raised; for the reason, no doubt, that Messrs. Quince and Jarrad were not asked to reconstruct Honeywood's drains, but only to report on them.

There would be no purpose in here reproducing the report, which describes, first, the system Spinlove has adopted; second, the layout of the drains; and third, every detail of the work. It is the passages typed in red which have scared Brash and will trouble his architect and which alone concern us; and as Spinlove has to meet these criticisms, we may expect to learn all we want to know of them from future letters.

SPINLOVE TO GRIGBLAY (PERSONAL)

Dear Mr. Grigblay, 15/6/26.

I am much disturbed to receive the enclosed letter and report of Quince and Jarrad from Sir Leslie. They make out that everything is wrong. Will you read and let me know what you make of it all?

Yours truly,

As usual, when in difficulties Spinlove looks about for advice—a bad habit, for it is only by settling things for himself that he will learn to settle things. At the same time, he is right to confer with the builder on this matter before acting.

GRIGBLAY TO SPINLOVE (PERSONAL)

Sir, 17/6/26.

I return herewith Quince and Jarrad's latest. It is their usual pack of nonsense, but it may be an awkward job to get the old gentleman to agree. I think, sir, I had better have a talk over. I can make convenient on Saturday at 11.30 if you will kindly confirm by phone, and oblige,

Yours truly,

We may suppose that Spinlove gained great advantage from his talk with Grigblay.

SPINLOVE TO QUINCE AND JARRAD

Dear Sirs, 21/6/26.

I have received from Sir Leslie Brash your report on the drains at Honeywood Grange, of which house I happen to be the architect. I must protest that it is most unfair of you to give mere differences of opinion the appearance of condemnations. You find no actual fault in the arrangements anywhere, and yet you have led my client to believe the drainage of his house is insanitary. You even tell him that the joint of lead waste to gully has not been made, without troubling to look to see whether it has been or not.

Yours faithfully,

It was undignified of Spinlove to write this letter, and also not worth while, for Messrs. Q. and J. probably receive a good many like it.

QUINCE AND JARRAD TO SPINLOVE

Sir, 22/6/26.

We have the honour to acknowledge your letter informing us that you do not agree with our views *re* drains Honeywood Grange, and which we may say we are not surprised to hear, as we happen to know our own business.

The differences of opinion you refer to are quite common and have no signification whatever, being quite usual with architects.

We have the honour to be, Sir,

Your obedient servants,

Spinlove asked for something of this sort. Q. and J. do not, it seems, use their gold-embossed bank-note stationery for this kind of letter.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 22/6/26.

I could not write to you on the subject of Messrs. Quince and Jarrad's report until I had thoroughly investigated the points raised.

I do not think that you yourself read the report closely, or you would not have formed the opinion that the drains are insanitary. Although the report is drawn in such a way as to lead you to a contrary impression, no fault is anywhere found, as you will see, either with the system or with the work; and attention is called to only *two* "*defects*." One of those defects is not a defect in the drains at all, but a defect in Mr. Jarrad, who tells you that a joint has been left unmade without troubling himself to see whether it has been or not; the second so-called "defect" is not an actual defect as, if it exists, it refers only to tests applied by Mr. Jarrad, and *not* to the normal use of the drains.

I am aware, Sir Leslie, that you will consider that I am on my defence, and will be reluctant to accept my views; but I am glad to say that I am not called upon to defend myself, and for your own peace of mind I ask you to hear me out with patience, for I shall confine myself to showing what the report does actually say. Before I do this I should like to point out that the whole of the matters stressed by red lettering, except the two above mentioned, are mere expressions of *opinion*, and do not involve the question of sanitary soundness in any way whatever; and also that this difference of opinion is in all cases due to the fact that while I designed the system so as to avoid unnecessary expense, Messrs. Quince and Jarrad's ideas are of the most extravagant and costly kind. I enclose the report and take the red-lettered points in their order.

"The aerobic filter might well be bigger and the tipper set 9 ins. higher. Gun metal bushes and trunnions are desirable, as in course of time rust will interfere with action of tipper."—The filter and tipper are the standard device of Wreek & Co., who are leading specialists in the work. I cut out the bronze bushes, etc., as being needlessly costly.

"We prefer detritus chambers and manholes to be lined with glazed brick. Also the effluent channels would be better in glazed ware. We recommend tallow for sealing manhole covers."—Glazed brick is expensive, and here quite unnecessary for sanitary efficiency. The rims are sealed with axle grease, which is usual. The sealing, in any case, is a counsel of perfection.

"The glazed channel discharging waste from scullery sinks over grease trap is unnecessary and objectionable." As this channel is required by the local Sanitary Authority it *is* necessary, and the Local Government Board does not agree that the arrangement is objectionable or it would not describe it in its Model Bylaws.

"The ventilation of the drains is sluggish. We recommend the up-and-down-cast system in preference to the up-cast here employed." — Messrs. Quince and Jarrad are in a minority among sanitary engineers if they hold this opinion; the up-cast is almost universally employed. The sluggishness was due to Messrs. Q. and J.'s representative having wetted and thoroughly chilled the pipes before he tested for ventilation. Mr. Grigblay will at any time demonstrate to you that the system ventilates properly.

"The lavatory wastes discharge over open rain-water heads near to windows. This arrangement is most objectionable, as when the down pipe and head get fouled, air passing up the pipe will smell offensively. We recommend lead waste pipes properly ventilated and discharging through inlets under grids of gullies as employed near the front entrance."—This condition *may* arise in the future. When it does, it can be readily cured by cleansing the pipes. It does *not exist today*. The arrangement I have adopted has much to recommend it, in addition to effecting great saving in cost. As nearly all the bedrooms have lavatory basins, Messrs. Quince and Jarrad's device would cover the elevations with a network of pipes with ventilating branches standing up above eaves.

"We much prefer and always recommend cast-iron waste and soil pipes in place of the lead used at Honeywood."—As in an hotel or workhouse! The associations of domestic architecture favour lead, and Messrs. Quince and Jarrad do not say—and cannot say—that lead pipes are not at least as sound as any other.

"The lead bath and lavatory waste by front entrance has been merely pushed through the gully inlet and not jointed to it."—This is not the case. A flanged

ring has been wiped to the lead and jointed to the stoneware in cement, as anyone could discover who wanted to know.

"The plate on clearing eye at the junction of the soil pipe vent by north-east gable has not been properly bedded, and allows foul air to escape from the drain."—I will have this plate taken off and re-bedded, but as there is, for all practical purposes, *never more pressure inside the open vent than outside* leakage cannot take place; if there were any leakage it would be of no consequence as the whole purpose of ventilation is to prevent the air in the drain from getting poisonous, and if it were foul, the position of the plate at the side of the gable and above the main eaves gutter would still make the matter of no consequence. The leak can only exist when the ends of ventilating pipes are stopped and air pumped into the drains under pressure.

I have written at some length, Sir Leslie, but at not, I hope, too great a length. If any doubts still remain of the soundness of the drains, I hope you will let me know what they are.

This letter would have been more dignified and much more impressive if Spinlove had denied himself the pleasure of aiming back-handers at Messrs. Quince and Jarrad, whose destruction would also have been more complete if Spinlove had made his points coolly instead of with warmth. The tone of the letter is unprofessional; but Spinlove's relations with Brash—who long ago made fervour, rather than decorum, the characteristic note of their interchanges—excuse it. Except for this he seems to have done extremely well and has given Brash grounds to be most grateful to him. With Grigblay's help and guidance—the "defect in Mr. Jarrad" obviously originated with Grigblay—he has thoroughly mastered the facts, and applied himself to make a most effective display of them; and he accomplishes a difficult task with a tact which even touches on charm—a most unusual achievement for him. It has been apparent that Spinlove is decently educated, and here we particularly see his advantage in this respect. The position is an awkward one, for Brash has been led by Spinlove's own lack of gumption to doubt his architect's capacity in matters of sanitation and, as we know, has a high opinion of Quince and Jarrad, rooted in snobbery and therefore almost indestructible. Brash has no technical knowledge of drains, yet it is for him to decide, between the conflicting opinions of architect and expert, whether his drainage arrangements are perfectly sanitary, or not; and if Spinlove cannot re-establish himself with his client and persuade him to his views, it is difficult to say what may not happen.

GRIGBLAY TO SPINLOVE

Dear Sir, 21/6/26.

You directed us to let you know if we were asked to make any structural alterations at Honeywood. Her Ladyship lately asked us to fix a grate she has bought, in the box-room, and this we have done with a bit of pipe carried well up into the flue serving the small servants' bedroom (No. 5) on the second floor, by her Ladyship's orders. We do not know whether this is what you mean by structural work, but think well to mention the matter. Her Ladyship says the fireplace in No. 5 will never be used.

Yours faithfully,

A fireplace in a box-room is scarcely to be found in the most lavishly equipped house, and it is a mystery how anyone could imagine any kind of use for one there. Two fireplaces connected to one flue are likely to give complete satisfaction only while neither of them is in use.

BRASH TO SPINLOVE

My dear Mr. Spinlove, 24/6/26.

I have to confess that I read your communication anent sanitation with some impatience, but after carefully re-perusing your arguments I am inclined to regard Messrs. Quince and Jarrad's proposals as unnecessarily redundant. Although I make no pretence of being a sanitary expert myself, I certainly agree with you that excessive costliness of refinements are inappropriate when not visually evident. There are certain aspects of the matter I desire to discuss with you, but so far as I can judge you have demonstrably answered Messrs. Quince and Jarrad's criticisms, and you will be glad to know that the odoriferous conditions are now rapidly ameliorating; in fact, they appear to have eventually dissipated, for though Lady Brash has been expectantly apprehensive no undesirable olfactory evidences have, I understand, been lately detected.

In view of the fact that the sanitary provisions are not—as Messrs. Quince and Jarrad led me to suppose—defective, I shall expect those gentlemen to allow me a substantial discount off the heavy fee of twenty guineas they have the effrontery to ask for their superfluous services.

Lady Brash informs me that we are to anticipate the pleasure of your company during the week-end. I shall then have an opportunity of discussing various matters with you.

With kindest regards,
Yours sincerely,

This is a triumph for Spinlove. It is to be hoped that Brash is grateful to him. He certainly seems to be; but his unusual good humour may be chiefly due to his having got this tormenting question of the drains settled, and Lady Brash appeased. Why these troublesome smells should so suddenly disappear is a mystery; but then it is also a mystery why they should ever have existed—if they ever did exist outside Lady Brash's imagination.

Messrs. Quince and Jarrad, by Spinlove's showing, here cut a sorry figure; but in point of fact they belong to an order of men to whom society has been in the past greatly indebted. It has to be remembered that what are now commonplaces of sanitary decency were, sixty years ago, only taking shape in the minds of scientific inquirers; and that forty years ago the general application of modern principles of sanitation was an innovation bolstered by public panic. In those days doctors faced with the complicated symptoms of patients who had nothing wrong with them had only to say "Are you sure there is nothing wrong with the drains?" to escape with honour from the field. The nobility and gentry—who we noticed are patrons of Quince and Jarrad—were obsessed with drains, which thereupon became fashionable, just as appendicitis did a few years later. Country gentlemen talked drains over the wine after dinner, compared drains on their way home from church, and rivalled one another in the renown of their sanitary adventures. There was scarcely a house in the country which was not, according to present ideas, poisonous; and none that was what we would consider sanitary. Throughout the country, people who would spend nothing on anything else were eager to celebrate themselves with drains, and this work was in great measure done—and thoroughly well done—by the forerunners of Quince and Jarrad.

The firm's fantastic test-exactions and extravagant ideas are also, for them, unavoidable; for if after they have approved the sanitation of a house the drains are surveyed by another expert in order to satisfy the covenant of a lease or conveyance, or because of a suspicious case of illness, and this rival expert by more exacting refinements of test or stringency of standards, reports a defect or imperfection, Quince and Jarrad might be liable for damages, and in any case the reputation upon which their very existence depends would suffer. This danger is so imminent that firms of the standing of Quince and Jarrad will apologize for the stringency of their tests and the triviality of their objections even while making them. This is perfectly reasonable. The expert tells the owner exactly what sort of drains he has got; that is the expert's responsibility: the owner decides whether to risk living in the house or not; that is the owner's responsibility, and the expert's comment: "I should not hesitate to live there myself," and so forth, does not shift those responsibilities. If Spinlove is ever called upon to re-drain a house, he would benefit by knowing this—however, that is not likely. Old houses have nearly all now been re-drained, and new ones do not need it.

[NEXT WEEK: X—THE BATTLE OF THE BRICKS]

The unlimited skyline of New York: a study of the massed skyscrapers of Lower Manhattan, as seen from Governor's Island.

THE ART AND THE ECONOMICS OF SKYSCRAPERS

BY GEORGE E. J. PISTOR

Mr. Pistor is Treasurer of the American Institute of Steel Construction, Incorporated, and this article is condensed from a lecture delivered by him at the Institution of Mechanical Engineers, last week, before an audience including representative architects and consulting engineers.

THE American skyscraper today is the product of the best economic engineering as well as artistic knowledge. As an engineer and a steel constructor I may be inclined to accentuate some things about building which would be overlooked by another, but experience with modern-day practice compels me to confess that an engineer alone would not produce that kind of structure which might prove highly successful. As an engineer, I know that tall buildings can be safely built to a height of 2,000 feet. Skyscrapers with pent-houses to rival mountain lodges can be built today, because we have at our command the most perfect building material known to man—steel; but whether such buildings would pay on the investment, or whether they could be made to appear æsthetically satisfactory, is a matter that must first be passed upon by others.

The story of steel began in the town of St. Pancras, in England. It was there, in 1854, that one Henry Bessemer (later to be knighted and famous throughout the world) made his great discovery, the discovery which he came on in his small ironworks, that if he blew a blast of air through molten iron he oxidized and drove off a number of the impurities which made iron an uncertain substance chemically, and to all intents and purposes produced a new substance—steel. The process of Bessemer, and of Kelly, who made an almost simultaneous discovery, is old-fashioned and unsatisfactory now; modern metallurgy has far surpassed it in wonders. But it was the start. From that time on, the Woolworth Building was a possibility. And trains that travelled sixty miles per hour. And one automobile for every five people in our country. And man's conquest of the skies.

The earliest beginnings of metal frame construction are probably to be found in the building erected in 1854 in New York for Harper and Brothers, where cast-iron columns were used as supports. Wrought-iron beams and columns were used in buildings for the Centennial Exposition in Philadelphia, in 1876. By that time iron was beginning to be a fairly common building material. But there was another problem that had to be solved before engineers were ready to construct tall buildings. That was the problem of getting people from floor to floor without stairways. One of the earliest elevators known was the one installed in the ornate old Fifth Avenue Hotel in New York, in 1859. It was built by Otis Tufts and cost $25,000. A steam engine ran it by turning an immense vertical screw—whence its name, vertical screw railway—much as a nut is moved up and down on a bolt by turning the bolt. The first suspended elevator, the forerunner of the kind we know today, was installed seven years later in the old St. James Hotel, New York.

Then came foundations. Simply digging a hole in the ground and building up masonry to support the building was not sufficient for more than a few stories. The foundation problem was not solved until 1880, when the Federal Building in Chicago sank considerably, and caused great apprehension among builders and engineers. That started an investigation from which developed a wholly new and modern method of foundation building. Nowadays foundations are, in practically all instances, placed under the foot of each column in the building, each one independent of the others. These footings are carried down into the ground until they reach a safe foundation. In some places, like New Orleans, it is necessary to sink piles until they strike a bottom solid enough to carry the weight, or to a depth which affords a skin friction sufficient to support the building.

With elevators, foundations, and the new structural steel, the time was ripe for the first true skyscraper. The Home Insurance Company, in 1883, put up a building in Chicago in which were used, for the first time, some of the skyscraper principles—primarily that of supporting the entire weight of the walls on a steel framework, instead of making the walls themselves carry the weight of the building. The fourteen-story Tacoma Building in Chicago, erected in 1887, carried skyscraper principles still farther, and is generally known as the first real skyscraper. The Tacoma Building was supported entirely by a metal frame, and the walls did no more than curtain off the interior and protect it from the elements. So sound was its design that when the owners, the University of

Chicago, demolished it recently to make way for a twenty-four-story building with a twenty-three-story tower, the framework was found to be in perfect condition.

To build higher and to build larger was only a matter of further experimentation, for engineers realized that in steel they had a material upon which they could depend absolutely. Accessories, of course, had to be improved, particularly the elevator. After Tufts' vertical screw railway type came the hydraulic plunger, and later the electric elevator. Electric elevators have been developed to move at the astonishing speed of 1,000 feet a minute, with an acceleration so accurately controlled that passengers are hardly conscious of the rate at which they are travelling. No building is yet equipped with elevators as rapid, but those in the towering new sixty-eight-story Chrysler Building in New York move at the rate of 700 feet a minute. When the legal limit is raised they can travel at the rate of 1,000 feet a minute. Elevators now being designed for the Empire State Building will be able to travel at the rate of 1,200 feet a minute.

As a matter of engineering, I could leave the story with you at this point, and you would undoubtedly agree with me that it has been a fascinating and dramatic story. It is fascinating because of the infinite possibilities of this modern material, steel, and the exact knowledge that man has acquired of it, an exactitude which has been impossible with any other building material. It is dramatic because of the suddenness with which this new art of skyscraper building has come upon us—a type of building that was unknown fifty years ago. But today the skyscraper is indigenous to every city in the United States, and is being built in many of the important cities of the world. There are today more than 4,778 buildings in the United States of ten stories and over in height, and of this number 2,479 are in New York. Forty years ago a ten-story building was thought to be a skyscraper. Today we are building office structures eighty and more stories high.

In the future we will build even higher. I say that, not upon my knowledge as an engineer. But economists, who are today called in for advice, tell us that we must build higher if we are to earn a proper return upon the ever-increasing land values in our urban centres.

We had our critics who objected to the tall building from the beginning, and condemned it as the source of most evils of our city life, and it is only recently that an endeavour has been made to lay the real facts before the public.

It may be interesting to know that the first attack of this group was chiefly directed against—so the critics stated—"the way they disfigured the streets and against the possibility of a catastrophe involved in the collapsing of one of these monsters on a crowded street." These criticisms amounted to nothing more than a prejudice against the new. Then came the criticism that these tall buildings shut out the light and air, and were thus harmful to the health of the public. Lately the traffic conditions have become almost intolerable in our cities, and again the skyscraper was blamed. The congestion argument has become the chief objection of those with conscientious scruples against the tall building.

In the matter of light and air it will be admitted, by all, that this applies only to the few lower floors—and that applies equally to buildings of limited height—but, as we reach the upper floors of a modern skyscraper, we attain the maximum of sunlight and air, and also a cheerful outlook. The higher the floor, the more permanent are such benefits.

The more modern buildings have such an arrangement of windows as further to assure an abundance of sunlight. Also, the modern skyscraper makes possible provision for artificial illumination and ventilation and atmospheric control, so as even to excel the natural light and air, and thus afford the possibility of having the atmosphere of mountain resorts right in the heart of New York City.

The possibility of the collapse of one of these buildings upon a crowded street was at one time held up as a serious objection to building them. After the experience of two generations this fear has been all but forgotten. Engineers have been able to convince the public of their ability to design these structures with absolute safety.

We still hear of the fire hazard and the danger to life of the occupants due to their inability to reach the ground in safety. All of our modern skyscrapers are built of fire-resisting material, and the trend in the furnishing of the offices is towards the non-burning kind. Of course, we still have much of the contents that will burn, and should a fire start it is necessary to confine it, and either let it burn out or have it extinguished. The advances made in fire-resisting construction and fire-fighting equipment have reduced this menace to a minimum, so that, today, the fire hazard is much less in the modern skyscraper than in other types of building.

Now just a few words regarding the congestion problem. This problem is not new, and was present in our various cities long before we had any buildings over three or four stories high. As far back as the time of Julius Cæsar, Ancient Rome had this problem to contend with, and many of the traffic regulations which we think modern were resorted to at that time. Thus history tells us that Rome had traffic policemen, taxi stands, one-way streets—also regulations that specified, due to the narrowness of the streets, merchants had to make their deliveries at night. In our own country this problem existed with bus and horse-car lines and ferry-boats, fifty years ago.

In New York City we find more serious congestion on Fifth Avenue and in the Times Square section than we do in the foot of Manhattan where most of the skyscrapers are. For the greater part of the day the department store sections are by far the more congested, and in the evening you find the congestion in the theatre district where there are few, if any, tall buildings.

There is no wonder that architects at first were somewhat at sea how to treat this (then new) type of housing; and many odd-looking structures—yes, even monstrosities—were built.

In more recent years the zoning laws effected in New York City have put certain restrictions on the shape and height of buildings. One of the most striking of these restrictions is the limitation in size of a tower to not more than 25 per cent. of the total lot area, but which may rise to an indefinite height as long as structural safety and economic conditions are satisfied.

Most foreign architects will concede that in the modern skyscraper America has contributed the most impressive and the most worth-while style since the Renaissance. There are many eminent authorities to bear me out, and practically all the worth-while architects in other countries have expressed their appreciation of the design of the American skyscraper. It is today ushering in a new era in architecture.

In 1934 we shall celebrate the fiftieth anniversary of the invention of rolled steel shapes and the erection of the first American skyscraper. Though possibly ugly at first, architects have attained such skill in using the material at their disposal that to-day this tall-building architecture is universally held up as a great contribution to creative art.

Those of you who have visited the States, and viewed the skyline of New York as your ship moved up the bay have undoubtedly been impressed by the courage of those who have dared to build so high. You who are yet to visit our shores I hope will look forward to that experience. Above all, however, I hope you steel constructors will not long permit us to enjoy the exclusive honour, but will take advantage of our experience and improve upon that which has already been tried and found expedient, economical, and of unique architectural merit.

THE SPECIFICATION WRITER

The Group System: iii

BY A. SEYMOUR REEVES

GROUP II:

INTERNAL FINISHINGS (continued)

AN alternative method which has found some preference is that which separates surface finishings from doors and windows. (This method is not contained in the Report of the Conference already mentioned.) When this order is adopted the first schedule covers surface finishings only —ceilings, walls and floors, with cornices, dado or picture rails, and skirtings. This is followed by separate schedules, respectively, for windows, doors, fittings, and fireplaces. Otherwise the principle follows the plan previously outlined. When dealing with surfaces, it is convenient in some cases to separate each floor; in other cases two or three floors can be dealt with in one group. Some prefer to omit any reference to radiators or lighting points at this stage, and to give this information under the respective services only.

STAIRCASES

A section will be needed for stairs and steps (other than steps in doorways, which will have been dealt with under doors). The definition will cover both construction and finishing—timber, concrete or steel—as well as balustrades and all work arising.

PARTITIONS

A separate section for partitions will almost certainly be necessary if some of them are framed and glazed. Otherwise it may be possible to cover this section by general clauses. All the work would be defined here irrespective of trade.

All matters concerning the first two groups—viz., structural and carcass work, and finishing—having been dealt with, the third group can be commenced.

GROUP III:

ESSENTIAL SERVICES

Under this head will come heating, ventilation, lifts, electrical and sanitary services, or any other special service. Whether hot-water service is best dealt with under heating or under sanitary service is a point to be decided by the particular circumstances, which are bound to vary.

The builder's work in connection with each service should appear therewith and follow the information upon the installation of the service concerned. Thus, pipe trenches, boiler seatings, or similar work arising from the heating system, would appear under that service, and both structural and finishing items would be defined.

Under sanitary service, the internal work is first dealt with, and this covers all water supply and attendant items such as pipe casings, cistern casings, etc. In the case of fittings, attendant work is described therewith; thus, when the sink has been specified, the draining boards and any special work on wall at back of sink would be defined.

Soil pipes and bath or other waste pipes, although actually external, are more conveniently dealt with under internal work, of which they are integral parts.

The external sanitary work follows, with all drains, gullies, manholes and attendant work.

While the three main groups already outlined will suit the large majority of contracts, other subsections, in addition to those indicated, may be required. Thus, a section could be included for boundary walls and fences, or one for roads or garden work. In some cases a separate section for reinforced concrete, or for constructional steel, might be advisable, and the principle of covering all attendant work would still be followed.

In the case of a contract in which a varied scheme of decoration was to form an important feature, a separate section entitled "Decoration" would be helpful. This would be suitably placed at the end of the finishings, and would obviate any reference to decoration in the schedules of surface finishings.

There is already a good deal of agreement as to the advisability of describing attendant work on heating, or any other service, in connection with that service, instead of dissecting the items and distributing them throughout different trades. There is also some agreement as to the advantage gained by a schedule of surface finishings in group form instead of by separate trades. It is a fact that schedule methods for specifying windows and doors are being more and more adopted. In many instances these group methods are combined with trade classification, and this sometimes involves double work on the part of the specification writer.

None would contend that the system which has been outlined is perfect. The examples given should be regarded as illustrations rather than final models, and doubtless improvements will occur to many. But it does provide a definite order or basis, and it is certain that a specification writer working on these lines is far less likely to miss out essential items. Specifications on a group basis may differ in most of the details and still preserve a general consistency as to the order or placing of information. Further changes in building methods may render trade classification even less suitable than it is today, but such changes would not affect group classification.

An instance of the advantage of the group system may be given by reference to a housing scheme. In this scheme several types of cottages were employed; the plans of each type were similar throughout, but the elevations were varied by differing facings. Two kinds of brick facings, as well as rough cast and cement facing, were employed. To indicate the intentions in this direction many drawings would have been necessary if the usual trade classification had been the basis of the specification. The difficulty was met by a schedule of facings, each block of cottages being identified by a number or letter on the layout plan.

(Concluded)

PROVISION against stresses that may be set up in a building by wind in exceptional situations is a subject that occasionally engages the attention of the designer and specification writer. For their computation a number of data exist, but they are not always at hand when required. In THE ARCHITECTS' JOURNAL *the matter was practically discussed under the heading, "Wind Pressures on Buildings," by Norman Davey under the dates of March 6 and 13, 1929. A study of the magnitude and probable frequency of high pressures on tall structures has been recently undertaken by A. Morris Thomas, and though made with overhead electrical power lines directly in view, the conclusions are equally applicable to towers and high buildings generally.*

The author recalls that the L.C.C. Regulations enjoin the ability of any building to withstand a wind-pressure of 30 lb. per square foot against the upper two-thirds of the exposed surface. Arguing from such statistics as are available, he estimates the chances during the next 100 years of pressure about 60 ft. above ground level (at Southport), exceeding 25 lb. per square foot, and puts it at twelve occasions. At a height of 100 ft., however, the probability that a pressure of 32 lb. per square foot will be exceeded is given as once in ten years, and of 39½ lb. once in a hundred years.

A valuable series of tables and graphs illustrates the paper, which is Technical Report Ref. F/T 42 of the Electrical Research Association, and is printed in the current issue of "World Power."

Horizontal Ventilation

IN THE ARCHITECTS' JOURNAL for December 25, 1929, reference was made to the Knapen system of damp removal and prevention in buildings. A concomitant of damp removal from interior walls is a suitable means of ventilation. Accordingly, a method of ventilation was developed in conjunction with the system for damp removal.

The primary object of ventilation is the removal of air which has become fouled by breathing and heating, and the introduction of clean air at a suitable temperature. The air which occurs in a confined room varies in density, increasing towards the floor. The upper layer consists of the warmer and lighter gases, whereas above the floor there is a layer consisting of the heavier gases and containing amongst others carbonic acid and steam. It may be taken that the distribution of these gases laterally is fairly regular, and that replacement demands their complete removal from all parts of the room.

The means of ventilation which exist in all rooms are doors and windows, and in some cases fireplace chimneys. The opening of an ordinary window at both top and bottom, with the door closed, allows egress of the hot air through the top part of the window, and the ingress of an equal quantity of cooler air through the bottom. The effective operation of this movement, however, is practically confined to the width and depth of the window and does not necessarily penetrate far into the room until the diffusion of the gases has had considerable time to proceed. As a result, corners of the room, particularly when they are damp and cold, are not subjected to an appreciable circulation of air. The weight of air in the corners being greater than that in the warmer parts of the room, a considerable disturbance of the atmosphere is necessary in order to shift this heavier air.

In the Knapen system of differential horizontal aeration, use is made of the fact that almost invariably there is some measurable difference in the temperature of the air at opposite sides of a building. The air on the colder side will be denser and therefore heavier than on the warmer side and will consequently exert the greater pressure. This difference may be very slight, but a difference in temperature of only 1° F., with its proportionate variation in density, will displace air in the lateral direction.

Taking into consideration this fact, inlets and outlets are fixed in certain well-defined positions on both sides of the building. The general disposition of these openings is shown diagrammatically in the figure, from which it will be noticed that the apertures in the outside walls are set in a slanting direction, while those in the partition walls are carried straight through. The top apertures are usually placed about 8 inches from the ceiling and the same distance from the angle of the walls, while the lower apertures are placed as near the floor level as possible, and vertically below the top openings. The middle apertures are placed about half-way between the two, and on vertical lines equally distant from the top and bottom apertures. Openings are provided in the partition walls at top and bottom only.

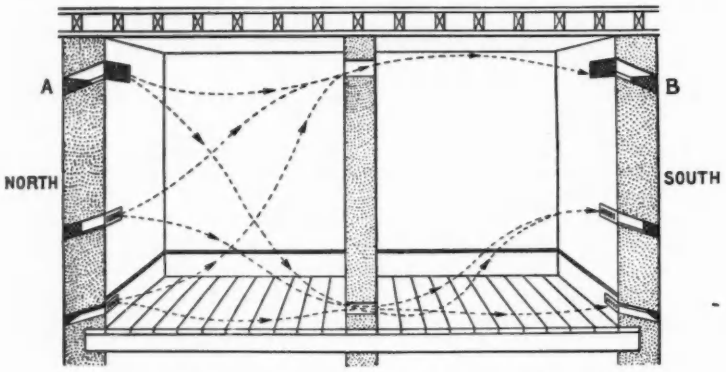

Diagram illustrating the installation and operation of the Knapen system of differential horizontal aeration.

With this disposition of inlets and outlets, the effect of the pressure difference at opposite sides of the building is to create a gentle flow of air from the high-pressure side, displacing air somewhat on the lines shown in the diagram, through the openings to the low-pressure side. In positions where strong winds are frequent, the outside apertures are fitted with adjustable grids or screens, to prevent wind from penetrating into the room, and so allow the ventilators to operate normally. The sizes of the openings are carefully proportioned to ensure the necessary flow of air without producing direct currents and the sensation of a draught. Also the arrangement of the inlets and outlets is such as to ensure that every portion of the room has its air content periodically removed and renewed. As the difference in temperatures upon which the movement of air depends is never very great, the air currents are consequently slow, but they are continuous and regular and diffuse throughout the apartment. Moreover, by this method ventilation is not confined to one room, and can also be arranged to prevent the ingress of vitiated air as from kitchens and similar places.

In dealing with basements and back rooms, which open into yards and spaces with restricted air supply, the apertures near the ceiling are put in communication with the yard or street by means of slanting ducts, and the openings near the ground, as well as the intermediate ones, are extended up to the roof by means of vertical shafts or ducts. By this means the warm air near the ceiling, being lighter than the air outside the room, is displaced outwards, and the resulting depression produced on the lower layers causes the denser air in the vertical shafts to descend, introducing fresh air at the bottom and lifting the foul air upwards for discharge. In this arrangement it is generally convenient to dispense with the middle row of openings and utilize only a single row placed between the usual locations of the bottom and middle rows.

A. H. H.

DEMANDS for Portland cement in ever-increasing quantities have sometimes resulted in consignments having been delivered direct to building jobs while still appreciably hot to the touch; and in order to resolve doubts as to the desirability of using cement in this condition, tests have been carried out at the Building Research Station. The general conclusion reached is that no harm is likely to result from the use of "hot" cement. The results of the tests are published in Building Research Bulletin No. 7 (H.M. Stationery Office, price 4d.).

RECENT WILLS

Mr. John Avenel Wickham, C.B.E. (48), of Westholme, Beverley, Yorks, Chief Engineer for Docks of the L.N.E.R. at Hull, left £20,092 (net personalty, £19,410).

Mr. Godfrey Charles Lambert, of Woodcote, Esher, and of Henrietta Street, Covent Garden, W.C., architect and surveyor, left £46,326 (net personalty £43,226).

QUESTIONS THAT ARISE

Zoning

S. K. writes: "*What is the meaning of the phrase 'zoning' that one reads of in American building papers?*"

Zoning originated in America, where it was discovered that the erection of high buildings was transforming the streets into sunless, windswept canyons. The authorities regulated the height of the building frontages to the width of the streets. These regulations vary in different districts or zones; in some a building may not rise vertically more than one-quarter the width of the street, and after that must be set back before going higher. In other and more busy districts the building may rise two-and-a-half times the street width vertically. The set-backs vary from 1 ft. rise for 2 ft. set-back to 5 ft. rise for 1 ft. set-back. It is also permitted to build a tower provided that the base does not cover more than 25 per cent. of the ground area.

Some difficulty was experienced in legislating for corner sites where the streets were of unequal width, but it was finally agreed that the set-back provided for the wider street might be continued for a horizontal distance of 150 feet up the narrow one.

Actually, this law has a restrictive effect on the height of the buildings, for the cost of erecting a tower with elevators prevents the letting value of the remaining floor area, above a certain height, being a paying proposition. In several large commercial concerns the value of the upper floors of the tower is written off as advertisement expenditure. S. G. A.

["S. K." will find matter germane to this subject on pp. 133–4 of this issue. —ED., A.J.]

Value of Extra Work

D. W. M. writes: "*I am having trouble in settlement of an account regarding extra plaster work.*

"*During my visits to the premises, while preparing the contract documents, I found that the external walling of a sub-basement was damp for approximately a height of 4 ft. above the floor. The walls were papered and the plaster was decayed in places. In the specification I asked the builder to allow for 15 yds. provisional cutting out of defective plaster, raking out joints, making good with waterproofed Keene's cement on a backing of Portland cement and carting away rubbish.*

"*Unfortunately, after the removal of the paper a considerable amount more plaster required making good, 50 yds. in all. The builder has produced day sheets for this work, and it amounts to 6s. per yd. This seems to me to be excessive. I shall be glad to know if it is correct that I should accept day sheets, or value the work myself as included for in contract?*"

"D. W. M." should, I consider, accept the day sheets tendered to him by the builder for the work. The price is not very excessive, if at all, for there is quite a large amount of rubbish to wheel and cart away.

If the contract stated that the work was to be measured and valued at completion by the architect and there was an extra, say, in plastering to new walls, the meaning of the clause could be brought into practice by measuring at current rates; but how is "D. W. M." going to measure and value cutting away old plaster work and carting away?

The clear way to have avoided this difficulty would have been, when obtaining estimates, to ask the builder to state in his tender the price per yard he would require for this work.

W. A. D.

Rusticated Masonry

J. V. N. writes: "*Should rusticated masonry be in large or small stones to give the necessary effect of strength to a base course of a building? Often, large stones appear to me to be merely clumsy. By small, I mean about 12 ins. deep, thus introducing more joints.*"

Rustication is used to give the effect of massiveness to a wall, and should only be used when there is some reason for the eye to expect strength, as in the base of the Pitti Palace, or in the fortress-like walls of the Strozzi Palace at Florence. These bases have deep stones.

English Renaissance buildings seem to have struck a general proportion of sizes as to the depth, as the following list shows:

St. Paul's Cathedral blocks	18 in. deep.	
Horse Guards	,,	17½ in. deep.
Banqueting Hall	,,	17 in. deep.
Somerset House	,,	16 in. deep.

A number of further examples of modern rustication are given in Atkinson and Bagenal's *Theory and Elements of Architecture*. J. D.

Drainage to Garage

H. V. S. writes: "*I am erecting a garage to house ten cars and vans, and am making provision for a washing space. Regarding the drainage, will a large garage gulley, with a galvanized iron bucket, be sufficient, or will it be necessary to provide a petrol and grease interceptor? If the latter is necessary, are there any special points to observe in connection with the construction?*"

In this case a garage gulley will not be sufficient to prevent a considerable quantity of grease from entering the drains.

With the washing required for so many vehicles, even a large perforated silt bucket would soon become choked, and garage proprietors could not be relied upon to take the trouble to continually cleanse the bucket and gulley.

It has been found satisfactory to work on the following principle:

For *four* vehicles and under, provide a large garage gulley with perforated silt bucket. For *five to ten* vehicles provide a two-pit ventilated petrol-grease interceptor. For *more than ten* vehicles provide a three-pit interceptor. The pits should be built with 9-in. brick external walls with 4½-in. division walls, rendered in cement, to be about 3 ft. below inlet of drain. Each of the cast-iron dip pipes to be 2 ins. lower than the drain inlet or dip pipe preceding. Each pit to be ventilated, and the branch pipes taken to a 6-in. cast-iron ventilating pipe of soil pipe strength, taken up above eaves or parapet. Pits to have air-tight covers.

A disconnecting trap is not required to the outgo, but the drain will run to a manhole in a trapped drainage system. W. E. K.

Books for Travel

"Student" writes: "*A fellow-student and I are planning a short holiday by car. We have decided to go to Paris, and from there to branch eastward into the chateaux country. Can you suggest any books we could read, either before we go or on the trip? Not a textbook, or a guide-book, but something we could read both for information and recreation.*"

I know nothing better as a travel companion in the Loire country than *Old Touraine*, by T. A. Cook. This treats the châteaux historically and gives much architectural information. It is in two small volumes, which is a consideration for those who travel light.

The first chapters of Henry James's *Little Tour in France* deal with the Loire. For Chartres, Pater's *Gaston de Latour* gives a picture of mediæval life in the cathedral town. There are also Balzac's two novels, *La Lys dans la Vallée* and *Le Curé de Tours*, printed in French.

For more serious reading one can choose several of the excellent little *Petits Monographies des Grands Edifices de la France*, and Pierre Lesueur's invaluable book, *Le Chateau de Blois*, gives all that can be desired of the history and architecture of that building.

Vol. iii of Sir Thomas Jackson's *Renaissance of Roman Architecture* is full of good things, and if the churches of Loches, Fontevrault and Angers are to be visited, then Violet Markham's *Romanesque France* should be added to the list. R. J. K.

Cubic Cost of Building

H. D. S. writes: "(1) *What price per cubic foot should be allowed for a block of twenty flats in the London area, five stories high, including one story in roof; fireproof construction, lift, brick walls with stone dressings?*

"(2) *Is it economical to have a steel frame structure for a building of this size? If so, what would be the approximate extra cost and what would be the building time saved?*"

(1) The price per foot cube for the building inclusive of lifts, heating, etc., would be 1s. 10d. per foot cube.

(2) There is little difference in cost by designing the building with a steel frame. There would be a saving on the thickness of brickwork, etc., offset by the extra cost of steelwork.

Given efficient organization, a saving of 20 per cent. in time could be effected by the erection on the steel frame method. B. O. F.

Crack in Partition

O. E. R. writes: "*In the bathroom of my new house a partition is cracked at the angle with the external wall, to a width of about ¼ in. all the way up. The partition is of studding, lathed and plastered. I have tried stopping this with plaster of Paris, but after a time the stopping falls out. Is there any elastic solution I could press into the plaster?*"

The cracks to the bathroom partition are no doubt caused by the movement of the wood partition against the brickwork, the shrinkage of the wood cracking the plaster.

I would advise cutting a strip of calico about 6 ins. wider than the crack; wet it to shrink it, and apply with a mixture of gold size and white lead, and allow about two days to dry. If the walls are then painted, there should be no repetition of the trouble; or, cheaper than painting, distemper and varnish. For the latter, the distemper should not be too light in colour. P. I. A.

Laundry Floor

C. H. writes: "*Can you recommend a good cheap flooring for a laundry which will have a considerable amount of heavy wear? Electric trollies will be in use, and it will be so situated that light motor vans will be driven through to a yard beyond. The size of the main working space will be 40 ft. by 36 ft.*"

I should advise your correspondent to lay a granolithic floor 6 ins. thick; the lower 4 ins. in concrete composed as used generally in foundations, and the upper 2 ins. composed of cement and granite chippings (1 and 2). This should be laid in one operation in 10 ft. squares at a time. The chippings should be clean and very little dust allowed. Then, finish with the trowel and well water within an hour of laying.

Colouring could be added to the mixture, and this would relieve the cold appearance given by this type of floor. W. H. L.

THE REFORM OF BUILDING BYLAWS

THE case for reform of the building bylaws is stoutly and skilfully argued in a leading article in *The Times* for July 18 last, from which the following sentences are quoted:

During the last few months attention has repeatedly been called with increasing emphasis to the crippling effect on the building industry of the Acts and regulations by which it is at present governed. Among those who have recently expressed these opinions in our correspondence columns are the secretaries or other spokesmen of the London Employers' Association, the British Steelwork Association, the Institutions of Civil and of Structural Engineers, the Surveyors' Institution, the National Federations of Building Trades Employers and Building Trades Operatives. Most of these bodies were specifically referred to by Sir Frank Baines at the meeting of all parties convened in the House of Commons, with Sir Robert Horne in the chair, to consider the question of the alteration of the existing bylaws. The enactments by which the industry is controlled he described as involved, unco-ordinated, antiquated and hopelessly diverse and out of date; and he expressed his conviction that these various associations, together with the great building trade unions, are all in favour of their statutory revision. In equally forcible language, Sir Banister Fletcher points out today that for ten years the R.I.B.A. have been urging the necessity of revising them on a national scale and in conformity with modern building methods and requirements.

Sir Banister appeals to the London County Council to take the necessary step to deal with the matter. On the other hand, at the non-party meeting it was agreed to ask the Minister of Health to receive a deputation petitioning for the immediate relaxation of all bylaws of a restrictive character. It was also decided that an effort should be made to draft a Bill to amend the London County Council Acts; that all interested parties should consider how to place building regulations throughout the country on a better and more satisfactory footing; and that Parliament should be requested to consider the revision of the statutory obligations imposed on the industry. Each of these various expedients is in itself unexceptionable. They all, of course, have the same object in view, and between them may lead to the desired result, though it would perhaps have been preferable for the various bodies vitally concerned to agree on a concerted line of action. But in any case there is no doubt as to what they all want. Their aim, said Sir Frank Baines, is a national code of building regulations, drawn up by those qualified to speak with authority and knowledge, and administered by a central authority—the code to be fluid, with power of revision, so that advantage could be taken of all advancing practice.

SOCIETIES AND INSTITUTIONS

THE WELSH SCHOOL OF ARCHITECTURE

The following awards have been made at the Welsh School of Architecture, Technical College, Cardiff:

FIFTH EXAMINATION

For the Diploma awarded at the end of the five years' full-time course, exempting from the R.I.B.A. Final Examination with the exception of the subject, "Professional Practice":

Aitken, F. K. (*Diploma with Distinction.*)
Bishop, J. W. ,, ,, ,,
Price, Miss O. E. ,, ,, ,,
Richards, L. F. ,, ,, ,,
Thatcher, C. ,, ,, ,,
Honeywell, F. (*Diploma.*)
Llewellyn, G. ,,
Richards, I. F. B. ,,

FOURTH EXAMINATION

Rosser, C. Ward, J. P.

THIRD EXAMINATION

For the certificate awarded at the end of three years' full-time course, exempting from the R.I.B.A. Intermediate Examination:

Ayres, N. D. Davies, W. J.
Darch, J. T. Richards, G.

SECOND EXAMINATION

Allen, P. Roberts, S. G.
Lewis, H. J.

FIRST EXAMINATION

Francis, C. H. Roberts, D. W.
Hill, T. Thomas, A. S.
Hurley, L. F. Thomas, I. G.

MODERN ARCHITECTURE

The widespread interest in the B.B.C. talks on Modern Architecture, broadcast by Mr. Maurice E. Webb and Mr. Howard Robertson a short time ago, was manifested by the large attendance in the R.I.B.A. Galleries on Friday last, when they delivered lectures on the same subjects. The Meeting was arranged by the London Society, and presided over by Mr. Carmichael Thomas.

By the aid of lantern illustrations, Mr. Webb described the influence of the

skyscraper on American architecture, and pointed out how radically different the buildings of London and of New York really were. He imagined skyscrapers of the future soaring skywards nearly half a mile!

Mr. Robertson showed examples of modern architecture throughout Europe. His slides of Stockholm Exhibition were particularly interesting, and he explained how the purpose of the Exhibition was to express the function of modern design. Flags supplied the only real ornamentation on the buildings.

C.P.R.E. NATIONAL CONFERENCE, 1930

The Third National Conference for the Preservation of Rural England, arranged by the C.P.R.E., is to be held at Welwyn Garden City from October 9 to 11, 1930.

The following will provide the subjects for discussion: (1) The preservation of commons, parks, open spaces and nature reserves, and the provision of playing-fields; (2) Town and regional planning in their relation to the objects of the C.P.R.E.; (3) Education and citizenship in their relation to the safeguarding of the countryside, with special reference to schools, rambling, scouting, guiding, etc., and the use and enjoyment of the countryside; (4) Flora and fauna, including the preservation of trees, wild flowers, roadside plants and the protection of birds.

Full particulars of the conference are obtainable from the Secretary, C.P.R.E., 17 Great Marlborough Street, Regent Street, London, W.1.

THE INSTITUTION OF HEATING AND VENTILATING ENGINEERS

Examinations for admission as graduates and associate membership of the above Institution are held at suitable centres in January, May and September each year.

Intending candidates should apply to H. B. Watt, Secretary, 12 Russell Square, London, W.C.1.

ANNOUNCEMENTS

Viscount Glenapp and Mr. Roger Wright have been appointed directors of the Westminster Bank, Limited.

Mr. Stanley Hunt, A.R.I.B.A., Architect and Surveyor, has removed his offices from 70 Finsbury Pavement, E.C.2, to 101 Finsbury Pavement, E.C.2. Telephone No.: Metropolitan 5364.

Included in the Civil List pensions, issued last week, is the name of Mrs. Evelyn M. Bankart. She receives a pension of £80 for the services rendered by her husband, the late Mr. George Percy Bankart, to art in the development of decorative plasterwork and lead-work.

THE ARCHITECTS' DIARY

WEDNESDAY, JULY 23

R.I.B.A., 9 Conduit Street, W.1. Exhibition of models, masonry specimens, drawings and photographs of St. Paul's Cathedral. Daily, 10 a.m. to 8 p.m. (Saturdays, 5 p.m.).
Tite Prize Final Competition. **10 a.m.**

ARCHITECTURAL ASSOCIATION, 36 Bedford Square, W.C.1. Annual Exhibition of Students' Work, open daily from 10 a.m. to 6 p.m., until August 1. **10 a.m.**

ROYAL ACADEMY, Burlington House, S.W. Summer Exhibition open to the public until August. 9 a.m. till 7 p.m. **9 a.m.**

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to the New Whitelands Training College, Putney Hill, S.W., designed by Sir Giles Gilbert Scott, who, with Lady Scott, will entertain members to tea after the visit. **3 p.m.**

BOARD OF EDUCATION REFRESHER COURSE FOR TEACHERS IN ART SCHOOLS. At the Victoria and Albert Museum, South Kensington, S.W.7. Discussion on "Is Painting a Craft?" to be opened by Percival Tudor-Hart. Capt. Claude Flight, R.B.A., will reply. Chairman: Charles Marriott.

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Exhibition of English Mediæval Art in the North Court. Open until September 21, 10 a.m. to 6 p.m. (Thursdays, 10 a.m. to 10 p.m.) **10 a.m.**

SIR JOHN SOANE'S MUSEUM, 13 Lincoln's Inn Fields, W.C.2. Open every Tuesday, Wednesday, Thursday and Friday until September next. 10 a.m. till 5 p.m. 10 a.m.

KINGSTON-UPON-THAMES PUBLIC BATHS COMPETITION. Exhibition of designs at the Tiffin Boys' School (old building). 2 p.m. to 8 p.m. **2 p.m.**

UNIVERSITY OF LONDON, University College, Gower Street, W.C.1. Exhibition of Egyptian and Palestinian Antiquities. Until July 26. 10 a.m. to 5 p.m. (July 15 and 25, 6.30 to 8 p.m.) **10 a.m.**

THURSDAY, JULY 24

R.I.B.A., 9 Conduit Street, W.1. Victory Scholarship Final Competition.

BOARD OF EDUCATION SUMMER COURSE FOR TEACHERS OF BUILDING SUBJECTS. At the Portland Hall, Little Titchfield Street, Great Portland Street, W.1. "The Physics of Soils and Porous Materials." By B. H. Wilsdon, M.A., B.SC. Chairman: H. T. Tizard, C.B., F.R.S. **2.30 p.m.**

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "French Eighteenth-Century Furniture." By L. O. Faraker. 12 noon. "Italian Furniture." By Miss M. Chamot. **7 p.m.**

BRITISH MUSEUM, W.C.1. "Origins of Architecture—II. Roman, etc." By Cecil Hallett, B.A., F.S.A. **12 noon.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Light and Colour." By S. H. Groom, B.A. **12 noon.**

FRIDAY, JULY 25

R.I.B.A., 9 Conduit Street, W.1. Visit to U.S.A. Arrival of S.S. "Ascania" at Plymouth.

BOARD OF EDUCATION SUMMER COURSE FOR TEACHERS OF BUILDING SUBJECTS. At the Portland Hall, Little Titchfield Street, Great Portland Street, W.1. "Earth Pressures." By Professor C. F. Jenkins, C.B.E., LL.D., M.INST.C.E. Chairman: H. T. Tizard, C.B., F.R.S. **2.30 p.m.**

SATURDAY, JULY 26

Sunrise, 5.13 a.m. Sunset, 8.59 p.m.

SOUTH-EASTERN SOCIETY OF ARCHITECTS. Visits to Leeds Castle, Chilham or Bodiam, etc., organized by the Canterbury and Tunbridge Wells Chapters. Particulars of the visits are obtainable from the Hon. Secretaries of the Chapters.

MONDAY, JULY 28

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Italian Decoration." By Miss M. Chamot. **3 p.m.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Electricity." By S. H. Groom, B.A. (Lantern Illustrations.) **3 p.m.**

TUESDAY, JULY 29

TOWER OF LONDON, E.C.3. "The Tower in Tudor Times." By Allen S. Walker. **11 a.m.**

Secretaries of architectural and allied societies are invited to forward particulars of their forthcoming meetings and visits for publication on this page. They should be addressed to the Editor at 9 Queen Anne's Gate, S.W.1.

WEDNESDAY, JULY 30

BOARD OF EDUCATION SUMMER COURSE FOR TEACHERS OF BUILDING SUBJECTS. At the Portland Hall, Little Titchfield Street, Great Portland Street, W.1. "A Builder Looks at America." By L. A. Gerrard, F.I.O.B. Chairman: E. J. Strange, I.P., F.I.O.B. **2.30 p.m.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "The Weather." By S. H. Groom, B.A. (Illustrated by Lantern Slides.) **3 p.m.**

THURSDAY, JULY 31

BOARD OF EDUCATION REFRESHER COURSE FOR TEACHERS IN ART SCHOOLS. At the Victoria and Albert Museum, South Kensington, S.W.7. "Are Art Schools Assisting Industry?" By Henry G. Dowling, F.R.S.A., F.I.B.D., of John Line and Sons. Chairman: Alfred Shuttleworth, A.R.C.A. (Secretary of the National Society of Art Masters).

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Alfred Stevens." 3 p.m. "Modern Sculpture." 7 p.m. Both lectures by Miss M. Chamot. **3 p.m.**

LUTON TOWN HALL, DUDLEY SCHOOL and SOUTHPORT MARKET HALL COMPETITIONS. Latest date for submission of designs.

SATURDAY, AUGUST 2

Sunrise, 5.24 a.m. Sunset, 8.48 p.m.

MONDAY, AUGUST 4 (BANK HOLIDAY)

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "English Masterpieces." 12 noon. "Italian Masterpieces." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

SATURDAY, AUGUST 9

Sunrise, 5.35 a.m. Sunset, 8.35 p.m.

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Architecture." By L. O. Faraker. **12 noon.**

TUESDAY, AUGUST 12

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "English Seventeenth-Century Furniture." 12 noon. "English Eighteenth-Century Furniture." 3 p.m. Both lectures by L. O. Faraker. "Spanish Art." By Miss M. Chamot. 3 p.m. **12 noon.**

THURSDAY, AUGUST 14

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "English Renaissance Furniture." By L. O. Faraker. **3 p.m.**

SATURDAY, AUGUST 16

Sunrise, 5.46 a.m. Sunset, 8.22 p.m.

TUESDAY, AUGUST 19

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "Later English Furniture." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

THURSDAY, AUGUST 21

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Architecture." By Miss M. Chamot. **3 p.m.**

SATURDAY, AUGUST 23

Sunrise, 5.56 a.m. Sunset, 8.8 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Ironwork." 12 noon. "Ecclesiastical Metalwork." 3 p.m. Both lectures by L. O. Faraker. **12 noon.**

MONDAY, AUGUST 25

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Stained Glass." By T. F. Wilson, F.R.S.A.I. **3 p.m.**

SATURDAY, AUGUST 30

Sunrise, 6.8 a.m. Sunset, 7.53 p.m.

MONDAY, SEPTEMBER 1

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. September 1 to 6.

TUESDAY, SEPTEMBER 2

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "The Composition, Mixing, Methods of Application of Concrete and Reinforced Concrete as used in the Yards and the Control of Same." By T. R. Grigson, M.INST.C.E. "Some Notes on the Composition, Mixing and Application of Concrete in Engineering Works." By C. J. Jackaman, A.M.INST.C.E.

WEDNESDAY, SEPTEMBER 3

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Pieces in Concrete Piles." By M. J. C. McCarthy, A.M.INST.C.E., A.M.MECH.E. "Stresses in Dams." By S. D. Carothers. "A Study of Plain and Reinforced Concrete Retaining Walls." By Ewart S. Andrews, B.SC., M.INST.C.E. "Reinforced Concrete in Great Britain." By A. Kirkwood Dodds, M.C., M.SOC.C.E. (FRANCE). "Reinforced Concrete in Engineering: Representative Examples of British Practice." By M. Gerard, M.SOC.C.E. (FRANCE).

LAW REPORTS

ARCHITECT'S FEES : APPEAL

Shipwright v. *Lidiard. Court of Appeal. Before Lords Justices Scrutton, Greer and Slesser*

THIS was an appeal by the defendant, Sir Herbert Lidiard, of Great James Street, London, from the judgment of a King's Bench Divisional Court consisting of Justices Talbot and Finlay, allowing an appeal by the plaintiff, Mr. Wm. Geo. Shipwright, an architect, of Abbey House, Victoria Street, London, and of Broadstairs, from a judgment of Mr. G. A. Scott, an Official Referee.

[A report of this action was published in THE ARCHITECTS' JOURNAL for May 7, 1930, page 724.]

Mr. Miller, K.C., who argued the case for Sir H. Lidiard, contended that the judgment of the Official Referee should be restored, that there had been clear evidence of negligence by the architect, and that in the circumstances Sir Herbert Lidiard was justified in rescinding the contract and abandoning the scheme.

Mr. James Dickinson, K.C., for Mr. Shipwright, contended that the judgment of the Divisional Court was right, and that Mr. Shipwright was not liable for what had occurred. Counsel said that although the walls of the twelve houses had cracked through the use of aerocrete, that did not justify Sir Herbert Lidiard abandoning the whole scheme and rescinding Mr. Shipwright's contract. It had not been established that aerocrete, properly manufactured and mature, was not a suitable material to be used. The builder at the trial had offered to put the matter right for £75.

At the conclusion of the arguments the Court reserved its judgment.

A DISPUTED CONTRACT

Marks v. *Board and Others. King's Bench Division. Before Mr. Justice Rowlatt*

This was an action by Mr. David Marks, of Belgrave Road, N.W., against Mr. V. Board, of Sorre Road, Hampstead, and Messrs. L. Pearlman & Co., estate agents, of West End Lane, Hampstead, under a contract for the alleged sale of a house to the plaintiff.

Plaintiff's case was that he agreed with the defendant's agents, Messrs. Pearlman & Co., to purchase a house in the Sorre Road for £950, and under the document he signed he paid deposits amounting to £95. The vendor had repudiated the contract, and plaintiff now sued the defendant Board, and in the alternative his agents, for alleged breach of warranty of authority, alleging that he could not purchase a similar house in the road on such good terms.

Defendant Board by his defence denied that there was any concluded contract, or that the plaintiff had suffered any damage. The other defendants said they had not committed any breach of their authority.

His lordship, after hearing the evidence, dismissed the claim with costs, declining to allow the second defendants their costs.

He said the case was an unfortunate one. The plaintiff's claim failed, as there was no contract which was enforceable or which could be relied upon. The document was called a memorandum of agreement. It was a formal sort of agreement, with a stamp, and recited that part of an intended deposit had been paid, and that another part would be paid and in fact had been paid. It contained the words "subject to surveyor's report," and was put forward by the second defendants in an endeavour to clinch the matter. It was perfectly well understood that when a person said he would buy, and agreed to everything else, subject to surveyor's report, it meant that he reserved to himself the absolute and undisputed right to say whether or not he liked the surveyor's report. In other words, there was no contract, because the buyer was not yet bound; and if the buyer was not bound, neither was the seller. The document was made to look like an agreement, and to take a deposit when there was no contract was a confusion which misled some inexperienced people. He accordingly dismissed the action.

DIGGING DITCHES : ALLEGED TRESPASS

Perry v. *Penrice. Chancery Division. Before Mr. Justice Luxmoore*

In this case Mrs. H. Perry sought an injunction restraining the defendant, Mr. G. W. Penrice, from digging trenches in plaintiff's land adjoining property known as The Croft, Ash Green, Surrey.

The Croft was the property of the defendant, having been conveyed to him by the plaintiff. The defendant, in his reply to the claim, set up a title to the land in question. He also said there was an agreement under which he submitted that he was entitled to do the acts complained of.

His lordship, after hearing the evidence of the parties, said it was a matter of regret that neighbours should have thought it necessary to bring this action. He was of the opinion that the boundaries were such that the ditches that had been dug by the defendant were outside the property as conveyed to the defendant, and therefore there was no justification for what he had done. He also came to the conclusion that there was no such agreement as the defendant alleged. He granted plaintiff the declaration she sought, that the acts complained of were acts of trespass, and awarded her £5 nominal damages with costs.

PARTITIONING OF PREMISES

L. and W. Whitehead, Ltd., v. *Hansley. King's Bench Divisional Court. Before Mr. Justice Branson*

Plaintiffs, Messrs. L. and W. Whitehead, contractors, of Clapham Road, sued Mr. E. J. Hansley, an estate agent, of 6 Hanover Square, W., to recover the sum of £1,510 for work done in respect of the partitioning of premises in Regent Street.

Defendant denied liability. There was a third party to the action, Mrs. A. M. Barker, a widow.

It appeared that the defendant was the surviving partner in a firm of auctioneers and estate agents, and that the partner who had dealt with the matter, a Mr. Brown, had since died.

The issue before the Court was whether the defendant was personally liable for the work ordered or whether the orders were merely given to the defendants as agents for the third party.

His lordship held that the plaintiffs were entitled to judgment, with costs, but that the defendant should be indemnified by the third party, who admitted that she had instructed Mr. Hansley's firm to do certain work in regard to the partitioning of the premises.

FALSE SALE OF PAINT

London Chamber of Commerce v. *Hamilton Trading Co., Ltd. Merchandise Marks Act Prosecution. Lambeth Police Court. Before Mr. H. McKenna*

In this case, the Hamilton Trading Co., Ltd., of 23 Queen's Road, Peckham, were charged, in a prosecution under the Merchandise Marks Act, with having sold paint with the false trade description of white lead paint, and were fined £15 and £15 15s. costs. The Hamilton Trading Co., Ltd., pleaded guilty. The prosecution was conducted by Mr. C. W. Measor, barrister, instructed by Messrs. White and Leonard.

Mr. Measor stated that there were advertisements in the window of the Hamilton Trading Co.'s shop at 23 Queen's Road, Peckham, of "genuine stack white lead paint," and that there had been two purchases on January 27 last, one upon an oral order for "genuine stack white lead paint," referring to the advertisement, and another upon a written order for "genuine stack white lead paint." The analyses showed that the white lead contained in the tins was less than 7 per cent. of the pigment, over 79 per cent. of the pigment being barium sulphate and over 10 per cent. being zinc sulphide.

TRADE NOTES

Wrought-iron fencing and gates are the subjects of a new catalogue, just issued by Messrs. Croggon & Co., Ltd., of London, Liverpool and Glasgow. Fencing for all purposes is manufactured and supplied by the firm, who are also prepared to make wrought-iron railings and gates in their workshops exactly to architects' designs and specifications. Illustrated in the catalogue are ornamental entrance gates suitable for public or private parks and with attachments for either brick, stone or cast-metal pillars, and with or without balustrading and side gates. Many designs are also shown for wrought wicket gates with cast-iron pillars and fitted with lock or slip bolt for padlock. The firm's specialities illustrated comprise ornamental ironwork for every architectural, municipal and industrial use, and include the well-known "Ceeco" fencing and gates.

Bank News

The Midland Bank has issued a revised edition of a booklet entitled *The Service of the Midland Bank*. Copies are obtainable upon application at the Head Office, Poultry, London, E.C.2, or at any branch. The work contains illustrations of some of the facilities available to the public, a map showing by counties the distribution of the 2,070 branches in England and Wales, and diagrams indicating the growth of the institution. There is also a photographic reproduction of the exterior of the new head office building. In addition to a brief history of the bank, chapters are devoted to several of the principal services rendered by the largest joint-stock undertaking of its kind in the Empire, including a description of the safe deposit service which was recently brought into operation at the head office.

*

The directors of Westminster Bank Ltd. have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £4 shares, and the maximum dividend of 6¼ per cent. on the £1 shares for the same period. The dividends, 2s. per share and 1s. 3d. per share respectively (both less income tax), will be payable on August 1.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

20121. Aluminiumerz Bergbau und Industrie Akt.-Ges. Material for building construction, etc. July 2.

19954. Cardinael, P. Building-block. July 1.

20310. Montagnon, D. J. Roofing or building materials. July 4.

19992. Symons, A. H. Shores for building construction. July 1.

SPECIFICATION PUBLISHED

331345. Glover, C. W., and Heat and Sound Insulation, Ltd. Method of building construction.

THE BUILDINGS ILLUSTRATED

Following are the names of the general contractors and some of the sub-contractors for the buildings illustrated in this issue:

Hampstead Garden Suburb Institute (pages 115–119). General contractor, Albert Monk. Sub-contractors: Ragusa Asphalte Paving Co., Ltd., asphalt; J. H. Sankey and Son, Ltd., "Fosalsil" concrete blocks; Indented Bar and Concrete Engineering Co., Ltd., reinforced concrete; S. E. Collier, Ltd., bricks; Empire Stone Co., Ltd., artificial stone; Archibald D. Dawnay and Sons, Ltd., structural steel; Stevens and Adam, Ltd., oak flooring; Colley, Meikle & Co., Ltd., central heating; G. A. Weston, electric wiring; T. A. Harris, Ltd., sanitary fittings; Francis Norton and Son, Valtor patent spring flooring to gymnasium; Carter and Aynsley, Ltd., door furniture; Gillett and Johnstone, clock in clock tower.

House at Abbots Langley, Herts (page 124). General contractors, Payne Bros. Sub-contractors: Tyler and Freeman, electrical work; Alfred Goslett, sanitary fittings; W. T. Lamb and Sons, roof tiling; Van Straaten (Martin) & Co., wall tiling; John Elbo, cork flooring; "Atlas White" Cement Co., exterior finishing work.

MODERN ADVERTISING

Although the title of Greenly's exhibition, held at the Royal Water Colour Society's Gallery, London, S.W.1, was Modern Advertising, there was an instructive outline of the development of advertising from B.C. to 2030 and a whimsical glimpse into the possible future. The earliest exhibits were of Ancient Rome, and included an example of the type of advertisements found on Pompeian tablets, which, it was stated in the catalogue, buried in lava by the eruption of Vesuvius in A.D. 79, have been preserved for nearly two thousand years. These inscriptions are advertisements for gladiators and poets, containing remarks and opinions of the Pompeians, with reference to their fancies and favourites in the circuses and other public exhibitions. Among the Roman tradesmen's signs were three, to advertise respectively a bakery, a dairy and a wine shop, found in the ruins of Pompeii, and one, of a shoemaker's, which came from Herculaneum. The first printed advertisement in English we found appeared in A.D. 1477. It was printed by William Caxton, and announced the publication of his *Salisburi pye*. A gem of the nineteenth century was one of the famous Sequah's direct-to-the-public advertisements. Coming from America in the early nineties, he opened at Portsmouth with a gilded carriage, cowboy band and a troupe of Redskins, and, it was said, performed extraordinary cures on persons afflicted with rheumatism. The modern examples of advertising by Greenly's numbered seventy-six, every one of which attracted and held the attention of the visitor as much as it must have held that of the reader of the newspaper in which it appeared.

COMPETITIONS OPEN

July 31.—The Luton Town Council invites architects to submit designs for the proposed town hall, which is to be built on the site of the old town hall, at an approximate cost of £250,000. Assessor: Sir Brumwell Thomas, F.R.I.B.A. Premiums: £500, £300, £200 and £100. Particulars obtainable from W. Smith, Town Clerk, 2 Upper George Street, Luton. Deposit £2 2s. Latest date for submission of designs: July 31.

July 31.—The Southport Borough Council invites local architects to submit designs for a new Market Hall. Assessor: Percy Worthington, F.R.I.B.A. Premiums: £100, £50, £35, and £20. The hall is to contain fifty-six stalls and a manager's office. The site is 191 ft. by 95 ft. The estimated cost is £13,500. Conditions obtainable from the Town Clerk, Municipal Buildings, Southport. Latest date for submission of designs: July 31.

August 30.—The Carlisle Corporation invites British architects to submit designs for the façade to English Street and the Victoria Viaduct, suitable for shops and business premises. The site was previously occupied by the Prison. The total length of the frontage is approximately 358 ft. Assessor: Francis Jones, F.R.I.B.A. Premiums: £300, £200, and £100. Particulars of the competition, etc., may be obtained from Percy Dalton, A.M.INST.C.E., A.R.I.B.A., City Engineer, 18 Fisher Street, Carlisle. Deposit £1 1s.

September 1.—The Bangor (Co. Down) Borough Council invites architects or town planners to submit designs in competition for laying out the sea front within the Borough. Assessor: Professor Patrick Abercrombie, F.R.I.B.A. Premiums: £150 and £50 for first and second places, respectively. Copies of the conditions and plans will be forwarded on application to J. Milliken, Town Clerk, Borough Council Offices, Bangor, Co. Down. Deposit £1 1s. Latest date for submission of designs: September 1.

September 30.—The Isle of Man Education Authority invites architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums: £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs: September 30.

November 30.—The Guildford Cathedral Committee invites any architect, who has been engaged in the design of cathedrals or churches, to submit for examination drawings and other illustrations of his works; or a design for a cathedral. Not more than three sets of drawings may be submitted, packed in one large portfolio. The Committee, with the assistance of Mr. Walter Tapper, A.R.A., will examine the portfolios, and select a limited number of architects for the Final Competition. Each architect selected for the final competition will receive 500 guineas, whether his design is accepted or not. Portfolios should be addressed to The Venerable the Archdeacon of Surrey, The Diocesan Office, Lloyds Bank Chambers, Guildford, not later than November 30.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

• In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

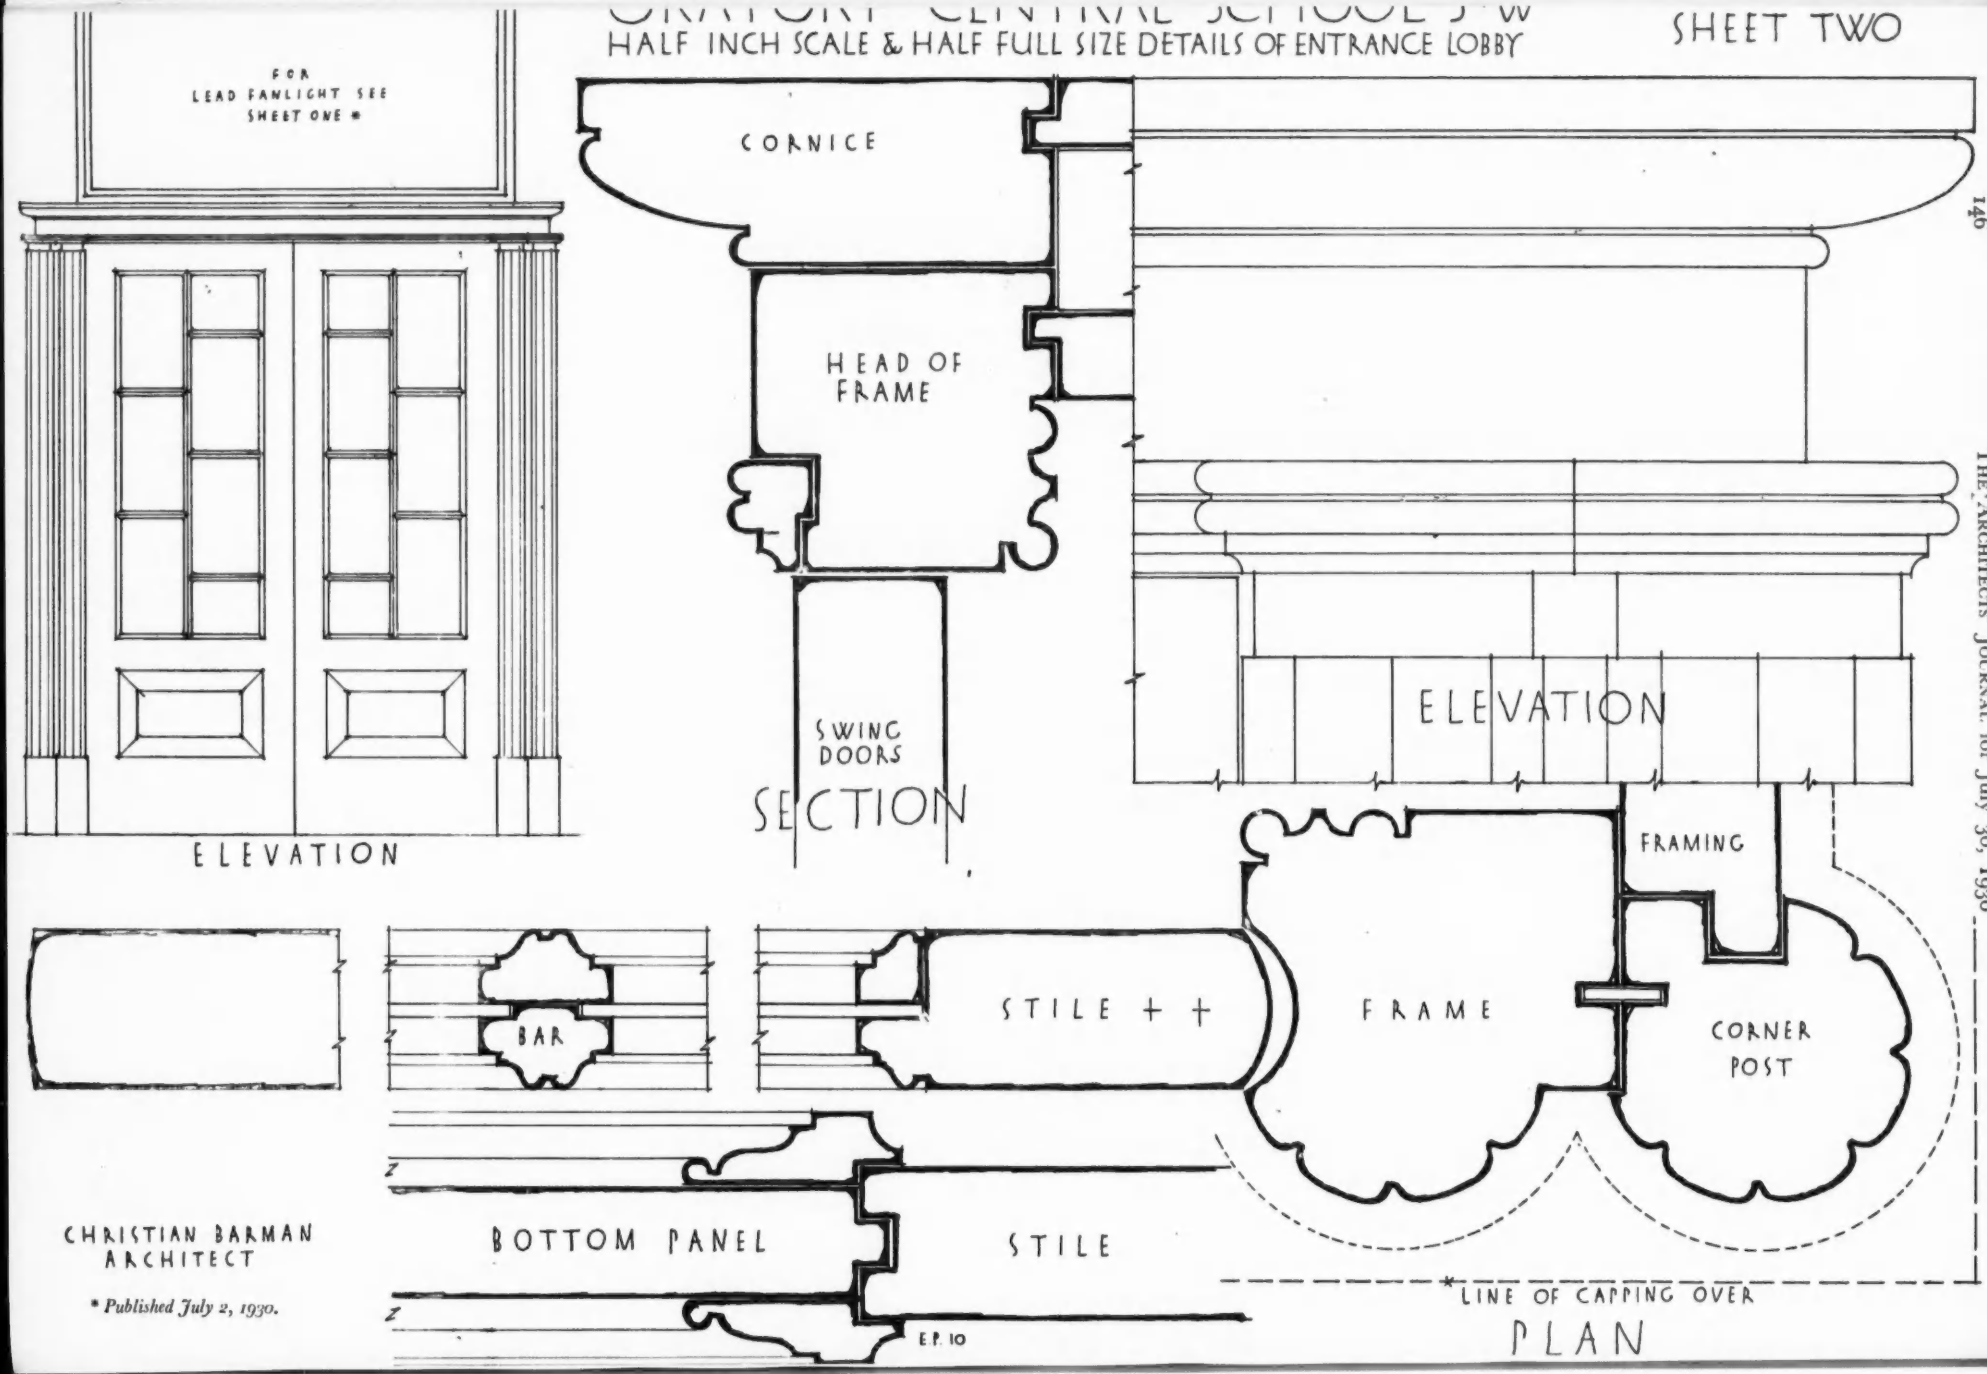
SCALE DETAILS:
A WEEKLY SERIES

ENTRANCE LOBBY AT THE ORATORY CENTRAL SCHOOL, CHELSEA, S.W.
DESIGNED BY CHRISTIAN BARMAN

THE inner doors forming this lobby are of wood, painted a bright Venetian red, with the upper and larger panels glazed in an unusual rectangular manner. The lower solid panels are given a bolection moulding.

The treatment of the inner corners of the lobby—which are formed of two interlocking reeded columns—should be noticed, the doors themselves being hung to the inner pair of these columns and the side framing of the lobby being housed to the outer pair. The panelled soffite of the lobby itself is finished in an oyster-white tone, while the door furniture is chromium-plated. These doors are glazed with fire-resisting glazing, wired in small squares, which, while satisfying the requirements of the fire inspectors, is at the same time in keeping with the design as a whole.



The working drawings overleaf show these doors to ½-in. scale, with details to half full-size. (The outer doors were the subject of the Scale Detail in the issue dated July 2, 1930.)

The drawing may be read with ordinary architect's scales—½ in.; and 6 in.=1 ft.

WEDNESDAY, JULY 30, 1930

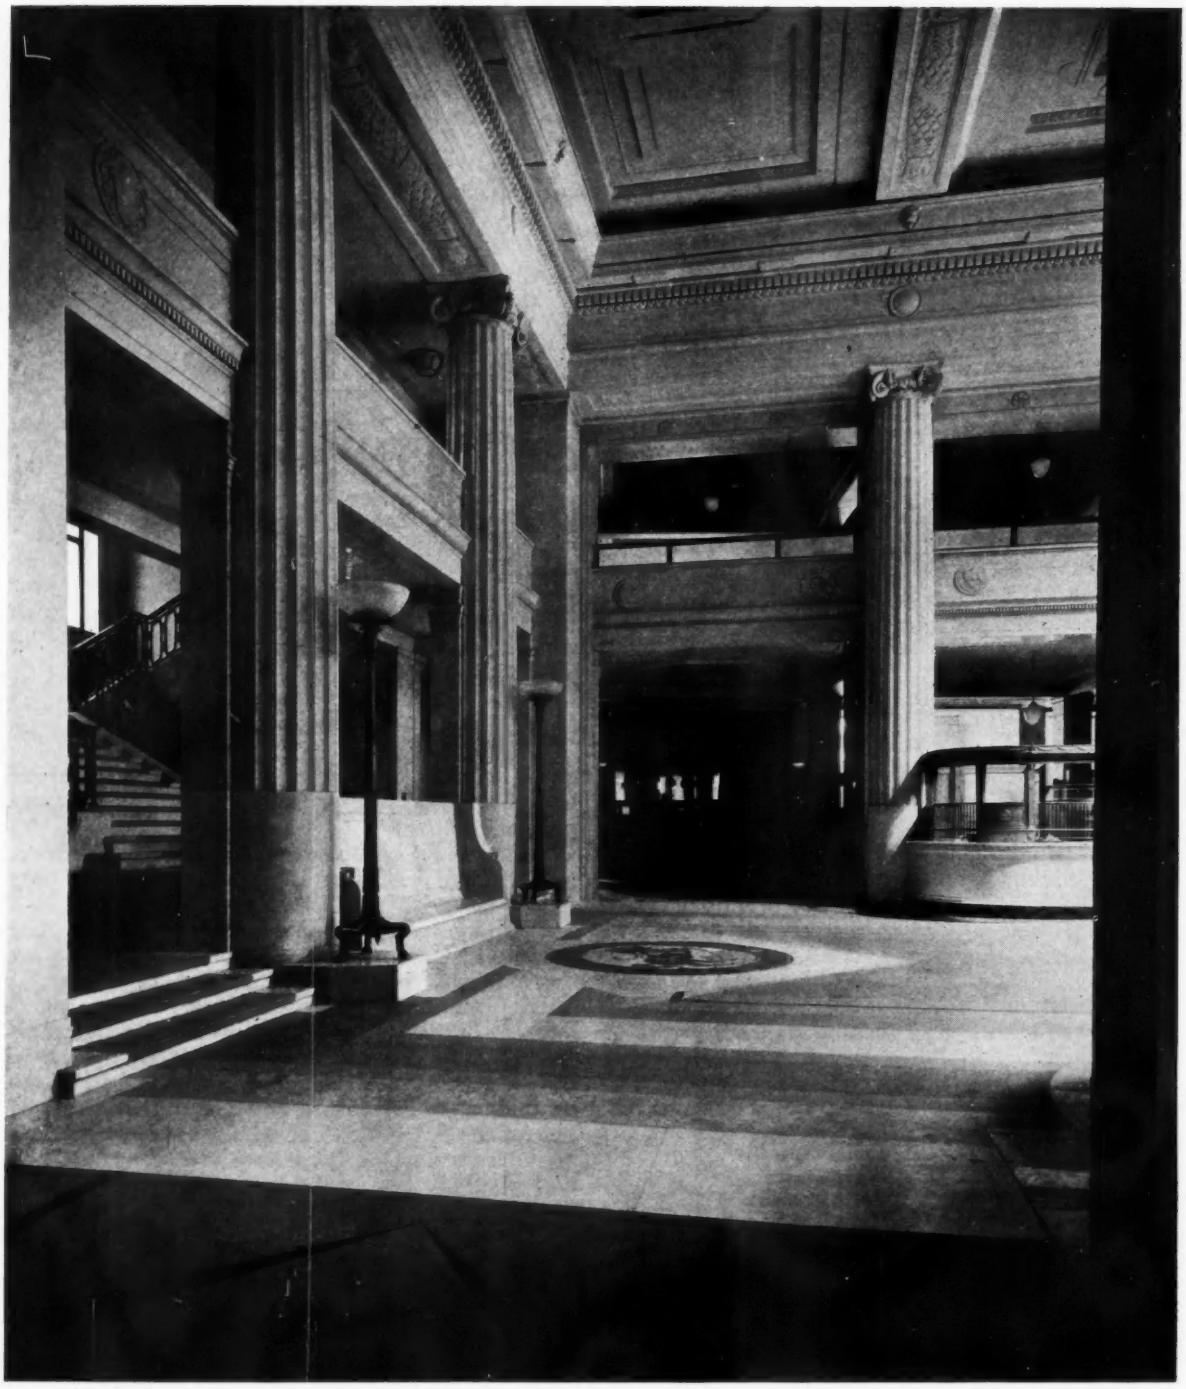
AN EXHIBITION WITH A DIFFERENCE

"The moment has arrived when the architects may collaborate with all *the artists in an exhibition that will comprehend the whole of house-making."*

IT is hard to know in this country at what stage of artistic development we have at any moment arrived. A clamorous Press, a vocal public, an enormous pseudo-uplift movement—all conspire to mask the genuinely inspired creations of a smaller band of artists, so that leadership by those best qualified to lead is impossible so long as there is any attempt to influence all but an educated minority.

It must be obvious to all who have turned the pages of *The Architectural Review* that there *is* a growing minority whose tastes lead them to prefer the work of responsible artists to the dreary imitations of past styles purveyed by the old type of interior decorator, or even to the completely finished product of an architect's office. For this minority the artist may express himself in design of all kinds. Not only houses, not only pictures and sculpture, but fabrics, carpets, furniture, pottery, glass, and everything that the wit of man can make more satisfying to the eye—all these are the artist's field.

Now, for years past this has meant that these things were designed by Continental artists; for, being insular, we look outside for our luxuries. Today we can count upon men whose inspiration may be whatever this age makes it, but in some way also is a sort of English vision, just as Paul Nash's inspiration may be the product of much that comes from France, but is English all the same. And we feel that, as our artists begin to express themselves and find architects to work with and clients to work for, the products of their labour should be brought together from time to time so that not only they, but the members of the educated minority, may see them and sense the direction in which they move.



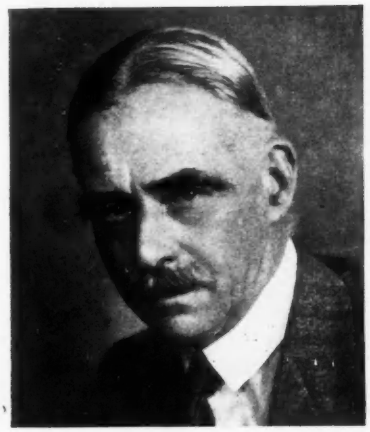
We stress the minority movement because it seems to us that some things spoil by touching, and that if there is to be any real direction given to this work it must be given by the encouragement of architects and by a really appreciative public of interested people.

Taste cannot be broadcast. It is an acquirement: nearly a privilege, just as the appreciation of architecture is.

Architects have often baited the public with photographs and little models. In vain. The public, even the minority public, is interested in homes; in interiors; in things. We therefore suggest that the moment has arrived when the architects may collaborate with *all* the artists in an exhibition that will comprehend the whole of house-making. In this exhibition, which might be annual and under the ægis of the R.I.B.A., there would be shown the work of those men whose fabrics we use or would like to use; the very best of the furniture, pottery, glass, of sculpture, ironwork, lighting—the whole gamut of designing and making.

But we stipulate that it shall be of the very best of our time: modern, not in the sense of it being necessarily ununderstandable or uncomfortable, or like this or that thing done in Germany or Sweden, but something representative most particularly of us and of our time. And it shall not be retrospective; nor arty; nor crafty.

To such an exhibition we feel that a public would be drawn; coming to see sculpture and pictures, but staying to see the whole show, including the architecture that houses the lesser things. It would be an education for them, and for us, as architects, superior to any other that might be devised; and we feel, too, that as this exhibition added year to year, producing annually a fine illustrated catalogue of its exhibits, the sense of direction would be defined and strengthened, would find response outside, and gain for itself a new prestige.



THE MARBLE BANKING HALL AT LLOYDS

Lloyds Bank is about to move into its new headquarters. The building has façades to Cornhill and Lombard Street, E.C., and has been described by Professor C. H. Reilly as the most monumental of our English banks, not excepting the Bank of England itself.

The banking hall is built entirely of marble. Twelve huge columns rise to the ceiling, where light enters through glass concealed in deep coffers. At the base of the columns the marble counter forms three sides of a rectangle. The seat seen at the foot of the two-way marble staircase is hewn complete out of a solid block of marble. Incorporated in the design of the rubber floor is a mosaic medallion by Gilbert Bayes, showing the "Black Horse," the sign of Lloyds Bank.

The architects are Sir John Burnet and Partners, and Campbell Jones, Sons and Smithers.

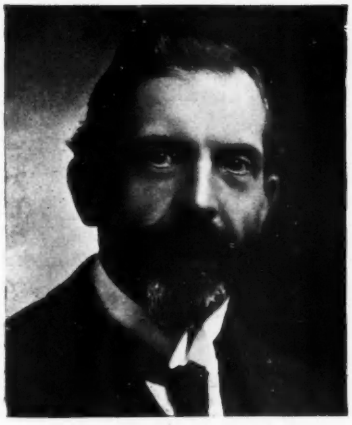
THE R.I.B.A. NEW BUILDING JURY OF FIVE ASSESSORS

Robert Atkinson
Charles Holden
H. V. Lanchester
Sir G. Gilbert Scott
Percy S. Worthington

Sir Giles Gilbert Scott.

THE R.I.B.A. JURY



THE names of the jury appointed to assess the forthcoming competition in which architects will be invited to submit designs for a new building to house the R.I.B.A. have at last been announced and will meet with the general approval of the profession. The Competition Committee has performed its delicate task with discretion and has succeeded in holding the scales evenly between the various interests and schools of thought which need to be represented on the jury. The constitution of this body does not differ in essentials from that recommended in the pages of this JOURNAL, although the suggestion that one of the assessors should be a layman has not found favour with the Committee.

*

All the five names announced occurred frequently in the list of jurors submitted by our readers who replied to the questionnaire which we issued to them a few weeks ago. Sir Giles Gilbert Scott is, of course, a natural choice. Although he has won only one competition, he gained more prestige thereby than do most architects who have been awarded the prize on many occasions. Thus he is fully entitled to be described as a " competition architect." Moreover, the inclusion of his name in the list of jurors will please those who like to be assured that at least one practitioner of the Gothic style will be represented. Mr. Percy Worthington has an obvious claim to be included, not only because his work is so scholarly, but because he is qualified to speak for the provincial architect. Mr. H. V. Lanchester has been associated with so many competitions, either as prize-winner or as assessor, that his great experience will be invaluable. Mr. Charles Holden is distinguished for a modern outlook, and his presence on the jury will be especially welcome to those competitors who wish to make stylistic experiments. Mr. Robert Atkinson, too, is not ashamed to espouse the cause of the modernists, as his award in the Stratford Competition proved. This is indeed an excellent jury, one to inspire complete confidence in the competitors, who, even at this moment, must be getting ready for the most thrilling contest this generation of architects has witnessed.

BIRMINGHAM'S HOUSING SCHEMES

Birmingham has recently built its 30,000th municipally-built house—an achievement neither equalled nor nearly approached by any other city. I have by me a booklet issued to celebrate the event. It shows aerial photographs of estate after estate, planned in the half-formal, half-informal way one is now very familiar with. The colossal effort represented by these estates must occupy nearly a

Henry Vaughan Lanchester.

" The architectural profession, to an extent previously undreamt of, is torn with internal faction."

In such words the difficulty of nominating a jury for the new R.I.B.A. building was summed up in our leading article of May 7 last, wherein readers were invited to name assessors of their own choice.

" Today," we continued, " it is upon the formation of . . . a middle party that our hopes . . . must principally depend."

To what extent these hopes may be realized may be judged from the official decision announced above.

Robert Atkinson.

quarter of the open space within the western and southern boundaries of the city, a proportion which only the map itself can properly qualify.

★

The houses are of their class good, but much below the average level of design of similar houses in London, Liverpool and Nottingham, with too little variety in plan to make fullest use of the ambitious road plans. There are, I noted, few properly planned corner blocks, without which there can be no suavity or finish.

★

From the handsome booklet it would appear that all this work was accomplished without architectural aid, for there are photographs of the mayor, chairmen of committees and the engineer, but I could find no mention of the designers upon whom fell the real responsibility for the work. Since it is creative work of a high order and considerable magnitude, this omission seems to me like civic ingratitude.

THE ARCHITECT'S DAUGHTER

I have just read *Miss America*, the kindly, ironical essay in verse on the modern woman, by W. J. Turner. Altiora, for that is her name, soliloquizes on the missing thing in her life as she waits in the Sierra Nevada for her divorce. Her father was "the town's boss-boy in architecture," with a staff of fifty architects, and laboured to adorn Philadelphia with skyscrapers, "scanning each cubic foot to the elimination of waste and useless ornament." Growing dejected at the sight of his efforts being demolished within twenty years of their erection, he trips abroad, but "a more dim and dismal lot of buildings than in London I never saw the poor dear gaze so stunned on." Altiora finishes her survey of architecture with the extraordinarily acute conclusion "that there are epochs when the real creation is not by individual men but masses moved by a simple universal passion." But these pass and leave behind a "multitude of asses."

THE BLOT ON PHILADELPHIA

The rest of the book is spent in convincing the reader that she is one of that multitude. Obviously her mother failed to lay her across her knee for the much-needed accolade of her father's tee-square. After marrying another ass, bearing three daughters, and committing adultery out of pity, she is left with her soliloquy. The woman is obviously bored stiff. But why? Are there (to paraphrase Mr. Petulengro) no stars, no sun, no clouds, all good things, in Philadelphia? Or did her father's skyscrapers blot them out, and was that the reason why the boss-boy's architecture is thrown upon the screen of the soliloquy?

★

Altiora. But it may be Mr. Turner's idea to show the skyscraper and Miss America as parallel developments. The building is the outcome of intellect working without passion for commerce. The shape of each skyscraper depends on its value as an advertisement and as a commercial speculation. Its construction is a piece of mathematics. Its design is mixed with brains but not with emotion. It is a mouse delivered of a mountain. Poor Miss America stands beside it, a wonder of intellect—but hers is not the face that "burnt the topless towers of Ilium!"

THE "STYLE FACTOR" IN THE U.S.A.

"Dear Sirs" (writes one who superscribes himself "Marketing Counselor" [*sic*], in addressing THE ARCHITECTS' JOURNAL from New York) "I am making a study of style tendencies in architecture. This is in connection with a book which I am writing, entitled *Styling to Meet Demand*, and also in connection with some work for one of our clients in the architectural and building materials field. I am interested to determine how important the style factor is today in architectural design, and I write in the hope that you will be willing to give me your opinions. Do you feel that a new style of architecture is being developed which is likely to last for a substantial length of time? Do you feel that this is likely to affect greatly the materials used? Will you give me your idea as to the nature of these style changes, and of the designs which will probably be favoured? We are particularly interested in roofing materials, and are desirous of having the above questions discussed in terms of roofing materials. What types of roofing materials do you think will gain, what types do you think will lose, and how rapidly do you think these gains and losses will be effected?"

★

"Marketing Counselor" who thus throws himself into the JOURNAL's arms in a quest for nourishment is, I fancy, what in America is called a "dynamo," and in England—I am much afraid—"hot stuff." He is certainly hot in his pursuit of the future, for he is bent on no less than anticipating its direction and lying doggo in its path, like a blood-leech, to clutch it as it passes. This is "getting there" with a vengeance, and it is a pity that the quarry is so wayward a thing as architectural style. The wind bloweth where it listeth, but the vagrancy of style knows no such choice. I hope that some of our readers will be able to give answers to his questions such as will aid our American correspondent in his heroic exploit of getting ahead of the clock; but I do not expect it. For one thing, we have not in this country yet learnt to conjugate the verb "to style," used in the sense of imparting style; for another, since continual modification of style is due to the designer's wish always to get away from familiar ideas and explore fresh ones, to have a clear prevision of the next style ahead would make everyone turn aside to something different; and for yet another, architecture is the child of circumstance and architects are its slaves.

★

Adam Smith's well-blown-on axiom that demand creates supply is particularly at fault where architectural style is concerned; it is rather the supply of new economic and efficient devices and materials that creates the demand for new styles. Anyone, for instance, who could supply a form of flat roof which decisively answered the present objections to that construction, would create demand for a style. I think therefore that, if the modesty which prevents the counsellor from recommending himself with more than one "I" will allow him, he ought to tell his suppliant marketers that though they may, by forethought and enterprise, give direction to style, they can never hope to ambush it.

THE A.A. EXCURSION

By the time this issue of the JOURNAL appears upon the library tables, writes a correspondent, some ninety-five members of the A.A. will be crossing the North Sea from Esbjerg to Harwich on the return journey from their visit to Sweden and Denmark. A few will possibly be feeling a little seasick, some rather fatigued, but all undoubtedly full of enthusiasm for what they have seen and experienced during their fortnight's tour in those two

delightful countries. Our forefathers may have bitterly resented the incursions of fair-haired Norsemen; nor can the Danes have been very pleased with us when Nelson returned the compliment by dropping shots through the roofs of Copenhagen churches; but this friendly invasion of English into the lands from whence came the long ships is a very different affair, and the visitors have been everywhere received in the kindest way by hosts who have seemed genuinely glad to see and entertain them. The party has not only feasted upon many architectural delights, but has met with charming hospitality from nations with whom it is easy for English people to feel at home. Many have been fortunate enough to be entertained by Swedes and Danes in their own homes, and have been struck with their cordial reception, coupled with a slight formality which is pleasant to experience. The Swedish language is not too easy for the average Englishman to learn, but the word "Skal," with which a toast is drunk, will not soon be forgotten.

★

Three towns have been visited—Gothenburg, Stockholm, and Copenhagen. Each possesses its own characteristic atmosphere and contains good work, both old and new. Thanks to the wide distribution of illustrated magazines and other means of information, we are not so ignorant of Continental architecture as we were, but all the photographs in the world are not as good as the sight of a good thing in the flesh, and there was nothing seen on the tour that did not come up to expectation.

★

The object of closest attention was possibly the Stockholm Exhibition. Fierce discussions have raged, and are still raging, around this exciting show. The Swedes themselves are by no means united in their opinion, and a sharp divergence of view could be noted among the party. Quite the hardest-worked word in Sweden at the present time is *Funkis*, a word far easier to say than our own *Functionalism*, but meaning the same. We in England are beginning to know very well what it means and stands for, and anyone—whatever his nationality—who felt uncertain about it before he saw the Exhibition must have come away with a far clearer understanding of it than could be found by reading countless treatises, even if amplified by footnotes.

★

A full description is not wanted, as it has recently been described and illustrated here; but what no photograph can give is its wealth of colour. The buildings themselves are mainly white, but great sweeps of clear colour applied here and there, bright awnings and masses of flags, make the place delightfully gay. The love of flags is a national characteristic of Sweden: they are flown from buildings, trams, cars, taxis, and even appear as a decoration upon dinner-tables; and they have been used by Asplund in the Exhibition with great skill and enormous decorative effect. The site is undulating and slopes down to the north bank of a broad sheet of water, and faces the hills and trees of the Djurgarden on the other side. Symmetry has not been sought, since the site does not call for it; but the designer has attempted something far more difficult, and, in the handling of masses, the feeling for scale, proportion, harmony and contrast, has brought off successfully a magnificent composition. Every advantage has been taken of the contours and all natural features; flowers, most carefully disposed, appear in great quantities, and every small detail has been considered, even to the design and colour scheme of the uniforms of the attendants and the lettering on the smallest kiosk. The Exhibition is making a great hit and may have far-reaching effects, and, whatever one thinks about the merits or demerits of *Funkis*, gives one an enormous thrill.

★

The complete success of the whole tour is largely due to the excellent arrangements made by those on the spot who gave up many hours of their time in organizing and conducting the visits, and the A.A. is very grateful to them all. Ladies and gentlemen, the toast is: "The Architects of Sweden and Denmark. Skal!"

GUILDFORD CATHEDRAL COMPETITION

The conditions of competition for the proposed cathedral for Guildford again appear in this issue of the JOURNAL.

Harold B. Rowe, A.R.I.B.A., who has won the Brenforce Travelling Scholarship, of the value of £300, and the gold medal awarded by the Institution of Structural Engineers, again secures that honour for the borough architect's office of Newport, Mon. When instituted three years ago, it was won by the deputy architect, Johnson Blackett.

They discover a very interesting manner of arriving at their objective, for though there might be objections to a competition confined to ecclesiastical architects only, there can be nothing said against a preference for men whose tastes have led them towards church design.

CALTON JAIL SITE

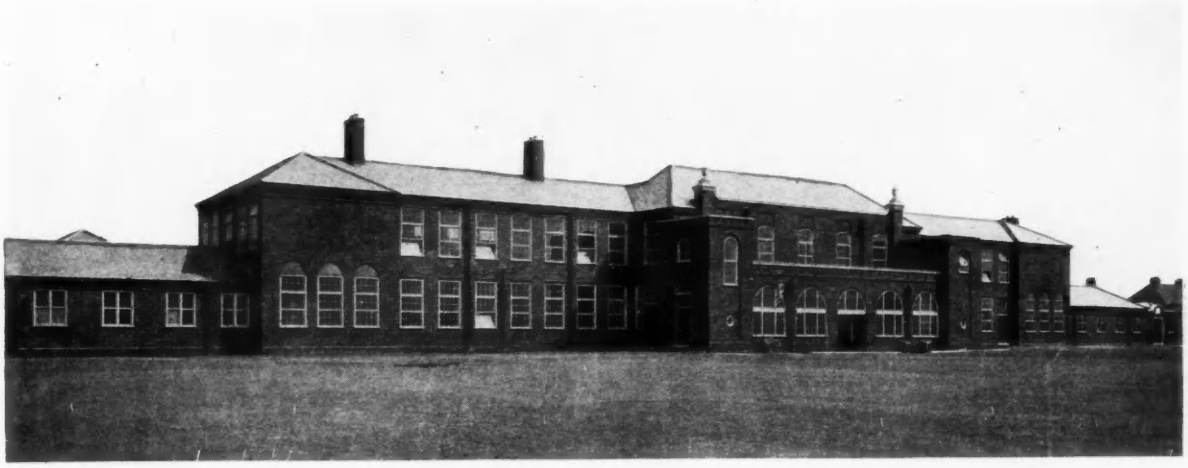
Public opinion in Edinburgh is oscillating between the need for a castellated or a Greek style of architecture for the Government buildings on Calton Hill, whereas in the minds of most architects the controversy is confined to a question of degree. Who can design the best building for the site: the Office of Works or an individual? It appears that when the Edinburgh Corporation saw the models and understood the terms of an official ultimatum that left them with the Whitehall design or nothing, they felt that an official building was better than none at all. The pity of the thing is that our argument is carried on in terms of the best that can be got, but is fought with any weapons that come to hand. The Office of Works will probably win the round, and their building will as probably be a quite creditable affair that takes due cognizance of its noble surroundings and high purpose. I have not seen the models, and the only reference to the design that frightens me is a reference to dormer windows (a wearisome foible of the Office of Works). Otherwise, marked horizontality and restraint are factors that promise well. The whole principle is nevertheless wrong, and the battle is not yet over, nor is it for ever to the strong.

ASTRAGAL

The main front to Belcher's Lane, Bordesley Green. The school stands on a site of about ten acres, and provides accommodation for 474 girls and boys.

SECONDARY BOYS' AND GIRLS'

DESIGNED BY



THIS school is the latest to be completed by the City of Birmingham Education Department. It includes sixteen classrooms, of varying sizes, providing accommodation for 474 children. The assembly hall is the central feature of the plan, and on two sides are open quadrangles around which are grouped the boys' and girls' departments. The gymnasium and the science department are planned at the rear of the building, overlooking the playing-fields. Adjacent to the gymnasium are large changing-rooms, fitted with baths for boys and girls, each having separate access both from the playing-fields and from the inside of the building.

The science and practical rooms include physical, chemical and biological laboratories, and an art room. There are also a woodworking room for boys and a domestic science room for girls.

Overlooking the playing-fields are the staff rooms, and in the front portion of the school the rooms for the head

The main entrance from Belcher's Lane leads through a vestibule into the entrance hall, facing which is the assembly hall. On the left of the entrance hall is the headmaster's room, and on the right the senior mistress's. Above is the library.

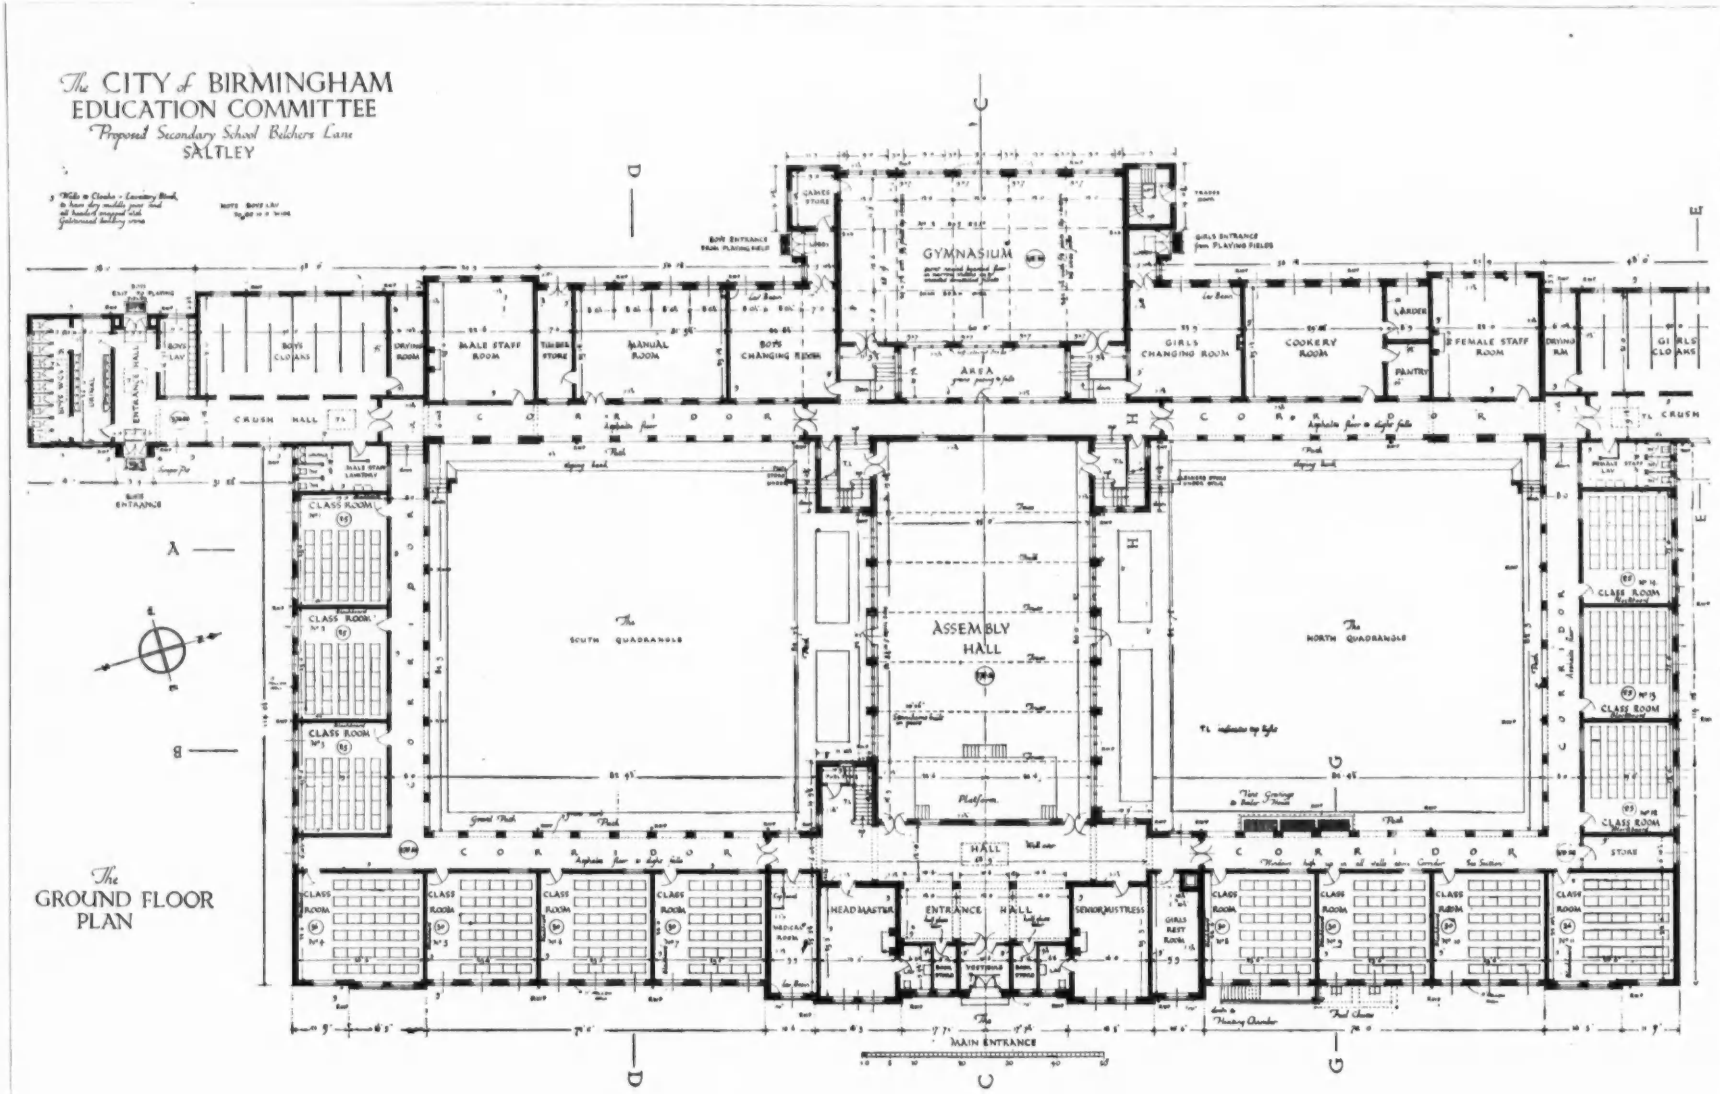
Looking from the playing-fields. In the centre of this side, with semicircular-headed windows and doorway, is the gymnasium, a near view of which appears below.

SCHOOL, SALTLEY, BIRMINGHAM

H. W. SIMISTER

master and senior mistress. In close proximity to the main entrance is a medical inspection room.

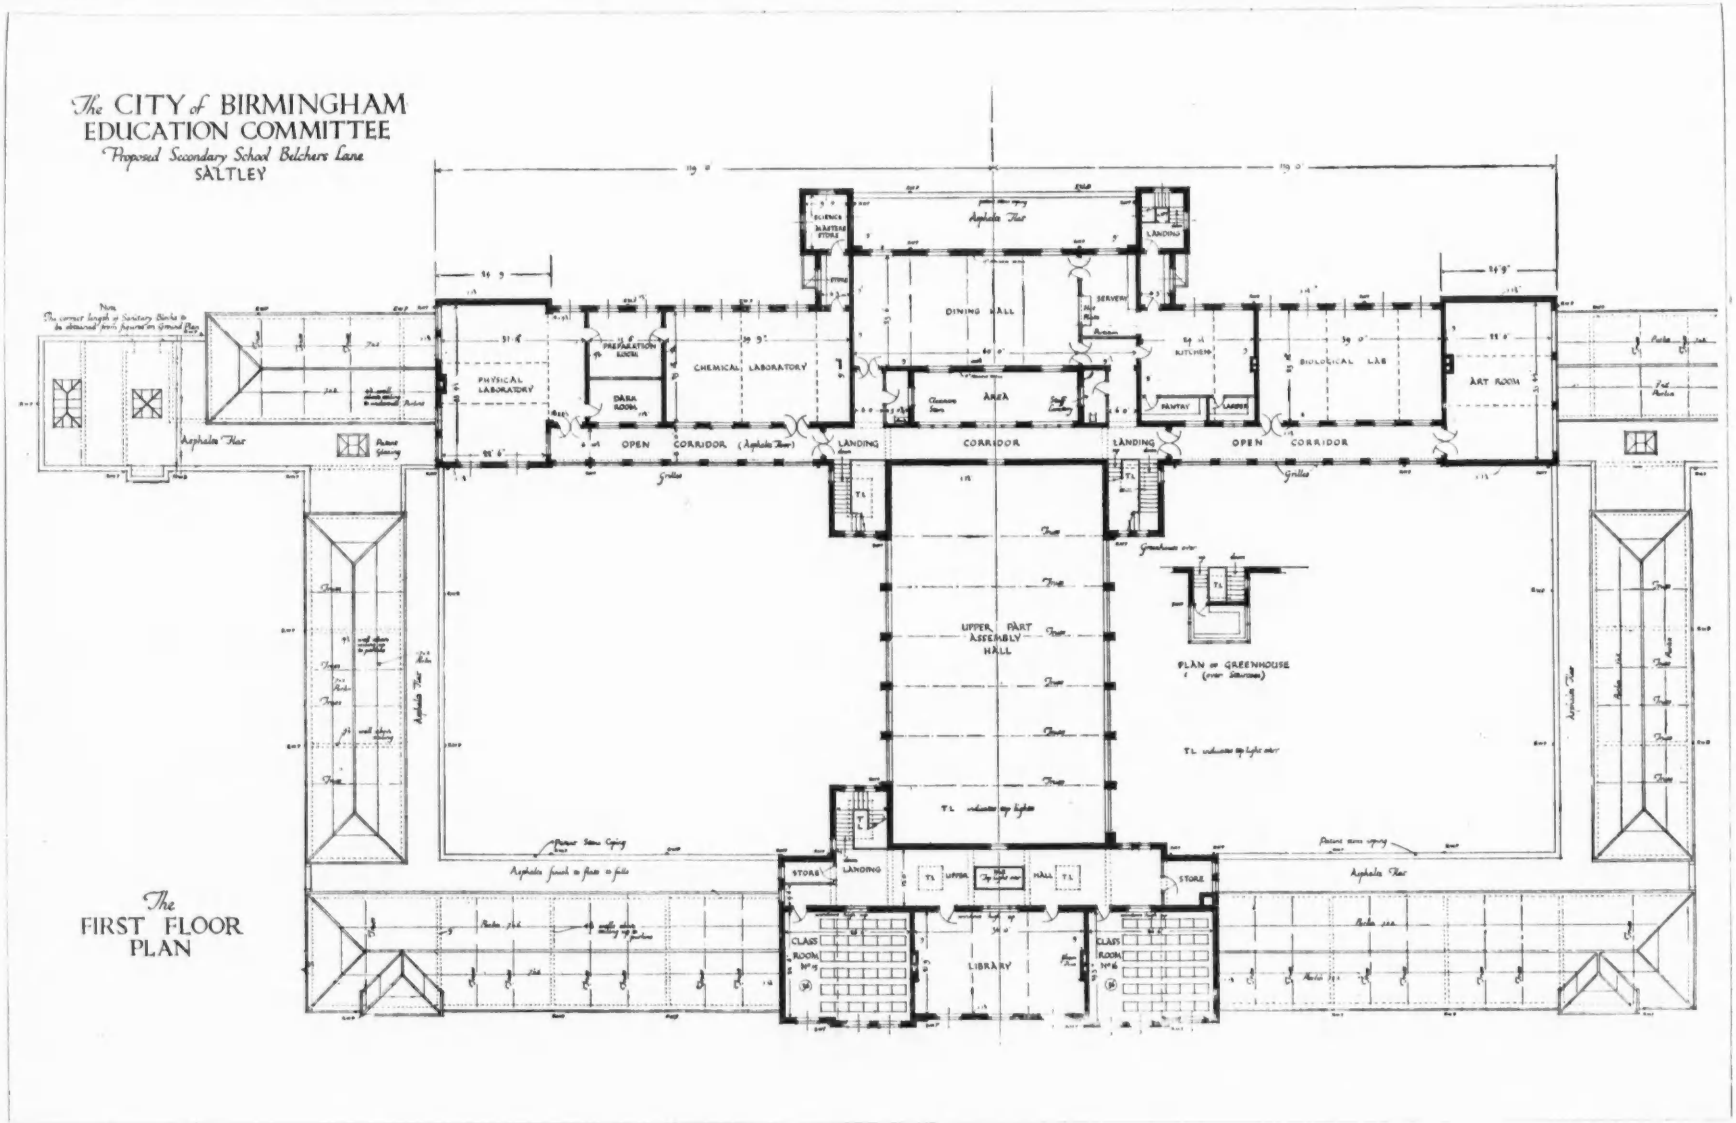
Separate cloak rooms, lavatories and drying-rooms for damp clothes are provided for the boys and girls. They are planned at either end of the building. All lavatories are approached from the inside of the school through "cut-off" lobbies to ensure efficient ventilation.



On the upper floor in the front block is a large room to be used as a school library. On this floor also is a dining-room to accommodate 100 children.

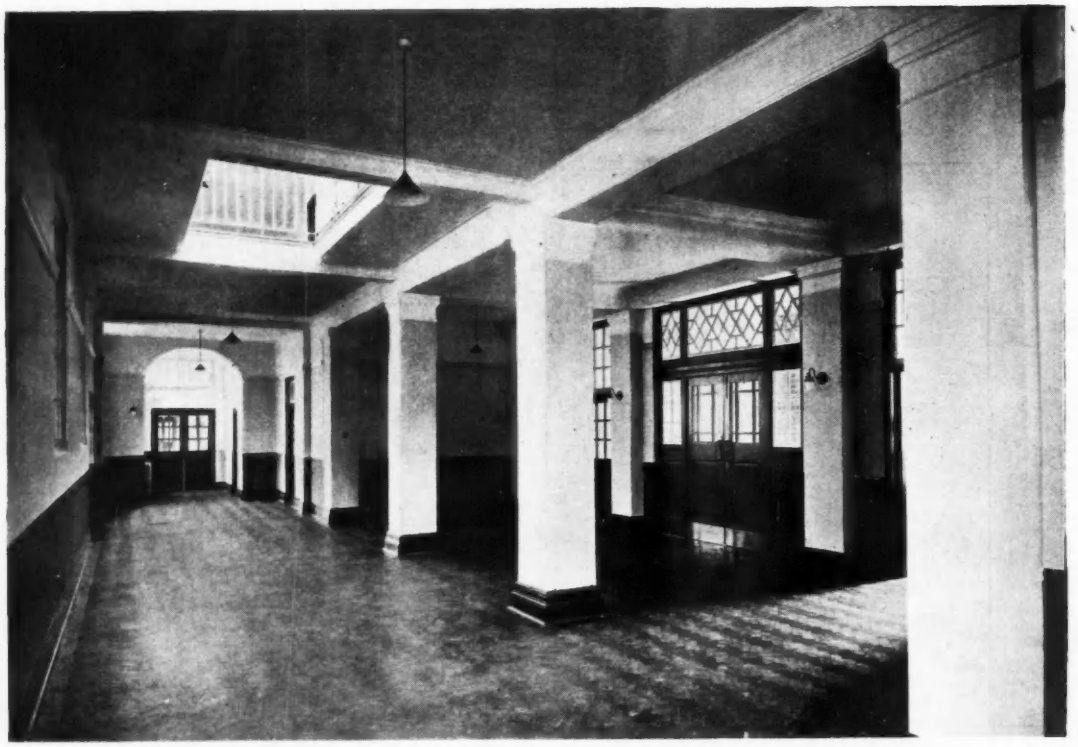
All the teaching rooms, halls and laboratories, etc., are lighted on both sides, thus ensuring thorough ventilation, ample light and the maximum amount of sunshine.

The school is built of multicoloured bricks with patent stone dressings sparingly used. The roofs are covered with slates. In addition to the playing-fields there are tennis courts and a football and hockey field.



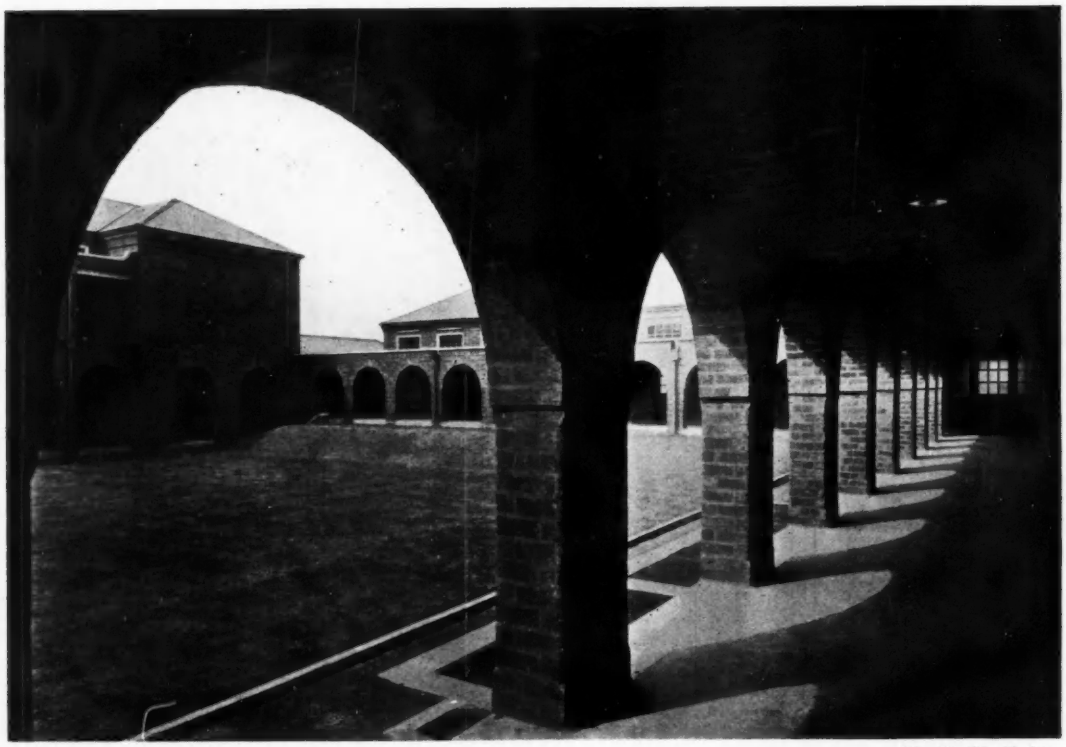
The gymnasium on the ground floor is 60 ft. long by 35 ft. wide, and is second in size only to the assembly hall (see plan on page 154), which measures 80 ft. by 45 ft. Above the gymnasium, and set back from the façade, is the dining hall.

On the ground floor the entrance hall, the assembly hall and the gymnasium occupy the centre portion of the school, and are planned one behind the other to divide the boys' from the girls' departments. The boys occupy the left half of the school and the girls the right half. Each department is provided with a quadrangle and with seven classrooms. In addition, there are a manual room for the boys and a cookery room for the girls. The architect's drawing has been curtailed on the right: the lavatory that occurs here is similar to that seen on the left.



departments. The boys occupy the left half of the school and the girls the right half.

been curtailed on the right: the lavatory that occurs here is similar to that seen on the left.



Saltley Secondary School.] [By H. W. Simister.

The first floor is planned as two independent units, separated by the upper part of the assembly hall and approached by separate staircases. In the front portion of the school, above the entrance hall, are two additional classrooms, making a total of sixteen, and the school library. In the rear portion are the dining-hall, art room and physical, chemical, and biological laboratories. Over the right-hand staircase is a greenhouse. A caretaker's house has been built on a site near the school. Numbers in circles indicate classroom capacities.

The entrance hall, looking towards the corridor leading to the girls' department. In the left-hand wall are the doors of the assembly hall. On the right-hand side of the photograph is the main entrance from Belcher's Lane.

Saltley Secondary School.] [*By H. W. Simister.*

A view of the girls' quadrangle from the corridor, or cloister, from which access is obtained to the classrooms. A similar quadrangle is provided for the boys. In addition, there are playing-fields, tennis courts and a football and hockey field.

THE MANSARD ROOF

BY E. MAXWELL FRY

"A building shall not be erected of, or be subsequently increased to, a greater height than eighty feet, exclusive of two stories in the roof . . ." So runs section 47 of the Act of 1894; and hence the mansard roof, characterized here as uneconomical and unsound.

ONE of the distinguishing features of contemporary architecture in London is the prevalence of a type of roof which anyone who is at all familiar with the steel-frame architecture of America or the reinforced concrete architecture of Germany and the Continent must find illogical and very difficult to explain. I refer to the mansard roofs of Regent Street and elsewhere, which have become accepted currency for most architects because they are to be found in profusion and variety, but which, nevertheless, are to be challenged from every point of view as an undesirable element in the body of architecture as it flourishes at this present.

If it can be proved to be a worthy and homogeneous expression of something which modern architecture should express and must include, then it must stay. If, on the other hand, it can be proved an excrescence, then it should be replaced by something better.

The origin of this mansard roof is not very far to seek, and I doubt whether there is much question that the roof is the result of too close a reading of a building bylaw that was originally framed to ensure that new streets should have a certain minimum allowance of sunlight and air, but which quite certainly had no intention of dictating the forms which modern buildings were to assume.

The bylaw in question is of the Act of 1894, where, in section 47, one reads that "a building (not being a church or chapel) shall not be erected of, or be subsequently increased to, a greater height than 80 ft., *exclusive of two stories in the roof*, and of ornamental towers," etc., etc. (see figure one).

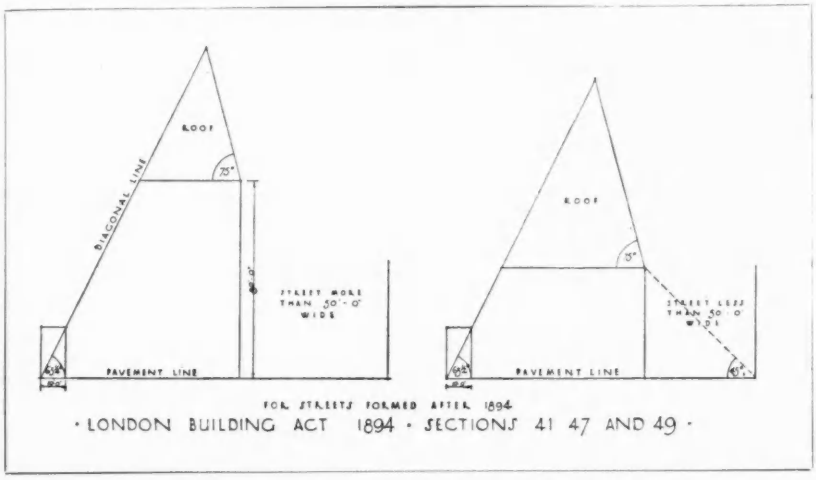


Figure one. The law as it stands, graphically expressed.

The italics are mine; but if the section is read by a care-taking, responsible architect, who is about to design an expensive building for a business client, in a street where rents are high and space is money, and where, in addition, mistakes are very costly to the client, and the architect, the italicized phrase will stand out, and in block letters, after a little reading, as its ambiguity seizes upon the unfortunate man.

If he doubts the necessity or desirability for a pitched roof in a modern steel-frame structure, feeling strongly the need for a logical expression of modern building, as one may suppose the architects of the Underground Building or Bush House felt the need, then he must either overcome the difficulty by neglecting the reference in the bylaw to a roof, and keep his building within the prescribed angle, or else he must design a mansard roof as well as it may be designed, and admit some measure of defeat.

In figure two, I have tried to compare in a general way two different readings of clause 47, the first being that most commonly accepted and the second a variation which preserves a vertical face to the top of the building, and does no injustice to the true nature of modern construction.

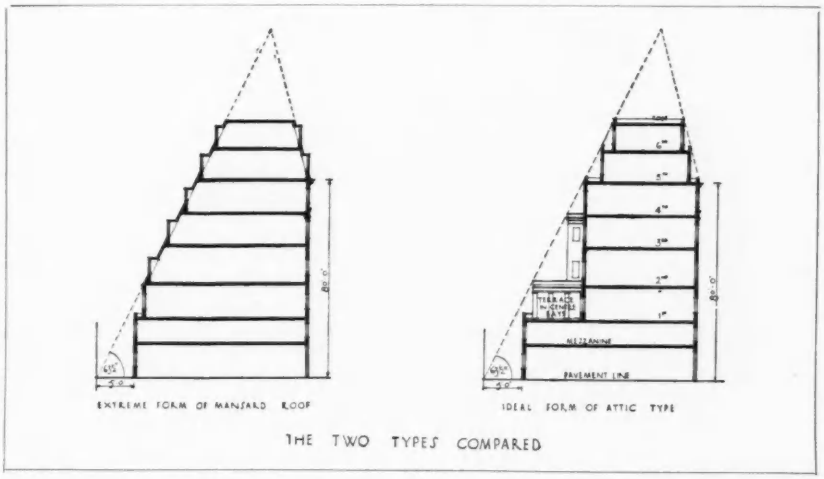

Figure two. The left-hand side shows the type of building produced by law, and on the right is an attempt to design sanely in spite of the law.

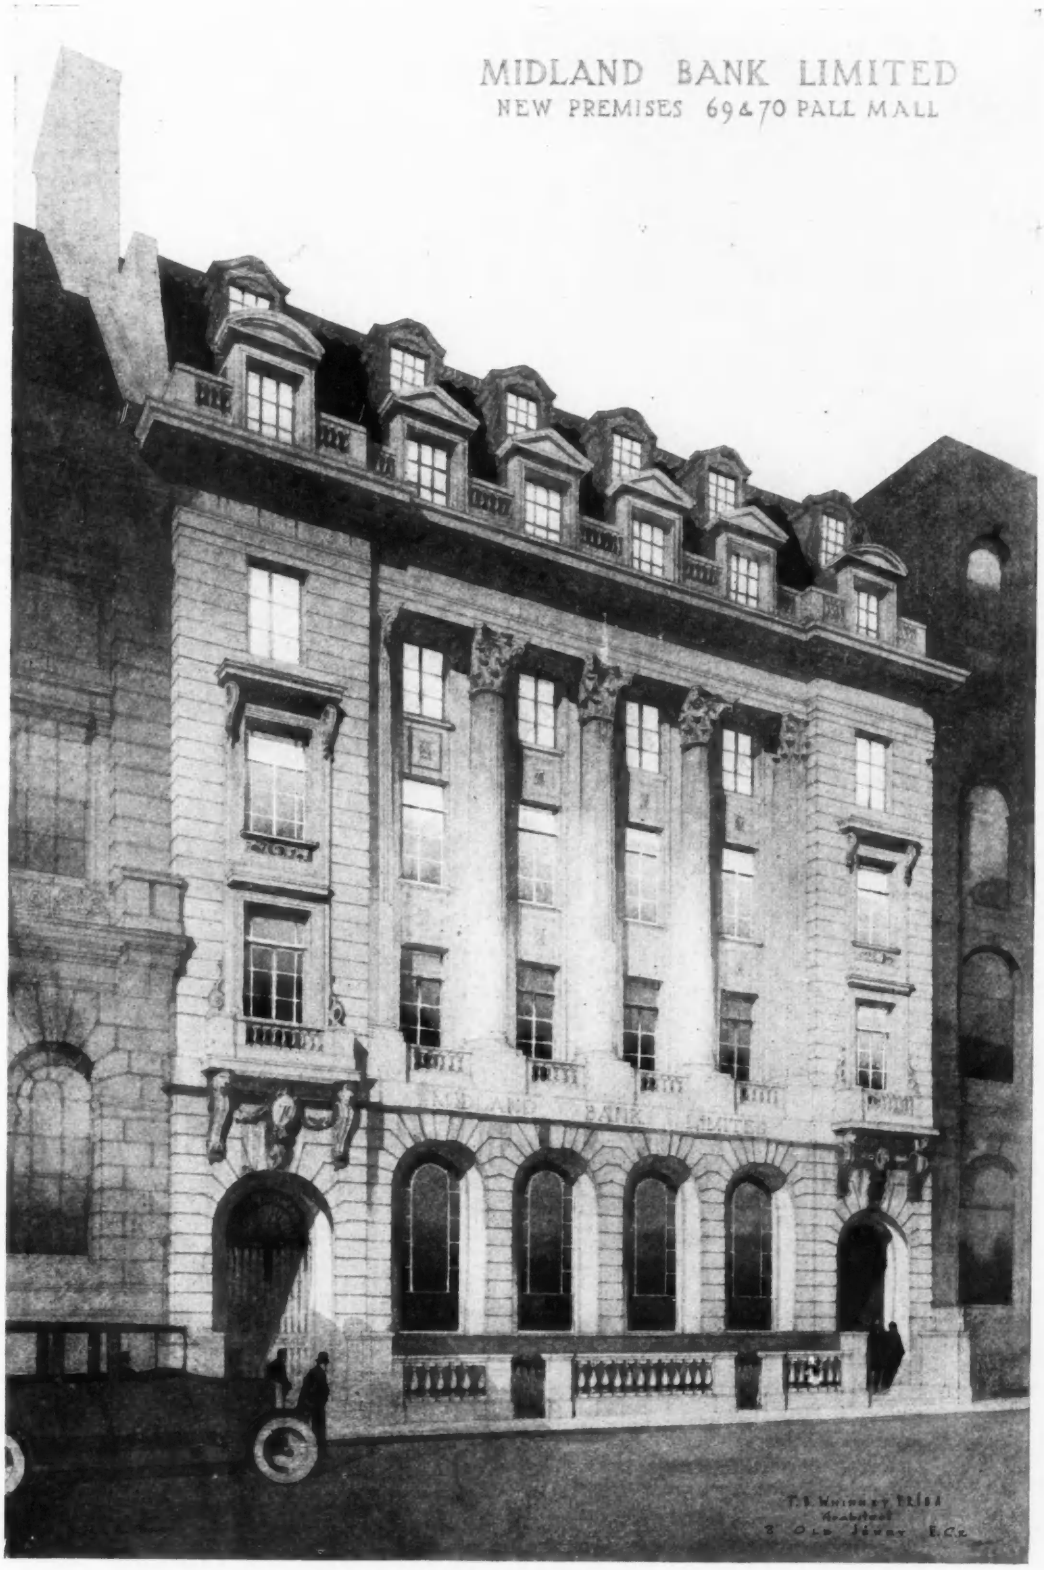
Cockspur Street, from Trafalgar Square, showing the effect of vertical set-backs and horizontal sky-lines in opposition to mansard roofs and dormer windows.

By adhering to the angle line of 75° laid down by the bylaw, the mansard roof gains a certain hypothetical amount of floor space. By projecting nearly unbroken rows of dormer windows, it nearly manages to make this floor space of real value, and as nearly defeats the entire object for which the bylaw was drawn up.

The attic roof, on the other hand, appears to lose if one only measures for space. By going up in vertical steps that keep within the angle of 75°, it loses floor space at each level. It gains substantially by having all its inside walls vertical and its windows normal, and it may also gain to the extent of a small terrace at the level of each set-back. Further than this, of course, it gains by being able to offer a normal and quite desirable suite of offices on the highest floors of the building, so that, instead of the obvious attic-looking rooms of the mansard type, there are airy and in every way superior floors of normal offices or residential flats.

The fact that mansard roofs are inimical to the economy of steel-frame construction and require all sorts of bent members, steel rafters, concrete, and what not before ever, in these days of fire-proof buildings, a slate or a tile is laid, does not need further explanation.



Steelwork is at its cheapest and best when it is composed of straight members set in square series, and to this formation it seeks always to return. Used thus, it is being true to its nature and exercises its chief virtue of economy and rapidity. Therefore, the mansard roof, by keeping a mass of twisted steelwork in the roof, impedes the progress of modern architecture towards its fullest expression; for whether the top stories of a street façade should be vertical or inclined planes, considered from the commercial standpoint as rentable areas, or from the æsthetic standpoint as the defining planes of the section of the street, there can be no manner of doubt that, considered *constructionally*, the mansard roof is uneconomical and unsound.

The objections to this mansard roof on æsthetic grounds are largely bound up with the true expression of steel construction.

If Sir Edwin Lutyens, by incurring enormous expense, can so cover steelwork with stone as to produce the appearance of a veritable stone-built

The unbalanced effect produced in Waterloo Place as a result of the addition of a mansard roof on the United Services Club, seen under construction on the left.

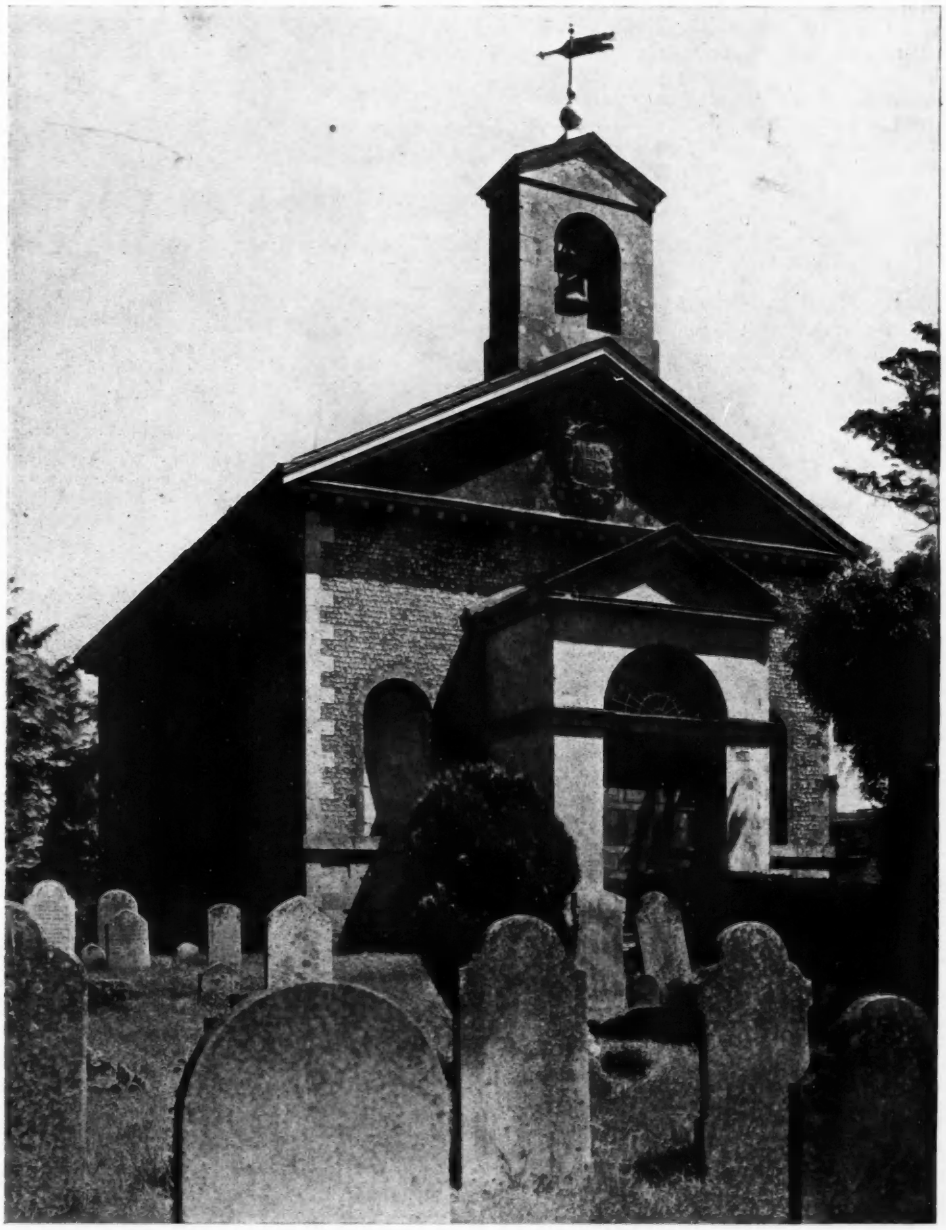
The Midland Bank, Pall Mall—a typical mansard roof, bursting into full flower.

building, he achieves a *tour de force* which removes him from the argument. One has to say, "Oh well, he is an unscrupulous artist, and not playing our game at all."

As soon as economy enters into building the true nature of the construction must be allowed to express itself. This expression I have defined as a vertical and horizontal expression, and it will be found developed in such buildings as the Underground Building, Celanese House, Canada House, and any well-built factory. To a certain extent, it is expressed in the comparative simplicity of nearly all new buildings, including those with mansard roofs. In place of many breaks in the surface, there are fat window-heads and a few prominent balconies—the rest is plain, admirably plain.

Why, after such fine expanses of brickwork which go so far to establish the vertical plane, the building should fall away into the barbarity of a heavy-tiled sloping mansard roof, the Act of 1894 can alone explain. It is all very grievously wrong and, as recent buildings may serve to show, of very little use for the purpose for which it was drawn up.

The latest mansard roof appears upon the Admiralty extension in Whitehall. It conforms to type in most particulars, but if you look up to it from the street it is hard to say at once whether it is, in fact, a mansard or an attic story, because the windows ordained by law to be in the roof are set so closely together that they form nearly a continuous surface, blocking out precious daylight from the street and looking rather ridiculous. The evil of this, from the point of view of health, is that the line of the pseudo-attic face is advanced *beyond* the prescribed line, and the law is defeated.



The last form to be mentioned is a perversion, and arises not out of the Act itself, but from the habit engendered by the Act. The addition of a roof to the United Services Club, which completes the formal symmetry of Waterloo Place, would under conditions of normal artistic reasoning be constructed so as to be complementary to the attic story of the Athenæum Club opposite. This would be an act of normal courtesy to a fine building. Instead of this, a form of mansard roof has been built in complete disharmony with the exquisite balance of the composition. This can only have been done out of habit, and would have been impossible in a more strictly logical period. This, I feel, is the mansard roof at its very worst.

Finally, there is the general question of architectonic form in relation to our great cities as places to live in. It is certain that as science, urged by public opinion, investigates problems of atmospheric pollution, this evil will cease to trouble us. The rapidly disappearing open fire will last a few years longer, but one may safely say that electricity and economic coal consumption will tend to make the enjoyment of a healthy town life much more possible. With high buildings and a city of sloping roofs, this life would be limited; but if one imagines a city of normally high buildings constructed with vertical set-backs, making terraces and roof gardens, one sees at once how great would be the gain.

At the moment we are prevented from making the fullest use of the expensive buildings we are putting up because of the old-fashioned wording of the building code. It is easier to evade the intention of the Act by a multiplicity of dormer windows in a high-pitched roof than it is to build cleanly and vertically, so that the sooner the law is altered to meet the improved conditions of the future and the most scientific methods of construction the sooner will we be able to develop an architecture that represents the best aspirations of our present civilization.

Making the best of a bad job, but with the top story looking like servants' quarters.

ENGLISH PRECEDENT No. 126

CHURCH OF SAINT MARY THE VIRGIN, GLYNDE, SUSSEX

In this view, taken from the north-west, the just size and right placing of the coat of arms in the tympanum show the skill of the designer who composed this simple but varied façade. The three pediments, well proportioned and assembled as they are, might not have combined agreeably without this coat of arms to serve as their focus; uniting the whole composition without attracting the eye unduly.

The arches combine no less happily than the pediments, and the belfry, with its curiously Italian look, crowns the façade without overweighting it.

The only fault easily found in the design is the lack of connection between the porch and the body of the church. Had the porch been built of flint, and had its impost-moulding been less pronounced, this defect would not have been apparent.

—[H. S. GOODHART-RENDEL]

LETTERS FROM READERS

Professional Tolerance

SIR,—Your leading article on "Professional Tolerance" in last week's issue negatives the popular saying that "Two of a trade seldom agree": yet popular sayings are invariably found to be founded upon fact—that is, upon experience. It often happens that two men of ability are unable to work together, whereas a genius will draw towards him and develop the powers of men who without his inspiration would accomplish little. In the remarkable association of Wren and Vanbrugh, however, we see two men of outstanding ability working together harmoniously, often in circumstances naturally provocative of dissension. Probably we shall be right in concluding that this was largely owing to the gentle character and charm possessed by Wren. When we read, in contemporary records (as those made available in the Wren Society volumes), the story of his association with men and women of every class and capacity, we cannot fail to be impressed by Wren's patience—patience with capricious employers, patience with scheming enemies, patience with rogues, patience with fools. He seems imperturbable, indefatigable, but never intolerant.

On the other hand, Vanbrugh, young, distinguished in arms, in letters, in society, having exceptional vision and ambitions and with that flair for architecture so rare in the professional and so often squandered by the amateur, defers to the older master, but pursues what he believes to be the right, without deviation. As the writer of your leader points out, these qualities were recognized by Wren, who encouraged, supported or withdrew: all in the most reasonable way.

The history of relations between architects in the seventeenth and eighteenth centuries is an almost unbroken record of jealousy, of trickery and of calumny. We conceal these things better now, but still they exist. How seldom does one hear of the big man helping the small one by influencing work into his way! How often is the architect in large practice seen to "grab" business and sometimes even meanly to supplant his less distinguished confrère to secure a good job! This is done and, when done, little said of it. The fact is that fashions alter, labels alter, but human nature does not alter.

Professional etiquette is a good thing, for it sets standards. But it is superficial; whereas the kindly nature that actuates the helping hand is not superficial—it is profound, it existed in every century, and it is widely diffused in this century. Perhaps the greatest factor in promoting amity amongst "those of a trade" is personal contact, such as is accomplished by meetings of societies, whether at indoor or out-of-doors functions. It is difficult to be jealous of, or at enmity with, a man whom one finds human and pleasant in intercourse. Goodwill has ever sprung from good company, which is the best antidote of professional jealousy.

May I add a word about the Wren Society volumes? Recently, I mentioned these to an architect friend, suggesting that the annual volume was astonishing value for a guinea subscription. He replied: "Oh, I can always see them at the Institute Library." The fact being that he had not seen them and certainly could not enjoy them as if he had them on his own bookshelves. They are books to be picked up, perused and enjoyed. They are inspiring and highly educative; indeed, I do not know where so much architectural food is to be obtained at so small cost, and if anyone can tell me, I shall be grateful for the information.

NATHANIEL LLOYD

Priced Bills of Quantities

KARSHISH AGAIN REPLIES

SIR,—Mr. Downe overlooks that we are discussing the Honeywood case where the quantities are *not* part of the contract; that though it may be *expedient* for builders to price items consistently with cost, it does not follow that they do so; and that whether they do so or not, the matter has no bearing on the fact that the contract forbids, in letter and in spirit, any use being made of the priced bills except by the quantity surveyor for the purpose of valuing variations.

I referred Mr. Downe to Mr. Leaning's letter because Mr. Leaning is a high authority on quantities, and I thought his statement of the facts would not gain weight by my repetition of them. There is no discrepancy between us. Discretion has a larger place in fixing rates than any science of pricing has. Builders have to face the risk of variations reducing profits, but hope otherwise; their rates are the speculative details of the speculative totals of speculative tenders—or "bids," as they call them in America—and the assumption that they can carry out at a profit all items they have priced, as Mr. Downe supposes, is not justified.

Mr. Taylor's opinion of Grigblay, as temperamentally unsuited to pricing out quantities, amused me. I have no doubt he is right and, as it is a point in Grigblay's favour, I bear no resentment. I judge Grigblay to be a man who can grasp and command all details of his business and is capable of reviewing his estimator's work and, by the intuition experience gives to an active mind, of modifying the rates, or amending the total with a percentage on or off, so that his tender shall represent his own judgment and no one else's.

KARSHISH

[*This correspondence is now closed.*—ED. A.J.]

Group Specification

SIR,—I read with considerable interest Mr. T. Sumner Smith's views on the above subject in your issue for July 9.

It is encouraging to learn that the art of specification writing is still a conscientious art in some quarters, and not merely something that has presumably been laboriously compiled by "the articled pupil" who still strives to acquire his "rudiments of building construction" in the traditional way, by copying out selected passages from obsolete specifications and arranging them in the time-honoured sequences; a jig-saw mode of compilation which, I respectfully suggest, can neither claim to be educational nor productive of a scientific and comprehensive guide to the prospective tenderer.

Also, as Mr. Smith implies in his rather happy and ingenious classification, just as the types of fowls govern the type of eggs, so should the type of contract govern the type of specification; but, as a piquant example, how often do we find woefully incomplete specification for a contract that is not based upon bills of quantities! The result is as disconcerting as it is to those hens whose brood of "chicks" takes to water.

What is the explanation of this apparent lack of thoroughness, I wonder? It is hard to believe that its proper importance is underestimated by those responsible for the training of our architects.

PROVINCIAL

COMPETITION RESULT

The following awards have been made in the competition for new Municipal Buildings, Chapel Road, Worthing:

First (£350), Charles Cowles-Voysey, London.

Second (£250), Percy Tubbs, Son and Duncan and S. Rowland Pierce, London.

Third (£150), Willink and Dod, Liverpool.

Fourth (£50), William A. Funnell, Purley.

The assessor, Mr. Henry V. Ashley, also commended the design submitted by Verner O. Rees, London.

It is hoped to illustrate the winning design next week.

Settling-Up Honeywood : x

THE BATTLE OF THE BRICKS

BY KARSHISH

(H. B. CRESWELL)

The owner, Sir Leslie Brash, has notified the architect, Spinlove, of various defects, among which the failure of the inside painting is the only serious matter, and has taken strong objection to the bill of extras.

GRIGBLAY TO SPINLOVE

Dear Sir, 24/6/26.

As arranged in your interview with Mr. Grigblay on the 10th, we have been in correspondence with Messrs. Hoochkoft on the subject of refund of their charge for picking facings. We enclose copies of letters and await your further instructions *re* same.

As Mr. Grigblay reminded you, the bricks were selected by you and ordered by us to your instructions without our seeing samples, and were inspected by you on delivery. You afterwards informed us you had arranged with Hoochkoft to send their picked quality, and we paid them for picked as per their quotation to you.

We must again press for certificate for *£1,316 3s. 1d.* Mr. Grigblay understood from you that certificate would follow, and we expected it would be received before now as it is a long time overdue.

Yours faithfully,

GRIGBLAY TO HOOCHKOFT (ENCLOSURE 1)

Dear Sirs, 16/6/26.

The architect objects to your charge of 28s. extra for picked facings over your original quotation of 147s. per thou. He states you agreed to pick over free of charge as the bright-reds objected to were not according to approved sample. We will thank you accordingly for refund of £92 paid you by us in error.

Yours faithfully,

HOOCHKOFT TO GRIGBLAY (ENCLOSURE 2)

Dear Sirs, 21/6/26.

Mr. James Spinlove gave us order for picked as per our special quote to him of 175s. per thou. as duly invoiced by us which please note is correct and oblige.

Yours faithfully,

Spinlove handled this matter badly. Instead of getting samples and quotations through the builder, he dealt direct with Hoochkoft and told Grigblay to order a certain broken-colour brick at a certain price without sending him the approved samples or otherwise letting him know what bricks he was to expect. He also did not definitely rule out a bright-red under-burnt sample to which he objected, and Hoochkoft accepted the order, perceiving that they could contend that their bright-reds had not been excluded. The bright-reds, to the amount of about 15 per cent. of the whole, were delivered, and were used by Grigblay until Spinlove stopped him. Spinlove then had a wrangle with Hoochkoft, who asked 35s. a thousand bricks extra for picking out the bright-reds, which charge Spinlove refused to allow on the grounds that Hoochkoft had agreed to exclude the bright-reds. Hoochkoft then reduced their claim for extra price to 28s. and, by manipulating an ambiguity led Spinlove to write them a letter that might be interpreted as agreeing to the extra price although he meant the opposite.

SPINLOVE TO HOOCHKOFT

Dear Sirs, 26/6/26.

Mr. Grigblay has sent me copy of your letter to him stating that I agreed an extra price for picked facings.

I did nothing of the kind. As you are well aware, I refused to countenance the extra; I cannot pass your account for more than the rate of 147s. a thousand originally quoted, and accepted, and I have so informed Mr. Grigblay.

Yours faithfully,

By yielding to impatience and showing bad manners Spinlove throws away the advantage he has in knowing better than to do so. If it comes to a slanging match he will have no chance against Hoochkoft. He also makes a great mistake in asserting himself before he knows what position Hoochkoft takes; for if he is forced later on to withdraw, he will lose ground that he might otherwise hold. The vehemence of his letter, too, is a sign of weakness. If he were sure of his case he would not be so noisy in proclaiming it.

SPINLOVE TO GRIGBLAY

Dear Sirs, 26/6/26.

As I told Mr. Grigblay, I did *not* agree Hoochkoft's price for picking. I gave you no authority to pay the extra, and I cannot pass the account for more than the originally quoted price of 147s.

I enclose certificate for £1,000 further on account. I should explain that Sir Leslie Brash raised great objection to the total of the account, and I could not very well draw the certificate until I had had an opportunity of explaining matters to him. Even so I am afraid he may make difficulties about honouring the certificate, and as there are various matters in dispute I do not feel able to certify for more than £1,000 at this time.

Yours faithfully,

It will be noticed that Spinlove has, by sloppy organization and lack of precision in expressing himself, not only given Hoochkoft an opening for setting up an unfair claim, but has also misled Grigblay, who could have no other reason for paying Hoochkoft's extra charge than the belief that Spinlove had told him to pay it.

If Spinlove is satisfied that Grigblay is entitled to a certificate, he is bound to draw it; and the reluctance of the owner to accept the account or honour the certificate is no justification for Spinlove to hold it back.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 26/6/26.

Grigblay has been pressing for a further certificate on account. I held this up until I should have had an opportunity of going into the account with him and with you, although the amount—*£1,316 3s. 1d.*—has, in fact, been due to him since *early last February*. As some items in the account are still in dispute I have certified for £1,000 only. This leaves *£2,332 13s. 7d.* as security in your hands for the making good of defects, and to cover any deductions which may hereafter be made from the account.

Yours sincerely,

HOOCHKOFT TO SPINLOVE

Dear Sir, 28/6/26.

We were naturally surprised at the contents of your letter. We may say that we regret the confusion that has unfortunately arisen, but you have evidently overlooked that you ordered picked as per our special quotation to you of 175s. and that we duly acknowledged same. This you will see is quite correct if you will refer to previous correspondence at the time. Trusting the above explanation will be quite satisfactory to you,

We remain, dear Sir,

Yours faithfully,

Hoochkoft are plausible rogues. They seem likely to get the better of Spinlove, who will find it difficult to believe this letter to be part of a deeply-laid scheme to deceive him.

GRIGBLAY TO SPINLOVE

Dear Sir, 28/6/26.

We have to acknowledge certificate for £1,000.

As you sent us copy of Messrs. Hoochkoft's letter quoting 175s. for picked facings, and afterwards wrote us you had arranged with Hoochkoft to supply picked, we naturally paid their invoices in accordance and do not see how we could be expected to do otherwise. We do not see what more we can do in the matter.

Yours faithfully,

Spinlove is getting the worst of this. He has put himself into the same kind of difficulty as that in which Brash finds himself over the Riddoppo paint; that is to say, he has made two parties who should be accountable to one another each accountable to him. *Experienced architects are careful to avoid dividing responsibility, and are particularly wary of sandwiching themselves between conflicting parties as Spinlove has here sandwiched himself. This, in fact, is a first principle of what good organization means for architects.*

SPINLOVE TO HOOCHKOFT

Dear Sirs, 30/6/26.

Our early correspondence makes it perfectly clear that I objected to the bright-red samples when I accepted your tender, and that you accepted the order on the understanding that they were not to be included. When I found the bright-reds *were* being included in deliveries I at once told you consignments containing them would not be allowed on the site. When you then proposed an extra charge for picking over, I refused to agree, but called upon you to supply to approved samples and pointed out that it was no concern of mine whether this was effected by picking or otherwise. I made myself perfectly clear and I will not allow the extra charge.

Yours faithfully,

Spinlove evidently feels the need of justifying himself, or he would not enter upon a florid interpretation of facts which he twice states are "perfectly clear." If they were perfectly clear it would not enter his head to insist on the point. Hoochkoft will be quick to notice this, and also to notice Spinlove's naive admission in his last sentence, that if he had *failed to make himself perfectly clear he would not contest the charge.*

SPINLOVE TO GRIGBLAY

Dear Sirs, 30/6/26.

I did *not* say I had "arranged with Hoochkoft." My words are "Hoochkoft has now agreed to pick out the soft bright-red bricks," which, in view of previous letters on the subject, is a perfectly clear statement that no charge for picking was to be made, and I therefore cannot pass the account.

It is for you to inform Messrs. Hoochkoft of my decision and require them to refund. If I had said *I* had agreed for Hoochkoft to pick, it would have been a different matter, but I did not say so.

Yours faithfully,

It is a pity Spinlove did not shorten his letter by the length of its last sentence. As usual, in his doubt of himself and anxiety to be plausible, he says too much. Although he omitted to state in so many words that the picking was being done free of charge, Grigblay was, nevertheless, at fault in assuming the contrary; but Spinlove surrenders all possibility of making good his claim by gratuitously admitting that its justice depends on niceties of syntax the exploration of which causes—in me at least—sensations of vertigo. He also reveals that he is now out of his depth in his own muddle. The only ground on which Grigblay can ask a refund from Hoochkoft is that he misunderstood the architect's instructions when he paid; and the only reply which he can expect from Hoochkoft is—"We are sorry for you."

HOOCHKOFT TO SPINLOVE

Dear Sir, 2/7/26.

We were naturally astonished to receive your letter. After our definite refusal to supply picked at the price we quoted for unpicked, and your acceptance of our special rate to you of 175s., we are surprised you should consider it worth while to press this unreasonable claim against us after we have reminded you of the facts which we supposed you had overlooked, and must now consider the matter at an end so far as we are concerned.

Yours faithfully,

SPINLOVE TO HOOCHKOFT

Dear Sir, 3/7/26.

It is perfectly clear from the correspondence that facings were to be picked free of cost. You had no right to make the extra charge and Mr. Grigblay had no authority to pay it. As I shall not pass the account, it will be for you and Mr. Grigblay to settle it between you. You will hear from him.

Yours faithfully,

As has been said, there is nothing for Hoochkoft and Grigblay to settle between them. Spinlove, as agent for Brash, has either to force Hoochkoft to refund, on the ground that the charge should not have been made; or compel Grigblay to stand the loss on the ground that he had no authority to pay it. Failing that, Brash will have to meet the charge, unless he can prove it to be set up by the culpable negligence of his architect; in which case Spinlove would be liable to Brash for the amount.

HOOCHKOFT TO SPINLOVE

Dear Sir, 5/7/26.

We certainly have no intention of settling with Mr. Grigblay. So far as we are concerned the matter was long ago settled, and the only reason we corresponded with you was to explain your mistake. In view of your hostile attitude the matter is now closed.

Yours faithfully,

Hoochkoft evidently realize that they cannot persuade Spinlove they have not cheated him, nor hope to retain his esteemed favours.

GRIGBLAY TO SPINLOVE

Dear Sir, 5/7/26.

We can only repeat that we acted in accordance with your instructions in paying Messrs. Hoochkoft's charge for picked. As you have kept this matter in your hands throughout, we are not in a position to approach Messrs. Hoochkoft further *re* same. We have already told them your views on the matter.

Yours faithfully.

This letter, and Hoochkoft's, seem to signalize the final discomfiture of Mr. James Spinlove, A.R.I.B.A.

BRASH TO SPINLOVE

My dear Mr. Spinlove, 5/7/26.

I duly received your communication anent certificate, which document has been transmitted to me by Mr. Grigblay, and have been for some days contemplating inditing a communication to intimate my apprehensions that, in disbursing this very substantial sum, I shall appear to acknowledge the justice of claims which still await eventual elucidation when the detailed account is produced.

Your own attitude in this matter continues to impress me as being—if you will permit me to say so—extremely inexplicable. It must be obvious to you—although natural reserve makes me hesitate to say so—that I am a gentleman of not altogether negligible weight and importance in the business world who has attained a certain degree of social eminence and monetary affluence; and I assume that young gentlemen embarking upon professional careers with ambitions for success in their elective sphere are aware of the directions in which advantageous opportunities are to be anticipated and final prosperity likely to eventuate; to be precise, they comprehend—if you will excuse a vernacular colloquialism—upon which side their bread is buttered.

You have on several occasions taken the opportunity to remind me that the contract allows you a very wide and free discretion in deciding points in dispute, and I am naturally surprised to notice that you consistently favour Mr. Grigblay's claims against me and urge—with considerable stiffness, you must permit me to remark—*his* views of contentious matters in preference to supporting *my* interests. I feel it my duty to a much younger gentleman who has not, I apprehend, enjoyed the opportunity of such wide experience of affairs as has been my providential good fortune, to intimate the illogical aspect of the position in which you put yourself, and the difficulty in which you place me. I meet one of my wealthy and influential acquaintances—let us suppose—who naturally refers to my building operations and asks: "How do you find your young architect, does he safeguard your interests, does he protect you from the rapacity of

builders and contractors, is he a pliable and conciliatory gentleman?" How am I to answer that question in such a way as to encourage my influential friend's confidence in your professional capacities while you keep me in serious doubts of the matter? This you will, I apprehend, regard as a subject deserving your thoughtful consideration, as it is obviously apparent that it has escaped your attention.

Believe me, my dear Mr. Spinlove,
Yours very sincerely,

The greasy affability of Brash's subscription—which so far as I can recall is without precedent—is evidently employed to give a gloss of magnanimity to a dirty purpose. The thing, however, is not quite what one would have expected of old Brash, and it is only fair to put the best interpretation upon it that circumstances allow. If Spinlove made clear to Brash that under the terms of a building contract the architect is constituted final arbiter of technical matters, and that his discretion is also decisive in many that are not, then it is perfidy of a detestable kind for Brash to use the power his years and station give him to subvert the honesty of the younger man; but we do not know that Spinlove made this clear to Brash, and the spectacle we have had of Brash's many flounderings makes it quite possible that he did not know what the obligations of an architect are. Brash may, perhaps, have regarded Spinlove as his agent in the ordinary sense of one whose services are remunerated by a commission, and did not understand that his architect's obligations to the builder were as binding, in fact and in honour, as his obligations to his client. At the same time, it is clear that Brash was aware of meanness in tempting Spinlove to favour his interests.

[NEXT WEEK, XI—SPINLOVE SCORES AGAIN]

QUESTIONS THAT ARISE

Proportion of Cornice

A. J. J. writes: "*Is there any fixed proportion which governs the depth of a cornice crowning a building without an Order, and how is it arrived at? I have tried building up an imaginary column the height of the building and making the fornice proportionate, but this is not satisfactory.*"

In the Italian, and particularly the Florentine palaces, the proportion does not seem to have been definitely fixed by any rule before Palladio, as the following examples show:

	Cornice; Of total height.
Strozzi Palace, Florence	$\frac{2}{29}$
Pandolfini ,, ,,	$\frac{2}{29}$
Gondi ,, ,,	$\frac{2}{32}$
Farnese Palace, Rome	$\frac{2}{34}$
Palladio rule was to make it	$\frac{2}{29}$

But several modern examples are deeper, and a good rule is to divide the total height of the building into 25 parts and allow 2 parts for the cornice. L. E. W.

Jointless Flooring

J. E. M. writes: "*What is the exact composition of a jointless floor, and how should this be laid? There are many patent varieties, but I presume the base of them is the same.*"

These floors are all based on a magnesian composition and consist of ground magnesite (MgO) and magnesium chloride (MgCl). When the former is moistened with a solution of the latter, it forms a rock-like mass. For the formation of a floor this mixture is added to an aggregate which gives resilience, quietness and warmth. The most usual aggregates are sawdust, ground silica and white talc—these aggregates must be very fine powders; the finest sand used for a cement and sand floor would be the coarsest that could be used for a magnesian.

When magnesian flooring is laid on concrete, the surface should be left rough to obtain better adhesion. On wooden floors the boarding should first be covered with galvanized wire netting, fixed to the boarding with galvanized iron nails.

The preparation should be laid in two operations, each $\frac{3}{16}$ in. thick, and then left from one to two days to dry and harden. A. B.

Mildew on Walls

E. Q. writes: "*When carrying out alterations and repairs to a cottage, I had the walls clearcolled and distempered. During the recent bad weather the walls became covered with a greenish mildew. They had previously been whitewashed and no trouble with mildew had been experienced, although during certain periods my client admits that the walling has been slightly damp. I have examined the stonework externally, but this is in perfect condition. Is it a fact that fungus does not occur with limewashed walls?*"

Mildew is a fungoid growth and therefore needs decaying matter to form on. The wall is no doubt slightly damp, and probably always has been, but in whitewash there was nothing for the fungus to thrive on.

On papered walls the mildew grows in the decaying paste, and it will do the same in the decomposing glue size of some distempers or in any organic matter.

I have found that it is no use putting even a waterproof backing paper on these walls, as damp may rise from the floor.

I would suggest using the whitewash, which has done service to this cottage in the past. D. E. A.

Boundary Line

T. W. writes: "*A portion of my property is bounded by a hedge, with a ditch along part only. How is the boundary defined?*"

In the case of hedge only, the boundary line is usually considered to be midway of the hedge, unless ascertained acts of ownership prove it to be otherwise.

With a ditch, it is the general rule that the hedge belongs to the owner of the field on whose side there is the ditch. The decision of the courts has been that no man making a ditch can cut into his neighbour's soil, but usually he cuts it to the very extremity of his own land, being bound, of course, to throw up on his own land the soil he digs, in which the hedge is planted.

The portion of hedge without a ditch may have originally had a ditch which in course of time has been filled in, but if looked for carefully, or trial holes made, some definite signs of the earlier existence of a ditch may be established.

No definite width for the ditch can be claimed, although if no other evidence is available to the contrary, it is generally considered that four feet is the normal width. A. T. A.

Thatched Buildings

H. J. writes: "*A client of mine has recently moved into an old cottage and applied to his insurance company for a fire policy. He has been informed by the company that the premium would be 5s. per cent. in place of 1s. 6d. per cent., as the cottage has a thatched roof. Can I do anything to treat the thatch with chemicals and render it sufficiently fireproof, so that my client can approach the insurance company and perhaps obtain better results?*"

Insurance companies are shy of thatched buildings, and undoubtedly the risk of fire is greater than for those roofed with tiles or slates.

However, one sees a large number of thatched roof cottages that have stood for two and three hundred years, and it would be interesting to know the proportion of fires that occur in roofs of this character to those occurring with tiles, slates, etc.

It is a fact that new thatch is more inflammable than old. Your correspondent might have the roof sprayed with the following mixture:

Sulphate of ammonia	4 lb.
Carbonate of ammonia	2 lb.
Borax	1 lb.
Boracic acid	1 lb.
Alum	2 lb.
Water	6 hhds.

This will render the thatch proof against sparks, but I do not think that it will convince the insurance company. R. A. C.

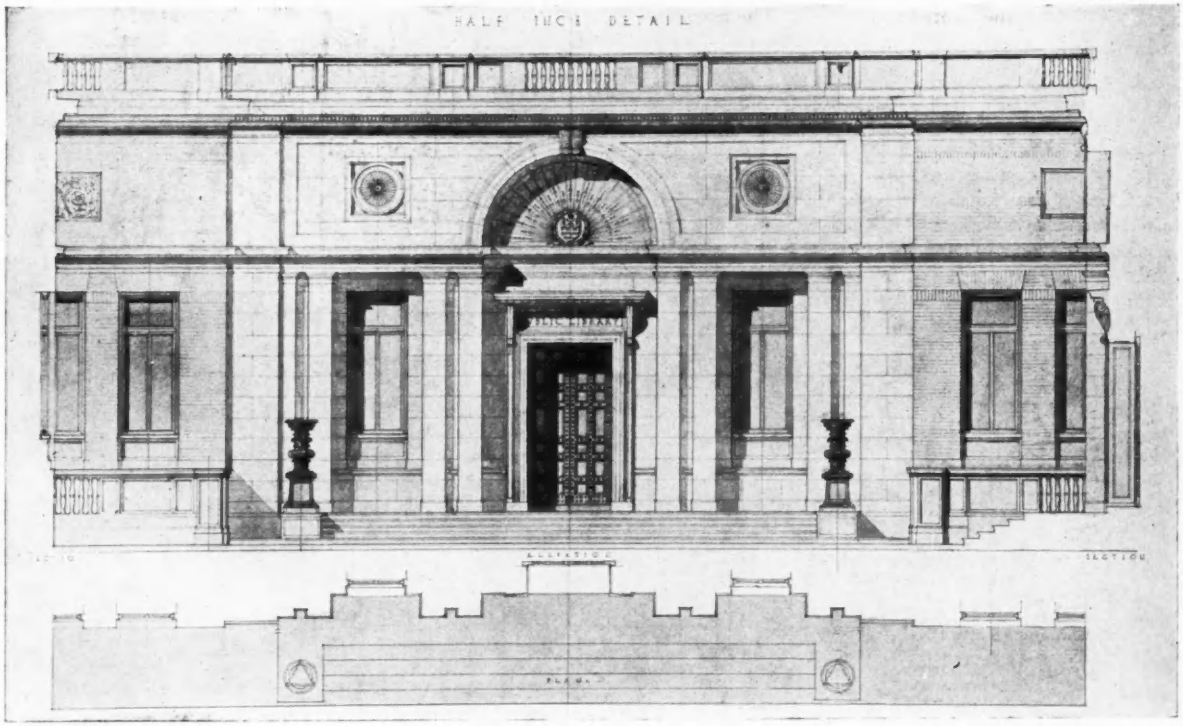
CHELMSFORD PUBLIC LIBRARY AND MUSEUM COMPETITION

WINNING DESIGN : BY R. A. CORDINGLEY

THIS competition was promoted by the Chelmsford Corporation to provide a public library and museum. In the conditions it was stated that the building was to be two or three stories high and to contain a basement. The cost was not to exceed £25,000. The ground floor was to be devoted to the public library. There were to be a general reading-room for newspapers and magazines, to accommodate sixty readers; a juvenile library for 5,000 books and seating twenty children; and a reference library for 8,000 volumes and twenty readers at single tables. In the open stack-room there were to be provided 500 ft. run of stacking around the walls and double-detached blocks, placed 7 ft. 6 ins. centre to centre, with a space 4 ft. wide around the ends. At the entrance to the stack-room was to be a staff enclosure for two registering clerks. This would have "In" and "Out" gangways on either side and be placed in such a position as to enable the reading room to be overlooked. It was requested that a spacious hall should be provided, with a good staircase to the first floor. Other accommodation required included a librarian's office to be usable as a committee room, a staff common room and a clerks' office.

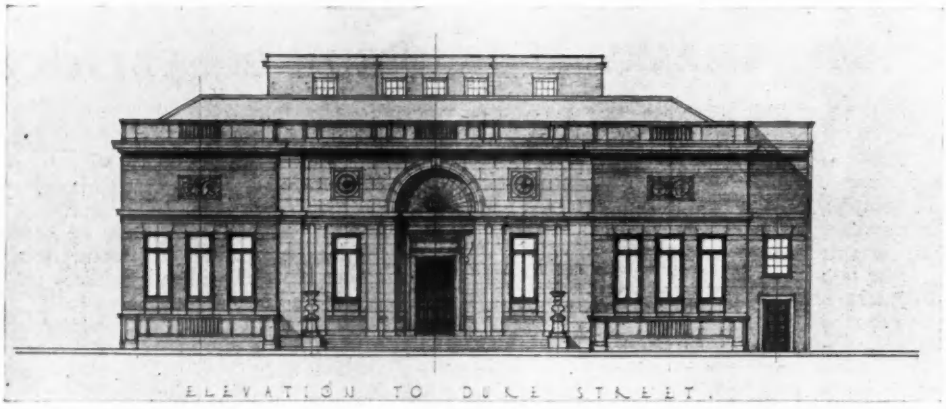
THE AWARD
(H. V. Lanchester, Assessor)

First: R. A. Cordingley, Durham.
Second (£100): Gregory & Robinson, Nottingham.
Third (£50 each): O. F. Martin Smith, London; and Frederic E. Towndrow, London.
Commended: Wallace Marchment; W. Simming and J. H. M. Bates; and W. J. Baker.



On the first floor the museum, it was suggested, should occupy the major portion of the building, and was to consist of four or five galleries.

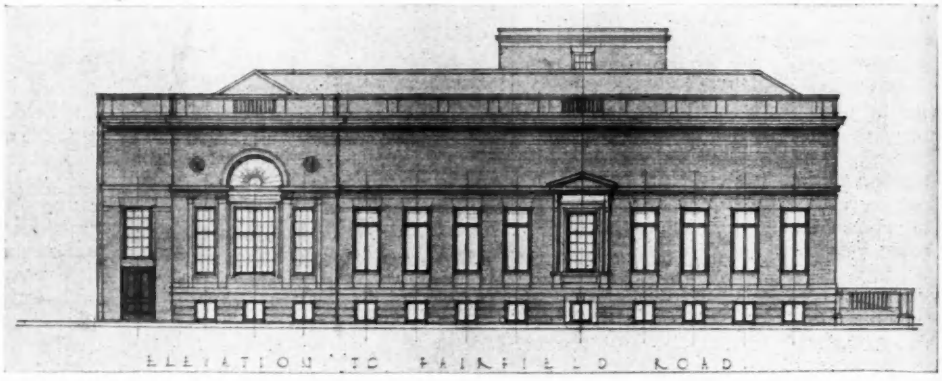
The caretaker's flat was to be placed on the first or second floor and was to comprise living-room, three bedrooms, scullery, larder and bathroom. It was to be provided with a subsidiary staircase. In the basement was to be the strong-room, a heating chamber, general storage and a store room, with a lift to the first floor.



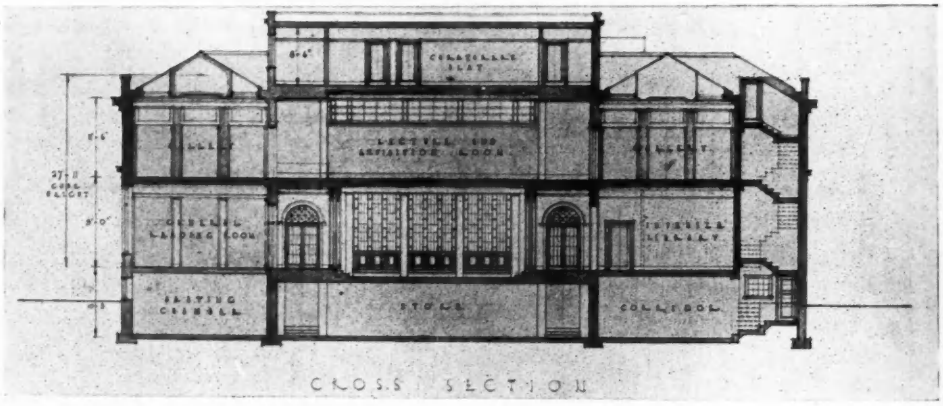
In Chelmsford the buildings are mainly of the eighteenth and nineteenth centuries, and it was stipulated that the building should harmonize with its neighbours. It was suggested that the material for the exterior should be brick, with possibly a limited amount of stone dressings.

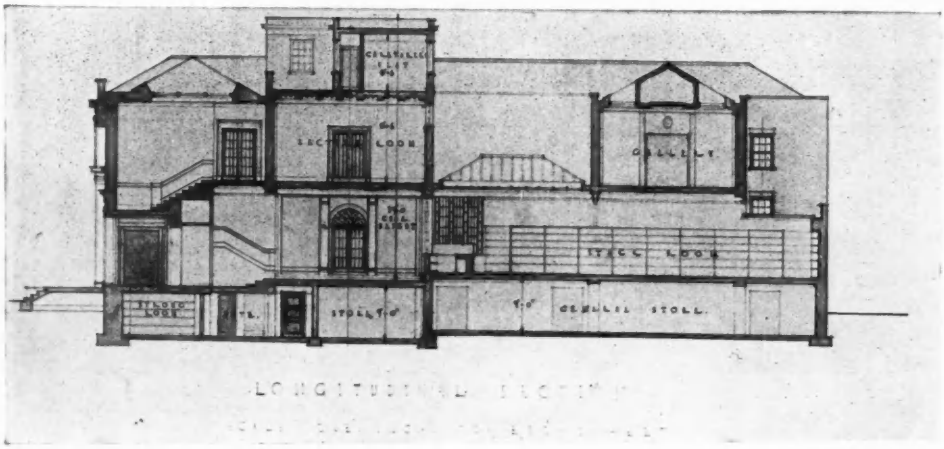
The competitors numbered 168.

Mr. H. V. Lanchester, the assessor, in his report, says that the winning design complies with the conditions and could be carried out at approximately the cost indicated. The planning is good, and the treatment dignified. The stack-room, while adequate, is rather smaller than indicated in the instructions, owing to the area allotted to the spacious entrance hall, which is a feature in this design.



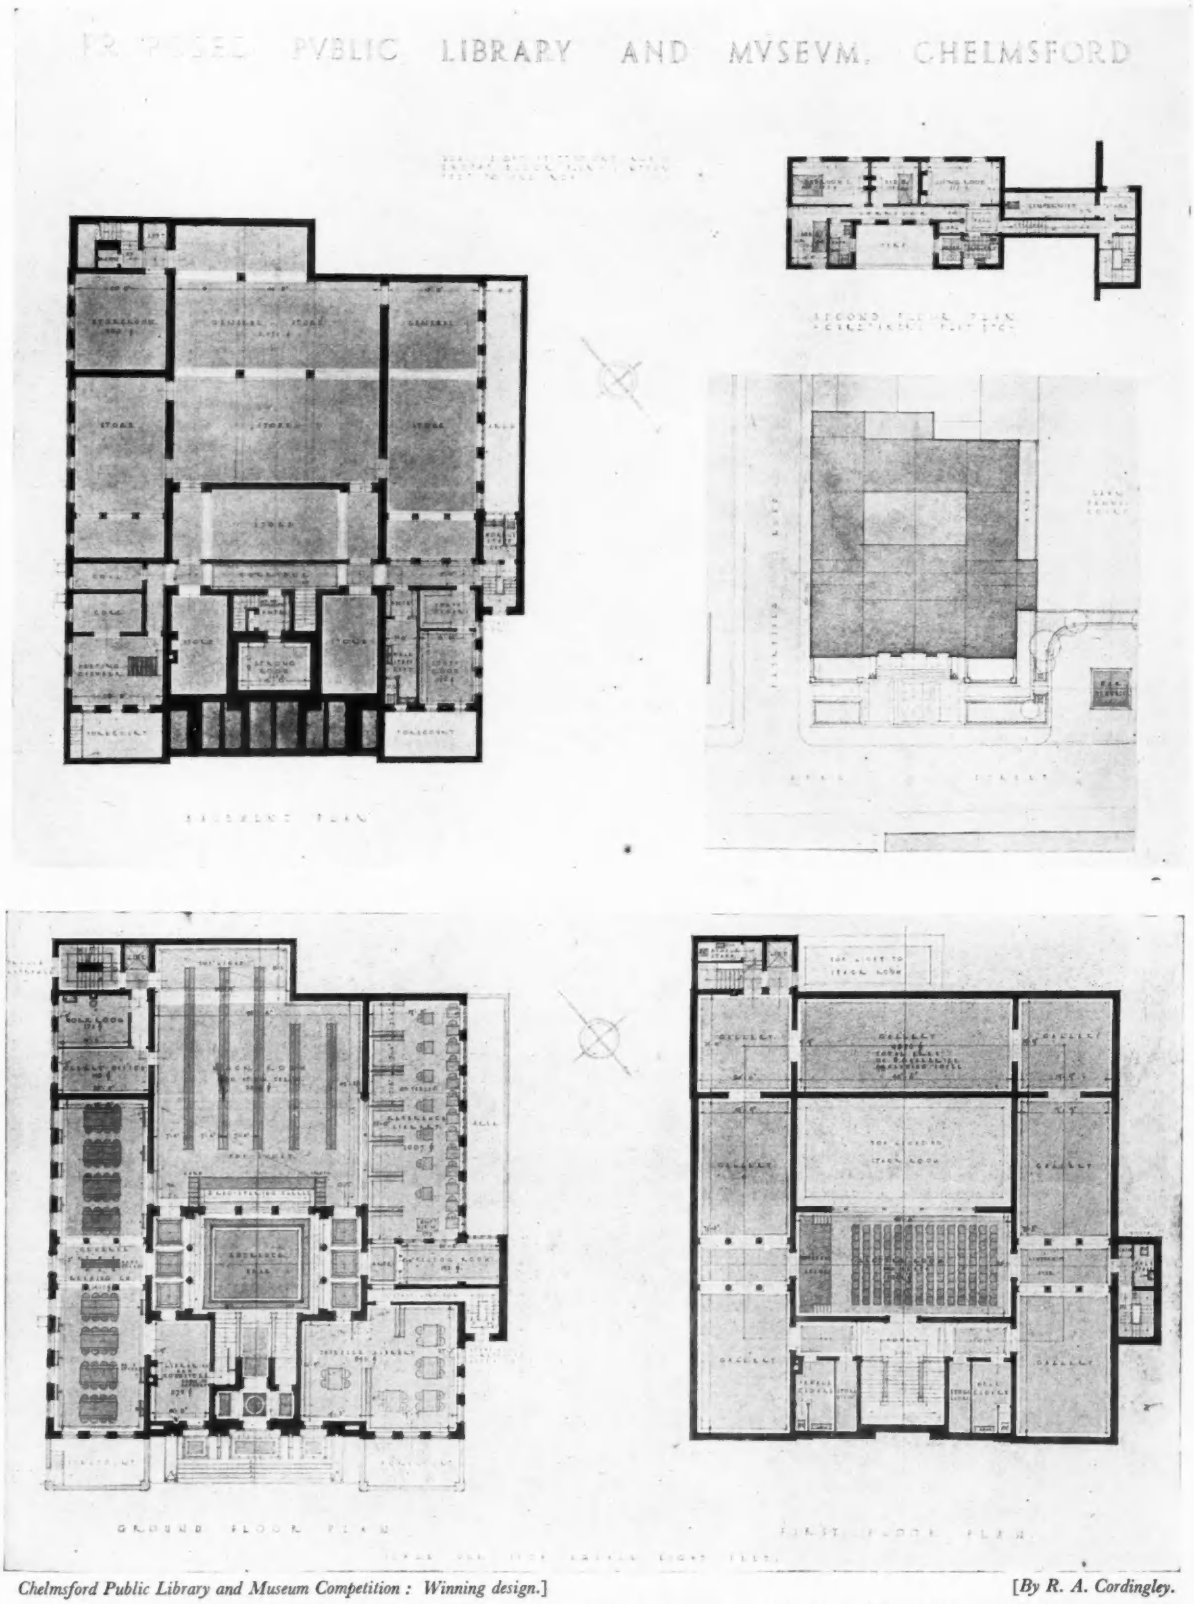
A reproduction from the ½-in. detail drawing of the main entrance. The façades, as suggested in the conditions of the competition, are intended to be erected in brick and stone. The cost of the buildings was not to exceed £25,000.





The main entrance is in Duke Street. It is approached by a flight of five steps and leads into a central hall, from which, as will be seen from the ground floor plan on the facing page, the library accommodation is entered.

The elevation to Fairfield Road is on the left of the main Duke Street front. The ground floor is devoted entirely to the public library and the first to the museum.



Cross section. The position occupied by the caretaker's flat on the second floor enables good unobstructed top lighting to be obtained for the museum galleries on the floor below.

A longitudinal section from the main Duke Street front, on the left, to the rear elevation. The stack room is for the most part top lit, secondary lighting being obtained from glazed screens in its walls.

Chelmsford Public Library and Museum Competition: Winning design.] [*By R. A. Cordingley.*

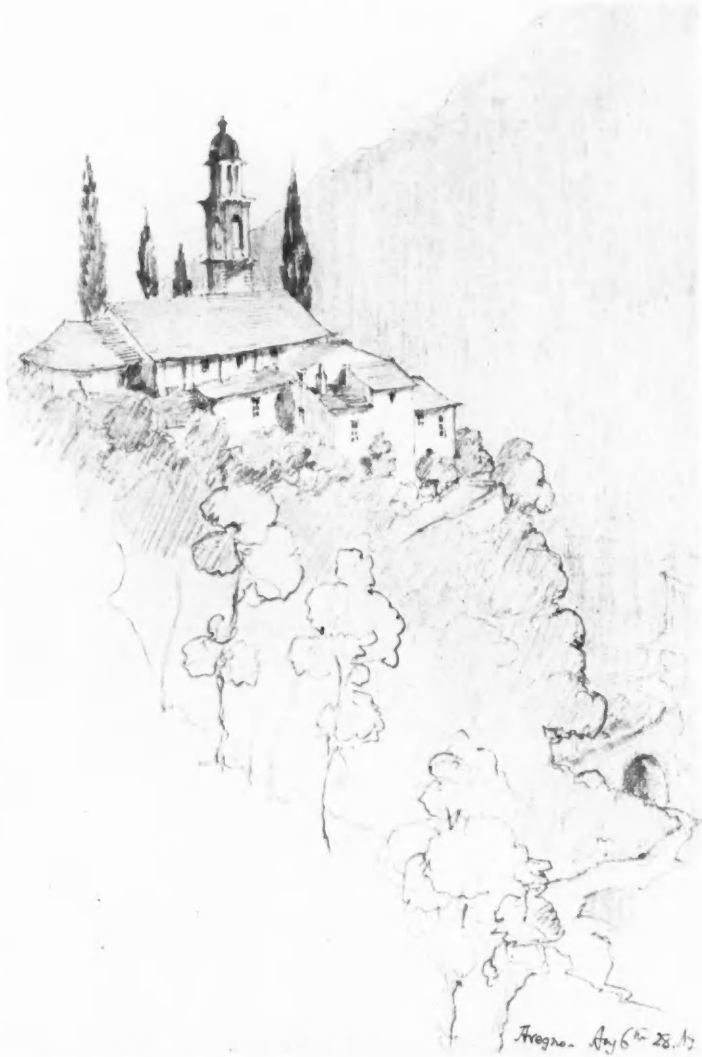
Chelmsford Public Library and Museum Competition : Winning design.] *[By R. A. Cordingley.*

The ground floor contains reference and juvenile libraries, a general reading-room, stack room, filing room and clerk's office. The librarian's and committee room is planned near the main entrance, enabling basement stairs to be placed beneath the main staircase. On the first floor is a museum, comprising five galleries, and a lecture room, with stage. The galleries have a maximum wall area to accommodate pictures or cases of birds. Independent staircases are provided for the trades and for the staff and the caretaker.

THE SKETCH CLUB

EIGHTH SESSION

Almshouses at Alkmaar, Holland.



By F. L. Jackman (Pencil).

The Hospital Church, Stuttgart, Germany.

By Thomas Mitchell (Pencil).

The Baroque of Austria, Bohemia and Southern Germany is flavoured strongly with a common ingredient — fantastically shaped spires. This one is attached to a late Gothic Church (1471 — 1493).

At Avegno, three or four miles north-west of Locarno, at the head of Lake Maggiore, Switzerland.

By Maxwell Ayrton (Pencil).

Castle towers, the Estuary, Dartmouth.

By E. B. Musman (Pencil).

The Church of the Holy Ghost, Heidelberg.

By Thomas Mitchell (Pencil).

A bare quarter of a mile in Old Heidelberg market place separates the river Neckar and the abrupt slope to the castle: its courtyard is about level with the top of this spire—380 feet high.

ALL who have spent any length of time in a drawing office know the delightfully confident and assured

design appropriate and those who, like a well-known architect to whom it was shown, thank their lucky stars

Gothic Church (1471—1493).

By Maxwell Ayrton (Pencil).

spire—380 feet high.

ALL who have spent any length of time in a drawing office know the delightfully confident and assured manner in which the draughtsman will argue on a diversity of topics, however difficult and obscure. From just such an one was born the idea of "The Celestial City." This is the "explanation" I have *imposed* on the design:—Heaven and Hell are represented as being the same place and exist only as abstractions. (This meets both those who think the design appropriate and those who, like a well-known architect to whom it was shown, thank their lucky stars that they are certain of not going there).

Souls who enter this Heavenly Hell can, by taking thought, move anywhere on the horizontal plane or below, but they needs must *toil* to reach the upper terraces and the high places of the Celestial City. That is our fate; to be for ever toiling upwards.

The Celestial City: a Fantasy.
By Hubert E. Furse (Charcoal).

One of the old Town Gates of Coburg, Germany: the wall itself has long since gone.
By Thomas Mitchell (Pencil).

TOWERS and spires are landmarks almost as essential to the eye of the architect as of the sailor. By them, both know where they are, and it shall go hard with the architect at large but he will sketch them as his first impressions of a strange town. Here are some such by members of the Sketch Club.

The June Holiday Sketches Competition has been adjudged and the awards will be announced in the next issue of THE ARCHITECTS' JOURNAL. *Those for July and August are still open.* *(See the rules, etc., printed on page xlv.)*

IN PARLIAMENT

[BY OUR PARLIAMENTARY REPRESENTATIVE]

The Government's Slum Bill

DURING the Committee stage of the Housing Bill in the House of Lords few amendments were made. An interesting debate took place, however, on a proposal of Lord Banbury providing that full compensation, and not merely site value, should be given to owners of property compulsorily purchased which was in good order but which happened to be included in an area scheduled for rehousing.

The Bishop of Southwark said the amendment, if carried, would place serious difficulties in the way of slum clearance. The law dealing with compensation had been in operation since 1919. If the Bill were altered as the amendment proposed, the value of slum property would be instantly increased. The people who bought slum property knew what they were buying, and the country would be making a present to those property owners if the amendment were passed. He recognized that there were hard cases, but these could be met by giving local authorities greater discretionary powers.

Lord Jessel said it was common knowledge that the late Government, had they remained in office, would have amended the compensation clause. The effect of the clause as it stood was that local authorities were deterred from carrying out schemes of slum clearance.

Lord Parmoor said that the Government could not consider any proposal which would place an extremely heavy burden on local authorities and prevent them from pressing forward with slum clearance.

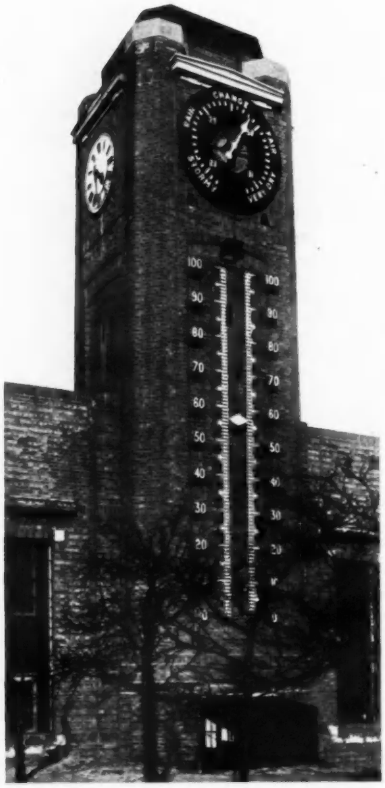
Eventually, the amendment was withdrawn, Lord Banbury reserving his right to bring it up at a later stage.

Lord Dynevor moved an amendment to provide that no compulsory purchase of land shall be authorized if it involves the destruction of or serious injury to the beauty of the landscape or the countryside. He explained that his object was to prevent local authorities from cutting down avenues or roads of trees in order to build houses if by so doing they would injure the beauty of the countryside. He was told that this point was partly dealt with in Clause 38; but he did not think that was really the case. That clause gave discretionary power to the Minister of Health, and it might happen that a future Minister of Health would not care for the beauty of the countryside. Local authorities should be prohibited from destroying the beauty of the landscape.

Lord Parmoor said that Clause 38 went a long way in the direction desired by Lord Dynevor. The Government could not accept the amendment, because its result would be that the question of natural amenities would be raised in every case of the proposed compulsory acquisition of land, and that would make the position of local authorities very difficult.

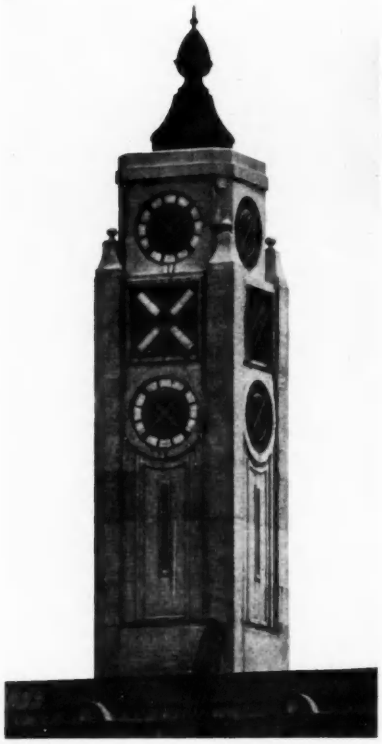
Lord Brentford suggested that, on Report, the Government might insert in Clause 38 the words "beauty of the landscape," and Lord Parmoor promised to consider that.

The amendment was withdrawn.



Slum-clearance Schemes

At question time in the House of Commons Mr. Day asked the Minister of Health whether he could state the number of buildings that had been acquired and demolished for slum-clearance schemes since April 1, 1925; how many new dwellings had been erected in connection with slum-clearance schemes over the same period; could he give an approximate estimate of the number of persons who had been rehoused in these new dwellings; and had any statistics been got out by his department of the number of persons who were still living in slum habitations.



Mr. Greenwood said that the number of buildings acquired by local authorities in England and Wales since April 1, 1925, in connection with approved slum-clearance schemes was approximately 10,700, and the number demolished approximately 9,000. The number of new dwellings erected since the same date in connection with such schemes was rather more than 9,700, and it was estimated that some 48,000 persons occupied these new dwellings. Statistics on the point raised in the last part of the question were not available.

Housing Progress in England

Mr. Greenwood informed Mr. Simon that the number of houses completed in England and Wales under the Housing (Financial Provisions) Act, 1924, during the year ended September 30,

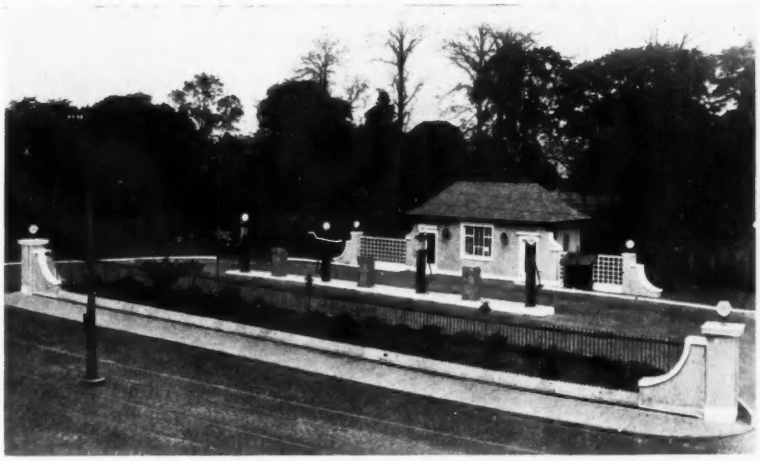
The chimney of the Cherry Blossom Factory, Chiswick. Designed by A. Alban H. Scott. In addition to its functional purpose, it serves as a clock tower, thermometer and barometer. The chimney, which is finished in sand-faced bricks, was camouflaged as much as possible to meet the wishes of the Ministry of Health and the Chiswick Urban District Council.

This tower, rising to a height of about 200 ft. from the Thames foreshore, near Blackfriars Bridge, surmounts the new wharf and distributing centre of Oxo, Ltd. The tower itself is 80 ft. high. The ornamental windows forming the letters OXO are, when the tower is illuminated from within, visible from a great distance. The architect was Albert Moore.

1927, was 97,316, and during the six months ended March 31, 1930, was 25,078.

Sir Kingsley Wood asked the Minister of Health if he would state the number of State-assisted houses completed under the Housing Act, 1924, for the quarter ended September 30, 1929, and the number completed for the last quarter for which figures were now available.

Mr. Greenwood said that the numbers were 17,730 and 11,351. The latter was the number of houses completed in the quarter ended June 30, 1930.



Housing Progress in Scotland

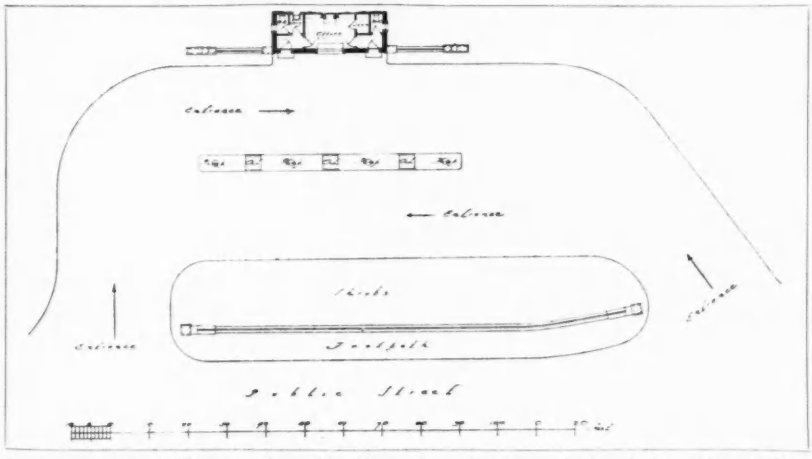
Mr. Johnston informed Mr. Marcus that the numbers of subsidy-aided houses completed and ready for occupation in Scotland in 1929 by local authorities and private enterprise respectively were 14,316 and 3,924. The number of houses erected without subsidy during that year was 1,275.

National Housing Survey

Mr. W. Taylor asked the Minister of Health if he would consider taking steps to institute a national housing survey throughout rural England, with a view to providing adequate cottage accommodation in every village at a rent the farm-worker could pay, and which would also relieve unemployment in the building trade.

Mr. Greenwood said that consideration had, from time to time, been given to the question of such a survey, but he did not think the results would be worth the time and labour involved. Mr. Taylor was no doubt aware of the special provision made for rural housing in the Housing (No. 2) Bill now before Parliament. He hoped that this Bill would soon be on the Statute Book and he should not fail to urge the local authorities concerned to take the utmost possible advantage of it.

Petrol-filling station, Hamilton, Lanarkshire. Designed by Alex. Cullen. The small office building which forms the central feature has white cement walls and a red tiled roof. In the recent competition promoted in connection with the design of petrol-filling stations, this station was awarded first place for Scotland.



Protection of Ancient Monuments

Mr. Lansbury, the First Commissioner of Works, informed Mr. Lewis that he had under preparation a Bill to give his department adequate powers to protect the surroundings of ancient monuments, including Hadrian's Wall.

Administration of the Housing Acts

Mr. Simon asked the Prime Minister whether, having regard on the one hand to the magnitude and complexity of the housing problem, and on the other to the burden of other work which devolves on the Ministry of Health, he would consider the advisability of transferring the duty of administering the Housing Acts either to a National Housing Council or to the Minister of Public Works.

Mr. MacDonald said he was advised that as housing was primarily a function of the local authorities it would not add to efficient administration if the central responsibility for it were divorced from the Ministry of Health.

Lay-out of petrol-filling station, Hamilton, Lanarkshire. Designed by Alex. Cullen. The site faces the main thoroughfare of the town and abuts on the wooded grounds of Hamilton Palace. A considerable depth, as well as frontage, was available, allowing the station to be set well back from the street. Wide access roadways allow incoming and outgoing traffic an uninterrupted flow.

SOCIETIES AND INSTITUTIONS

R.I.B.A. COUNCIL MEETING

FOLLOWING are some notes from the minutes of a recent meeting of the R.I.B.A. Council :

British Architects' Conference, Norwich : The Council passed a cordial vote of thanks to the members of the Norfolk and Norwich Association of Architects and all who contributed to the success of the Conference.

R.I.B.A. Examination Overseas : The following result was reported to the Council :

Final Examination, Part I (Design), Singapore, December, 1929.

Examined.	Passed.	Relegated.
1	1	—

Exemption from the R.I.B.A. Final Examination except that portion relating to Professional Practice : On the recommendation of the Board it was decided, subject to proper safeguards, that in future schools recognized for exemption from the R.I.B.A. Final Examination be allowed to hold the Examination in Professional Practice with other examinations in the final school year, instead of at the R.I.B.A.

The School of Architecture of the University of Cape Town : A report on the School of Architecture of the University of Cape Town was considered and, on the recommendation of the Board, it was decided, subject to

reconsideration in five years' time, that: (1) The three years' full-time day course be recognized for exemption from the R.I.B.A. Intermediate Examination; (2) the five years' Degree Course and Diploma Course be recognized for exemption from the R.I.B.A. Final Examination except that portion relating to Professional Practice; (3) the Examination in Professional Practice at the end of the fifth year of the school course be accepted as the R.I.B.A. Examination in Professional Practice provided that the two R.I.B.A. External Examiners shall act as Examiners in this subject; (4) non-university students who pass the university examinations be accepted for candidature as Associates of the R.I.B.A. on the recommendation of the R.I.B.A. Local Board of Examiners after reviewing their work; (5) external students who possess certificates in respect of the diploma examinations in architecture of either the University of the Witwatersrand or of the University of Cape Town be granted exemption from the R.I.B.A. Intermediate Examination; (6) with a view to ensuring some relaxation of the conditions in favour of students who suddenly find themselves confronted with a new set of circumstances, the Senate of the University of Cape Town should allow students accepted as Probationers R.I.B.A. to sit for the external examination for which the two Universities jointly are the examining body for the Union, even if the necessary entrance qualification is lacking, provided the Central Council of the Institute of South African Architects agree.

The School of Architecture, Birmingham: On the recommendation of the Board it was decided that the recognition of the three years' full-time day course for exemption from the R.I.B.A. Intermediate Examination be continued, and that the five years' course be recognized for exemption from the R.I.B.A. Final Examination except that portion relating to Professional Practice.

The School of Architecture, the Polytechnic, Regent Street, London: On the recommendation of the Board, it was decided that the three years' full-time day course be recognized for exemption from the R.I.B.A. Intermediate Examination.

Libraries of Schools of Architecture: The Board reported that the grant of £50 provided for the Libraries of Schools of Architecture had been allocated as follows: School of Architecture, Municipal School of Arts and Crafts, Southend-on-Sea, £20; School of Architecture, Robert Gordon's Colleges, Aberdeen, £20; School of Architecture, Armstrong College, Newcastle-on-Tyne, £10.

The R.I.B.A. and Technical Colleges and Art Schools with Arrangements for the Instruction of Intending Architects: It was decided, with a view to improving the standard of architectural education throughout the country, that: (1) A list be published in the *R.I.B.A. Kalendar* of technical colleges and art schools with arrangements for the instruction of intending architects; (2) the colleges and schools included in the list be sent from time to time all R.I.B.A. educational publications, notices, etc., and copies of each issue of the *R.I.B.A. Journal*.

R.I.B.A. Final and Special Examinations: The Council, on the recommendation of the Board, has decided to discontinue from December 31, 1930, the acceptance of a paper on the Outline of the History and Practice of Town Planning in the R.I.B.A. Final and Special Examinations, as an alternative to either Iron and Steel Construction and Reinforced Concrete or Hygiene.

PRIZES

The Alfred Bossom Travelling Studentship, 1929: The Board reported that they had approved the report on "Country Clubs" prepared on his tour by Mr. Frank Scarlett, A.R.I.B.A., Alfred Bossom Travelling Student, 1929.

The Godwin and Wimperis Bursary, 1925: The Board reported that they had approved the report on "The Layout of some Rhine Towns" prepared on his tour by Mr. L. H. Bucknell, A.R.I.B.A., Godwin and Wimperis Bursar, 1925.

The Athens Bursary, 1930: It was reported that the President, in consultation with the Officers of the Board, had approved the report on his tour submitted by Mr. G. D. Gordon Hake, F.R.I.B.A., Athens Bursar, 1930.

Architecture in Secondary Schools: It was decided that further steps be taken with a view to papers on the methods of interesting boys and girls in schools in architecture and kindred subjects being read at meetings of the Headmasters' Conference, the Incorporated Association of Headmasters and the Association of Headmistresses, and at meetings of the branches of these bodies.

The Architectural Association: It was decided to renew the annual grant of £100 to the Architectural Association for the year 1930.

Royal West of England Academy School of Architecture: It was decided to make a grant of £50 to the Royal West of England Academy School of Architecture for the current year.

Completion of the Mosaics on the Staircase of the National Gallery: It was decided to make a donation of £5 5s. towards the fund for the completion of the mosaics on the staircase of the National Gallery.

The British School of Archæology in Iraq: It was decided to make a donation of £5 5s. to the British School of Archæology in Iraq.

The Building Industry Council of Review: It was decided to make a donation of £25 towards the cost of the work of the Building Industry Council of Review.

The Council of the British School at Rome: Mr. Henry M. Fletcher (Vice-President) was reappointed for one

The students at the School of Architecture, Robert Gordon's Colleges, Aberdeen, recently entertained the assessors and staff to dinner. The above caricatures of some of the students, drawn by J. C. Todd, appeared on the outer page of the menu.

year as one of the two representatives of the Council of the R.I.B.A. on the Council of the British School at Rome.

British Waterworks Association: Standing Committee on Water Regulations: Mr. H. D. Searles-Wood, F.R.I.B.A., and Lt.-Col. P. A. Hopkins, L.R.I.B.A., were reappointed to represent the R.I.B.A. on the Standing Committee on Water Regulations of the British Waterworks Association.

The British Engineering Standards Association and Proposed Standard Specification for Gypsum Plaster: Messrs. W. E. Vernon Crompton, F.R.I.B.A., Alan E. Munby, F.R.I.B.A., and A. H. Barnes, L.R.I.B.A., were appointed to represent the R.I.B.A. on the Technical Committee which has been set up by the B.E.S.A. to prepare a standard specification for gypsum plaster.

Revision of the London Building Acts: On the recommendation of the R.I.B.A. London Building Acts Committee it was decided to call a conference of representatives of the following bodies with a view to co-ordinating the efforts now being made to hasten the revision of the London Building Acts: The Building Industry Council of Review, the London Employers' Association, the British Steelwork Association, the Incorporated Association of Retail Distributors.

Resignations: The following resignations were accepted with regret: Messrs. Raymond Bush, F.R.I.B.A.; Charles Albert Battie, L.R.I.B.A.

Applications for Transfer to Retired Fellowship: The following members were transferred to the Retired Fellowship: Messrs. O. C. Hills (A. 1896, F. 1905); F. Peck (A. 1898, F. 1915).

Election of Students: The following probationers were elected as students of the R.I.B.A.:

Abbott, D. N. (Architectural Association).
Ashley-Smith, E. T. (Intermediate Exam.).
Belsey, A. J. G. do.
Billington, P. do.
Bowden, G. E. (Architectural Association).
Bradford, W. N. (Intermediate Examination).
Brown, A. do.
Brown, C. do.
Brown, L. A. do.
Brown, V. do.
Burles, D. R. (Architectural Association).
Carter, F. H. (Intermediate Examination).
Chantrey, G. H. B. do.
Chapman, E. B. do.
Church, A. G. do.
Clayton, T. H. do.
Coker, W. E. G. do.
Cook, J. H. do.
Cortis, H. W. do.
Davies, E. L. W. (University of London).
Davis, C. H. R. (Intermediate Examination).
Deleuse, J. E. do.
Denbigh, G. D. do.
Elgey, C. do
Fairweather, J M. do.
Farnsworth, J. E. do.
Fleming, D. E. do.
Fox, C. F. do.
Goffey, A. E. do.
Goodworth, C. E. (Southend School of Arts and Crafts).
Gott, A. F. E. (Intermediate Examination).
Grant, F. C. G. (Architectural Association).
Gratrix, H. H. (Intermediate Examination).
Hardwick, J. do.
Hey, J. A. do.
Huddy, G. V. do.
Hunt, W. J. do.

Watkinson, P. G. do.
Wheatley, N. do.
Wilkinson, A. do.
Williams, I. M. do.

MEMBERSHIP OF THE R.I.B.A.

The revised bylaws of the R.I.B.A. have received the approval of H.M. Privy Council, and applications may now be sent in for membership of the R.I.B.A. in the Licentiate Class. Full information obtainable on application to the Secretary, R.I.B.A., 9 Conduit Street, London, W.1.

BARTLETT SCHOOL OF ARCHITECTURE

The following further award has been made at the Bartlett School of Architecture, University College, London. Prize for design in reinforced concrete: J. K. M. Sanderson.

BRISTOL SCHOOL OF ARCHITECTURE

The annual exhibition and presentation of prizes was held recently at the Bristol School of Architecture. Mr. W. Stenner, F.R.I.B.A., President of the Bristol Society of Architects, presided.

Mr. G. D. Gordon Hake, F.R.I.B.A., the headmaster, reported that the membership of the school had increased and now numbered forty-two; half of the students came from places outside Bristol, and even from Egypt. If, he said, there were an increase in the number of students, the question of accommodation would become acute. There had been additions to the staff, and it would be further augmented next session.

Dr. Ludford Freeman, Director of Education for Bristol, who presented the prizes, said it was anticipated that the school would soon secure the standing necessary so that students might take the full certificate of the R.I.B.A.

The following awards were made: Dame Janet Stancomb Wills travelling studentship (value £25), and the Savoury design medal, Mark Hartland Thomas; Mrs. Yda Richardson's bursary for the study of town planning, D. A. Thuell; R. W. A. Silver medal and Bristol Society's prize, P. K. Pope; R.W.A. bronze medal and Bristol Society's prize, W. R. Stenner; Architectural Association design prize, A. R. Taylor; Eustace Button measured drawing prize, P. K. Pope, with A. D. Kirby and T. H. Burrough highly commended; headmaster's prize, W. J. L. James. Certificates were awarded to Mark Hartland Thomas, Pauline Hartland Thomas, C. W. A. Ingles, D. A. Thuell and A. D. Waller.

The Traffic Problem

The Special Committee on Traffic of the London County Council, says *The Times*, has for some time had under consideration questions arising from requests by the Commissioner of Police that authority should be sought requiring the submission to him of plans of large buildings, such as retail stores and places of public resort, so that the layout of buildings might be examined in the light of traffic considerations.

In a report which was put before the Council yesterday the committee say that the erection of buildings to which the public resort in large numbers undoubtedly gives rise to considerable difficulties in large cities.

The committee advise that powers should be sought to enable plans to be examined from the traffic point of view and to empower the Council to impose requirements in respect of the provision of facilities for dealing with the vehicular traffic likely to be attracted to new buildings of the character mentioned. If the powers are conferred it is indicated that the Council will lay down the procedure to be followed, but the committee imagine

that before imposing requirements the Council would in all cases consult the Minister of Transport, so that the views of the London and Home Counties Traffic Advisory Committee might be obtained.

OBITUARY

JOHN A. CHESTON : 1889–1930

We regret to record the death of Mr. John Allford Cheston, F.R.I.B.A., surveyor to the Bethlem and Bridewell Royal Hospitals, at the age of forty-one.

He was the son of the late Mr. Horace Cheston, F.R.I.B.A., to whose practice he succeeded. He was architect, in association with Mr. C. E. Elcock, F.R.I.B.A., for the new Bethlem Hospital, Monks Orchard, Beckenham, opened by H.M. the Queen early this month.

During the war Mr. Cheston served in the H.A.C., the London Regiment, and the 24th Royal Fusiliers, and was a recipient of the Military Cross.

TRADE NOTES

Delegates from twenty countries attended the Conference of Holophane overseas agents held at Holophane House, Elverton Street, London.

Mr. H. Hepworth Thompson, in extending a welcome to the delegates, said that Holophane was the first to apply the science of illuminating engineering to ordinary illuminating purposes, and it might fairly be said that Holophane and the genesis of illuminating engineering were coincident terms. The movement had extended to all parts of the world. Others had emulated and extended the various things Holophane had put forward until there was hardly a country in the world which had not got its own lighting movement.

Among the papers read were "Recent Researches in Illumination" by Dr. Walsh, President of the Illuminating Society and head of the National Physical Laboratory; "Street Lighting," by Professor Teichmuller; "Cinema and Theatrical Colour Lighting," by Mr. H. G. Williams, who demonstrated in the firm's private theatre the effects and possibilities of Holophane colour lighting; "Science in the Service of Illuminating Glass Manufacturers," by Dr. S. English; "Illumination from the Architect's Point of View," by Mr. G. Grey Wornum, F.R.I.B.A., President of the Architectural Association; "Modern Interior Lighting," by Mr. Howard Robertson, F.R.I.B.A.; "Holophane Developments," by Mr. Ernest Stroud; and "Practical Developments of Holophane Products," by Mr. L. M. Tye.

Mr. G. Grey Wornum said that if a room was lit in an eccentric way it would become tiresome after a time. For that reason he thought it essential to give variety in lighting. In the near future, he said, you might have men perfectly delighted to have three-dimensional pictures in recesses in the house, with projected coloured lighting giving colour shades, so that the pictures could be arranged according to their fancy. He was rather interested to see on the staircase of the Duchess Theatre, one of the new London theatres, some little pictures made up of strips of coloured glass with lights thrown on them. He thought they were a forward movement.

Mr. Howard Robertson said the lighting problem as he saw it was dual. There was illumination and there was the decorative. The solution of those problems required the collaboration of the technician and the artist, and he found, in the most efficient examples of lighting the separation of the two. This was evident and convincing, but in many cases the artist must be absent. Buildings were becoming less and less stereotyped. Take the factory, for instance—different machinery and probably different kinds of lighting even for different departments in the same factory. Even churches were not standardized. You had, say, Roman Catholic and Unitarian. You could not apply the same lighting to both. Churches which were more like a public meeting hall would stand a harder kind of lighting, while Roman Catholic churches must have soft lighting to preserve the mystery of the service. There, he thought, the artist was called upon and he had got to feel his architectural problems very acutely.

*

The coal industry is making considerable progress with by-products which are becoming increasingly useful to builders and constructional engineers. Presotim, the wood preservative produced by the Powell Duffryn Co., and marketed by Stephenson Clarke and Associated Companies, has been specified for a number of interesting jobs recently. The G.W.R. is using it for the roof of Bargoed Station, which is being rebuilt; the Birmingham Housing Department is using it for treating wood fencing in one of their housing schemes, and both Bangor and Aberystwyth piers are having the wood protected by Presotim, which is claimed to have four times the covering capacity of creosote.

*

The following story concerning Mark Twain appears in the July issue of *Leyland Rubber Relay*, the house journal of the Leyland and Birmingham Rubber Co., Ltd. Mark Twain was, in his earlier days, the editor of a Missouri newspaper, in a copy of which a superstitious reader found a spider. On being asked if this was a sign of good or bad luck, Mark Twain replied as follows : "Finding a spider in your newspaper is neither good fortune nor bad for you. The spider was merely looking over our paper to see which merchant is not advertising, so that he could go to that store, spin his web over the door, and lead a life of undisturbed peace ever afterwards."

*

"If you have wood you need Solignum" is the slogan adopted for an interesting leaflet issued by Messrs. Solignum, Ltd. It is pointed out that in temperate climates, where dry rot and decay play havoc with unprotected timber; in the tropics, where the white ant is an even speedier agent of destruction, Solignum is specified by governments, municipalities, railways and building contractors. In addition to its value as a preservative, Solignum is claimed to be an attractive stain for wood. It is made in eighteen different shades, and can be either varnished, or finished with Solignum wax polish. In the leaflet are illustrations in colour of a few of the many ways—for brightening up garden woodwork, for floors, and for poultry houses—in which Solignum can be used. Other illustrations suggest the use of the material for all woodwork, both externally and internally. The sole makers and proprietors are Messrs. Solignum, Ltd., 205 Borough High Street, London, S.E.1.

*

Subject to the approval of the Ministries of Health and Transport, Messrs. Dorman, Long & Co., Ltd., of Middlesbrough and London, have secured the contract for the strengthening of the Scotswood Bridge over the Tyne, about three miles upstream from Newcastle. This suspension bridge, owned by the Newcastle-upon-Tyne Corporation, provides a roadway and footway. The strengthening work will take approximately thirty-six weeks, and will require 350 tons of steel. The contract price is £30,343 12s. 10d.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.

LATEST PATENT APPLICATIONS

20650. Blakesley, J. H. Bridge construction. July 8.

20537. Davy, W. J. Sound-proofing ceilings, walls, etc. July 7.

SPECIFICATION PUBLISHED

331644. Allen, S. Collapsible and transportable shelter or structure.

SALTLEY SCHOOL

Following are the names of the general contractors and some of the sub-contractors for Saltley Secondary School, illustrated on pages 152–156. General contractors, Maddocks and Walford. Sub-contractors : Ragusa Asphalte Paving Co., Ltd., asphalt; Blockley, Ltd., facing bricks; Stuart's Granolithic Co., Ltd., artificial stone and stairtreads; Charles Wade & Co., Ltd., structural steel; Kleine Patent Fire-Resisting Flooring Syndicate, Ltd., fireproof construction; Wormells, Ltd., slates; H. Hope and Son, Ltd., patent glazing; Hollis Bros., wood-block flooring; Marbello, Ltd., patent flooring; Brightside Foundry and Engineering Co., Ltd., central heating; Baxter and Impey, electric wiring; H. Pratt, Ltd., plumbing; Adamsez, Ltd., sanitary fittings; Walker and Worsey, door furniture; Parker, Winder and Achurch, Ltd., and Walker and Worsey, window furniture; I. R. Pearson (Birmingham), Ltd., entrance gates and metalwork; Parker, Winder and Achurch, Ltd., tennis court enclosures and equipment, and cloakroom fittings.

TUESDAY, AUGUST 26

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Electricity." By S. H. Groom, B.A. **3 p.m.**

SATURDAY, AUGUST 30

Sunrise, 6.8 a.m. Sunset, 7.53 p.m.

MONDAY, SEPTEMBER 1

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. September 1 to September 6.

TUESDAY, SEPTEMBER 2

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "The Composition, Mixing, Methods of Application of Concrete and Reinforced Concrete, as used in the Yards, and the Control of Same." By T. R. Grigson, M.INST.C.E. "Some Notes on the Composition, Mixing and Application of Concrete in Engineering Works." By C. J. Jackaman, A.M.INST.C.E.

WEDNESDAY, SEPTEMBER 3

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Pieces in Concrete Piles." By M. J. C. McCarthy, A.M.INST.C.E., A.M.MECH.E. "Stresses in Dams." By S. D. Carothers. "A Study of Plain and Reinforced Concrete Retaining Walls." By Ewart S. Andrews, B.SC., M.INST.C.E. "Reinforced Concrete in Great Britain." By A. Kirkwood Dodds, M.C., M.SOC.C.E. (FRANCE). "Reinforced Concrete in Engineering: Representative Examples of British Practice." By M. Gerard, M.SOC.C.E. (FRANCE).

THURSDAY, SEPTEMBER 4

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Work of the Building Research Station on Small Movements in Concrete." By Dr. W. H. Glanville, B.SC., A.M.INST.C.E. "The Effect of Temperature on Flat Arches Constructed of Reinforced Concrete." By C. S. Gray, B.SC., A.M.INST.C.E. "Temperature and Cement." By Dr. Oscar Faber, O.B.E., M.INST.C.E.

SATURDAY, SEPTEMBER 6

Sunrise, 6.19 a.m. Sunset, 7.37 p.m.

XII. INTERNATIONAL CONGRESS OF ARCHITECTS. In Budapest. September 6 to 13. Opening of International Exhibition of Architectural Designs in the Picture Gallery of the Hungarian Scientific Academy. **10 a.m.**

SATURDAY, SEPTEMBER 13

Sunrise, 6.30 a.m. Sunset, 7.21 p.m.

WEDNESDAY, SEPTEMBER 17

BRITISH GLASS CONVENTION. At Buxton. Until September 20. Further particulars will be announced later.

FRIDAY, SEPTEMBER 19

R.I.B.A., 9 Conduit Street, W.1. Exhibition in the R.I.B.A. Galleries of Drawings submitted in competition for the Archibald Dawnay Scholarship (10 a.m. to 7 p.m.; Saturdays, 2 p.m.) Until September 30. **10 a.m.**

SATURDAY, SEPTEMBER 20

Sunrise, 6.41 a.m. Sunset, 7.5 p.m.

FRIDAY, SEPTEMBER 26

NATIONAL SMOKE ABATEMENT SOCIETY. Annual Conference, to be held at Leicester until September 28. During the conference the following papers will be read: "Fuel Research and Smoke Abatement," by Dr. Margaret Fishenden; "The Smoke Problem in Sheffield," by F. J. Bailey and E. C. Evans; "Smoke and the Weather," by a meteorological expert; and "The Smoke Nuisance as the Airman Sees It."

SATURDAY, SEPTEMBER 27

Sunrise, 6.53 a.m. Sunset, 6.49 p.m.

COMPETITIONS OPEN

July 31.—Competition for a Council school to accommodate 320 children, to be erected on the Brewery Fields estate; also a school for 400 children on the Priory estate, for the Dudley Education Authority. Assessor: Herbert T. Buckland, F.R.I.B.A. Premiums: £150, £100, and £50. Applications for conditions of the competition, etc., should have been made to J. Whaley, Director of Education, Education Offices, St. James's Road, Dudley, by April 30. Deposit £1 1s. Latest date for submission of designs: July 31.

July 31.—Competition for proposed town hall, which is to be built on the site of the old town hall, at an approximate cost of £250,000 for the Luton Town Council. Assessor: Sir Brumwell Thomas, F.R.I.B.A. Premiums: £500, £300, £200 and £100. Latest date for submission of designs: July 31.

July 31.—Competition for a new Market Hall for the Southport Borough Council. Assessor: Percy Worthington, F.R.I.B.A. Premiums: £100, £50, £35, and £20. The estimated cost is £13,500. Latest date for submission of designs: July 31.

August 30.—The Carlisle Corporation invites British architects to submit designs for the façade to English Street and the Victoria Viaduct, suitable for shops and business premises. The site was previously occupied by the Prison. The total length of the frontage is approximately 358 ft. Assessor: Francis Jones, F.R.I.B.A. Premiums: £300, £200, and £100. Particulars of the competition, etc., may be obtained from Percy Dalton, A.M.INST.C.E., A.R.I.B.A., City Engineer, 18 Fisher Street, Carlisle. Deposit £1 1s.

September 1.—The Bangor (Co. Down) Borough Council invites architects or town planners to submit designs in competition for laying out the sea front within the Borough. Assessor: Professor Patrick Abercrombie, F.R.I.B.A. Premiums: £150 and £50 for first and second places, respectively. Copies of the conditions and plans will be forwarded on application to J. Milliken, Town Clerk, Borough Council Offices, Bangor, Co. Down. Deposit £1 1s. Latest date for submission of designs: September 1.

September 30.—The Isle of Man Education Authority invited architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums: £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs: September 30.

November 30.—The Guildford Cathedral Committee invites any architect, who has been engaged in the design of cathedrals or churches, to submit for examination drawings and other illustrations of his works; or a design for a cathedral. Not more than three sets of drawings may be submitted, packed in one large portfolio. The Committee, with the assistance of Mr. Walter Tapper, A.R.A., will examine the portfolios, and select a limited number of architects for the Final Competition. Each architect selected for the final competition will receive 500 guineas, whether his design is accepted or not. Portfolios should be addressed to The Venerable the Archdeacon of Surrey, The Diocesan Office, Lloyds Bank Chambers, Guildford, not later than November 30.

The Poplar B.C. is to invite architects to submit competitive designs for the erection of new municipal offices in Bow Road, the premiums to be 500 guineas, 300 guineas, and 100 guineas.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Broken brick or stone, 2 in., per yd.	£0	11	6
Thames ballast, per yd.	0	10	0
Pit gravel, per yd.	0	15	0
Pit sand, per yd.	0	12	6
Washed sand, per yd.	0	13	0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.
Portland cement, per ton £2 8 0
Lias lime, per ton 2 0 0
Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.
Transport hire per day:

Cart and horse	£1	3	0	*Trailer*	£0	15	0
3-ton motor lorry	3	15	0	*Steam roller*	4	5	0
Steam lorry, 5-ton	4	0	0	*Water cart*	1	5	0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0	1	6
SPREAD and level, including wheeling, per yd.	0	1	6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0	10	6
TRIMMING earth to slopes, per yd. sup.	0	0	6
HACKING up old grano. or similar paving, per yd. sup.	0	1	3
PLANKING to excavations, per ft. sup.	0	0	5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.			
If left in, add to above prices, per ft. cube	0	2	0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0	2	1
DO. 6 in. thick, per yd. sup.	0	2	10
PUDDLING, per yd. cube	1	10	0
CEMENT CONCRETE, 4-2-1, per yd. cube	1	17	6
DO. 6-2-1, per yd. cube	1	12	6
DO. in upper floors, add 15 per cent.			
DO in reinforced-concrete work, add 20 per cent.			
DO. in underpinning, add 60 per cent.			
LIAS-LIME CONCRETE, per yd. cube	£1	14	0
BREEZE CONCRETE, per yd. cube	1	7	0
DO. in lintels, etc., per ft. cube	0	1	6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0	3	9
FINE concrete benching to bottom of manholes, per ft. cube	0	3	0
FINISHING surface of concrete spade face, per yd. sup.	0	0	9

DRAINER

LABOURER, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* BRICKLAYER, 1s. 8½d. *per hour;* PLUMBER, 1s. 8½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0	0	10
DO. 6 *in., per ft.*	0	1	3
DO. 9 *in., per ft.*	0	2	3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0	5	6
DO. 6 in., *per yd.*	0	8	0
Portland cement and sand, see "Excavator" above.			
Leadwool, per cwt.	£2	0	0
Yaskin, per lb.	0	0	4½

STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft. 0 4 3
DO. 6 in., per ft. 0 5 0
DO. 9 in., per ft. 0 7 9
CAST-IRON DRAINS, jointed in lead, 4 in., per ft. 0 8 3
DO. 6 in., per ft. 0 10 3

Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

BRICKLAYER

BRICKLAYER, 1s. 8½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour.*

London stocks, per M.	£4	5	6
Kettons, per M.	2	12	6
White facing bricks, per M.	5	0	0
Multi-coloured facings, per M.	7	7	9
Best red facings, per M.	7	7	9
Rubbers, 9½ in., per M.	12	0	6
Staffordshire blue, per M.	9	5	0
Firebricks, 2½ in., per M.	9	5	0
Glazed salt, white, and ivory stretchers, per M.	21	10	0
DO. *headers, per M.*	20	10	0
Colours, extra, per M.	5	10	0
Seconds, less, per M.	1	0	0
Cement and sand, see "Excavator" above.			
Lime, grey stone, per ton	£2	11	6
Mixed lime mortar, per yd.	1	6	0
Dampcourse, in rolls of 4½ in., per roll	0	2	6
DO. 9 *in. per roll*	0	4	9
DO. 14 *in. per roll*	0	7	6
DO. 18 *in. per roll*	0	9	6
BRICKWORK in stone lime mortar, Flettons or equal, per rod	30	0	0
DO. in cement do., per rod	32	10	0
DO. in stocks, add 25 per cent. per rod.			
DO. in blues, add 100 per cent. per rod.			
DO. circular on plan, add 12½ per cent. per rod.			
DO. in backing to masonry, add 12½ per cent. per rod.			
DO. in raising on old walls, etc., add 12½ per cent. per rod.			
DO. in underpinning, add 20 per cent. per rod.			
HALF-BRICK walls in stocks in cement mortar (1-3), per ft. sup.	£0	1	0
BEDDING plates in cement mortar, per ft. run	0	0	3
BEDDING window or door frames, per ft. run	0	0	3
LEAVING chases 2½ in. deep for edges of concrete floors not exceeding 6 in. thick, per ft. run	0	0	2
CUTTING do. in old walls in cement, per ft. run	0	0	4
CUTTING, toothing and bonding new work to old (labour and materials), per ft. sup.	0	0	7
TERRA-COTTA flue pipes 9 in. diameter, jointed in fireclay, including all cuttings, per ft. run	0	3	6
DO. 14 ft. by 9 in. do., per ft. run	0	6	0
FLAUNCHING chimney pots, each	0	2	0
CUTTING and pinning ends of timbers, etc., in cement	0	1	0
FACINGS fair, per ft. sup. extra	0	0	3
DO. picked stocks, per ft. sup. extra.	0	0	7
DO. red rubbers, gauged and set in putty, per ft. sup. extra	0	4	9
DO. in salt white or ivory glazed, per ft. sup. extra	0	5	6
TUCK pointing, per ft. sup. extra	0	0	10
WEATHER pointing, do. do.	0	0	3
TILE creasing with cement fillet each side, per ft. run	0	0	6
GRANOLITHIC PAVING, 1 in., per yd. sup.	0	5	0
DO. 1½ in., per yd. sup.	0	6	0
DO. 2 in., per yd. sup.	0	7	0
If coloured with red oxide, per yd. sup.	0	1	0
If finished with carborundum, per yd. sup.	0	0	6
If in small quantities, in finishing to steps, etc., per ft. sup.	0	1	4
Jointing new grano. paving to old, per ft. run	0	0	4
Extra for dishing grano. or cement paving around gullies, each	0	1	6
BITUMINOUS DAMP COURSE, ex rolls, per ft. sup.	0	0	7
ASPHALT (MASTIC) DAMP COURSE, ½ in., per yd. sup.	0	8	0
DO. vertical, per yd. sup.	0	11	0
SLATE DAMP COURSE, per ft. sup.	0	0	10
ASPHALT ROOFING (MASTIC) in two thicknesses, ¾ in., per yd.	0	8	6
DO. SKIRTING, 6 in.	0	0	11
BREEZE PARTITION BLOCKS, set in cement, 1½ in. per yd. sup.	0	5	3
DO. DO. 3 in.	0	6	6
BREEZE fixing bricks, extra for each	0	0	3

MASON

MASON, 1s. 8½d. *per hour;* DO. *fixer,* 1s. 9½d. *per hour;* LABOURER, 1s. 3½d. per hour; SCAFFOLDER, 1s. 4½d. *per hour.*

Portland Stone:			
Whitbed, per ft. cube	£0	4	6
Basebed, per ft. cube	0	4	9
Bath stone, per ft. cube	0	3	0
Usual trade extras for large blocks.			
York paving, av. 2½ in., per yd. super.	0	11	0
York templates sawn, per ft. cube	0	7	6
Slate shelves, rubbed, 1 in., per ft. sup.	0	2	6
Cement and sand, see "Excavator," etc., above.			
HOISTING and setting stone, per ft. cube	£0	2	2
DO. for every 10 ft. above 30 ft. add 15 per cent.			
PLAIN face Portland basis, per ft. sup.	£0	2	8
DO. circular, per ft. sup.	0	4	0
SUNK FACE, per ft. sup.	0	3	9
DO. circular, per ft. sup.	0	4	10
JOINTS, arch, per ft. sup.	0	2	6
DO. sunk, per ft. sup	0	2	7
DO. DO. circular, per ft. sup.	0	4	6
CIRCULAR-CIRCULAR work, per ft. sup.	1	2	0
PLAIN MOULDING, straight, per inch of girth, per ft. run	0	1	1
DO. circular, do., per ft. run	0	1	4
HALF SAWING, per ft. sup.	0	1	0
Add to the foregoing prices, if in York stone, 35 per cent			
DO. Mansfield, 12½ per cent.			
Deduct for Bath, 33⅓ per cent.			
DO. for Chilmark, 5 per cent.			
SETTING 1 in. slate shelving in cement, per ft. sup.	£0	0	6
RUBBED round nosing to do., per ft. lin.	£0	0	6
YORK STEPS, rubbed T. & R., ft. cub. fixed	1	7	6
YORK SILLS, W. & T., ft. cub. fixed	1	10	0
ARTIFICIAL stone paving, 2 in. thick, per ft. sup.	0	1	3
DO. 2½ in. thick, per ft. sup.	0	1	6

SLATER AND TILER

SLATER 1s. 8½d. *per hour;* TILER, 1s. 8½d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* LABOURER, 1s. 3½d. *per hour.*
N.B.—Tiling is often executed as piecework.

Slates, 1st quality, per 1,200:

Portmadoc Ladies						£14	0	0
Countess						23	0	0
Duchess						32	10	0
Old Delabole	*Med.*		*Grey*			*Med.*		*Green*
24 in. × 12 in.	£42	11	3			£45	1	0
20 in. × 10 in.	31	4	3			33	0	6
16 in. × 10 in.	20	18	0			22	4	9
14 in. × 8 in.	12	1	0			12	16	3
Green Randoms, per ton						8	3	9
Grey-green do., per ton						7	3	9
Green peggies, 12 in. to 8 in. long, per ton						5	13	9
In 4-ton truck loads, delivered Nine Elms station.								
Clips, lead, per lb.						£0	0	6
Clips, copper, per lb.						0	2	0
Nails, compo, per cwt.						1	6	0
Nails, copper, per lb.						0	2	2
Cement and sand, see "Excavator," etc., above.								
Hand-made tiles, per M.						£5	18	0
Machine-made tiles, per M.						5	8	0
Westmorland slates, large, per ton						9	0	0
DO. *Peggies, per ton*						7	5	0

SLATING, 3 in. lap, compo nails, Portmadoc or equal:

Ladies, per square	£4	0	0
Countess, per square	4	5	0
Duchess, per square	4	10	0
WESTMORLAND, in diminishing courses, per square	6	5	0
CORNISH DO., per square	6	3	0
Add, if vertical, per square approx.	0	13	0
Add, if with copper nails, per square approx.	0	2	6
Double course at eaves, per ft. approx.	0	1	0

SLATING with Old Delabole slates to a 3 in. lap with copper nails, at per square.

	Med.	*Grey*		*Med.*	*Green*	
24 in. × 12 in.	£5	0	0	£5	2	0
20 in. × 10 in.	5	5	0	5	10	0
16 in. × 10 in.	4	15	0	5	1	0
14 in. × 8 in.	4	10	0	4	15	0
Green randoms				6	7	0
Grey-green do.				5	9	0
Green peggies, 12 in. to 8 in. long				4	13	6

TILING, 4 in. gauge, every 4th course nailed, in hand-made tiles, average per square 3 17 6
DO., machine-made do., per square 3 7 6
Vertical Tiling, including pointing, add 18s. 0d. per square.

FIXING lead soakers, per dozen	£0	0	10
STRIPPING old slates and stacking for re-use, and clearing away surplus and rubbish, per square	0	10	0
LABOUR only in laying slates, but including nails, per square	1	0	0

See "Sundries" for Asbestos Tiling.

CARPENTER AND JOINER

CARPENTER, 1s. 8½d. *per hour;* JOINER, 1s. 8½d. *per hour;* LABOURER, 1s. 3½d. *per hour.*

Timber, average prices at Docks, London Standard,

Scandinavian, etc. (equal to 2nds):			
7 × 3, per std.	£22	0	0
11 × 4, per std.	30	0	0
Memel or Equal. Slightly less than foregoing.			
Flooring, P.E., 1 in., per sq.	£1	4	6
DO. *T. and G., 1 in., per sq.*	1	4	6
Planed boards, 1 in. × 11 in., per std.	30	0	0
Wainscot oak, per ft. sup. of 1 in.	0	1	6
Mahogany, Honduras, per ft. sup. of 1 in.	0	1	4
DO. *Cuba, per ft. sup. of 1 in.*	0	2	6
DO., *African, per ft. sup.*	0	1	3
Teak, per ft. sup. of 1 in.	0	1	2
DO., *ft. cube*	0	14	0
FIR fixed in wall plates, lintels, sleepers, etc., per ft. cube	0	4	6
DO. framed in floors, roofs, etc., per ft. cube	0	4	6
DO. framed in trusses, etc., including ironwork, per ft. cube	0	8	6
PITCH PINE, add 33⅓ per cent.			
FIXING only boarding in floors, roofs, etc., per sq.	0	13	6
SARKING FELT laid, 1-ply, per yd.	0	1	6
DO., 3-ply, per yd.	0	1	9
CENTERING for concrete, etc., including horsing and striking, per sq.	2	0	0
TURNING pieces to flat or segmental soffits, 4½ in. wide, per ft. run	0	0	4½
DO. 9 in. wide and over, per ft. sup.	0	1	2

[continued overleaf

CARPENTER AND JOINER: *continued*

SHUTTERING to face of concrete, per square	£1	10	0
DO. in narrow widths to beams, etc., per ft. sup.	0	0	6
USE and waste of timbers, allow 25 per cent. of above prices.			
SLATE BATTENING, per sq.	£0	12	6
DEAL boarding to flats, 1 in. thick and firrings to falls, per square	2	10	0
STOUT feather-edged tilting fillet to eaves, per ft. run	0	0	6
FEATHER-edged springer to trimmer arches, per ft. run	0	0	4
STOUT herringbone strutting (joists measured in), per ft. run	0	0	6
SOUND boarding, ⅞ in. thick and fillets nailed to sides of joists (joists measured over), per square	2	0	0
RUBEROID or similar quality roofing, one ply, per yd. sup.	0	2	3
DO., two-ply, per yd. sup.	0	2	6
DO., three-ply, per yd. sup.	0	3	0
TONGUED and grooved flooring, 1¼ in. thick, laid complete with splayed headings, per square	2	5	0
DEAL skirting torus, moulded 1¼ in. thick, including grounds and backings, per ft. sup.	0	1	0
TONGUED and mitred angles to do.	0	0	6
WOOD block flooring standard blocks laid herringbone in mastic:			
Deal 1 in. thick, per yd. sup.	0	10	0
DO. 1¼ in. thick, per yd. sup.	0	12	0
Maple 1¼ in. thick, per yd. sup.	0	15	0
DEAL moulded sashes, 1¼ in. with moulded bars in small squares, per ft. sup.	0	2	6
DO. 2 in. do., per ft. sup.	0	2	9
DEAL cased frames, oak sills and 2 in. moulded sashes, brass-faced pulleys and iron weights, per ft. sup.	0	4	6
MOULDED horns, extra each	0	0	3
DOORS, 4-panel square both sides, 1¼ in thick, per ft. sup.	0	2	6
DO. moulded both sides, per ft. sup.	0	2	9
DO. 2 in. thick, square both sides, per ft. sup.	0	2	9
DO. moulded both sides, per ft. sup.	0	3	0
DO. in 3 panels, moulded both sides, upper panel with diminished stiles with moulded bars for glass, per ft. sup.	0	3	6
If in oak, mahogany or teak, multiply 3 times.			
DEAL frames, 4 in. × 3 in., rebated and beaded, per ft. cube	£0	15	0
Add for extra labour, per ft. run	0	0	1
STAIRCASE work:			
DEAL treads 1¼ in. and risers 1 in., tongued and grooved including fir carriages, per ft. sup.	0	2	6
DEAL wall strings, 1¼ in. thick, moulded, per ft. run	0	2	0
If ramped, per ft. run	0	4	6
SHORT ramps, extra each	0	7	6
ENDS of treads and risers housed to strings, each	0	1	0
2 in. deal mopstick handrail fixed to brackets, per ft. run	0	1	6
4½ in. × 3 in. oak fully moulded handrail, per ft. run	0	5	6
1½ in. square deal bar balusters, framed in, per ft. run	0	0	6
FITTINGS:			
SHELVES and bearers, 1 in., cross-tongued, per ft. sup.	0	1	6
1¼ in. beaded cupboard fronts, moulded and square, per ft. sup.	0	2	9
TEAK grooved draining boards, 1¼ in. thick and bedding per ft. sup.	0	4	6
IRONMONGERY:			
Fixing only (including providing screws):			
TO DEAL—			
Hinges to sashes, per pair	0	1	2
Do. to doors, per pair	0	1	7
Barrel bolts, 9 in., iron, each	0	1	0
Sash fasteners, each	0	1	0
Rim locks, each	0	1	9
Mortice locks, each	0	4	0

SMITH

SMITH, *weekly rate equals* 1s. 8½d. *per hour*; MATE, *do.* 1s. 3½d. *per hour*; ERECTOR, 1s. 8½d. *per hour*; FITTER, 1s. 8½d. *per hour*; LABOURER, 1s. 3½d. *per hour.*

Mild Steel in British standard sections, per ton	£12	10	0
Sheet Steel:			
Flat sheets, black, per ton	17	0	0
DO., *galvd., per ton*	18	0	0
Corrugated sheets, galvd., per ton	17	10	0
Driving screws, galvd., per grs.	0	1	10
Washers, galvd., per grs.	0	1	1
Bolts and nuts per cwt. and up	1	18	0
MILD STEEL in trusses, etc., erected, per ton	25	0	0
DO., in small sections as reinforcement, per ton	16	0	0
DO., in compounds, per ton	17	0	0
DO., in bar or rod reinforcement, per ton	22	10	0
WROT-IRON in chimney bars, etc., including building in, per cwt.	2	0	0
DO., in light railings and balusters, per cwt.	2	5	0
FIXING only corrugated sheeting, including washers and driving screws, per yd.	0	2	0

PLUMBER

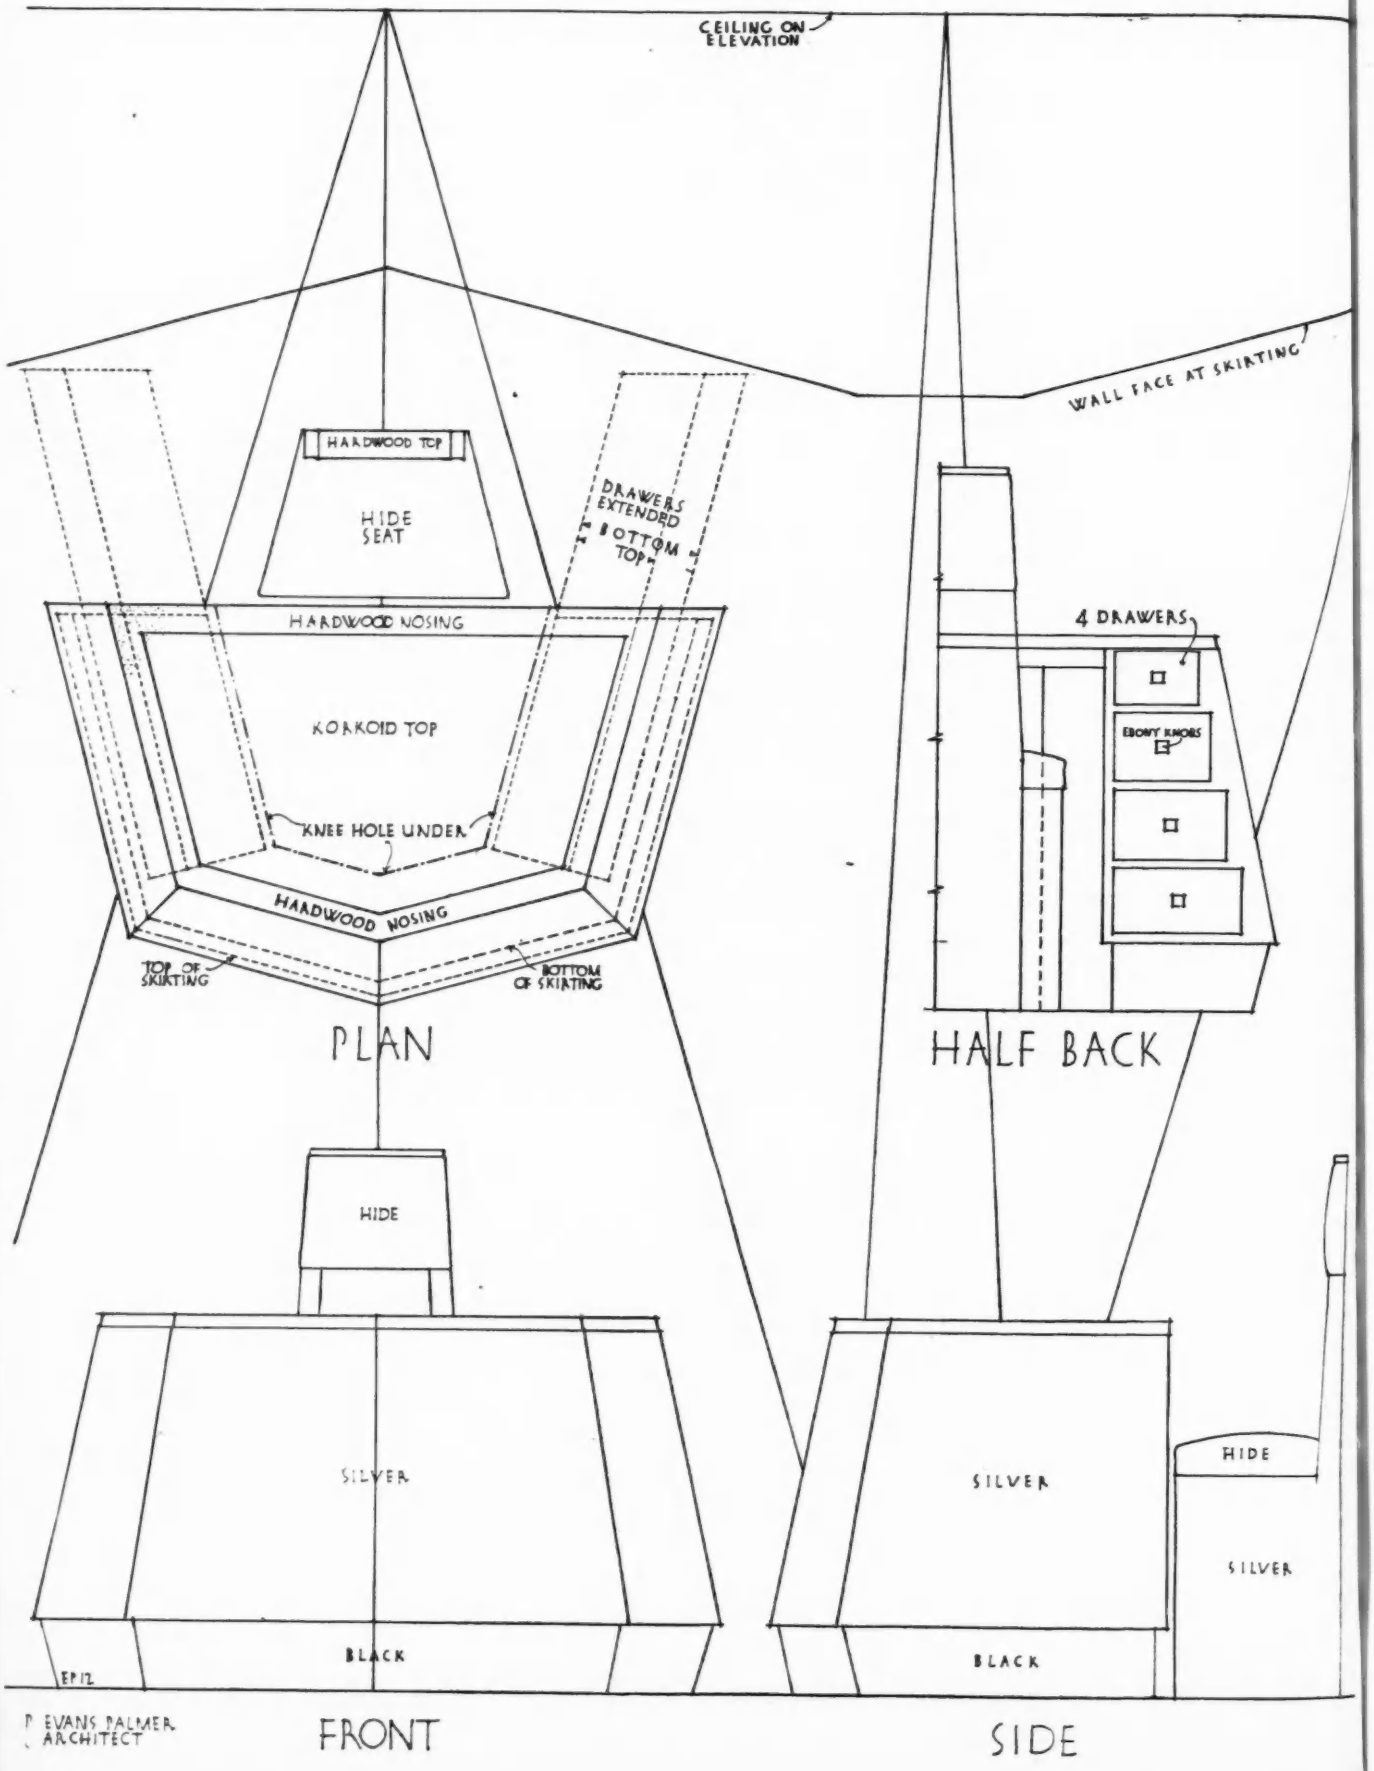
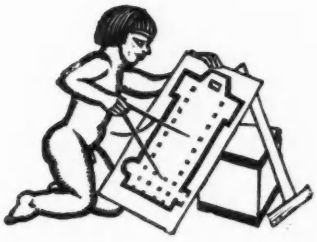
SCALE DETAILS:
A WEEKLY SERIES

DESK AND STOOL AT No. 26 BRUTON STREET, MAYFAIR
DESIGNED BY P. E. PALMER



THE desk shown above with its stool is one of eighteen flanking the sides of a long reception office, and is constructed entirely of Ibus laminated board. It will be noticed, on reference to the plan and elevations shown overleaf, that its shape has a definite relationship to the walls against which it is placed—i.e. on the plan two of its five sides are at right angles to the wall faces, while another two are parallel thereto; and in elevation all the sides are plotted to a point where wall meets ceiling, immediately above. Each desk is fitted with eight drawers, which, by virtue of the canted sides of the desk, open very conveniently away from the seat and working space.



The stools also are framed up and finished in laminated board, and have their sides and backs covered in a pale green calf. The desks are finished in cellulose sprayed silver, finished with a cellulose lacquer, with black skirtings and hardwood nosings to the tops, finished to match the calf of the seats. The tops of the desks are filled in with grey Korkoid.

(Other views of this office were reproduced in THE ARCHITECTS' JOURNAL *for April 23, 1930.)*

The drawing may be read with an ordinary architect's scale—1 in. = 1 ft.

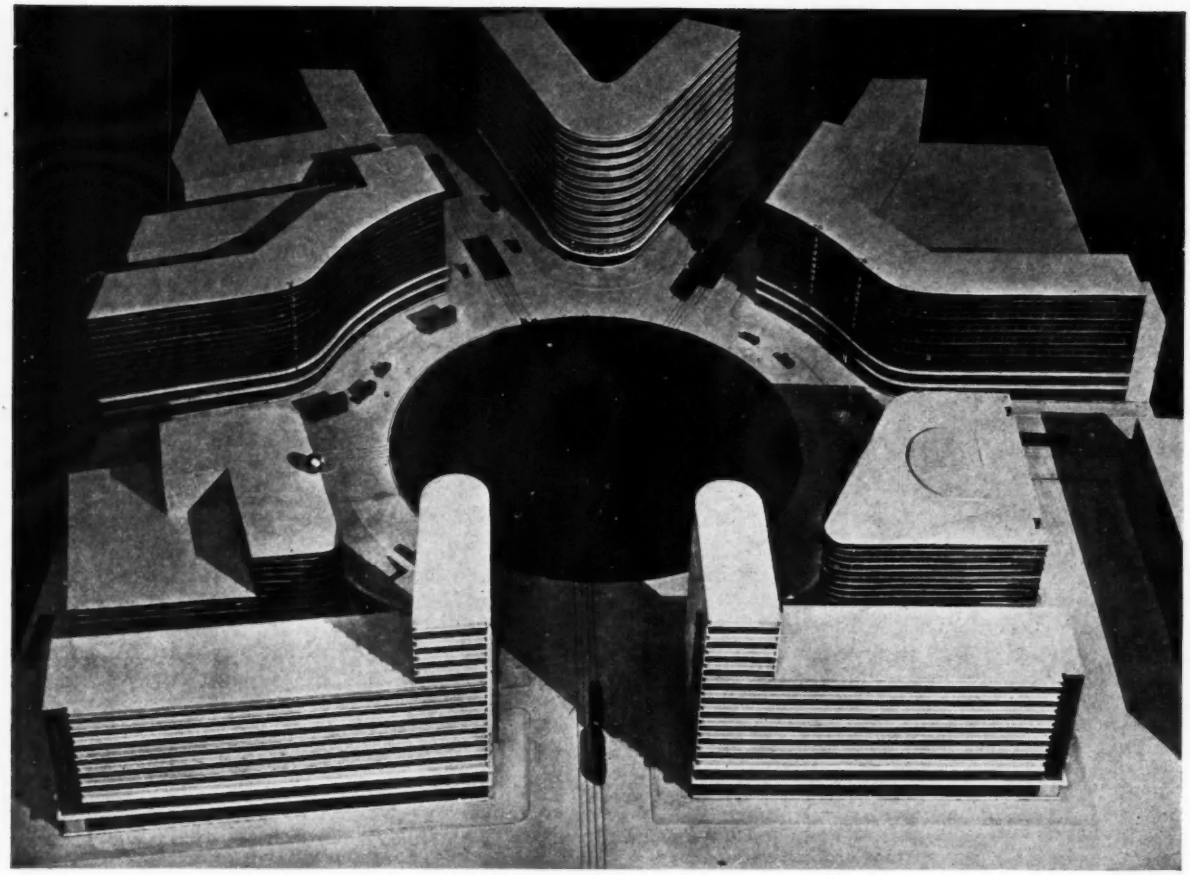
THE FIREMAN MOVES ON

". . . . At any given point, congestion is . . . . a direct function of the population using buildings served by the street."

FREDERICK L. ACKERMAN

TWO separate resolutions brought up at the meeting of the L.C.C. on July 29 last will, when regarded together, be seen to point very clearly to the new angle from which the State is today approaching the control of buildings. Each of these motions is of sufficient interest by itself, but that the two of them should have been raised the same afternoon gives them the value of a prophetic utterance.



First, the Special Committee on Traffic asks that plans of new buildings should in future be subject to the approval of the Commissioner of Police, who will look closely into the amount of vehicular traffic likely to be attracted by the proposed building. It appears that the police have been urging for some time past that such an arrangement should be enforced by law. Large new buildings in the shopping and theatre districts are, it appears, giving trouble already. Indeed, the street obstruction directly traceable to new buildings, as this JOURNAL has frequently enough predicted, is reaching such a pitch that the evil must now be treated at the root, and at once.

Secondly, the Building Acts Committee recommends that certain types of commercial buildings, hitherto restricted to a height of eighty feet as a precaution against fire danger, shall be allowed to rise to a height of one hundred feet, subject to proper protective measures. Some of the daily papers felt called upon to report this suggestion under headlines proclaiming the arrival of skyscrapers in London. Nothing could be farther from the true facts. The hundred-foot limit is of course an old-established one, and all that has happened is that certain buildings, now prevented from reaching the full building height, will in future be treated on the same footing as their more fortunate neighbours.

Now, if there is one thing that these two resolutions demonstrate, it is that our Victorian building bylaws are indeed, though slowly, passing away; because the dangers they were set up to avert have become much less than they once were. But while advancing civilization has disarmed the bogeys of the Victorian legislators, it has created new ones in their place, and as these grow and multiply it is inevitable that building legislation should shift away from the ground that once was its own.

What were the dangers that awaited the incautious builders three-quarters of a century ago, when the bylaw maker started his work? There was, first, the danger of a building falling down. New methods and new materials were being introduced in a tentative but somewhat excited manner, and collapses were not infrequent. There were the horrors of fire, cruel beyond our imagining today, where, with panic ensuing, it attacked crowded public buildings, more especially those in which public entertainments were given. And there were the less spectacular but even more deadly horrors of infectious diseases, air-borne and water-borne, begotten of improper sanitation. These three dangers were not the only ones, but they loomed high above any others to which built-up city areas were subject. And they were guarded against as closely and as cunningly as any of the physical enemies that have threatened the life of man. The building bylaws of nineteenth-century England were an administrative achievement that has not been equalled in after years.

But what is the position today? Fire-fighting appliances are with us now in ever greater number, and hygiene and sanitation have made greater strides than our pampered generation realizes. The progress of structural engineering and the perfecting of our structural materials have also transformed the whole process of building. Our bylaw inheritance does more in many ways than is required of it today, and is rapidly becoming an impediment and a hindrance. So far, the authorities have been reluctant to give way an inch; now one section of them, the fire-fighting one, has set an example of the new tolerance that will soon be required of all. And at the same time a stricter surveillance is foreshadowed in a quarter where it has only recently become necessary. Thus slowly, and with a great deal of creaking, the old machine is adjusting itself to the new tasks.

A PROPOSED TRAFFIC CIRCUS IN BERLIN: PHOTOGRAPHED FROM A MODEL

This scheme, devised by Brüder Luckhardt and Alfons Anker, for the reconstruction of the Alexanderplatz, though not finally adopted, presents features of interest to a student of traffic problems with London in mind.

The Alexanderplatz can best be compared to the Bank in regard to the importance of the traffic crossing it, and to Aldgate Broadway in respect of its geographical position in the street plan of Berlin. Among the buildings flanking it, scheduled for retention, is the Polizeipräsidium, the Scotland Yard of Berlin, a vast and gloomy Romanesque edifice of terra-cotta, contemporary with our own Natural History Museum. The opposite corner is skirted by the viaduct of the Reichsbahn, which not only accommodates the local Berlin electric lines, but also the main international railway routes connecting Western and Eastern Europe.

Another view, and some comments by Astragal, appear in the "News and Topics" pages.

NEWS & TOPICS

Two ways of doing it, in Oxford. It is not often that so striking a contrast between the bad old ways and the orderly new is to be caught as in these two corner treatments, photographed for the latest D.I.A. "Cautionary Guide."

NEW SCHEMES FOR CHARING CROSS BRIDGE

THE Charing Cross Bridge Committee, sitting under the chairmanship of Sir Leslie Scott, have intimated, through *The Times*, their willingness to receive schemes within a certain period, thus reviving all the old hopes that went down the wind before the official scheme was thrown out by Parliament.

★

While it is certainly possible that the Committee may be inundated by all the crack-brained ideas of every crank at liberty, it will also clear the air for wider issues than those contained within narrow terms of reference, and it may still happen that larger considerations than those of immediate traffic requirements will be allowed to govern their decisions, perhaps even that they may see their way to accept some of the chances of great future developments which courage and fine planning alone can bring to this enterprise. There was too close an adherence to *dead* fact, and far too much subservient pandering to purely selfish as opposed to national needs of the Railway Company. The new Committee has a deal to forget.

OTHER NEW THAMES BRIDGES

The Middlesex and Surrey Joint Thames Bridges Committee have accepted tenders for the construction of new bridges at Hampton Court and Chiswick. Little has been heard of this last, which has been designed by Sir Herbert Baker, though there has been a certain amount of controversy over the additions to the engineer's design for Hampton Court Bridge, which Sir Edwin Lutyens was called in to finish. These additions, that look like little lodge gates on a turnpike road, are known to town councils as kiosks. They are to be omitted from the contract at present, and I devoutly hope for ever, being more superfluous than anything ever added to a finished design.

WHY NOT EVERY POLE A MAYPOLE?

The protection of Rural England has its unlooked-for reflections. The latest thing in telegraph insulators is coloured green to match the countryside. Let no man scoff at this simple story, for we are in the presence of a real and genuine attempt to shade the horrid signs of industrial expansion into the bosky leafage of rural England. Purists and the higher criticism will object that there are a hundred greens to be found in every lane, and that commerce will go crack for the wrong one. Others may remind us of the changing leaf and winter's branches bare. I might even myself say, frivolously, and aside, why not pink insulators, and blue? Why not red, white and blue? And why stop at the insulator? Why not leave the branches on the telegraph pole? Why not every pole a maypole?

AN L.C.C. HOUSING CITY

The L.C.C. have now completed the Downham Housing Estate, which occupies an irregular site between the old Bromley Road, on the west, and Bearing Road, on the east. Architecturally, the houses erected present many points of interest, as they have been built mainly under the 1924 Act, and much skill has been shown in the internal planning. The work of development was commenced over six years ago, under a "value cost contract." The houses generally are made of red or soft brick or rough-cast concrete. Among the experimental houses to be found on the estate are two "Atholl houses," two "Weir houses," two "Telford steel houses," two "Dennis Wild steel-framed houses," and eight "Prefacto houses."

THE DE-PLASTERED INN

There was a reference in the annual report of the Society for the Protection of Ancient Buildings to a certain inn in Salisbury, the zealous owners of which had uncovered the timber framing of a fine plastered gable, and so upset the continuity of surface in a row of buildings that had hitherto fallen very pleasantly together. These owners were referred to as sentimentalists with eyes to profits; and their action was considered vandalistic.

★

Now it appear, that the brewery company would not have removed the plaster, even though they might have wished to, had not a certain antiquarian spotted the timber underneath. Very soon lots of antiquarians were buzzing about, like flies round meat, rubbing their hands with foolish glee, and ruthlessly plunging the brewers into the expense of exposing the construction of this old gable to the light of heaven and the eyes of Salisbury. And so, for a few years, the little group is put out of action. Personally I prefer the expanse of plaster to the broken-up half-timber, which has no sense of design in it, but I feel sorry that the owners should have been subjected both to the higher criticism and the lower obloquy. The real sinner is the cigarette-advertising agent who covered the adjoining building with bad lettering. He is an outsider.

BERKELEY SQUARE GOING

Berkeley Square is up for auction and it will go. It is compact of historic and literary association. The estate agents have it all pat. But that does not matter. It will go, all of it, and be rebuilt up to the limit of height—in a new manner—for flats and offices, shops and hotels. It will be recreated by us, and for a far worse educated age than the clients who first commanded good architecture to arise a hundred and fifty years ago. There will be a clamour for higher buildings to offset the open space of the Square, just as though we all so enjoyed our beastly little ration of light and air that we could afford to do without a little extra when it came our way. The L.C.C. is quite firm on the point of there being no higher buildings, and they are backed by a growing consensus of opinion, so that it is unlikely that we will find skyscrapers in the Square. Dear Berkeley Square ! It seems very sad.

PAGHAM HARBOUR TO BE DEVELOPED

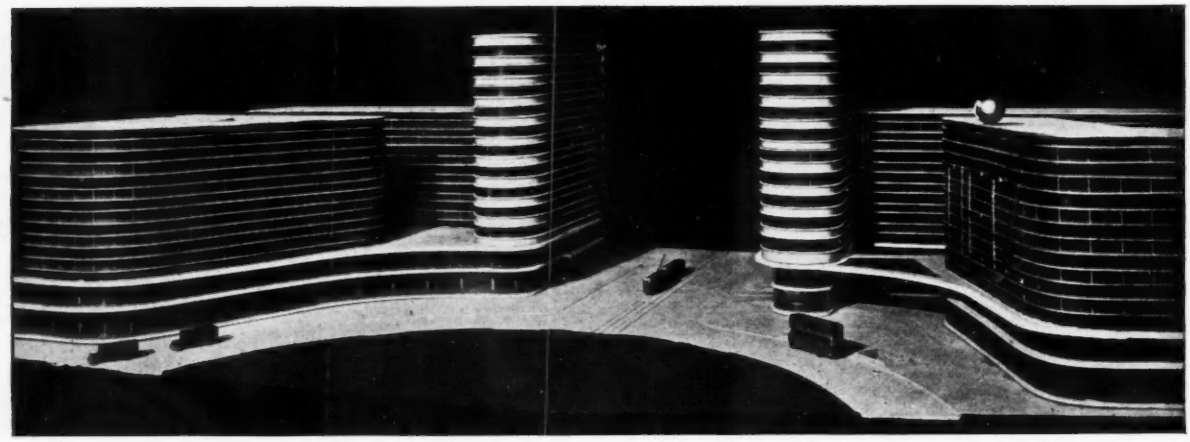
There is talk of a new garden city on the South Coast somewhere near Bognor. The last attempt was that Peacehaven of horrid memory, at the thought of which one shudders involuntarily. This new town is, happily, of another order, and starts life on the drawing board of Mr. E. Prentice Mawson, of Thomas Mawson and Son, with all the promise that a desire to evolve a welding of natural and architectural amenities may hope to produce.

★

There is, of course, no reason other than the presence of greed and rapacity why a new seaside place should not be beautiful from the beginning, and for all time, so long as there is the intention to create beauty and to control its growth. One has but to think of the Georgian developments that alone made the South Coast resorts possible, to realize how destructive of all real beauty is the notion that *old-world* charm can be resurrected by sentimental imitation.

★

The other factor that always fills me with fear is that of finance combined with courage. So seldom are they to be found together that we may see along every few miles of coast the unhappy results of ambitions frustrated by lack of policy and a too hasty wish to make money.



REPLANNING BERLIN'S BUSIEST TRAFFIC CENTRE

The fiasco of the L.C.C.'s Charing Cross Bridge Bill, in which the one germane consideration ignored was, ironically enough, the paramount one of town-planning, may lend a certain spice of civic envy to the subject of the illustrations reproduced in this issue. They represent two views of a model of a project for the replanning of the Alexanderplatz in Berlin submitted by Brüder Luckhardt und Alfons Anker, B.D.A., in an *ad hoc* competition instituted by the Municipal Council of the German capital. Actually, this competition (the importance of which was recognized by the very considerable premiums attached to it) was won by Professor Peter Behrens, under whose auspices the remodelling of this busy centre for bus, tram, taxi and lorry traffic is now being carried out; though Messrs. Luckhardt and Anker's scheme, in many respects the most interesting of those sent in, was among the first premiated designs. The ultra-Modernist type of architecture shown was merely intended to illustrate the suggested regrouping, and the governing elevations of the new blocks of buildings to be erected round this Platz. The circular grass-sown Tom Tiddler's ground in the middle is reserved for the trams : a device which has already proved a very efficacious solvent of traffic congestion in the Potsdamerplatz and the Lützowplatz.

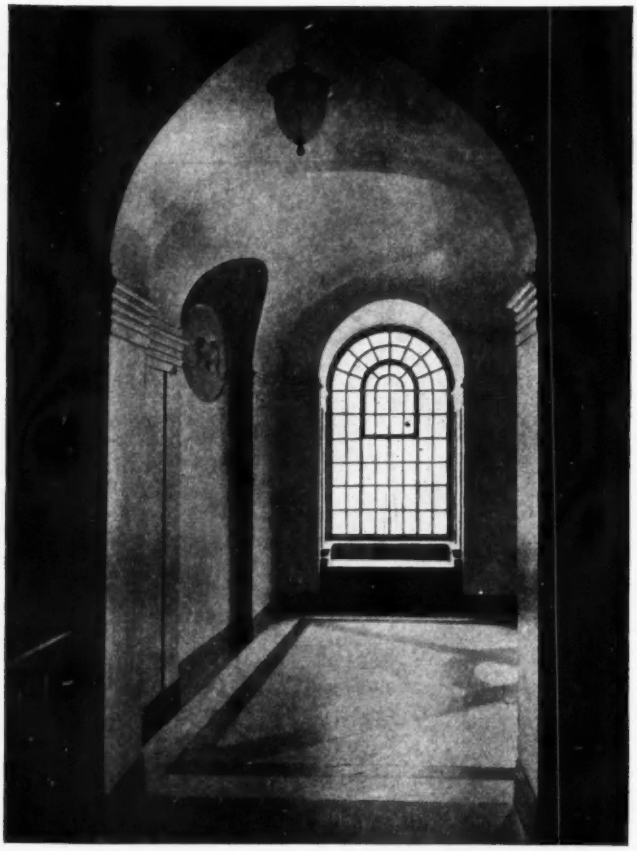
★

At present the Alexanderplatz is a chaos of sandy excavations and timber hoardings, owing to the fact that an immense new *Untergrundbahn* tube station, with three different levels of platforms, is being constructed underneath it. This is to be connected with the adjacent Reichsbahn viaduct station of the same name by a series of escalators. In another couple of years, or less, the Alexanderplatz will emerge from its chrysalis stage almost unrecognizably transformed as a model of everything that the layout of an important metropolitan traffic centre ought to be. Meanwhile all is still slumberously quiet on the vastly more important and encumbered London traffic front; and the Knightsbridge and Berkeley Street bottle-necks, to say nothing of the all-but-impassable intersection of Oxford Street by the Charing Cross and Tottenham Court Roads, are likely to be left exactly as they are for another decade or two.

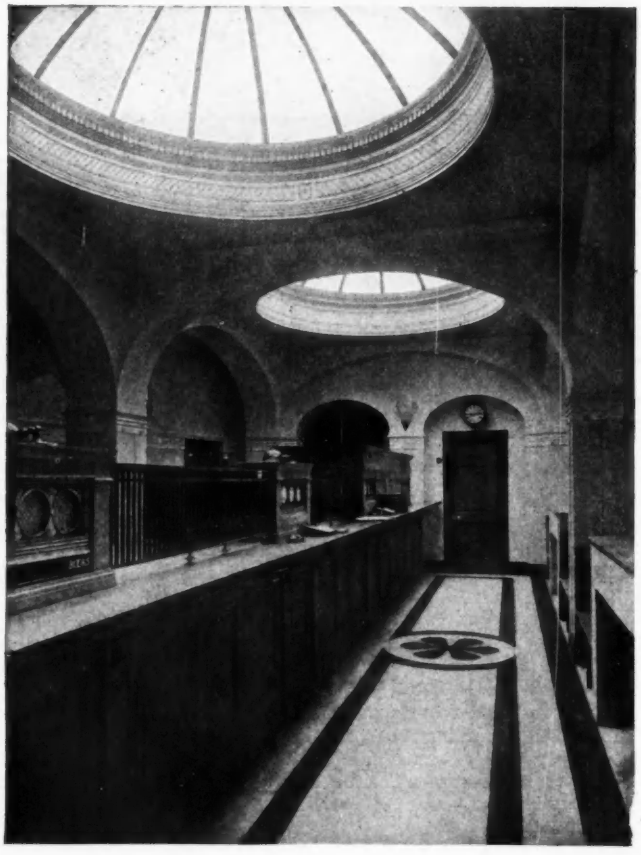
ASTRAGAL

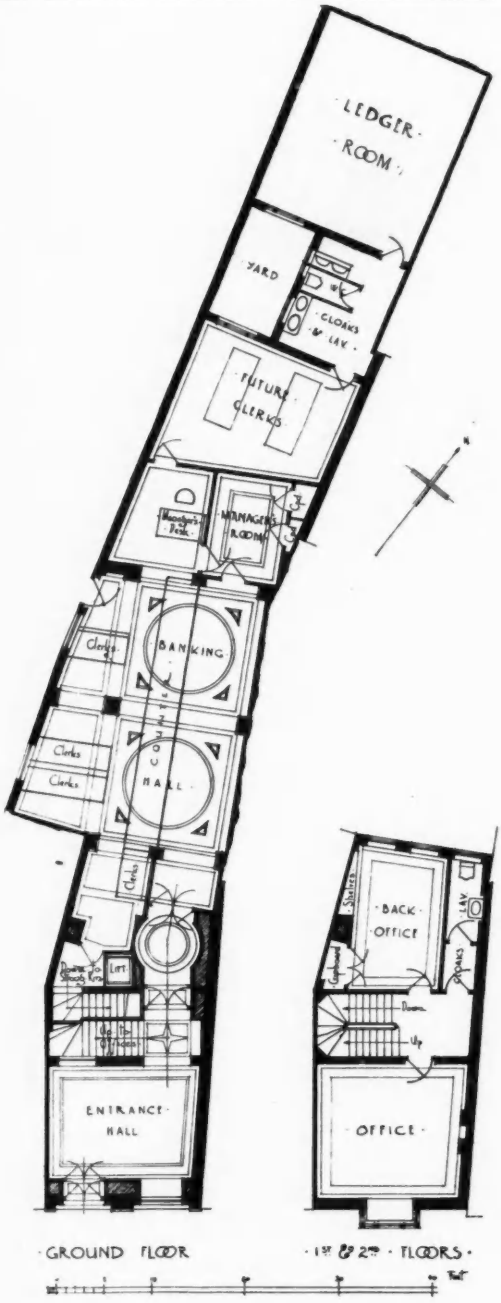
The Alexanderplatz, Berlin, reconstruction scheme, devised in competition by Brüder Luckhardt and Alfons Anker : a view from inside the model illustrated in the frontispiece.

MARTINS BANK, HIGH ST., MAIDSTONE



DESIGNED BY DARCY BRADDELL AND HUMPHRY DEANE

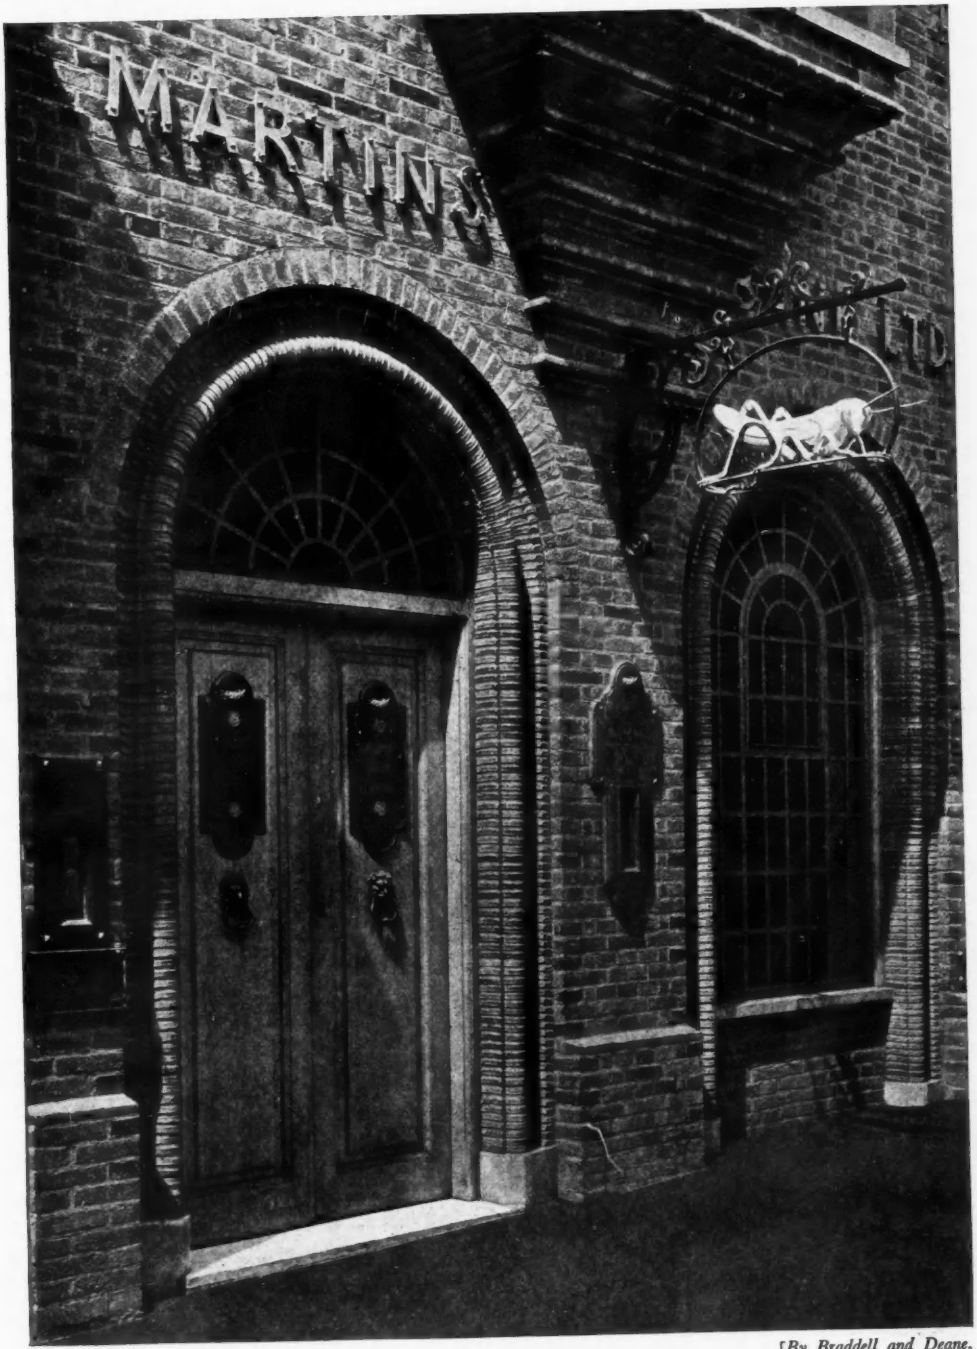




The façade to High Street is built of 2-in. dull red local bricks. The overhanging bay of the previous house, which dated from the seventeenth century, was repeated in oak framing, brick nogged. The line of the old main cornice was kept and also carried out in oak.

THE unusual domestic character of this bank is chiefly due to the wish of Mr. Robert Holland Martin, chairman of Martins Bank. The site upon which it stands in High Street was previously occupied by a very narrow-fronted seventeenth-century house. Externally, this house had no particular architectural merit, but it was of sufficient charm to cause regret at the thought of its demolition. Both the old house and its neighbour had overhanging bays and modillioned cornices which lined up under the hipped roofs covered with their original tiles. The old house was so badly built that there was no possibility of preservation. In fact, it would have collapsed if serious structural changes had been attempted. Mr. Martin asked, however, that, in rebuilding, something of the character of the old building should be preserved.

As will be seen from the plans reproduced on page 188, the site was so narrow that it was impossible to plan an adequately lighted banking hall on the street front with, in addition, an entrance to the chambers above. The problem was eventually solved by planning the entrance hall on the street front, with a corridor, on the left of which are the main stairs, leading to the banking hall at the back of the site. Behind the banking hall are the manager's room, future clerks' room, and



Looking towards the entrance hall from the staircase lobby; the banking hall; and the plans. On the ground floor the scheme of decoration adopted is fawn, white, grey, and black. The doors are of weathered oak, set in ebonized frames. The walls are painted and stippled to imitate, fairly closely, Hopton Wood marble. The bank's emblems of the Liver and the Grasshopper are used in various places, notably as plaques in the entrance hall, the ceiling of which is vaulted.

Martins Bank, Maidstone.] [*By Braddell and Deane.*

ledger room. The first and second floors are planned only on the front portion of the building, and each consists of two offices, placed one on each side of the staircase, and lavatory accommodation.

On the street façade the bay window is held on a brick corbel, as it had been previously in the old house. The bricks for this purpose were specially made, as were the tiles forming the archivolts of the ground-floor arches.

Once inside the entrance hall, all attempt at "period" was abandoned, and the interior was handled without a thought of any particular bygone age. Features of the interior are the bank's emblems of the Liver and the Grasshopper which are used in various places, notably as plaques in the entrance hall, the ceiling of which is vaulted. There is a black and gilded grille in the entrance hall, set in an oval, to admit light to the staircase on its first flight.

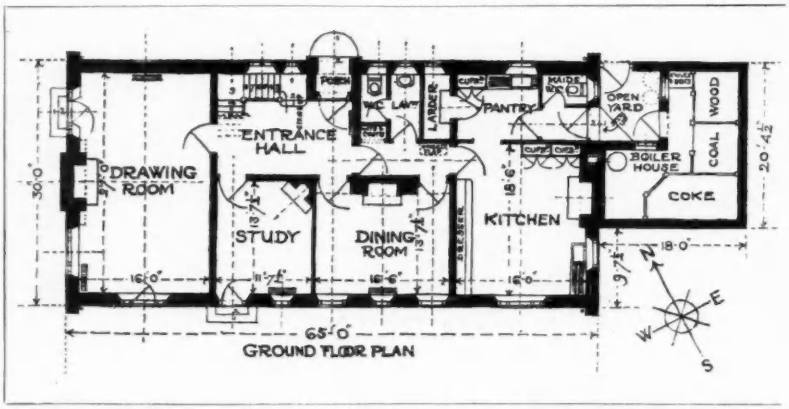
Martins Bank, Maidstone.] *[By Braddell and Deane.*

The main entrance. From the wrought-iron bracket hangs the ancient sign of the gilded grasshopper, which has been used by Martins Bank since its foundation in the sixteenth century. Name plates are in pewter with incised lettering filled with red wax.

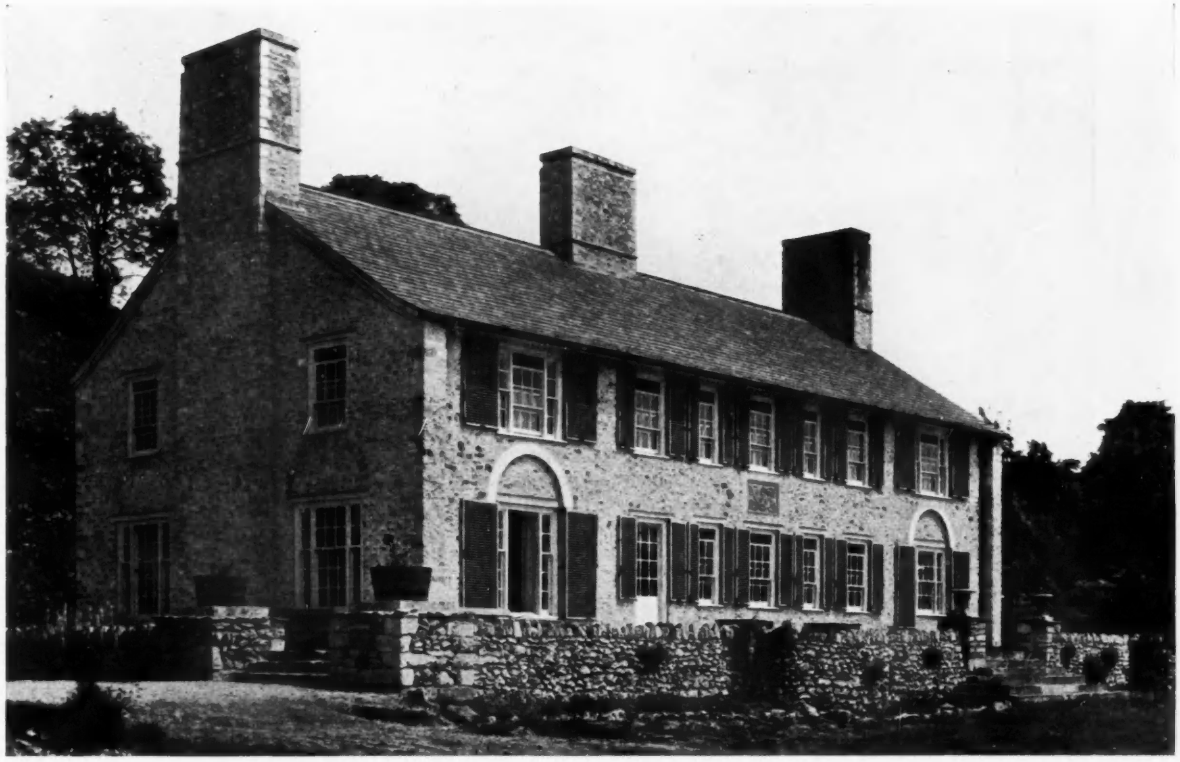
The entrance front and forecourt, seen from the north-east. The porticoed entrance to the old house was in the south-easterly end, as seen in the illustration reproduced on page 192.

WOLFORD LODGE, DUNKESWELL,

DESIGNED BY



A distant view of the old house, giving an impression of the situation.

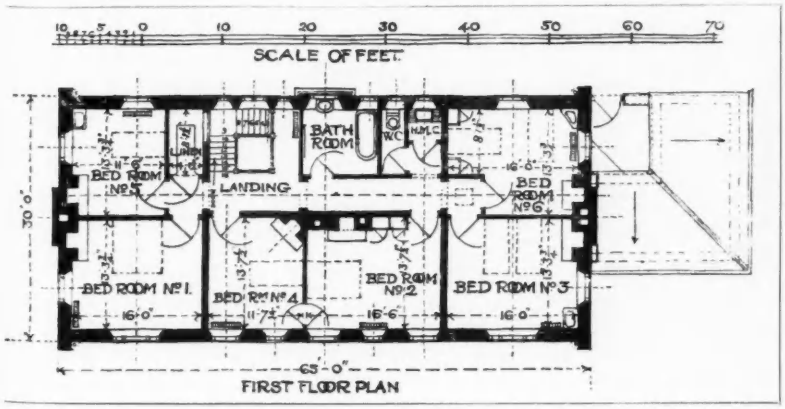


THIS new house occupies part of the site of an earlier one, set in the hilly, wooded country in Devonshire, lying between Cullompton and Honiton, that was demolished in 1924. A large, rambling house, inconveniently planned and in bad repair, having been built in the late eighteenth century, with additions dating from the early nineteenth century and from Victorian days, it yet had many features of interest,

A near view of the entrance doorway in the main front, illustrated above.

The drawing-room extends through the house, and is nearly double the size of the study and the dining-room. The large kitchen and commodious service quarters are eloquent of the care taken to assure easy working.

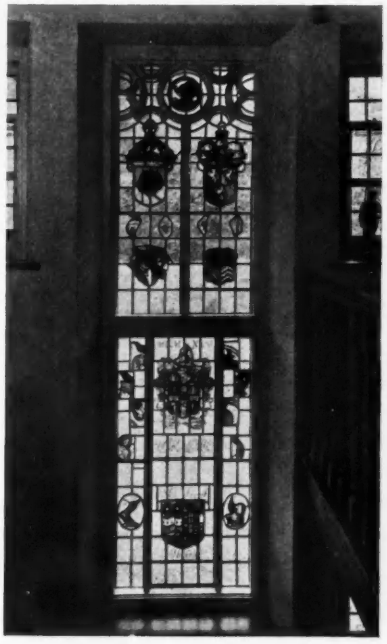
NEAR HONITON, DEVONSHIRE



BASIL OLIVER

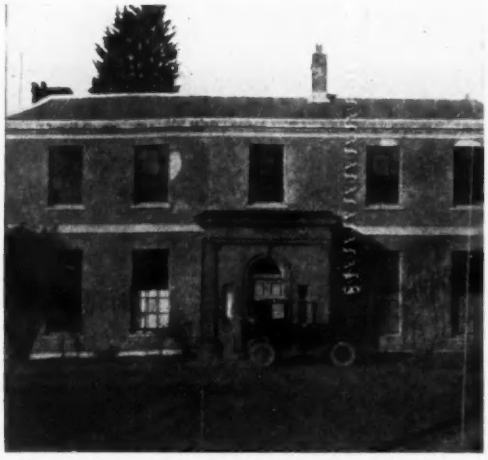
as will be seen from the photographs, taken before the war and here reproduced for purposes of contrast.

It was decided to demolish it, in favour of a more modest and convenient establishment, but certain materials and fittings, some probably of even earlier origin, were preserved and have been re-used. In aiming at economy of first cost and in subsequent working a notably compact plan has been evolved.



The entrance lodge, which it was found possible to preserve unaltered.

Six bedrooms are provided, four of them lit with southerly-looking windows. The bathroom and lavatory are on the opposite wall, and are divided from the main rooms by a transverse corridor that gives character to this floor.



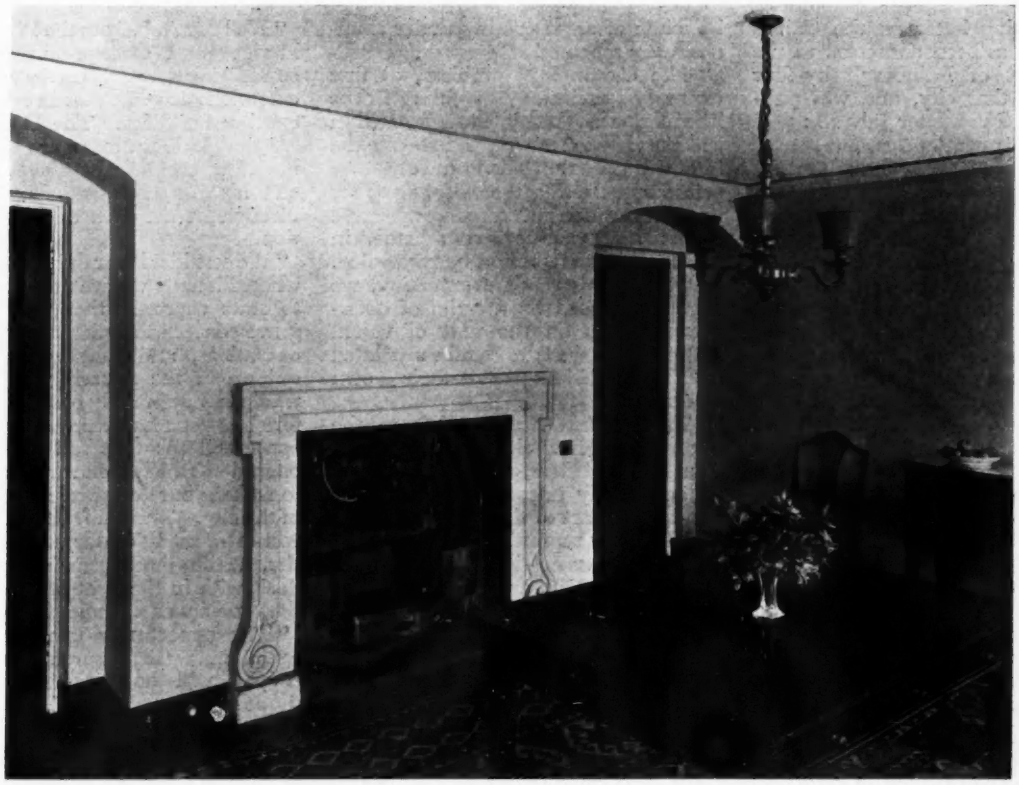
The garden front, from a south-westerly view-point. The extensive use of stone, both in the house, and for the terrace walling, respects the traditions of the locality.

A view, from within, of the stained glass window to staircase, flanking the front door.

The photographs reproduced on this page are of the old house, demolished in 1924. This one shows the southerly front, with the opulent bows and regular fenestration characteristic of its period.

The entrance porch was the central feature of the perfectly symmetrical south-east end.

The south-westerly bow differed from its fellow only as to type of openings.



Wolford Lodge, Honiton, Devon.] *[By Basil Oliver.*

This view reveals the appearance of the entrance hall when last the old house was in occupation, and, with its statue and bust, dinner gong, heating stove and light fitting, tells its own tale.

The drawing-room fireplace has another similar window on its other side : they look nearly west.

Wolford Lodge, Honiton, Devon.] [*By Basil Oliver.*

Both the mahogany doors and the stone fireplace in the new dining-room are relics of the past : the latter, from its character and the details of the room in which it was found, was probably incorporated in the early-nineteenth-century house from one of yet earlier origin—late-seventeenth century or Queen Anne.

THE ARCHITECTS' JOURNAL SKETCH CLUB

JUNE COMPETITION AWARD

THE Editor of THE ARCHITECTS' JOURNAL who, under Rule 8 of the conditions, was appointed Assessor of the Holiday Sketches Competition, has made his report.

The report states that sixty drawings were received by July 15 last, the closing date for the June competition, and that these drawings have been carefully examined by the Assessor.

The report then goes on to recommend that the FIRST PRIZE OF TEN GUINEAS be awarded to the author of the pencil drawing of "South Side of St. Pierre, Avignon," who submitted five drawings under the pseudonym of

AVIGNON

and the SECOND PRIZE OF FIVE GUINEAS to the author of the pencil drawing of "The Judge's House, in the Close, Salisbury," who submitted four drawings under the pseudonym of

PENCIL

The sealed letters sent in by these two competitors were afterwards opened on behalf of the Club, when the winner of the First Prize was revealed as:

Mr. P. J. Westwood,
14 Buckingham Street, W.C.2,

and the winner of the Second Prize as:

Mr. Alan Sherwin,
c/o *Evans, Clark and Woollatt,*
Eldon Chambers, Wheeler Gate,
Nottingham.

Congratulations to Mr. Westwood! Congratulations to Mr. Sherwin! The SKETCH CLUB is proud of their work, and proud of having them among its members. Their sketches, together with a selection of the other drawings submitted, will be on view NEXT WEEK.

THE TOWN PLANNING OF EDINBURGH

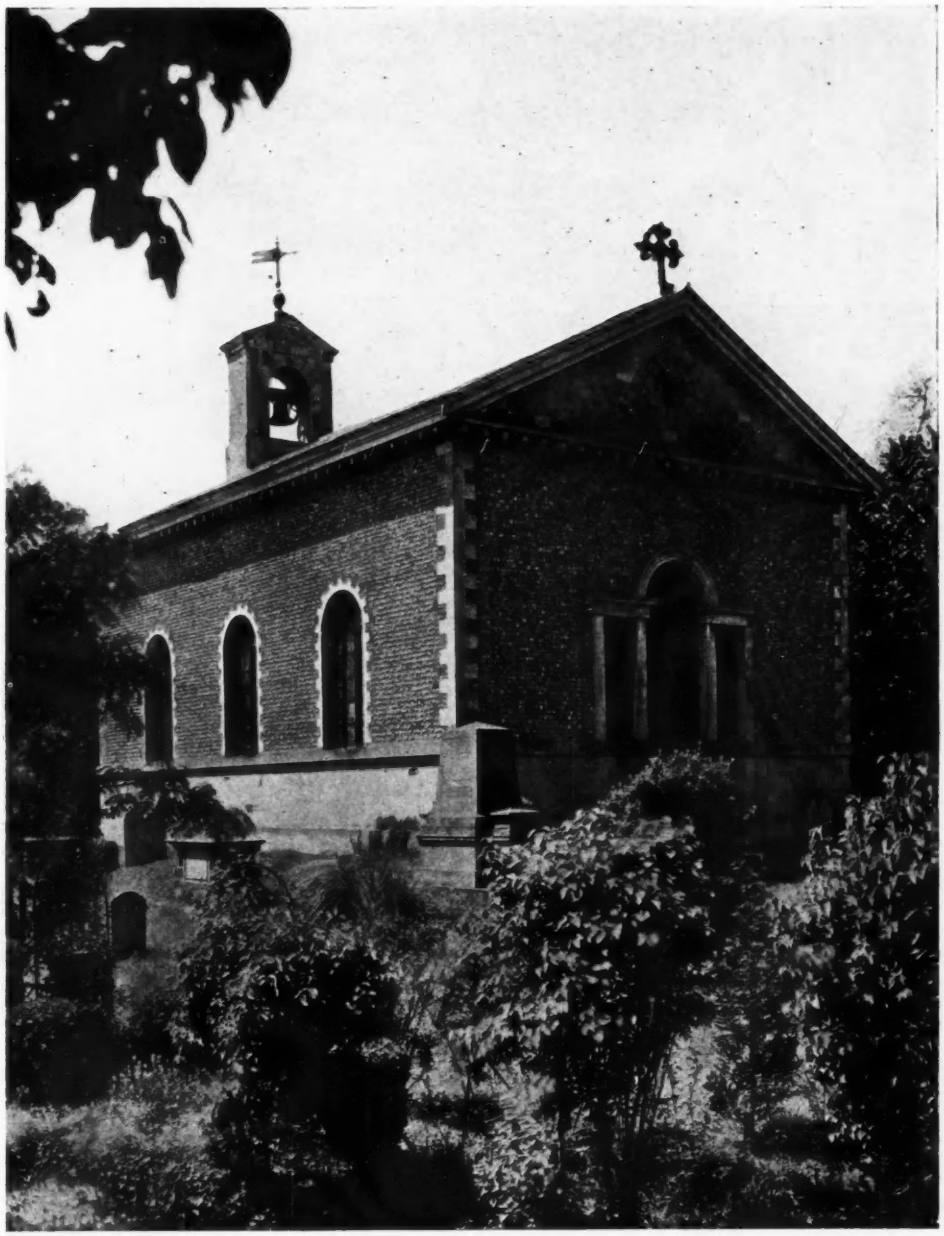
THE following letter on the Calton Jail site has been addressed to the Lord Provost of Edinburgh by four architects of that city, and was published in *The Scotsman* for July 28:

"15 Rutland Square,
"Edinburgh.

"We, the undersigned architects, appointed by the Royal Scottish Academy, the Merchant Company, the Royal Incorporation of Architects in Scotland, and the Edinburgh Architectural Association, to serve on the committee recently set up by you to consider and advise as to the development of the central area of the city, beg to put before your Lordship the following representation.

"The object of the committee, as defined by resolution, was to devise a properly co-ordinated building policy, and to lay down a plan, so far as it is practicable to do so, for the development on right lines of the central part of the city, or such parts of the city as may be considered advisable, keeping in view more particularly the better grouping and rearrangement of public or other important buildings. The problem before the committee embraces *inter alia* the University and Educational Institutions, Museums, the National and other Libraries, Law Courts, Municipal buildings, street improvements, and, by implication, the use to be made of areas coming under slum-clearance schemes.

"The Calton Hill problem, at first expressly excluded by the Prime Minister, was lately brought within the purview of the committee on the initiative of the Government. The prime opportunity, therefore, arose for the preparation of a comprehensive report and well-devised scheme, in which all interests might be reconciled. Instead of this result eventuating, we have been faced by a series of determined efforts on the part of vested and other interests to obtain unrelated interim decisions in their own favour.



"The problem then arose as to the finding of a new site for the Sheriff Court-house. Here, again, we were met by an equally uncompromising assertion on the part of the Office of Works and Treasury representatives, that they would consider no site other than that of the Calton Hill, and this quite apart from the question whether or not the Government buildings were to be placed there. Such a proposal shows that the Office of Works were in no wise concerned with our town planning problem, since, failing the erection of the Government buildings there, the Sheriff Court-house must have stood solitary and apart at one end of a large vacant space, and quite remote from its associated Courts of Law.

"We learn, too, from the Press that the Heriot Watt College authorities are considering sketch plans for patch-work extensions at great cost in rear of their existing buildings. The Governors of George Heriot's School are busy, while the City Architect is actively engaged on housing reconstruction schemes throughout the area under consideration.

"We consider it our duty to the public, whose interests we are anxious to serve, to state expressly that we view with grave concern this piecemeal scheme of operations, and that we cannot acquiesce in the frittering away of the whole town planning project; we therefore beg your Lordship to appeal to all concerned for that full and free co-operation which alone will enable you to realize your great project for the good of the city. The plan, once drawn out, will solve many of our present difficulties, while those remaining may be dealt with in the light of knowledge of the problem as a whole.

"The opportunity can never occur again, and we feel assured that in seizing it you will have the wholehearted support of the people of Edinburgh and, indeed, of Scotland.

(Sgd.) JOHN BEGG, F.R.I.B.A.

HENRY F. KERR, A.R.I.B.A.
F. C. MEARS, F.R.I.B.A."

ENGLISH PRECEDENT No. 127

CHURCH OF SAINT MARY THE VIRGIN, GLYNDE, SUSSEX

This little church was built in 1765; its architect was John Maurice of Lewes.

Both pediments have mutilated cornices, and the eastern one, seen in the above view taken from the south-east, wears its Victorian cross rather truculently. Otherwise the building is unscathed by the years that have passed over it, and well exemplifies what an eighteenth-century gentleman would put in place of a decayed church standing in his park.

The walls are built of the flints and clunch of the neighbouring South Downs: both the flintwork and the ashlar are very well done. This photograph should be compared with last week's Precedent.

—[H. S. GOODHART-RENDEL]

REVISION AND CO-ORDINATION OF BUILDING BY-LAWS

Deputation to the Minister of Health

THE Minister of Health received a deputation last week from Members of Parliament and representatives of the Associations mentioned below, on the subject of the restrictions imposed under existing building legislation.

The deputation was introduced by Mr. J. Walker, M.P., and included: Mr. Louis Smith, M.P., Mr. J. Baker, M.P., Mr. Clement Davies, M.P., Major Beaumont Thomas, M.P., Mr. Maurice Webb, Mr. C. J. Kavanagh (British Steelwork Association), Mr. Bossom (Building Industry Council of Review), Mr. Searles-Wood (Institution of Structural Engineers), Mr. Holloway (London Master Builders' Association), Lord Ebury (London Employers' Association), Mr. Coppock (National Federation of Building Trades Operatives), Sir Woodman Burbidge (Incorporated Association of Retail Distributors), Sir Francis Towle (Hotel and Restaurant Association).

Mr. Louis Smith made the following statement, and his views were supported by Mr. Maurice Webb, Sir Woodman Burbidge, Mr. Coppock, Lord Ebury, Mr. Kavanagh and Sir Francis Towle.

We wish to call attention to the extent to which the control of building, especially in London, has become a serious menace to enterprise and employment not only in the building trades but in the vast number of ancillary trades whose welfare is vitally dependent upon the building industry. There is no doubt that the cumbrous and bureaucratic control so often exercised far exceeds the limits necessary to safeguard public health and safety which we, no less than the authorities concerned, consider it our business to secure.

This control, especially in the sphere of commercial and industrial buildings, is exercised under Acts which in many cases date back to the last century, imposes very serious restrictions upon the use of modern materials, and methods of construction, and has given place to the growth of administrative machinery which needs drastic simplification.

If the revolution in building construction, which has occurred during the last thirty years, due to the introduction of steel and reinforced concrete, to the vastly improved methods of sanitary services, and to the invention of new and improved building methods and materials, continues at the same rate in the future—and who shall say that it will not?—no Act of Parliament can be kept up to date unless wide discretionary powers are given to those who administer it. In the use of these discretionary powers, complex and inelastic methods are almost bound to creep in, and while a relaxation of provisions in the Act suitable for the time it was passed may be granted, this is apt to lead to further restrictive regulations which were not only not contemplated in the Act, but are in many cases unnecessary.

This deputation suggests that as a first essential the law in London ought to be as susceptible of constant revision as in the provinces; otherwise it will become out of date almost as soon as drafted. We are conscious that a great deal has been done towards simplification and uniformity of control in the limited field open to the Ministry, through the model by-laws and otherwise, and we see no reason why statutory revision should not now be considered by Parliament to bring such control as is deemed necessary in the public interest into tune with the times, afford all local authorities a guide to securing public safety and health, and simultaneously give the industry a chance to develop as other industries by uniformity of practice and standardization.

The Building Industry Council of Review was recently formed to investigate and report on the lines upon which a rationalization of the building industry may be achieved, but we feel it necessary to emphasize that the reorganization and readjustment of the industry is rendered difficult, if not impossible, so long as the law is not co-ordinated for the whole country.

The building industry represents not only a vast field for employment, but building costs are a first charge upon every form of commercial and industrial activity, and in assisting the industry to operate upon business lines rather than upon too rigid a regulation basis, the Government can make a valuable contribution to the reduction of unemployment and clear the way for the industry to deal with the other vital aspects of building such as reorganization, standardization and finance with which it is faced.

Those bodies which now urge a reform and which are represented today have set up a Central Committee to co-ordinate the reports and recommendations at their disposal and are prepared in conference with your Ministry to suggest lines upon which a solution of many of the existing difficulties and anomalies may be found. Their investigations have to a great extent been directed to close scrutiny of the conditions obtaining in the London area where all building is controlled by Act of Parliament administered by different authorities, is subject to varying interpretations, and results in a degree of confusion and lack of uniformity which it is necessary to dispel.

Miss Susan Lawrence has stated in a letter addressed to Mr. A. M. Samuel, M.P., that representations from professional societies in regard to the London building regulations have been lacking. The R.I.B.A. have been urging the amendment of the London Building Acts on the London County Council for ten years, and representations were made jointly by the R.I.B.A., the Institution of Civil Engineers, the Institution of Structural Engineers and the Surveyors' Institution.

This deputation is of the opinion that building legislation should now be considered on a national basis and should be confined as far as possible to broad questions of principle.

If the Government is in agreement with our views, the building industry would be prepared to set up a Technical and Economic Advisory Council which would review and report upon all aspects of building construction and control which are from time to time deemed necessary to meet the constantly changing conditions. Such a Council would make the fullest use of our Research and Technical and Standardization Institutes and would maintain a constant touch with the Ministry with a view to giving every assistance in maintaining a flexible and up-to-date code. At a time of such serious unemployment and industrial distress we urge that this vital question is ripe for review by the Government.

The Minister said in reply that he gathered that the difficulties of which the deputation complained were experienced chiefly in London and that comparatively little difficulty had been encountered in the provinces. But in so far as Scotland was concerned he would see that a report of the proceedings was sent to the Secretary of State. As regards London, the matter was, of course, one for the London County Council to consider. Obviously he could not express any definite opinion until he had heard the views of the Council, but he could certainly assure the deputation that he so far sympathized with their representations that he would himself undertake to discuss the position with the London County Council.

LETTERS FROM READERS

Group Specification

SIR,—I gather that both Mr. Lynn C. Doyle, in your issue of July 16, and "Student" in your issue of July 23, are obviously acquainted with only one type of specification.

It is common knowledge that one of the functions of a specification for a contract without bills of quantities is to enable an estimate to be formulated, and that where bills of quantities form the basis of the contract this function is relegated to the bills of quantities. It will be seen that in the former case it must continue to function as an instrument in estimating, whilst in the latter case this function is obsolete; therefore a different method of treatment is not only necessary but is essential.

What has been said with regard to a contract without bills of quantities applies in a like degree to a contract with bills of quantities, that do not, however, form the basis of the contract. Clause 3 of the Schedule of Conditions of Contract of the R.I.B.A. Form where bills of quantities do not form the basis of the contract says the estimate may be "sealed" or not "sealed," implying that it is optional on the part of the contractor, and this estimate is for the sole purpose as provided under clause 13, which is that of valuing the *authorized* variation only; in effect, the bills have no bearing whatsoever upon the contract.

It is the drawings and specification that constitute the "contract works," consequently everything ought to be shown thereon or described therein, for the estimate, in a legal sense, is based upon these as if the bills of quantities did not exist. The wording of this clause is altogether different from that of clause 3 in which bills of quantities form the basis of the contract, and the inference is that the framers of these clauses knew precisely what they were about and understood thoroughly their business. Contractors of nous also know their business, for they leave severely alone those contracts in which bills of quantities do not form the basis of the contract.

Again, clause 28 with reference to "Provisional Sums," which is the same in both types of contracts, is very skilfully worded. No mention is made therein of the bills of quantities, but the word *specification* is named, as is also the contractor's original *estimate*. There is here no ambiguity, nor need there be any confusion about the meaning of this clause and its effect. If, in the bills of quantities which do not form the basis of the contract, the "Provisional Sums" differ—more or less—from those enumerated in the specification, it is those in the specification that are taken into account in the adjustment of the *authorized* variations. But where the bills of quantities form the basis of the contract then it is those in the bills of quantities, whether more or less than those in the specification, that are taken into account in the adjustment of *all* variations, because the contract provides for this in clauses 12a and 13.

Whilst errors of any description in the specification have no effect upon the amount of a lump sum contract, once that is signed, those errors of omission in the specification in contracts *without* bills of quantities operate prejudicially to the contractor. But in the case where bills of quantities *do not* form the basis of the contract the issue is confused and complicated by this document, inasmuch as any errors in the specification may have been rectified in the quantities; and, on the other hand, the quantities themselves may contain errors, and these are not rectifiable by the specification. Hence, the contractor takes upon himself the responsibility of any errors in the quantities, whether for or against himself, because by the terms of the contract he is compelled to adhere to the specification. In the case where bills of quantities *form* the basis of the contract, any errors therein are rectifiable under clause 12a in the conditions of contract, so that neither party to the contract suffers loss or gain by errors in the specification.

In law, the written contract takes priority over the other documents. Anything contained in these documents that is not in agreement with the contract is null and void: for the simple reason that the contract embodies the intentions of the parties precedent to the signing thereof, and the parties may be said to be of one mind as to terms and conditions of the contract when signing.

Seeing that you cannot construe the specification to mean other than what the contract says it means, both in intention and in fact, the obvious thing then to do is to frame the specification to suit the type of contract. It matters not in what manner the specification is written—the items of works in trades or sectionalized as in the group system. These are only matters of convenience. The group system would be very inconvenient where there is much subletting of the contract.

T. SUMNER SMITH

A Laundry Floor

SIR,—"C.H." in your issue for July 23, page 138, asks for advice on the construction of a good cheap flooring for a laundry which will have a considerable amount of heavy wear.

If it is required to have a floor more dustless and resistant to wear than granolithic, there seem to be several types of proprietary floorings which should answer the requirements of your querist. He has only to look at the advertisement pages of THE ARCHITECTS' JOURNAL to see announcements of a number of modern surface coverings for floors of this description.

R. HUTCHINGS

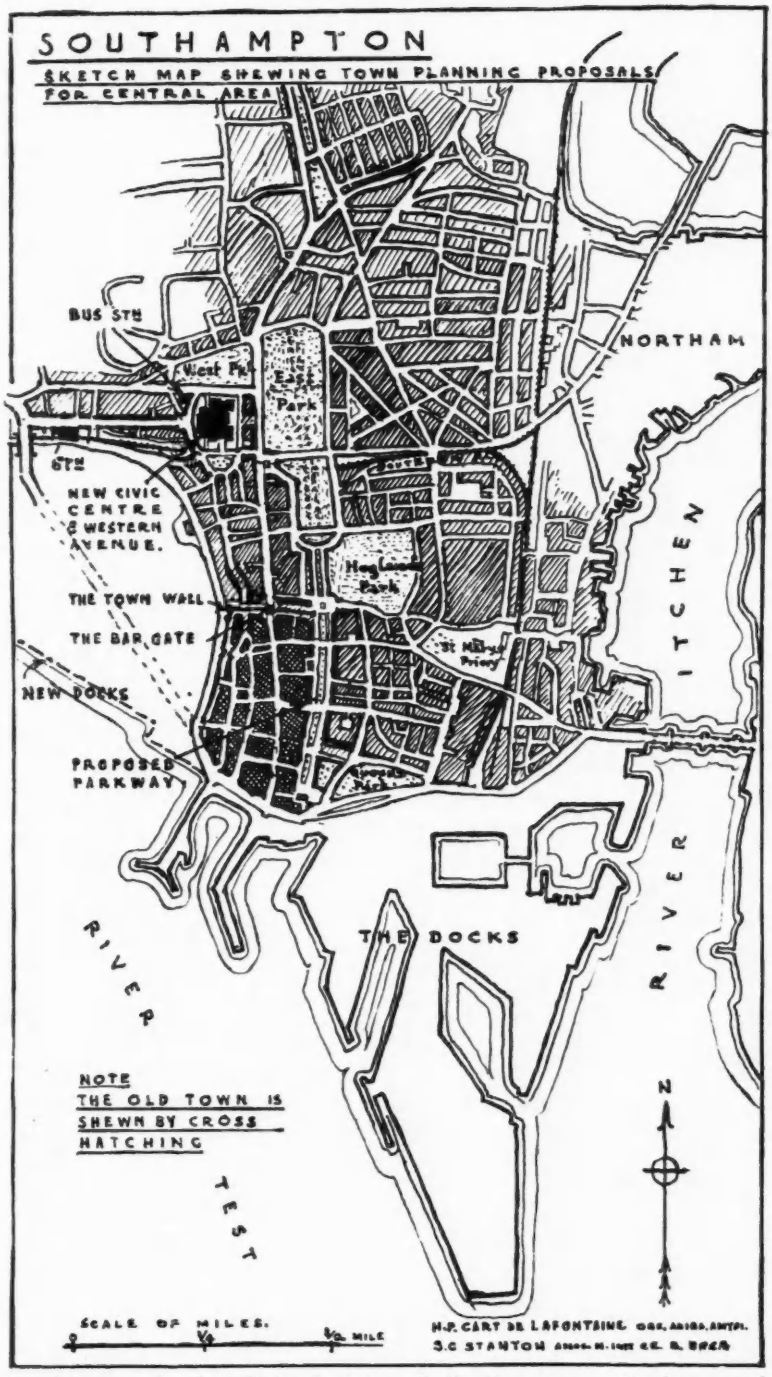
The Bargate, Southampton

SIR,—Astragal, in your issue for July 23, suggests that, whatever is done at Southampton to ameliorate the traffic problem, it would be a mistake to isolate the Bar by cutting away a part of the old town wall on each side of it. When I was consulted by the civic authorities on the traffic problem, I expressed the opinion that whatever could be schemed for the Bargate would be only a partial solution of the traffic problem. For a real solution it was essential to find an alternative and adequate route to take the through traffic *before* it entered the old town.

This alternative route should follow the line of the old ditch, or moat, which formerly skirted the town wall on the east side of the old town. The line is still preserved by two paved walks; one of these, "The Walls," ran at the foot of the town wall, while the other, "Canal Walk," was evidently a path on the far side of the moat. If these two walks be taken as the line for the new street it would be possible to make two "one-way" streets of adequate width, with a garden strip, about fifty feet wide, running along the whole length in the centre. By this means the magnificent chain of parks to the north and east of the old town could be connected by a "parkway" to the small park adjoining the docks, the line of the old wall could be established, and the old town itself would acquire a fresh interest, because it would be possible to walk right round it—alongside a garden strip—if the scheme for the Bargate and north side is carried out as suggested.

With regard to the Bargate itself, it will be seen from the foregoing observations that it is of great importance that its essential character as a gateway should be preserved. It is for this reason that I propose that the by-pass roads, east and west of it (which are essential to meet modern needs), should not cut clean through the walls, but be arched over. These arched openings will be frankly modern, some 20 feet wide for the roadway, with a smaller opening for pedestrians. But the line of the top of the wall will be preserved

and will, I think, give a sufficient unity between the wall and the gate to preserve its significance and interest.



The matter is one which has long engaged the attention of the municipal authorities, and various suggestions have been made by local architects and others; many of them are extremely interesting and nearly all are worthy of careful consideration. It is therefore much to be desired that any suggestion I have made should be fully criticized and debated, so that any defects may be disclosed and any useful suggestions made use of before a final decision is arrived at.

I think I may say that through the public-spirited activity of the Hants and Isle of Wight Society of Architects and the Civic Society of Southampton there seems every reason to anticipate that the whole problem of the re-planning of the central area (of which the Bargate problem is only a part) will be examined very carefully at no distant date.

It is certain that the Corporation are fully aware of the importance of the matter, and will probably defer any decision until a model (illustrating the effect of the proposals mentioned in Astragal's comment) is before them.

I write somewhat fully as it is desirable to correct the impression that the city fathers are not alive to the importance of the problem, though at the moment we are not entirely in agreement as to the best way of solving it.

H. P. CART DE LAFONTAINE

Sketch map of Town Planning Proposals for the central area of Southampton (see the accompanying letter from H. P. Cart de Lafontaine).

Cost of Houses

SIR,—I have read with amazement the letter of L. E. Williams on the urgent problem of working-class housing, which appeared in THE ARCHITECTS' JOURNAL for July 16 last.

In my extreme ignorance I have imagined that one of the prime functions of the architect was to instill into the mind of the ordinary man the true meaning of beauty—a beauty confined not only in the conception of great buildings, but extending to the things and the thoughts of everyday life, even to that lowly thing the working man's house. In this latter, even now, the great and universal big business of decent living is carried on, in spite of the inhabitants' so-called inferior status.

Can any true architect—a "chief worker"—feel happy that the efforts of his great profession should be nullified by an attitude of mind which blandly consents to such a low standard of living for his fellow-workers that these cannot even hope to grope towards the twin lights of beauty and decent thinking?

If true architects could feel happy in these conditions, then would I be proud to sign myself, with due acknowledgments to Astragal, "A born poacher, an engineer." I am, however, merely an engineer, and still remaining optimistic, am, etc. ROBERT W. STANTON

Settling-Up Honeywood: xi

SPINLOVE SCORES AGAIN

BY KARSHISH

(H. B. CRESWELL)

Sir Leslie Brash, the owner, has complained of various defects in the house, of which failure of the inside paint is alone serious. He has also raised an outcry at the bill of extras which Spinlove, his architect, is negotiating—as it is called—with the builder, Grigblay; and has "intimated," with unholy unction, that Spinlove will serve his own interests best by favouring his client rather than the builder. Spinlove's "negotiations" have included a fruitless struggle to force Hoochkoft, who supplied the facing bricks, to disgorge an overcharge; or, alternatively, to make the builder responsible for paying it.

GRIBLAY TO SPINLOVE (PERSONAL)

Sir, 8/7/26.

I have been looking into this matter of Hoochkoft's facings. You will understand it is no business of ours what understanding you came to with them, but as you cannot agree the matter I venture to drop you a hint that you have no occasion to argue it as those reds you objected to were place bricks that the fire hadn't properly reached and, as you know, some that got built in began to go almost at once. Hoochkoft cannot hold out that those soft reds were fit for what they sold them for, which is high-class facings—and which was their warranty or I am much mistaken. I enclose just a little statement that perhaps you may be interested to see and to have a word with Messrs. Hoochkoft about, but as I say it is no business of mine. It is lucky for them you had the softs thrown out or where would they be now!

Apologizing for troubling you but thought you might like the information.

Yours truly,

GRIGBLAY TO SPINLOVE (ENCLOSURE)

SIR LESLIE BRASH
DR. TO MARSTON GRIGBLAY, BUILDER

EXTRAS ON FACINGS SUPPLIED BY MESSRS. HOOCHKOFT & CO., LTD.

	£	s.	d.
Paid Messrs. Hoochkoft for picking out defective under-burnt bricks ..	92	0	0
Paid Messrs. Hoochkoft for 1,050 defective bricks delivered and not used, at 147s.	7	14	4
Picking over 7,000 bricks for throwouts, at 28s. ..	9	16	0
No. 87 cutting out defective under-burnt bricks built into wall-face and making good, at 2s.	8	14	0
	£118	4	4

It is a pity that this view of the matter did not occur to Spinlove before, but it has to be remembered that his objection to the under-burnt bricks was that he did not like the colour of them. Defects only appeared in a small number which were, by oversight or misunderstanding, built into the walls; and as Spinlove held Grigblay responsible for this, and required him to cut out and replace, Hoochkoft's liability did not obtrude itself.

SPINLOVE TO GRIGBLAY

Dear Mr. Grigblay, 9/7/26.

Thank you for your letter and enclosure. I will write to Hoochkoft, but at the same time I cannot agree that you had instructions from me to pay their extra charge, and I do not depart from my decision that you are responsible for cutting out and making good defective facings, for they were built in contrary to my orders.

Yours truly,

We may suppose that Spinlove does not want to relinquish his claim against Grigblay, but this is not a happy occasion upon which to insist on it. Bloggs, the foreman, did his best to interpret Spinlove's instructions in throwing out the red bricks, and it was his misfortune, and not his fault, that some of those he built in began to decay.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 9/7/26.

As I explained in my last letter, I held back the last certificate until Grigblay should have proved that he was entitled to it. Your honouring the certificate does not prejudice your right to challenge Grigblay's charges, but in any case responsibility for drawing the certificate is mine. Under the terms of the contract Grigblay can claim payment of all sums certified, and as he has been kept waiting a long time I hope you will make it convenient to send him a cheque at once.

I have some difficulty in understanding the drift of your letter. I do not think you need assurances that I am watching your interests closely to the best of my ability. It is also my duty to see that you are not called upon to pay any charge which is not properly substantiated. You cannot mean to suggest that I should unfairly interpret the contract against the builder in your your interests, and disallow his just claims, in order to win your favour; yet that is the impression your letter gives. Will you, therefore, be so good as to explain what it is you had in mind.

Yours sincerely,

Here, again, what are we to understand? Has Spinlove failed to see the purpose of Brash's letter, or has he perfectly understood it and framed such a reply that Brash can make a graceful retreat? As Spinlove does not respond to, but rather repulses Brash's pose of cordiality, the latter explanation is probable; but it may be that, without knowing exactly what Brash intended, Spinlove so disliked the implication of the letter that he responds to a healthy impulse and asks Brash what the devil he does *mean.*

SPINLOVE TO HOOCHKOFT

Dear Sirs, 12/7/26.

I have just received from the builder the enclosed account of his claim against my client in respect of defective facing bricks supplied by you, and shall be glad to receive your cheque drawn in favour of Sir Leslie Brash for the sum of *£118 4s. 4d.* forthwith, as the matter is of long standing and the account is now being closed.

Yours faithfully,

Appearances are that Spinlove took an opportunity to consult some longer head than his own on the drafting of this letter—perhaps that of Mr. Tinge, the quantity surveyor. The words he commonly wastes are conspicuously absent, and some good influence has also restrained him from his characteristic digressions in self-justification.

BRASH TO SPINLOVE

Dear Mr. Spinlove, 12/7/26.

It is scarcely necessary for me to intimate that nothing was farther from my intentions when I indited my last communication than to suggest that you should "unfairly interpret the contract" or "disallow the builder's just claims." As you very naturally divine, I certainly have no such desires and would be the last person to consent to any such nefarious proposition. I am a gentleman who has always disbursed his just liabilities without demur and *up to the hilt* as it is sufficiently self-evident I shall be required to do on this occasion by Mr. Grigblay with the due approbation of my architect. At the same time I apprehend that it is within the prerogatives of the employer to indicate an aspect of the situation which it is clearly advantageous for his architect to comprehend. A judicial deportment is obviously an appropriate desideratum for a young gentleman engaging in the sphere of professional activities.

It will, I anticipate, signalize to you that I am pliably amenable to appeals of logical reason when I intimate that I have today transmitted cheque for one thousand pounds to Mr. Grigblay. I also enclose cheque for £60 in satisfaction of your own fees in respect of that disbursement.

Yours sincerely,

Brash appears to be sulky, and even a little embittered, at being taken up by Spinlove. His letter is a clever one: although it disclaims the sinister implications of its predecessor it, in fact, stresses them.

HOOCHKOFT TO SPINLOVE

Dear Sir, 13/7/26.

We do not understand why Mr. Grigblay's account with Sir Leslie Brash has been sent to us, and return it herewith as we can only suppose your suggestion of a cheque in settlement is intended as a joke. The matter is ended so far as we are concerned.

Yours faithfully,

SPINLOVE TO HOOCHKOFT

Dear Sirs, 16/7/28.

I have to point out that the matter of the defective facing bricks supplied by you is by no means ended, and is very far from being a joke so far as you are concerned.

The facts are that some of the soft, bright-red, under-burnt facings included by you in the early consignments, and built into the walls, almost immediately began to decay and, to the number of eighty-seven, had to be cut out and replaced.

As you neglected to pick out the under-burnt bricks from early consignments totalling 7,000, this work had to be done on the site by the builder.

The under-burnt throwouts were unusable and had to be replaced by sound bricks to the number of 1,050.

The charge you made for picking is not allowable as the bright-red under-burnt bricks were unsuitable for facings.

Mr. Grigblay's charge is the sum he paid you for picking, together with the cost of picking over in your default. The other charges are based on time and materials, and the amount paid you for defective bricks that could not be used.

The bricks offered by you, ordered by me and invoiced, are "facings"; you were under warranty to supply facings, and Sir Leslie Brash claims from you £118 to reimburse him for losses directly due to your breach of warranty. I return the account and have to repeat my request for cheque in settlement forthwith.

Yours faithfully,

It is difficult to believe that Spinlove settled the draft of this letter. The probability is that some architect friend of wide experience, or a lawyer, gave him guidance. It is to his credit that he realized he was on delicate ground; for it is most difficult in positions such as this to be lucid, and to keep to the essential facts, and to avoid prejudicing the position, or actually making it untenable, by accidental admissions or inconsistencies.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 16/7/28.

Thank you for cheque. I enclose formal receipt. I am glad you have sent Mr. Grigblay a cheque as he had grounds for feeling aggrieved at the delay.

I am obliged for your reply to my letter, but I still do not completely understand what it is that you expect of me. You seem to express dissatisfaction with my conduct of the business of settling Grigblay's account. I can only assure you that I will spare no pains to see that no improper charge is included.

Yours sincerely,

HOOCHKOFT TO SPINLOVE

Mr. Spinlove, 17/7/28.

We now understand your new move to make us refund in order to cover your own liability to your client by now saying bright-reds were defective; but unfortunately you *told us nothing of this at the time*, but waited till your other trick failed, knowing that nothing was wrong with the bricks; and if you did have a few cut out they were sound ones and only done to bolster up a false claim against us by holding out they were defective when they were not; but very likely *none were cut out at all*, and this is just a dirty job to put responsibility on to us and get a refund because your other trick of saying you never ordered picked has gone wrong.

We return you Grigblay's account and suggest try again as this has not come off and something better is needed to humbug us.

Your most obliged humble servants,

Such contemptible devices as Hoochkoft, by return of post, here ascribes to Spinlove, could scarcely enter their heads if they did not themselves habitually practise them. Its abusive diction and general likeness to the barking of a dog is common in the wider fields of business correspondence. Hoochkoft for the first time honours Spinlove by meeting him as man to man, and Spinlove should take heart.

SPINLOVE TO HOOCHKOFT

Gentlemen, 19/7/26.

I do not know whether you intend your letter as a final disclaimer, but as there is the testimony of the builder, foreman, bricklayers and others to support me, perhaps you will prefer to reconsider your position before I advise Sir Leslie Brash to take action to enforce his claim; in which case I do not think such letters as that you last sent me will help you. I enclose the account and await your reply.

I am, Gentlemen,

Your humble servant,

This diplomatic answer was certainly not drafted by Spinlove. It is clear he had guidance.

HOOCHKOFT TO SPINLOVE

Dear Sir, 22/7/26.

Your favour of the 19th inst. with enclosure and previous correspondence has been laid before our chairman and managing director, Mr. Eli Hoochkoft, who proposes to wait on you at any time convenient to your good self for the purpose of amicably settling the matter to your satisfaction in a personal interview.

We may say that we were naturally taken aback at the contents of your previous letters, as the matters referred to were quite new to us and the official who dealt with the correspondence was under a misapprehension. Mr. Hoochkoft tenders you his apologies for same, although our suggested explanations were not intended in any way as a criticism of your good self.

We are, dear Sir,

Yours faithfully,

Delicacy of touch is not a strong point with Hoochkoft; in fact, one of the few disadvantages of having a hide like a rhinoceros is that you assume everyone to be sheathed with an insensibility equal to your own. Hoochkoft are quite unaware that their ingratiating affability presents the picture of deceit spurred by funk. The trick by which, after one bluff has failed, they approach the subject de novo *from a new angle, by a pretence of referring it to higher authority, is a very old one.*

SPINLOVE TO HOOCHKOFT

Gentlemen, 28/7/26.

I confirm arrangement by telephone that Mr. Hoochkoft will call to see me here at noon on Wednesday.

I am, yours faithfully,

MR. ELI HOOCHKOFT TO SPINLOVE (AUTOGRAPH)

Dear Mr. Spinlove, 5/8/26.

As promised I have carefully considered the position of my firm in the light of our friendly talk and have responded to your kind offer to entertain a payment in settlement and now enclose Treasury notes to the value of £25 in the belief that this will meet your favourable ideas. Will you kindly initial for receipt of this letter to the bearer who has been instructed to deliver it into your hands?

I trust that in the future I may be honoured by your esteemed favours, when I will make it a personal duty to see you receive complete satisfaction in any orders you may entrust to us and that no irregularity as that complained of occurs.

Believe me, dear Mr. Spinlove,

Yours truly,

Eli is trying to bribe Spinlove; a bribe being the giving to, and acceptance by, an agent of any gift or consideration, as an inducement to the agent to do, or forbear from doing, any act in relation to his principal's affairs. Although it is a thing the slightest hint of which all right-minded men shrink from as intolerable to their self-respect and a violation of the rudiments of personal honour, yet bribery, in one form and another, is a common usage for greasing the wheels of business, and all architects sooner or later become aware of its detestable implications. Many men whose fields of activity involve them in the practice, excuse it by the cynical sophistry that all human actions are swayed by a coveted reward, and that in essence there is no difference between actions framed in ambition for social and political advancement or the favour of powerful men, and those where the goal is more directly money—just as it has been argued that all motives are at bottom selfish, or that there is no such thing as a bald man because it is impossible to say at what point, when single hairs are plucked from the head, it becomes bald.

We lately saw Brash holding out inducements to Spinlove to betray his trust which, though morally bribery, would scarcely have made him guilty at law; but this attempt by Hoochkoft is a particularly flagrant example of the crime—for crime it is. To take or give a bribe is an offence punishable by a fine not exceeding £500, with or without imprisonment not exceeding two years. If Eli were brought before me, I should award him a fine of one hundred pounds with nine months in the second division for undisturbed meditations on bricks. He is, however, unlikely to be brought before anyone, for the nefarious understandings he seeks to establish are reached by each party advancing towards the proposal by hints and innuendos to which either can readily give an innocent meaning if his overture wins no response; and it is thus usual for the illicit agreement to be reached tacitly and by implication, without anything being said that would entitle either party to affirm that a bribe had been offered or asked by the other.

Thus we find Hoochkoft sending money to Brash's agent in fulfilment of an apparently honest agreement for settlement of Brash's claim: he could—although it is doubtful if any jury would agree—hold out that he had no intention of bribing. He also, it will be noticed, makes it safe for Spinlove to pocket the money and decide, for any reason he chooses to give, that Brash's claim is untenable. There is the evidence of no third person; and there is no record, such as a cheque or bank notes would set up, that the money has changed hands. There is nothing but Hoochkoft's oath that he sent Spinlove the money against Spinlove's that he never received it, and vice versa, *to establish the fact; and as both would be equally guilty and the arrangement meets the desires of each, there would be no likely need for either of them to thus add perjury to their conspiracy to plunder Brash.*

SPINLOVE TO MR. ELI HOOCHKOFT (REGISTERED POST)

Sir, 7/8/26.

I am not prepared to recommend Sir Leslie Brash to accept any such disproportionate sum as the £25 you sent me in settlement of his claim against you.

As your offer is in no way adequate to your professions at our interview, I have to say that the sum I am prepared to recommend my client to accept in full settlement, is the amount paid to you in error by Mr. Grigblay for picking out defective bricks, namely £92; and I shall be glad to receive, *not cash*, but your *cheque* for this amount *drawn in favour of Mr. Grigblay*, on receipt of which I will return your Treasury notes value £25. In the event of your not accepting this offer the matter will go out of my hands.

I am, Sir,

Yours faithfully,

The reason Spinlove did not send back Eli's Treasury notes by the messenger who brought them is, probably, that he could not at the moment make up his mind how to handle the matter. It is just as well he did not so return them, for it would have been a gesture of wiping out the interchange and left things as though Hoochkoft had never offered the affront. As it is, Hoochkoft is likely to have had an uneasy feeling in regard to what may have been happening in the enemy camp in the three days' interval between his sending the notes and Spinlove's reply. This uneasiness will be increased by Spinlove's action in holding the notes for return, instead of putting them to Hoochkoft's credit in his account with Brash. Spinlove clearly has someone guiding him in this ticklish business; and perhaps the awkwardness of dealing with the cash, and a wish to enforce decorum on Hoochkoft and hold the whip hand over him, decided his action.

It still remains unexplained why such a practised rogue as Hoochkoft should have concluded that Spinlove was open to bribery. It is clear that he was misled by Spinlove at their interview; and it is also clear that Spinlove had no intention of so misleading him. We may suppose, therefore, that it never entered Spinlove's head that Hoochkoft's aim was to find out whether he was corruptible and, if so, his price; and thus Spinlove neither encouraged Hoochkoft to show his hand nor, in his complete unconsciousness, warned him, by word or look, that his task was hopeless. It is easy, on this supposition, to understand that Hoochkoft's offer of a money payment to Spinlove as "a sum in friendly settlement"—or however else he disguised his true meaning—was accepted in all good faith by Spinlove as a proposal for settlement to Brash, while Hoochkoft supposed Spinlove was veiling the acceptance in the same way that he himself was veiling the proposal. The extreme innocence of Spinlove, in fact, gave Hoochkoft, who is clearly a lumbering, obtuse fellow, the idea of excessive subtlety and wariness.

It is to be noted that no sum was named at the interview. The position was threshed out, and Hoochkoft went off to consider the sum he would offer in settlement, and make an offer.

HOOCHKOFT TO SPINLOVE

Dear Sir, 10/8/27.

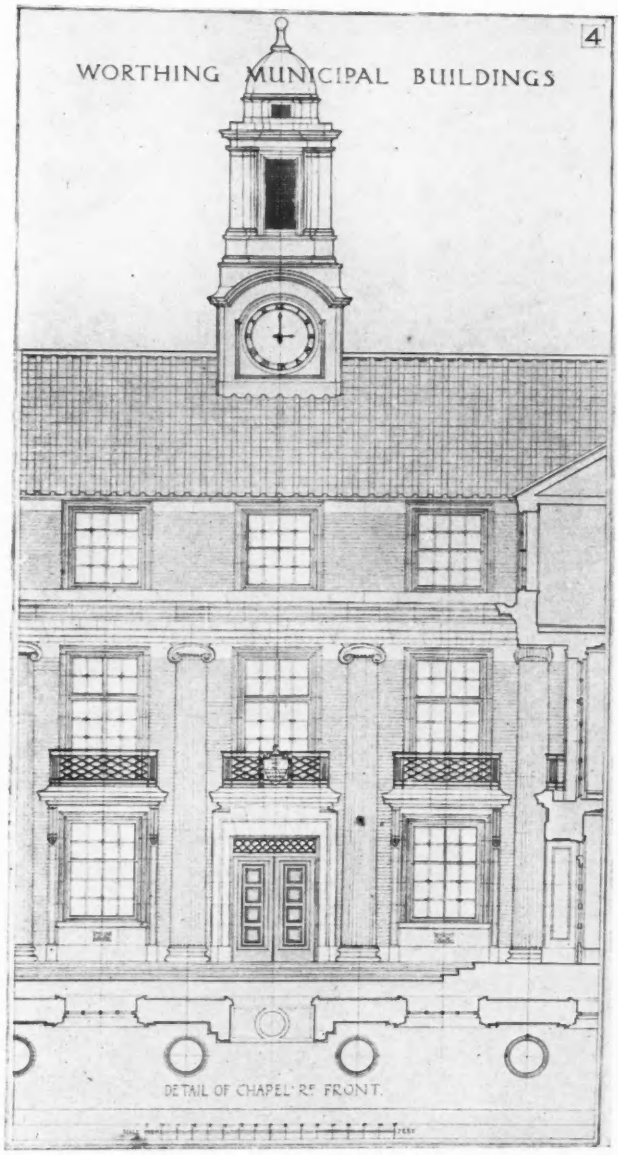
With reference to Mr. Hoochkoft's interview with you on August 4th, we now enclose cheque drawn in favour of Mr. Grigblay for the sum of £92 as refund of disputed charge for picked facings, which you state was paid in error. The acceptance of this sum to be understood to be in full settlement of Sir Leslie Brash's claim against us as per enclosed account and which is in dispute.

Yours faithfully,

And so Spinlove has won! He has made a good fight, in which his native tenacity and his vanity have probably served him better than his devotion to his client's interests.

There is no doubt that Hoochkoft's false step in attempting to bribe Spinlove has precipitated his decision to pay up and so avoid any chance of litigation and exposure. It is to be noticed that Hoochkoft ignores Spinlove's letter and sends the cheque as though in fulfilment of an understanding come to at Hoochkoft's interview with Spinlove. The object of this is to cover their tracks, so far as may be, and avoid any official record of the illicit project.

[NEXT WEEK: XII—DRY ROT APPEARS]



WORTHING MUNICIPAL BUILDINGS COMPETITION

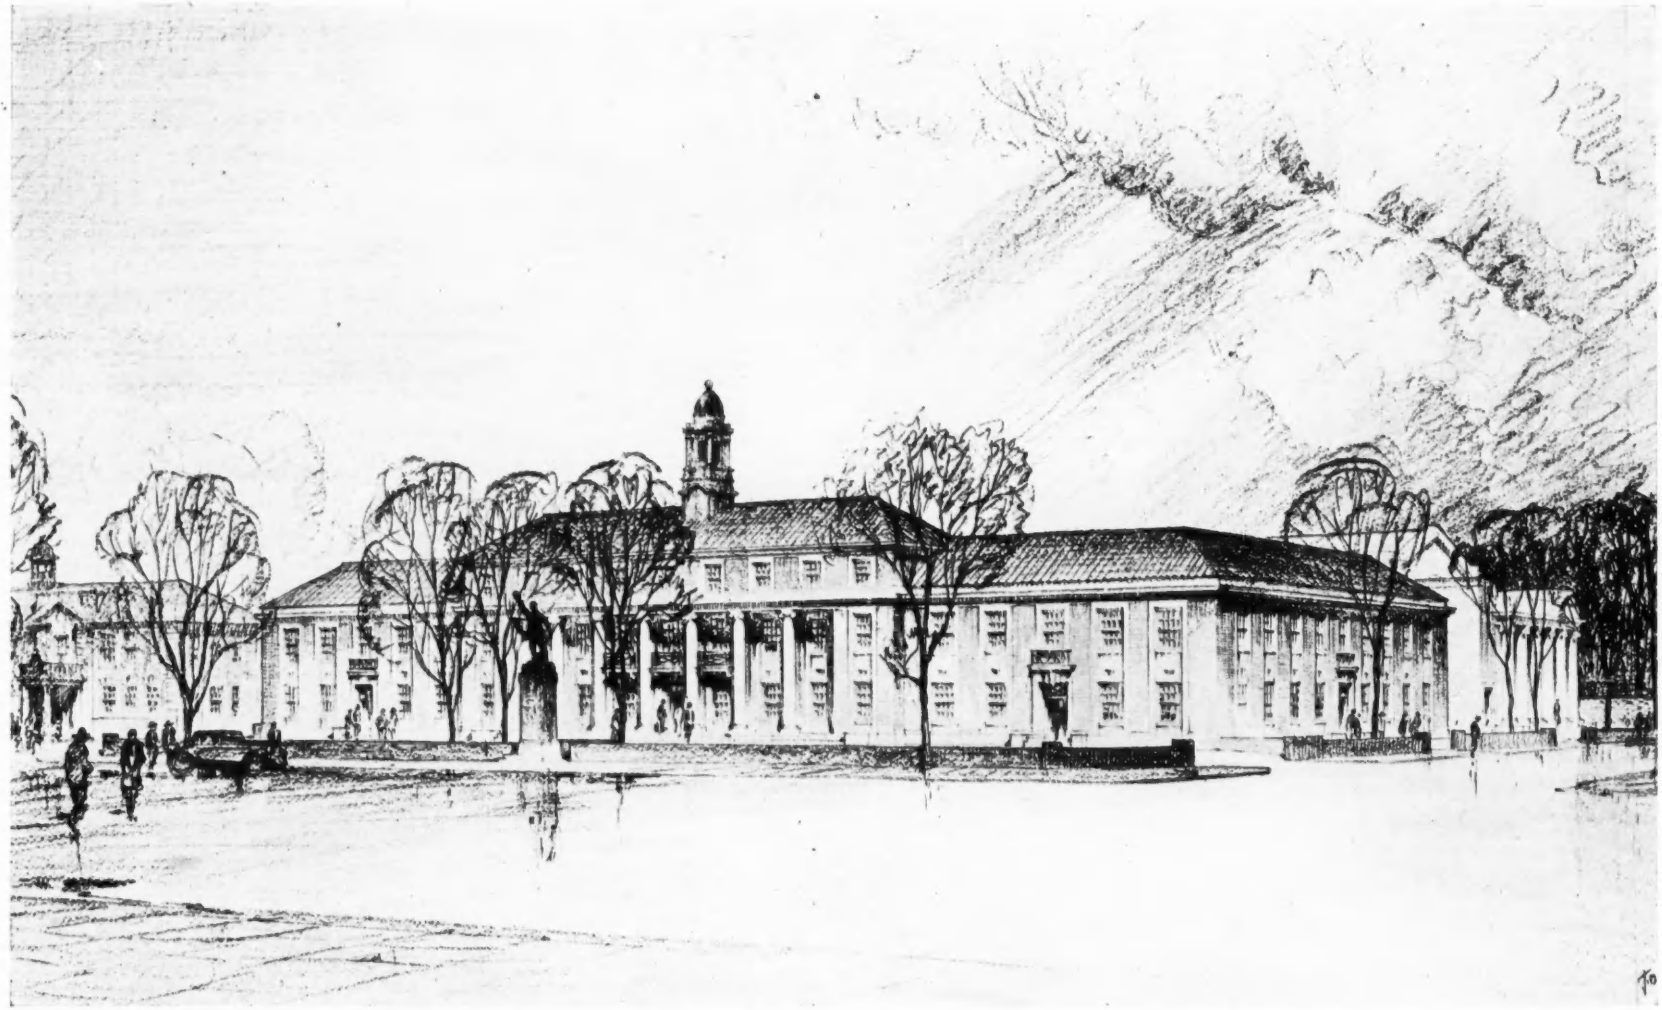
FIRST PREMIATED DESIGN: BY CHARLES COWLES-VOYSEY

First premium (£350): Charles Cowles-Voysey, F.R.I.B.A., London. Second premium (£250): Percy Tubbs, Son and Duncan, F. & A.A.R.I.B.A., and S. Rowland Pierce, A.R.I.B.A., London. Third premium (£150): Willink and Dodd, Liverpool. Fourth premium (£50): William A. Funnell, Purley. Commended: V. O. Rees, A.R.I.B.A., London.

NO fewer than forty-three designs were submitted in the competition for designs for the municipal buildings proposed to be erected on a site with frontages to Chapel Road and Stoke Abbott Road, Worthing. The competition was promoted by the Worthing Corporation, and restricted to architects of British nationality.

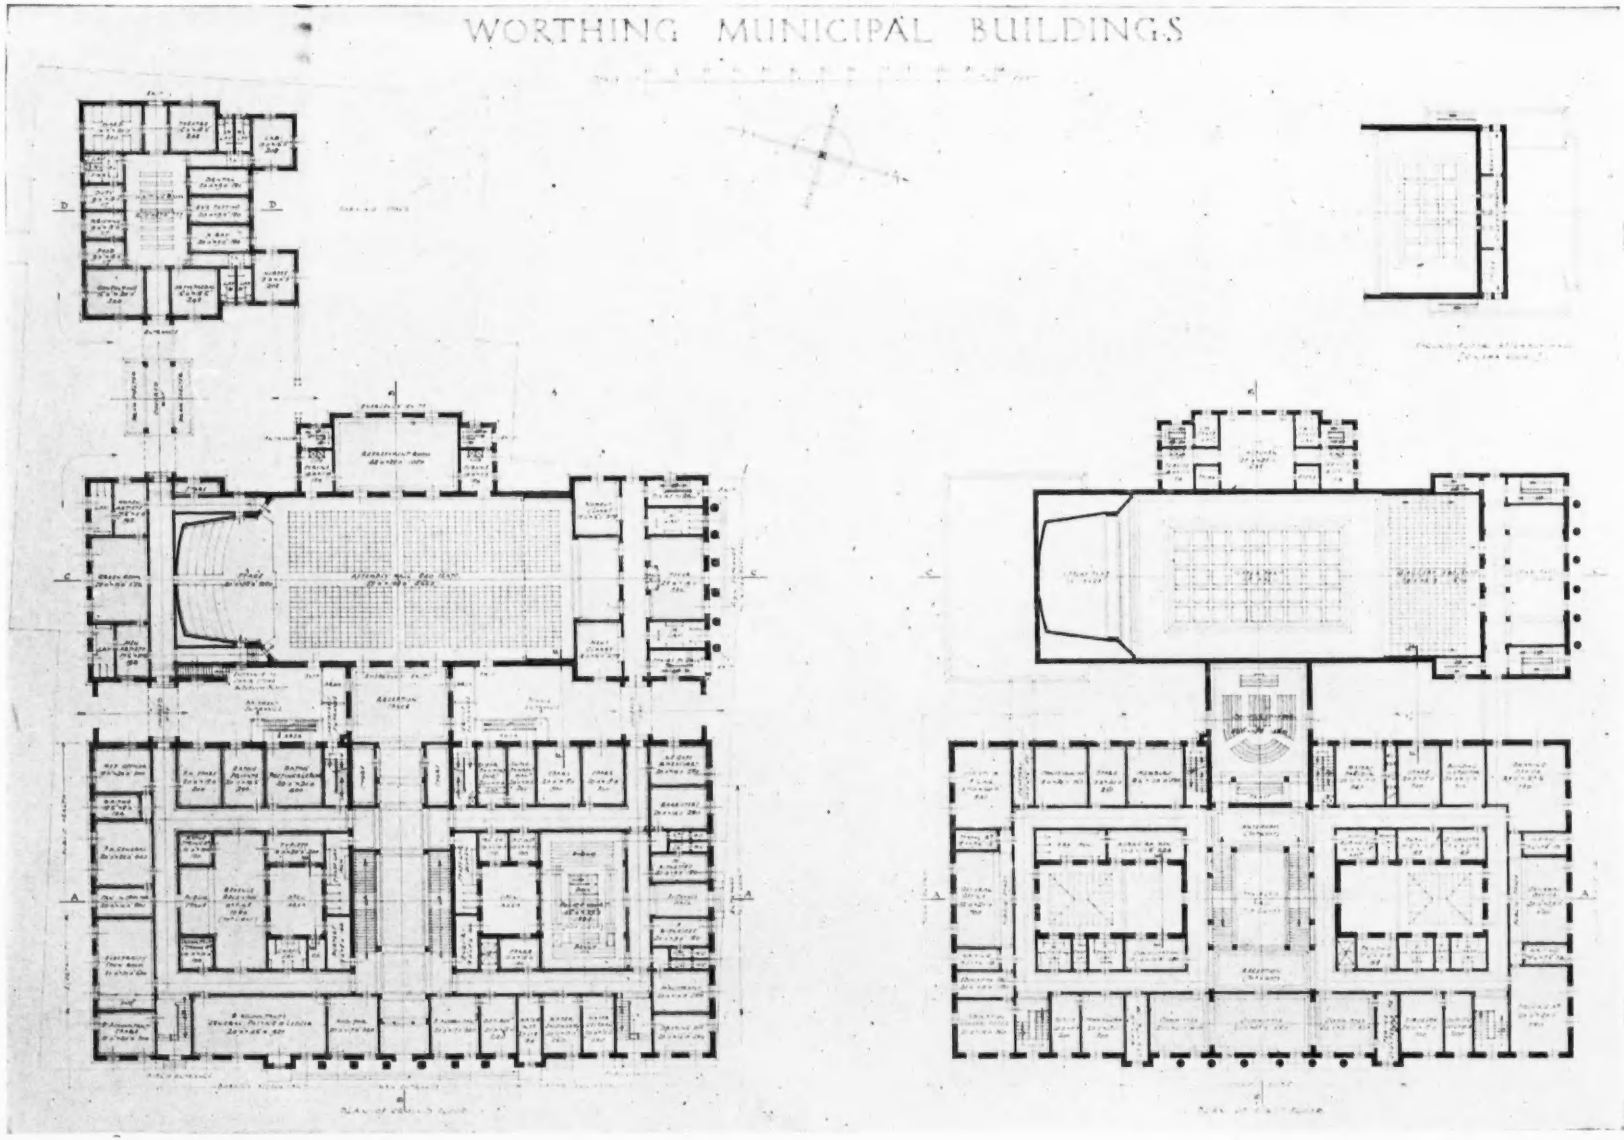
The programme provided for the erection of the municipal buildings, a county court and clinics with, in addition, the reservation of a site for an assembly hall, the erection of which will not at present be proceeded with. It was thought desirable that the principal entrance to the municipal buildings should be in Chapel Road and the principal entrances to the county court and assembly hall from Stoke Abbott Road. Access is also available from Richmond Road to the western portion of the site by a 10 ft. carriageway.

Detail of the centre feature of the main, Chapel Road, front, showing the principal entrance to the municipal buildings. On the first floor are the balconied windows of the committee rooms.



The general design of the buildings, both internally and externally, was left to the competitor, but it was stipulated that it should be dignified and restrained, and competitors were asked to bear in mind that the public library and museum adjoining are the property of the Corporation. It was requested that the design should rely on good proportions rather than on elaborate decorations and detail, which was not desired.

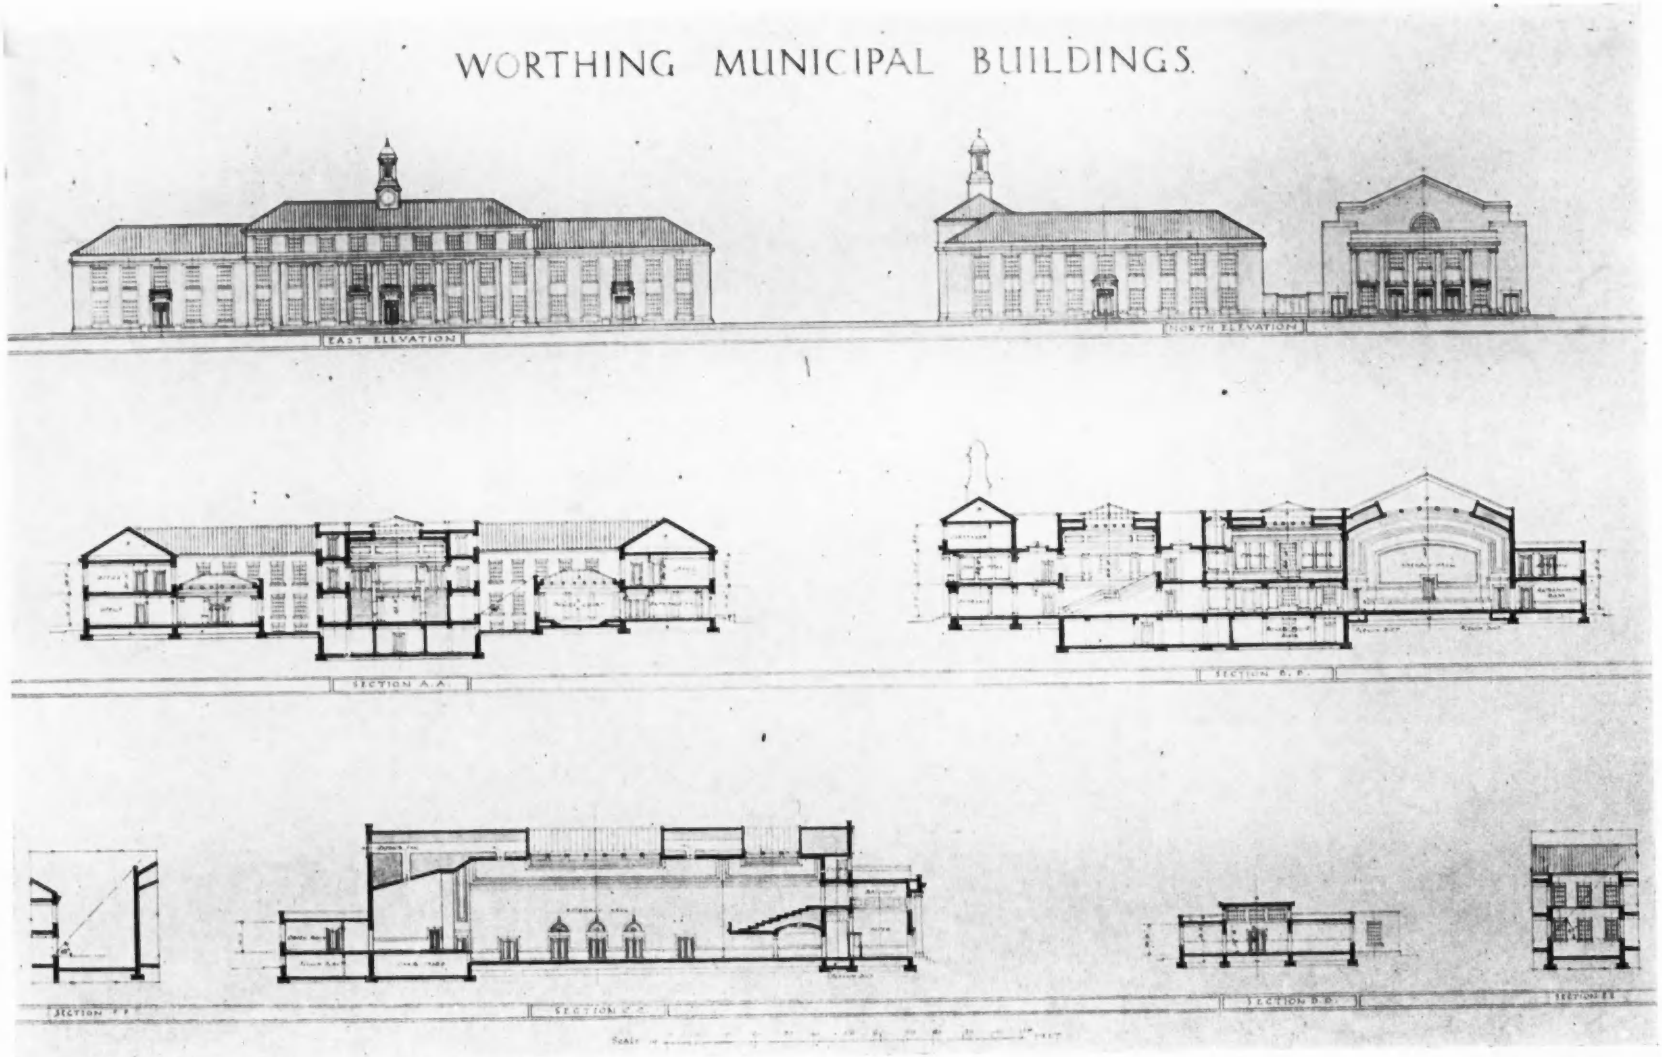
Stress was laid on straightforward and economical planning, with rooms and corridors well lighted and ventilated, and with due regard to escape in case of fire or panic. Towers and domes were to be avoided.



Competitors were asked to consider whether a space for the parking of the private cars of members of the Corporation could be provided on the west side of the buildings with approaches from Stoke Abbott Road and/or Chapel Road on the south side of the site; also the provision of a parking space for the assembly hall.

The total cost was not to exceed £100,000, this sum not to include the layout of the forecourts.

Mr. Henry V. Ashley, the assessor, in his award, says: "The programme set was a complex one, involving the planning and design of municipal buildings, police court and clinics, and with an assembly hall in addition, and while it should be stated that there are good points in many of the designs sent in, I am entirely satisfied that the scheme placed first by me attains the best all-round degree of excellence of any submitted, both as regards the planning of the several buildings and the architectural design thereof; it is eminently suited to its purpose and to its environment."



The architect's perspective drawing of the main, Chapel Road, front. The principal entrance, in the centre of the façade, leads into a spacious hall, on either side of which are the staircases to the upper floors. Around this entrance and staircases the municipal offices are planned. On the extreme right of the drawing is seen the main entrance to the assembly hall from Stoke Abbott Road. The drawing shows the war memorial, which now stands at the junction of the two roads, removed to a central position on the main front.

Worthing Municipal Buildings Competition, Winning Design.] [*By Charles Cowles-Voysey.*

Ground-, first- and second-floor plans. In the front portion of the building, devoted to the municipal offices, is the police court, which is served by a separate entrance and hall from Stoke Abbott Road. On the first floor, the council chamber, the committee rooms, and he mayor's parlour are planned on the east and west ends of the staircase. The assembly hall is two stories high. It is provided with a full stage and is equipped for use as a cinema. Behind the assembly hall are the clinics and a parking-space for motor cars.

Worthing Municipal Buildings Competition, Winning Design.] [*By Charles Cowles-Voysey.*

These elevations and sections should be studied in conjunction with the plans on page 205. The east elevation faces Chapel Road, the principal thoroughfare, and the north overlooks Stoke Abbott Road. The municipal offices are planned on the front portion of the site, at the junction of these two roads. Behind, on the north front, is the assembly hall, with its main entrance from Stoke Abbott Road. Although the competitors were asked to include the assembly hall in their designs it will not be built until some future occasion.

QUESTIONS THAT ARISE

Chimney Flaking

H. O. R. writes: "*I have been asked to recommend a treatment for (1) brick chimneys (of an ordinary country residence) which have flaked badly on the weather side; (2) concrete stucco (plain floated face) to outside of house walls which, on examination at a distance, appears sound, but on closer inspection, shows cracks (hair) all over. When these spots are tapped, they are found to be brast, and evidently the space behind is a receiver for water, which, freezing in winter, is gradually separating the stucco from the masonry.*

"*We cannot afford to take the stucco off the wall; and, although the facing of the chimneys with cement stucco would not be a serious expense, we want, if possible, to avoid this also.*"

Your correspondent does not mention the cause of failure. It may be due to frost action, in which case we should advise the raking out of all soft and friable material and the application of a carefully proportioned cement and sand rendering. Efflorescence and crystallization of soluble salts just below the surface of the brick may cause flaking, and an attempt should be made to remove as much of the salts as possible before any treatment is applied. An incrustation of this type may be removed to a considerable extent by washing down with warm water at intervals, allowing a period to elapse in between each washing, during which crystallization may take place. It would then be possible to render the bricks with cement and sand, which should reduce trouble due to frost action or by crystallization of salts.

In both the above cases the use of a bituminous preparation or even an oil paint film may possibly be substituted for the rendering, but it must be borne in mind that the colour and appearance of the chimney would be greatly altered and the treatment would require periodic renewal.

In the case of the stucco, moisture will penetrate through the hair cracks, which are usually produced by the shrinkage of the rendering on drying. The periodic movements of cracks of this kind make it very difficult to seal them effectively, and the only certain remedy appears to be to strip the stucco and replace it with carefully proportioned, sound material, taking suitable precautions to minimize the risk of further cracking.

It is claimed for certain bituminous preparations that they will cover a cracked surface of this kind, but we have as yet no evidence on this point. It is possible, if the cracks are merely hair cracks, and provided no hollow areas have developed between the stucco and underlying brickwork, that a slurry of Portland cement and white hydrated lime may provide a remedy. Such a treatment may be applied with a brush and has quite a pleasant white colour; on cement-rendered walls at this Station a slurry of this kind shows little deterioration after eighteen months' exposure.

SIGNED (FOR DIRECTOR OF BUILDING RESEARCH).

Cesspools

S. W. writes: "*I am building a factory to accommodate fifty people, near the Thames Valley, in a district which is not yet sewered. The soil is of ballast and the natural water line is approximately 3 ft. 6 ins. below general ground level. The sinking of a deep cesspool with brick walls is out of the question; also, there arises the more serious difficulty of making a watertight tank. Asphalting is impossible on damp walling. The question of rain water is easier: for this I am providing a large soak-away. What is your expert's opinion on this question?*"

The storage of sewage can be overcome on a waterlogged site by the use of reinforced concrete tubes. These are manufactured by a number of firms, to various diameters, and are made in lengths of about 3 ft. A cover slab for the top, with loose slab for access, is made; also the bottoms, which are cast, are stocked.

The lengths of tubing have rebated joints and inlets and outlets are cast on.

In the case mentioned by your correspondent, where the water level is so high and there are a large number of persons to provide for, it would be advisable to form two, if not three, of these cesspools, each coupled together with a short length of 4-in. cast-iron pipe.

The ground should be excavated, the water pumped out, a concrete bed laid and one cesspool fixed in position before excavation is commenced for the next. Tubes about 4 ft. 6 ins. diameter and about 2 ins. thick could be used.

It is better to make the cesspool with joints in neat cement, above ground, and, with the aid of sheer legs, sling it into position. Care should be taken to see that each cesspool is loaded immediately it is placed in position and filled with water to resist the pressure of the surface water. Dry rubble should be well rammed around the cesspools and the joints protected externally with a casing of concrete.

In view of the high pressure of the water, if "S. W." decides to use this construction, he would be advised to cover the two or three cesspools at yard level with a reinforced concrete slab, to resist the water pressure. In that case, ordinary cast-iron manhole covers can be used for access to the chambers. W. E. K.

Underpinning

T. A. writes: "*In the majority of specifications, in the description of work in connection with underpinning, new work is specified to be pinned to the underside of the old work, with slates or tiles in cement mortar. Several foremen I have spoken to consider that this is never actually carried out in practice, and that the work is pinned up with cement mortar. Can you inform me whether it is really necessary to pin with slates or tiles?*"

I have found that there are a number of foremen who consider that new work is satisfactorily pinned to old by packing in the top joint of the new work with cement mortar only, and I have seen them do this, using a piece of hoop iron, bent at the end, to wedge the cement into the joint.

This method, however, does not ensure that there are no pockets left in the mortar.

By wedging slates between the old brick or stone work and the cement mortar, which is packed into the joint, the whole is tightly pinned together.

W. A. D.

Party Wall

T. A. P. writes: "*My house and the one next door have a common party wall. The owner of the next house is about to construct a cellar against this party wall. What right of support have I?*"

In the case of houses built together, the right of support is generally one of grant. Usually, however, a man has a right by common law to a natural support of soil; so that if a builder, by excavating too near a party wall, imperils the house, he may be sued for damage; but a special easement of support from adjoining property appears to be the only safe ground on which proceedings of this nature can be taken.

It is not easy to say, however, to whom an old party wall belongs, the general circumstances of most properties rendering it difficult to find out by whom the wall was built.

Under such an uncertainty, the presumption should be that the wall belongs to the two owners as tenants in common, and in such a case, as the query indicates, the builder will be as anxious as the querist that the party wall is properly supported during his operations. A. B.

THE SPECIFICATION WRITER

Cellulose Lacquers for Architectural Decoration

BY MAJOR DENIS J. BURKE

THE steadily increasing employment of cellulose lacquers and enamels in the field of architectural decoration is sufficiently remarkable to warrant a close examination of the qualities of these materials at first hand. Like every other innovation, cellulose lacquers have encountered stout opposition. All sorts of unfounded accusations have been hurled at them, from toxicity to lack of durability; but such opposition is in the normal course of events. Cellulose lacquers and enamels for architectural use have now reached a stage of development which establishes this material amongst the proved successes in decorative media.

Architectural lacquers which are suitable for employment under the varying conditions encountered in their application to plaster, wood, metal, old paint work, large plain surfaces and multi-coloured small or irregular surfaces divide themselves into two classes: brushing lacquers and spraying lacquers.

Brushing lacquers, suitable for use by the professional decorator, are different in composition and working from the brushing lacquers sold in small tins for the amateur painter. They have a very much longer brushing time, a much greater covering power and more nearly approximate in methods of application to a quick-drying enamel. But they have the very important characteristic of retaining all the good qualities of lacquer—that is to say, they combine speed of drying with great durability, washability, brightness of colour, resistance to disinfectants and other damaging fluids, and to penetration by dirt or stains. Bacteria, if deposited on a cellulose finish, cannot grow there because there is no moisture or organic medium to encourage reproduction.

Cellulose lacquers are non-absorbent and can be scrubbed periodically with water containing disinfectants, and, further, they are not damaged by the fumes of formaldehyde or other disinfectant vapours.

The qualities of great durability, ease of cleaning and rapidity of application make lacquers especially suitable to hotels, hospitals, theatres and restaurants, all of which demand of a decorative medium that it should be sanitary, hard wearing, and capable of being rapidly applied.

Every hour that hotels, restaurants or theatres immobilize any of their accommodation for the purpose of decoration means a loss of earning power, therefore speed of application and rapidity of drying is of the utmost importance in any such scheme of decoration. It is interesting to note that the largest firm of caterers and restaurateurs in London finished the interior of their new laboratory building over a year ago with brushing cellulose enamel. They also used this finish on several of their restaurants, kitchens and refrigerating rooms; in all cases the work was carried out by their own staff of decorators and has given entire satisfaction. The G.P.O. has used a brushing cellulose lacquer on telephone booths, letter-boxes, and the new Air Mail letter-boxes in London. In this case also the finish was applied by the ordinary painters. Several offices and flats have been decorated very successfully with brushing cellulose lacquers.

In all these cases the work of decoration only held up the use of premises during the actual time while the decorators were employed, and by selecting suitable times for carrying out the work of decoration it was found possible not to interfere with their normal use at all.

Brushing lacquers of this type dry dust-free in one hour after application, and the room is free of the odour of the solvents in six hours. There is no residual odour in the paint film and the vapours given off during drying do not form an explosive mixture. They are therefore particularly suitable for carrying out a rapid scheme of decoration under the normal conditions of paint application. They do not call for a specially trained staff for their application, no special air-exhausting apparatus is required to remove the fumes, the odour given off during the drying period is mild and completely disappears in about six hours. Consequently offices, restaurants, kitchens, etc., can be decorated at night and used the next morning without the usual inconveniences experienced from wet paint.

Spraying lacquers are used where great rapidity is called for. They involve the employment of compressed-air spraying apparatus, the technique of which has to be acquired, but by this means large wall areas can be covered in a very short time and cellulose enamels applied in this way dry hard within the hour. The advantages of such characteristics are obvious.

There are numerous examples of buildings which have been successfully decorated with spraying cellulose enamels. In the London area the following instances may be quoted: The Prince Edward Theatre, the Brixton Astoria, the Streatham Astoria, the Whitehall Theatre, the Old Kent Road Astoria, Marlow House office buildings, and the Zion Ward, St. Mary's Hospital. In addition, many other banks and office buildings, shops, etc., have been wholly or partially decorated with lacquer. Moreover, it was found that cellulose lacquer was the only finish that successfully resisted the conditions of the hot vapour room in a clinic for the treatment of rheumatism.

In America the Book Cadillac Hotel in Detroit was decorated throughout about six years ago with cellulose lacquers. The decoration has given every satisfaction both in wearing qualities and appearance, and the additional satisfaction that the rooms can be redecorated, or damage to the finish repaired, without loss of a single letting night.

The principal obstacle to the more extensive use of lacquers is ignorance. Admittedly, the application of spraying lacquers requires facilities not normally available to the ordinary decorator, who has neither the knowledge nor the plant nor the staff necessary. However, certain firms of decorators have been specializing in this work for some time past, and the remarkable encouragement that they have met with will certainly cause others to enter this field.

Brushing lacquers are in a very different category, as they can be successfully applied by any decorator who knows his business and has enough intelligence to study the slightly different technique of application.

Much good work has been and is being done by the Borough Polytechnic Institute and the Regent Street Polytechnic Institute to give practical and theoretical instruction regarding the composition and application of cellulose lacquers.

SUMMER brings thunder, and thunder a certain amount of damage to buildings from being struck by lightning. The toll in this country, it is true, is light, and no very elaborate precautions have been found expedient. Those whose attention has, nevertheless, been drawn to the matter, and especially designers of buildings in regions less immune from storms—and there are many such in the British Empire—have but meagre data to draw upon. The subject, in fact, awaits further research, which it has been suggested should be undertaken on the high veld of South Africa, where the results are severely felt. Meanwhile a paper on the subject, recently read by Mr. T. P. Pask, M.I.E.E., before the South African Institute of Electrical

Engineers, has been printed in their April "Transactions," and may be recommended to those in search of information.

Tests on Wired Glass

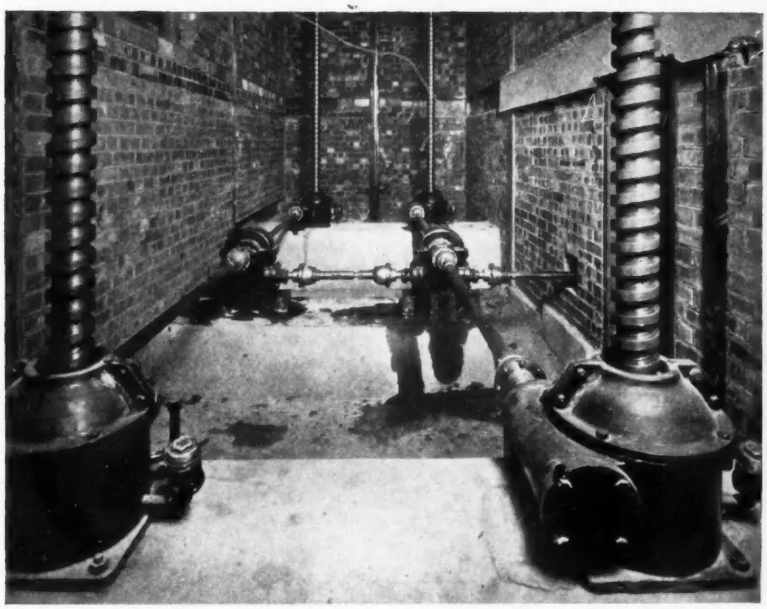
GEORGIAN wired glass was introduced to meet a demand for a safety glass having a better appearance than the hexagonal mesh variety. This square-meshed glass has recently undergone a series of tests carried out by the Department of Scientific and Industrial Research, and the results show that while not only more artistic it is also stronger both under impact and pressure than the hexagonally reinforced variety.

The glass chosen was ¼-in. wired glass. In the bending test, sheets 24 ins. by 12 ins. were supported at either end and the load applied across the centre.

The Georgian glass broke under a pressure of 175·1 lb., while the ordinary glass broke at 159·6 lb. Under a load of 100 lb. the deflection of the Georgian glass was only 85 per cent. of that normal to the ordinary variety.

The impact tests, which were carried out on sheets measuring 6 ins. by 8 ins., were measured by a weight of ·55 lb. falling from increasing heights, and the results were as follows :

Georgian, smooth side up, weight fell 7·35 in. to break; smooth side down, weight fell 8·95 in. to break.



Ordinary, smooth side up, weight fell 6·7 in. to break; smooth side down, weight fell 7·9 in. to break.

One interesting fact emerges from these tests. The glass was rough on one side and smooth on the other, and the reinforcement was placed nearer to the rougher surface. The glass resists best when the reinforcement is nearest to the side from which the blow is delivered, and therefore when fixed in skylights and windows the rougher side should be the external face, or that from which the impact may be expected.

The results of these tests show that improved appearance has not been obtained at the sacrifice of mechanical strength. Once again it has been shown that to be artistic is to be practical.

L. E. W.

OIL-FIRED furnaces have come into wide use for the large central heating equipments of offices and public buildings, and are now being increasingly adopted in the more modest domain of the private house. Heavy fuel oil has been freely available for a dozen years or so, and various methods of adapting it for burning under the special conditions indicated have been devised. The cardinal advantage afforded by liquid fuel is that it lends itself to automatic thermostat control, but the chief problem has been the suitable admixture of air for combustion. For domestic purposes a burner of the rotary atomiser type, operating under an air-pressure of 6 to 9 inches of water, which can be supplied by a small electric compressor, has certain advantages. By this method the stream of air both drives an atomising cone introduced into the path of the fuel and then carries forward the particles of oil to the combustion-chamber in the form of a gas-like mixture. The use of a small-bore jet is obviated, and the orifice is the full cross-section of the fuel supply pipe, ranging from ¼ in. diameter upwards.

The screw-jacks that operate the sinking orchestra stage at the Trocadero restaurant; they are driven by an electric winding engine. The sinking wall is similarly operated by five screws arranged in line at equal intervals.

The "Troc.'s" Sinking Wall

REVOLVING stages, disappearing platforms, sinking orchestra pits, have become, in these days, common requirements for which the architect for a theatre or other place of entertainment may be called upon to legislate. The moving orchestra stage at the Trocadero, and the sinking wall recently installed in the Empire Room, are two applications of the same idea, and a brief description of the construction of the latter may interest the specification writer.

The wall is built up in steel on one large girder, suitably reinforced, and beneath this girder there are five large square-threaded screws, spaced at equal distances along the underside of the girder. These screws pass through a case which contains the necessary crown nut and worm gear for operating them. The motion to the crown nut is obtained by an electric winding engine, similar in design to that employed for passenger-lift service, except that in place of the sheave or wheel which normally sets the lift in motion there is fitted a horizontal transmission shaft which transmits the energy to the worm gear, which in turn is coupled to the crown nuts operating the screws. This piece of apparatus is controlled by a magnetic controller situated near the gear, the buttons operating this controller being fixed at suitable positions in the lobbies at the Empire Room level. As the wall descends, a loose cover which rests normally on top of it automatically fills the hole in the floor through which the wall has passed, thus bridging the gap so neatly that the average visitor to the room does not realize that it is anything but a normal floor over which he is walking.

The wall moves in one piece. It is 67 ft. long by 13 ft. high, and weighs approximately 17 tons. Besides the question of designing suitable apparatus to set in motion so great a mass of material, the problems of silent running, of interlocking and of simplicity in control, had to receive the most careful consideration. The swing doors, for instance, through which people pass from one room to the other, were fitted with specially designed apparatus to lock, electrically, the moving wall, so that, in the event of the doors being pushed open, the wall would be prevented from moving. When in motion, the wall can be stopped immediately if necessary by a push button provided for that purpose.

D

IN PARLIAMENT

[BY OUR PARLIAMENTARY REPRESENTATIVE]

Calton Jail Site

THE question of the Calton Jail site, Edinburgh, was raised in the House of Commons by several members. Mr. Lansbury said that within the last two days it had been represented to him that the Corporation of Edinburgh approved in principle the first scheme prepared by the Office of Works for Government buildings on this site. The Corporation considered that the Sheriff Court House should be erected in the vicinity of the High Street. It was quite clear that no other site but that of the Calton Jail could be acquired within a reasonable time, and as it was essential that the Sheriff Court House should be erected as early as possible so as to free the site of the present buildings at George IV Bridge for the extension of the National Library, the Government had decided that there was no alternative to putting the new Sheriff House on the Calton Jail site.

From the previous Report of the Royal Fine Art Commissioners for Scotland, he had come to the conclusion that no scheme for a Sheriff Court House and for public offices containing sufficient accommodation for the staff for which it was necessary to provide was likely to meet with the approbation of the Commissioners. In view, however, of the representations of the Edinburgh Corporation, he was asking the Royal Commissioners whether, on reconsideration, there was, in their opinion, a reasonable prospect of obtaining a satisfactory architectural scheme on the lines of the original scheme, and, if not, for their views as to the design and setting of a Sheriff Court buildings. On receipt of a reply, it would be necessary to consider whether the proposal to erect Government buildings on the Calton Jail site should be proceeded with. His department was under covenant to obtain the approval of the Edinburgh Corporation to the plans, etc., of any buildings on the site in question, and would in the future, as in the past, avail itself of the advisory services of the Royal Fine Art Commission for Scotland in the preparation of the scheme.

He was not prepared to make the designs of the buildings the subject of open competition. The plans and model of the scheme now under reconsideration were prepared at a very early stage, and represented merely the preliminary ideas. If they represented a finished design, he would have been prepared to make them available to the members of the House and, probably, to the public generally, but he had come to the conclusion, after consideration, that the publication of the designs and of the Report of the Fine Art Commission would only be misleading. He could give the House an assurance that, in the event of a finished design being prepared, full publicity would be given to it at the stage when the plans were submitted to the Edinburgh Corporation. He regretted that, in the circumstances, he could not state when the buildings would be commenced, but no avoidable delay would occur. He was not in a position to express any opinion as to whether the proposed Sheriff Court House would be capable of housing a Scottish Parliament.

Mr. Mathers asked whether the illustration, which had been published in the Edinburgh newspapers, and a copy of which he handed to Mr. Lansbury, was a photographic representation of the proposed new building which had received modified commendation from the Edinburgh Corporation. If so, did Mr. Lansbury think that the building would be in keeping with the surroundings?

Mr. E. Brown: "It is a monstrous factory!"

Mr. Lansbury said he could add nothing to his answer. He knew nothing of the photograph.

Eventually, after much pressure, Mr. Lansbury gave an assurance that no final decision to erect the building on modified plans would be come to before the House was in session in the autumn.

The Roman Wall

Mr. Hurd asked the First Commissioner of Works if he would state whether the Government would guarantee effective protection of the Roman Wall and its surroundings before amending legislation was introduced.

Mr. Lansbury said that the wall and the *vallum* were in no danger. The quarrying had not yet begun and, as the House was aware, he had under preparation a Bill which would give adequate powers for the protection of the wall and its surroundings. It was unlikely that any appreciable amount of quarrying could be carried out before amending legislation was introduced.

LITERATURE

CITIES OF THE PAST, IN PLAN

THE title "Introduction to Town Planning" must be read in conjunction with the second sub-title, "The Lesson of Antiquity," in order to realize accurately the scope of M. Marcel Poëte's book. It is true that the earlier chapters treat the subject on general lines, but they are lacking in the organic balance justifying the term "Introduction," and when Chapter 6 brings us to Ancient Egypt this opens up an historic study, carried through 240 pages, which, passing from the Nile to Mesopotamia, thence to Greece and the Greek colonies, terminates with the Greco-Roman cities of Syria.

While the author's scholarship and wide reading have provided him with masses of interesting knowledge, he seems entirely lacking in the capacity to select his facts and to arrange them in such a way as to emphasize their bearing on the structures of the city; again and again we find him trailing away from his subject and, fascinated by the general history of the times, embarking on dissertations that, if not entirely beside the point, are of little help to the "Urbaniste."

We are accustomed to look to France for a thesis having a programme concisely set forth and pursued with almost relentless logic and definition; it is disappointing to find in this case, and under such a title, a work in which so much interesting material is marshalled to so little purpose.

M. Poëte can both think and write, but if his work is to achieve what appears to be his aim he ought to exercise more care that all his facts and commentaries contribute directly and definitely to his exposition. To some extent the same criticism applies to the selection of the illustrations. Some of these are superfluous, while plans illustrating the towns under discussion would assist the descriptions in the letterpress. H. V. L.

Introduction a l'Urbanisme. L'Evolution des Villes: La Leçon de l'Antiquité. By Marcel Poëte. Paris: Boivin et Cie. 35 frs.

THE SUPERVISION OF BUILDING

TEXTBOOKS dealing with building work vary considerably as to the amount of interest they create in the mind of the student, and a number of these books are read with a feeling of relief when the final chapter is approached. Possibly the authors, however, feel fully compensated for their labours when they realize that many members of the profession fall back on them for reference, and in this capacity the books come into their own.

Mr. Metson's book, *The Supervision of Building*, is of considerable interest and one in which all engaged in the supervision of building works can feel that the information given is sound and of value. The author deals with the trades in separate chapters, and in

this manner the progress of the works can be easily followed. His interpretation of the requirements of the architect's specification is clear, and it is quite as exacting as it should be. While for the successful supervision of building works many years of experience are necessary before an architect can say "I have obtained in this contract nearly all that I asked for in the specification," this compact little book, which incidentally has special reference to the duties of the clerk of works, is a valuable addition to the architect's reference library.

W. A. D.

The Supervision of Building. By George Metson. London: "Illustrated Carpenter and Builder." Price 2s. 6d.

COMPETITIONS OPEN

August 30.—The Carlisle Corporation invites British architects to submit designs for the façade to English Street and the Victoria Viaduct, suitable for shops and business premises. The site was previously occupied by the Prison. The total length of the frontage is approximately 358 ft. Assessor: Francis Jones, F.R.I.B.A. Premiums: £300, £200, and £100. Particulars of the competition, etc., may be obtained from Percy Dalton, A.M.INST.C.E., A.R.I.B.A., City Engineer, 18 Fisher Street, Carlisle. Deposit £1 1s.

September 1.—The Bangor (Co. Down) Borough Council invites architects or town planners to submit designs in competition for laying out the sea front within the Borough. Assessor: Professor Patrick Abercrombie, F.R.I.B.A. Premiums: £150 and £50 for first and second places, respectively. Copies of the conditions and plans will be forwarded on application to J. Milliken, Town Clerk, Borough Council Offices, Bangor, Co. Down. Deposit £1 1s. Latest date for submission of designs: September 1.

September 30.—The Isle of Man Education Authority invited architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums: £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs: September 30.

November 30.—The Guildford Cathedral Committee invites any architect, who has been engaged in the design of cathedrals or churches, to submit for examination drawings and other illustrations of his works; or a design for a cathedral. Not more than three sets of drawings may be submitted, packed in one large portfolio. The Committee, with the assistance of Mr. Walter Tapper, A.R.A., will examine the portfolios, and select a limited number of architects for the Final Competition. Each architect selected for the final competition will receive 500 guineas, whether his design is accepted or not. Portfolios should be addressed to The Venerable the Archdeacon of Surrey, The Diocesan Office, Lloyds Bank Chambers, Guildford, not later than November 30.

The Southport Education Committee has decided to invite architects practising in Lancashire to submit competitive designs for the erection of a new technical and art school, to be built at an estimated cost of £50,000. It has been decided to offer a first prize of £300 and a second prize of £100.

THE ARCHITECTS' DIARY

WEDNESDAY, AUGUST 6

ROYAL SOCIETY OF ARTS. At the Imperial Institute, Exhibition Road, South Kensington, S.W.7. Exhibition of designs submitted in the R.S.A. Competition of Industrial Designs. Until August 31. 10 a.m. to 5 p.m. (Sundays 2.30 to 6 p.m.). **10 a.m.**

ROYAL ACADEMY, Burlington House, S.W. Summer Exhibition open to the public until middle of August. 9 a.m. till 7 p.m. **9 a.m.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Light and Colour." 12 noon. "Electricity." 3 p.m. Both lectures by S. H. Groom, B.A. **12 noon.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Exhibition of English Mediæval Art in the North Court. Open until September 21, 10 a.m. to 6 p.m. (Thursdays, 10 a.m. to 10 p.m.) **10 a.m.**

SIR JOHN SOANE'S MUSEUM, 13 Lincoln's Inn Fields, W.C.2. Open every Tuesday, Wednesday, Thursday and Friday until September next. 10 a.m. till 5 p.m. **10 a.m.**

SATURDAY, AUGUST 9

Sunrise, 5.35 a.m. Sunset, 8.35 p.m.

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Architecture." By L. O. Faraker. **12 noon.**

TUESDAY, AUGUST 12

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "English Seventeenth-Century Furniture." 12 noon. "English Eighteenth-Century Furniture." 3 p.m. Both lectures by L. O. Faraker. "Spanish Art." By Miss M. Chamot. 3 p.m. **12 noon.**

THURSDAY, AUGUST 14

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "English Renaissance Furniture." By L. O. Faraker. **3 p.m.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Lighting and Illumination." By G. Tilghman Richards. **12 noon.**

SATURDAY, AUGUST 16

Sunrise, 5.46 a.m. Sunset, 8.22 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. Indian Section: "Sculpture." By Miss M. Chamot. **3 p.m.**

TUESDAY, AUGUST 19

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "Later English Furniture." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Roads and Road Transport." By G. Tilghman Richards. **12 noon.**

THURSDAY, AUGUST 21

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Architecture." By Miss M. Chamot. **3 p.m.**

SATURDAY, AUGUST 23

Sunrise, 5.56 a.m. Sunset, 8.8 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Ironwork." 12 noon. "Ecclesiastical Metalwork." 3 p.m. Both lectures by L. O. Faraker. **12 noon.**

MONDAY, AUGUST 25

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Stained Glass." By T. F. Wilson, F.R.S.A.I. **3 p.m.**

TUESDAY, AUGUST 26

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Electricity." By S. H. Groom, B.A. **3 p.m.**

SATURDAY, AUGUST 30

Sunrise, 6.8 a.m. Sunset, 7.53 p.m.

MONDAY, SEPTEMBER 1

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. September 1 to September 6.

TUESDAY, SEPTEMBER 2

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "The Composition, Mixing, Methods of Application of Concrete and Reinforced Concrete, as used in the Yards, and the Control of Same." By T. R. Grigson, M.INST.C.E. "Some Notes on the Composition, Mixing and Application of Concrete in Engineering Works." By C. J. Jackaman, A.M.INST.C.E.

Secretaries of architectural and allied societies are invited to forward particulars of their forthcoming meetings and visits for publication on this page. They should be addressed to the Editor at 9 Queen Anne's Gate, S.W.1.

WEDNESDAY, SEPTEMBER 3

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Pieces in Concrete Piles." By M. J. C. McCarthy, A.M.INST.C.E., A.M.MECH.E. "Stresses in Dams." By S. D. Carothers. "Reinforced Concrete in Engineering: Representative Examples of British Practice." By M. Gerard, M.SOC.C.E. (FRANCE).

THURSDAY, SEPTEMBER 4

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Work of the Building Research Station on Small Movements in Concrete." By Dr. W. H. Glanville, B.SC., A.M.INST.C.E. "The Effect of Temperature on Flat Arches Constructed of Reinforced Concrete." By C. S. Gray, B.SC., A.M.INST.C.E. "Temperature and Cement." By Dr. Oscar Faber, O.B.E., M.INST.C.E.

SATURDAY, SEPTEMBER 6

Sunrise, 6.19 a.m. Sunset, 7.37 p.m.

XII. INTERNATIONAL CONGRESS OF ARCHITECTS. In Budapest. September 6 to 13. Opening of International Exhibition of Architectural Designs in the Picture Gallery of the Hungarian Scientific Academy. **10 a.m.**

THURSDAY, SEPTEMBER 11

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Italian Furniture." 12 noon. "Italian Decoration." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

FRIDAY, SEPTEMBER 12

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "French Furniture." By Miss M. Chamot. 12 noon. "Gothic Woodwork." By T. F. Wilson, F.R.S.I.A. 3 p.m. **12 noon.**

SATURDAY, SEPTEMBER 13

Sunrise, 6.30 a.m. Sunset, 7.21 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "Later English Furniture." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

WEDNESDAY, SEPTEMBER 17

BRITISH GLASS CONVENTION. At Buxton. Until September 20. Morning: Meeting of the Council of the Society of Glass Technology. Afternoon: General Meeting of the Society of Glass Technology. Evening: Informal Presidential Reception of members and their friends at the Palace Hotel.

THURSDAY, SEPTEMBER 18

BRITISH GLASS CONVENTION. At Buxton. Morning: Official welcome by the Mayor and Corporation of Buxton, at the Peak Buildings. Presidential Address. Discussion on "Elimination of Waste in the Glass Industry," to be opened by Dr. Miles. Official luncheon. Evening: Mayoral Reception at the Palace Hotel.

FRIDAY, SEPTEMBER 19

R.I.B.A., 9 Conduit Street, W.1. Exhibition in competition for the Archibald Dawnay Scholarship (10 a.m. to 7 p.m.; Saturdays, 2 p.m.). Until September 30. **10 a.m.**

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussions on "Marketing Methods in the Glass Industry" and "Public Propaganda in the Glass Industry," to be opened by Sir Francis Goodenough, C.B.E., and H. Gordon Selfridge respectively. Afternoon: Golf Competition for championship of the Glass Industry. Evening: Banquet at the Palace Hotel.

SATURDAY, SEPTEMBER 20

Sunrise, 6.41 a.m. Sunset, 7.5 p.m.

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussion on "The Convention—Present and Future," to be opened by Mr. Walter Chance, M.A., J.P.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Stained Glass (1)." 12 noon. "Stained Glass (2)." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

FRIDAY, SEPTEMBER 26

NATIONAL SMOKE ABATEMENT SOCIETY. Annual Conference, to be held at Leicester until September 28. During the conference the following papers will be read: "Fuel Research and Smoke Abatement," by Dr. Margaret Fishenden; "The Smoke Problem in Sheffield," by F. J. Bailey and E. C. Evans; "Smoke and the Weather," by a meteorological expert; and "The Smoke Nuisance as the Airman Sees It."

SATURDAY, SEPTEMBER 27

Sunrise, 6.53 a.m. Sunset, 6.49 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Continental Glass." 12 noon. "English Domestic Glass." 3 p.m. Both lectures by Miss B. Goldsmid. **12 noon.**

LAW REPORTS

ARCHITECT'S FEES

Shipwright v. *Lidiard. Court of Appeal. Before Lords Justices Scrutton, Greer and Slesser*

THE Court delivered its reserved judgment on the appeal of Sir Herbert Lidiard, of Great James Street, London, from a judgment of a King's Bench Divisional Court, consisting of Justices Talbot and Finlay, allowing an appeal by the plaintiff, Mr. Wm. Geo. Shipwright, an architect, of Abbey House, Victoria Street, London, S.W., and Broadstairs, from the judgment of Mr. G. A. Scott, one of the Official Referees of the High Court.

Mr. Shipwright brought his action against Sir Herbert Lidiard, a building owner, to recover £1,537, his fees in connection with work done for Sir Herbert in the development of a building estate at Woking, Surrey, belonging to Sir Herbert.

Lord Justice Scrutton, in the course of his judgment, said this appeal involved a charge of negligence against a professional man, and it required, and had received, the Court's careful consideration. Here, in twelve houses, a new material called aerocrete was used, without metal strengthening, and it was said that within six months a large number of cracks appeared, and the architect admitted that 50 per cent. of the houses had these cracks. One of the reasons given by the defendant for these cracks was alleged faulty design. The Official Referee saw the houses and he took the view that the aerocrete had not been sufficiently matured or dried and that the cracks were due to shrinkage in drying. The Official Referee found that the architect was negligent in specifying this material without inquiries or guarantees from the company. The architect had never used this material before. He had seen a large factory where it was used supported by steel reinforcement. He relied on statements he read in books. His lordship had read those statements and it was obvious that in England aerocrete was in its infancy. There was no evidence of the material's lasting qualities without reinforcement. In his lordship's opinion the architect made no adequate inquiries as to the lasting qualities of aerocrete and took no guarantees from the company. For an architect to put on his employers the risks of an untried material without any satisfactory experience of its behaviour seemed to his lordship to be a breach of an architect's duties and a failure to exercise his skill. The architect could have taken steps in the matter to see that the aerocrete was fit and proper. To take no guarantee was unfair to the building owner. It was not sufficient for an architect to have professional skill. He must use it. If he used material without proper inquiry and it went wrong, as in this case, he was guilty of negligence and the building owner was entitled to complain.

The appeal would be allowed with costs here and below, and the judgment of the Official Referee would be restored. The Court had nothing to do with the question of damages. They should be restricted to reasonable repairs. It seemed to be to the interest of the architect, builder and Aerocrete, without wasting further money in legal proceedings, to act together in this matter.

Lord Justice Greer concurred and said the architect was guilty of negligence and he must bear the result of that finding. He thought the architect made a grave blunder in advising aerocrete and his dismissal was justified.

Lord Justice Slesser said in his view the architect took a risk as architect which he had no right to take.

Appeal allowed with costs. Leave given to amend defence.

[A report of the action was published in THE ARCHITECTS' JOURNAL for May 7, 1930, page 724.]

LIGHT AND AIR CASE—NEW DICTUM AS TO ANCIENT LIGHTS

Sowler v. *Moorgate Estate Co., Ltd. Chancery Division. Before Mr. Justice Luxmoore*

This was an action by Mrs. Helen Josephine Sowler, the lessee of 74 Coleman Street, E.C., against Moorgate Estate Co., Ltd., of Bank Chambers, Powis Street, Woolwich, for an injunction to restrain the defendants from erecting any building so as to diminish the light to ancient windows in No. 74 Coleman Street, E.C., as those windows existed prior to 1915, and for damages.

Defendants denied the alleged obstruction to plaintiff's ancient lights.

Mr. Cyril Atkinson, K.C., and Mr. Beeber appeared for plaintiff, and Sir Thomas Hughes, K.C., and Mr. J. N. Gray for defendants.

Plaintiff's case was that her leasehold premises, No. 74 Coleman Street, extended over and in part abutted upon a narrow passage known as Nun Court. Defendants became owners of premises on the north side of Nun Court and both plaintiff and defendants had demolished their original premises and re-erected other buildings in their place. Plaintiff pulled down and rebuilt No. 74 Coleman Street in 1915, and the new building consisted of business premises, with a basement, ground floor and five floors above, lighted by windows facing Nun Court. The part of the defendants' building abutting on Nun Court opposite plaintiff's ancient windows prior to the recent demolition, consisted, plaintiff alleged, of a building to the height of 37 ft. 6 in., except for a short length of 8 ft., where the height was 40 ft. 4 in. Plaintiff alleged that defendants had erected new buildings abutting on Nun Court, and opposite to her premises, of a greatly increased size as compared with the old building, and had thereby diminished light formerly enjoyed by her ancient windows.

Defendants contended that only very small portions of the windows in plaintiff's present building occupied the same positions as the windows in the demolished building, and that the plaintiff's present windows were substantially new ones and were not entitled to any right of light belonging to the old windows. Defendants further said that their new building did not materially diminish the light coming to any of the plaintiff's windows.

Mr. J. Viner, architect, employed in connection with the work of demolition and the construction of the plaintiff's new building, said that it was the invariable professional custom to record the position of all windows which had the privilege of "ancient lights."

The witnesses called for plaintiff were Mr. Waldram, the daylight illumination expert; Mr. J. M. Waldram, his son; Sir Edwin Savill, a chartered surveyor; and Sir H. Daw, of Messrs. Herring, Son and Daw, Basinghall Street, E.C.

Sir Thomas Hughes, for the defence, contended that this was not a case for a mandatory injunction, but one of damages.

Mr. T. Henry Smith, architect and surveyor, of Basinghall Street, and Mr. Geo. Bailey, of King's Road, Smith Square, Westminster, gave evidence for the defence. Mr. Bailey said he was architect to the defendants' building, which would have cost £120,000 when completed, and it would cost at least £10,000 to alter so as to give plaintiff's building the same light as it previously had. Mr. Godfrey Lang, of Jones, Lang and Co., also gave evidence for the defence.

His lordship, in giving judgment, said it was agreed that all the rooms to plaintiff's old building were well lighted, considering the standard of light in the City of London. In fact of the some floors were exceptionally well lighted. The plaintiff claimed that the light to certain of her windows, which were ancient lights, had been interfered with by the defendants' new building, causing a diminution of light to the rooms, and apparently she would have been entitled to relief for obstruction. But the first difficulty arose in

view of the fact that the plaintiff's building had not retained in its entirety any of the old windows. The new windows in the plaintiff's building did not coincide with the old windows when the new building was erected. It was contended for the defendants that when the plaintiff rebuilt her building she abandoned her rights to the light to the old windows, and that there was an intention to abandon, by her, her rights. In his lordship's opinion the defendants' claim for abandonment by the plaintiff could not be supported. He could not see that there had been any abandonment here or intention to abandon her rights in regard to plaintiff's ancient lights. In this case each window must be considered separately. If any part of an ancient window was incorporated in a window in plaintiff's new building, the intention to abandon the light must be considered in the light of what had been abandoned. Any ancient light which was incorporated in a new and larger window indicated the intention to retain that ancient light. Here the plaintiff reserved her right to her windows, facing Nun Court, on the second and third floors of the building, and the first, second and third floors of her building, facing Hertford House. His lordship had not to deal with any windows on the ground floor, as the experts were agreed that the light enjoyed by the windows on the ground floor, even if retained to the full extent, would not affect the value of the ground floor. The defendants' new building materially obstructed the light enjoyed by the plaintiff's building. He was satisfied on this point. The obstruction was of such a nature as to constitute an action for interference within the Coles case.

The question which now arose was to what remedy was the plaintiff entitled. Was it a case for a mandatory injunction or would damages meet the case? He had had a large body of evidence that the windows of the plaintiff's building above the ground floor had been damaged as regards the lighting owing to the defendants' building, and damaged to a considerable amount. It certainly could not be compensated by a small money payment. Defendants' building was now completed and it would cost a large sum to alter it. This was not due to anything done by the plaintiff. As soon as the plaintiff heard of the proposed erection of the defendants' new building, her advisers got into touch with the defendants, but without result, and the defendants proceeded with the erection of their building.

Under these circumstances it was impossible for his lordship to say that the plaintiff had done anything to render the granting of an injunction oppressive. He therefore granted the plaintiff an injunction restraining the defendants from obstructing the access of light to those parts of plaintiff's ancient windows which had been incorporated in her new building on the first, second, third and fourth floors, and a mandatory injunction ordering the defendants to pull down so much of their building as obstructed the access of light to the plaintiff's windows. The defendants must pay the costs of the action.

The operation of the injunction was suspended for six months to give the defendants an opportunity of considering the question of appeal.

SOCIETIES AND INSTITUTIONS

R.I.B.A. MAINTENANCE SCHOLARSHIPS IN ARCHITECTURE

The R.I.B.A. Maintenance Scholarship (1930) of £100 has been awarded to Ralph Dickinson, of the Birmingham School of Architecture. The scholarship is tenable in the first instance for one year and renewable for two further periods of one year each.

In addition the following scholarships, each of £100 a year (except where otherwise stated), have been renewed for a further period of one year each: G. G. Laidler (Architectural Association School of Architecture); Hubert Bennett (School of Architecture, University of Manchester); F. W. Wright (School of Architecture, University of Sheffield); A. K. Brown (School of Architecture, Armstrong College, Newcastle-on-Tyne): £50.

The Artists' General Benevolent Institution Scholarship (£100), which is administered by the R.I.B.A., has been awarded for a further year to J. F. D. Wylson (Architectural Association School of Architecture).

SIR EDWIN LUTYENS

At a recent meeting of the Council of the Incorporated Association of Architects and Surveyors, Sir Edwin Lutyens, R.A., F.S.A., was elected a Vice-President of the Association.

INCORPORATED INSTITUTE OF BRITISH DECORATORS

A dinner given by the Incorporated Institute of British Decorators was held at the Criterion Restaurant, Piccadilly, recently. Mr. C. A. Hindley, F.I.B.D., President of the Institute, occupied the chair.

Mr. Geoffrey Le M. Mander, M.P., said that the ambition of the Institute was to obtain a Royal Charter and to perform for the decorators of England what the R.I.B.A. does for architects.

The Rt. Hon. J. R. Clynes, P.C., replying to Mr. Mander, said he appreciated very highly the real service the Incorporated Institute of British Decorators rendered, particularly to the young men who were coming into the business or into the trade, who by its existence got opportunities unknown to the older men now associated with the Institute. He was certain that the Institute was destined to do much good to the cause of decorative art in the making of the beautiful.

During the evening presentations were made to two past Presidents of the Institute, Messrs. John R. Chappell and Godfrey Giles.

Among those who also spoke were the following: Messrs. C. A. Hindley, F.I.B.D., R. H. Keatinge, O.B.E., F.I.B.D., G. Edward Line, Henry G. Dowling, F.R.S.A., F.I.B.D., Cyril E. Lloyd, O.B.E., M.INST.C.E., S. T. Laughton, F.I.B.D., T. Kershaw Bonner, F.I.B.D., Dr. G. D. Hindley, M.C., and Mrs. Grace Lovat Fraser.

THE BUILDINGS ILLUSTRATED

Following are the names of the general contractors and some of the sub-contractors for the buildings illustrated in this issue:

Martins Bank, Maidstone (pages 187–189). General contractors, G. E. Wallis and Sons. Sub-contractors: Excel Asphalte Co., Ltd., asphalt; Lips, Ltd., reinforced concrete and fireproof doors; Morris-Singer Co., patent glazing and casements; E. E. Pope, cast lead, plumbing and central heating; Thos. Pascall and Son, bricks; Art Pavements and Decorations, Ltd., patent flooring and stair treads; National Radiator Co., Ltd., boilers; O. Jones, electric wiring; Osler and Faraday, Ltd., electric light fixtures; Cecil Ern & Co., Ltd., electric light fixtures and metalwork; John Bolding and Sons, Ltd., sanitary fittings; A. Jones Lock Co., Ltd., door furniture; Arthur Glover, decorative plaster; Bagues, Ltd., metalwork; Ritchie and Sons, Ltd., office fittings.

Wolford Lodge, near Honiton, Devon (pages 190–194). General contractors, Wakelin and Rampling. Sub-contractors: J. T. Morton, heating; Edward Wolf & Co., electrical work; Herbert Read, carver; Roberts, Adlard & Co., roofing. Old glass re-leaded by Lowndes and Drury, of Fulham, under the direction of Martin Travers, who designed the new work.

ANNOUNCEMENTS

Mr. Alister G. MacDonald, A.R.I.B.A., has moved his offices from No. 6 Old Queen Street to No. 13 Queen Anne's Gate, S.W.1. Telephone Numbers: Victoria 2392, Victoria 8812, and Welbeck 2392.

Mr. S. H. Loweth, A.R.I.B.A., Deputy County Architect, Kent, has removed his office to The New Bothy, Mote Park, Maidstone, Kent. Telephone Number: Maidstone 3515.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Broken brick or stone, 2 in., per yd.	£0 11 6
Thames ballast, per yd.	0 10 0
Pit gravel, per yd.	0 15 0
Pit sand, per yd.	0 12 6
Washed sand, per yd.	0 13 0
Screened ballast or gravel, add 10 per cent. per yd.	
Clinker, breeze, etc., prices according to locality.	
Portland cement, per ton	£2 8 0
Lias lime, per ton	2 0 0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.

Transport hire per day:

Cart and horse	£1 3 0	*Trailer*	£0 15 0
3-ton motor lorry	3 15 0	*Steam roller*	4 5 0
Steam lorry, 5-ton	4 0 0	*Water cart*	1 5 0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0 1 6
SPREAD and level, including wheeling, per yd.	0 1 6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0 10 6
TRIMMING earth to slopes, per yd. sup.	0 0 6
HACKING up old grano. or similar paving, per yd. sup.	0 1 3
PLANKING to excavations, per ft. sup.	0 0 5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.	
IF left in, add to above prices, per ft. cube	0 2 0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0 2 1
DO. 6 in. thick, per yd. sup.	0 2 10
PUDDLING, per yd. cube	1 10 0
CEMENT CONCRETE, 4-2-1, per yd. cube	1 17 6
DO. 6-2-1, per yd. cube	1 12 6
DO. in upper floors, add 15 per cent.	
DO. in reinforced-concrete work, add 20 per cent.	
DO. in underpinning, add 60 per cent.	
LIAS-LIME CONCRETE, per yd. cube	£1 14 0
BREEZE CONCRETE, per yd. cube	1 7 0
DO. in lintels, etc., per ft. cube	0 1 6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0 3 9
FINE concrete benching to bottom of manholes, per ft. cube	0 3 0
FINISHING surface of concrete spade face, per yd. sup.	0 0 9

DRAINER

LABOURER, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* BRICKLAYER, 1s. 8½d. *per hour;* PLUMBER, 1s. 8½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0 0 10
DO. *6 in., per ft.*	0 1 3
DO. *9 in., per ft.*	0 2 3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0 5 6
DO. *6 in., per yd.*	0 8 0
Portland cement and sand, see "Excavator" above.	
Leadwool, per cwt.	£2 0 0
Gaskin, per lb.	0 0 4½
STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft.	0 4 3
DO. 6 in., per ft.	0 5 0
DO. 9 in., per ft.	0 7 9
CAST-IRON DRAINS, jointed in lead, 4 in., per ft.	0 8 3
DO. 6 in., per ft.	0 10 3

Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

BRICKLAYER

BRICKLAYER, 1s. 8½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour.*

London stocks, per M.	£4 5 6
Flettons, per M.	2 12 6
White facing bricks, per M.	5 0 0
Multi-coloured facings, per M.	7 7 9
Best red facings, per M.	7 7 9
Rubbers, 9½ in., per M.	12 0 6
Staffordshire blue, per M.	9 5 0
Firebricks, 2½ in., per M.	9 5 0
Glazed salt, white, and ivory stretchers, per M.	21 10 0
DO. *headers, per M.*	20 10 0
Colours, extra, per M.	5 0 0
Seconds, less, per M.	1 0 0
Cement and sand, see "Excavator" above.	
Lime, grey stone, per ton	£2 11 6
Mixed lime mortar, per yd.	1 6 0
Dampcourse, in rolls of 4½ in., per roll	0 2 6
DO. *9 in. per roll*	0 4 9
DO. *14 in. per roll*	0 7 6
DO. *18 in. per roll*	0 9 6
BRICKWORK in stone lime mortar, Flettons or equal, per rod	30 0 0
DO. in cement do., per rod	32 10 0
DO. in stocks, add 25 per cent. per rod.	
DO. in blues, add 100 per cent. per rod.	
DO. circular on plan, add 12½ per cent. per rod.	
DO. in backing to masonry, add 12½ per cent. per rod.	
DO. in raising on old walls, etc., add 12½ per cent. per rod.	
DO. in underpinning, add 20 per cent. per rod.	
HALF-BRICK walls in stocks in cement mortar (1–3), per ft. sup.	£0 1 0
BEDDING plates in cement mortar, per ft. run	0 0 3
BEDDING window or door frames, per ft. run	0 0 3
LEAVING chases 2½ in. deep for edges of concrete floors not exceeding 6 in. thick, per ft. run	0 0 2
CUTTING do. in old walls in cement, per ft. run	0 0 4
CUTTING, toothing and bonding new work to old (labour and materials), per ft. sup.	0 0 7
TERRA-COTTA flue pipes 9 in. diameter, jointed in fireclay, including all cuttings, per ft. run	0 3 6
DO. 14 ft. by 9 in. do., per ft. run	0 6 0
FLAUNCHING chimney pots, each	0 2 0
CUTTING and pinning ends of timbers, etc., in cement	0 1 0
FACINGS fair, per ft. sup. extra	0 0 3
DO. picked stocks, per ft. sup. extra	0 0 7
DO. red rubbers, gauged and set in putty, per ft. sup. extra	0 4 9
DO. in salt white or ivory glazed, per ft. sup. extra	0 5 6
TUCK pointing, per ft. sup. extra	0 0 10
WEATHER pointing, do. do.	0 0 3
TILE creasing with cement fillet each side, per ft. run	0 0 6
GRANOLITHIC PAVING, 1 in., per yd. sup.	0 5 0
DO. 1½ in., per yd. sup.	0 6 0
DO. 2 in., per yd. sup.	0 7 0
If coloured with red oxide, per yd. sup.	0 1 0
If finished with carborundum, per yd. sup.	0 0 6
If in small quantities, in finishing to steps, etc., per ft. sup.	0 1 4
Jointing new grano. paving to old, per ft. run	0 0 4
Extra for dishing grano. or cement paving around gullies, each	0 1 6
BITUMINOUS DAMP COURSE, ex rolls, per ft. sup.	0 0 7
ASPHALT (MASTIC) DAMP COURSE, ½ in., per yd. sup.	0 8 0
DO. vertical, per yd. sup.	0 11 0
SLATE DAMP COURSE, per ft. sup.	0 0 10
ASPHALT ROOFING (MASTIC) in two thicknesses, ½ in., per yd.	0 8 6
DO. SKIRTING, 6 in.	0 0 11
BREEZE PARTITION BLOCKS, set in cement, 1½ in. per yd. sup.	0 5 3
DO. DO. 3 in.	0 6 6
BREEZE fixing bricks, extra for each	0 0 3

MASON

MASON, 1s. 8½d. *per hour;* DO. *fixer,* 1s. 9½d. *per hour;* LABOURER, 1s. 3½d. per hour; SCAFFOLDER, 1s. 4½d. *per hour.*

Portland Stone:	
Whitbed, per ft. cube	£0 4 6
Basebed, per ft. cube	0 4 9
Bath stone, per ft. cube	0 3 0
Usual trade extras for large blocks.

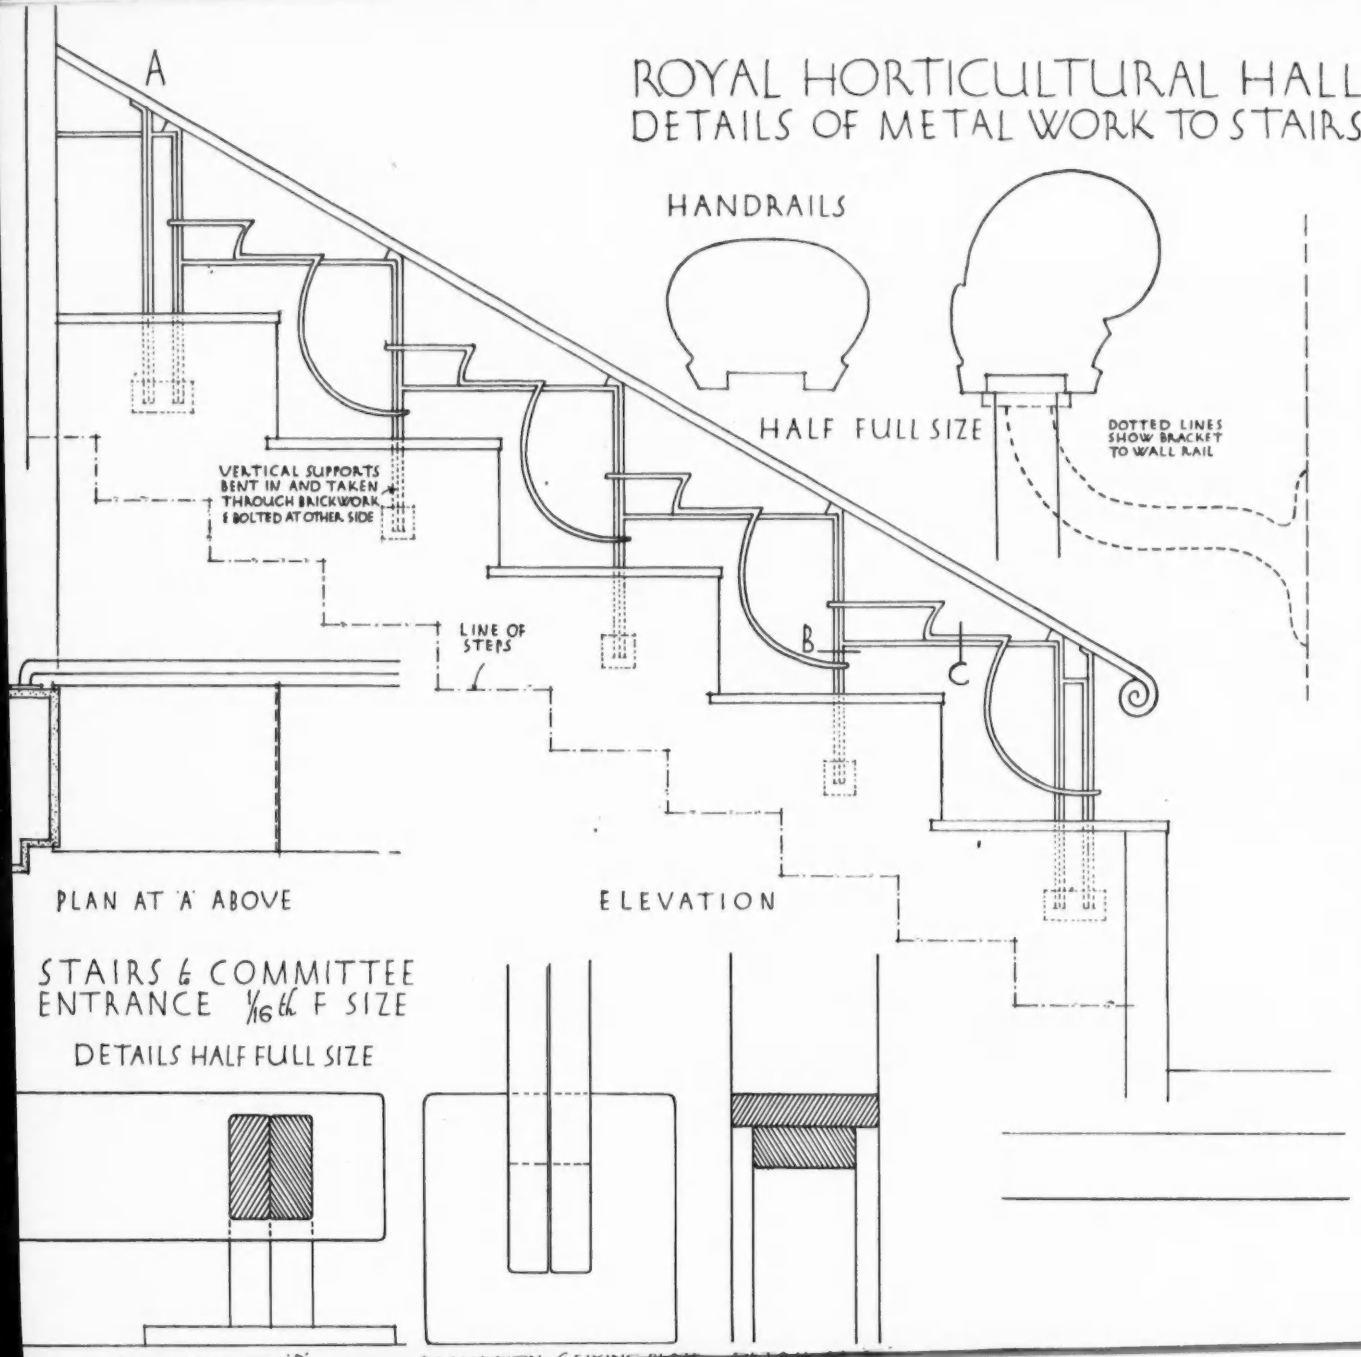
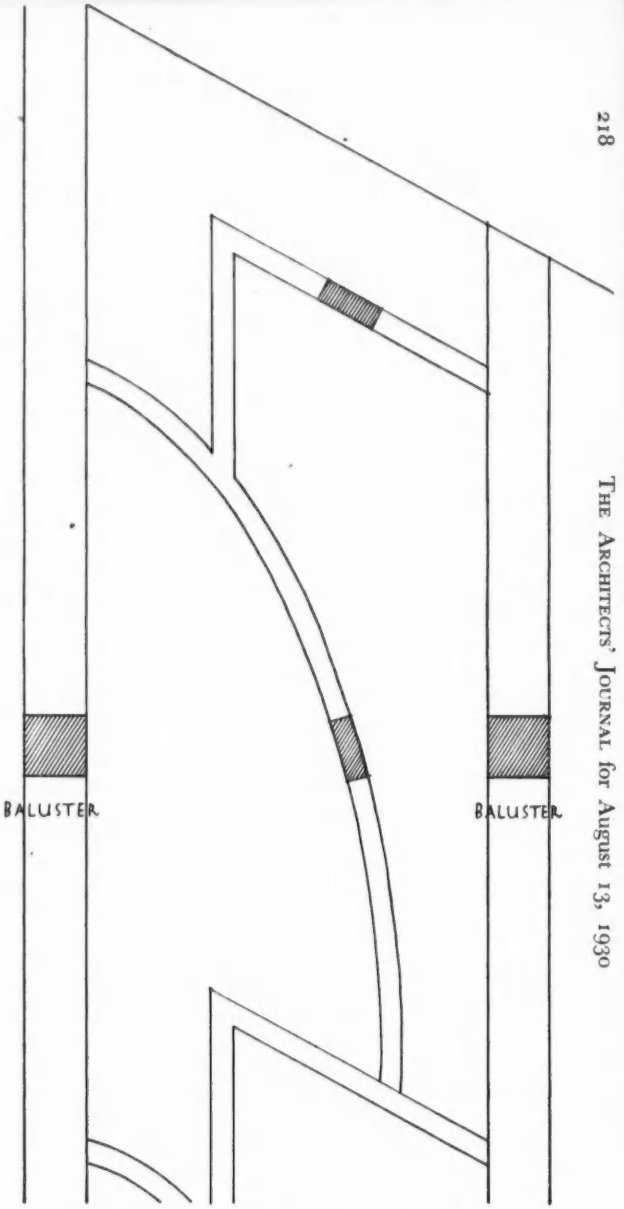
SCALE DETAILS:
A WEEKLY SERIES

STAIRCASE AT THE ROYAL HORTICULTURAL HALL, LONDON
DESIGNED BY EASTON AND ROBERTSON

THERE is a direct and fresh outlook shown in this composition, that has led to disregard of the traditional treatment for a metal staircase balustrade; yet, at the same time, the repetition of a "panel," bearing a definite relationship to the flight of steps, is entirely logical.



It will be noticed that here, as elsewhere throughout the building (previous examples were dealt with in our issues for June 11—clock—and July 16—light fitting), the detail is quite in accord with the uses of the Royal Horticultural Hall, and is again strongly reminiscent of plant and leaf forms.



The stepped string has "treads" of Hopton Wood stone, each tread taking two steps of the stair behind. The balustrade is of iron, and the small handrail itself is of bronze.

Reference to the drawing, reproduced overleaf, will make the construction clear.

The drawing may be read with architects' scales ($\frac{1}{2}$ and $\frac{1}{16}$ full size.

EASTON AND ROBERTSON ARCHITECTS

THE ARCHITECTS' JOURNAL

WEDNESDAY, AUGUST 13, 1930

BACK TO BATHSHEBA

or, the Doctor's View

"This is an appeal to architects. They should be allies of the hygienist."

—LENS in *The New Statesman.*

THE well-known member of the medical profession who writes under the pseudonym of Lens is to be congratulated on his intelligent interest in domestic architecture. Although many of us have collaborated with doctors in the planning of hospitals, we have hardly realized yet the importance of their point of view in the arrangement of houses. Lens has a genuine complaint, for he speaks from a personal experience. He lives on the northern edge of St. John's Wood, in an oldish house with a pitched roof, except for one small part 13 ft. square, which has a flat roof. To the latter, access has been made, and for a few pounds Lens has acquired "a new living-room, a new toy, a sleeping place, a solarium and an observatory." This experience leads him to the declaration, "All these pitched roofs . . . represent stupid waste of . . . civic area."

We have much sympathy with the doctor's point of view. We will summarize the objections to it; as shortly as possible because to do so will seem to our modernist friends like crossing the *t* and dotting the *i* of obscurantism. A flat roof with a suitable surface for walking on, and protected by a parapet, is dearer than a pitched roof: an air-space between the ceiling and the roof gives insulation from heat in summer and cold in winter; it follows there is less risk of condensation; the tiles or slates covering a pitched roof are rather more reliable than the coverings of a flat roof; the elimination of pitched roofs will cause a wide dislocation of employment. But our main difficulty is with our clients, whom Lens would like us to persuade to his point of view. For our clients usually like sloping roofs, but entirely for sentimental reasons. They do not ask merely for a house but a home, and at present they do not recognize an apparently roofless building as fulfilling their sentimental ideal of a home.

The sense of architecture in the public is like a plant with a rather sickly appearance and blooms of uncertain colour, but with roots which go down very deep into the strata of primitive impulses. Instinct responds to the visible roof descending to the walls and projecting over them as a cornice or an eaves, and there are inherited satisfactions in approaching a home of this type. Nor must we forget the wide variety within the type—the differences of pitch, of colour and of material, the proprieties of size as between dominant and subsidiary roofs, the interest of valleys, ridges and eaves, and the many inventions of shapes.

Can we blame our clients for preferring the cheerfulness and assurance of pitched roofs to the dubious delights of sun-bathing with flies, or snoring to thunder; or for holding that any number of Bathshebas fail to banish the impression that German housing schemes look dull?

But in so far as Lens considers there should be closer relations between his profession and ours, both our clients and ourselves agree. We are a nervous generation and health seems to us the prime necessity; just as the soldier moulded the buildings of the Middle Ages, and the gentleman those of the Renaissance, so the doctor's influence is predominant today. Every house-building client must be asked if he wants a solarium, either on the roof or as a recessed veranda or loggia, and even though we retain our slopes over the main blocks, we can form a flat roof in a subsidiary position and make the best of both worlds.

Finally, we would point out to Lens that most houses designed by architects already go some way to meet his ideas, as we noted in reviewing the volume of *Recent Domestic Architecture* last year. It is the type of house built without an architect's plan that he must attack.

CARPENTER AND JOINER : *continued*

SHUTTERING to face of concrete, per square	£1	10	0
DO. in narrow widths to beams, etc., per ft. sup.	0	0	6
USE and waste of timbers, allow 25 per cent. of above prices.			
SLATE BATTENING, per sq.	£0	12	6
DEAL boarding to flats, 1 in. thick and firrings to falls, per square	2	10	0
SCOUT feather-edged tilting fillet to eaves, per ft. run	0	0	6
FEATHER-edged springer to trimmer arches, per ft. run	0	0	4
STOUT herringbone strutting (joists measured in), per ft. run	0	0	6
SOUND boarding, ⅞ in. thick and fillets nailed to sides of joists (joists measured over), per square	2	0	0
RUBEROID or similar quality roofing, one ply, per yd. sup.	0	2	3
DO., two-ply, per yd. sup.	0	2	6
DO., three-ply, per yd. sup.	0	3	0
TONGUED and grooved flooring, 1½ in. thick, laid complete with splayed headings, per square	2	5	0
DEAL skirting torus, moulded 1½ in. thick, including grounds and backings, per ft. sup.	0	1	0
TONGUED and mitred angles to do.	0	0	6
WOOD block flooring standard blocks laid herringbone in mastic :			
Deal 1 in. thick, per yd. sup.	0	10	0
DO. 1¼ in. thick, per yd. sup.	0	12	0
Maple 1¼ in. thick, per yd. sup.	0	15	0
DEAL moulded sashes, 1¼ in. with moulded bars in small squares, per ft. sup.	0	2	6
DO. 2 in. do., per ft. sup.	0	2	9
DEAL cased frames, oak sills and 2 in. moulded sashes, brass-faced pulleys and iron weights, per ft. sup.	0	4	6
MOULDED horns, extra each	0	0	3
DOORS, 4-panel square both sides, 1¼ in thick, per ft. sup.	0	2	6
DO. moulded both sides, per ft. sup.	0	2	9
DO. 2 in. thick, square both sides, per ft. sup.	0	2	9
DO. moulded both sides, per ft. sup.	0	3	0
DO. in 3 panels, moulded both sides, upper panel with diminished stiles with moulded bars for glass, per ft. sup.	0	3	6
If in oak, mahogany or teak, multiply 3 times.			
DEAL frames, 4 in. × 3 in., rebated and beaded, per ft. cube	£0	15	0
Add for extra labour, per ft. run	0	0	1
STAIRCASE work :			
DEAL treads 1⅛ in. and risers 1 in., tongued and grooved including fir carriages, per ft. sup.	0	2	6
DEAL wall strings, 1⅛ in. thick, moulded, per ft. run	0	2	0
If ramped, per ft. run	0	4	6
SHORT ramps, extra each	0	7	6
ENDS of treads and risers housed to strings, each	0	1	0
2 in. deal mopstick handrail fixed to brackets, per ft. run	0	1	6
4½ in. × 3 in. oak fully moulded handrail, per ft. run	0	5	6
1½ in. square deal bar balusters, framed in, per ft. run	0	0	6
FITTINGS :			
SHELVES and bearers, 1 in., cross-tongued, per ft. sup.	0	1	6
1½ in. beaded cupboard fronts, moulded and square, per ft. sup.	0	2	9
TEAK grooved draining boards, 1½ in. thick and bedding per ft. sup.	0	4	6
IRONMONGERY :			
Fixing only (including providing screws) :			
TO DEAL—			
Hinges to sashes, per pair	0	1	2
Do. to doors, per pair	0	1	7
Barrel bolts, 9 in., iron, each	0	1	0
Sash fasteners, each	0	1	0
Rim locks, each	0	1	9
Mortice locks, each	0	4	0

SMITH

SMITH, *weekly rate equals* 1s. 8½d. *per hour* ; MATE, *do.* 1s. 3½d. *per hour* ; ERECTOR, 1s. 8½d. *per hour* ; FITTER, 1s. 8½d. *per hour* ; LABOURER, 1s. 3½d. *per hour.*

Mild Steel in British standard sections, per ton	£12	10	0
Sheet Steel :			
Flat sheets, black, per ton	17	0	0
DO., *galvd., per ton*	18	0	0
Corrugated sheets, galvd., per ton	17	10	0
Driving screws, galvd., per grs.	0	1	10
Washers, galvd., per grs.	0	1	1
Bolts and nuts per cwt. and up	1	18	0
MILD STEEL in trusses, etc., erected, per ton	25	0	0
DO., in small sections as reinforcement, per ton	16	0	0
DO., in compounds, per ton	17	0	0
DO., in bar or rod reinforcement, per ton	22	10	0
WROT-IRON in chimney bars, etc., including building in, per cwt.	2	0	0
DO., in light railings and balusters, per cwt.	2	5	0
FIXING only corrugated sheeting, including washers and driving screws, per yd.	0	2	0

PLUMBER

PLUMBER, 1s. 9d. *per hour* ; MATE OR LABOURER, 1s. 4d. *per hour.*

Lead, milled sheet, per cwt.	£1	13	0
DO. *drawn pipes, per cwt.*	1	13	6
DO. *soil pipe, per cwt.*	1	16	6
DO. *scrap, per cwt.*	1	1	6
Copper, sheet, per lb.	0	1	0
Solder, plumber's, per lb.	0	1	0
DO. *fine, per lb.*	0	1	6
Cast-iron pipes, etc. :			
L.C.C. soil, 3 in., per yd.	0	3	0
DO. 4 *in., per yd.*	0	3	8
R.W.P., 2½ in., per yd.	0	1	5
DO. 3 *in., per yd.*	0	1	8
DO. 4 *in., per yd.*	0	2	5
Gutter, 4 in. H.R., per yd.	0	0	11
DO. 4 *in. O.G., per yd.*	0	1	2½
MILLED LEAD and labour in gutters, flashings, etc., per cwt.	3	2	6
LEAD PIPE, fixed, including running joints, bends, and tacks, ½ in., per ft.	0	2	2
DO. ⅝ in., per ft.	0	2	5
DO. 1 in., per ft.	0	3	4
DO. 1¼ in., per ft.	0	4	5
LEAD WASTE or soil, fixed as above, complete. 2½ in., per ft.	0	6	6
DO. 3 in., per ft.	0	7	9
DO. 4 in., per ft.	0	10	6
WIPED soldered joint, ½ in., each	0	2	6
DO. ⅝ in., each	0	3	2
DO. 1 in., each	0	3	8
BRASS screw-down stop cock and two soldered joints, ½ in., each	0	11	0
DO. ⅝ in., each	0	13	6
CAST-IRON rainwater pipe, jointed in red lead, 2½ in., per ft. run	0	1	4
DO. 3 in., per ft. run	0	1	8
DO. 4 in., per ft. run	0	2	0
CAST-IRON H.R. GUTTER, fixed, with all clips, etc., 4 in., per ft.	0	1	6
DO. O.G., 4 in., per ft.	0	1	9
CAST-IRON SOIL PIPE, fixed with caulked joints and all ears, etc., 4 in., per ft.	0	3	0
DO. 3 in., per ft.	0	2	0
Fixing only :			
W.C. PANS and all joints, P. or S., and including joints to water waste preventers, each	2	5	0
BATHS, with all joints	1	3	6
LAVATORY BASINS only, with all joints, on brackets, each	1	10	0

PLASTERER

PLASTERER, 1s. 11½d. *per hour* ; LABOURER, 1s. 3½d. *per hour.*

Chalk lime, per ton	£2	17	0
Hair, per cwt.	2	5	0
Sand and cement see "Excavator," etc., above.			
Lime putty, per cwt.	£0	2	9
Hair mortar, per yd.	1	7	0
Fine stuff, per yd.	1	14	0
Sawn laths per bdl.	0	2	5
Keene's cement, per ton	5	15	0
Sirapite, per ton	3	10	0
DO. *fine, per ton*	3	18	0
Plaster, per ton	3	0	0
DO. *white, per ton*	3	12	6
DO. *fine, per ton*	5	12	0
Lath nails, per lb.	0	0	4
Ferrocrete, per ton	2	15	6
LATHING with sawn laths, per yd.	0	1	7
METAL LATHING, per yd.	0	2	6
FLOATING in Cement and Sand, 1 to 3, for tiling or woodblock, ½ in., per yd.	0	2	4
DO. vertical, per yd.	0	2	7
RENDER, on brickwork, 1 to 3, per yd.	0	2	0
RENDER in Portland and set in fine stuff, per yd.	0	3	3
RENDER, float, and set, trowelled, per yd.	0	2	7
RENDER and set in Sirapite, per yd.	0	2	5
DO. in Thistle plaster, per yd.	0	2	5
EXTRA, if on but not including lathing, any of foregoing, per yd.	0	0	5
EXTRA, if on ceilings, per yd.	0	0	5
ANGLES, rounded Keene's on Portland, per ft. lin.	0	0	6
PLAIN CORNICES, in plaster, per inch girth, including dubbing out, etc., per ft. lin.	0	0	2
WHITE glazed tiling set in Portland and jointed in Parian, per yd., from	1	11	6
FIBROUS PLASTER SLABS, per yd.	0	1	10

GLAZIER

GLAZIER, 1s. 7½d. *per hour.*

Glass : 4ths in crates			
Clear, 21 oz.	£0	0	4½
DO. 26 oz.	0	0	5
Cathedral white, per ft.	0	0	7½
Polished plate, British ¼ in., up to 2 ft. sup. per ft.	0	1	2
DO. 4 *ft. sup.* ,,	0	2	3
DO. 6 *ft. sup.* ,,	0	2	6
DO. 20 *ft. sup.* ,,	0	3	1
DO. 45 *ft. sup.* ,,	0	3	3
DO. 65 *ft. sup.* ,,	0	3	5
DO. 100 *ft. sup.* ,,	0	3	10
Rough plate, ¼ in., per ft.	0	0	6½
DO. ½ *in., per ft.*	0	0	6½
Linseed oil putty, per cwt.	0	15	0
GLAZING in putty, clear sheet, 21 oz.	0	0	11
DO., 26 oz.	0	1	0
GLAZING in beads, 21 oz., per ft.	£0	1	4
DO. 26 ozs., per ft.	0	1	1
Small sizes slightly less (under 3 ft. sup.).			
Patent glazing in rough plate, normal span, 1s. 6d. to 2s. per ft.			
LEAD LIGHTS, plain, med. sqs. 21 oz., usual domestic sizes fixed, per ft. sup. and up	£0	2	0
Glazing only, polished plate, 6½d. to 8d. per ft. according to size.			

PAINTER AND PAPERHANGER

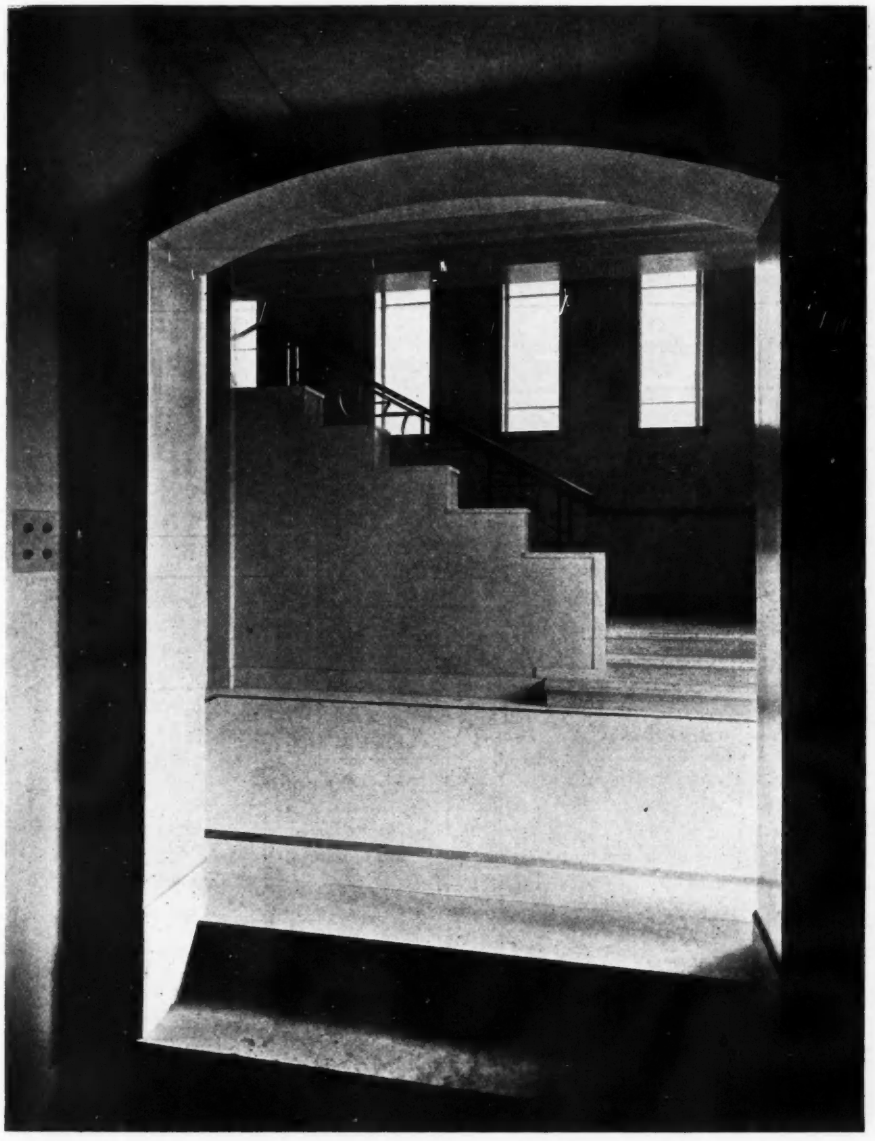
PAINTER, 1s. 7½d. *per hour* ; LABOURER, 1s. 3½d. *per hour* ; FRENCH POLISHER, 1s. 8½d. *per hour* ; PAPERHANGER, 1s. 7½d. *per hour.*

Genuine white lead, per cwt.	£3	0	9
Linseed oil, raw, per gall.	0	4	6
DO., *boiled, per gall.*	0	4	9
Turpentine, per gall.	0	4	7
Patent driers, per cwt.	1	10	6
Knotting, per gall.	0	15	0
Distemper, washable, in ordinary colours, per cwt., and up	2	2	0
Double size, per firkin	0	3	6
Pumice stone, per lb.	0	0	4½
Single gold leaf (transferable), per book	0	2	0
Varnish, copal, per gall. and up	0	15	6
DO., *flat, per gall.*	0	15	6
DO., *paper, per gall.*	1	2	6
French polish, per gall.	0	16	0
Ready mixed paints, per cwt. and up	3	10	0
LIME WHITING, per yd. sup.	0	0	3
WASH, stop, and whiten, per yd. sup.	0	0	6
DO., and 2 coats distemper with proprietary distemper, per yd. sup.	0	0	9
KNOT, stop, and prime, per yd. sup.	0	0	7
PLAIN PAINTING, including mouldings, and on plaster or joinery, 1st coat, per yd. sup.	0	0	9
DO., subsequent coats, per yd. sup.	0	0	8
DO., enamel coat, per yd. sup.	0	1	0
BRUSH-GRAIN, and 2 coats varnish, per yd. sup.	0	3	8
FIGURED DO., DO., per yd. sup.	0	5	6
FRENCH POLISHING, per ft. sup.	0	1	0
WAX POLISHING, per ft. sup.	0	0	6
STRIPPING old paper and preparing, per piece	0	1	7
HANGING PAPER, ordinary, per piece	0	1	10
DO., fine, per piece, and upwards	0	2	4
VARNISHING PAPER, 1 coat, per piece	0	0	9
CANVAS, strained and fixed, per yd. sup.	0	3	0
VARNISHING, hard oak, 1st coat, yd. sup.	0	1	2
DO., each subsequent coat, per yd. sup.	0	0	11

SUNDRIES

Fibre or wood pulp boardings, according to quality and quantity.

The measured work price is on the same basis . . . per ft. sup. £0 0 2½



FIBRE BOARDINGS, including cutting and waste, fixed on, but not including studs or grounds, per ft. sup. . . . from 3d. to	0	0	6
Plaster-board, per yd. sup. . from	0	1	7
PLASTER-BOARD, fixed as last, per yd. sup. . . . from	0	2	3
Asbestos sheeting, 5/32 in., grey flat, per yd. sup.	0	2	3
DO., *corrugated, per yd. sup.*	0	3	3
ASBESTOS SHEETING, fixed as last, flat, per yd. sup	0	4	0
DO., corrugated, per yd. sup.	0	5	0
ASBESTOS slating or tiling on, but not including battens, or boards, plain "diamond" per square, grey	2	15	0
DO., red	3	0	0
Asbestos cement slates or tiles, 5/32 in. punched per M. grey	16	0	0
DO., *red*	18	0	0
ASBESTOS COMPOSITION FLOORING : Laid in two coats, average ¾ in. thick, in plain colour, per yd. sup.	0	7	0
DO., ½ in. thick, suitable for domestic work, unpolished, per yd.	0	6	6
Metal casements for wood frames, domestic sizes, per ft. sup.	0	1	6
DO., *in metal frames, per ft. sup.*	0	1	9

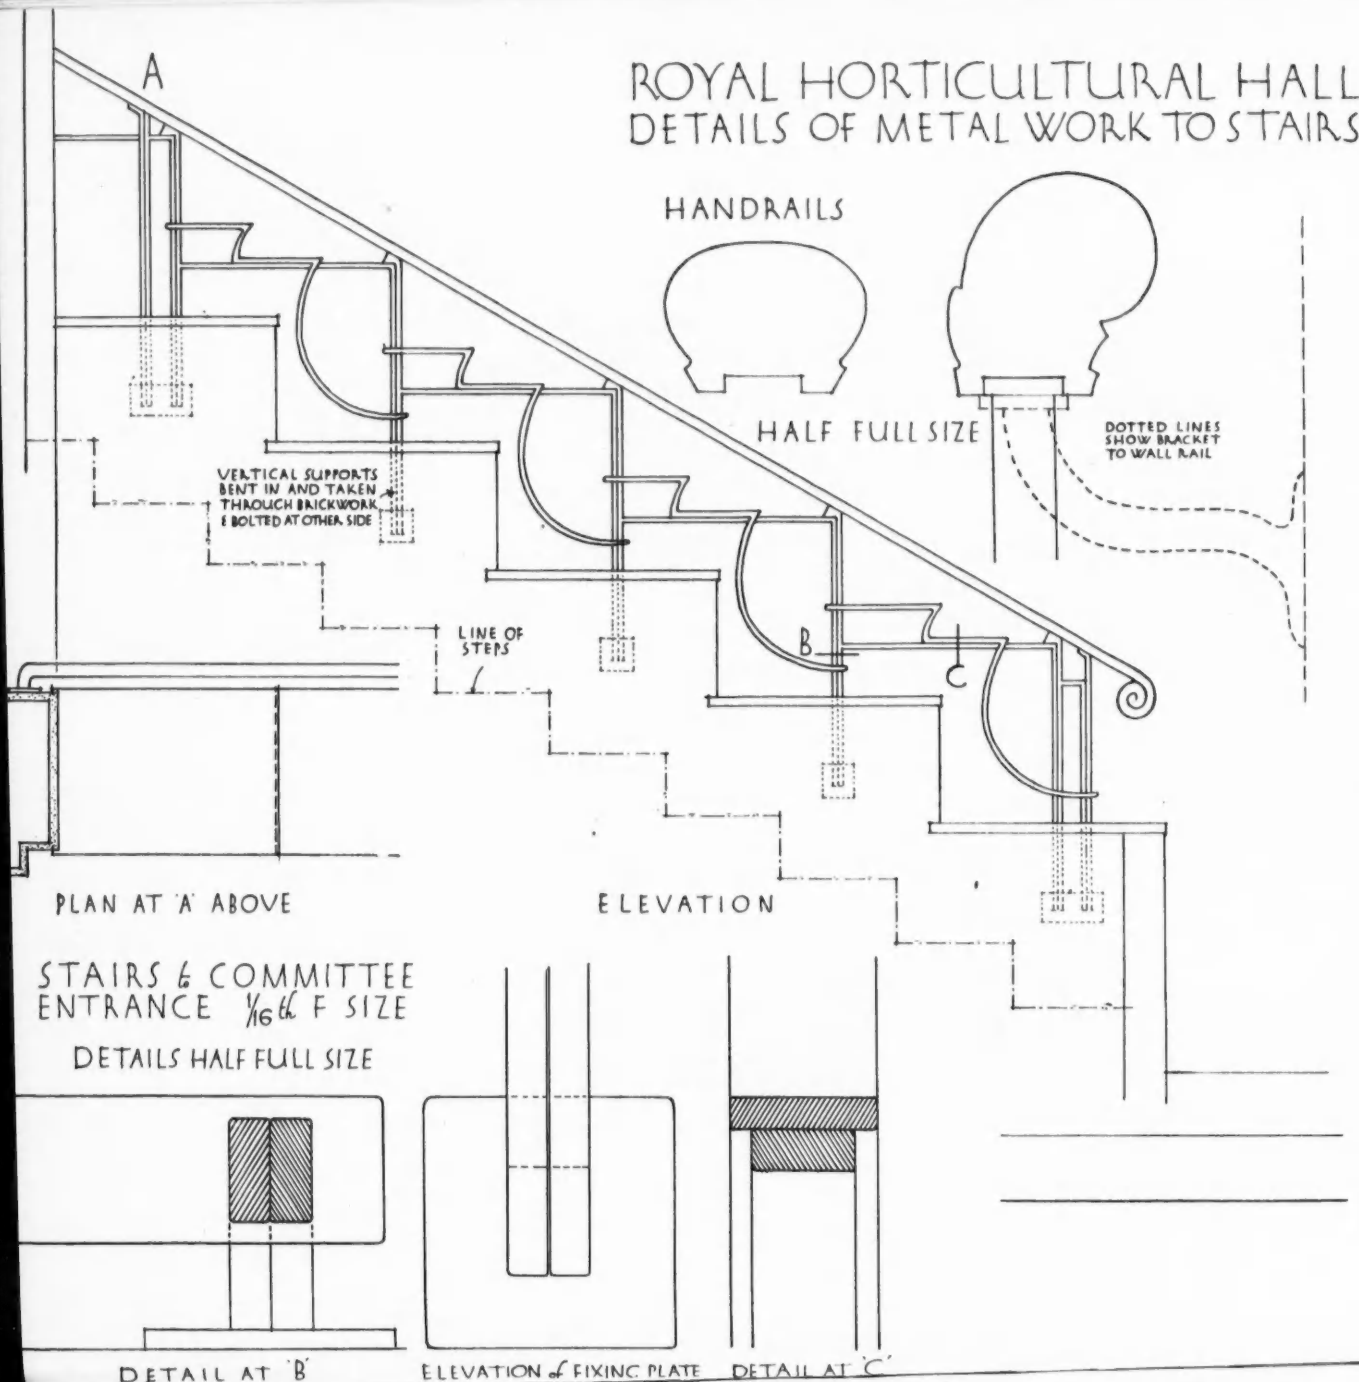
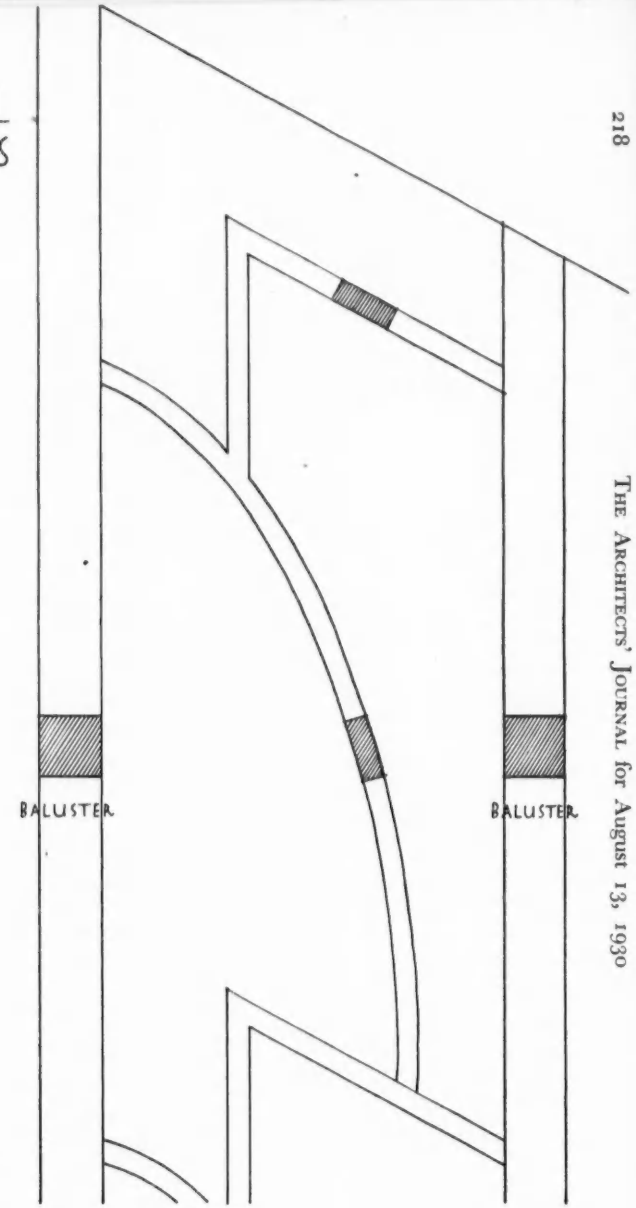
SCALE DETAILS:
A WEEKLY SERIES

STAIRCASE AT THE ROYAL HORTICULTURAL HALL, LONDON
DESIGNED BY EASTON AND ROBERTSON

THERE is a direct and fresh outlook shown in this composition, that has led to disregard of the traditional treatment for a metal staircase balustrade; yet, at the same time, the repetition of a "panel," bearing a definite relationship to the flight of steps, is entirely logical.



It will be noticed that here, as elsewhere throughout the building (previous examples were dealt with in our issues for June 11—clock—and July 16—light fitting), the detail is quite in accord with the uses of the Royal Horticultural Hall, and is again strongly reminiscent of plant and leaf forms.



The stepped string has "treads" of Hopton Wood stone, each tread taking two steps of the stair behind. The balustrade is of iron, and the small handrail itself is of bronze.

Reference to the drawing, reproduced overleaf, will make the construction clear.

The drawing may be read with architects' scales ($\frac{1}{2}$ and $\frac{1}{16}$ full size.

EASTON AND ROBERTSON ARCHITECTS

THE ARCHITECTS' JOURNAL

WEDNESDAY, AUGUST 13, 1930

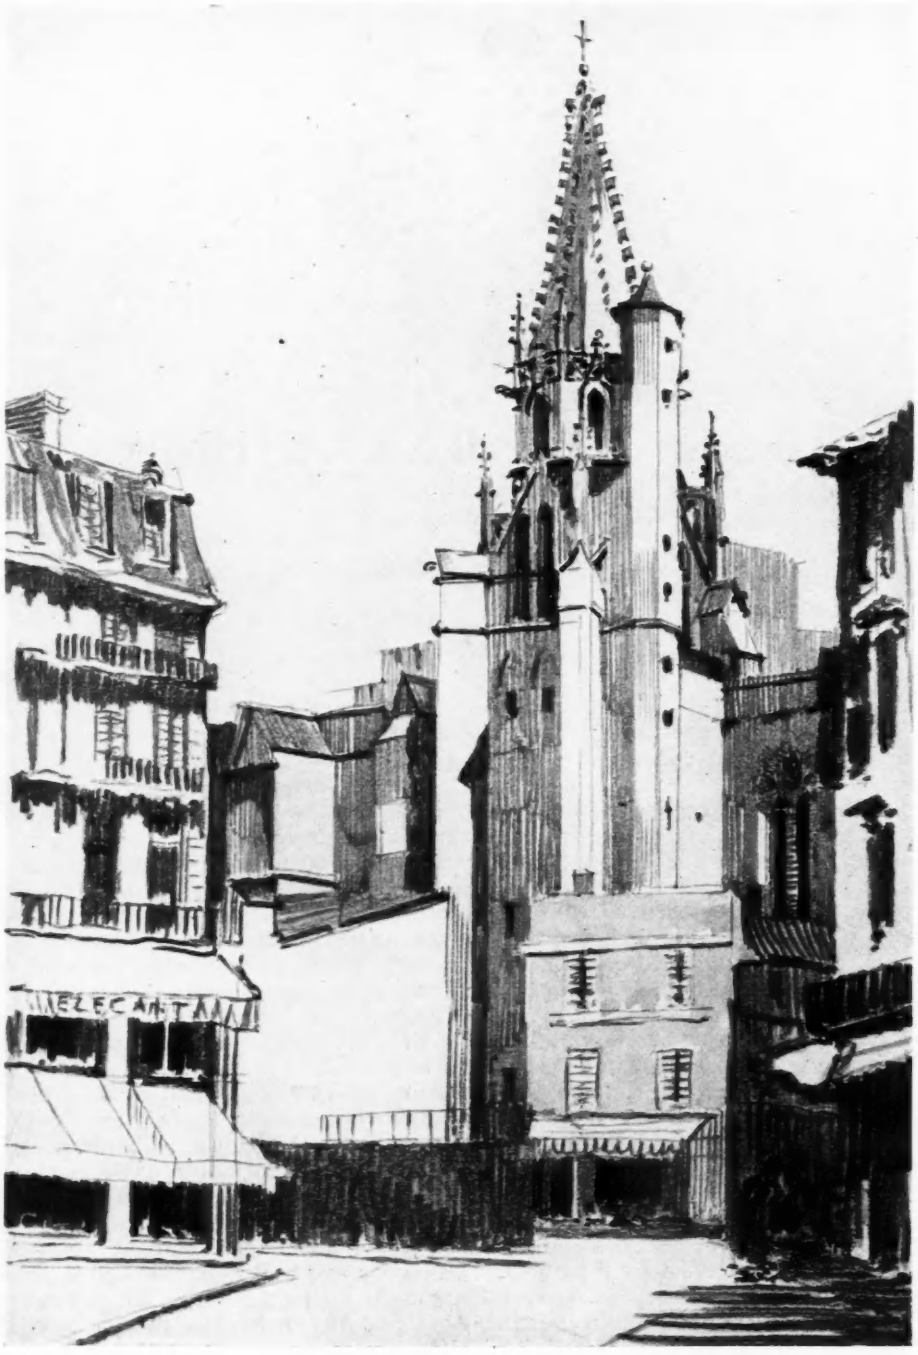
BACK TO BATHSHEBA

or, the Doctor's View

"This is an appeal to architects. They should be allies of the hygienist."

—LENS in *The New Statesman.*

THE well-known member of the medical profession who writes under the pseudonym of Lens is to be congratulated on his intelligent interest in domestic architecture. Although many of us have collaborated with doctors in the planning of hospitals, we have hardly realized yet the importance of their point of view in the arrangement of houses. Lens has a genuine complaint, for he speaks from a personal experience. He lives on the northern edge of St. John's Wood, in an oldish house with a pitched roof, except for one small part 13 ft. square, which has a flat roof. To the latter, access has been made, and for a few pounds Lens has acquired "a new living-room, a new toy, a sleeping place, a solarium and an observatory." This experience leads him to the declaration, "All these pitched roofs . . . represent stupid waste of . . . civic area."



We have much sympathy with the doctor's point of view. We will summarize the objections to it; as shortly as possible because to do so will seem to our modernist friends like crossing the *t* and dotting the *i* of obscurantism. A flat roof with a suitable surface for walking on, and protected by a parapet, is dearer than a pitched roof: an air-space between the ceiling and the roof gives insulation from heat in summer and cold in winter; it follows there is less risk of condensation; the tiles or slates covering a pitched roof are rather more reliable than the coverings of a flat roof; the elimination of pitched roofs will cause a wide dislocation of employment. But our main difficulty is with our clients, whom Lens would like us to persuade to his point of view. For our clients usually like sloping roofs, but entirely for sentimental reasons. They do not ask merely for a house but a home, and at present they do not recognize an apparently roofless building as fulfilling their sentimental ideal of a home.

The sense of architecture in the public is like a plant with a rather sickly appearance and blooms of uncertain colour, but with roots which go down very deep into the strata of primitive impulses. Instinct responds to the visible roof descending to the walls and projecting over them as a cornice or an eaves, and there are inherited satisfactions in approaching a home of this type. Nor must we forget the wide variety within the type—the differences of pitch, of colour and of material, the proprieties of size as between dominant and subsidiary roofs, the interest of valleys, ridges and eaves, and the many inventions of shapes.

Can we blame our clients for preferring the cheerfulness and assurance of pitched roofs to the dubious delights of sun-bathing with flies, or snoring to thunder; or for holding that any number of Bathshebas fail to banish the impression that German housing schemes look dull?

But in so far as Lens considers there should be closer relations between his profession and ours, both our clients and ourselves agree. We are a nervous generation and health seems to us the prime necessity; just as the soldier moulded the buildings of the Middle Ages, and the gentleman those of the Renaissance, so the doctor's influence is predominant today. Every house-building client must be asked if he wants a solarium, either on the roof or as a recessed veranda or loggia, and even though we retain our slopes over the main blocks, we can form a flat roof in a subsidiary position and make the best of both worlds.

Finally, we would point out to Lens that most houses designed by architects already go some way to meet his ideas, as we noted in reviewing the volume of *Recent Domestic Architecture* last year. It is the type of house built without an architect's plan that he must attack.

The South Side of St. Pierre, Avignon.

By P. J. Westwood (Pencil, with slight wash: 9½ ins. by 6½ ins.)

FIRST PRIZE DRAWING:
HOLIDAY SKETCHES COMPETITION (JUNE)

This sketch—one of a set of five—has been awarded the prize of ten guineas in the first of the three ARCHITECTS' JOURNAL *competitions. Three of the winner's other subjects, together with a selection of those by the second (five guineas) prize winner, Alan Sherwin, are exhibited in the Sketch Club this session.*

P. J. Westwood, winner of the June Holiday Sketches Competition, received his architectural education at the A.A. Schools, where he won the A.A. Medal and Studentship in 1899 (Lectures). Many business premises, showrooms and factories have been erected from his designs, some in partnership with Joseph Emberton—notably Austin Reed's in Regent Street.

NEWS & TOPICS

NOT BY-PASS ROADS—BUT BUILDING SITES

MR. GUY DAWBER, in a recent letter to *The Times*, expressed his fears for the whole face of rural England, blaming the new roads for its destruction, and wondering whether these roads were not too big, too many—and too late. Too late they may be, if aviation progresses with the same speed as motoring, but not, I think, too many or too big, for they are, even in their present bareness, rather fine things ; and when their trees grow tall, mile upon mile of great avenue, it may be that we shall be blessed by those quiet souls who, in the future, prefer rather to walk on the tree-shaded earth than fly in the noisy skies.

★

As for the bungalows and other shoddy litter that spring up by the road, these are not a part of it. The road was designed to take transport from place to place. It is patently a speed track, a trunk road, and an artery. It knows little of the intimate countryside it passes through because it is county-wide rather than hamlet-wide, and passes over like a Roman road, but with much more feeling for the contouring of the earth.

★

The pity of the thing lies in the lack of purpose in those who laid out the roads. They did not realize that a road that was built for swift traffic from place to place should not stoop to anything less menial than this high office. Translated into terms of concrete and drains, this means that there should be no sewers in arterial roads, the very minimum of cross-roads, no buildings lining its pavements other than those big and grand enough to pay their way; and that the villages and housing schemes that it ultimately serves should lie away from its speed and noise so that it should bring prosperity to the country through efficient transport rather than through cheap-jacking by the kerbside.

★

There was a chance once that every new trunk road might have been a parkway. It required but the purchase of enough land on either side to cause the development in depth which would alone save their beauty and ensure their ultimate usefulness and profit. But the Ministry was a spending and not a saving department; and so it decided to do what was wrong, and short-sighted, and, as we see it today, destructive. And then it helped to form a roadside beautifying society, which was very nearly insulting to those who had to find the money for the roads and who knew better than the Ministry how to spend it.

ECONOMY, A SMOTHER OF INVENTION

Mr. H. Tomlinson, speaking at Cambridge, said that the small houses of this country are the best in the world. Opinions may differ, and the widely-travelled may be able to tell us more exactly where we stand, and how far we are unique in building little family houses in village formation, rather than more communal and urban dwellings. Yet we may rejoice with Mr. Tomlinson that we have passed from the very bad old days of Late Victorianism, and the even worse Edwardian period, into the comparative sanity of these days we live in; for the seed which was planted at Letchworth and Hampstead has grown into a tolerable harvest of good work, among which even the house of the jerry-builder, that once lacked every charm, is seen to be decked with a certain simple propriety. Economy, if I may say so, has been a smother of invention.

AN ALFRED STEVENS DOORWAY

The Museum of Practical Geology has long been one of the " dark spots " of Piccadilly. It is a gloomy façade, never, even in its youth, an outstanding work. We shall therefore know how to contain our grief when it is demolished in the near future, and its contents are transported to a new building which the Office of Works are designing on a site adjoining the Science Museum in South Kensington.

★

My knowledge of the interior of the old museum is confined to an impression of extreme stuffiness that pervades a photograph of it in Richardson's *Monumental Architecture* : but how many times, in passing along Jermyn Street, have I not experienced the thrill of seeing again Alfred Stevens's great doorway, and wondered what would be its fate? I have never doubted that the museum would go, but for that fine doorway I have had many fears—fears once that it might be destroyed entirely; then fears that it might be put into some museum instead of *on* one; and then, feeling that men were becoming wise enough to keep beautiful and appropriate things, that it would be incorporated with some building unworthy of it.

★

It is a noble doorway, and one that the very best architect among us might be proud to design; and one that would make an entrance to a new museum such as the Office of Works might themselves design. I would like to suggest, if it has not already suggested itself, that the new museum would be graced by Alfred Stevens's portal. It would, I think, bring life to nearly any façade with which it was sympathetically associated, for it is a finely modelled piece of work, and of a craftsmanship much above our average. It would be an economy too.

THE HONEST SURVEYOR

The common notions of what constitutes an architect's duties must be extraordinarily vague, for, as we know, most local authorities see nothing amiss in employing a man, trained to be an engineer and surveyor, and brought up in an atmosphere of slide rules and crimson lake edging, to do their housing and other miscellaneous architecting. The evolution, from underground lavatories to public shelters, and so on to markets and libraries, is not so illogical, apparently, to others as it is to us, and the saving in cost, itself a beautiful thought, tips the balance in any

case. Yet there is a surveyor who is reported to have refused to take on architecture in addition to drain-laying, maintaining that he was engaged to be a surveyor and not an architect; and if there were more such honest men about there would be fewer bad Council houses to bemoan. It is a fact that architecture is looked upon as a tolerably easy acquisition by public officials. It has lost caste just when architects set out to build the small house better than it had been built before.

COMPARATIVE BUILDING COSTS HERE AND IN THE U.S.A.

The present Government, through their Economic Council, are paying attention to the question of building costs. Can these be reduced, and if so, will house rents be decreased and more work found for the building operatives who are now unemployed? Much has been said in certain quarters as to the much cheaper production of building in the United States as compared with this country.

★

But according to Mr. R. G. Tarran, the President of the Hull Master Builders' Federation, there is a good deal of loose thinking on this point. Although the costs of building in America and in England vary, greatly to the advantage of the latter, he takes the view that there is not the same difference between the costs of building in towns like Hull, Leeds and Newcastle-on-Tyne, and in the smaller American towns. He also considers that the finished article in America, especially as regards skyscrapers, is not equal to a British building. He tells of slipshod fixing of masonry in the United States. At the same time he recognizes that the rates of wages paid to American operatives are higher than in this country, and that this causes them to give willingly a greater output.

SH—— !

We are all prone to diagnose our own symptoms, and to have the diagnosis confirmed by the faculty seldom fails to bring some sort of wry satisfaction. But we scarcely needed Dr. G. F. Buchan, medical officer of health to the Willesden Urban District Council, to describe for us the deleterious effects of the noises of latter-day life that we detect within ourselves. It needs no physician's researches to inform us that "a newly-born infant shows a distinct fear reaction at the sound of a loud noise"; and that, on eventually awaking, the sleeper will betray irritation as a result of nervous tension due to the din, is the experience of every keeper of an alarm-clock. Yes, the trouble, and the sources, are real enough. It is true that hundreds of thousands of industrial and clerical workers live their waking hours amid the perpetual thunders of, as it were, a whole battery of alarm-clocks. What, then, is our remedy?

★

The legal creation of a "noise nuisance" offers obvious difficulties. (When is a noise a mere rumour?) Nevertheless it will probably need legislation to crystallize the nation's growing hatred of noise. In the meantime there is a tendency among architects to explore the means of constructing rooms that shall be insulated from sound, and modern manufacturing processes have many sound-proofing materials to offer. The trouble usually arises with windows and ventilation. For soundless fresh air we must still seek the solitary mountain-tops.

A LEAF FROM A BRUSSELS PARK

Although what I am about to say is not strictly within the realms of architecture, writes a correspondent, it is intimately connected with the beautifying of a town and at the same time shows that some public bodies possess a unique view of public (or mass) psychology. I have just returned from Brussels, where I read the following notice (written in French and Flemish) at the entrance to Brussels Park. I think it is far more efficacious than our own system of inciting people to "squeak" on wrong-doers for the sum of 40s., or a direct threat of a £5 fine. I append a free translation: "Les arbres nous donnant de l'ombre; comme les plantes et les fleurs ils sont la joie et la béauté du paysage. Abîmer les arbres et les plantes, c'est se faire du tort à soi-même." (The trees give us shade; like the plants and the flowers they are the joy and the beauty of the countryside. To destroy the trees and the plants is to do wrong unto oneself.) ASTRAGAL

The badge which will in future be worn by the President of the Royal Society of British Sculptors. This badge has been instituted as a memorial to Sir Thomas Brock, the first President of the Society, whose name, with those of other past presidents, is engraved on the chain. The design is by Mr. Richard Garbe, F.R.B.S., A.R.A., and is carried out in gold, enamel and jewels, the main figure being carved in ivory. It will be noticed that the links of the chain on the right of the picture are left blank; hereon will be inscribed the names of future Presidents as they retire from office. The present President, who was elected nine years ago, is Mr. Reynolds Stephens.

THE MERCANTILE MARINE MEMORIAL

Tower Hill, London, E.C.

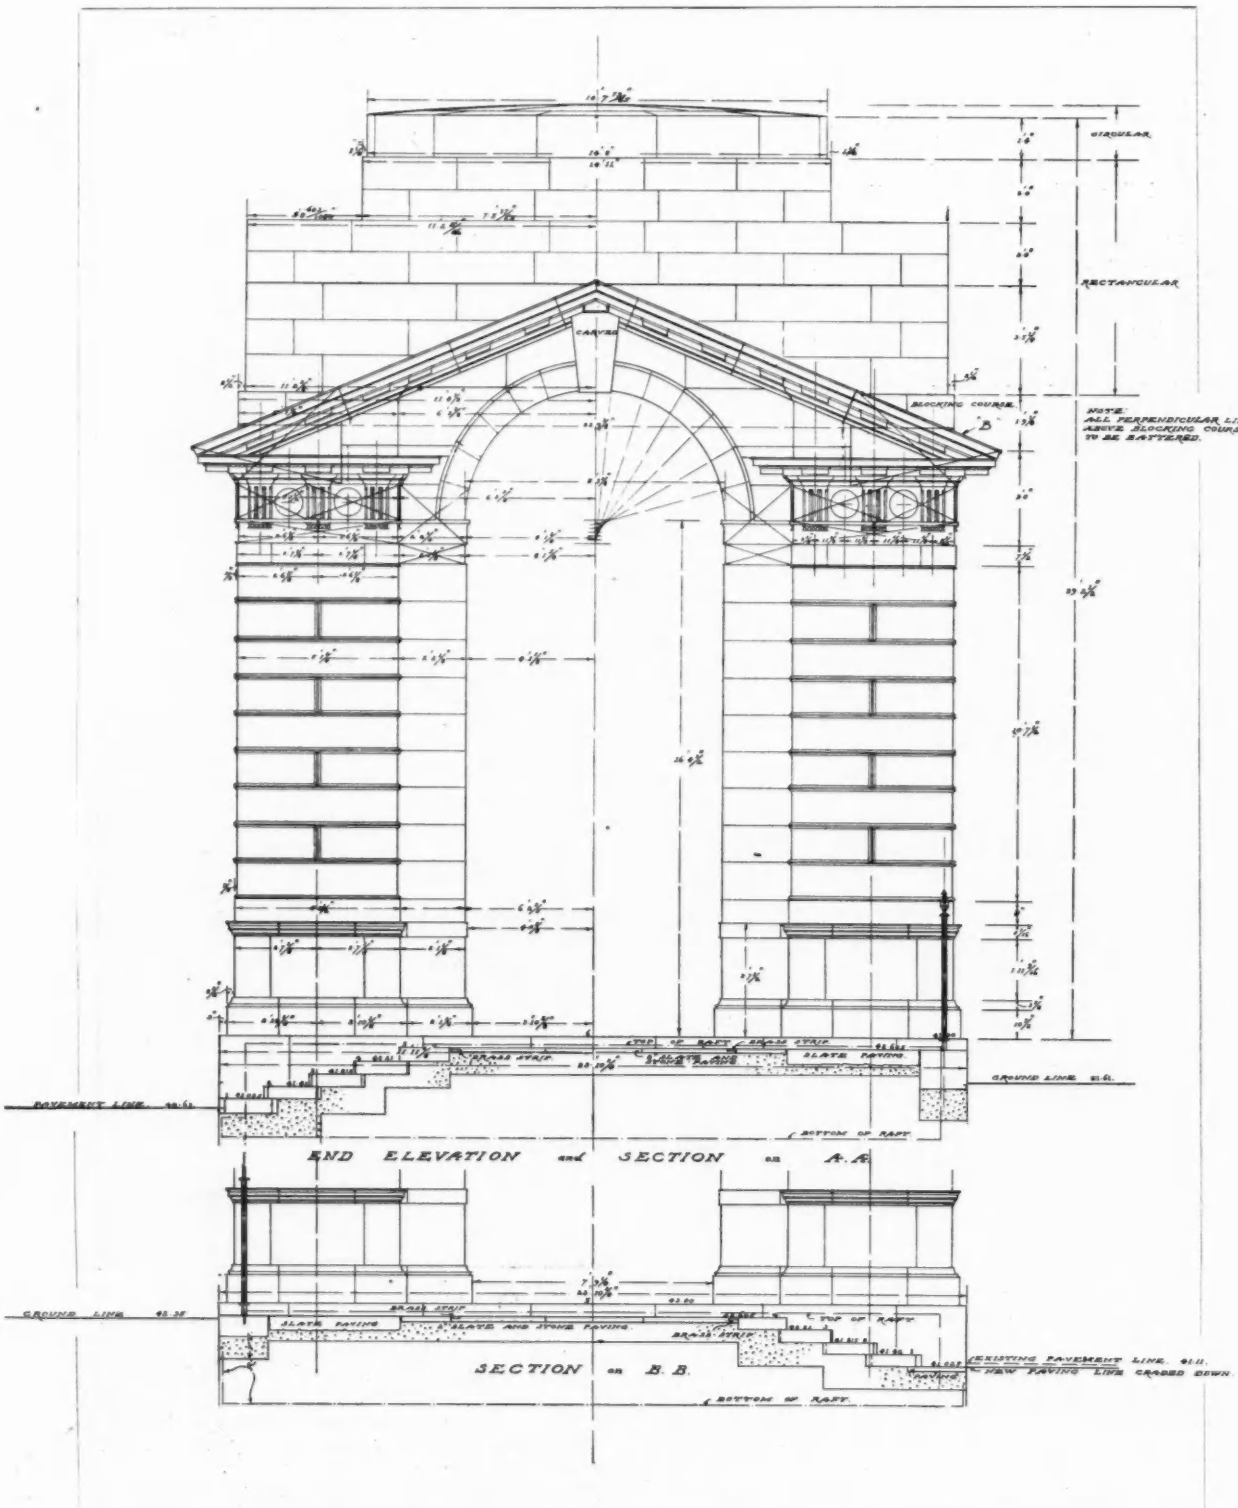
DESIGNED BY SIR EDWIN LUTYENS

THE Mercantile Marine Memorial was erected by all the Governments of the Empire, through the Imperial War Graves Commission, to commemorate the names of over 12,000 officers and men of the Merchant Navy and Fishing Fleets who lost their lives at sea through enemy action and whose graves are unknown. It stands, rightly enough, on Tower Hill, on the south side of Trinity Square, which is generally regarded as the hub of maritime England; with its back to Trinity House and the big P.L.A. building, and within sight of the forest of masts of St. Katherine's Docks.

The memorial is a counterpart to those erected by the Imperial War Graves Commission at Chatham, Portsmouth and Plymouth to the "missing" of the Royal Navy; and to the Menin Gate and other memorials erected on the battlefields abroad. It is of Portland stone, and has eight piers, encased with bronze panels on which are inscribed the names of the "missing," arranged under their ships. It consists of a vaulted corridor, 64 ft. long, in three bays, 17 ft. wide, approached from each end by archways 8 ft. wide. Between the piers are columns in pairs carrying the Doric entablature that surrounds the monument. Each end is pedimented and the centre is emphasized by a rectangular feature finished with a circular treatment, on the faces of which feature the dedication is inscribed.

The total length of the memorial is 64 ft., the width 24 ft., and the heights 24 ft. 6 ins. at the ends and 35 ft. in the centre, from floor to roof respectively.

The inscribed dedication reads:



1914–1918
TO THE GLORY OF GOD
AND TO THE HONOUR OF
TWELVE THOUSAND
OF THE MERCHANT NAVY
AND FISHING FLEETS
WHO HAVE NO GRAVE BUT THE SEA

The entrance gates and railings to the memorial are of the spearhead type, each of the former being provided with rollers and a quarter-circle track over which they run when being opened and closed.

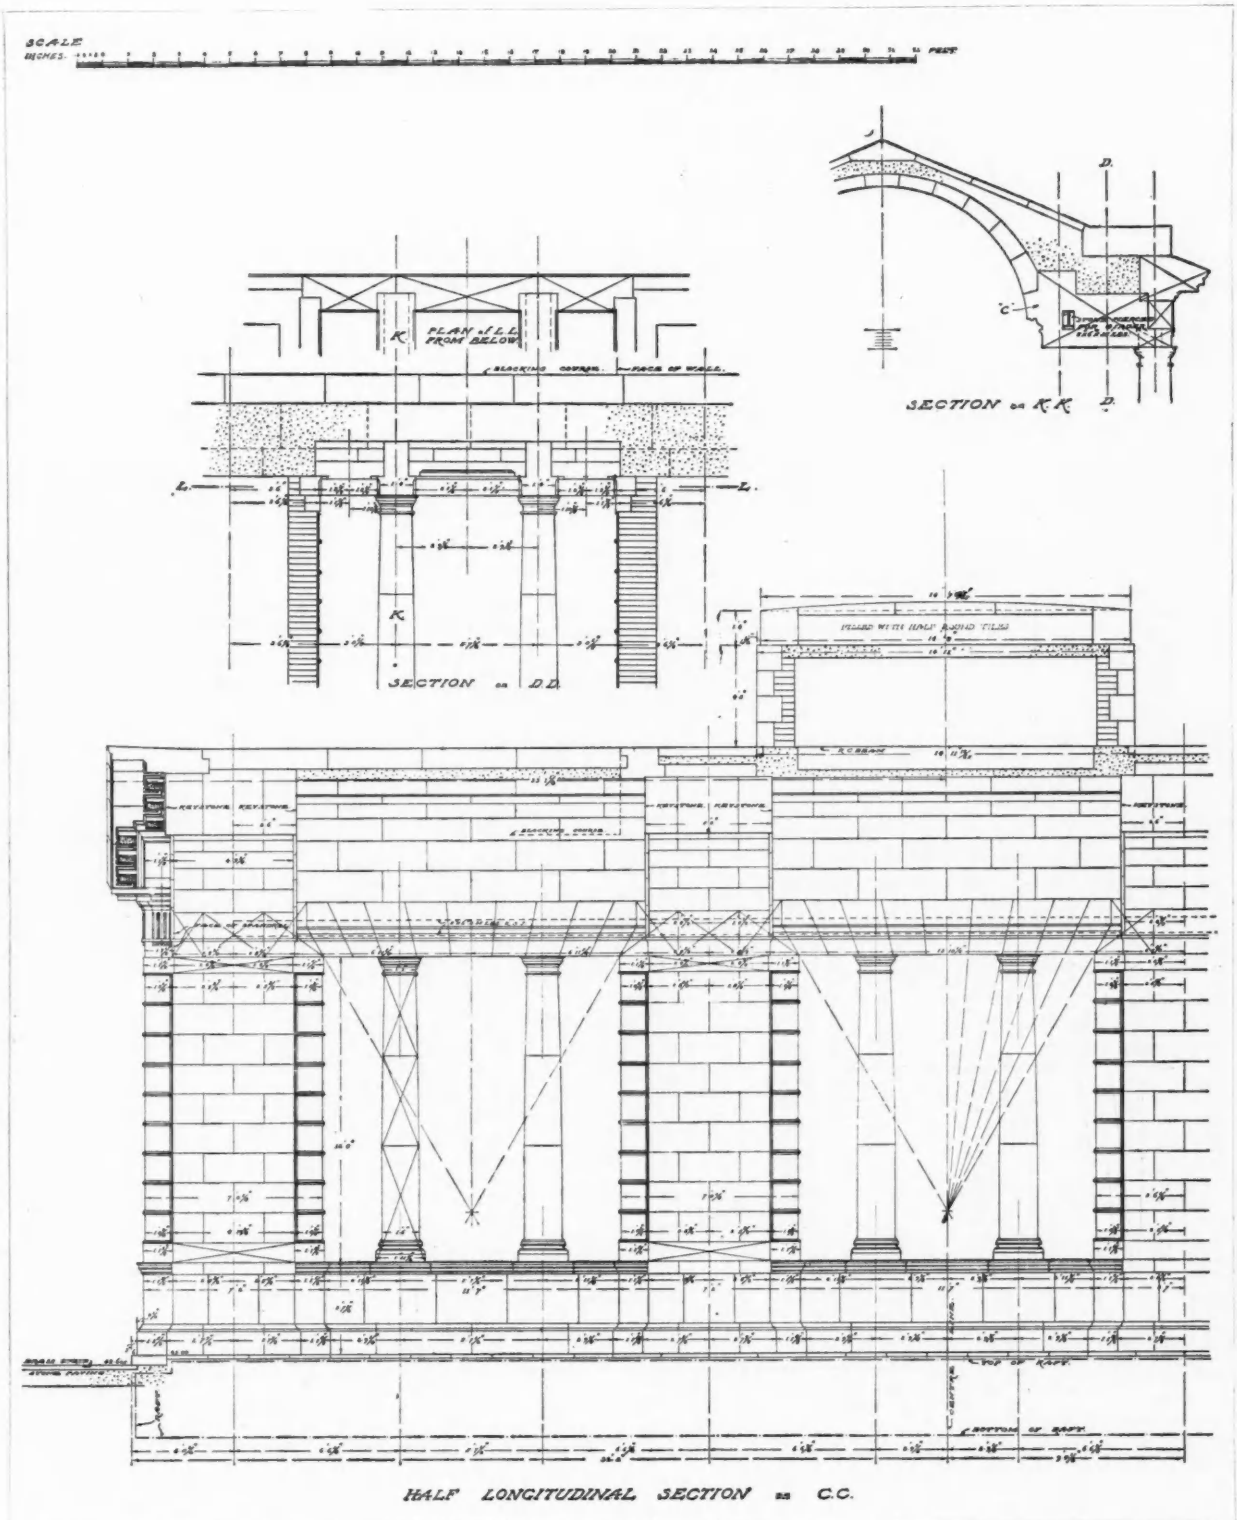
The memorial was opened by H.M. the Queen. It is a fine thing, and, new as it is, seems to have an atmosphere of history about it. Already rich in that atmosphere, the City is the richer and more famous for this piece of Lutyens's work.

The memorial is of Portland stone and has eight piers encased with bronze panels, inscribed with the names of over 12,000 officers and men of the Merchant Navy and Fishing Fleets who lost their lives in the war and who have no grave but the sea.

The Mercantile Marine Memorial, London, E.C.]

Detail drawing of one of the two end pedimented features. The memorial is approached at either end by an archway 8 ft. wide. It stands on a sloping site, with a maximum height of 24 ft. 6 ins. at the ends and 35 ft. in the centre.

[*By Sir Edwin Lutyens.*

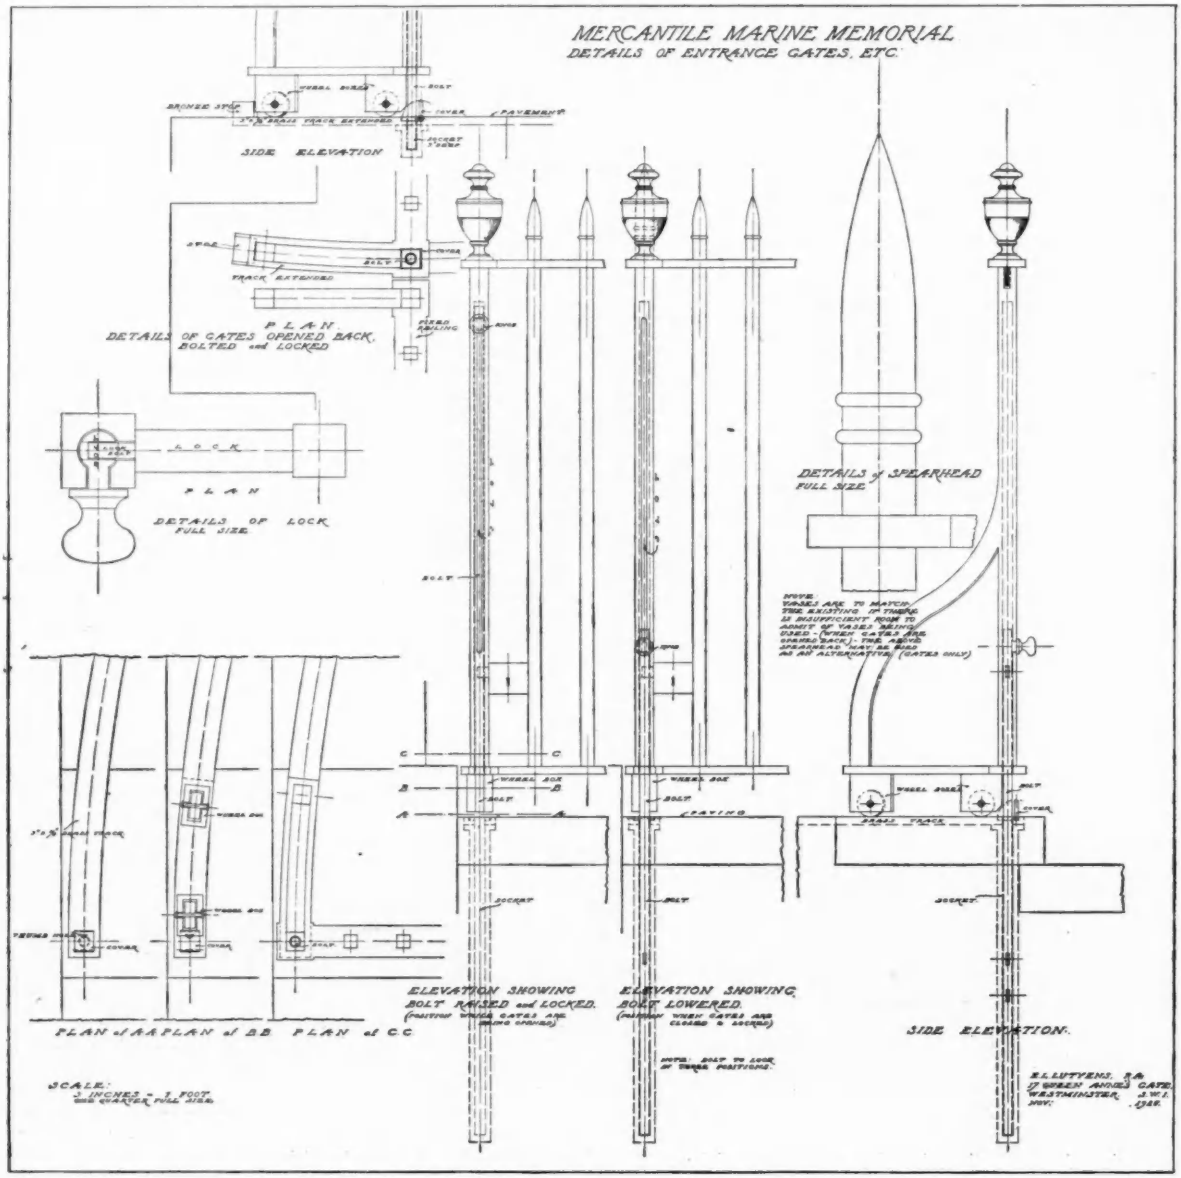


A photograph of one of the two end pedimented features, showing the entrance gates and railings, detail drawings of which appear on page 228. A curious texture is produced on the bronze panels by the inscribed names of the "missing."

C

The Mercantile Marine Memorial, London, E.C.]

A photographic detail of the side of the memorial. A section appears on the facing page. The memorial stands with its back to Sir Edwin Cooper's building for the Port of London Authority, the tower of which is shown in the illustration.



[By Sir Edwin Lutyens.

Half of the longitudinal section through the memorial; sections through one of the bays, of which there are three on each side; and section through one of the two end pedimented features. The memorial is 64 ft. long, 24 ft. high at the ends, and 35 ft. in the centre

A photograph; and details of the entrance gates and railings. The gates are run back over a quarter-circle brass track. An ingenious bolt is designed to lock the gates in three positions. When they are being opened this bolt is raised from the ground by a knob and locked in position; when the bolt is lowered, the gates themselves are locked.

The Mercantile Marine Memorial, London, E.C.] *[By Sir Edwin Lutyens.*

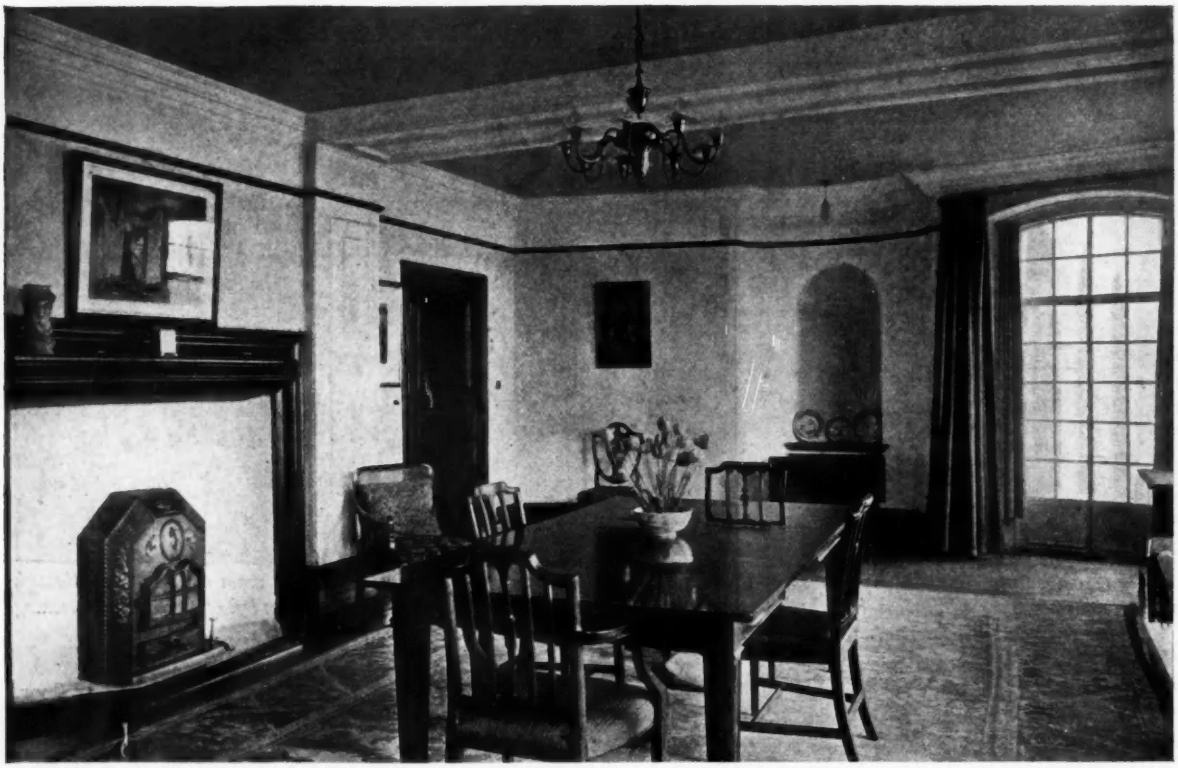
A STONE HOUSE IN SHROPSHIRE

DESIGNED BY BUCKLAND AND HAYWOOD

A view of the entrance front at Hammer Hill, Romsley, Kidderminster, showing the lily pond. The main entrance leads through a lobby, with adjoining cloak-room, into the hall, the three windows of which are seen immediately to the left of the porch, overlooking the forecourt. The large bay on the right lights the drawing-room, and faces west.

HAMMER Hill, Romsley, was built a few years ago on the crest of one of the many undulations in the interesting countryside between Kidderminster and Bridgnorth.

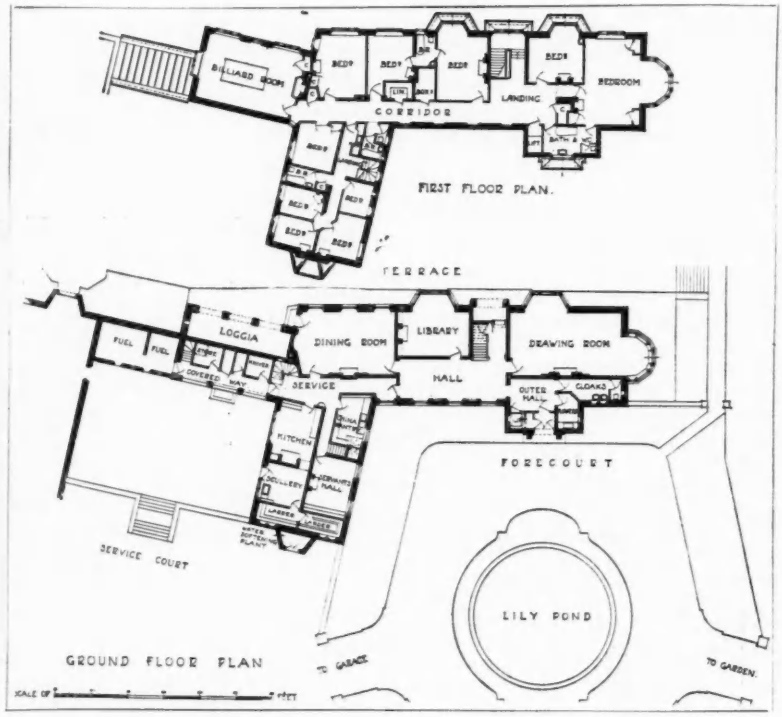
The plans reveal a substantial house; affording rooms spacious, lofty and well-lit in character, if comparatively modest in number. On the ground floor there are drawing-room, dining-room and library, besides a large hall and loggia, and the service quarters, to which a separate wing is devoted. On the first floor, the counterpart of the long hall and its contiguous outer hall and servants' passage, is found a corridor, off which, or its landing, open the main bedrooms, five on the south front of the house, and the sixth cutting into the northerly wing. At this level, too, a billiards-room has been planned, situated above the loggia. A heating chamber and wine-cellar are in the basement.



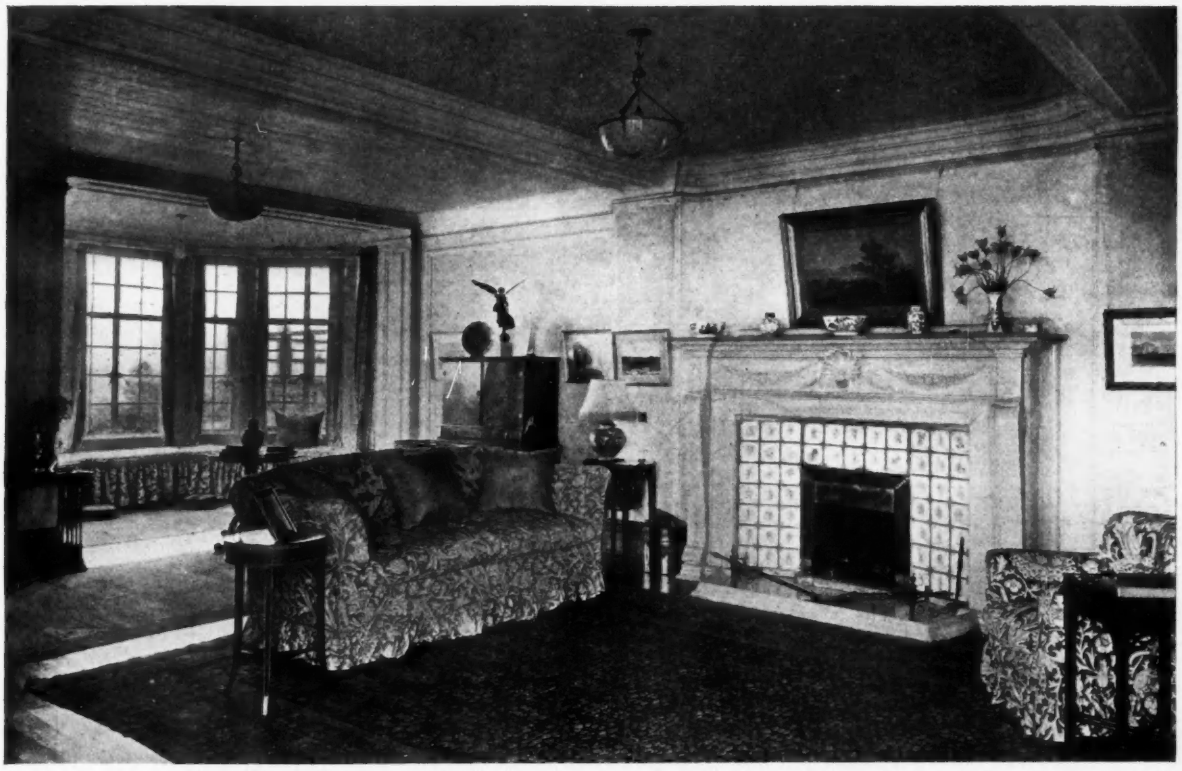
The entrance gateway, and one of the lodges. The photograph gives some indication of the undulating countryside. Extensive use has been made of stone found on the site.

A quantity of stone and other materials was found ready to hand on the site,

The south or terrace front has, as its principal features, a garden porch, occurring where the main stairway runs up from the hall, and an arcaded loggia, isolated from the living quarters, though conveniently entered from the dining-room via the terrace.



The dining-room is an oblong, with three windows on the right (not here shown) overlooking the terrace, access to which, and to the loggia, is also given through the glazed doors seen ; and an alcove in the end wall. The door on the left is for service.



Hammer Hill, Romsley, Shropshire.]

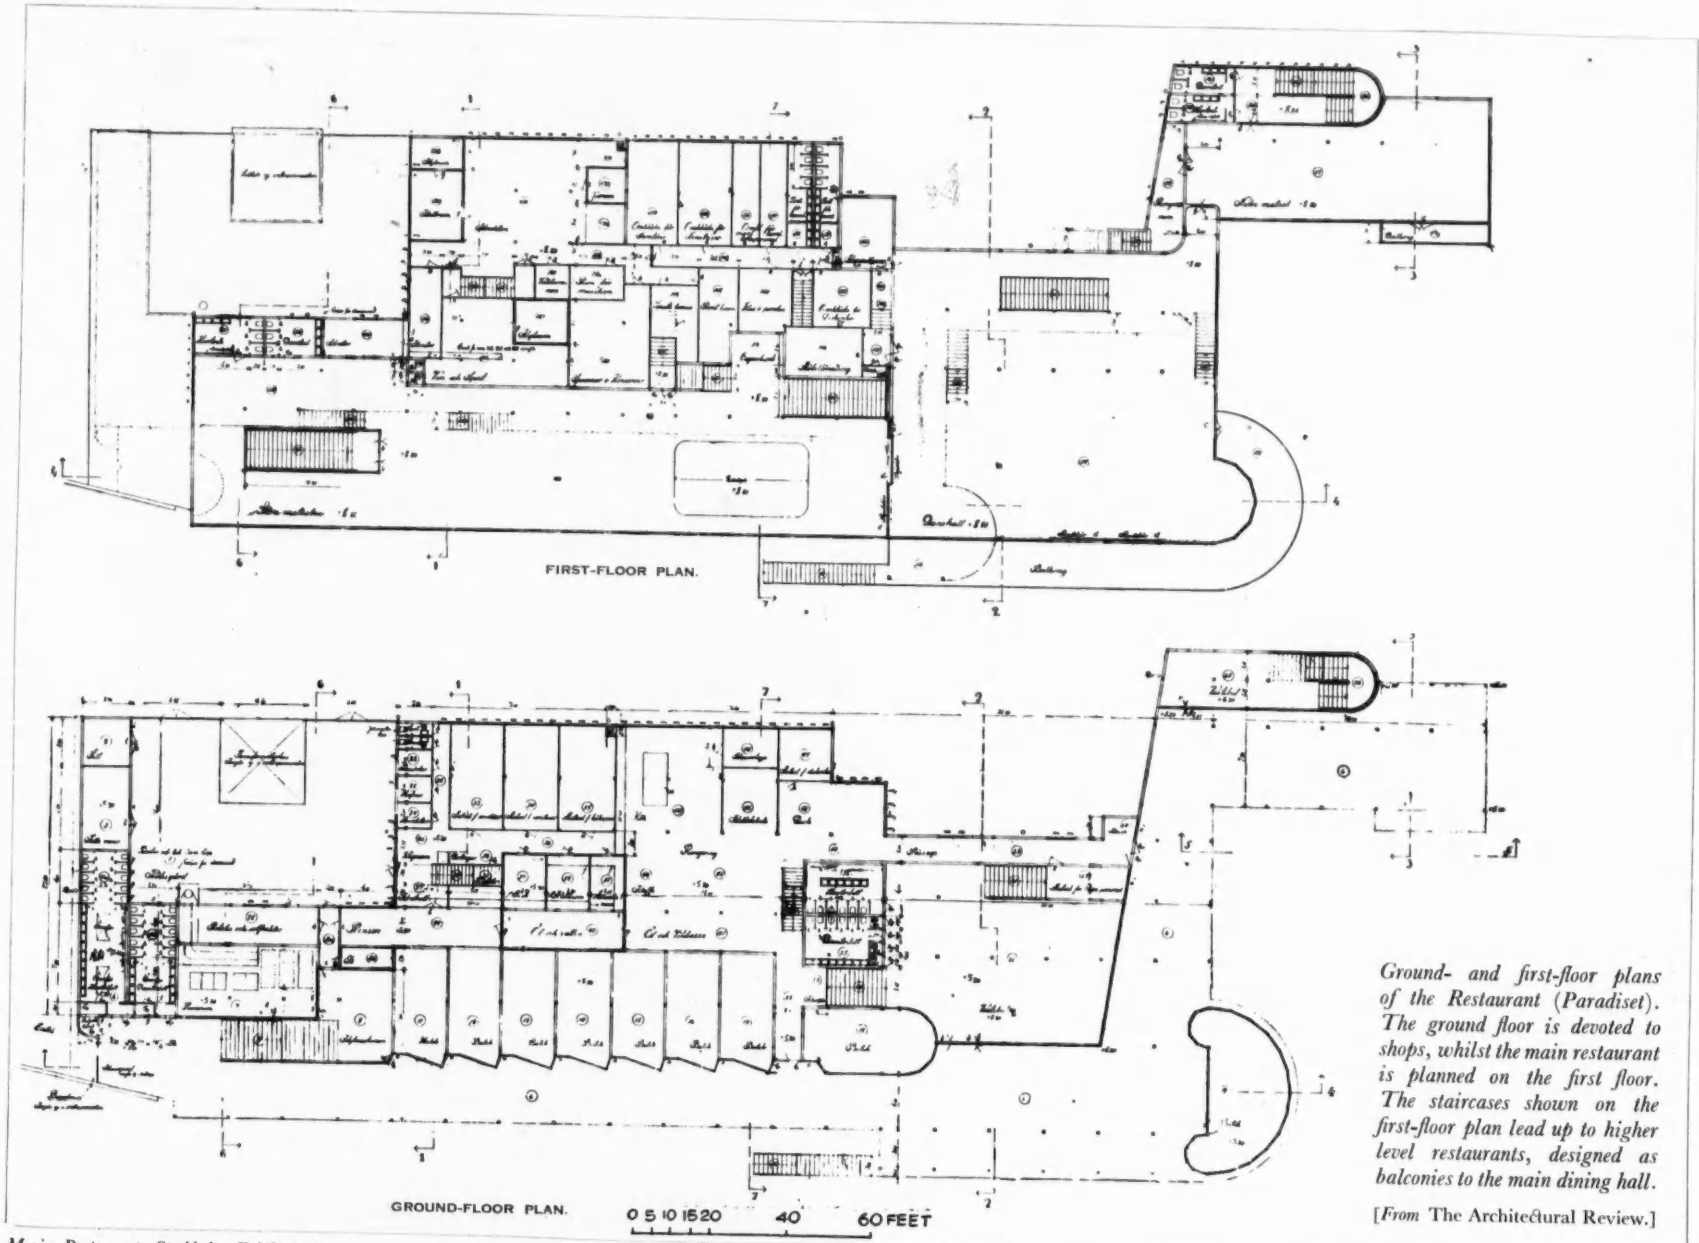
One end of the hall : through the open door on the left is seen a glimpse of the drawing-room ; through that on the right, the outer lobby.

On both ground and first floors, servants' accommodation is concentrated in the northerly wing, though an extra bedroom is placed over the kitchen. The billiards-room is built over the loggia and the storerooms, etc., that flank it.

In the drawing-room, in addition to the large semicircular bay shown, there is another spacious three-sided bay in the wall opposite to the tiled fireplace. It is the largest living-room in the house: 31 ft. by 17 ft. 6 ins.

and the walls, not only of the house, up to first-floor level, but of two entrance lodges in the grounds, were built of this local stone, with quoins and moulded work of Hollington stone. The upper portion of the walls is formed of brickwork, faced with stucco, and heavy grey slates were used for the roofing.

The presence of the materials mentioned lent itself to the enclosure of about an acre of the grounds with walls built of stone and pisé-de-terre, in order to give protection against driving winds. Here there are the beginnings of a very interesting garden, planned by the architects.



The main entrance to the house is on the northerly front, and here a forecourt has been formed, with a lily pond as its central feature. On the other front the ground has been terraced, and flights of steps at the centre and west end lead down to a large lawn and a transverse terrace, respectively. On one side of the latter are the flower beds of a formal garden; on the other is a rock garden. Not quite parallel with this western terrace, on the other side of the central lawn, runs an eastern walk, with herbaceous borders.

The contract price of the house was approximately £20,700, not counting the value of site materials.

[*By Buckland and Haywood.*

This corner of the best bedroom corresponds to that of the drawing-room illustrated above. On either side of the bay window are cupboards, the door of one of which is seen; the other door on the extreme right leads to a bathroom and lavatory.

Ground- and first-floor plans of the Restaurant (Paradiset). The ground floor is devoted to shops, whilst the main restaurant is planned on the first floor. The staircases shown on the first-floor plan lead up to higher level restaurants, designed as balconies to the main dining hall.

THE MORAL OF STOCKHOLM

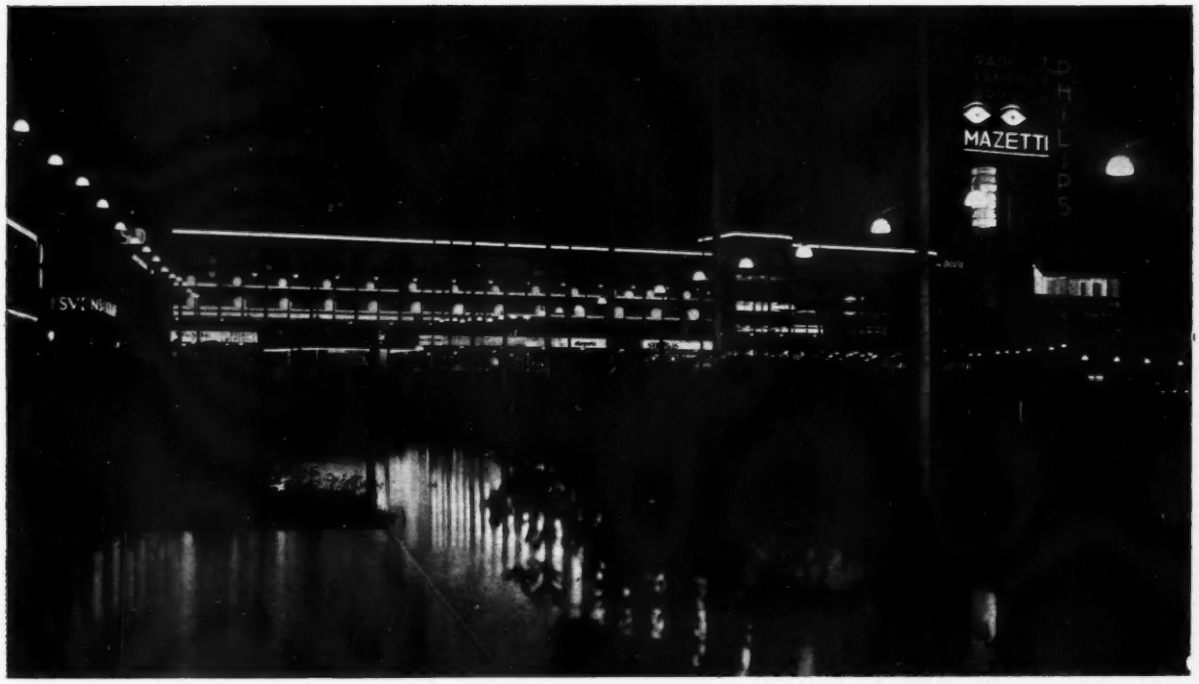
A Revelation of the Mechanistic Idea

E. G. ASPLUND: ARCHITECT

IN a letter addressed to the Editor of *The Architectural Review*, and printed as a foreword in the August issue, His Excellency Baron Ramel, Minister for Foreign Affairs to H.M. the King of Sweden, writes: "With great interest I hear that you intend to devote a number of your eminent periodical to Sweden and in particular to Swedish architecture. No doubt modern Swedish architecture can offer a great deal of interest even to the foreigner, possibly more than one is inclined to imagine. The country is perhaps still too little known abroad to be fully valued in every respect. This (August) number of *The Architectural Review* will certainly contribute to spread knowledge about our country.

"The event that for you has actualized Swedish architecture is, of course, the Exhibition held in Stockholm, which has aroused many impassioned discussions in Sweden, as well as in foreign countries, on account of its new orientation and its unscrupulous rupture with architectonic principles hitherto prevailing."

An article discussing the Exhibition buildings has been specially contributed by P. Morton Shand. It is illustrated with many views of the Exhibition, including a portfolio of plates, with plans and working drawings of some of the buildings, illustrating the new methods of construction in glass and steel.



As Mr. Shand observes, Gothenburg Exhibition showed that Sweden had a natural gift for planning and organizing exhibitions such as no other country possessed. It was natural enough, therefore, that the world should have been waiting for the present Stockholm Exhibition with intense suspense. For one thing, it was on a much more ambitious scale than Gothenburg, and, for another, it was to be exclusively devoted to Swedish arts and crafts.

The reactionaries hoped that it would definitely stem the tide of "Cubism" (by which they meant the evolution of the one style expressive of our own age and not hypnotized by the dead hand of past centuries); the progressives, that Sweden would rally whole-heartedly to Modernism and give it the definite orientation which it still lacks.

It may as well be candidly admitted, he goes on to say, that we erect mechanist buildings, not because we must, but because we like them. Whatever the near future may bring forth, there is today absolutely no practical necessity for adopting the mechanist hypothesis in building construction. Asplund could probably have done the exhibition rather cheaper on neo-traditional lines in lath, canvas, and plaster. He did not do so because he did not want to do so. Mechanism may be the whim of the moment, but that does not alter the patent fact that there is more to be said for it than for any other.

Thereafter, he points out, the world will look up to Sweden as the supreme exponent of a Modernism which has succeeded in finding its own soul and embellishing itself with a purely mechanist grace, just as till yesterday it regarded her with such ravished eyes as the ultimate expression of a daintily fragile charm, pure, delicate and aloof as the scent of some wild flower that defies the fashionable alchemists of the Rue de la Paix.

For the 1930 Stockholm Exhibition has at least taught us that the future of the machine as an integral organ of modern culture is assured; and that its technical perfection as an art-form is only a matter of time. In it there lies the germ of an Augustan architecture magnificent enough to satisfy both the conditions and the aspirations of a great, a golden age, and worthy of man's ultimate enfranchisement from the tyranny of matter and the superstitious terrors of his own timid and hide-bound imagination.

[*From* The Architectural Review.

The front of the main restaurant of the Stockholm Exhibition, which forms the focal point of the promenade and faces the distant entrance. It is built of steel, glass and vitrolite. The moons are large balloon lights inside the main restaurant, which is planned on the first floor.

Main Restaurant, Stockholm Exhibition.

ARCHITECTS' RESPONSIBILITIES

Questions of Negligence and Liability

MUCH interesting information concerning the responsibilities and liabilities of the architect —and, incidentally, the engineer—was given by Mr. W. T. Hills, F.S.I., in reading a paper at the annual general meeting of the South-Western Branch of the Institution of Structural Engineers.

An architect or engineer may act in four distinct capacities: 1: That of designer only, until he is instructed to obtain tenders or to proceed with the work of construction. 2: That of agent to the building owner, and supervisor from the commencement to the completion of the work. 3: That of quasi-arbitrator between the parties, which means that a person must in fact (though not with regard to procedure) act as arbitrator between the parties in respect of matters which are left to his judgment by the contract. 4: That of arbitrator. His duties and liabilities in these various capacities are quite distinct.

Where the engineer, or architect, acts on account of his skill or professional knowledge as quasi-arbitrator to determine some points between two parties to a contract, he is not liable, says Mr. Hills, in that capacity for: *a:* want of skill; *b:* ignorance of law; *c:* negligence, to either owner or contractor.

Mr. Hills sums up the position as follows:

When placed in a position in which he has to exercise his judgment impartially he is not liable for negligence in the exercise of that judgment, and it is not necessary that he should be, in the strict sense of the term, an arbitrator, as he is not bound to follow the procedure of an arbitration under the Arbitration Act, 1889, but is in the same position as an arbitrator in respect of the impartiality with which he must determine questions referred to him.

Where a person enters into a contract giving the architect this power, he cannot afterwards reverse his position and allege negligence. Where acting as quasi-arbitrator, the architect is not liable to the employer for negligence, but he is so liable when acting as employer's agent, and the question will always arise whether alleged negligence took place while the architect was acting in the one capacity or in the other; when invested with the dual capacity it is most difficult in the case of a dispute to decide this question. It would therefore seem that it is advisable to provide in any contract an arbitration clause rather than that the architect should be appointed to decide finally any matters arising.

The arbitrator or quasi-arbitrator may not substitute the judgment of another for his own, though he may leave ordinary or routine duties to assistants, but he is at liberty to consult experts for his information upon legal or technical questions arising out of any matter referred to him. Such advice or information must, therefore, be obtained from a proper and professional source, and an arbitrator must not adopt an opinion which he himself does not believe to be accurate. Any impropriety with regard to delegation of duties may serve as a ground for setting aside the award.

An architect is not responsible unless works have in fact been entrusted to him. If the client or owner insists on superseding the architect's judgment, and asserting his own opinion relating to construction and design or giving orders which are ignorant and unskilful, he cannot complain of the result if his orders are followed, provided that before complying with the orders, the architect disclaims all responsibility therefor.

An architect or engineer is not relieved from liability for professional negligence in regard to plans or projects which he has prepared and which may have been examined and approved by the client.

Even when the client has actually signed and passed the plans, it does not release the architect for liability for defects in the plans, or structural defects, which the client is incompetent to decide upon mere inspection.

If a professional man does not exercise his calling with ordinary skill and care he breaks the contract expressly made or implied with his employer. In such an event he is liable to dismissal and to forfeit wholly or in part his right to be paid, or he may be compelled to refund the whole or part of any fees which may have been paid to him.

Among the acts mentioned by Mr. Hills which have been held as proof of incompetence and lack of skill and to render the engineer or architect liable for negligence were the following:

An architect can render himself liable by advising a client that a building will cost less than the amount it actually does, if the excess of cost is so great as to show want of care or skill in making his estimate. He may be unable to recover any fees for his services.

Where an architect is instructed, and there is an expressed or implied condition that a structure can be executed for a fixed sum, he may not be entitled to recover commission in respect of designs which cannot be carried out for such sum.

Where an architect is restricted as to the amount to be expended and has obtained tenders which are too high, he is entitled to obtain further tenders within a reasonable time without exceeding his authority, if he does not put his client to any unauthorized expense or delay.

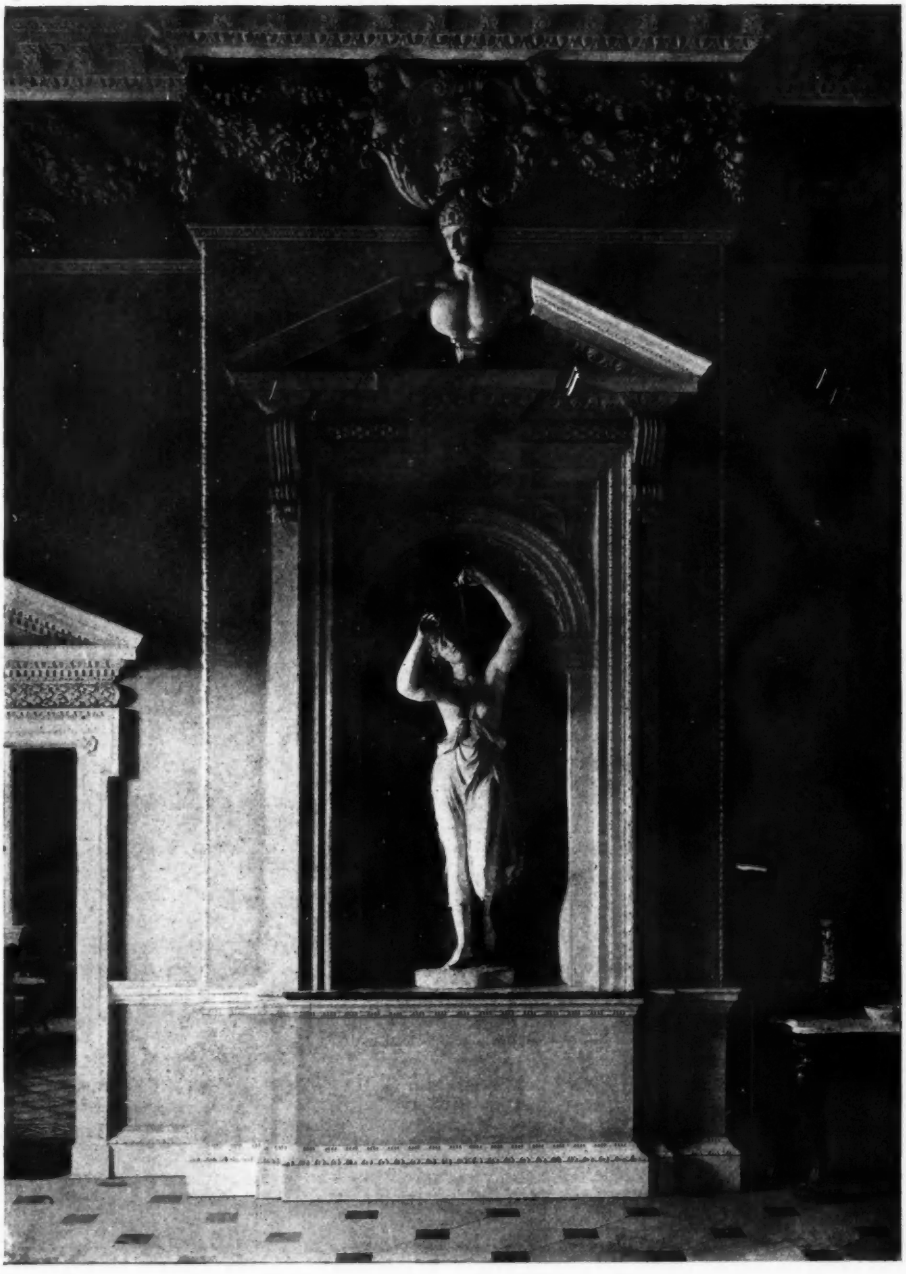
In considering whether he will allow the architect to obtain further tenders, or whether to refuse to proceed further, or to determine the employment of the architect, the client must act reasonably according to the contract between himself and the architect.

If an architect does not obtain tenders within a limited time, he may, by being guilty of neglect, render himself liable in an action for any damages which his client may sustain.

It is an architect's duty not to allow an employer to enter into a contract with a person whom he has any reason to suspect of being unable, from financial, or any other reasons, to carry out the work with all due speed and in a satisfactory manner.

If an architect fails to discover unsatisfactory work and defective materials, as he should do in the reasonable exercise of his duty at the time when the work was done, or when the defects should have been patent to a skilful person, he may be liable.

By the expressed terms of a contract a builder is generally freed from all liability after the architect has issued a final certificate at the expiration of the period of maintenance.



The liability of an engineer or architect for negligence towards his employer terminates under the Statutes of Limitation at the end of six years from the time of the act of negligence.

For fraud upon a contractor the architect remains liable for six years from the date when the person injured either has discovered the fraud or with reasonable diligence ought to have discovered it.

When an architect authorizes trespass into adjoining lands or excavates under adjoining houses it is submitted that he would not be free from liability until six years from the accrual of the damage from the trespass, such as subsidence of the land or house under which excavations have been made, inasmuch as in those cases each subsidence gives a fresh cause of action.

It is the custom for the architect to retain plans which he has prepared, even though such custom has been held to be unreasonable, and in any case he has a lien on them until final payment of his fees. It would appear that plans, etc., become, when paid for, the property of the employer, and that he can subsequently make use of these when he pleases.

The copyright, however, remains the property of the architect.

ENGLISH PRECEDENT No. 128

NICHE AT GODMERSHAM, KENT

During the first quarter of the eighteenth century the interior decoration of large houses became more classical. At the same time there was a revival of the manner of Inigo Jones. Niches were introduced as internal features for two reasons: primarily to form focal points or balancing motives, and, secondly, to provide recesses for antique sculpture. Owing to the immense importation of classical antiques the second reason is the most obvious one.

The influence of Lord Burlington, and the coterie of architects who flourished at the time, is apparent in examples of niches with consoles and broken pediments, such as the one illustrated. As examples of pure architecture such features are indefensible.

—[A. E. RICHARDSON]

LETTERS FROM READERS

Guildford Cathedral Competition

SIR,—May I suggest that others beside myself would be glad of some informed comment at an early date upon the competition for Guildford Cathedral. It is quite in the Liverpool tradition to invite portfolios from recognized church specialists, but to suggest that anyone should submit a "design for a cathedral" without reference to site or size, and, above all, without indication of the liturgical taste of the diocese, seems unlikely to help the promoters.

For example, a wealthy donor may turn the whole scale on the position of the High Altar, or a really fine essay in modern "early Christian" might be rejected out of hand because one of the canons liked Mr. Ruskin *so* much.

I understand that a site has been selected, and that there has been some considerable local canvass of the question, but competitors are apparently to be without guidance. It is all rather like the "monument to nothing in particular" which is said to have been designed by one of the leading architects recently.

There is the further point that younger men will be prejudiced from the start because they have no dusty portfolios of Gothic churches in the office, and will thereby be labelled as inexperienced in such projects.

"FANE"

Manufacturers and Bribes

SIR,—I have read *The Honeywood File* and *Settling-Up Honeywood* with a great deal of interest and no little amusement, but I have a bone of contention with Karshish, in the picking of which I think I shall be giving expression to the views of a great many other people besides myself.

If a narrative of this description is to have the verisimilitude which its author claimed for it at the beginning of the series, it is clear that Spinlove must be regarded as in most essentials the typical architect. In the same way, the characters with whom he comes in contact during the story must equally be regarded as typical.

It is, therefore, not a little distressing to find that throughout the story practically all the manufacturers who appear in it are depicted in the blackest possible colours, and represented as being prepared to stop short of nothing less than murder in their mad race for orders and their manufacturing of pretexts for unfair charges. In your last issue the picture is rendered still more unfair by the spectacle of a presumably reputable firm of brickmakers offering Spinlove a bribe of £25 to further their nefarious ends.

Surely this is going a bit too far. One knows that the picture is intended to be highly coloured, but at the same time one cannot help feeling that the impression is being given that the majority of architects look upon the majority of manufacturers as a set of sharks. This is not the case, as we all, including Karshish, know from our personal experience; but all the same, the implied insinuation leaves an unnecessarily nasty taste in the mouth.

"FAIR PLAY"

Group Specification

SIR,—I have read with interest Mr. Seymour Reeves's articles on the "group specification"; but I see little in them to convince one of the desirability of a change from the present method.

A group specification would no doubt be more easily understood by a client unfamiliar with the conditions of the building trade, but for those who actually carry out the work I consider the present specification in trades more suitable.

A specification is written in trades because the work is carried out by trades, and although trades are not now let separately, yet some, such as slater, plasterer and plumber, are almost invariably sublet by the general contractor, and so it is essential that each trade should be able to find out readily what work is required—no easy matter with a group specification.

The clause (to which Mr. Reeves so much objects) stating that all walls are to be plastered except where otherwise described, can be made perfectly clear either by briefly mentioning the walls not to be plastered, or by cross referencing, and this method will much more readily convey the information the plasterer requires, than expecting him to wade through pages of internal finishings.

C. W. PERRY

SIR,—It is quite true, and I agree with Mr. T. Sumner Smith's remarks in your last issue, that I am acquainted (in practice) with but one type of specification. I am very grateful to Mr. Smith for his clear exposition of the types and usages of specifications, because I have had doubts for some time as to the efficacy and equity of specifications as represented by the practice in Oldham and district. I have been conscious at times of the rumbling dissatisfaction of contractors both as regards specifications and quantities.

However, amongst architects in our district the idea prevails that a specification is necessary only for a contract without bills of quantities, and not necessary when bills of quantities are supplied. The bills of quantities form the basis of the contract, acting as a schedule, and any variation, whether by increase or decrease, is rectifiable at the squaring up of the contract.

I should be pleased to learn what obtains in other districts regarding bills of quantities and specifications.

I should also like to know if there is any book dealing with this aspect of the subject. One learns very little about the relative values of specifications and bills of quantities except by experience.

LYNN C. DOYLE

Lighting the Bodleian Library

SIR,—I was interested to read in THE ARCHITECTS' JOURNAL, for April 23 last, page 660, a description of the precautions taken to avoid fire risk with the electric lighting installation at the Bodleian Library, Oxford. The precautions which have been taken are, of course, excellent. It occurs to me, however, that in view of the great value of the contents of the Bodleian Library, it might be worth while to go a little further and make the installation into what I believe would constitute a perfectly safe one. To do this, alternating current is necessary, therefore if direct current is in use, a small rotary converter would be required to change the supply to alternating current. This would remove the danger of producing an electric crater and consequent long arc and high temperature in the event of an arc taking place.

Once alternating current is in use, two further precautions could be taken: either small transformers could be used in the distribution circuits so that the possible short circuit current would be reduced and the amount of power which could be fed into a fault would be so small that a fire is hardly conceivable, but the better plan, I think, would be to raise the frequency of supply to about 300 cycles per second, which Prof. Thornton's investigation into colliery work shows reduces the fire risk to a negligible value.

Alternating current at 300 cycles could be obtained from the direct current supply by a suitably constructed rotary converter, or from an existing alternating current supply by means of a static frequency changer. Both of these devices are quite inexpensive, and I believe that the adoption of either of these methods would greatly reduce, if not entirely eliminate, the fire risk.

L. C. GRANT, M.I.E.E.

Settling-Up Honeywood : xii

DRY ROT APPEARS

BY KARSHISH

(H. B. CRESWELL)

Sir Leslie Brash, the owner, has complained of various defects, of which the failure of the paint is alone of any seriousness, and has raised outcry at the total of the extras claimed by Grigblay, the builder, of which exact details have still to be settled by the architect, Spinlove.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 11/8/26.

I think you will like to know that after considerable trouble I have at last succeeded in securing refund of ninety-two pounds which was overpaid to the manufacturer of the facing bricks by mistake.

With kind regards,

Yours sincerely,

Spinlove's guardian angel seems to be resting after the heavy task of seeing him safely through his struggle with Hoochkoft ; for though we have had many examples of Spinlove's impetuous folly, he has never surpassed the adroit idiocy of this letter.

It is obviously desirable to avoid pushing poor old Brash's dislocated nose down into the extras account, yet Spinlove here goes out of his way to do so. Not only is any letter at all quite unnecessary, but Spinlove entirely discredits himself by vaunting his achievements. His childish impulse evidently was to court Brash's esteem ; but to do so it was important for him to put that strange face on his own perfections which Shakespeare tells us is the witness of excellency. His noisy acclaim of his own scanty merit, which he represents in the worst possible light, can only make his client sick with distrust. If Spinlove had merely allowed the fact to emerge without any exhibition of complacency, his client would have been favourably impressed with his capacity and devotion ; but what is Brash to think of an agent who writes, with kind regards, applauding himself for making a merchant give back money that ought never to have been paid ; and who breaks the news with " I think you will like to know . . . " as though such glad tidings were beyond all imagining ?

The explanation no doubt is that Spinlove, in the exhilarating moment of victory, is moved to demolish the adverse criticism of Brash's last letters ; and writes, as he so often does, without pausing to consider what he is doing.

BRASH TO SPINLOVE

Dear Mr. Spinlove, 13/8/26.

I was, of course, gratified to receive the intimation communicated by your missive, but you must permit me to convey the comment that the considerable difficulty you experienced in exacting repayment of an erroneous disbursement does not favourably impress me with the expeditious conclusion of negotiations for settlement. May the interrogation be permitted *why* the excess amount was paid to these grasping manufacturers; how many more of these irregular disbursements have been allowed; and when—may I ask again—shall I eventually receive the detailed statement of account so often promised ? This account, it is now obviously clear, will have to be carefully audited by qualified accountants.

My lengthy negotiations with the Riddoppo Company, anent the failure of the paint, are now approaching termination, and I shall shortly have further communications to indite.

Yours sincerely,

Brash's auditing accountants will not get far with Grigblay's statement of account, and are likely to raise many more questions than they can understand the answers to, so that the resulting turmoil will bring Brash much more suffering than consolation. The proposal itself is, however, futile : Grigblay would refuse to allow interferences, and Spinlove and Tinge (the quantity surveyor) would support Grigblay, for under the contract Brash has agreed that the architect shall decide all technical matters and questions of fact, and that the quantity surveyor shall measure and value all variations, so that these auditors would have no standing.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 14/8/26.

In reply to your questions :

(1) The excess payment arose from the manufacturer supplying bricks some of which I condemned as not up to sample. He then supplied a better quality for which he charged a higher, unauthorized, price. In order to secure a refund I had to make good my contention that he was not entitled to a higher rate than that quoted for bricks to approved sample.

(2) None.

(3) Directly I receive it.

Yours sincerely,

Spinlove's hackles were erect when he wrote this.

MISS PHYLLIS BRASH TO SPINLOVE

Dear Jazz, 14/8/26.

Mum is away so what about a beano on Saturday sans all parental tennis crocks; just Snooty, Biff, Woggles, Boojum, you and me—a whole afternoon of fast and furious. Boojum wants Snooty for keeps, but don't let on as it's most *frightfully serious*. Boo served *hat fulls* of doubles last Thursday and poor Snooty dunno where she are. Buzz in early and bring tuxedos and pys as the caboodle flits to Bingham's at nine. Only the usual old rampage but Porky B with two snotties out of his old bum-boat are there on a week-end binge and we shant go home till the Hullaballoo-bala-balay. I'm *perfectly* potty but you know what I mean.

Now don't scream, but :

There's suthin' funny amiss, Miss;
Along by the pantery sink.

Thus our Judith cussically obsairve (see Art. Ward) jerking poetry in your honour. Seriously, the suthin' funny is decidedly dud. Dad is having the paintwork scrubbed to keep it from flaking off and today the fairy hand of Judith burst the wood thingy that runs along under the sink. It is evident suthin' is amiss, for the wood is bulged, and cracked and woolly, and seems to be crumbling and it is very much rather all along under the windows in the kitchen. No one dare tell Dad except Mum, and it is a shrieking necess to have suthin' done before they come back in three weeks' time. Dad joins her on rest cure next week.

Meet the posh cubby hole and patent pocket nest Mum has made of the box-room ! You really never ! It's *too* dilly ! Twice as good as a caravan ! Copied from the " converted attic " at the Ideal Homes Exy but *ever so much nicer* as the window is simply microscopic and it is all dim and penurious, and the roof slopes so that you can only stand up near the middle but, of course, when its a case of sits there is tons of room. The windey stairs are absolutely thrilling and there is the most dinky furniture you ever and Mum and I simply *cuddle ourselves* there. Mum bought an old dud grate she saw lying in a cottage garden for *one and ninepence*, which was a bargain as the man asked two shillings at first; and Grig's people made a fireplace with it. Mum is trying to find some old oak beams so that it will all be posher; and old panelling for the sloping part where the white comes off. We will have tea up there on Saturday.

Yours

PUD.

Mum is going to be psychoed.

This letter has probably been preserved to us because of its intimation of dry rot ; for that fell disease, which is a more fierce enemy of new houses than of old ones, is here clearly indicated. We now know why Lady Brash asked Grigblay to arrange a fireplace in the boxroom.

SPINLOVE TO GRIGBLAY

Dear Sir, 17/8/26.

I was at Honeywood during the week-end and it was pointed out to me that the skirting under the pantry sink is crumbling away like touch-wood. I imagined that water from the sink had rotted it, but there is no sign of wet, and the skirting along the outer wall of the kitchen is going in the same way. It is clear that the wood was not properly seasoned and it will be necessary to renew these skirtings at once.

Yours faithfully,

It seems that Spinlove has never seen, or smelt, dry rot; but one would think that he might have guessed what the extraordinary condition was due to. To attempt to cure the trouble by fixing new skirtings would be like trying to extinguish a fire by throwing fuel on it. The only remedy is to remove the whole of the rotted wood, to thoroughly sterilize surroundings and to discover and end the cause of the outbreak.

GRIGBLAY TO SPINLOVE

Dear Sir, 20/8/26.

We gathered from your letter that dry rot is the trouble and yesterday sent over our shop foreman Hassoks, who says no great harm done but it has got into the back of the china cupboard. He pulled the angle scotia off and there it was five feet up, but does not seem to have taken any hold. He says it has started on the edge of wood-block flooring but not gone far he thinks. The kitchen is not so bad, but there is a soft place in the skirting at foot of stairs and it sound dead all along, Hassoks says, so it has got a hold there too. We do not know cause as Hassoks reports walls seem dry as a bone. Perhaps you would like to meet Mr. Grigblay at the house and decide what best to be done, and if you will appoint a day we will send over to take out the cupboard and open up for your inspection.

Yours faithfully,

This is a bad business; but how bad remains to be seen.

Dry rot is a disease of timber caused by various species of fungi which feed on wood, penetrate it and destroy it. Infection is by contact with diseased wood, or by spores latent in it, borne on the air or conveyed by dirt. If conditions favour its growth, dry rot may be regarded as inevitable; if they are unfavourable there is no danger. Favourable conditions are the coincidence of damp with warmth and lack of ventilation; and it is particularly the responsibility of architects and builders, as the law decrees, to so design and build that those conditions shall not anywhere arise. As warmth is always present in a building, and it is impossible to ventilate every cranny of it, damp is regarded as the prime cause of dry rot. The need for entire prevention of damp is, therefore, always in the mind of the architect, the builder, the clerk of works and the foreman in charge. Ventilation, by carrying away evaporation, is a safeguard against "damp." The beauty of dry rot—in the opinion of its admirers—is that when it once gets going it sends out, with devastating rapidity, thread-like tendrils which carry moisture yards from the source over the surface of walls, and even through them, and which multiply to form mats of dense, cobwebby filament, that collect moisture from the air and so set up and maintain new centres of growth from which new foraging tendrils spread. Thus the good work continues, so that one solitary brick carelessly thrown into the broken rubbish under the concrete foundation of a wood-block floor, and disposed in such a way as to conduct damp from the ground to the concrete, may set up in the wood blocks dry rot which in a few weeks will have travelled to the space behind skirtings, invaded the back of the door linings, passed into the staircase and involved the first floor before its presence is anywhere noticed. The circumstances that give rise to dry rot are innumerable, and are a continual source of interest and pleasure to irresponsible observers; but the conditions of damp, combined with warmth and lack of ventilation, are always present.

Two days after a radiator is installed below a sliding sash window in an unfinished house, dry rot has started inside one of the jamb casings and involved the whole of it; eighteen months after a roof is finished by pointing the tiles without ventilating the roof-space, sagging outlines reveal that the whole of the inside surface is a mass of cobwebby fungus, and that the timbers are perished to the point of collapse; and, as in a case made famous in the Law Courts a quarter of a century ago, the floors and joinery of a hospital are renewed at a cost of several thousand pounds because the wooden pegs driven into the ground to fix the screeding-level of concrete floor-foundations were not taken out. What exactly has happened at Honeywood we do not know, but some source of continuous dampness in contact with the skirting, or with other woodwork near to it, is indicated.

SPINLOVE TO MISS PHYLLIS BRASH

21/8/26.

I am coming down on Thursday to meet Grig about the pantry do. Am arranging to get all done before the two P's return; but there will be carpenters to take out the china cupboard so will you get the crockery cleared.

Apparently Spinlove has some sensitiveness about typing his superscription and subscription to this lady. It is, of course, inadvisable to delay the work, for the harm is growing, and it will occasion less upset—both physical and moral—if all is completed before "the two P's" return.

Spinlove's light-hearted assumption that the trouble can be readily cured, when he does not yet know the cause of it, is lamentable. It is clear that not only has he had no experience of dry rot, but that he has no knowledge at second hand, or he would view this manifestation of it with consternation. The rot in the pantry and kitchen may be only first evidences of an outbreak involving the whole of the ground-floor skirtings, which may itself be but the first visible flicker of flames that are raging out of sight in the floors, and which have already secretly invaded the cavities at the back of panelling and of door and window linings and of fireplace surrounds. Even this does not measure the full dimensions of the possible catastrophe, for not only has the damaged work to be restored and all parts near it to be doctored to destroy the infecting spores of the fungus, but the cause of the outbreak must be fully proved and, when proved, then entirely eradicated; and as this cause may be fundamental in the design of the structure or inherent in the materials employed, the little pieces of decayed skirting, as every experienced architect knows, may, as likely as not, signal a great calamity.

SPINLOVE TO WYCHETE, P.P.R.I.B.A.

Dear Mr. Wychete, 24/8/26

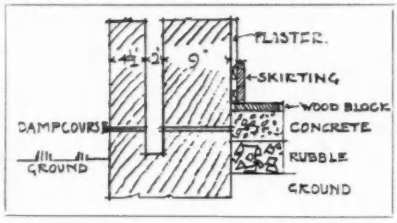
You have been so extremely kind in the past in advising me that I hope you will not mind my troubling you, but I have a case of dry rot which I do not know how to deal with. I enclose linen prints of $\frac{1}{8}$ in. scale plan, and $\frac{1}{2}$ in. section of the outer wall.

The house has been occupied now for six months, and the deal skirting along the outside (north) wall of the kitchen, pantry and hall (up to the stairs) is rotted, and the under edge of the Columbian pine wood-block flooring has begun to go in places. The larders, scullery and cloaks along the same front are tiled and have tiled skirtings. I should mention we pulled up some of the wood blocks, but there was no sign of rot except just at the outer edges, and no evidence of rot anywhere else; and though the growth had run up behind the china cupboard the wood was sound.

The walls behind the skirting were "bone dry," the builder said, but he was doubtful of the concrete under the block floor. We cut this away where it lies against the wall, and the builder then said he understood the cause.

If you look at the half-inch detail you will see that the dampcourse lies just below the concrete foundation of the floor; but the floor was lowered $1\frac{1}{2}$ inches after the dampcourse was built, and the bottom of the concrete comes an inch *below* the dampcourse. The brickwork below the dampcourse is full of water, and the builder says that damp is drawn into the concrete where its lower edge lies against the wet bricks, and that this has started the dry rot. Can this be possible? He also says that the water creeps up between the bricks and the concrete, and gets

into the brickwork above the dampcourse, but I could not see any evidence of this. Do you think he is right? I could see no sign of damp myself. Before we cut away the concrete he thought the trouble might be due to the rain, which beats through the outer 4½ ins. of the hollow wall, collecting on the dampcourse, and getting into the inner wall, but he forgot that the hollow goes down *below* the dampcourse.



The main question is—If the builder is right, what is to be done? He says he cannot advise me; that he built as I directed and cannot accept responsibility. I pointed out that *he* suggested lowering the floor so that the threshold of front entrance would line up with the brick joint and make a neat finish; but he says that the decision was mine and that he followed my directions in lowering the floor.

The north wall of the billiard room is panelled in oak and the floor is of oak boards nailed to fillets let into concrete. The panelling is ventilated behind by openings in the skirting and in the top of the capping. There is no sign of dry rot here, and the builder says he thinks there is no danger.

I should be so very much obliged if you will tell me what you think I had better do, if it is not troubling you.

Yours sincerely,

The sketch below illustrates the positions of the floor and dampcourse described.

The eminent Wychete must be a good friend indeed to lay himself open to the fatigue of solving posers of this kind; and Spinlove must have great confidence in his opinion or he would consult a friend closer at hand instead of writing to Manchester, where, as his address indicates, Wychete operates. We know from earlier letters that the site of Honeywood slopes towards the south, and that it is only the floors on the north side that are laid directly on concrete. The others are carried on joists supported on sleeper walls.

[NEXT WEEK: XIII—FRED BLOGGS INTERVENES]

ART AND INDUSTRY

"Are Art Schools Assisting Industry?" was the subject of a paper read by Mr. Henry G. Dowling at a representative gathering of art masters from all parts of the country, held at the Victoria and Albert Museum, on July 31. Below we print extracts from Mr. Dowling's paper.

THERE has been a radical change of outlook since the days when the old art school only sheltered those who were anxious to boast of art as an accomplishment, or were desirous of becoming art masters. Such a system was largely responsible for the superstition still to be met with—that the artist is a soulful dreamer, an individual to be preserved from the imaginary destructive influences of commerce.

As a peculiarly manufacturing nation, it is well that such is the case, for the connection between art and manufactures is most important. It is well that art is not now solely the beautiful, ennobling and vital thing known as "fine art" with the old-time official scholastic phrases, grandiose and aloof from the common wants of man. Today it has far-reaching effects on every phase of domestic and industrial life

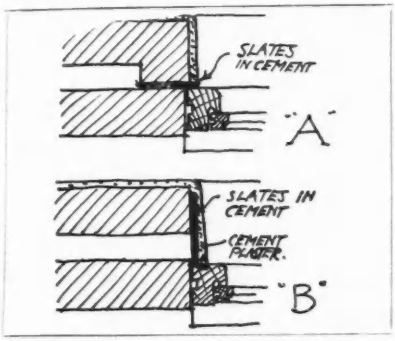
Too long there has prevailed a wrong conception of the status of the artist, who was looked upon as being superior to the craftsman. It was generally conceded that the man who painted a picture or produced a piece of sculpture reached the highest means of expression, whereas he who served the community by carving or gilding a frame, or painting a carriage, was merely a skilled artisan and was in an inferior category. Such art assumptions and decadence of thought are outcomes of a non-producing age. The outlook on life in general has materially changed that, and the production of useful commodities for the many is now esteemed of greater importance than the production of luxury for the few. Parallel with this, progressive manufacturers are at length appreciating that artistry in their products is a commercial asset, and though this may be true of a small proportion only, yet together these two facts are attracting artists to industry. Our schools of art must function for this specific purpose.

Our industrial pre-eminence was gained in the first place by aiming at quality in production—quantity followed as a natural consequence of the appreciation of good things, and we have inherited the responsibility as well as the glory of long built-up artistic traditions. The introduction of the machine ushered in an era of vast manufacturing activity, but tended to "dull" quality, with the result that craftsmanship became exclusive and its products were reserved for the patron of the arts, so that art and industry drifted apart. The modern school of art exists to bring them together again, and I am confident that records show many successes of students who have gone into industry imbued with imagination and possessing a sound knowledge of the principles of art.

And—discovery of discoveries!—the business man has come to the conclusion that there is money in art. Just think for a moment of the emphasis placed on design in the metal trades—of colour in gas ranges, of kitchen fittings and containers, of bathroom fittings—all proving an interest in æsthetics and a willingness to make use of artists to express the age in which we live.

Indifference to opportunities will result in certain classes being claimed by science men. With the developments now in progress, disaster will positively ensue if proper recognition is not given to art-craft classes, such as painters' and decorators' work, cabinet-making and lithography—work that absolutely calls for definite guidance and control by an artist rather than a mere technician. Art masters must jealously guard such classes, and see that they develop them along right lines; otherwise there is grave danger of instruction being given merely to drill the student in what will only make him more useful for his particular job in the shop.

There is a demand today for creative artists, literally *architects*—men who can design things. It is therefore imperative that such men should be eminently practical and acquainted with the needs of this mechanized age. Line, colour, proportion are equally as important as fitness of structure. It has been said that in this age of movement in speed and photography the artist has been robbed of his recording function, but I believe all our ingenuity will be called upon before long to cope with all the demands of a discriminating public who insist that their artistic needs shall be diagnosed and met by trained specialists.



Lastly, I tender a suggestion to those in control of art education. I believe a national survey and report on art and its relation to industry would be opportune to ascertain, as accurately as possible, the present situation and the demands of our art industries as regards standards of design and conditions governing such standards. Such a report should be definitely objective in intention and procedure, and should most certainly be exhaustive in character. If responsible individuals prominent in art industries were invited to serve on such a committee, with instructions to make trade surveys and concrete recommendations, it would then be possible to adopt intelligent measures for the improvement of industrial art.

QUESTIONS THAT ARISE

Cavity Wall

T. F. C. writes: "*What is your expert's opinion on the following points? (1) In designing a two-story residence of concrete blocks on an exposed site, is it better to take the cavity all around the building, stopped only by the window and door linings, or to build the jambs of windows and doors, and corners of building, solid? (2) What is the best way of fixing window frames in a cavity wall that has not been built solid around the openings? (3) Which do you consider the better wall for a two-story dwelling-house in an exposed situation—a: a 12-in. solid concrete wall; or b: an 11-in. cavity wall?*"

(1) If jambs are built solid, without precautions as to dampcourse, driving rain will inevitably saturate them, and the advantages of cavity construction be lost. The two alternatives are (a) To build solid but unbonded, with a continuous slate dampcourse vertically as sketch A; (b) To take

These sketches (plans) illustrate the points raised in the accompanying query on "cavity walls."

the cavity through, subsequently closing up with slates set in cement and plastering thereon with cement undercoat as in B.

(2) Frames should be set in the outer thickness of the double walling, as in sketches illustrating (1).

(3) In a really exposed situation cavity walling properly built and safeguarded at openings is much more reliable. E. G.

Painting Galvanized Iron

A. G. B. writes: "*I have some galvanized iron pipes in a building which are, unfortunately, in a conspicuous position. The last pipes of this kind that I had painted I had trouble with—the priming flaking. Is there any special method of preparing I can specify?*"

I would suggest that in the case quoted the piping was not perfectly clean before painting. All such pipes should be cleaned immediately before painting with pumice stone and turpentine, to free them entirely from grease and dirt.

If a metal primer does not then adhere, a good practice would be to sponge over the surface with a solution of copper sulphate, about ¼ lb. to a gallon of water. This will develop a key to which any good primer will adhere after it is dry. The remaining coats can be applied of any desired colour.

P. T.

Location of Water Main

G. E. H. writes: "*I have a client who has recently bought a house in a country district. As the pressure of water in the house is rather poor, I have asked the water company to locate the pipe between the main in the road and the house, as the trouble may rest there. For this purpose the water company is having a trench dug on my client's land, along the side of the road. What is your expert's opinion on the following questions? 1. Can the water company call on my client to pay for this excavation? 2. Is there an instrument in the nature of a stethoscope or some electrical device by which the pipe could be located?*"

The particulars given by your correspondent are too meagre to establish absolutely the liability for the work indicated. Normally, when a water company connects a supply to private property, a stop-cock is inserted near the main, and liability for defects occurring on the consumer's side falls on the consumer. The company has usually authority to locate leakages and insist upon their repair, or, failing that, to undertake the work themselves and charge the cost to the consumer.

In the present case, it would appear that no stop-cock exists to indicate the point of connection. In such case the liability would appear to depend upon the actual form of the request made to the water company.

If your correspondent asked them to *indicate* the position of the connection, and they were unable to do so without excavating, they may have undertaken that for their own information. If, on the other hand, he definitely requested them to locate the supply on the consumer's own land, they would normally be entitled to charge for the work unless definite arrangements to the contrary were made.

In the event of a company making excavations on their own responsibility, in order to locate possible faults, the consumer is usually charged only with the cost of repairing, after having been served with an intimation that the defect must be remedied within a specified period.

Regarding instruments for locating the position of the pipe, there does not appear to be any such in existence. The stethoscope type of indicator merely indicates the flow of water through a pipe or cock, with which contact can be made, the vibration of the flow being amplified by the microphone of the stethoscope. The query appears to be one which can only be settled by reference to the water company concerned, and possibly their Act of authorization.

It might be as well to approach the company in a friendly spirit, and point out that the accurate location of the connection is in their interests, and that they should accordingly bear at least part of the cost. A friendly arrangement would unquestionably be more satisfactory than a contention as to liability, since the advantage is always on the side of the company.

A. H. H.

Joints in Flooring

M. J. M. writes: "*The ground floors of a house I built two years ago were constructed on dwarf walls and were of deal, tongued and grooved. They have since opened out, and there is a very objectionable draught when sitting at the fireplaces in the winter. Have any of your advertisers been able to provide against this, or could you suggest any method of caulking the open joints with tow, pitch or compo?*"

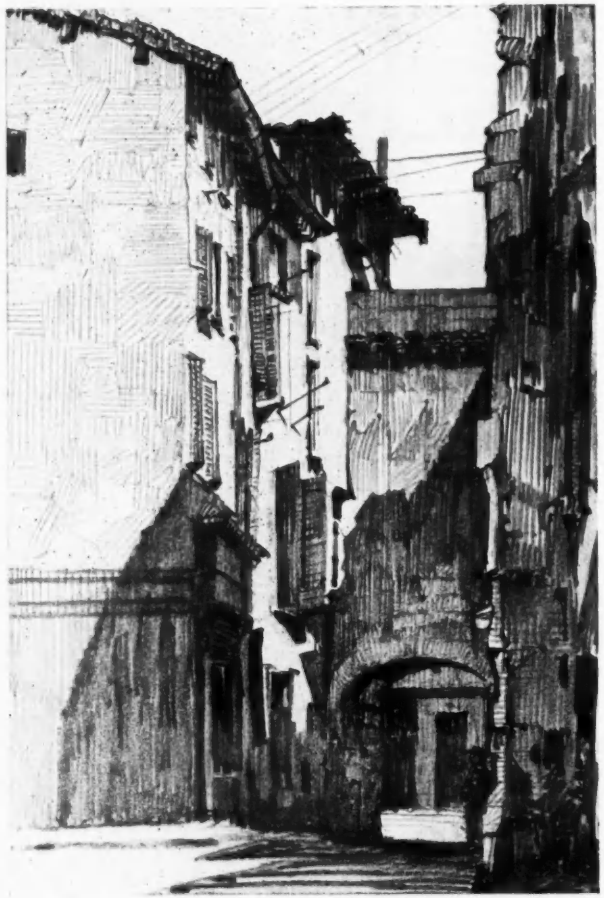
It should be quite possible to fill the open joints with "plastic wood," but as the joints are grooved and tongued it seems more probable that the draught enters between the skirting and floor, due to shrinkage of joists and boarding leaving an open space of about ¼ inch immediately opposite the air-brick vents. Fixing a quadrant fillet about ¾-in. radius, nailed to the *floor boards* in close contact with the skirting, is an easy cure for this.

E. G.

Old Beams

W. E. B. writes: "*I am carrying out alterations to a pair of old cottages in the country, which are constructed with a considerable amount of oak to walling and beams. The majority of the beams are covered with paper, and others are thickly coated with whitewash. Is there any preparation which will remove this without damage to the wood?*"

For the removal of paper and whitewash on old beams I have found the following preparation satisfactory:



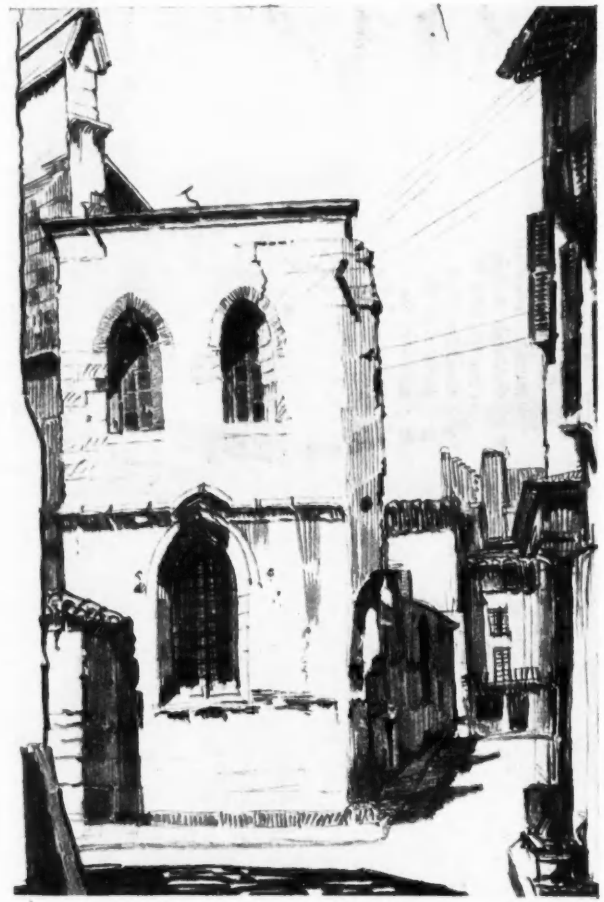
Wash over the beams with clean water and, while wet, apply with a whitewasher's brush a solution of American potash mixed with a small quantity of lime. Allow this to remain for nearly a day, and then rewash with clean water several times and allow to dry.

This will remove all whitewash and paper, and will restore the natural surface of the wood. F. L. B.

THE SKETCH CLUB

NINTH SESSION

DRAWINGS BY THE WINNERS
of the
FIRST and SECOND prizes
in the
June HOLIDAY SKETCHES COMPETITION



Entrance to Cloister Square of St. Pierre, Avignon.
By P. J. Westwood (Pencil and slight wash : 10¼″×7″)

THE south elevation of St. Pierre, Avignon (*frontispiece*), attracts one because of the long vertical lines of stonework, plain heavy buttresses, and concentration of ornament. The café at its base shows the scale. The west front (1512) has wonderful heavily-carved doors and carved stone canopies and surrounding arches. The interiors of the chapels are decorated with XV. century frescoes. The east end is panelled in wood, painted with scriptural subjects, all of the XV. century.—A low archway gives entrance to a delightful small square, formerly the cloisters. A shop built against the church wall, recently demolished, left the rough stonework on the right of the drawing. The plain stone wall above the arch has projecting tiles to the upper part and a plain stone parapet—

A Street in Avignon.
By P. J. Westwood (Pencil : toned paper : 12¾″×8¼″)

THE SECOND PRIZE DRAWING

East End of Cloisters of St. Pierre, Avignon.
By P. J. Westwood (Pencil : 11¼″×7¼″)

"THE Judge's House," or, more correctly, "Mompesson House," was built for Charles Mompesson about 1701, being contemporary with Wren's matured style, although there is no evidence of his association with it. The front is of stone throughout, including the cornice, and the doorway is linked with the window above, to form a central feature.—Steeple Row Gateway forms the north-western entrance from the High Street to the Close; it is a little backwater full of colour, the plaster frontage forming a charming contrast to the age-worn roofs and brickwork.—Ragdale Old Hall, a most picturesque old house, has fallen into sad disrepair and humble occupation. Originally Rahedale or Wreakdale, it belonged to Lord Basset of Drayton, and passed to John Shirley, who built

forming a charming contrast to the age-worn roofs and brickwork.—Ragdale Old Hall, a most picturesque old house, has fallen into sad disrepair and humble occupation.

drawing. The plain stone wall above the arch has projecting tiles to the upper part and a plain stone parapet.—The sketch on toned paper shows one of the old projecting houses whose height and character is most attractive.

P. J. W.

THE SECOND PRIZE DRAWING

Originally Rahedale or Wreakdale, it belonged to Lord Basset of Drayton, and passed to John Shirley, who built the oldest part in the middle of the XVI. century. His grandson, Sir Henry Shirley, in 1629 added the stone porch, emblazoned with his coat-of-arms. A. S.

THIS week the walls of the Sketch Club are adorned with six out of the sixty drawings sent in under the rules of the June competition. In addition, that which won the first prize is reproduced as frontispiece to this number. It is hoped to hang a further selection in future sessions. Meanwhile, the fruit of sketchers' July holidays is arriving : the closing date is two days hence, August 15. The attention of intending competitors is drawn to the rules printed on page xiv, especially that prescribing the use of motto labels ; several entries in the competition just closed were disqualified by reason of non-compliance with this condition on the part of their senders.

LITERATURE

THE ANNUAL REPORTS OF THE C.P.R.E., AND S.P.A.B.

IT is one of the remarkable things about the C.P.R.E. that it has been successful from the first. Five years ago very few people were interested in the preservation of the beauties of England. Today nearly every intelligent man is interested, and a vast number, actively interested.

There were several societies in existence before the C.P.R.E. was born, who were engaged upon work of preservation. They ploughed a lonely and not too fruitful furrow. The coming of the C.P.R.E., with ideals as lofty and a spirit much more combative, raised the need of preservation from a local to a national issue.

Two things the C.P.R.E. visualized as vital to their work. One was that they must pursue a policy of education and propaganda if they were to find any strong backing for what they had set themselves to do. The other lay in the realization that preservation was only half the battle, and that an entirely new mental attitude must replace the hopeless indifference of a vast section of the community to their surroundings, before we should hope to see England preserved and made beautiful again.

To a certain extent the public was ready to receive the ideas which the C.P.R.E. spread broadcast, but it is mainly due to the intense and burning activity of the founders, who used all the means of publicity they could command, that the active need for preservation, and the new feeling for decency in our everyday surroundings, got home to the man in the street.

Goodness knows, one may say, looking round in any direction, we have a long way to go. We have, it is true. But, thanks to the C.P.R.E., we are on the move.

The outstanding feature of the year, to those whose interest is in the state of the society apart from the result of its efforts, is the gift by Mr. Boies Penrose of £10,000, conditional upon an equal amount being raised by subscription, together with the gift of a similar sum by the Carnegie Trustees. Wonders may be done with voluntary help, but propaganda needs money, and the C.P.R.E. must live for some time on the support its propaganda engenders. Therefore nothing can exceed the importance of these two generous bequests.

It would be impossible here even barely to refer to the enormous activity of the society during the past year, for its work is carried on by branches all over the country, and through many constituent bodies. One may indicate its diversity by mentioning, on the one hand, the active part taken by the C.P.R.E. in Commander Hilton Young's Rural Amenities Bill, and, on the other, say, the setting up of litter baskets on a beautiful reach of the Thames. All are grist to the mill, and the smallest grain is the result of effort on the part of some interested person.

The Society for the Protection of Ancient Buildings is one of those bodies whose long and patient work has served to introduce the C.P.R.E. to a public less ignorant than it might otherwise have been, and who, in turn, are helped by the activities of the younger society.

One of the fruits of last year's efforts is to be seen in Mr. Jervoise's book of *Bridges*, published by the Architectural Press. Barns and windmills are also engaging their attention, and complete records are being taken with a view to reparation. These are particular efforts, but the annual report runs to many pages, covering a host of very varied examples where help has been given, interest aroused, and something bravely attempted, if not always successfully done.

THE NEW FACE OF LONDON

A City of Steel Cages

CONSTRUCTIVELY, the modern building is a steel cage, writes the Architectural Correspondent in *The Times*, with—except in the sky-scraper—approximately equal value in its horizontal and vertical members, to be covered with a skin of stone, brick, or other material; something completely new in the whole history of architecture. He says: Going by historical precedent, and in order to be traditional, the steel cage should work out its own architectural salvation; at any rate, we may say that, for lasting satisfaction, whatever style is adopted must make its terms with the steel cage. As may be seen anywhere in London, Renaissance architecture is doing this with difficulty, and we still have columns and arches that not only support nothing but have themselves to be supported at great expense, staircases cutting across windows, and other æsthetic as well as practical inconveniences. On the other hand, the modernists do not yet seem to have grasped the full architectural implications of the steel cage. Some, as at Adelaide House and the new Courtauld Building, St. Martin's-le-Grand, by Mr. Leo Sylvester Sullivan, emphasize the vertical members of its construction; others, as at the new Olympia, by Mr. Joseph Emberton, Messrs. Crawford's, Ltd., High Holborn, by Messrs. Frederick Etchells and Herbert A. Welch, and the New Victoria Cinema, by Mr. W. E. Trent, the horizontal; with no obvious reason, not even—as may be seen at High Holborn—architectural context. In the New Victoria Cinema the horizontal and vertical stressing of different parts of the same building even conflict with each other.

Prophecy is rash, but on the whole the contemporary buildings in London which are most likely to command the respect of posterity are the Underground Building and the new Horticultural Hall—particularly for its interior. These buildings proceed on the principle of seeing what you can do without—always a step forward—rather than on that of getting excited over functional and constructional expression. This is not to say that function and construction should not be recognized. All good architectural styles may be looked upon as a gloss or comment on a text—a text of construction. As a rule the gloss begins crudely, as in the earliest Greek, and gains in subtlety and refinement; when, as in the latest Gothic, the gloss overcomes the text, it is time for the style to go. With a new text of construction, such as the steel cage, it is better to reserve your enthusiasm for architectural gloss or comment until you are quite sure of all the principles involved.

At the moment the greatest centre of building activity is the area surrounding the Bank of England. Already, under the persuasion of Sir Herbert Baker, A.R.A., the Old Lady of Threadneedle Street is beginning to sit up and take notice over Soane's enclosing wall; the new Lloyds Bank, by Sir John Burnet and Partners, with Messrs. Campbell Jones and Smithers, and the new Westminster Bank, Lothbury, by Messrs. Mewés and Davis, are finished; the Princes Street block of the Midland Bank, by Mr. Laurence M. Gotch, with Sir Edwin Lutyens, R.A., is rapidly nearing completion; and the National Provincial Bank, at the corner, by Sir Edwin Cooper, A.R.A., is well on the way. All these buildings are good examples of modern Renaissance, but the prize for delicacy and refinement in the treatment of the stone skin must go to the Westminster. One wonders a little what will be the effect on dull days of the increased height of these buildings, and one cannot help feeling that setting back might begin below the height allowed by the building regulations.

Other buildings among the many that, whether in a traditional or a modernist style, inspire confidence in changing London are the front court of the British Medical Association building, Woburn Place, by Mr. C. Wontner Smith; the new Bechstein Hall, Brook Street—a little prone to "shape," in the sense in which it was applied indifferently to brawn, jelly or blancmange in our childhood, in the treatment of the moulded stone—by Sir John Burnet and Partners; and, for their good-humour in simple masses, the new Council Dwellings, Vincent Street, off Marsham Street, by Sir Edwin Lutyens, R.A. These last are treated chess-board fashion, the windows alternating with squares of artificial stone on a ground of beautiful greyish brick. Speaking generally, however, it is less in complete buildings than in such details as shop fronts that modernism is creeping into London most successfully.

COMPETITION AWARDS

STREET DECORATION SCHEMES FOR LIVERPOOL

THE following awards have been made in the competitions for designs for the decoration of Liverpool Streets during the Liverpool and Manchester Railway Centenary Celebrations which are to be held from September 13 to 20.

Castle Street and Derby Crescent Scheme: 1 (£20), Leonard Berger, 3 Spencer Street, Everton, Liverpool; 2 (£10), W. G. Holford and G. Stephenson, of the Liverpool School of Architecture.

Moorfields Scheme: 1 (£20), C. W. Hutton, 7 St. Bees Road, Bolton; 2 (£10), Leonard Berger, 3 Spencer Street, Everton, Liverpool.

Central Station, Church Street, Bold Street, and Hanover Street Scheme: 1 (£20), W. G. Holford and G. Stephenson, of the Liverpool School of Architecture; 2 (£10), Leonard Berger.

Lime Street Scheme: 1 (£20), E. M. K. Ellerton, Rankin Hall, Liverpool; 2 (£10), J. L. Parkinson, 48 Dovedale Road, Mossley Hill, Liverpool.

The assessors were Professor L. Budden (chairman), Mr. H. Tyson Smith, and Mr. H. Hinchcliffe Davies, assisted by Mr. Matthew Anderson, of the Liverpool Organization. All the prize-winners are either students or members of the staff of the Liverpool School of Architecture.

The Castle Street design is intended to convey in a forceful manner something of the spirit of the Railway birthday. The pylons, each throwing out bright-coloured signal arms, are joined by lines of bunting which create a suspension bridge effect.

The main feature of the winning design for the decoration of Moorfields consists of panels on which are painted types of Liverpool people who are served by the railway.

The dominating feature of the Central Station scheme is a pylon which fits over the existing lighting control, and is the focus of the four streets. Incorporated in the design of the pylon is a revolving light with alternate opaque and translucent shutters, to give the effect of a searchlight at night.

The entrance to the Mersey Railway and the Cheshire Lines Railway will be marked by three tall Venetian masts with banners.

Lime Street station site presented the greatest technical and decorative difficulties. The designers were asked to decorate the short street leading up to Lime Street station, and to evolve an erection near the site of the "Punch and Judy" show which would be seen by all travellers emerging from the station. The main motif of the winning design is a triumphal arch which the through traffic to and from Lime Street

station passes. The design consists of two pylons supporting symbolical figures. Between these pylons is a large descriptive modelled panel, showing different aspects of engineering. Each of the pylons will show the Railway Company's coat of arms. The whole structure is finished in aluminium, the bases and caps of the pylons being finished with vermilion, turquoise, green, and black.

Designs for further schemes of decoration in the city and in the neighbourhood of Wavertree Playground will be entrusted to one or more of the aforementioned prize winners, at the discretion of the assessors.

R.S.A. INDUSTRIAL DESIGNS COMPETITION

The awards in the architectural decoration section of the Royal Society of Arts Competition of Industrial Designs, 1930, are announced below. All the designs submitted in the various sections are on exhibition at the Imperial Institute, South Kensington, until August 31.

Prize offered by the Royal Society of Arts under the Mulready Trust for a set of three black-and-white drawings of architectural subjects in any town or district :—

The Prize of £20 to Harold F. Hoar, Bartlett School of Architecture, University College (No. 1786).

Highly Commended :

Dennis E. J. Harrington, London (Nos. 1643 and 1644).

Frederick E. Kerswill, Bartlett School of Architecture, University College (Nos. 360 to 365).

Francis G. Lodge, London (Nos. 624 to 626).

Prize offered by Mr. Murray Adams-Acton, for the best lettering on any sheet of drawings submitted in the whole section of architectural decoration :—

The Prize of £5 to William A. Moffoot, Selly Park, Birmingham. (Nos. 1184 to 1186 in subsection 5).

Prizes or travelling scholarship offered by Messrs. Baguès, Ltd., for a design for a metal screen (in the Norman, Perpendicular or Modern style) for a small church :—

First Prize of £30 to Arthur C. Adamson, Hammersmith School of Arts and Crafts. (Nos. 2153 to 2156).

Second Prize of £20 to Raymond C. Bean, Dalston, E.8. (Nos. 1291 to 1294).

Prizes offered by Messrs. Bratt Colbran and Company and the Heaped Fire Company, Ltd., for a design for a fireplace :—

First Prize of Twenty Guineas to Francis F. Johnson, School of Architecture, Leeds College of Art. (No. 2643).

Commended :

Kenneth M. Angus, Plymouth. (No. 1073).

Norman Holmes, Burnley. (No. 1386).

Donald M. Williamson, Sheffield College of Arts and Crafts. (No. 2864).

Prizes offered by Messrs. Chance Brothers and Company, Ltd., for designs for a glazed screen for a fashionable hotel :—

First Prize of £35 to Harold J. W. Hyde, Newton St. Loe, near Bristol. (No. 136).

Second Prize of £15 to Edwin J. Storry, School of Architecture, Leeds College of Art. (No. 2652).

Commended :

Frederick E. Osborne, Victoria, S.W.1. (Nos. 749 and 750).

Prize offered by Messrs. Hailwood and Ackroyd, Ltd., for a design of an electrical illuminating fitting to occupy the central position in a room, with wall bracket fitting to match, designed in modern style :—

The Prize of Ten Guineas to John A. C. Howard, Bowes Park, N.22. (Nos. 1636 to 1637).

Highly Commended :

Arthur Collett, Ryland Memorial School of Art, West Bromwich. (Nos. 531 to 533).

Prizes offered by the Malkin Tiles (Burslem), Ltd., for a design for a dull glazed surround to suit a wood mantel opening for a dining-room or lounge in a modern room :—

The First Prize of £10 to Thomas B. Jones, Burslem School of Art. (No. 3283).

Highly Commended :

Francis W. Mudd, Architectural Association School of Architecture.

Prizes offered by Messrs. Smith and Wellstood, Ltd., for designs for an anthracite stove :—

The judges were unable to recommend that the full amount of the prizes offered should be given, but the following award was made :

A Prize of £10 to Miss Vera M. Moller, Golders Green, N.W.11. (No. 1531).

Prizes offered by Messrs. J. Wippell and Company, Ltd., for designs for a litany desk in wood :—

The First Prize of Ten Guineas to Ernest J. Weir, Edinburgh. (Nos. 1518 and 1519).

The Second Prize of Five Guineas to Terence Carr, Woking, Surrey. (No. 779).

Highly Commended :

George Hay, Edinburgh College of Art. (Nos. 3348 and 3349).

Commended :

Terence Carr, Woking, Surrey. (No. 778).

Gerald Cogswell, London. (No. 832).

Prizes offered by the Morris-Singer Company for a design for a wrought-iron entrance door for a high-class West End business shop :—

The First Prize of Ten Guineas to William A. Guttridge, School of Architecture, Leeds College of Art. (Nos. 2632 and 2633).

The Second Prize of Six Guineas was equally divided and a prize of three guineas each was awarded to :

Frank A. Gardner, Stoke Newington, N.16. (No. 546); and

Miss Vera M. Moller, Golders Green, N.W.11. (No. 1532).

Commended :

Roland Morris, Sydenham Hill, S.E.26. (Nos. 640 and 641).

Prizes offered by the Morris-Singer Company for a design for leaded glazing for a metal staircase window upon a half landing opposite to the above-mentioned door (subsection 10 [*a*]) of a different design but to harmonize with the door :—

Owing to the lack of suitable entries the Judges were unable to recommend that the full amount of the prizes offered should be given, but the following awards were made :

A Prize of Six Guineas to John R. Sime, Nottingham School of Art. (No. 3121).

Highly Commended :

John R. Sime, Nottingham School of Art. (No. 3118).

The second half of this subsection did not produce such interesting work. The designs generally lacked architectural feeling and showed want of knowledge of the limitations of the materials. The design by J. R. Sime (No. 3121), which was awarded a prize, was over-elaborate, but was suitable for the material and would work out well in practice.

INCORPORATED INSTITUTE OF BRITISH DECORATORS

Following are the names of the winners of the Incorporated Institute of British Decorators' scholarships and awards for 1930, and the successful candidates in the Institute's 1930 entrance examination :

Scholarships and Prizes, 1930 : Books, value £5, Harry John Farr (The Northern Polytechnic); £25 Junior Scholarship, Benjamin Charles Fick (The Northern Polytechnic); the work of Charles Henry Simpson (The Northern Polytechnic) was highly commended. 60 Guineas Travelling Scholarship, Alec Cecil Wilce (The Central School of Arts and Crafts); second place, bronze medal, Roy Fowkes (St. Martin's School of Art); third place (no prize), Gilbert Leslie Monk (Brixton L.C.C. School of Building).

Institute Entrance Examination, 1930 :

Intermediate Grade :

Tingley, H. R.
Roberts, W. S.
Fowkes, C. R.
Moseley, L. J.
Yates, W. R.

Final Grade :

Lewis, E. W.
Evans, J. A.
Drummond, A. S.
Tubb, L. F. J.
Gates, B. H. E.

THE ARCHITECTS' DIARY

WEDNESDAY, AUGUST 13

ROYAL SOCIETY OF ARTS. At the Imperial Institute, Exhibition Road, South Kensington, S.W.7. Exhibition of designs submitted in the R.S.A. Competition of Industrial Designs. Until August 31. 10 a.m. to 5 p.m. (Sundays 2.30 to 6 p.m.). **10 a.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Exhibition of English Mediæval Art in the North Court. Open until September 21, 10 a.m. to 6 p.m. (Thursdays, 10 a.m. to 10 p.m.) **10 a.m.**

SIR JOHN SOANE'S MUSEUM, 13 Lincoln's Inn Fields, W.C.2. Open every Tuesday, Wednesday, Thursday and Friday until September next. 10 a.m. till 5 p.m. **10 a.m.**

THURSDAY, AUGUST 14

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to India House, Aldwych, W.C.2. **5.30 p.m.**

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "English Renaissance Furniture." By L. O. Faraker. **3 p.m.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Lighting and Illumination." By G. Tilghman Richards. **12 noon.**

SATURDAY, AUGUST 16

Sunrise, 5.46 a.m. Sunset, 8.22 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. Indian Section: "Sculpture." By Miss M. Chamot. **3 p.m.**

TUESDAY, AUGUST 19

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "Later English Furniture." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Roads and Road Transport." By G. Tilghman Richards. **12 noon.**

WEDNESDAY, AUGUST 20

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to Morley College, Westminster Bridge Road, S.E.1. **11.30 a.m.**

THURSDAY, AUGUST 21

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Architecture." By Miss M. Chamot. **3 p.m.**

FRIDAY, AUGUST 22

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to Cornwall House, Stamford Street, Waterloo Road, S.E.1. An official demonstration will be given of the automatic telephones. **3 p.m.**

SATURDAY, AUGUST 23

Sunrise, 5.56 a.m. Sunset, 8.8 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Ironwork." 12 noon. "Ecclesiastical Metalwork." 3 p.m. Both lectures by L. O. Faraker. **12 noon.**

MONDAY, AUGUST 25

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Stained Glass." By T. F. Wilson, F.R.S.A.I. **3 p.m.**

TUESDAY, AUGUST 26

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to Harrington House, Craig's Court, Charing Cross, S.W.1. **3 p.m.**

SCIENCE MUSEUM, Exhibition Road, South Kensington, S.W.7. "Electricity." By S. H. Groom, B.A. **3 p.m.**

SATURDAY, AUGUST 30

Sunrise, 6.8 a.m. Sunset, 7.53 p.m.

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS, 26 Buckingham Gate, S.W.1. Fourteen-day Tour to Madrid, returning to London on September 13.

MONDAY, SEPTEMBER 1

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. September 1 to September 6.

TUESDAY, SEPTEMBER 2

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "The Composition, Mixing, Methods of Application of Concrete and Reinforced Concrete, as used in the Yards, and the Control of Same." By T. R. Grigson, M.INST.C.E. "Some Notes on the Composition, Mixing and Application of Concrete in Engineering Works." By C. J. Jackaman, A.M.INST.C.E.

WEDNESDAY, SEPTEMBER 3

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Pieces in Concrete Piles." By M. J. C. McCarthy, A.M.INST.C.E., A.M.MECH.E. "Stresses in Dams." By S. D. Carothers. "A Study of Plain and Reinforced Concrete Retaining Walls." By Ewart S. Andrews, B.SC., M.INST.C.E. "Reinforced Concrete in Great Britain." By A. Kirkwood Dodds, M.C., M.SOC.C.E. (FRANCE). "Reinforced Concrete in Engineering: Representative Examples of British Practice." By M. Gerard, M.SOC.C.E. (FRANCE).

THURSDAY, SEPTEMBER 4

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Work of the Building Research Station on Small Movements in Concrete." By Dr. W. H. Glanville, B.SC., A.M.INST.C.E. "The Effect of Temperature on Flat Arches Constructed of Reinforced Concrete." By C. S. Gray, B.SC., A.M.INST.C.E. "Temperature and Cement." By Dr. Oscar Faber, O.B.E., M.INST.C.E.

SATURDAY, SEPTEMBER 6

Sunrise, 6.19 a.m. Sunset, 7.37 p.m.

XII. INTERNATIONAL CONGRESS OF ARCHITECTS. In Budapest. September 6 to 13. Opening of International Exhibition of Architectural Designs in the Picture Gallery of the Hungarian Scientific Academy. **10 a.m.**

THURSDAY, SEPTEMBER 11

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Italian Furniture." 12 noon. "Italian Decoration." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

FRIDAY, SEPTEMBER 12

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "French Furniture." By Miss M. Chamot. 12 noon. "Gothic Woodwork." By T. F. Wilson, F.R.S.A.I. 3 p.m. **12 noon.**

SATURDAY, SEPTEMBER 13

Sunrise, 6.30 a.m. Sunset, 7.21 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "Later English Furniture." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

WEDNESDAY, SEPTEMBER 17

INTERNATIONAL BUILDING TRADES EXHIBITION, Olympia. Until October 1.

BRITISH GLASS CONVENTION. At Buxton. Until September 20. Morning: Meeting of the Council of the Society of Glass Technology. Afternoon: General Meeting of the Society of Glass Technology. Evening: Informal Presidential Reception of members and their friends at the Palace Hotel.

THURSDAY, SEPTEMBER 18

BRITISH GLASS CONVENTION. At Buxton. Morning: Official welcome by the Mayor and Corporation of Buxton, at the Peak Buildings. Presidential Address. Discussion on "Elimination of Waste in the Glass Industry," to be opened by Dr. Miles. Official luncheon. Evening: Mayoral Reception at the Palace Hotel.

FRIDAY, SEPTEMBER 19

R.I.B.A., 9 Conduit Street, W.1. Exhibition in the R.I.B.A. Galleries of Drawings submitted in competition for the Archibald Dawnay Scholarship (10 a.m. to 7 p.m.; Saturdays, 2 p.m.). Until September 30. **10 a.m.**

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussions on "Marketing Methods in the Glass Industry" and "Public Propaganda in the Glass Industry," to be opened by Sir Francis Goodenough, C.B.E., and H. Gordon Selfridge, respectively. Afternoon: Golf Competition for championship of the Glass Industry. Evening: Banquet at the Palace Hotel.

SATURDAY, SEPTEMBER 20

Sunrise, 6.41 a.m. Sunset, 7.5 p.m.

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussion on "The Convention—Present and Future," to be opened by Mr. Walter Chance, M.A., J.P.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Stained Glass (1)." 12 noon. "Stained Glass (2)." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

FRIDAY, SEPTEMBER 26

NATIONAL SMOKE ABATEMENT SOCIETY. Annual Conference, to be held at Leicester until September 28. During the conference the following papers will be read: "Fuel Research and Smoke Abatement," by Dr. Margaret Fishenden; "The Smoke Problem in Sheffield," by F. J. Bailey and E. C. Evans; "Smoke and the Weather," by a meteorological expert; and "The Smoke Nuisance as the Airman Sees It."

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS. London and Home Counties Branch. Dinner and Dance to be held at the Quadrant Restaurant, Regent Street, W. Tickets, 7s. 6d.

SATURDAY, SEPTEMBER 27

Sunrise, 6.53 a.m. Sunset, 6.49 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Continental Glass." 12 noon. "English Domestic Glass." 3 p.m. Both lectures by Miss B. Goldsmid. **12 noon.**

TUESDAY, SEPTEMBER 30

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS, 1 Wilbraham Place, S.W.1. London and Home Counties Branch. "The Making of a Cathedral—Liverpool." By E. W. Harvey-Piper. (Lantern Illustration.) **7 p.m.**

THURSDAY, OCTOBER 9

C.P.R.E. Third Annual Conference, to be held at Welwyn Garden City. Until October 11. Among the papers to be read are the following: "The Preservation of Commons, Parks, Open Spaces and Nature Reserves, and the Provision of Playing Fields." By Sir Lawrence Chubb. "Town and Regional Planning in their Relation to the Objects of the C.P.R.E." By Sir Theodore Chambers, K.B.E., F.S.I. "Education and Citizenship in their Relation to the Safeguarding of the Countryside, etc.," and "Flora and Fauna, including the Preservation of Trees, Wild Flowers, Roadside Plants and the Protection of Birds." Each paper will be open to discussion.

COMPETITIONS OPEN

August 30.—The Carlisle Corporation invites British architects to submit designs for the façade to English Street and the Victoria Viaduct, suitable for shops and business premises. The site was previously occupied by the Prison. The total length of the frontage is approximately 358 ft. Assessor: Francis Jones, F.R.I.B.A. Premiums: £300, £200, and £100. Particulars of the competition, etc., may be obtained from Percy Dalton, A.M.INST.C.E., A.R.I.B.A., City Engineer, 18 Fisher Street, Carlisle. Deposit £1 1s.

September 1.—The Bangor (Co. Down) Borough Council invites architects or town planners to submit designs in competition for laying out the sea front within the Borough. Assessor: Professor Patrick Abercrombie, F.R.I.B.A. Premiums: £150 and £50 for first and second places, respectively. Copies of the conditions and plans will be forwarded on application to J. Milliken, Town Clerk, Borough Council Offices, Bangor, Co. Down. Deposit £1 1s. Latest date for submission of designs: September 1.

September 30.—The Isle of Man Education Authority invited architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums: £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs: September 30.

October 20.—The Maternity and Child Welfare Committee of the City of Birmingham invite architects to submit competitive designs for two infant welfare centres, one at Warren Farm Road, Kingstanding (Perry Barr), and the other at Trittiford Road (Billesley). Competitors must have occupied offices in Birmingham as their head office for six months prior to July 19, 1930. Assessor: A. T. Butler, F.R.I.B.A. Premiums, £100 in respect of each centre. Conditions of competition and plans of the sites may be obtained on application to Herbert H. Humphries, M.INST.C.E., City Engineer and Surveyor, the Council House, Birmingham. Deposit £1 1s. for each centre. Latest date for submission of designs: October 20.

November 30.—The Guildford Cathedral Committee invites any architect, who has been engaged in the design of cathedrals or churches, to submit for examination drawings and other illustrations of his works; or a design for a cathedral. Not more than three sets of drawings may be submitted, packed in one large portfolio. The Committee, with the assistance of Mr. Walter Tapper, A.R.A., will examine the portfolios, and select a limited number of architects for the Final Competition. Each architect selected for the final competition will receive 500 guineas, whether his design is accepted or not. Portfolios should be addressed to The Venerable the Archdeacon of Surrey, The Diocesan Office, Lloyds Bank Chambers, Guildford, not later than November 30.

The Birkenhead Corporation has decided, in connection with the new central library, to restrict the competition to architects practising within a twenty-mile radius of the town hall.

The Durham County Council has considered the question of new county buildings, and has authorized the clerk to approach the President of the R.I.B.A. with a view to his nominating a north-country architect to act as assessor in connection with the proposed architectural competition for the provision of new county offices on the Old Elvet site.

IN PARLIAMENT

[BY OUR PARLIAMENTARY REPRESENTATIVE]

Town Planning Act, 1925

IN the House of Lords, Lord Gage asked when the Government proposed to introduce legislation to amend the Town Planning Act, 1925.

Lord Parmoor, replying for the Government, said they quite realized the existing statutory requirements were inadequate for present arrangements. It was recognized that there was a general demand for an extension of planning powers, not only of built areas of towns, in order to secure that re-development, as and when it takes place, shall be carried out on a settled plan, but also in rural areas, so that development might be brought under proper control and the amenities of the countryside preserved and respected. Steps had already been taken to obtain the views of members of local authorities and of important organizations interested, and the Government would take the question of legislation on this subject into careful consideration when framing their programme for next session.

Rent Restrictions Act

In the House of Commons, Mr. Greenwood, in reply to Mr. Tout, said that the last general inquiry into the working of the Rent Restrictions Act was made in 1923, and the whole situation had been profoundly modified since that date by such factors as the operation of the Housing Act passed in that year, and by the additions made to the number of houses available. While, therefore, the Government were fully conscious of difficulties and hardships resulting from the existing Acts, they felt that, before coming to any conclusion as to the course to be adopted, it was necessary to have the whole field under the Acts fully examined by a strong Departmental Committee, and they proposed to set up such a committee as soon as possible. Meanwhile, they would propose to Parliament, in due course, to extend the existing Acts for another year by means of the Expiring Laws Continuance Act.

Mr. Snowden stated that it was the intention of the Government to take special steps to stimulate the provision of improved housing in rural areas under the powers which the new Housing Bill gave them. Also, the Committee on the Rent Restrictions Acts would include under its purview the special position of the tied cottage, with a view to providing a remedy against any unfair use of that system.

Calton Jail Site

Mr. Mathers asked the First Commissioner of Works whether it was his intention during the recess to continue his negotiations with the Corporation of Edinburgh and the Scottish Fine Art Commission regarding the design of the buildings to be erected on the Calton Jail site.

Mr. Lansbury said that the answer was in the affirmative.

Removal of Rodin's Statue

Mr. Morley asked the First Commissioner if he would secure the removal of Rodin's statue of the Burghers of Calais to a place where it would be seen to better advantage.

Mr. Lansbury replied that he did not think there was any other site under his control which would be more suitable. Moreover, the present position was selected by the sculptor himself, after considering all possible alternatives and personally inspecting a number of sites.

The Roman Wall

Sir John Withers asked the First Commissioner what was the exact state of negotiations for the preservation of the Roman Wall pending the introduction of legislation.

Mr. Lansbury said that negotiations had been proceeding in accordance with a decision of the Cabinet, with a view to limiting the area within which quarrying was to be allowed, and, from a letter which he had received from the quarry owner, he anticipated a successful issue. No quarrying had yet begun on the site, and there would be no interference at any time with the wall or the vallum. If, as he hoped, the legislation contemplated was carried through without delay, the surroundings of the wall as a whole would be adequately protected for the future.

Housing Progress

Mr. Gossling asked the Minister of Health if he would state the number of houses built under the 1924 Act from July, 1928, to June, 1929; and the number built from July, 1929, to June, 1930.

Mr. Greenwood said that the numbers for England and Wales were during the period July 1, 1928, to June 30, 1929, 51,282; and during the period July 1, 1929, to June 30, 1930, 54,159.

Sir Kingsley Wood asked the Minister of Health if he would give the number of houses finished under the various Housing Acts for the quarter ended June, 1930.

Mr. Greenwood said that the number completed in England and Wales during the quarter in question was 11,351. All these houses were erected under the Housing (Financial Provisions) Act, 1924.

Average Cost of Houses

Sir Kingsley Wood then asked the average price for parlour and non-parlour houses, respectively, let by or in direct labour schemes of local authorities in England and Wales during June, 1930.

Mr. Greenwood replied that the average prices were, for parlour houses £403, and for non-parlour houses £339.

LAW REPORT

QUESTION OF ANCIENT LIGHTS

Edelshain v. *Huggins and Co., Ltd. Chancery Division. Before Mr. Justice Clauson*

THIS was an action by Mr. Leon Edelshain, of the Regent Palace Hotel, and Regent Street, goldsmith and silversmith, against Messrs. Huggins & Co., Ltd., of Palace Street, S.W., for a declaration that three contracts to purchase for £133,000 Huggins' Lion Brewery Estate, Soho, were rescinded or might be rescinded by the plaintiff. He also asked for repayment of deposits held by the auctioneers, Messrs. Farebrother, Ellis & Co., as stakeholders, amounting to £13,200.

The plaintiff's case was that it was not till after the contract that an old agreement was found not to build on one side of Lot 1 beyond a certain height, because of ancient lights, and as to Lot 3 the particulars said they were short tenancies, leading to the conclusion that the tenants could easily be got rid of, whereas the Rent Restrictions Act applied. The particulars of sale declared the whole was capable of remunerative development, that the tenancies were all short tenancies and that the property was exceedingly valuable. The total area was 30,000 square feet, with 1,000 feet frontages. He bought at the sale in May last year Lot 1, freehold and leasehold premises, formerly Huggins' Lion Brew House, in Broad Street, for £55,000; Lot 2, freehold premises used as brewery cooperage, Broad Street, for £41,000; and Lot 3, freehold brewery offices with shops having rooms above, in Broad Street, Berwick Street, Kemps Court, for £37,000. Plaintiff purchased the whole to develop into a complete scheme of flats and instructed his architects to get out plans. He suggested that his purchase of the three lots stood or fell together, and it was essential that he should have early possession.

Mr. Swords, K.C., for plaintiff, said

the question was whether the defendants had made a title according to contract when they had not disclosed the existence of a contract affecting title, viz., an agreement to observe a neighbour's lights by not building above a certain height.

Mr. Topham, K.C., said none of the directors knew of this agreement, which was thirty years old. It was provided that the case of an error might be met by compensation, and plaintiff had not asked for it.

Mr. Swords said plaintiff had not been offered it, and further, a restrictive covenant was incapable of compensation.

Mr. E. J. Tanner, F.R.I.B.A., of Messrs. Henry Tanner, Hanover Square, said he did not notice the white tiles on the property, which might indicate that a question of ancient lights had at some time been raised. He was preparing plans for the plaintiff for flats from May 23.

Plaintiff gave evidence and said he bought to obtain 9 per cent. on his capital and had confidence his flats would have gone like hot cakes. He refused £3,000 profit on Lot 3. The auctioneers who hold asked if he would accept £150,000, and he replied that he would, provided he had not completed. A friend was going to advance £100,000 on the property.

Mr. Wild, of Messrs. Farebrother, Ellis & Co., gave evidence for the defence as to being notified that the property was again in the market, and as to an agreement that on payment of £1,500 and costs buildings could go up without restrictions as to height.

His lordship, in giving judgment, said he could not hold that the statement with regard to the tenancies was misleading. The Rent Restrictions Act was law and it could not be suggested that there was any obligation upon a vendor to draw the attention of the purchaser to any particular law. Besides, under the contract the purchaser agreed that he should be deemed to know what the tenancy terms were. The omission to disclose the ancient lights agreement was an innocent one, but the agreement should have been disclosed. There was a sub-clause in the contract which stated that no omission or mis-statement, although materially affecting the description of the property, should annul the sale, but if pointed out before the completion compensation would be made to the purchaser. The omission came within that sub-clause and the purchaser was not entitled to be discharged from the contract, but the plaintiff said he would be discharged on the ground that it was impossible to assess compensation, and he relied upon another sub-clause which said that nothing in the conditions should enable the vendor to convey property which differed substantially from the property agreed to be sold. His lordship was of opinion that it was quite possible for an arbitration tribunal to assess the compensation, and that having regard to the size of the property it could not be regarded as differing substantially from the property without restrictions. He therefore dismissed the action with costs.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

21269. Thompson, J. W. Concrete slab structures. July 14.

21318. Bound, W. S. Concrete building construction. July 14.

21880. Cocking, W. C. Concrete structures. July 19.

22059. Mathews, C. B. Production of fireproof floors. July 22.

22235. Remis Industries, Inc. Building-block. July 23.

22510. Oliver, H. W. Building materials. July 25.

SPECIFICATIONS PUBLISHED

312308. Remis Industries Inc. Building construction.

332331. Burgess, A. F. (Tench, F.). Flooring, walls, partitions and other parts of structures.

ABSTRACT PUBLISHED

330186. Gratings; reinforced concrete. Law, J. A., 29 Southampton Buildings, London. (Irving Iron Works Co., 3rd Street, Long Island, New York, U.S.A.).

NEWS ITEMS

UNIVERSITY AND TRAVELLING SCHOLARSHIPS

New conditions for the award of university and travelling scholarships have been announced by the Council of the Surveyors' Institution. It is proposed, in future, to offer one three-year scholarship annually, value £100 per annum, and three one-year scholarships of £125 each, which will in all cases be tenable at Cambridge University, except where the successful applicant for a one-year scholarship has applied to use his emoluments for travel.

The system of awarding scholarships on the result of a competitive examination has, they state, been found unsatisfactory and will be discontinued. Awards in future will be made by selection, the applicant's school record, personality, and intentions regarding his future career as a surveyor being taken into account.

Particulars of the conditions governing these scholarships may be obtained from the Secretary of the Institution, 12 Great George Street, Westminster.

CHARING CROSS BRIDGE

Definite and practical proposals bearing upon the terms of reference to the Advisory Committee appointed by the London County Council, in connection with the Charing Cross Bridge Scheme, will be considered by the Committee.

Such proposals should be accompanied by sufficient explanations and plans, and should be addressed to Montagu H. Cox, Clerk of the Council, County Hall, Westminster Bridge, S.E.1, to be there received, if possible, by August 30, but in any event not later than September 10, 1930.

The terms of reference to the Advisory Committee are: That an Advisory Committee be appointed by the Council for the purpose of preparing and submitting to the Council an agreed scheme for a road bridge and approaches at Charing Cross, within a net cost of £12,500,000.

A STONE HOUSE IN SHROPSHIRE

Following are the names of the general contractors and some of the sub-contractors for the house, garage, lodges, etc., at Hammer Hill, near Bewdley, illustrated on pages 229–231 of this issue:

General contractors, Messrs. Thomas Vale and Sons, Ltd., who were also responsible for the excavation, foundations, damp courses, concrete blocks, reinforced concrete, artificial stone, fireproof construction, ventilation, plumbing, joinery and water supply. Sub-contractors: Rubery Owen & Co., structural steel; Ames and Finnis, slates and roofing felt; C. Trumper and Sons, breeze partitions; Henry Hope, Ltd., patent glazing, door furniture and casements; Griffin Foundry Co., grates, boilers and mantels; Shanks & Co., Ltd., sanitary fittings; Marley Bros., fireproof doors and metal work; A. and P. Steven, Ltd., lifts.

ANNOUNCEMENTS

Messrs. Fred Rowntree and Sons, architects, have removed their offices to No. 94 Baker Street, W.1. Telephone number: Welbeck 6385.

Mr. Norman Keep, A.R.I.B.A., has been appointed head of the building department at Woolwich Polytechnic (Evening) and would be pleased to receive manufacturers' catalogues, etc., relating to modern building materials and specialist methods of construction.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1*s.* 3½*d. per hour;* LABOURER, 1*s.* 3½*d. per hour;* NAVVY, 1*s.* 3½*d. per hour;* TIMBERMAN, 1*s.* 5*d. per hour;* SCAFFOLDER, 1*s.* 4½*d. per hour;* WATCHMAN, 7*s.* 6*d. per shift.*

Broken brick or stone, 2 in., per yd.	£0 11 6
Thames ballast, per yd.	0 10 0
Pit gravel, per yd.	0 15 0
Pit sand, per yd.	0 12 6
Washed sand, per yd.	0 13 0

Screened ballast or gravel, add 10 *per cent. per yd.*
Clinker, breeze, etc., prices according to locality.

Portland cement, per ton	£2 8 0
Lias lime, per ton	2 0 0

Sacks charged extra at 1*s.* 9*d. each and credited when returned at* 1*s.* 6*d.*

Transport hire per day:

Cart and horse	£1 3 0	*Trailer*	£0 15 0
3-ton motor lorry	3 15 0	*Steam roller*	4 5 0
Steam lorry, 5-ton	4 0 0	*Water cart*	1 5 0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0 1 6
SPREAD and level, including wheeling, per yd.	0 1 6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0 10 6
TRIMMING earth to slopes, per yd. sup.	0 0 6
HACKING up old grano. or similar paving, per yd. sup.	0 1 3
PLANKING to excavations, per ft. sup.	0 0 5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.	
IF left in, add to above prices, per ft. cube	0 2 0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0 2 1
DO. 6 in. thick, per yd. sup.	0 2 10
PUDDLING, per yd. cube	1 10 0
CEMENT CONCRETE, 4-2-1, per yd. cube	1 17 6
DO. 6-2-1, per yd. cube	1 12 6
DO. in upper floors, add 15 per cent.	
DO. in reinforced-concrete work, add 20 per cent.	
DO. in underpinning, add 60 per cent.	
LIAS-LIME CONCRETE, per yd. cube	£1 14 0
BREEZE CONCRETE, per yd. cube	1 7 0
DO. in lintels, etc., per ft. cube	0 1 6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0 3 9
FINE concrete benching to bottom of manholes, per ft. cube	0 3 0
FINISHING surface of concrete spade face, per yd. sup.	0 0 9

DRAINER

LABOURER, 1*s.* 3½*d. per hour;* TIMBERMAN, 1*s.* 5*d. per hour;* BRICKLAYER, 1*s.* 8½*d. per hour;* PLUMBER, 1*s.* 8½*d. per hour;* WATCHMAN, 7*s.* 6*d. per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0 0 10
DO. *6 in., per ft.*	0 1 3

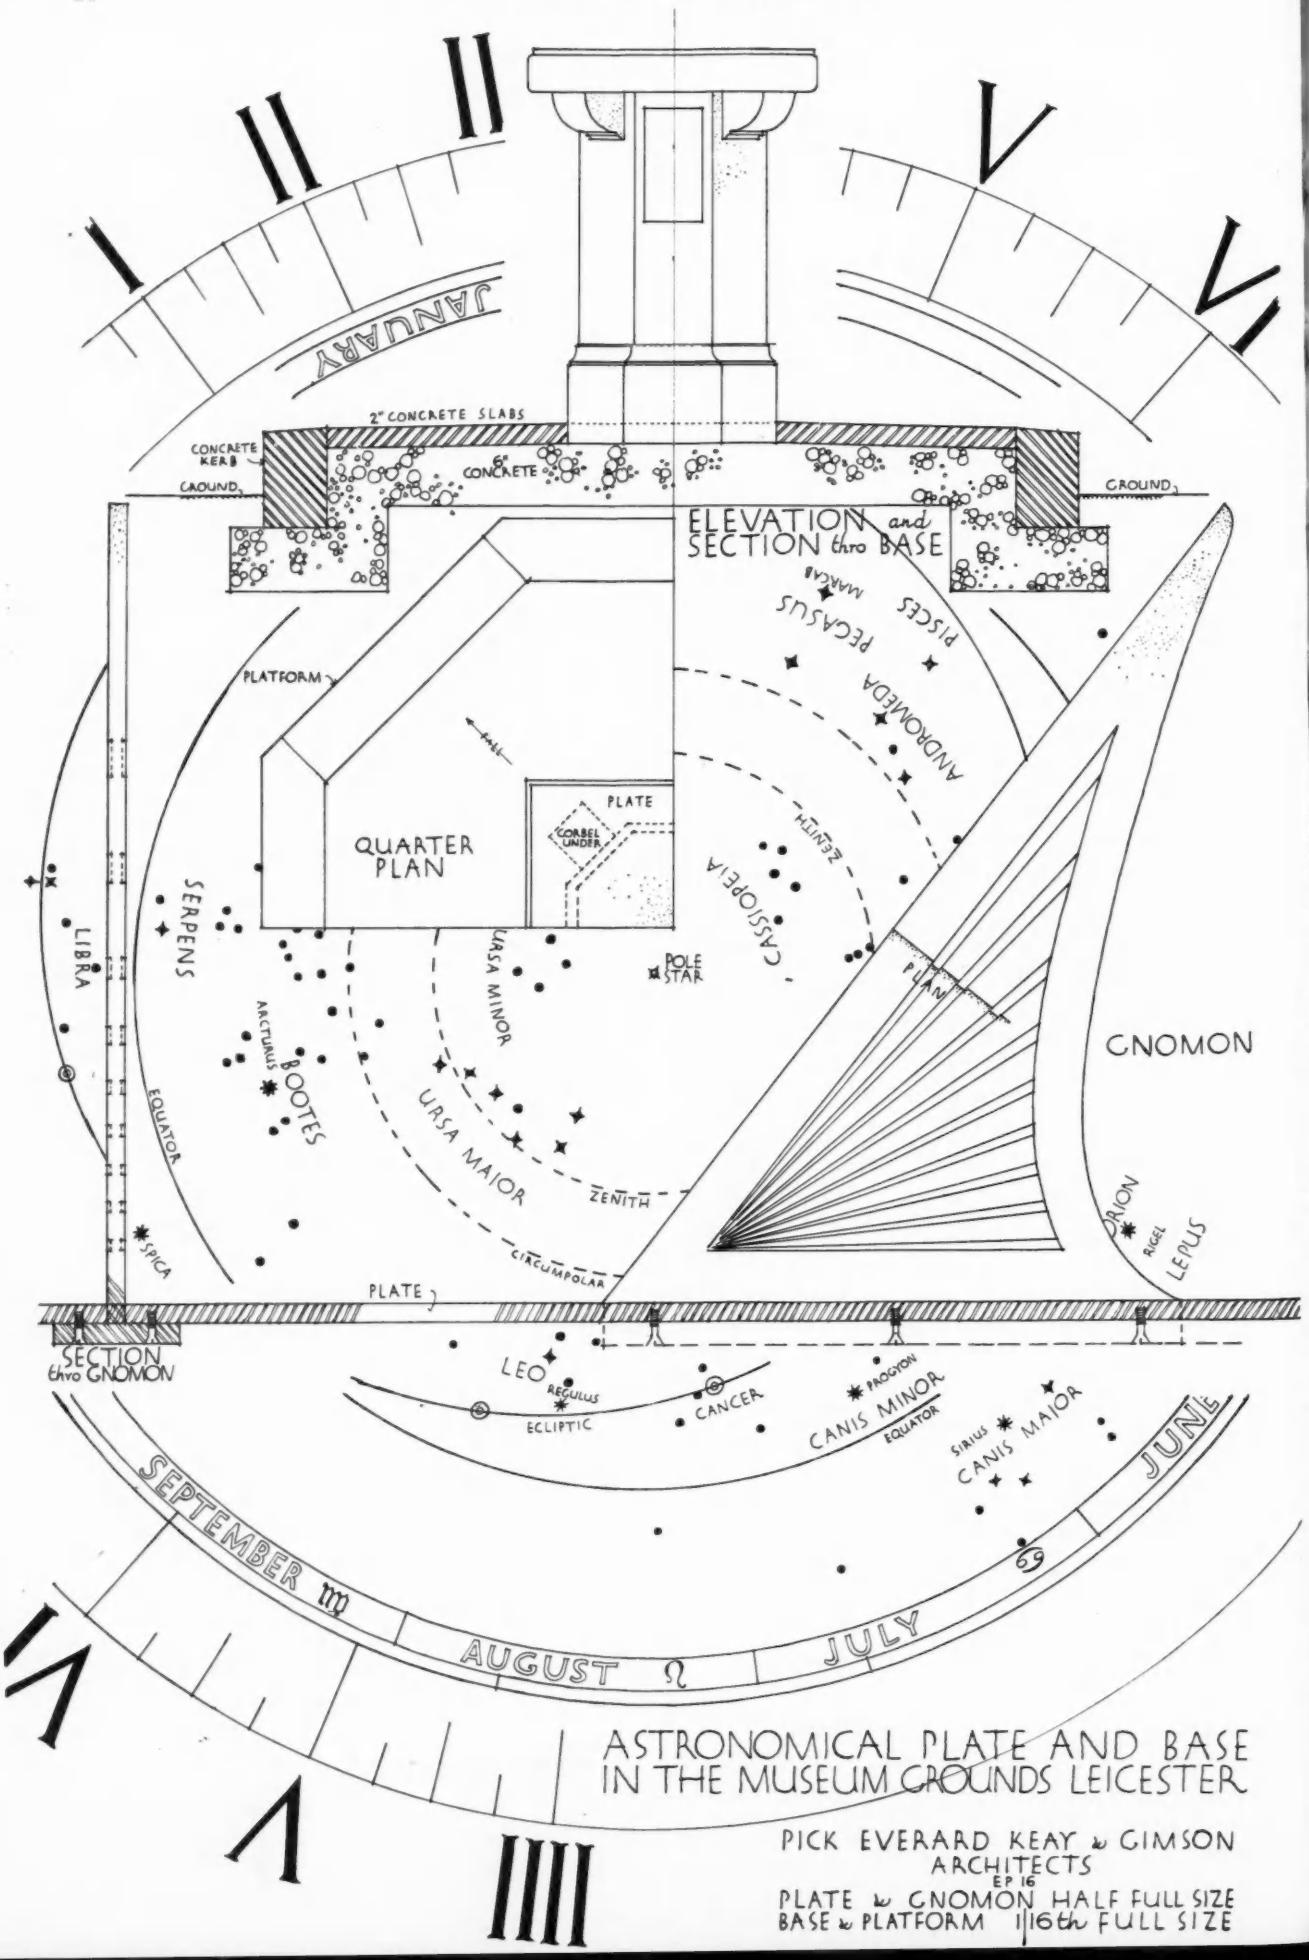
ASTRONOMICAL PLATE
IN THE GROUNDS OF THE MUSEUM, LEICESTER

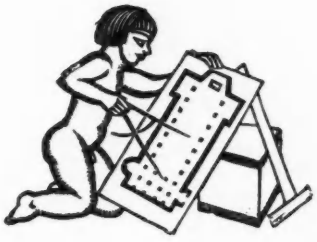


DESIGNED BY PICK, EVERARD, KEAY AND GIMSON

THIS astronomical plate or "sun-dial," fitted to a square base-plate and standing on an octagonal pedestal and paved surround, has been erected in the Museum grounds at Leicester as a memorial to the late F. B. Lott, M.A.

The design of the bronze plate itself, which is set to accord most accurately with the latitude of its position, is the work of a Fellow of the Royal Astronomical Society—Mr. J. W. Durrad. It gives a plotting of the stars and planets, and contains an inset showing the slight variations from Greenwich Mean Time. A detail of part of this plate is given on the scale drawing overleaf.

The pedestal and base, however, for which parts of the memorial concrete was chosen, on account of its permanence, were designed by the architects. The drawings give details both of this concrete work and of the gnomon, or pointer, the shadow of which, moving around the divisions of the plate, marks the passing of the hours, and at the same time shows the position of the sun relative to the heavenly constellations.



The drawing may be read with $\frac{1}{2}$ and $\frac{1}{16}$ full-size scales.

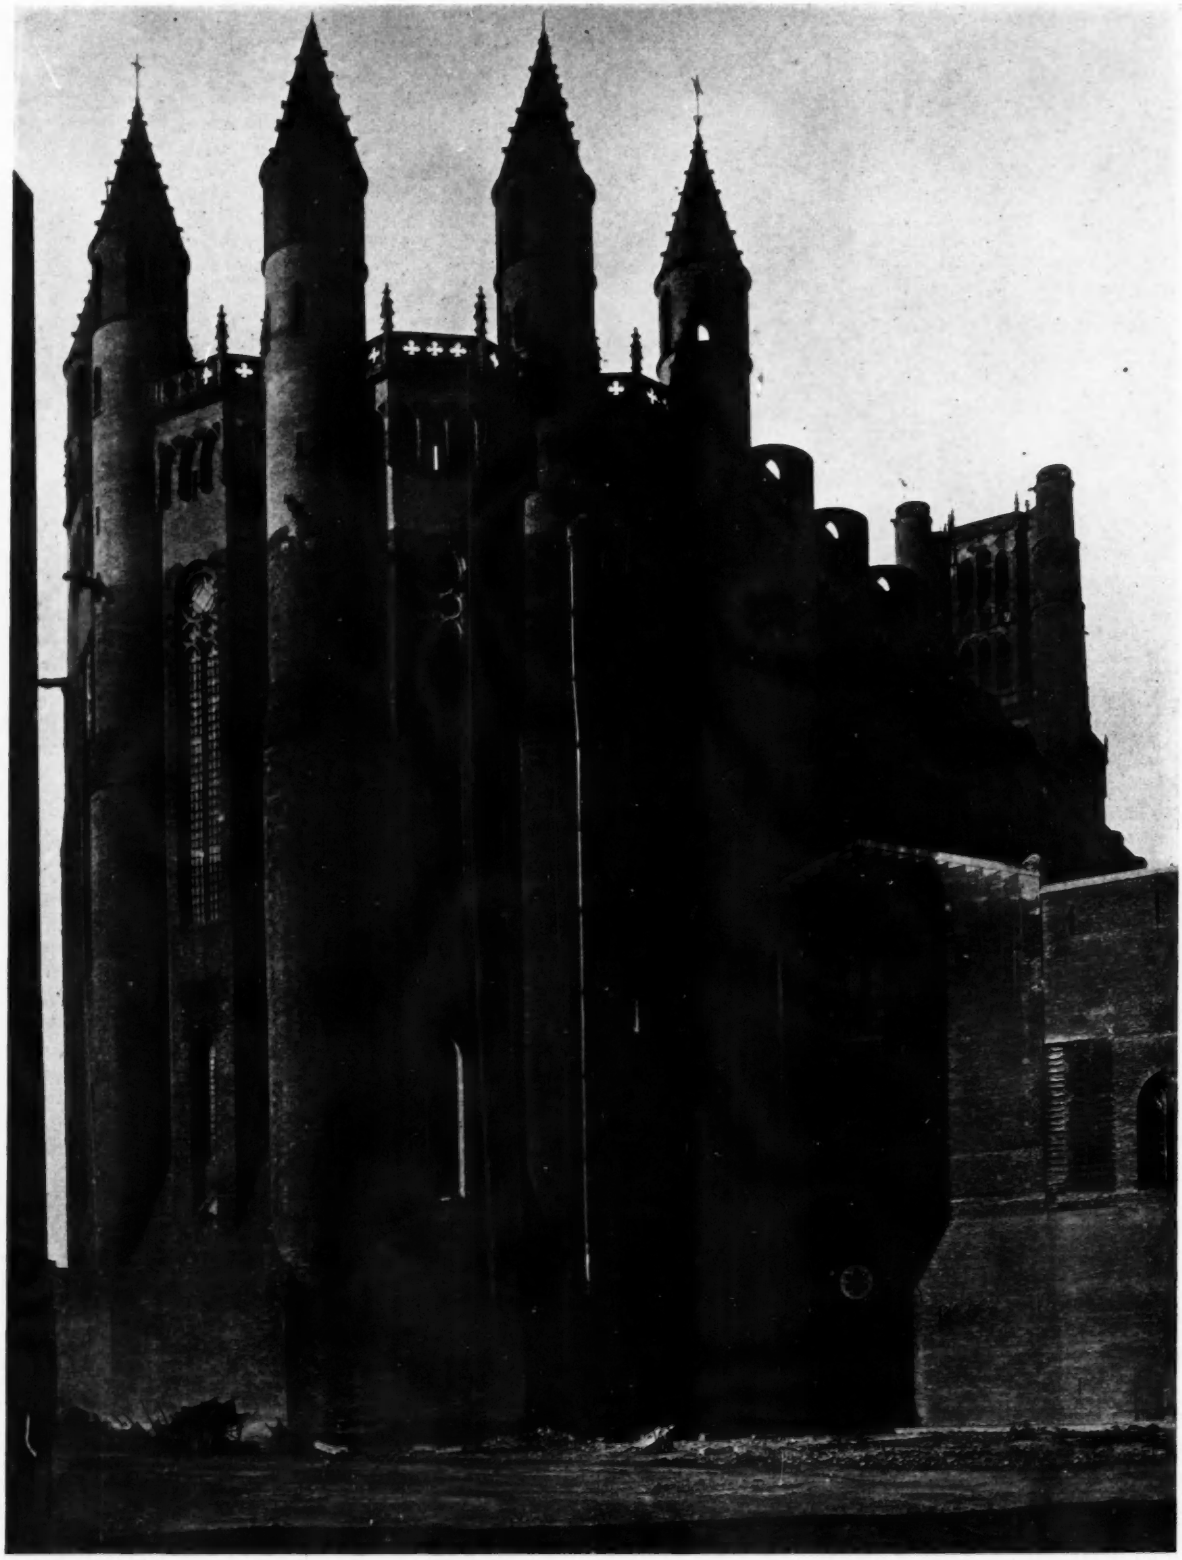
SHEFFIELD RECANTS

When a man came to take on the ordinary work of a city architect, was it necessary for him to take on every job the City Council passed?

MR. J. G. GRAVES.



OUR contributor Astragal has more than once referred to the question of official architecture, and it is not many months since the affairs of the city of Sheffield were the subject of one of his paragraphs. Indeed, Sheffield provides a very instructive example of many of the more controversial aspects of the official system, and things are occurring there from time to time that bring this system to the attention of the public at large. Another such incident took place there the week before last, when a motion to grant an honorarium of £1,000 to the City Architect, Mr. W. G. Davies, gave rise to considerable liveliness at a City Council meeting.

The discussion that took place ran upon lines which make it almost as interesting to architects as the motion itself. Those against the motion pointed out that the City Architect was already drawing an adequate salary, and that he should be expected to produce the plans and specifications for a new Central Library and Art Gallery as a part of his ordinary work and without the payment of a special fee. One of the best speeches of the day was that made by Councillor Neal, who reminded the meeting that when extensions to the Town Hall were required the City Architect of the day prepared the plans and no special fee was paid to him. Mr. Neal also drew a parallel between the City Architect's job and that of the City Treasurer, who had done a great amount of work that lay beyond the scope of his ordinary duties, again without any special fee.

Though our sympathies are strongly with Mr. Neal and with others who have argued ably against the principle of the honorarium, we cannot but rejoice that their view of the position should have been contradicted by a majority of the City Council. It may seem at first glance to be most undesirable—some might call it outrageous—that the Council should make its permanent officials a present of large exceptional jobs for which they receive considerable fees over and above their regular salary. There is, we hold, one argument which architects may well advance—as several have done—against such an honorarium being paid, once the work is finished. The payment of an honorarium undoubtedly gives colour to the fallacy that architectural services rendered by an official department cost the community less than the same services rendered by a private firm.

This fallacy is an unconscionable time a-dying, it is true; and few things in this life are more surprising than the readiness with which councillors and other public representatives will swallow costing figures that would render a self-respecting accountant helpless with laughter. It is also true that no less a person than the Chairman of the Sheffield City Council Finance Committee, who really ought to have known better, is reported to have told the meeting that the City Architect had saved Sheffield the full five per cent. that is the ordinary architect's munificent wage. Incredible, but true, if the newspapers are correct. Statements such as these do, we say, surely more than suffice to explain the vigorous opposition to the honorarium, and to some extent justify it.

All this notwithstanding, we believe the granting of this honorarium to Mr. W. G. Davies is a step in the right direction, for it is a vindication of the one principle to which we have always clung in this matter of official architecture. We have no grudge against the official architect, who has in many places proved himself a useful member of the community. We do object, however (as we believe it to be the duty of citizens and architects alike to object) to official architects being entrusted with large exceptional jobs unrelated to their normal everyday work. Until this meeting of the Sheffield City Council took place, it might, for all we knew, have been a part of the Sheffield City Architect's contract with the Council that he should design new public buildings costing £100,000 and over. We know now that it was not. By voting him an honorarium, the City Council has made clear to all its realization that it has done something it ought never to have done : namely, thrust upon one of its most able officials a job he was not appointed to undertake (and one which should, beyond question, have been the subject of open competition). We may not have got very far, but that is where we are today; and we may be pretty certain that the matter will not end there.

THE APSE OF THE CATHEDRAL OF SAINTE CECILE, ALBI, SOUTH-WEST FRANCE

The fortress-cathedral towering above the town of Albi, in South-West France, was two-and-a-half centuries in building, from 1277 onwards. Left incomplete by the original builders, César Daly raised the walls some twenty feet, and added a Gothic cresting and turrets, which were subsequently removed, to be replaced by those here shown. The building is one of those that somehow impress themselves vaguely on the minds of countless people who have never seen them. From his recently published diary for the year 1929 we learn that Mr. Arnold Bennett, who visited Albi last year, "had an intuition that the cathedral would be marvellous." Now that he has seen it, "its red brick," he writes, "is eternally fixed in my mind."

NEWS & TOPICS

CAPITAL SITE VALUES

IT was pointed out in a recent letter to *The Times* that the possible effect that a tax on the capital site value of land may have on the safeguarding of rural amenities must not be forgotten. If taxes are to be levied upon the capital site values of land, it should be possible to work out a system of exemptions that will help to restore a healthy balance between building land and land that is set aside for public enjoyment or private amenity.

★

The following exemptions, based upon a survey on town-planning lines, are put forward as suggestions: 1: Any land forming part of a park, pleasure ground, or the amenity of any house. 2: Any land reserved as a public or private open space, or dedicated not to be built upon. 3: Any land zoned for an average of two buildings over a land unit.

★

It will be seen that if a tax is levied on the value of all land irrespective of its purpose, it will become very difficult to keep public open spaces; and golf courses, sports grounds, etc., will be forced into the market, and their borders disposed of to pay for the tax by the realization of their potential values.

THE OLD "ADAM" AGAIN

Not long ago thieves lifted two Adam fireplaces from a house in Portland Square. They were valued at £1,000; so it was worth doing. Last week's enterprise went one better, and four fireplaces, in a house bought expressly on account of its fireplaces, were gently carried out and placed upon a motor van, in company with a good show of builders' ladders and other tackle.

★

The value placed upon what is called "period" architecture is out of all proportion to the uses to which the architecture is put. Wrenched from its well-balanced setting, a fine piece of Adam design is set up in a room purporting to be an exact reproduction of the period, but failing to be so through the inability of a "period" designer to sense the feeling of fine spatial and linear proportion out of which the fireplace was born. I have seen these interiors in hotels and hated them, remembering with sick loathing how the delicate relief of Adam's invention was made to crawl along the errant beams of an un-Adam steel framework, or to fill in the spaces between windows designed from the outside and not for the room itself. But the whole craze for period rooms springs from a desire to give a lazy and uneducated public what equally uneducated but unfortunately energetic business men think they want.

★

It would be harmless if it were not that these energetic maniacs have money to pursue their vandalistic tastes to the full. At this moment an American architect is engaged in the melancholy task of securing 200 English mantelpieces for re-erection in the period rooms of a New York hotel. It is ridiculous, and a slur upon the native cunning of American architects, to suppose that this stuff can ever live again in a hotel suite. These things are beyond price in English houses, and it is just because we would never willingly copy, that the examples of fine periods can give us greater pleasure than they do the hotel merchants who buy them.

THE GENIUS BY THE WAVES

All round the south and east coasts the jerry and speculating builder has literally lost a lot of ground during the last ten years. He was the worst baby on the shore, and he has been left. A nicer baby altogether, with a butterfly tie and plus-fours, and called the seaside architect, has forestalled Jerry on the best pitches, and knows what he can sell, and what will attract a good let for the season. Here is a thatched cottage "with an old-world air," and yonder the adapted type of the Sussex farmhouse, with brilliant hanging tiles. Bits of half-timber break lances with the woodlands, and waves of elm boarding beat the breakers. But through it all, our friend threads some long lines of eaves and ridges, and places some good solid masses of walls and roofs. The whole effect is that of richly English humorous songs punctuated by a jazz band.

DESECRATION ON A LARGE SCALE

Cissbury Ring is one of the most beautiful places in Sussex. Some time ago it was threatened, and saved by the energy of wise people, so that the Ring itself is now preserved for posterity. But on the lower slopes that now enjoy the immunity secured for it through the National Trust, a syndicate is commencing the laying-out of a large building development. The first act of the syndicate that has chosen this beautiful scene for its speculation is to cut in giant letters through the turf a colossal advertisement of its enterprise. In glaring white chalk this defacement stands out upon the pleasant hillside, to be seen for miles around.

★

To such purpose has it been that the same good people of Worthing who saved the Ring have risen in their wrath and vowed that they will stint no effort to save the Downs as well; for what is a hill-top saved, when all around it is ruined? Unfortunately, the boundaries of Worthing are not wide enough to take in the site, and it would take too long to obtain powers of extension. But there are other weapons which the Council may use, and these, with unanimous consent, are their weapons against such vandalism. And so the speculators have been denied all help in the matter of drainage, and, of even greater importance, they will be without a public water supply.

★

Furthermore, an attempt is to be made to invoke the Advertisement Act in the matter of the giant lettering. It seems to me that a body of public opinion, backed by the Council, could use the Act with great effect; nor can I believe that this same opinion, reinforced by every official body that can lend a hand and voice, will be unable to prevent a group of private speculators from acting contrary to strongly-expressed public feeling and against the best interests of the community.

ARTIFICIAL STONE IN FRANCE

The extensive use of artificial stone in France is very marked at the present time. Nearly all the latest buildings in Paris and other large cities are being constructed of brick and artificial stone, which is made in factories. Even at the Cité Universitaire, which is regarded by the French as being the climax of their post-war effort in the establishment of a University centre, most of the buildings contain a great deal of manufactured stone. Curiously enough, although there are now French, American, Belgian, Canadian, Japanese and Anammite Houses, from the architectural point of view it is considered that the new Armenian House is much the most attractive. Indeed, the the design of some of the other houses has been much criticized.

BADLY-MINTED STUFF

I felt it my duty to wound the feelings of an innocent man who recently showed me, with every expression of pride, some gas-fire surrounds in a material which he called by a name that sounded like marble but wasn't. The material also purported to be marble but was no more marble than Gorgonzola cheese, despite its curious veining, is marble. I asked him why he should go to such trouble to imitate a good material in a bad one, and he answered me by telling me that a great quantity was sold to many satisfied customers, and that I was out of step; all of which made me very sad, for it was yet another corroboration of the depressing fact that to most people matters of taste are matters of fashion.

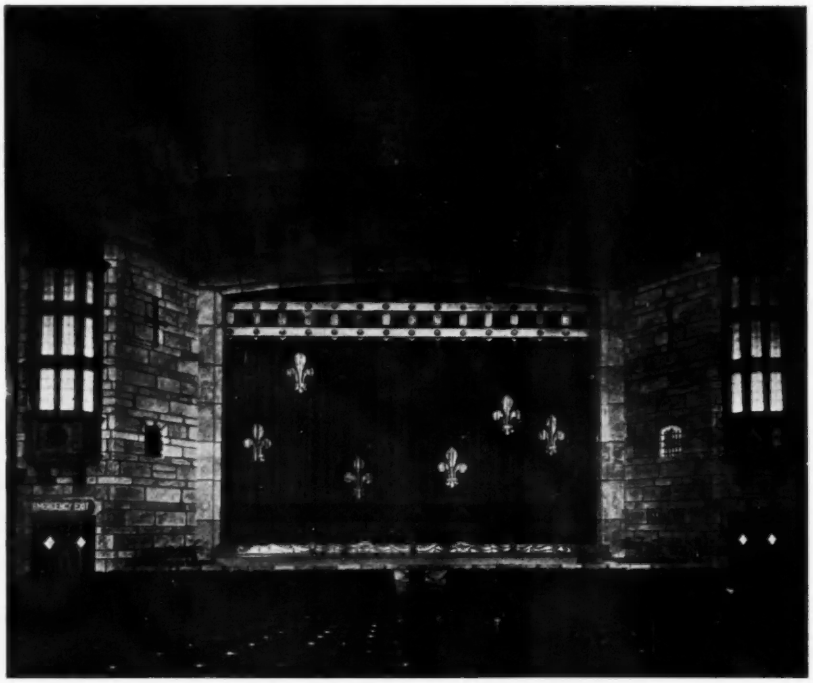
★

For let the majority admire the beauty of stone, yet do not count upon them knowing fake from true for all that. And, inquiring further, you may ask whether indeed they *do* admire the beauties in stone, or are they drawing upon some fictitious, sentimental, and utterly meretricious fund of ancientry worship. And I will not tell you further where this inquiry may lead you, for you will despair of the world, and be wrong in despairing. Better, I feel, to pursue one's own knowledge that one may deal in true coin, than play about with badly-minted stuff. There is enough popular appeal in the air today.

A REAL "SILENT HOUSE" AT OLYMPIA

Apropos my note, last week, on the noise nuisance, in the Building Trades Exhibition next month there will be erected a suite of rooms in the gallery, which will be entitled the "Silent House." While the problem of the acoustics of large auditoriums has received a good deal of attention in recent years, and there must now be few architects who would design a concert hall, for instance, without consulting an acoustical expert, it is far less common to employ the resources of modern science to render sound-proof the walls of ordinary dwellings. With the object of showing the progress which has been made in this direction, a number of firms have been invited to collaborate in the construction of this remarkable suite.

★



Each room will have on either side of it a small compartment devoted to the exhibition of sound-tests which may be applied to the partition walls and ceiling, and visitors will be enabled to judge of the sound-resisting qualities of specially-constructed walls of insulating bricks and blocks, thatchboard, fibre board, millboard, plywood and other materials. Moreover, they will be shown examples of silent ventilating fans, silent door-shutting apparatus, sound-resisting windows; and many of the appurtenances of the rooms will contribute to the general atmosphere of restfulness which is here aimed at. The designer of the Silent House is Mr. Trystan Edwards, who will also be responsible for the decorations and furnishing.

CAN THERE BE HUMOUR IN ARCHITECTURE?

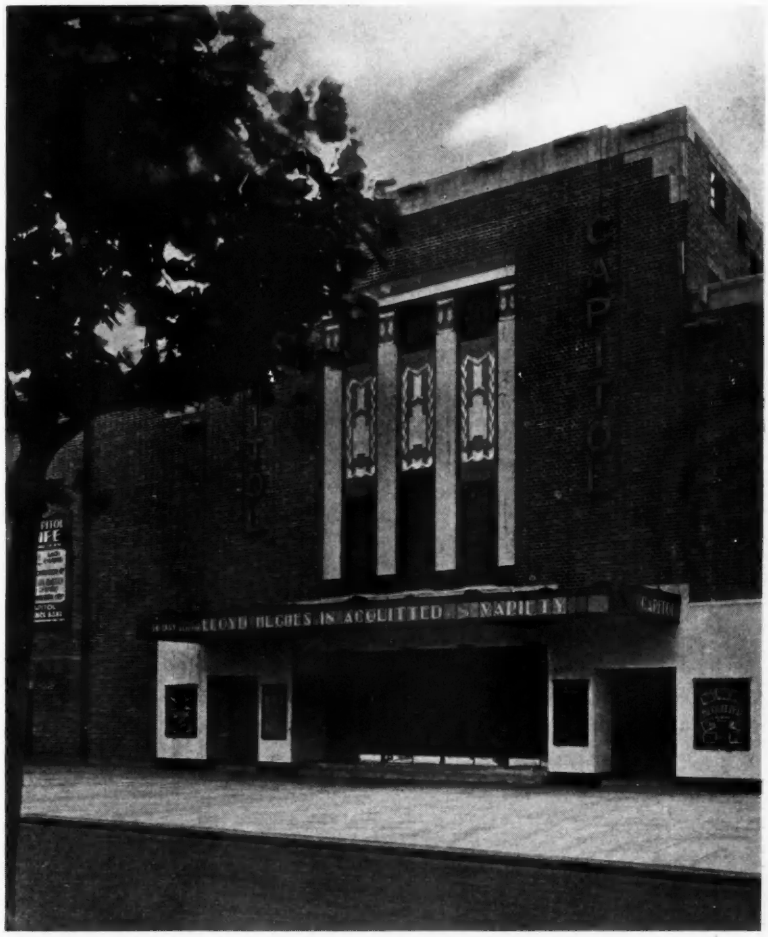
On several occasions lately I have taken the liberty of enlivening these notes with illustrations of buildings that have struck me as containing some element of humour (species: unconscious). I have never thought about this matter of architectural humour very deeply, but I suppose a building is about the only work of art in which there is no scope for the comedic spirit at all—no scope, that is, for it to function *intentionally*.

★

Of the other sort of comedy there is, however, more than enough. Or am I wrong in seeing matter for laughter in an interior such as the one shown on this page? I know from the correspondence I have received that readers of the JOURNAL have not quite seen eye to eye with me in my past guffaws. Well, the flat-arched opening is *not* a billiard-room fireplace, and the objects flanking it are *not* the latest thing in mediæval light-fittings. Nor does the building hail from Hollywood or anywhere in the United States. It is, in fact, a new cinema "not a hundred miles" from the Isle of Man. ASTRAGAL

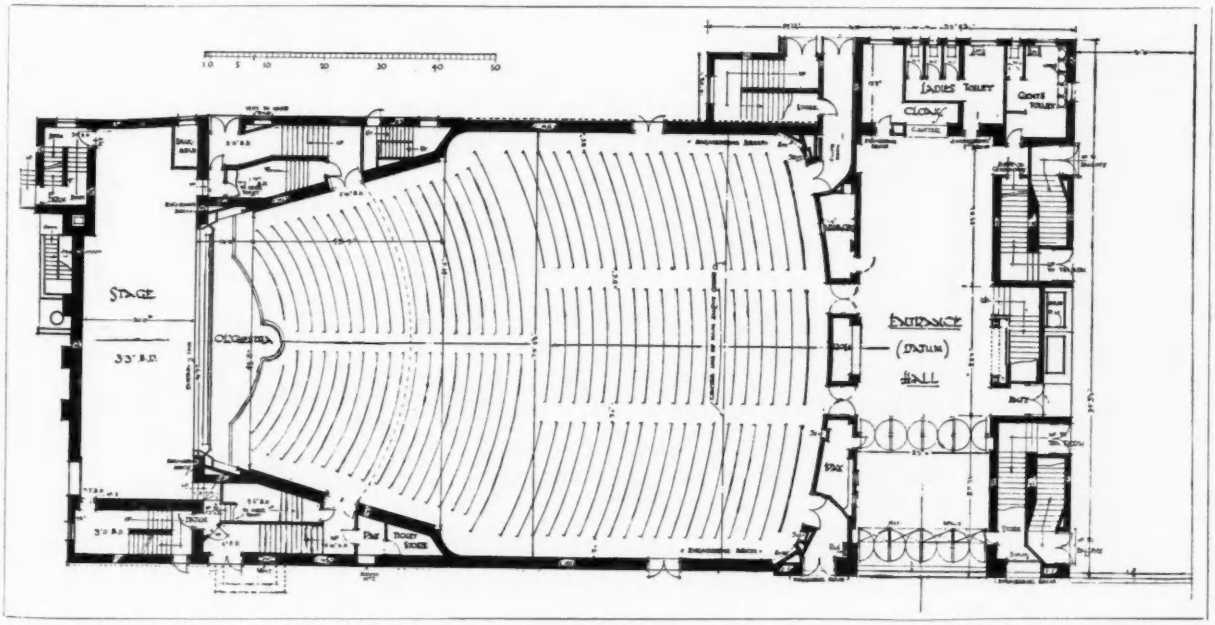
The mediæval mystery picture referred to in a note on this page. The portcullis is not a real portcullis, but a pelmet. The seats in the foreground, however, are real cinema seats!

THE CAPITOL, WINCHMORE HILL



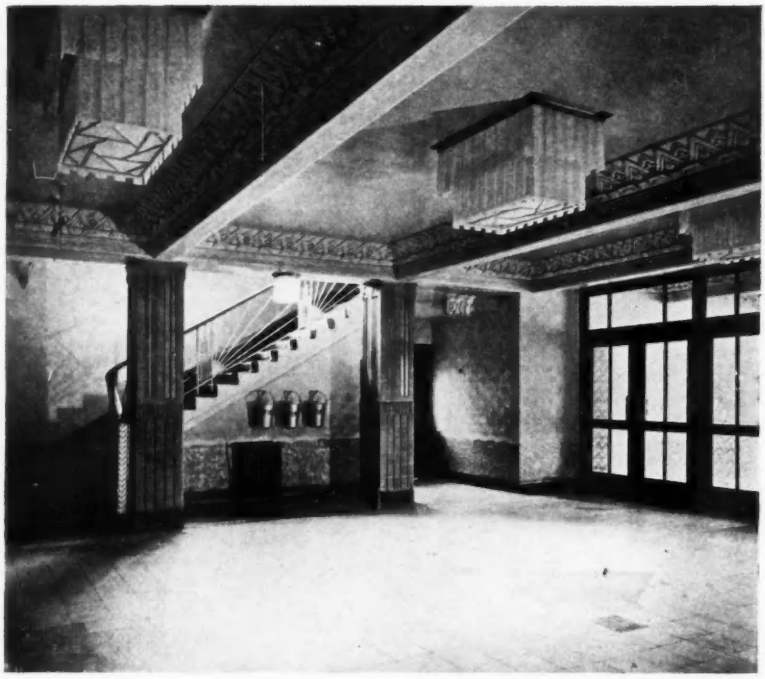
A Typical Suburban Cinema

DESIGNED BY
ROBERT CROMIE



THE Capitol Cinema has been extolled in a journal devoted to the design, building and equipment of such places as an "example of what a suburban hall should be. Complete in every essential, dignified and efficient, even to its car park for 100 cars; fireproof, safe and well planned, and decorated in the best possible taste, it deserves every success."

Which really means that comfort and convenience have been the first considerations in designing it. That this should be so is perfectly right, for this country has a reputation in these matters that experienced visitors from abroad have often applauded. Taste in decoration is a more individual concern; in this respect the house is in conformity with the current lavish criteria.



It occupies a site measuring 200 ft. by 86 ft., with the long side to the main road. The main entrance is therefore at one end, and affords, with its stucco, inlaid with ceramics in green and gold, black and white, relief to the general mass of mottled brown brickwork, pointed with white cement. A marquise, cellulose-painted, shelters the doorways, and, in the fashion of the day, the

The entrance feature occurs, as will be seen from the plan below, near one end of the frontage of the building to the road. The walls are of mottled brown brick, with white pointing, the central panels, of stucco inlaid with ceramics.

Plan of the stalls floor. Seating is provided for approximately 1,208 persons. The entrance and exit facilities include two pairs of doors to tea-room and balcony, respectively, giving direct access from a side street passage, via separate staircases.

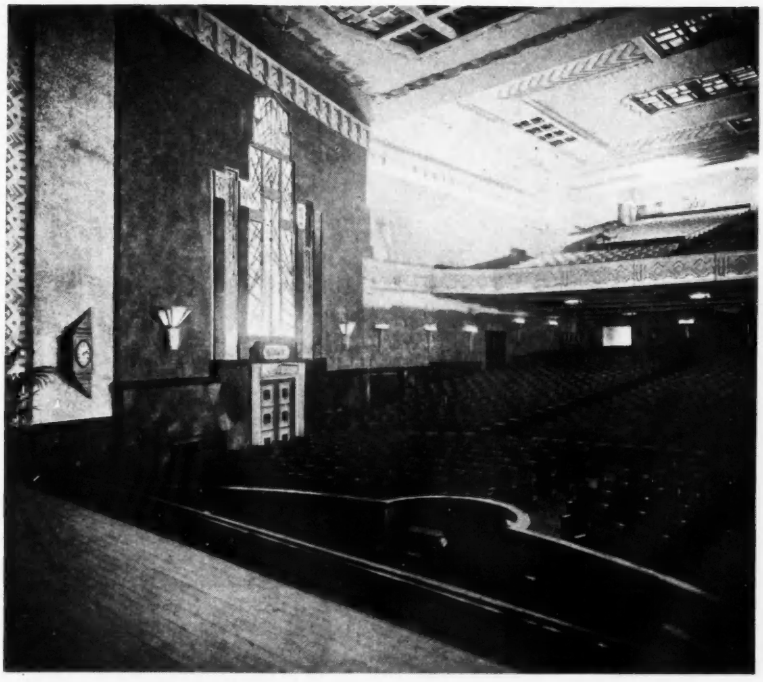
A corner of the entrance foyer. The doors on the right give straight-through communication with the street, through the vestibule. An extra exit, beneath the stairs to tea-room and balcony, leads to a side passage.

building is silhouetted with neon tube lights. Nor have poster-boards, suitably illuminated, been omitted. The doors themselves are of black oak, with chromium fittings, and engraved French glass.

Passing through these, one enters, first, a vestibule, in which automatic ticket-machines are installed, and thence, the entrance foyer. Facing one are the cloakrooms; to the right, an extra exit to the street and stairway leading up to the tea-room and balcony; and, to the left, two pairs of swing-doors to the stalls. This foyer, measuring 54 ft. by 24 ft., has a floor of tiles and terrazzo, and silver, black, jade-green and blue are predominant in the colour-scheme; the joinery is of dark oak.

Within the auditorium itself there is seating for 2,000 people—over 1,200 in the stalls. An interesting point is that the balcony has been placed comparatively far back, and with a rake and sight-lines calculated to provide for the arrival of the large-scale screen. The proscenium opening is 40 ft. across and 23 ft. high, with the organ grille inclined forwards above it. The walls are in textural plaster, finished a warm champagne above a mottled dado. Orange and silver relieve the Nile

Capitol Cinema, Winchmore Hill.]



The tea-room has an oak floor and an orchestra alcove—one of several—for dancing, and is lit by the three-window feature of the main entrance. The walls and ceiling form a quasi-octagonal outline. The entrance from stairs leading up from the foyer is seen on the left; next to it is a glazed draught screen.

green of the ceiling, which, in addition to each side-wall, has lay-light panels. The proscenium curtains and the carpets match in soft green, the chair upholstery being in green and beige.

Occupying the void behind the balcony is the tea-room, 64 ft. by 24 ft., with an oak dancing floor, and decorated in dark green and "sunshine." A number of alcoves are formed under the rake of the balcony floor, one of which can be used for a dance orchestra. The kitchen accommodation is conveniently arranged for the service of teas in the balcony. Administrative offices and stores are planned over the tea-room.

As usual, consideration has been given to the use of the stage for the presentation of theatrical programmes. It is some 64 ft. wide by 20 ft. deep and possesses a steel grid and fireproof curtain, while adjacent are six dressing-rooms, music store, bandsmen's and musical director's rooms. A private projection chamber is also provided.

The electric installation includes a battery of accumulators for secondary and emergency use. Vacuum cleaning apparatus is fitted, and a system of electric fans, to exhaust air through grilles of large area. Heating is by a low-pressure hot-water service.

A view of the auditorium, looking towards the balcony, from the stage. The ceiling has a series of lay-lights, illuminated from behind, like the panels in the splayed side-walls, which are glazed with leaded Flemish glass.

[*By Robert Cromie.*

The proscenium arch is surmounted by the organ grille, inclined forwards. The walls have a mottled dado, with textured plaster above, finished champagne colour. The proscenium curtains of soft green silk velour harmonize with the carpets, while the upholstery is in green and beige damask. The prevailing colour of the ceiling is Nile green.

MODERN DESIGN IN AMERICA

BY CHARLES W. KILLAM

The author, who is Professor of Architecture at Harvard University, makes a thoughtful and suggestive survey of the trend of design in the United States. After identifying current phenomena and analysing their causes, he inquires, very pertinently, whether, if they are to dominate design, architects must not learn to be modern in their use of materials and economies as well as in surface treatment. His argument, which conveys many lessons applicable in this country, is reprinted below, slightly abridged, from The Architectural Forum *of America.*

NO one man knows enough to discuss this subject in all its aspects. We can each try to contribute from our particular training, experience, and reflection.

No one solution can fit our diversified problems—a residence, a theatre façade, a shoe shop front, an office building, an apartment house, a church, a memorial on the Lake Front in Chicago or in the Charles River Basin in Boston. Some of these structures are by their nature ephemeral; others are to be long-lived. Some have environments without any claim to respect; others cannot in decency disregard their environment.

The interest of the so-called modernist in this country has been largely a matter of superficial appearance, not in the structural use of new materials to give utility, speed, and economy. The so-called modernist is experimenting with the horizontal windows, the black or white bricks, the directional textures, the shiny metals, the unusual woods, and the so-different ornament, all largely superficial things. He has continued to use brick and stone, although sometimes torturing them into forms they had escaped in the past. The student in the architectural school assumes that all façades are to be of concrete or of glass, and that all corners must be built of curved glass. Entrances no longer have horizontal lintels or curved arches; they must be mysteriously and precariously spanned by stone cut into unnatural forms or bricks contorted into wiggly courses. He also assumes that all ceilings are to be stepped in horizontal and vertical planes, a cross-section dating back to the stone-corbelled ceilings of the Egyptians and Assyrians, but having no excuse in modern structural methods except cheapness, if done in ignoble metal-lath and plaster.

Obviously, we should not limit the usefulness or increase the cost of our modern buildings by clinging to the materials or forms of the past. But we can welcome the new masses of our modern buildings and the new materials and methods now available without being so sure about some of the new ornament. We may admit that a score of columns, a hundred modillions, or a thousand eggs and darts, all alike, leave us cold. On the other hand, it is difficult to get much enjoyment from the modern glorification of the triangle, the groove, the steam radiator, the directional surface treatment, all copied from the savage's whittled paddle or war club, or the curled-up fern-like vegetation copied from prehistoric fossils.

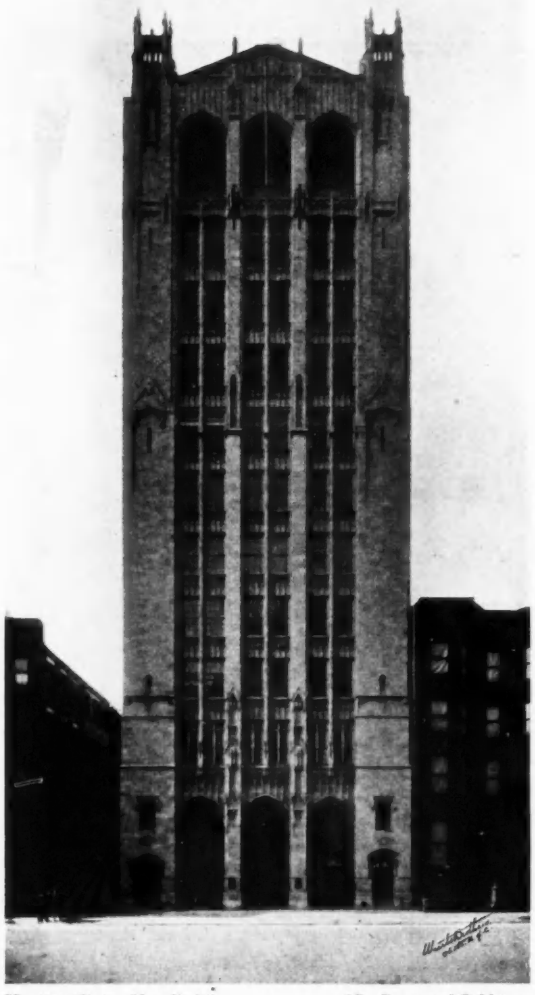
No matter what the change in fashion for the overcoat of our steel or concrete skeletons, we have continued to use masonry as the material of the overcoat. We had to use masonry when walls were bearing walls, and when buildings lasted for more than a generation, but it is one of the most inefficient materials to use with the skeleton construction today. In the case of cut stone, our labour of today is much more highly paid than in the past, although, on the other hand, machinery has greatly reduced the amount of manual labour as far as stone-cutting is concerned, particularly if the designer will acknowledge the twentieth century and see what he can do with machinery. At best, however, brick, stone, and reinforced concrete are extravagant materials to use to keep out weather and fire and to support light floor loads. Should we not try new materials, particularly for our commercial buildings and for our short-lived buildings?

Modern construction has added steel and reinforced concrete to the masonry pier, lintel, and arch of the past. These new materials allow slenderness in columns. They have much greater resistance to transverse bending than stone, hence shallow beams can be used over longer spans than is possible with stone. They can be used so that the thrust of vaults or domes of large spans may be eliminated or resisted, so that thick abutting walls are not required.

The possibility of slender piers has affected our window sizes and shapes. Windows in vertical walls were an unimportant element in the public buildings of the Greeks and Romans. In Gothic cathedrals, as in our modern factories, the wall became a series of windows between piers which were in general made just large enough to carry their loads. The vault thrust in the cathedral delivered an oblique load to the buttress, thus requiring much heavier masonry than would have been needed for vertical loads. After the Gothic days architecture reverted to a construction of walls with relatively small openings. The early New England mill building had large wall areas and small windows. The New England textile mill of heavy timber, slow-burning construction, developed in the latter part of the last century, gave us again an architecture of large windows between small piers, the piers being no larger than necessary to carry the loads. The spandrels were thin and often recessed from the outside faces of the piers. The early high office buildings had brick bearing walls. Their designers, although with the already developed mill building before them, adhered to the old scheme of walls with holes punched in them. They did not at first emphasize the piers by setting the spandrels back. Later the iron or steel columns in the outer walls, and still later the complete skeleton construction, allowed the pier to become a mere fire- and weather-protection for the column, and the spandrel wall a mere enclosure extending from window head to window sill. As the buildings became higher, the designers chose to accent the verticality by setting back the spandrel walls, perhaps using a different material, and thus throwing the narrow vertical piers into greater prominence, as though the buildings were built primarily for the columns instead of for the floors. They wasted much valuable rented space by setting the spandrel wall a foot or more back from the faces of the piers. Now we are swinging round to horizontal lines, as though the building were built entirely for the windows and had no vertical structural members, even at the corners. Architects have designed the over-emphasized vertical buildings and the over-emphasized horizontal buildings within a few months and within a few blocks of each other.

Suppose a real modernist dropped into the United States today to analyse our problems and to examine our solutions. Let us consider particularly the commercial building and still more particularly the high building of skeleton construction and of relatively short profitable life. The modernist would see that we have materials in infinite variety—their fitness to carry loads, to resist fire, to resist passage of heat, cold, and sound, their waterproofness, and all other physical characteristics definitely known and comparable one with the other. Great organizations of producers, with engineers and inventors ceaselessly at work, have in their minds, or even in being, new materials or combinations of materials awaiting only the acceptance by architects or the revision of building laws to put them into use. The modernist would observe the congestion of our narrow streets with loads of brick, stone, concrete, and plaster for new buildings. He would see these heavy materials hoisted hundreds of feet into the air and see the brick and stone set by slow and high-priced labour with very little aid from machinery. The owner demands speed in the construction so that his investment can commence to earn, because he is going to tear the building down in thirty years. We stick to slow methods of hand assemblage at the job instead of taking advantage of the rapidity and economy of maximum preparation in factories and a minimum of manual labour at the job. Our masonry walls get dirty, effloresce, and disintegrate on the surface. They drop pieces of stone and terra-cotta to the street. They are ill-fitted to keep out moisture, and we spend money and space on flashings, damp-proofings, and furrings, often in vain. In thirty years they are obsolescent, and we tear them down and congest our streets again hauling them to the dumps because brick, stone, concrete, and plaster have so little salvage value. We are continually extending the use of the machine in the preparation of materials, but machinery helps us little in setting brick or stone in place. We have specialization among the contractors, each trade demanding that it be free to complete its work without waiting for any other trade. We have labour unions deciding or fighting as to which trade shall do which work.

As soon as the modernist had become acquainted with these facts he would wonder why we went to Greece or Rome or the Middle Ages or the Renaissance or to the Mayas for our forms, materials, and methods. Still more would he wonder why we go to France, Germany, Holland or to the Scandinavian countries of today.



If he watched buildings in course of construction he would see strange things. He would see long stone lintels supported by concealed steel or reinforced concrete beams, with the stone columns put in later when they arrived from Europe. He would see columns with shafts of marble but with plaster capitals, coloured to imitate bronze, supporting a plaster cornice painted to imitate quartered oak, the columns being tucked in on top of a floor which had to be strengthened to hold them, and beneath another floor which did not need their support. He would see 8-inch rolled steel H-columns supporting floors and roofs and backing up Ionic stone columns 4½ feet in diameter which supported an entablature. The great stone columns shut out light and made the interior area about 4 feet narrower than it needed to be. He would see similar steel columns supporting floors and roofs but concealed by Gothic buttresses 3 feet wide and projecting 4 feet from a thick wall, the buttresses abutting nothing. He would note that these columns and buttresses were put together, slowly, stone by stone, by high-priced manual labour. He would see a great technical school, dedicated to study of the most modern sciences, housed in reinforced concrete buildings, overcoated in limestone brought a thousand miles, designed in a style two thousand years old and three thousand miles away from its home. Within a few miles he would see well-designed factories far better fitted to house such a school. At the same time in the same cities he would see cathedrals, collegiate buildings and private residences being built in the old manner with steel and reinforced concrete sometimes left out as sacrilegious and uncraftsmanlike modernisms. He would see vault thrusts resisted by the most extravagant of masonry members, a buttress resisting oblique forces. He would see malformed wooden trusses which would exert a thrust on the walls if they were true wooden trusses, but would find that here where buttresses are needed they are not relied upon, concealed steel resisting the deformation of the truss. He would see brick sand-blasted

Los Angeles County Hall of Justice. [*By Allied Architects' Association of Los Angeles.*

"No matter what the change in fashion for the overcoat of our steel skeletons, we have continued to use masonry as the material of the overcoat."

to make it look old, and stone and wood hand-hewn after the machine saws and planers had left it smooth. He would see sway-back roofs, bricks laid crooked to make them look "interesting," moss-covered slates imitated in burnt clay, asbestos, or tin. He would observe that the people who worshipped in these cathedrals, studied in these colleges, or lived in these houses, were not the least bit mediæval.

Hampton Shops, New York.] [*By Rouse and Goldstone.*

" Designers chose to accent the verticality by setting back the spandrel walls, as though the buildings were built primarily for the columns instead of for the floors."

They travelled in motor cars, motor boats and airplanes, whose forms and materials had been revolutionized in a decade, and there was no attempt to imitate mellow age in the finish of any of them.

If he watched the alteration of a building he would see interior bearing partitions of masonry removed to give wider open spaces, masonry exterior piers replaced by a different kind of masonry, reinforced concrete construction noisily and expensively cut through, with no salvage value; plaster removed in a cloud of dust, floor construction patched with heavy and dripping reinforced concrete.

If he watched a town in a hurricane, conflagration, flood, or earthquake, he would see buildings built of bricks, stones, or blocks disintegrating into their primary units, killing the population in the process. If he watched the destruction of a building by fire he would see expensive cut stone spall in moderate heat.

If he watched the destruction of a building to make way for a new one he would see expensive cut stone dropped into a chute to a truck, but the brick taken away to give that "interesting" texture to a new country house. He would notice that wooden and steel beams, and metal in general, seemed to have some salvage value. He would note that skeleton construction allows arcading the sidewalks as shown in the Barclay-Vesey building of the New York Telephone Co., but he would find that we made very little use of this possibility for street widening.

We have used, and in some cases abused, a few of these modern materials and methods. We have used reinforced concrete properly for foundations. We have used it honestly and decoratively in some ceilings where the structural coffers, joists or slabs have been designed to show, and have been coloured, a welcome relief from metal lath and plaster imitations. We have used reinforced concrete improperly in façades which were made up of vertically reinforced piers but which we have rusticated horizontally. We have formed it expensively into arches which were acting structurally as beams. We have cast it into blocks which imitate quarry-face stone. In bridges the architect is afraid to admit the slenderness of the reinforced concrete barrel and conceals it with a stone arch ring three times as thick, or with a concrete face rusticated into false voussoirs. Reinforced concrete has been pushed by organizations of cement manufacturers and by contractors whose financial interests were dependent upon that one material. From being either a floor material or a wall material it has become a structural whole, whose backers insist that economy and convenience require that they be allowed to do all of their work without reliance upon other trades, a reinforced concrete skeleton being recommended even for the lowest buildings, although the masonry walls may be amply thick to support the floors. We have built floors of reinforced concrete which weigh as much or more than the live loads which they support. We make our beams, girders, columns, and foundations twice as strong as the live loads require because of this over-heavy dead load. The reinforced concrete building is difficult to alter and expensive to tear down. Should we not take a fresh look at our needs and our building materials of today and see if we cannot use lighter, cheaper materials and materials with a larger salvage value?

Let us now try to face some of our problems as a thorough-going modernist would. For years we have used sheet metal to cover roofs, bay windows, spandrels, and shop fronts, as well as for the entire walls covering steel frames in garages and industrial buildings. Why not build our high buildings and our buildings which are to be obsolescent in thirty years with a steel frame with no exterior masonry what-

ever? The steel can be fireproofed, perhaps with less thickness than at present, and then the whole outside can be covered with bronze, copper, aluminium, stainless steel, nickel silver or other metals, shop-fabricated as much as possible, light in weight, except for fireproofing. Such thin walls would save large areas of rentable floor space.

Do we need to fireproof steel beams, girders, and columns in all buildings with 1 to 4 inches of tile or concrete or outside columns with 8 inches of brick or stone? At the times of our great conflagrations—Chicago, Boston, Baltimore, San Francisco, and smaller fires elsewhere—a few more or less fire-resisting buildings were surrounded by great numbers of combustible buildings with combustible contents. This condition is now changed in parts of many cities. Large areas of our cities are now built up with fire-resisting office buildings, apartment houses, hotels, banks, railroad stations, theatres, and some other buildings with no great amount of combustible contents, with weather-tight, fire-resisting, requiring no painting or cleaning, resisting earthquakes and gales, having high salvage value. Back of this sheet metal, insulation can be provided by light weight, incombustible material. Plastering could be omitted altogether metal partitions, doors, windows, furniture, and incombustible finished floors. In such cases why is it necessary to fireproof such buildings with the same heavy floor slabs and column protection as for storehouses or manufacturing buildings filled with combustible

Royal Building, New York.] [*By Starrett and Van Vleck.*

"The New York zoning ordinance of 1916 resurrected the set-back buildings of the Chaldeans, and it has spread like wildfire to cities where they were needed, and where they were not needed, but which wanted to look like New York."

contents and surrounded by wooden buildings?

We have for longer or shorter periods used roof constructions much lighter and less fire-resisting than our first-class floor construction. Why not use these lighter types for floor construction, such as pressed steel joists, trussed joists, pressed steel floor plates, thin concrete or gypsum floor slabs?

The New York zoning ordinance of 1916 resurrected the set-back buildings of the Chaldeans, and it has spread like wildfire to cities where they were needed and to cities where they were not needed, but which wanted to look like New York. Set-backs to fit modern needs would be entirely impracticable with the wall-bearing buildings with brick arch or wooden floor construction of a century ago. The steel or reinforced skeleton makes them entirely possible, even if not economical. It still remains true, however, that even with the skeleton construction the rectangular prism is the most economical frame to construct. Some of these buildings have few set-backs, each one a full bay, so that the successive faces are on column lines as in the Lincoln building or the *Daily News* building in New York. Others have more numerous set-backs, many of them of less than a bay, and thus start new wall columns, not on the lower columns but on heavy girders, thereby increasing the steel weight as well as complicating its design, shop-work, and erection. Some of these buildings set back a full unit of the plan, for instance, the width of a typical office. Others are more complicated both in cross-section and in plan. They copy the silhouette of a Gothic tower which set back 4 inches by thinning the wall, but the skyscraper is ten times as high as the tower, and the set-back becomes 40 inches, and therefore cannot be gained by thinning a 12-inch curtain wall. Then the various faces are played with, battered and bent, hollowed and curved, as though a thousand-foot high building were a 10-inch high wedding cake. It isn't; it is a combination of 12-foot high stories enclosed in masonry walls supported at each floor on steel beams which would like to run straight from column to column.

If the plan of an office building or an apartment house is economically arranged in one story it is difficult to believe that it is equally well planned in six or eight other stories of varying areas and shapes.

In conclusion, if architects are to dominate the design of buildings, must they not be modern in more than mere surface treatment? Must they not use modern materials, methods, and economies not reluctantly but enthusiastically?

DAMP IN BRICKWORK

The following notes on the penetration of rain through brickwork represent one of many inquiries submitted to the Information Bureau of the Building Research Station, and the reply thereto, summarised:—

AN Association of Builders report:—

The penetration of rain through 9-in. brickwork, which is the standard of construction required by most local authorities, has given rise to a considerable amount of trouble. Some of our members find that the penetration takes place in the bricks and some unquestionably attribute porosity to both joint and brick. It is generally accepted that a 9-in. brick wall, no matter how constructed, cannot be relied upon under every circumstance to keep out the rain. The real problem, therefore, is the construction of a 9-in. wall in such a manner and of such materials as to give the longest possible resistance to penetration.

In small house construction, using traditional walling materials, there is an excess of strength and an insufficiency of weather protection; in other words, the governing factor in deciding the thickness of traditional external walling material is the minimum which will keep out the wet.

The factors operative when damp penetrates to the internal plaster on an external wall are (1) those due to wind acting upon water passing over the external face and (2) the capillary properties of the materials of construction.

What usually happens with walling materials is a very high rate of absorption at first, due to the head of water plus capillary attraction; as frictional resistance in the pores increases with depth of penetration, the rate is gradually slowed up. In order that water shall flow out over the interior surface of the wall a pressure greater than the "capillary head" must be exerted. At smaller pressures the liquid surfaces formed at the orifices of the capillaries will merely become distorted, assuming a convex shape on account of which forces are developed which will oppose the flow of water.

In a porous material the limiting pressure which the larger pores can sustain through distortion of the liquid surfaces may easily be exceeded by the wind pressure; as a result water will flow through the larger pores and will wet the whole internal surface of the wall. The curved surfaces which oppose the capillary flow through the smaller pores will then merge in a continuous liquid film and no capillary forces, apart from frictional forces, will oppose the penetration of the material.

In common bricks and, in fact, all bricks, with the exception of a few semi-vitreous engineering bricks, which are absolutely impermeable, the capillary properties are such that, with a continuous supply of water at one end moisture will travel straight through the length of the brick.

It will thus be realized that, quite apart from pressure due to wind effects, a 9-in. wall of ordinary bricks containing direct capillary paths to the interior in the form of "headers" tends to be fundamentally unsound. A good drying atmosphere on the outside, following periods of rain sufficiently rapidly, is the factor which renders most walls tolerably weather-resistant, since the capillaries of the brick will not usually have time to fill up before the direction of flow is reversed.

In 14-in. walls there is no direct capillary path through brickwork, the moisture has farther to go and the flow is therefore slowed up, and there is more likelihood of it being reversed in time by drying conditions outside. At the same time, a capillary path is still provided by the mortar, and the success of some 14-in. walls and the failure of others probably largely depends upon the degree to which joints are filled.

As a means of preventing damp reaching the interior, the obvious remedy is a continuous cavity in the external wall. From the point of view of strength the 11-in. brick cavity wall is adequate for small house construction. It does, however, require careful design and construction and we can say that the only cases brought to our notice where the 11-in. wall has failed to provide water-tightness have been due to avoidable causes, e.g. ill-considered design at window and door heads and jambs, or the provision of a capillary path by allowing mortar droppings to remain on the ties.

The alternative of providing a cement rendering, stucco or roughcast coating to the solid wall cannot be said to be a certain preventive of moisture penetration. It often serves the purpose, but with the development of shrinkage cracks or crazing (which defects, it must be admitted, cannot be wholly guarded against), such a covering becomes a definite disadvantage for the simple reason that while water will enter and tend to saturate the wall, the evaporation to the outside will be prevented or restricted, and it will almost certainly occur from the internal surface; any salts dissolved during the passage of the moisture through the wall will thus be crystallized at, or near, the internal plaster surface, usually with disastrous effects on plaster and decoration.

ENGLISH PRECEDENT No. 129

REDLAND GREEN CHAPEL, BRISTOL

The Redland Green Chapel is the work of the eldest of the remarkable Paty family who gave to Bristol many of its finest eighteenth-century buildings. The Patys were not only architects but workmen, and one of them, William, left on his death, in addition to a "capital and extensive business" as architect and statuary, a large stock of monumental and architectural marbles.

The influence of Vanbrugh is noticeable in this powerfully-modelled façade, which bears a striking resemblance to the latter's entrance front for Kingsweston House. Vanbrugh's lateral windows have gone; his characteristic pediment light remains, however, and the window over the entrance doorway becomes a niche of the same shape.

By such means, and by the strengthening of the doorway itself to just the right pitch of importance and severity, an ecclesiastical tone is skilfully infused into the design.

—[C. BARMAN]

LETTERS FROM READERS

Oxford, Past and Present

SIR,—On page 185 of THE ARCHITECTS' JOURNAL for August 6 last, you published a photograph entitled "Two Ways of doing it, in Oxford." In the foreground are two old houses simply and soundly built, unassumingly dignified, and not without that romantic charm with which the old builders were able to invest their simplest building, an art which we have not only lost but which, it would appear, we cannot even appreciate.

The modern contribution to these old houses consists in the advertisements plastered over the old work.

Behind these well-bred old buildings, which even contrive to look well-bred in spite of the posters which disfigure them, is an entirely vulgar modern shop, the kind of shop with which modern commercialism is disfiguring our old towns. No printable adjectives of mine can convey the devastating ugliness of this so-called "orderly" corner treatment.

And yet it is this building which the D.I.A. have dared to hold up as a shining example. I cannot believe that the D.I.A. does not include amongst its members some artists not blind to beauty in building. It is to them I appeal. If this is too much to hope, let me appeal to the painters and ask, say, Augustus John, which of these two buildings he would chose to make a picture of. The old building, even with its flamboyant posters, might give him a subject not without inspiration, but I doubt whether any artist could infuse any beauty into the dull and common-place vulgarity of the modern shop. If this is the kind of lead the D.I.A. is giving to the modern designer of shops, the sooner it puts up its own shutters the better.

BAILLIE SCOTT

Regarding Doors and Windows

SIR,—As an outsider, with no technical knowledge in building matters, I feel some diffidence in airing my views to experts, but I should like to have authoritative answers to two pet grouses of mine.

First, who killed the Venetian blind, and why? Surely it is easily the most efficient type of blind, since it permits easy regulation of the amount of light and air admitted to the room. Presumably it is "unhygienic," but I wonder how much dirt the average chintz curtain conceals.

Secondly, why cannot doors be arranged to slide open instead of being hinged? A sliding door would save a good deal of space at present wasted, would not fray the carpet, and, incidentally, would probably shut out more draughts than the average door. It would also eliminate possible collisions caused by the sudden entrance of one party coinciding, as Euclid would say, with the intended exit of another. In most cases, I imagine, the door would be arranged to slide into the wall, so that no difficulty would be experienced on the score of ugly appearance.

HENRY B. BLESSINGTON

Restoration of Old Buildings

SIR,—Letters have appeared in *The Times* criticizing an appeal for the better care of old inns which was printed in the annual report of the Society for the Protection of Ancient Buildings.[1]

These letters were concerned with the photographs of a restored inn at Salisbury. There an ancient house, probably dating from the sixteenth century, had been modernized in the eighteenth century and given a hanging bay-window and some other sash-windows. At the same time the timber framing, till then probably exposed, was covered with plaster. The plaster covering was usually put on for two reasons: (1) To keep the weather out, and (2) to cover the damage and alterations to the framing which had accompanied the changes in the form of the windows. Lately the eighteenth-century windows have been taken out, the plaster stripped, and the damaged framing has been restored, exposed, and darkened. At the same time new windows, in imitation of those of the sixteenth century, were added where they were supposed or known to have been; and no doubt some old mullions, and perhaps a complete window or two, were found and exposed.

Before this was done the plastered inn, with a group of other plastered houses, made a pleasant, picturesque unit in the street. Now, in marked contrast to its neighbours, the inn stands rather proudly self-conscious. It conforms to the demand for the appearance of antiquity. Because the Society suggests that the preservation of such an ancient building is better when it is not accompanied by emphatic stress on archæological knowledge and by the partial or entire neglect of the other attributes of building, the owners of the house are offended and have voiced their opinions in the columns of *The Times*. If any are more interested in the subject than in the consequent newspaper controversy, I would ask them to refer to the note in the Society's

[1] The report referred to was reviewed in the last issue of THE ARCHITECTS' JOURNAL.—ED. *A. J.*

BEFORE—

—AND AFTER RESTORATION. [*From* Country Life.

The King's Arms, Salisbury.

annual report in which the general nature of the Society's views, rather than a consideration of the Salisbury case, is set forth.

Some further suggestions on the principles involved in this kind of architecture are offered below.

The success of such work rests in reality, and a sense of reality derives from a balanced consideration of values, which, because they have different names, incline to be stressed separately and in excess, so that the single unity they together possess is lost. The enthusiast for "form" will be careless of history, or the keen archæologist will consider nothing but the "ancient," the business man "economy," the melancholy lover of romance little but the evidence of decay. This list can be extended.

It may be that this generation leans too heavily on the past and shows a too artificial appreciation of old things. But, accepting (as do these critics of the Society) the belief that the ancient building art deserves a very considerable share of human attention, the Society asks that respect be given to the handiwork of the eighteenth as well as to that of the earlier centuries. The article criticized was written to plead for this respect, and at the same time to suggest that the reproduction of ancient features (conveniently called restoration) has a value that is strained, self-conscious, and even false. The Society thinks these qualities are unpleasant, and it believes that others will share that opinion.

My committee asks those who criticized our action to believe that the Society appreciates the sincerity with which they have acted, and it should be well known that the Ancient Buildings Committee of Salisbury have more than once been the chief protectors of some ancient building—Harnham Bridge is an example of this.

Incidentally, a committee representing the Royal Archæological Society, the R.I.B.A., the London Society, and the S.P.A.B. has been formed to explore the possibility of compiling a central card-index of prints, drawings and other architectural records. It is proposed to limit the scope of the committee's work to buildings at least a century old and to those of England only, but it is hoped that parallel action will be taken in Scotland and Wales.

It is realized that an immense amount of such records are in private hands, and it would be useful to the committee if owners would give particulars of their collections *now*, for with this knowledge the committee will be better able to form an idea of the extent and scope of the enterprise.

A. R. POWYS,
Secretary, Society for the Protection of Ancient Buildings.

Guildford Cathedral Competition

SIR,—I have read the letter of "Fane" in your issue of August 13. I may say, in answer to him, that the site for the proposed cathedral can easily be ascertained by a visit to Guildford.

I can assure him that the objections raised in the second paragraph of his letter need cause him no anxiety.

As for his remark about "younger men" and "*dusty* portfolios" (italics mine), I need only say that the latter are quite unlikely to receive much attention from the committee, and, in regard to the former, that the procedure adopted is identical with that employed by the Liverpool authorities. This method produced a Scott, and there would seem to be no reason why it should not have a similar result in the case of Guildford.

LIONEL E. BLACKBURNE,
ARCHDEACON OF SURREY

Settling-Up Honeywood: xiii

FRED BLOGGS INTERVENES

BY KARSHISH
(H. B. CRESWELL)

Sir Leslie Brash has taken loud exception to the bill of extras, the failure of the inside painting is a serious defect, and Spinlove, the architect, has written to Wychete, an architect friend of experience, to ask his advice in dealing with an outbreak of dry rot.

WYCHETE TO SPINLOVE

My dear Spinlove, 26/8/26.

This is an awkward business, and if you cannot deal with it yourself you ought to get the advice of someone on the spot, but, of course, *you* alone are responsible to your client, and no one but yourself can decide what course to take. The question between you and the builder is a difficult-one. If I were you I should not press your point of view to the extent of making him antagonistic. He may be willing to do what is necessary without any charge, but, quite naturally, he will take no action that will involve him in responsibility. This is the reason he refuses to advise you, and he will not, you will find, handle the matter as a "defect" under the terms of the contract. If he did this, he would admit liability for the whole extent of the damage. This may, of course, become extensive.

I do not, however, think that it will extend. In my opinion the builder's view of the cause of the outbreak is right, but, as it appears not to be a vigorous growth, I think that the amount of damp is probably very small, and that the use of infected wood may have led to trouble which otherwise might not have occurred.

To make the house perfectly safe it would be necessary to cut away the concrete floor-foundation against internal walls, as well as external, wherever there are "solid" wood floors—that is, over nearly half the area of the house—and make good clear of the dampcourse; but I think the case will be met if you replace all affected skirtings and blocks on top of an impervious bituminous coating made continuous with the mastic in which the wood blocks are laid, and covering walls behind skirtings. Bellflower and Snooter Ltd. manufacture bituminous coatings for various purposes and would advise what best to use. You should also treat the back parts of the china cupboard, and all contaminated work, as well as the back of the new, with a solution of sulphate of iron. There is nothing better for killing dry-rot and it does not smell as creosote does.

If this fails, you will have to cut away the concrete. If it succeeds, you can treat any other similar outbreaks in the same way, but let us hope that there will be none. I have no doubt the ventilation of the panelling in the billiard-room will prevent any trouble there. Ever, my dear Spinlove,

Yours sincerely,

Wychete's tactful reminder that Spinlove is responsible to his client, and that whatever action he takes must be his own decision, is much to the point. Wychete's advice—whatever it is worth—cannot lead Spinlove astray; for the reparation, if experimental, is simple, and should it be without effect, little time and money will have been wasted. There is, however, the risk that while Spinlove is dealing tentatively with this small outbreak, far-reaching growths, which immediate drastic action would prevent, may be establishing themselves secretly in other parts of the house. The decision whether to take this risk or not and, if not, what measures to adopt, devolves on Spinlove, and no one can relieve him from the need to rely on his own discretion, for that discretion is inseparable from a responsibility which belongs to no one but himself. It is the exercise of judgment, hampered by the considerations of cost, of risks, of exact justice, of conflicting interests, of uncertainty as to facts, of misunderstandings and of diverse individualities and dishonest or incapable agents, which is the chief care and preoccupation of architectural practice. To design a building, to draw and specify

every part of it, and to direct its construction and see it completed with no other anxieties and dilemmas than belong to the exercise of those duties, is unknown—except, possibly, to a few very good architects, after they die.

SPINLOVE TO WYCHETE

My dear Mr. Wychete, 27/8/26.

Thank you extremely for your most kind letter. I am enormously obliged for your advice. I will act on it at once. Surely, as the dry rot is due to the builder's use of infected wood, the outbreak is *his* fault and he can be held responsible for making good ?

With kind regards,

Ever yours sincerely,

Spinlove's impetuosity here again prevails to his discredit. He plainly tells Wychete that he has not troubled to read his letter.

WYCHETE TO SPINLOVE

Dear Spinlove, 28/8/26.

I give no advice but merely make suggestions. There is no means of knowing that the wood was infected, and the " cause " of the outbreak is, in any case, *damp*.

Yours sincerely,

Exactly ! Wychete was particular in warning Spinlove that he must use his own judgment : by replying " I am taking your advice at once," Spinlove announces that he is relying on Wychete's. Wychete, naturally, will allow no such interpretation of his letter. Wychete was also particular in exculpating the builder; and if Spinlove had reflected, he would not have requited his benefactor by plaguing him to say once again what he has already been at pains to make clear.

SPINLOVE TO GRIGBLAY

Dear Sirs, 27/8/26.

I enclose specification of work in making good where dry rot has appeared. If you see any objections to the proposals will you let me know ? The work should be completed if possible before the end of next week when Sir Leslie and Lady Brash, who are away, return.

Yours faithfully,

GRIGBLAY TO SPINLOVE

Dear Sir, 28/8/26.

We have to acknowledge your instructions for making good where dry rot has appeared, and will do our best to complete same before the end of next week, as requested.

Yours faithfully,

Grigblay has no intention of committing himself in any way, it will be noticed. Spinlove will realize how much support and guidance he has had in the past, now that he can get neither.

GRIGBLAY TO SPINLOVE

Dear Sir, 30/8/26.

As promised you by Mr. Grigblay, we have referred to our foreman Bloggs for explanations of certain extras under " Various minor works " and other matters queried by you, and enclose sheets with his answers to same which we hope will give the information you want.

Yours faithfully,

(ENCLOSURE) GRIGBLAY TO MR. F. BLOGGS

c/o Marston Grigblay,
Builders,
By Portenwalsh Mead,
Baggerfoss, Hunts.

HONEYWOOD

Dear Fred, 7/8/26.

The architect queries extras as attached sheets. The governor wants your answers in blank spaces. No doubt you have your diary along. Enclosed is copy of Statement lettered so you can pick up easy. The jim crow was put on passenger last night. The governor says if you can't manage take along to Potters, Nottington, who will straighten while lorry waits. To be charged up against Ry.

Yours,

T. P.

Hear with O.K. F. Bloggs, Aug. 28tht.

This letter must have been sent to Spinlove pinned to the other papers, by an oversight. It shows Grigblay's business to be conducted in the old-fashioned style that still lingers, with the best traditions of the building crafts, in the provinces, where son follows father to the bench or the scaffold, and the master calls his men by their Christian names, knows the domestic circumstances of each, and distributes joints and poultry among them at Christmas. There may be somewhere in this world happier men than these, associated in more delightful work, but it is a hard thing to imagine. The tail of the letter indicates that Bloggs is in difficulties with a steel joist delivered bent by the railway.

Bloggs, it will be noted, is business-like. He answers the letter concisely and dates his signature. The " attached sheets " proclaim a most studious devotion on his part, handicapped by a very gritty pencil and by india-rubber deeply involved with butter. The papers are greatly fatigued at the folds, and Bloggs has evidently lost the saucer of his tea cup, but—with the help of stamp-edging—they survive, and Bloggs, as he might be trusted to do, has done the job, although it has taken him three weeks to finish it.

HONEYWOOD

The Architect queries the following. The letters in margin refer to statement items.

A. EXTRA IN FOUNDATIONS, ETC.? ARCHITECT SAYS HE NEVER ORDERED ANY.

Sep. 20tht 24. Architect bring along drawings of terrace, put out cause she want steps moved further up kitchen end. It were the day her little nurse dog made to bite him so he will know it. First I must lower bench of terrace he says; then after I peg out that wont suit, so then it was three steps he ordered and that wont do neither, it got to be two he says, wich where $9\frac{5}{8}$" and brought bench down to 7" or thereabouts above top of footings, and no harm as I could see, but I must put foundation down four courses along front and jump up with extra step on return he says. I put Rumbler on it and after dinner found he add got mixt and rekoned four courses has $13\frac{1}{4}$" instead of $11\frac{1}{8}$" gauge we was on, but architect passed all on 13tht see dairy hearwith for measurs has per weekly return.

Bloggs's identification of Lady Brash with " she," after an interval of six months, is eloquent of the place the lady had won for herself in his regard.

Oc. 13tht. Archteckt come on to pass trenches, dont like bit of slop down drawing room end (S). He drop his pipe and I send Joe Perks for bit of waist I add in the window of my office, so he will know all about it. He wont have me to scrape up but I must dig out 4" to satisfy, and I level up with concrete to save jumping footings has he agreed to measure I give (see dairy) and marked with the toe of my boot for architects approval the oner see me do it and can say.

Nov 11tht. Syd broke his hand, architect was there so will know he ordered me to lower excavation for cellar floor one course, reason cause headroom to thight at door under stairs reason of lowering ground floor $1\frac{1}{2}$"

Nov 25tht. I had bench pegs set for screed of cellar floor and he came on afternoon latish about Hoochkofs facings and left a letter on my table I sent after. He dont like top course of footings standing above screed cause of bottom being dug 3" lower, and I must knock off to level. I says suppose inspector see what were at dam Mr. Potch he says, but after he left he came back and I haerd him shouting wehn I was in my office and put my head out to see who was and he had come back to gate and called I was to put floor back as it was and headroom were good enough, so there was that bit extra digging and hard core to level up again after, as per my weekly and see dairy.

As the due offset of footings is defined in the bylaws, the local surveyor would object if he found a course being cut away.

B. EAVES SPROCKETS AND TILT TO RIDGE? ARCHITECT REMEMBERS GIVING DIRECTIONS BUT SAYS NO EXTRA.

June 6tht 1925. Architect come on roof an add me to fake a bit of eaves

has per No. 41 but that dont suit, must be bigger projectn. and tilt. Well gage wehre 3½" so he says better make it one course, so I botched it to get what he wanted but the rafter feet was all lined and cut and no tilts would carry over that far, and what finish would he have an so I says it mean cutting back feet and fix sprockets to make a job, an he says yes do it and make a job so I done it D.W. as per weekly and all stuff cut out in shop which proves it see dairy.

14 Juy tht. Tilers add left. Architect says must put more tilt to gable ends of ridges. It come on raining pretty sharp an he tore his mac standing in the door of my office wehre staple was jagged after I had to burst the door along of the boy losing the key, so he will remember. I say all I can, but it got to be done to satisfy and a nice job pulling off the bonnets and all that fancy filling on face and breaking of the verges with there double undercloaks an pointing and filleting in cement, it could not only be a botch but he would have it and pleased when it were done he told me Jan 3 tht.

As the verges of the roof, where the tiling ends at gables, are slightly tilted so as to throw the water back on to the roof and prevent it being blown to run down face of gables, it is natural that the end ridge tile or "bonnet" should be given a corresponding tilt. This tilt at the end of ridge is conspicuous, and is exaggerated in the designs of some architects, apparently because a strong upward curve of the ridge to apex of gable is often seen in old houses as a result of settlement of the roof timbers, and has the deadly sentiment of the "dear old." The same exaggerated effect is given by artists who make drawings of houses for Christmas cards and kindred destinies. Spinlove had various fanciful notions for the roof at Honeywood, most of which were wrecked by the obstructive inertia of the British craftsman when asked to vary from accustomed usage; and one cannot help regretting that he was not similarly baulked of his extravagantly belled eaves and "old moated grange" gable ends. The devices of the building crafts, which have served centuries of skilful and efficient use of humble materials, are a pure delight to everyone who has studied them, and have come to be loved as a tradition of beautiful building; but it is the perfection with which they serve their purposes, and not the forms they present, which delight us; and to give those forms an emphasis beyond what their purpose demands is fatuous. It is the thing that, in the main, makes the modern villa a monstrosity; and as it has no part in architecture, and as Spinlove is evidently a man of educated taste, we must suppose that his preoccupations with his ridges and eaves was to get them to look right, and did not result in making them look wrong. Strong associations are aroused when we view any building, and if the style or tradition of its design awakens a certain group of associations it is important that every detail of the design shall accord with that tradition and strengthen the association. In a house with eaves, no feature is more expressive than the degree of projection of them. As the rafter feet had been cut to agree with the drawing (No. 41) they could not properly be used to carry the increased carry-over of the tiles. They had to be cut back close up to the plate, and false rafter feet, set at a slightly flatter slope, to give the required tilt, spiked to them. These are the "sprockets" spoken of.

C. TAKING DOWN AND REBUILDING RETURN DIES OF TERRACE WALL. ARCHITECT STATES IT WAS YOUR MISTAKE.

Feb. 23tht. Architect come on in white trousers he left his bat against flooring stacked in kitchen an a long job to find so he will know wehn it were. He said break back at side of dies had ought not to be battered same as face but plumbded, but I reckon his drawing No. 22 showed it other way same as I had it, and so I told him and charged D.W. has per weekly.

P.S. There were a line on that drawing you could not tell waht was meant for and he dont know neither so that makes sure, for if he cant say, how were it my fault not to.

Privet. He says I dont know a good drawing when I see one; an I says may be has I dont but I knows a bad one when I sees hit I says. Privit.

Spinlove seems to have had words with Bloggs on this matter and not to have had the best of the exchange.

Bloggs's microscopic memory is clearly an immovable barrier to all argument or question, and indicates resources of a kind that will infallibly repulse any attempts at cross-examination. His acumen in forestalling denial of the circumstances he adduces can only be the result of tried experience in similar contests. What foothold can Spinlove find for protesting "I remember nothing about it," when he is told the event occurred on the day he dropped his pipe in the trench, or mislaid his tennis racquet? Demonstrably, Bloggs knows exactly all that happened, and Spinlove, who can remember nothing—even of the muddied pipe and the bit of waste fetched from the foreman's office to cleanse it—clearly has not a leg to stand on.

This proof of the evidence of Fred Bloggs covers five and a half laborious foolscap sheets, and I will make no further excerpts. Pinned up with the sheets are certain pages from his "dairy"; and the ungrudging liberality with which he has gutted it in the good cause is almost touching. "Leaves from a Diary" has a new meaning for me since I have seen Bloggs's. The entries are hieroglyphic and also cryptic; and if I describe the pages as having been "torn" from the book, I only do so because no more destructive-sounding word occurs to me. "Captured in Battle" best describes their appearance.

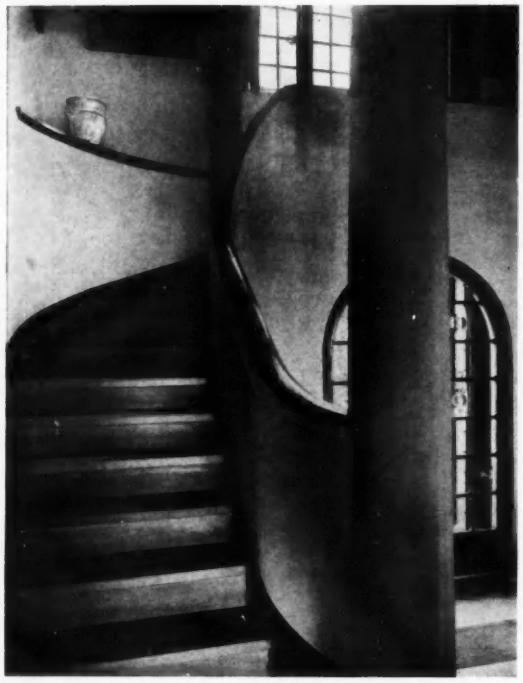
[NEXT WEEK: XIV—LADY BRASH REALIZES HER IDEAL]

Thorpe Hall, Peterborough. A general view, indicating the position, in the garden wall, of the doorway, of which a near photograph and measured drawing appear on the facing page.

WALL DOORWAY AT THORPE HALL

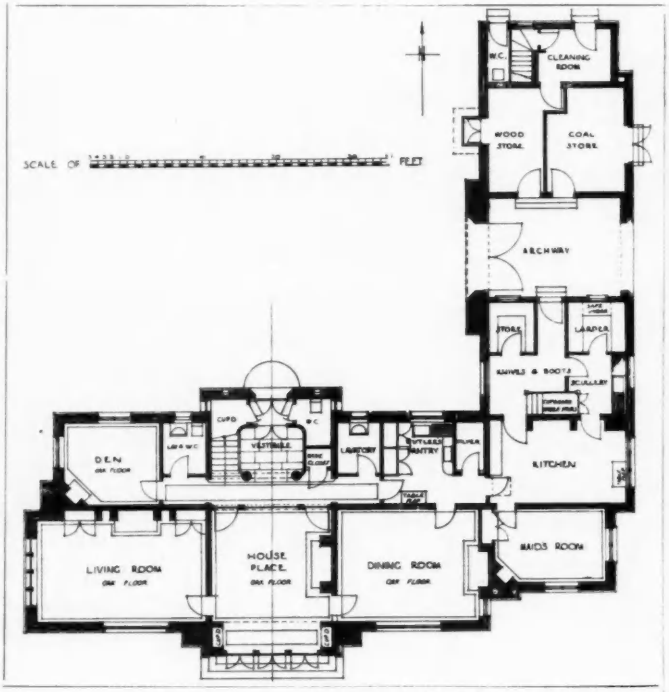
A detail photograph, and measured drawing (from Hakewill) of ramped volute to pilaster of doorway in wall at Thorpe Hall, Peterborough. These ramped volutes are also found in the designs of windows, stairs, fireplaces and panelling in this house; indeed, they were favourite features with Inigo Jones and John Webb, but sometimes the volutes were flattened. Photographs of this doorway and of the other details mentioned appear amongst the illustrations to "A History of the English House" in the November, 1929, issue of "The Architectural Review," and this particular subject was reproduced, with others, to a much smaller scale in THE ARCHITECTS' JOURNAL *for January 23, 1929. The general view of the house and the wall, given on the facing page, was not, however, then published, and is now included to show their inter-relation.*

NATHANIEL LLOYD



The main front and carriage court from the north-west. The wing to the left is occupied by service quarters, with maids' bedrooms on the first floor, and the main living-rooms lie on the far side of that on the right.

A WESTMORLAND



DESIGNED BY

SILVERDALE, though actually in Lancashire, belongs to the Westmorland topography, and in designing "Greywalls" for a rocky limestone eminence overlooking Morecambe Bay the aim was to produce a modern home in the old Westmorland style.

Practically all the rock on the site remains as it was, only a hummock having been removed to make room for the house and carriage court. The stone used in the building has a natural weather-worn face, while those portions that are rough-cast are of brickwork, with 9-in. outer wall, into which various pieces of limestone are introduced. For the roof, green Westmorland slates, with a ridging of native stone, have been employed. The house looks, and is, capable of withstanding the severest weather; all openings to the south and west have

The main staircase, running up from the entrance vestibule, of which the inner door is seen behind the column, is of green Westmorland stone.

The symmetry of the block containing the principal living-rooms speaks for itself. Stores and cupboards of various kinds are liberally provided. On the first floor are five main guests' rooms and bathrooms.

The garden front. The central ground-floor french casements light the house-place or inner hall. All the windows are double. The garden, of living rock, remains the natural home of rock plants.

MODERN HOME

THOMAS H. MAWSON AND SONS

double bronze casement windows. Internally, all joinery is of the best Austrian oak, and, in the pursuit of tradition, the majority of the fittings, down to the door furniture, which is from an old local wooden pattern, are the work of craftsmen of the district. The staircase is of green Westmorland stone, and so is the fireplace in the dining-room, which incorporates a clock, steel-faced, and with hand-wrought steel pointers, also made locally.

Equipment of the most modern order is installed : every room has a vacuum cleaner; and the heating system is interesting, in that it is completely concealed and operates through louvres in the floors. The air is drawn in through special ducts and passes over radiators in its path. The building cost approximately £25,000.

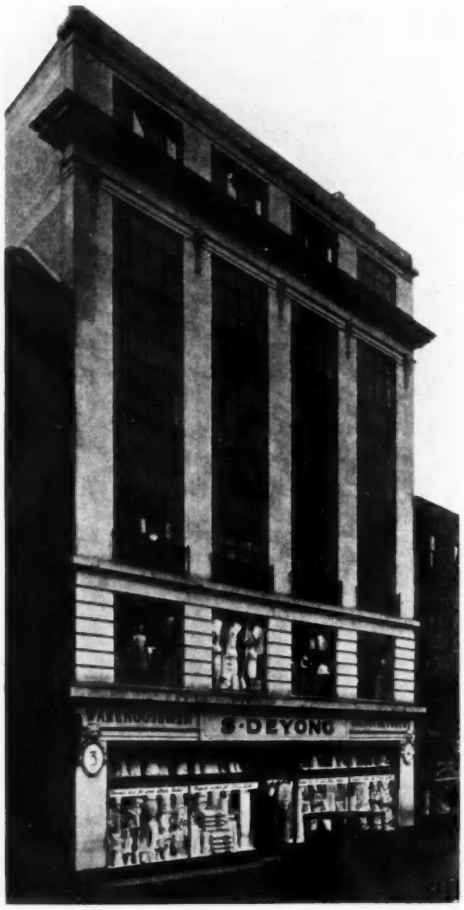
The fireplace in the dining-room is carried out in unpolished green Westmorland stone, and frames, above the mantelpiece, a clock, with a steel face and hands, hand-wrought by local craftsmen, in common with most of the internal fittings throughout the house. The finest Austrian oak has been utilized for all woodwork inside the house. The windows are bronze casements.

SOFT GOODS WAREHOUSE

Houndsditch, London, E.

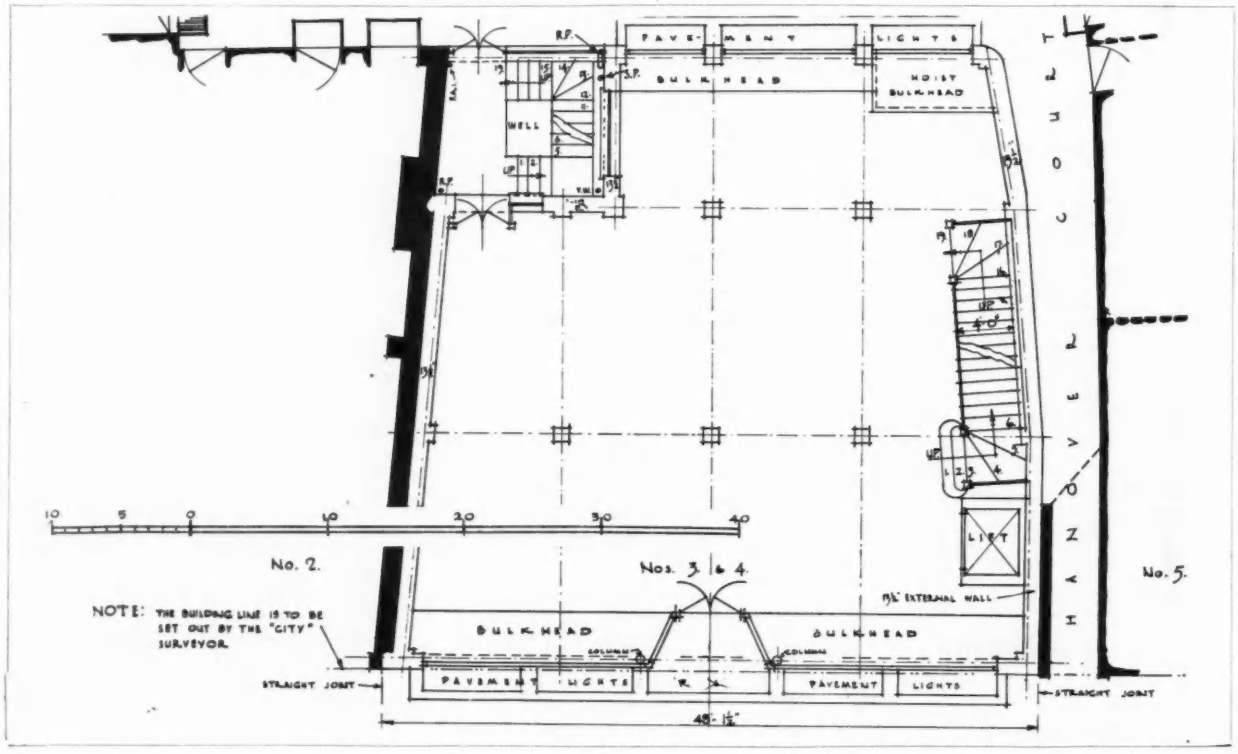
DESIGNED BY LEWIS SOLOMON & SONS

THIS new building is built as a showroom and warehouse for hosiery and soft goods. It has been designed with a stone front, a facing material now the vogue in Houndsditch, as can be seen by the five or six new buildings built there during the last few years.



From a constructional point of view the new warehouse is of particular interest, as it is built over one of the main sewers of London —the Irongate sewer. This runs under the rear of the property, parallel to its frontage and in such a position, directly under the main back wall, as to make it impossible to carry down to the solid ground any foundations for the steel frame.

In conjunction with the consulting engineers, Messrs. S. H. White and Son, of London, a scheme was designed whereby the rear portion of the building is cantilevered out over the sewer for a distance of about 9 ft., this cantilevered portion carrying a part of the building for its full height of seven stories. Some of the main cantilever beams carrying this construction are heavy plate girders 42 ins. deep, tailed down at the front by the weight of the front portion of the building.



In addition, further difficulties were experienced during the course of erection, as dangerous structure notices had been served in respect of the party walls on each side of the property, and it was decided to repair and uphold these party walls during construction.

Matters were made still more difficult by the fact that Houndsditch is an extremely narrow street, carrying a great volume of traffic, with the result that loading and unloading operations had to be fitted in to suit the traffic.

All the floors are served both by an electric passenger lift and by an electric goods lift.

The Houndsditch front. The building consists of basement, ground and five upper floors. It is of steel frame construction, with fire resisting floors, to comply with the L.C.C. 1909 Act.

Ground floor plan. The full height of the rear portion of the building is cantilevered out for a distance of 9 ft. over one of the main sewers of London that runs directly beneath it.

QUESTIONS THAT ARISE

Open Fireplace

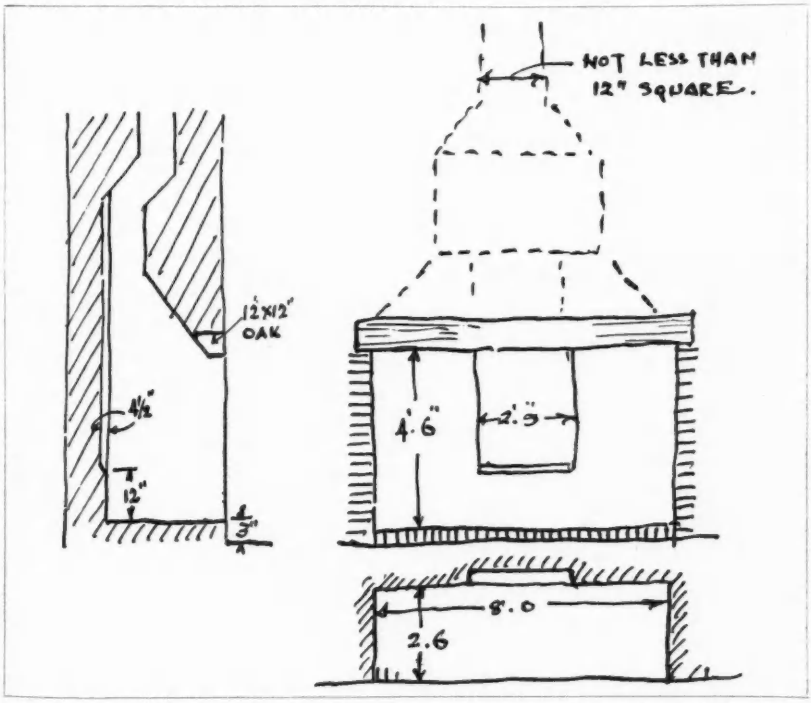
K. T. writes: "*I enclose a sketch* (not reproduced) *of an open fireplace that I have had added to my living-room. Ever since it has been finished it has been unsatisfactory and nearly always smokes, sometimes so badly as to make the room uninhabitable. The builder informs me that these open fires, burning wood, always smoke. Is this a fact?*"

I am not at all surprised that the fire shown in your correspondent's sketch is unsatisfactory. The 9 in. by 9 in. flue and the sharp bend immediately above the opening, followed by the almost horizontal gather-over, would make any fire smoke.

Wood smoke is sluggish and needs ample room above the fire to eddy about. No wood fire should have a flue less than 12 ins. square, and with as few bends as possible. The accompanying sketch shows a typical cottage fireplace. There seem no hard and fast rules for making a perfect flue, but one or two points are so general and found in districts so widely different that they seem to carry the weight of individual experiments arriving at the same solution.

The recess at the back varies, but is usually about ⅓ the total width, and sometimes starts from hearth level; this seems to lead the smoke up from the iron fire-back.

The hearth is often some 3 ins. above the cottage floor level, and the oak bressumer is very often chamfered off on the inner side, which allows the draught a clear passage upward to clear the smoke that may eddy in the side space above the hearth. Logs are of course burned on dogs and, as your correspondent probably knows, the secret of a wood fire lies in the ashes, which should never be cleared out, but left to form a hot pile beneath the logs. LL. E. W.



Moisture on Walls

B. M. writes: "*What is your expert's opinion as to the best method of preventing moisture finding its way through brick walls, ruling out tar as being too unsightly?*"

This question has exercised the building world for generations, and various solutions are in evidence over the countryside, such as slate or tile hanging, rendering or painting. Of these, I should exclude rendering, as defects are liable to occur, which in many cases accentuate the trouble.

If practicable, painting is probably as efficient as anything. In comparatively recent years, various waterproofing solutions have been put on the market. Some of these are colourless and some are not. The Building Research Board doubt if any are permanent. Karshish, in THE ARCHITECTS' JOURNAL for June 11, 1930, page 897, mentions Grigblay's tip of soft soap. This might affect the appearance of the brickwork, but, on the other hand, it would not cost much to try. H. D.

[*Further reference to the above subject is made on page 266 of this issue.*—ED., *A.J.*]

Section, elevation and plan for wood-burning open fireplace. (See reply to "K. T.")

Reconstructed Stone

S. D. writes: "*I am constantly having particulars sent to me by firms who specialize in reconstructed stone, but their catalogues give little information of the method of manufacture. Is the process a secret?*"

Certain firms may have special processes which they are loth to divulge, but the general manufacture of reconstructed stone is no secret. The chippings, etc., are powdered to grit and mixed with a definite proportion of lime. The mixture is thoroughly slaked, a large quantity of water being added, and is then consolidated into blocks under pressure.

The blocks leave the press the consistency of chalk, and are hardened by exposure to the air. Finally, the stone is dried at a temperature of 100° and placed in steel tanks and the air exhausted. Carbonic gas is then turned on until the carbonization of the hydrate of lime is complete.

All kinds of stone can be reconstructed by this process, but the best results are obtained from the oolites. T. N.

Thatched Roofs

E. W. writes: "*I have been asked to design a cottage with a roof of thatch. I understand, however, that new thatch is still more inflammable than old. What precautions should I take against the possibility of fire?*"

Where thatch is used as a roofing material considerable protection against fire risks can be obtained by interposing thin layers of slag wool between the individual layers of the thatch.

This slag wool is a by-product obtained in the steel-making industry and is a perfectly incombustible and non-conducting material. On this account it is already used for pugging-in floors and roofs, and for casing-in hot flue pipes, but in conjunction with thatch its use is something of a novelty, in spite of the fact that it cannot mar the æsthetic appearance of the roof.

Silicate of soda, however, would satisfactorily fulfil the requirements of a fireproofing medium for thatch, were it not liable to make the thatch brittle. This brittleness is not so marked if the silicate is used in conjunction with powdered asbestos, the necessary solution being prepared by treating 35 lbs. of solid silicate of soda and 35 lbs. of powdered asbestos with 10 gallons of boiling water. The syrupy form of silicate of soda, which is now used for hardening cement surfaces, should not be used in the preparation of this fireproofing medium. C. H. B.

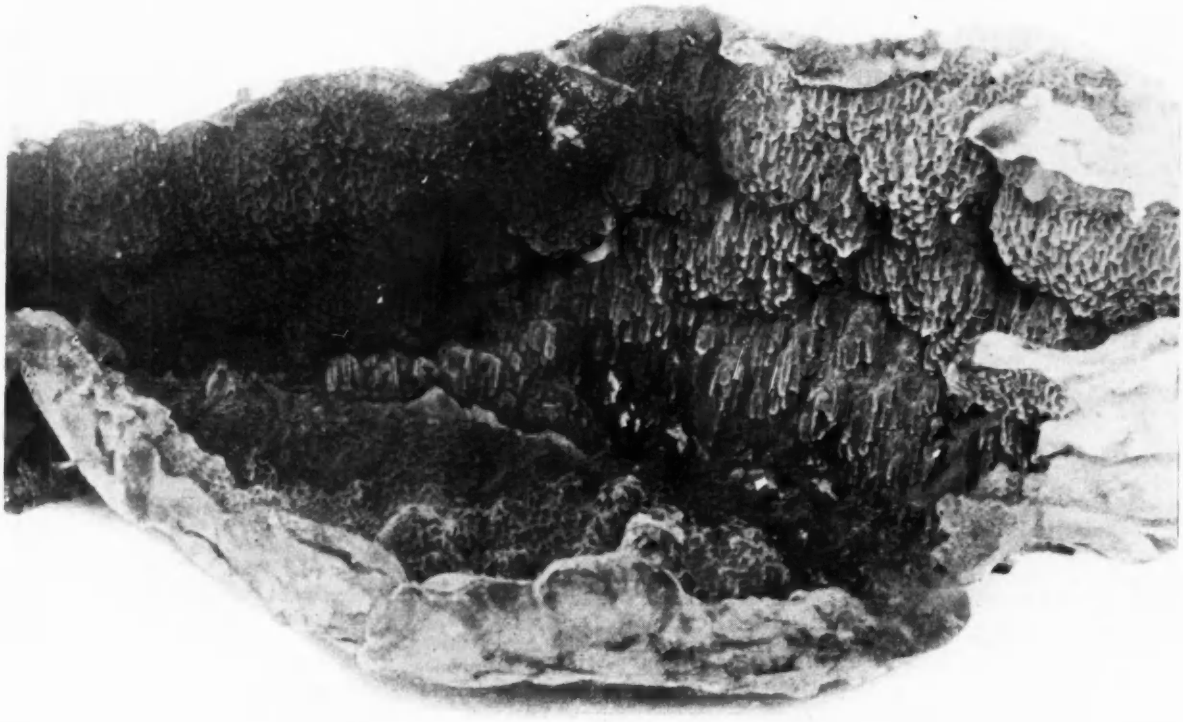


Figure two. A fruit-body of Merulius lacrymans, *the dry-rot fungus, found on a skirting-board in a house. Note the folds on the surface and the stalactite-like form of these, when in a vertical position.*

WHAT DRY ROT LOOKS LIKE

THE illustrations on this page accompany the article on dry rot, begun on the facing page, and to be continued in the two succeeding issues in which "The Specification Writer" appears. In it the author discusses comprehensively, from the scientific point of view, the nature, the prevention, and the cure, respectively, of this very prevalent disease. The contribution of this important study will have a special interest for those who have followed the later history of "Honeywood Grange," in which Karshish has just described an outbreak of trouble due to this cause. The article and the two accompanying illustrations of the fungus, and the typical appearance of wood due to its ravages, will form a valuable pendant to that episode, and will, it is hoped, assist readers in identification of the root of the mischief when, sooner or later, it comes in their way.

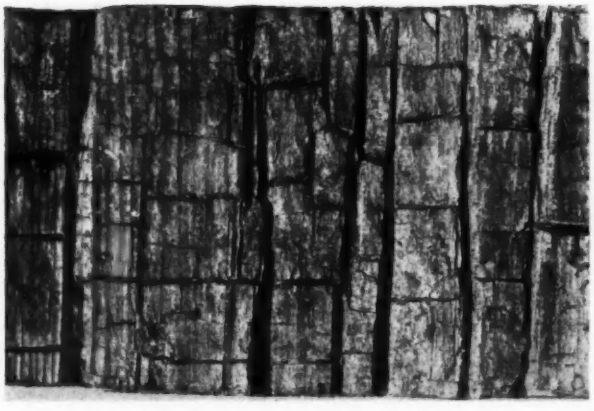

Figure three. Typical decay caused by Merulius lacrymans. *Note deep fissures and transverse cracks breaking up the wood into cubes.*

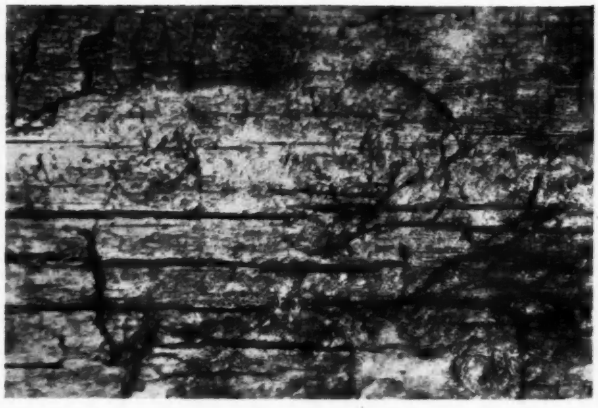

Figure four. Decay caused by Coniophora cerebella. *Features to note here are the longitudinal cracks and the blackish strands.*

THE SPECIFICATION WRITER

Dry Rot: Cause, Prevention, and Cure

BY W. P. K. FINDLAY, B.SC., A.R.C.S., D.I.C.

THE timber in a building may suffer from various troubles and occasionally a serious deterioration sets in, some time after construction is complete. The destruction of the timber may be caused either by a form of decay, which is known as "dry rot," or it may be due to the attacks of small wood-boring insects, commonly called "worm." This article deals only with the former; attack by insects, of which the most common is the so-called "Death Watch Beetle," occurs chiefly in old buildings, and is especially frequent in oak panelling and in the oak rafters of old churches. It may be readily recognized by the round flight-holes, made by the beetles, when emerging from the wood, and by the presence of a powder, consisting of the very small rounded pellets of the insects.

Dry rot is caused by fungi—that great class of plants, to which the mushroom and toadstool, as well as the moulds and yeasts, belong. One thing common to all of them is the absence of the green colouring matter which enables the higher plants to make their own food materials and they are, in consequence, dependent upon organic food already made by other plants. Many of them are parasites and live upon other living things, but the vast majority are scavengers, and decay and dissolve organic materials whenever conditions are suitable for them. The wood-destroying fungi belong mainly to this second class, although some of them can rot away the heartwood of living trees. Now, as fungi are living plants, they require much the same conditions for growth as other plants; there must be present, first, a supply of suitable nourishment; secondly, water; thirdly, air for respiration; and fourthly, a suitable temperature.

The principal fungi which live on wood and cause its decay belong to a class of the higher fungi, called the *Basidiomycetes*, because the spores, which are the minute bodies by which the fungus is propagated, are borne upon a club-shaped cell called the *basidium* (see figure one, A, D, E). These spores are produced in enormous numbers; a single fruit-body may produce many millions of spores which, being small and light, are blown about and become widely dispersed. When one of these spores falls upon a suitable food material such as wood, which is sufficiently wet to cause it to germinate, it starts into growth: a fine thread called a *hypha* grows out. These hyphæ can penetrate into the wood and bore through the cell-walls, and they spread rapidly. The hyphæ of most Basidiomycetes are distinguished by their having "clamp connections" or "buckles"—see figure one, B and C. By means of the ferments and the acids which they produce, they dissolve away part of the wood, which thus becomes available for food. After considerable growth of the *mycelium* (a whole collection or mass of hyphæ) in the wood, the fungus usually produces a fruit body on the exterior. Upon this the spores are borne, and so the cycle is completed. These fruit-bodies are often the first sign of the fungus that we see, and they may take the form of toadstools, brackets or plates.

Quite a number of species of fungi have been found in houses and, under extremely damp conditions, may cause

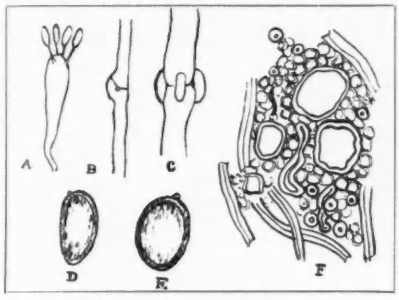

Figure one.

E. Spore of Coniophora cerebella.
F. Transverse section of strand of Merulius lacrymans *(all highly magnified).*

damage, but, for practical purposes, there are only two fungi of great importance in houses in this country and, of the two, one is responsible for over 90 per cent. of the damage.

The true dry rot fungus—*Merulius lacrymans* is its scientific name—is fairly easy to recognize in most of its stages, although its appearance depends very much on the conditions under which it is growing. The fruit-body, when growing horizontally, is a flat, fleshy, pancake-like object, which may be over a foot in diameter or may be quite small; it is covered with ridges or folds about $\frac{1}{8}$ in. deep and, when mature, assumes a rich rusty red colour due to the millions of coloured spores on its surface. But, when growing on a vertical surface, the folds are vertical also and appear something like stalactites or wide pores (see figure two). There is usually a whitish or greyish margin to the fruit-body, and this may show patches of vivid lemon yellow. When growing actively, it often bears drops of liquid, and these gave rise to the specific name of the fungus, *lacrymans* (weeping). The fungus when growing actively in a very damp place such as a damp cellar or coal mine will produce great snowy masses of mycelium like cotton wool; these often show, secondarily, the bright yellow patches. When conditions are somewhat drier, fairly tough sheets of mycelium are produced on the surface of the wood; these are silver grey when fresh and frequently show tinges of lilac or lemon yellow. The fungus is able to spread across neutral substances upon which it is not feeding, such as iron or stone, by means of these sheets and by means of strands, which are root-like structures often quite as thick as a pencil. These strands enable the fungus to spread from one piece of infected wood to sound wood that may be yards away. They are able to penetrate the mortar between bricks and so attack timber on the other side of a brick wall. They are extremely resistant to drying and possess definite water-conducting vessels or "veins" (see figure one, F).

Frequently the architect is not called in until the fungus has ceased active growth, and all that he sees is the decayed wood in which the fungus still lurks, alive though dormant. Wood thoroughly decayed by *Merulius lacrymans* has a definite appearance; it is light, friable and of a light brownish colour and often dry and powdery (hence the name "dry rot"). It usually shows deep fissures running at right angles and dividing up the wood into cubes which may be small or large (see figure three). This type of cracking serves to differentiate wood attacked by true dry rot from that decayed by *Coniophora cerebella*, the other fungus referred to above as the second important one causing decay in house timber. *Coniophora* causes the wood to split with longitudinal checks and to darken considerably (see figure four); its strands are smaller and finer than those of *Merulius* and soon become brown and, later, blackish. The fruit-body, less frequently seen than that of *Merulius*, is an irregular plate of a dull olive green, covered with small lumps or pimples. *Coniophora* only grows where the wood is definitely wet, due to the presence of liquid water, as from an overflowing cistern, and cannot attack distant dry timber in the way that *Merulius* does.

(*To be continued*)

Damage to Plumbing by Frost

THE sub-committee recently appointed by the Science Standing Committee of the R.I.B.A., to inquire

into damage to plumbing work due to frost, state, in the report of their conferences, that they are of opinion that much of the damage to pipes during frost is due to :

1 : Faulty layout of the pipes and lack of means of protection against freezing.

2 : Inadequate precautions being taken on the approach of frost.

They find that, whilst legislation gives local authorities and water companies power to control water mains and supply pipes in the roadway, there is at present inadequate control exercised as regards pipes within the premises.

In those parts of the U.S.A. and Canada which are subject to severe frosts, hot and cold water pipes are subject to the control and approval of the local authorities. The sub-committee are of opinion that local authorities or water companies should make bylaws putting the layout of water pipes generally on a more scientific footing.

With that end in view, they have formulated suggestions which might form a basis of such bylaws, or, failing that, the proposals would be helpful as a guidance to architects and builders in their work.

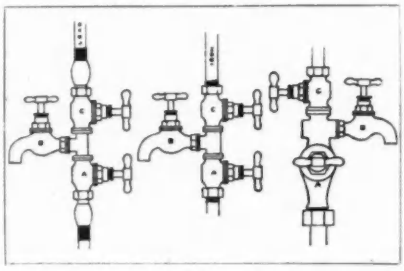
On this matter all the representatives called into consultation are in agreement.

The sub-committee's recommendations, in addition to the question of bylaws, are as follow :

CONSTRUCTIONAL DATA

Depth of Supply Underground.—The water pipe from the company's main should be at least two feet under the ground to the inside of the building. Care should be taken that the two-feet depth is maintained until the pipe is within the building, and consideration should be given to the avoidance of air lock.

Stop-Tap.—A stop-tap should be fixed immediately the supply pipe enters the owner's land. Another should be placed as near as convenient to the floor, at the point where it emerges within the building.



Draw-off Tap.—As near as convenient to the latter stop-tap, a draw-off tap should be fixed, so that all pipes which are branches from the main may be emptied by closing the stop-tap and opening this draw-off tap.

A combined stop and draw-off tap may be used where convenient, and such is recommended.

Supply Pipes within the Building and all Branches.—Supply pipes within the building and all branches to fittings from the supply pipe should, as far as possible, be fixed on internal walls and should be fixed to wood grounds or not directly in contact with the wall, and should be fixed so that they have a fall to the draw-off tap. On no account should water pipes enter the roof space near the eaves, for such a practice not only exposes pipes to risk of freezing, but renders them less accessible. All pipes should be laid so that they have a fall and can be emptied by the drain cock.

Hot and Cold Pipes to Bath and other Fittings.—The rules applicable to " Supply Pipes within the Building " should be followed for hot and cold pipes.

Storage Cisterns.—When storage cisterns are fixed in the roof space they should be carefully insulated by such devices as a wood-casing made to allow approximately a space of not less than 3 inches all round the sides of the cistern, such space to be packed with non-conducting material. A cover of wood should be fitted on the top of the cistern. All pipes in roof space should be laid on grounds and carefully insulated with either boiler lagging, thick felt, or other suitable material, and if from some unavoidable reason

Arrangement of taps on water main, suggested in the R.I.B.A. report, to avoid damage by frost. A and B are the usual stop and draw-off taps; by the addition of tap C, water can still be drawn from B, but without filling the rising main feeding storage cistern.

the water pipe should enter the roof at the space near the eaves, particular attention should be given to insulating the pipe at this point.

The overflow pipe should be insulated from the cistern to the outside wall.

The expansion pipe of a hot-water system should be made to discharge over the tank, so as to avoid such pipe being exposed to the open air, as serious accidents frequently occur by exposure.

Secondary Circulation.—Where the cost of so doing is permitted, a secondary circulation pipe should be taken from the domestic hot-water system (or the central-heating system) to a point near the bottom of the cold storage cistern or cisterns and there formed in a simple coil and the return taken as far as practicable to follow the course of the rising main and/or the main supply pipe from the storage cistern or cisterns. A stop-tap should be placed on this return, in an accessible position, so that this secondary circulation may be thrown out of action when weather conditions do not justify its use.

Stop-tap on Storage Cistern.—A stop-tap should be fixed for each supply pipe as near the cistern as possible in an accessible position.

INSTRUCTIONS TO HOUSEHOLDERS TO PREVENT DAMAGE BY BURST PIPES

Precautions to take before the frost arrives.—

1 : Make certain there is a stop-tap and drain-tap on the main supply pipe after it enters the house, so that you can control the water supply.

2 : Make yourself familiar with what taps and cisterns this pipe supplies, and the method of emptying.

3 : The other cold taps (if any) will be supplied from the storage cistern.

4 : Pipes and cisterns which are exposed to the frost, that is, to a temperature below freezing-point, should be wrapped with hair felt or other non-conducting material.

5 : See that all taps shut off water properly, and do not keep taps dripping.

Precautions to take during frosty weather.—

1 : Shut off the water at night by closing the stop-tap on the supply pipe entering the house, and empty the pipes by opening the scullery cold tap or the tap at the lowest level on the main supply pipe and the drain cock, and flush the w.c. cisterns.

2 : If any of the taps on this supply pipe should cease to run water at any time, close this stop-tap.

3 : If a hot-water tap should cease to run water, but other hot-water taps are functioning, it means that only the branch to that tap is frozen.

4 : If all hot-water taps cease to function, it means that the cold supply to the boiler is frozen, or the supply pipe to the storage cistern is frozen. Draw the fire, shut off the stop-tap in the supply pipe and only then open all hot-water taps.

5 : See that all plugs to lavatory basins, baths and sinks are put in the wastes each night.

6 : The foregoing are general instructions to prevent freezing or render first-aid yourself to avoid unnecessary damage by burst pipes. Send for the services of a plumber immediately a pipe freezes.

MANAGEMENT OF HEATING APPARATUS

In order to avoid danger to heating apparatus and water fittings, caretakers must see that the following instructions are carefully complied with during frosty weather :

1 : Fires in heating apparatus must be kept alight all night. Sufficient fire should be maintained to keep the pipes and radiators warm and circulation should be maintained throughout the building.

2 : The feed cistern and the distributing pipe to the boiler must be covered and protected from frost by sacks, boards or other covering material. This cistern must be examined daily, and if it is found that the supply pipe is

frozen, and that the cistern is short of water, it must be filled by hand.

3: If, owing to unforeseen circumstances, the fire has been allowed to die out, great care must be taken before the fire is re-lighted to see that the water throughout the pipes or radiators is not frozen.

4: All windows and doors should be closed at night, especially those in corridors and lavatories where there are pipes or radiators.

5: All fresh-air inlets, including those behind radiators, must be carefully closed at night, and at all times if the apparatus is not working. Extract ventilators should similarly be closed, where practicable. (This clause refers specially to cases in which the premises are not occupied at night.)

6: In the case of tubular boilers, precautions should be taken as under (1).

[The full report is obtainable in pamphlet form, on application to the Secretary, R.I.B.A., 9 Conduit Street, at the price of 3d.]

LITERATURE

A GERMAN'S VIEW OF TOWN PLANNING

A BUILDING Act for Germany as a whole having been drawn up to replace the various regulations of the different states, the author visualizes a similar procedure in the case of town planning, and, with this in view, has considered the general characteristics of town planning regulations and practice in Europe and the United States.

After summarizing the development of cities during the past century, and the problems now presenting themselves, he passes on to review the salient features of town-planning practice, first in the non-German countries of Europe together with North America, and then in the German-speaking countries and states; concentrating, lastly, almost exclusively on Prussia, as affording typical examples of the way in which regulations are framed to meet various demands.

Herr Heiligenthal sees town planning as something rapidly changing to meet changing needs, and deprecates any form of regulation that does not afford within itself the flexibility these changes may demand. He regards the work he has put into this book as illustrative of the problems and solutions before us at the moment, and promises another volume to be devoted to a forward-looking commentary on these; we therefore find here not so much a comprehensive view of town planning as one illustrating the action and reaction between practice and the regulations controlling it. H. V. L.

Städtebaurecht und Städtebau. By R. Heiligenthal. Berlin: Deutsche Bauzeitung G.m.b.H. Price 12 RM.

THE SCOTS MERCAT "CROSS"

IN the second edition of *The Scots Mercat "Cross,"* Mr. W. G. Black has taken the opportunity to add illustrations, and a description of the Cross of Glasgow, as re-erected from the designs of Mrs. Edith Burnet Hughes, A.R.I.B.A. This cross was presented by the author and his wife—the latter unfortunately died before it was completed—to Glasgow, their native city, "as an emblem of the continuity of civic life from remote times, such as was familiar in Edinburgh and other ancient burghs of Scotland." It stands at the junction of London Road, High Street, and the Gallowgate—a few feet distant from the original site of the old cross.

Most of us are more or less familiar with the market cross as a local landmark in Scotland. It may stand on a platform, or be only raised by a few rough steps from the roadway in a tiny burgh, but as the author points out, it is always a shaft, and seldom a cross in any conventional sense. The name indeed, he says, is both correct and incorrect in a bewildering way, correct because during time of market in old days, the column actually did become a cross by the addition of a wooden cross to the far more ancient shaft such as we may still see at Kilwinning, and incorrect because the name "Cross" suggests Christian and ecclesiastical associations, which are entirely misleading when we try to find out the early history of those monuments, their origin and their purpose. These crosses are not isolated antiquities. On the contrary, the author shows that they have most important relation to similar monuments in other parts of Europe and particularly to the Perrons of Belgium.

The author issues a note of warning against "restoring" crosses without making a careful and adequate study of the monument which it is proposed to "restore."

The Scots Mercat "Cross." By William George Black, C.B.E., LL.D., F.S.A. Second Edition. William Hodge & Co., Ltd., Edinburgh and Glasgow. Price 2s. 6d. net.

The Mercat Cross, Glasgow, from the south-west. Designed by Edith Burnet Hughes. The cross takes the form of an octagonal building of Cullaloe stone, 16 ft. across, with a heavily moulded base and a machicolated cornice. Rising from the platform is a shaft 12 ft. high, surmounted by a unicorn holding a shield displaying the Royal Arms of Scotland. The platform is reached by an oak staircase.

[*From* The Scots Mercat "Cross."]

THE ULSTER SOCIETY'S YEAR BOOK

THE Year Book of the Ulster Society of Architects, 1930–31, which has reached its third year of publication, has just been issued. It has been edited by Mr. R. H. Gibson, F.R.I.B.A., M.I.STRUCT.E., the vice-president of the Society.

The progress that has been made by the Ulster Society of Architects can be visualized by the fact that the annual report of the council for the year 1929–30 states that the Society has fifty members, eighteen honorary members, forty associates, and twenty students, making a total of 128; and during the year the number was increased by twenty-six—two members, eleven associates, and thirteen students. The report also states that the offer has been accepted of a medal to be presented by the R.I.B.A. to the Ulster Society, to be offered as a prize every third year for the best building erected in their area.

The year book contains photographs of the president, Mr. J. R. Davidson, A.R.I.B.A., and the immediate past president, Mr. E. R. Kennedy, F.R.I.B.A., M.R.SAN.I.; the Society's memorandum of association and articles of association, and suggestions and regulations in regard to professional conduct and practice; a complete list of books on architecture and allied

subjects in the Central and branch public libraries of Belfast; a list of the books in the John Lanyon bequest; and a calendar covering the period July, 1930, to June, 1931.

The Year Book of the Ulster Society of Architects, 1930–31. Edited by R. H. Gibson, F.R.I.B.A., M.I.STRUCT.E., vice-president of the Society. W. W. Clelland, Ltd., Belfast.

LAW REPORT

PUBLIC HEALTH ACT: RIGHT TO BUILD

Attorney-General v. *Manchester Corporation. Chancery Division. Before Mr. Justice Maugham.*

IN this action the Attorney-General, at the relation of Mr. Ben Kanter, of Singleton Road, Kersal, sought the decision of the Court as to whether the Manchester Corporation had the right to build on a piece of land at the junction of Aberdeen Street, Oxford Road and Denmark Road, Manchester. The Attorney-General asked for an injunction restraining the Corporation from allowing a wall, which they had erected, to remain on the land, and from building a tuberculosis dispensary, contending that the land was an open space and that the Corporation had no right to build upon it.

The Corporation replied that as the land had not been dedicated to the public they had the right to build upon it.

Sir Gerald Hurst, K.C., Mr. T. Cunliffe and Mr. John Bennett represented the Attorney-General, and Mr. Spens, K.C., and Mr. Evershed, the Manchester Corporation.

Sir G. Hurst said the land in question was acquired by the Corporation in 1875 for the purpose of making new streets, or otherwise for the improvement of Manchester. The land remained open, however, till 1891, when it was levelled and gravelled, and plaintiff's case was that the Corporation in that way dedicated it as a footway to the three adjacent roads, and it was so used till February, 1929. Counsel's point was that as the Corporation had elected to use the land as an extension of the highway, they now had no right to change their mind. Mr. Kanter was the owner of the Rivoli Picture Theatre in Aberdeen Street.

Evidence was given that for many years the public had an unchallenged right of way over the land in question.

Mr. Spens, for the Corporation, contended that his clients had never dedicated the land as an open space. The Corporation did not require the land immediately upon acquiring it, and under those circumstances there was nothing to stop the public having right of access across the land. There was no intention here to dedicate the land to the public.

His lordship, in giving judgment, said in 1891 the Corporation handed the land in question over to the Parks Committee, to be used as an open space. The land was laid out by the Whitworth Trustees and a drinking fountain was erected, the Corporation agreeing to supply a light and water to it for all time. The Corporation were still doing so. Since 1893 the public had used the land as a right of way. The action of the Corporation in getting the approval of the Ministry of Health to the erection of a tuberculosis dispensary not unnaturally raised objections, and after attempts to persuade the Corporation not to act, a number of the objectors took legal action. Having regard to the Corporation's resolutions concerning the fountain, his lordship said he must conclude that the Corporation at that time intended the layout of the ground should be permanent. Apart from section 95 of the Public Health Act, 1907, he should have felt bound to decide that the Corporation would not be entitled to alter the use of the land. The next question was whether it was possible for the public to acquire a right of way over the land by extensive user. He came to the conclusion that it would be wrong to come to any such decision. The facts were in favour of the presumption of tolerance by the Corporation as against a presumption of dedication, and therefore it must follow that no public rights of way had been acquired over the land. But the real point in the action was as to the true construction of section 95 of the Public Health Act. It was his opinion that the Corporation, acting in good faith, must be the sole judges whether the land was or was not any longer required for the purpose for which it was acquired. He must take it that the Corporation had honestly determined that it was not required for the purpose. Did the section enable the Corporation, with or without the approval of the Ministry of Health, to override either public or private rights? The reply was that the rights of the public over this land had never been defined, and he doubted whether they were capable of definition. On the true construction of the section he was not prepared to hold that rights of this kind could not be affected or destroyed, provided that the new purposes for which the land were to be used were approved by the Ministry of Health. In his opinion the approval of the Ministry of Health under section 95 had authorized the Corporation to use the land for purposes so approved. The result was that the action failed and he dismissed it, awarding the Corporation the costs of the action, except in so far as they had been increased by the issue as to user of the land by the public.

COMPETITION AWARDS

ROYAL NATIONAL EISTEDDFOD OF WALES

At the Royal National Eisteddfod of Wales, held at Llanelly last week, the following prizes were awarded in the Architecture Section. The assessor was Mr. Percy Thomas, F.R.I.B.A.:

(I.) Design for a town hall. Prize, £50. 1st, F. Keith Aitken; 2nd, J. W. Bishop.

(II.) Design for an omnibus station. Prize, £25. 1st, D. D. Harrison; 2nd, W. Sirrell.

(III.) Design for workmen's cottages. Prize, £25. 1st, S. G. Roberts; 2nd, L. F. Richards.

(IV.) Measured Drawings Prizes. 1st, D. M. Jones (£15 15s.); 2nd, L. F. Richards (£5 5s.).

Mr. T. Alwyn Lloyd, of Cardiff, president of the South Wales Institute of Architects, writing in *The Western Mail*, said:

In previous years the work at the Eisteddfod has often been of a poor standard and hardly worthy of a national competition. Whatever the cause of these unsatisfactory results there seems no doubt that at Llanelly a remarkable advance took place, both in regard to the quantity and the quality of the work submitted in the architecture section.

Four subjects were set, three of these being designs for a provincial town-hall, for a central motor 'bus station, and for a pair of workers' cottages. The other subject was a set of measured drawings of architecture.

Mr. Percy Thomas, in his adjudication of the 191 competitors' designs in the four subjects, paid a high tribute to their work and the skill shown by them in planning and elevational treatment. He said that the general high standard indicated that our young architects were producing work of which any country could be proud.

If, as one hopes will be the case, organizers of future Eisteddfod competitions will profit by the example of Llanelly and offer adequate rewards for carefully framed architectural programmes, there is no reason why architecture should not take her rightful place in Welsh life instead of being relegated to the position of "scullery maid," which has been so usual in the past!

OBITUARY

HOWARD JOSELAND: 1860–1930

We regret to record the death of Mr. Howard Joseland, F.R.I.B.A., who passed away in a Sydney nursing home early this month.

At an early age he left Worcester and was articled to a firm of London architects, but, not being of robust health, he emigrated to Australia, and finally settled in Sydney, where he founded the firm of Joseland and Gilling. He was responsible for the design of many public buildings in Sydney. Mr. Joseland was seventy years of age.

TRADE NOTES

At the twenty-first annual general meeting of Williams and Williams, Ltd., held at Reliance Works, Chester, on Wednesday last, Sir Henry Penson, chairman, stated that contracts for British metal window frames had recently been secured from New York, Montreal, Stockholm, Alexandria, Rangoon and Perth, Australia. He further stated that orders placed during the past year constituted a new record for the company; also, additions to buildings and plant during the year amounted to more than £23,000, which would enable them to deal with the increased output they were confidently expecting.

*

The Liverpool Corporation has just placed the contract for the equipment of their new abattoir, which is to be erected at Stanley, with Messrs. J. and F. Howard, Ltd., of Bedford, one of the associated firms of Agricultural and General Engineers, Ltd. This abattoir, which, it is claimed, will be the biggest municipal undertaking of its kind in the world, will have a capacity for dealing with no less than 1,000 cattle, 900 calves, 7,500 sheep and 2,000 pigs—11,400 animals a day. It is being built and equipped from the designs of Mr. T. Laurie Price, in consultation with Mr. Albert D. Jenkins, F.S.I. Other contracts of a similar nature which have been secured during the last three years by Messrs. Howard, against U.S. competition, include the equipment of the new works for Bovril, Ltd., in the Argentine; the reconditioning of the Smithfield and Argentine Meat Company's plant in the Argentine; the equipment of the Argentine Co-operative Farmers' works at Entre Rios; and five sheep abattoirs in Iceland.

*

In his report to the shareholders of Allied Cement Co., Ltd., at their annual meeting on July 31, the chairman, Mr. Oliver J. S. Piper, referred to the increased competition from foreign cement, pointing out that, while foreign cement is cheaper to purchase than British cement, the British buyer is no longer able to save the difference, since he must, apart from the question of quality, pay in addition a sum to the British workman for not making it, in the shape of the purchaser's contribution to the cost of unemployment itself. If these facts were better appreciated by municipalities and contractors who are buying foreign goods because they appear to be cheaper, it would be of advantage to the cement industry of this country.

*

Messrs. W. H. Gaze and Sons, Ltd., have secured the following contracts: Cricklewood Synagogue, Messrs. Burnett and Eprile, architects; new science block for Haberdashers' Aske's School for Boys, West Hampstead, Mr. Noel D. Sheffield, architect; Midland Bank, Tottenham Court Road, W.1, Messrs. Whinney, Son and Austen Hall, architects; new premises for Messrs. Montague Burton at Walthamstow, Messrs. Harry Wilson, architects; erection of dwellings at Wandsworth for the London County Council; picture theatre, Kingston-on-Thames, Mr. L. H. Kemp, architect.

THE BUILDINGS ILLUSTRATED

Following are the names of the general contractors and some of the sub-contractors for the buildings illustrated in this issue:

The Capitol Cinema, Winchmore Hill (pages 259–261). General contractor, L. F. Richardson. Consulting engineer, S. W. Budd. Sub-contractors: Edward Wood & Co., Ltd., structural steelwork; The London Plenum Heating Co., heating and ventilation; Sedgley and Edgley, electric installation; F. H. Pride, electric fittings; Plaster Decoration Co., Ltd., decorations; George Pixton & Co., Ltd., seating, carpets, and stage draperies; Wainwright and Waring, Ltd., leaded lights; Enfield Stone Co., Ltd., mosaic flooring; Thomas Cook, Ltd., ceramic decorations; General Tile Co., Ltd., wall tiling; Cement Marketing Co., Ltd., white cement; Arthur Lyon & Co., electric clocks; Sturtevant Engineering Co., Ltd., vacuum cleaners; Compton Organ Co., Ltd., organ; Automaticket, Ltd., ticket machines; Independent Sprinklers, Ltd., fire equipment; Frank J. Brockliss, Ltd., bio projectors; Frank Burkitt, fire curtain, etc.; Alfred Goslett & Co., Ltd., sanitary fittings.

Warehouse and showrooms, 3-4 Houndsditch, E.1 (page 276). General contractor, F. and H. F. Higgs, Ltd., who were also responsible for the joinery. Sub-contractors: Ragusa Asphalte Paving Co., Ltd., asphalt; F. J. Barnes, Ltd., stone; Redpath Brown & Co., Ltd., structural steel; Caxton Floors, Ltd., fireproof floor construction; Hollis Bros. & Co., Ltd., wood-block flooring; J. H. Nicholson & Co., Ltd., central heating; Tyler and Freeman, electric wiring; Automatic Sprinkler Co., sprinklers; Crittall Manufacturing Co., Ltd., casements; Turner Hall & Co., cellulose spraying; Hart, Son, Peard & Co., Ltd., ornamental metalwork; Penrose Lifts, Ltd. passenger and goods lifts.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full published specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

23204. Dischinger, F., and Finsterwalder, U., and Zeiss, C. (Firm of). Roofs of reinforced concrete. August 1.

23347. Legat, A. W. Method of finishing concrete surfaces. August 2.

22636. Venning, F. G. Building construction. July 28.

SPECIFICATION PUBLISHED

318551. Maus, K. Producing hollow bricks or building-stones.

ANNOUNCEMENTS

Mr. Septimus Warwick, F.R.I.B.A., has removed his offices to Nos. 2, 3 and 4 Cockspur Street, London, S.W.1. Telephone Number: Gerrard 2143.

Mr. Matthew J. Dawson, F.R.I.B.A. (lecturer, University of London), has removed from 11 New Court, Lincoln's Inn, W.C.2, to 88 Gower Street, W.C.1. Telephone Number: Museum 4671.

Messrs. J. M. Dent and Sons, Ltd., announce, with regret, that Mr. D. S. MacColl has resigned the editorship of *Artwork*. Mr. Randolph Schwabe, Slade Professor Elect at University College, London, is his successor.

A booklet summarizing and explaining the new motoring laws has been issued by the Automobile Association, and is now available to every motorist. Copies are obtainable on application to the Secretary, the Automobile Association, Fanum House, New Coventry Street, London, W.1, or to any of the A.A. branch offices (gratis).

SOCIETIES AND INSTITUTIONS

R.I.B.A. EXAMINATIONS

THE questions set at the R.I.B.A. intermediate, final and special examinations held in May, June and July, 1930, have been published, and are on sale at the Royal Institute, price 1s. (exclusive of postage).

R.I.B.A. Intermediate Examination.—The following notice has been issued by the R.I.B.A.: "The R.I.B.A. Intermediate Examination to be held in November, 1930, will take place on the following dates: November 21, 22, 24, 25, and 27, instead of from November 7 to 13 as previously announced. The closing date for the receipt of applications for admission to the examination is October 7."

R.I.B.A. Examination Results.—The final examination qualifying for candidature as Associates of the R.I.B.A. was held in London and Edinburgh from July 9 to 17, 1930. Of the 99 candidates examined, 46 passed (8 in Part 1 only) and 53 were relegated. The successful candidates are as follows:

Billiards, H.
Bintley, L.
Bowden, F. I.
Burrington, T.
Cooper, R. W. G.
Corlett, W. S.
Couldrick, H. C.
Davis, E. E.
Doctor, B. E. (Part 1 only).
Ellis, H. H.
Farmer, H. C.
Ford, G.
Ford, H. H.
Harris, K. W. F.
Hartley, J. S. (Distinction in Thesis).
Henderson, P. P.
Hinton, R. C. H.
Hurden, S. A.
Johnston, A. C.
Jolley, V. A.
Kemp, W. C.
Kendrick, A. W. R. (Part 1 only).
Kingsford, G. M.
Lacoste, G. A. C.
Livingstone, A. H. (Part 1 only).
Lumley, D. F.
Marshall, H. B.
Maybury, M.
Mellor, F.
Mileson, H. (Part 1 only).
Pilichowski, A. V. (Part 1 only).
Polson, F. M.
Rea, A. J.
Schultz, I.
Sherwin, R. W. (Part 1 only).
Smith, A.
Smith, J. J.
Soper, S. F. E.
Thompson, E.
Tolson, J. R.
Twigg, W. L.
Underhill, A. (Part 1 only).
Vaughan, O.
Watson, L. K.
Williams, S.
Writer, A. (Part 1 only).

The Special Examination.—The special examination qualifying for candidature as Associates of the R.I.B.A. was held in London from July 9 to 15. Of the 22 candidates examined, 11 passed (1 in Part 1 only) and 11 were relegated. The successful candidates are as follows:

Elleray, F. R.
Harris, R. O.
Lloyd, W. T.
Peel, A.
Pertee, W. C.
Rowe, G. F.
Tomkins, C. J.
Waugh, H. L.
Webb, F. H. H.
Wingate, W. H.
Worrall, W. (Part 1 only).

The Examination in Professional Practice for students of Schools of Architecture recognized for exemption from the R.I.B.A. Final Examination.—The examination was held in London and Edinburgh on July 15 to 17, 1930. Of the 63 candidates examined, 50 passed and 13 were relegated. The successful candidates are as follows:

Aitken, F. K.
Anderson, W. G. D.
Asghâr, S. A.
Bevan, C. S.
Bishop, J. W.
Bower, S. E. D.
Brodie, M. B.
Budgen, P. G.
Burles, D. R.
Chackett, L. A.
Challen, M. C.
Coulter, H. G.
Cowie, M. J. H.
Cruickshank, G. L.
Duggan, D. M.
Folkes, J. H.
Gardner, E. G.
Gifford, R. C.
Good, N. D.
Grant, F. C. G.
Hall, A. E.
Harland, P. J. B.
Henniker, R. F.
Innes, D. W.
Ironside, W. D.
Jackson, G. H.
Jackson, H.
King, L. E.
Luke, H. S.
Monro, G. J.
Nightingale, D. E.
Nisbet, J. V.
Noad, R. M.
Osburn, W. J. A.
Parr, J. W.
Paterson, H. N.
Playne, E.
Reith, W. J.
Richards, L. F.
Riddell, J. R.
Rose, C. A.

Stephen, N.
Stewart, J. A.
Thatcher, C. A. E.
Walker, W. C.
Wilson, J. C.
Yorke, F. R. S.

RHODESIAN ARCHITECTS FORM AN INSTITUTE

A number of Bulawayo architects recently took advantage of the Rhodes and Founder's Day holidays to travel to Salisbury, where they met the local architects at a general meeting, and elected the first council of the Institute of Southern Rhodesian Architects, a body corporate under the Architects (Private) Act of 1929.

The result of the ballot was as follows: President: Mr. D. MacGillivray, M.L.A., of Bulawayo; Vice-President: Mr. F. A. Jaffray, L.R.I.B.A., M.I.A., of Salisbury; Hon. Secretary and Registrar of the Institute, Mr. E. Pallett, F.I.A.A.; Members of the Council: Messrs. W. D'Arcy Cathcart, F.R.I.B.A., S. A. Cowper, M.C., F.I.A.A., J. R. Hobson, M.C., F.R.I.B.A., J. D. Robertson, L.R.I.B.A., and W. J. Whitesides, A.R.I.B.A.

The new council will shortly take over from the Inaugural Board appointed by the Government, and the Institute will then manage its affairs under the Architects Act and the regulations drawn up by the Inaugural Board.

On July 14 the architects entertained the Colonial Secretary (Mr. W. M. Leggate) and members of the Inaugural Board to dinner at the Grand Hotel.

The toast of "The King," proposed by the Institute's new president and heartily responded to, was followed by "The Government," proposed by Mr. Whitesides, who explained how the Government had sympathetically taken up the architects' request for the registration of architects and had passed the Architects (Private) Act, 1929. He coupled with the toast the name of the Colonial Secretary, who was closely associated with the administration of the Act.

Major R. H. Everett, C.B.E., chairman of the Board, in response to the toast of "The Inaugural Board," proposed by Mr. J. Cope Christie, F.R.I.B.A., commended the rather unusual action of the architectural profession of Rhodesia who, when drafting their Bill, made the provision that the regulations which would govern them under their Act should be drawn up by a board selected by the Government, the majority of whom need not be members of the architectural profession. Thus public interests were safeguarded as well as the interests of the profession.

Other toasts and responses were made by Messrs. W. M. Leggate, J. R. Hobson, M.C., F.R.I.B.A., D. MacGillivray, F. A. Jaffray, W. Cathcart, and Captain W. E. Thomas, M.C., B.A.

COMPETITIONS OPEN

August 30.—The Carlisle Corporation invites British architects to submit designs for the façade to English Street and the Victoria Viaduct, suitable for shops and business premises. The site was previously occupied by the Prison. The total length of the frontage is approximately 358 ft. Assessor: Francis Jones, F.R.I.B.A. Premiums: £300, £200, and £100. Particulars of the competition, etc., may be obtained from Percy Dalton, A.M.INST.C.E., A.R.I.B.A., City Engineer, 18 Fisher Street, Carlisle. Deposit £1 1s. Latest date for submission of designs, August 30.

September 1.—The Bangor (Co. Down) Borough Council invites architects or town planners to submit designs in competition for laying out the sea front within the Borough. Assessor: Professor Patrick Abercrombie, F.R.I.B.A. Premiums: £150 and £50 for first and second places, respectively. Copies of the conditions and plans will be forwarded on application to J. Milliken, Town Clerk, Borough Council Offices, Bangor, Co. Down. Deposit £1 1s. Latest date for submission of designs: September 1.

September 30.—The Isle of Man Education Authority invited architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums: £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs: September 30.

October 20.—The Maternity and Child Welfare Committee of the City of Birmingham invite architects to submit competitive designs for two infant welfare centres, one at Warren Farm Road, Kingstanding (Perry Barr), and the other at Trittiford Road (Billesley). Competitors must have occupied offices in Birmingham as their head office for six months prior to July 19, 1930. Assessor: A. T. Butler, F.R.I.B.A. Premiums, £100 in respect of each centre. Conditions of competition and plans of the sites may be obtained on application to Herbert H. Humphries, M.INST.C.E., City Engineer and Surveyor, the Council House, Birmingham. Deposit £1 1s. for each centre. Latest date for submission of designs: October 20.

October 30.—The General Building Syndicate, Ltd., invite architects to submit competitive schemes for the development of a site at Liverpool, fronting St. John's Lane, Queen Square and Rose Street. Premiums: £250, £100 and £50, for first, second and third prizes, respectively. Particulars, etc., are obtainable on application to the Secretary, the General Building Syndicate, Ltd., 36 St. Martin's Lane, W.C.2. Latest date for submission of designs: October 30, 1930.

November 30.—The Guildford Cathedral Committee invites any architect, who has been engaged in the design of cathedrals or churches, to submit for examination drawings and other illustrations of his works; or a design for a cathedral. Not more than three sets of drawings may be submitted, packed in one large portfolio. The Committee, with the assistance of Mr. Walter Tapper, A.R.A., will examine the portfolios, and select a limited number of architects for the Final Competition. Each architect selected for the final competition will receive 500 guineas, whether his design is accepted or not. Portfolios should be addressed to The Venerable the Archdeacon of Surrey, The Diocesan Office, Lloyds Bank Chambers, Guildford, not later than November 30.

No date.—The Leicester Corporation propose to invite local architects to submit competitive designs for a library, to be erected at West Humberstone. Assessor: Hugh Gold, F.R.I.B.A. Premiums: £75, £50, and £25, for first, second and third prizes, respectively. (Full particulars are not yet available.)

No date.—The Committee of the Foundation Hospital and the Rectorate of the Royal Yugoslavian University of Zagreb invites competitive designs for the general rebuilding plans of the Foundation and Clinic Hospital of Zagreb. Assessors: 1. Dr. Srkulj Stjepan, Burgomaster and Chairman of the Foundation, as president of the jury. 2. Henauer, W., architect, of Zurich (or his representative, Ch. Thevenaz, architect, of Lausanne), for the Swiss Engineers' Association of Germany. 3. Dr. Ing. Kreis Wilhelm, of Dresden, for the Engineers' Association of France. 4. Arch. Expert H.R., of Paris, for the Engineers' and Architects' Association of France. 5. Dr. Culumovic Pavao, Primarius, for the Medical Association of Zagreb. 6. Ing. Gabric Franjo, for the Yugoslavian Association of Engineers and Architects, Zagreb section. 7. Dr. Rasuhin Josip, deputy for the Directors of the Institute of Hygiene of the foundation: "Foundation Hospital of Zagreb." 8. Prof. Dr. Prasek Emil, for the medical faculty of Zagreb. 9. Dr. Durst Franjo, for the medical faculty of Zagreb. 10. Arch. Heinzel Vjekoslav, Alderman of the City of Zagreb. Committee representative of the jury: Ing. Jurkovic Mato, Stadtbaurat in Zagreb. Prizes: 1st, 20,000 Swiss francs; 2nd, 15,000 Swiss francs; 3rd, 10,000 Swiss francs. 15,000 Swiss francs have been set aside for any further work which may be required. Programme and particulars of the competition will be sent on or after August 15, 1930, on application to the Stadtvorstand of Zagreb (Mr. Matica, secretary), Room No. 70, 2nd floor, on payment of 200 dinar. Latest date for submission of designs: January 15, 1931.

The Watford Corporation has arranged with Mr E. Vincent Harris, F.R.I.B.A., the assessor, the details of the competition for the designs of the proposed new municipal buildings. The estimated expenditure is £200,000.

In connection with the proposed new municipal buildings the Southwark B.C. recommends the appointment of an assessor to report on a scheme for competitive designs for a new town hall, central library, museum and public hall, on the existing and adjoining sites. The estimated cost of the scheme is £317,000.

THE ARCHITECTS' DIARY

WEDNESDAY, AUGUST 20

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to Morley College, Westminster Bridge Road, S.E.1. **11.30 a.m.**

ROYAL SOCIETY OF ARTS. At the Imperial Institute, Exhibition Road, South Kensington, S.W.7. Exhibition of designs submitted in the R.S.A. Competition of Industrial Designs. Until August 31. 10 a.m. to 5 p.m. (Sundays 2.30 to 6 p.m.). 10 a.m.

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Exhibition of English Mediæval Art in the North Court. Open until September 21, 10 a.m. to 6 p.m. (Thursdays, 10 a.m. to 10 p.m.) **10 a.m.**

SIR JOHN SOANE'S MUSEUM, 13 Lincoln's Inn Fields, W.C.2. Open every Tuesday, Wednesday, Thursday and Friday until September next. 10 a.m. till 5 p.m. 10 a.m.

THURSDAY, AUGUST 21

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. "Architecture." By Miss M. Chamot. **3 p.m.**

FRIDAY, AUGUST 22

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to Cornwall House, Stamford Street, Waterloo Road, S.E.1. An official demonstration will be given of the automatic telephones. **3 p.m.**

SATURDAY, AUGUST 23

Sunrise, 5.56 a.m. Sunset, 8.8 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Ironwork." 12 noon. "Ecclesiastical Metalwork." 3 p.m. Both lectures by L. O. Faraker. **12 noon.**

MONDAY, AUGUST 25

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Stained Glass." By T. F. Wilson, F.R.S.A.I. **3 p.m.**

TUESDAY, AUGUST 26

Sunrise, 7.4 a.m. Sunset, 6.53 p.m.

TUESDAY, OCTOBER 7

R.I.B.A., 9 Conduit Street, W.1. Closing date for applications for admission to the Intermediate Examination.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1s. 3½d. *per hour;* LABOURER, 1s. 3½d. *per hour;* NAVVY, 1s. 3½d. *per hour;* TIMBERMAN, 1s. 5d. *per hour;* SCAFFOLDER, 1s. 4½d. *per hour;* WATCHMAN, 7s. 6d. *per shift.*

Broken brick or stone, 2 in., per yd.	£0 11 6
Thames ballast, per yd.	0 10 0
Pit gravel, per yd.	0 15 0
Pit sand, per yd.	0 12 6
Washed sand, per yd.	0 13 0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

Portland cement, per ton	£2 8 0
Lias lime, per ton	2 0 0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.

Transport hire per day:

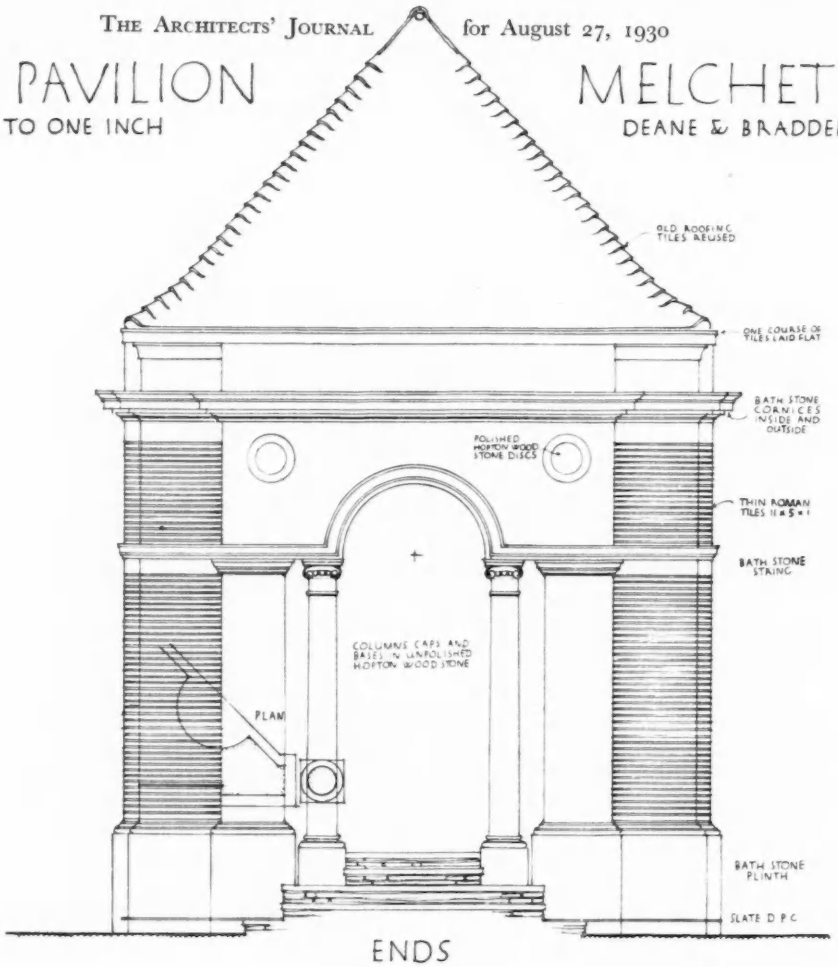
SCALE DETAILS:
A WEEKLY SERIES

GARDEN PAVILION AT MELCHET COURT, NEAR ROMSEY, HAMPSHIRE. DESIGNED BY DEANE AND BRADDELL

THE arch and column motive employed for the sides of the little gazebo, shown in the photograph in its setting at the end of a stone-edged pool, is repeated at each end, while the corners of the building are built of 2-inch Roman tiles with wide flush joints. Hopton Wood stone has been used for the columns, arches, filling, cornice and blocking course, while the caps and bases were carved in marble by Mr. Esmond Burton. The roof is of plain hand-made tiles, which are laid at a steeper pitch from the ends than from the longer sides to give a little length to the ridge and so avoid a pyramidal appearance. Internally, a stone cornice has again been employed, in conjunction with a plaster ceiling, wall enrichments and niches in all four corners. The flooring and treads to the shallow steps leading down to the pool are of stone, and the risers are filled in with tiles.



The drawing overleaf may be read with an ordinary architects' scale ($\frac{1}{4}$ in. = 1 ft.)

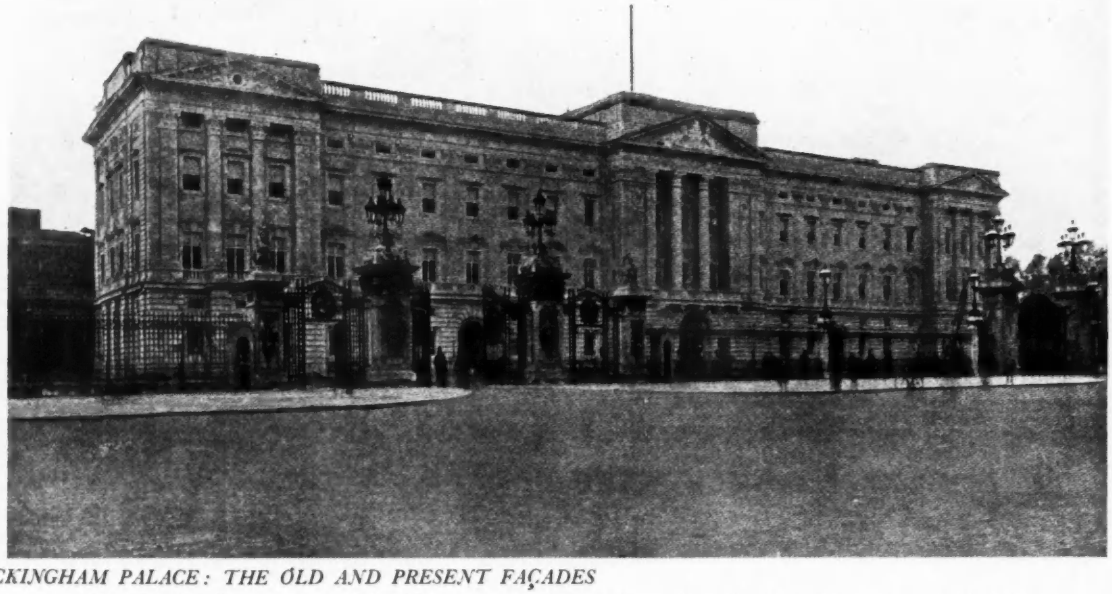
1849—1930

The art of building is one of the great things in the State . . . I may unduly magnify my calling, but I know nothing greater than the honest old craft of building.

—W. R. LETHABY

LORD GORELL, the other day, told a delicious story which deserved to be repeated more widely than it was. He recalled a visit paid in the year 1900 by friends to an old lady of eighty. The friends took with them a person who happened to be their guest at the time. This guest was an architect of some distinction, and the old lady treated him with old-world courtesy. A day or two later the friends called on the lady again, and as the name of their recent guest was mentioned they told her his profession. "An architect!" cried the old lady, with pained surprise, "and I shook hands with him." Shaking hands with an architect was something that wasn't done.



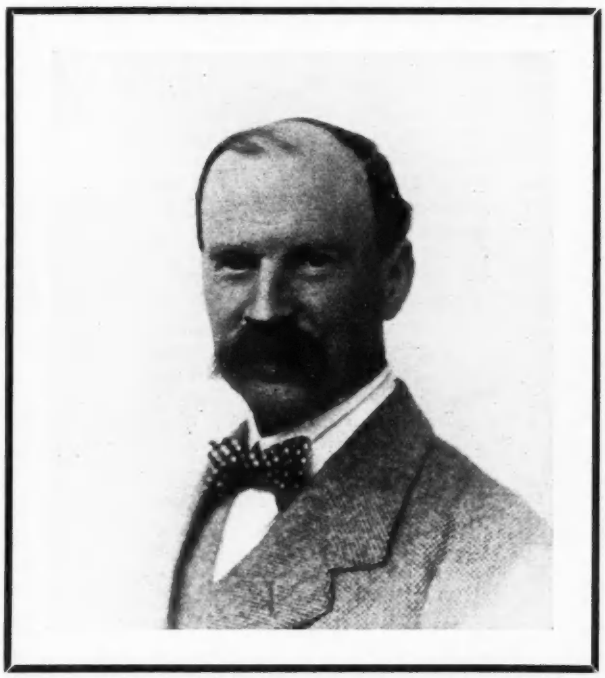
The old lady was genuinely horrified. She was born in 1820, Sir Aston Webb twenty-nine years later. In one generation the social position of the architect became what it is today. And if it is possible to associate one man's name with the change that has made it possible for the most exalted to shake hands with an architect and not commit a solecism thereby, then that man is Sir Aston Webb, who died on Thursday last. In losing Sir Aston Webb we have lost more than an architect, however distinguished, can ever be; more than the unchallenged head of our profession. We have lost the man who raised the craft of architecture to a level of authority and prestige among the country's servants, which would have appeared an impossible dream to Lord Gorell's old lady, and which may yet become but a memory unless we strain every nerve to maintain it in our time.

As was to be expected, the daily papers tried their hardest to be complimentary about "the majesty of the Admiralty Arch" and the noble pile of the Museum buildings at South Kensington. Looked at from the angle of our post-war beliefs and aspirations, these buildings supply little food for enthusiasm. Fortunately, there is no need to be enthusiastic about them as buildings. There are stories current about Sir Aston Webb which make him appear as one who thought highly of himself as an artist. For our part, we do not believe these reports to be true. There are more sorts of greatness than one, and architecture is a complex business indeed. Sir Aston Webb had achieved a greatness that was beyond all question when he was asked to succeed Sir Edward Poynter as President of the Royal Academy. It was a few months after the Armistice, and Sir Aston was in his seventieth year. His Presidency was not the beginning of a chapter, but the end. The greater part of his work was done between 1890, when he began the Dartmouth Naval College building, and 1913, when he put the new front on Buckingham Palace. It was during those years that he raised up architecture to a great and important position in the nation's affairs.

We live in an age today when the scale of human enterprise is growing steadily larger—more steadily, it is true, and more rapidly, in other countries than in ours, where individualist methods are still cherished in times of dire competitive stress. The large business, the trust and the amalgamation, these things are not welcomed, but they are here, and it is no use blinking their presence. Building enterprise, too, must grow larger accordingly. It did not escape the newspaper critics that the volume of Sir Aston Webb's practice and the size of his architectural staff were hardly commensurate with the pace and the scope of the personal artist's labours. They were not. There is more individuality (or so it seems to us today) in the buildings now being designed by a mere "official machine" like the Office of Works than in those designed by Sir Aston Webb. But would the Office of Works, would some of our larger private offices and partnerships today, be producing the work they do if Sir Aston Webb had not pointed the way to them?

It is impossible to say where we should have been today had he never lived, but it is certain that we should have been poorer, weaker and vastly less respected, and our influence in the world would have been correspondingly less. For much though the position of architecture in the world still leaves to be desired, it would have refused many a frightening task, and missed many a critical opportunity, had not the genius of Sir Aston Webb taught it to face and to master them.

BUCKINGHAM PALACE: THE OLD AND PRESENT FAÇADES



Sir Aston Webb's refronting of the Palace was characterized in our issue for November 5, 1913, in the following words: "There is a decidedly imposing air about it; it is, in fact, the best thing that Sir Aston Webb has ever done."

At the same time the opinion was advanced that it was the deplorably dirty condition into which Blore's old front, in Caen stone, painted, had been allowed to get, rather than the insipid design itself, that had brought it into disrepute.

The decision to refront was the natural sequel to the unveiling of the Queen Victoria Memorial, which was sculptured by Sir Thomas Brock, but architecturally was part of Sir Aston Webb's monumental scheme which earned him his knighthood. When the statue and fountain stood out, spick and span, it was clear that something would have to be done with the dingy Palace. The project was dear to the heart of Edward VII, and Sir Aston was at work on it as early as 1904. But the King died before it could be put into execution (incidentally, the upper photograph is believed to have been taken while his Majesty was lying dead in the Palace), and there were several revisions.

It was in August, 1913, that operations were commenced by the contractors, Messrs. Leslie and Co. Sir Aston anticipated that they would occupy two years, but the builders undertook to complete in thirteen weeks. And, by the end of October, all was finished and the scaffolding cleared away. On the average 350 men were employed by day and 180 during the night.

ASTON WEBB 1849—1930

The late Sir Aston Webb, G.C.V.O., C.B., PP.R.A., PP.R.I.B.A., etc., who died in London last week, in his 82nd year.

ASTON WEBB, who died in his sleep at his London residence in Hanover Terrace, early in the morning of Thursday last, August 21, was born in London on May 22, 1849, and was thus well into his eighty-second year. The son of the late Edward Webb, water-colour artist and engraver, he married, in 1876, Marian, youngest daughter of the late David Everett, F.R.C.S., of Worcester, who bore him two sons and a daughter. The surviving son, Maurice Everett Webb, himself a Vice-President of the R.I.B.A., was articled to his father, and had, of late years, undertaken more and more of the work of their partnership, after serving with distinction in the war with the Royal Engineers, winning the D.S.O. and the M.C. The other son he had the misfortune to lose in the course of hostilities.

Sir Aston was educated privately and, as a prelude to his long and distinguished career, was articled to Banks and Barry at the age of eighteen. Seven years later he set up in private practice, having won, in 1873, the Pugin studentship of the R.I.B.A., instituted to promote the study of medieval architecture in Great Britain and Ireland.

Thus, an early event seemed to mark out the whole path of life for him, for it brought him particular experiences that were destined to influence all his work. At this time, too, he exhibited drawings of Continental churches at the Royal Academy, and what he thus gave proof of having assimilated bore fruit when, in a few years' time, he was to undertake works of restoration, among them that of Burford Church. That with which his name will always be chiefly associated was the Norman Church of St. Bartholomew, Smithfield. He laid out St. Bartholomew Close in 1880; and between that year and 1896, when his arduous work, which involved much study and included the practical rebuilding of the Lady Chapel, was completed, was tireless in his crusade of rescue and preservation of the finest Norman relic in the metropolis.

Meanwhile his ability had been winning recognition over a wide field of subjects. His early original works included the Huguenot Church in Soho Square and several country churches; schools, among others for the Huguenot Church and for St. Bartholomew's; infirmaries and clubs; a town and many country residences; granaries and warehouses. The year 1885 saw, also, the exhibition of his designs for buildings at the War Office and the Admiralty. Nor were his social gifts without influence upon the development of his career. His gift for administration began to find scope when, in 1884, he became President of the Architectural Association. It was the first of a long list of responsible appointments. Between 1893 and 1897 he was Vice-President of the R.I.B.A., of which he had long been a Fellow. Distinctions began to come thick and fast. In 1899 he was elected A.R.A., in 1902–4 President of the R.I.B.A., in 1903 a full Academician. The sequel was a knighthood, when, in 1904, he exhibited his diploma work, designs for the lay-out of a memorial to Queen Victoria. In association therewith came the scheme for the new front of Buckingham Palace (actually carried out in 1913) and the Admiralty Arch at the east end of the Mall, which thus became at once an exemplar of Edwardian architecture and, in a sense, his own memorial.

In 1905 he received the highest honour for which British architects can recommend a Fellow, the Royal gold medal presented by the King. In 1906 the American Institute decided to commemorate their fiftieth anniversary by the inauguration of a gold medal to be awarded to eminent architects; he was chosen as the first to receive it, and in the following year Lady Webb accompanied him to Washington for the purposes of the award. He was created C.B. in 1909, upon the opening of the Victoria and Albert Museum.

A mere list of works executed during this most prolific period of his life would assume formidable proportions. They included the Naval College at Dartmouth (1889), the Imperial College of Science and Technology and the Victoria and Albert Museum (1891), Christ's Hospital, Horsham (in collaboration with the late Ingress Bell : 1894-1904), the Metropolitan Life Assurance Building, Moorgate Street (1894), the Royal College of Science, Dublin (in collaboration with Sir Thomas Deane), the Victoria Courts, Birmingham, an early competition success, to be followed later by the Birmingham University buildings, the Grand Trunk Railway of Canada Offices, Cockspur Street, and Law Courts at Hong Kong. One of the most recent buildings in the design of which Sir Aston and his son were associated was the block of offices in the Renaissance style for the Ocean Accident and Guarantee Corporation in Moorgate, completed four years ago.

A Londoner born and bred, it is no wonder that with such a keen civic sense as his chief works imply him to have possessed—no man since Wren has left his mark so big upon the town—London always occupied a large place in his affections. His aspirations for it took form in his vision of "London of the Future," unfolded early in 1914 to members of the London Society, in the formation of which he was a leading spirit. He pictured a salmon weir at London Bridge in 2014—emblem of a spacious, smokeless, clean metropolis. And though the war supervened, the dream endured. In 1921 he edited a large volume with the same title, which contained the ideas of nineteen other members of the society, like unto himself.

The rest is a tale of honours. In 1919 there fell to him, and through him to the profession of architecture, an honour that may be said to have set the crown upon his career. After sixteen years as an Academician he, an architect, was elected President of the Royal Academy. Ever since the days of Sir Joshua Reynolds this chief office

had been reserved for a painter, and on only one previous occasion had it been held—and then doubtfully, for the election was not ratified by the Royal signature—by a member of this profession: to wit, by James Wyatt, "The Destroyer," in 1805. In the last year of his office, 1923, he was elected an hon. LL.D. of Cambridge University, and a member of the Royal Academy of Sweden, in further recognition of his valuable services to architecture. In 1924, it will be remembered, he was involved, together with Sir William Llewellyn, the present president, while returning from the R.A. banquet, in a serious motor accident: a prolonged and serious illness followed, and, partly on this account, he retired from the presidency, being elevated to G.C.V.O. in 1925. He was an original member of the Fine Arts Commission, formed in 1924. His most recent honour was the Albert Medal of the Royal Society of Arts, awarded to him in 1927.

TRIBUTES IN THE PUBLIC PRESS

IF we ask whether Sir Aston was a great architect from the artistic point of view the answer must be doubtful. The more cultivated among his brother architects do not put him on a level, for instance, with Street, and he certainly exercised no such artistic influence as Bodley and Norman Shaw. The fact is that he was almost too successful. His work was so vast that he had to surround himself with clerks—people say, fifty at least—so that his office became more like a Government Department than the studio of a man who had time to think and draw. But thinking and drawing are essential to fine architecture, and they cannot be deputed. The wonder is, not that the work of a man with fifty clerks sometimes fell short of the highest artistic standard, but that in Sir Aston's case it was so good as it undoubtedly was, and that his personal touch was impressed throughout every design for which he made himself responsible.

—*The Times.*

Sir Aston Webb's was a charming personality, and few men of his profession were more deservedly esteemed by the younger generation of architects. His advice and assistance were always at the disposal of those who needed it. In spite of the onerous nature of his practice, he cheerfully undertook the duties of various honorary offices connected with his calling, and he fulfilled them admirably.

—*The Manchester Guardian.*

He was not only notable as an architect but as a champion of modern architecture, as understood by what may be described as the Conservative school. He liked rigid and formal design and almost as passionately disliked that emotionalism which has of recent years invaded the earlier tradition in architecture. He had a splendid technical equipment, to which he was able to add that subtle sense of fitness to the occasion with which he had to deal, that marks the difference between the mere journeyman and the artist.

. . . .

He planned and worked for the future of London, bequeathing to a younger generation his dreams of a city changed and ennobled in many ways beyond the range of architecture alone.

—*The Daily Telegraph.*

He combined art and utility, and though his buildings do not show the severe economy and simplicity aimed at by the younger architects of today, they are dignified and attractive. Sir Aston Webb was in advance of his age.

—*The Daily Mail.*

. . . unquestionably one of the foremost architects of his day.

His designs for so many public edifices entitle him to be considered par excellence the architect of King Edward's reign, though his ultimate fame may rest rather on his restorations at the Church of St. Bartholomew.

—*The Morning Post.*

Sir Aston resembled Wren in his ambition to beautify London, and he leaves many memorials of his artistic triumph.

. . . .

Modest and retiring, but a wise and tactful administrator, he had in full measure the esteem of his fellow members.

. . . .

He had had a great influence on British architecture for more than a generation.

—*The Yorkshire Post.*

Of Sir Aston Webb, Londoners might say that they only needed to look around to find his monument.

—*The Daily Sketch.*

NEWS & TOPICS

IN ST. PAUL'S CATHEDRAL

THE profession's last tributes to a great Londoner were paid on Monday. The Rev. Canon S. A. Alexander conducted the service at St. Paul's Cathedral for the funeral of Sir Aston Webb. H.M. the King was represented by Admiral Sir Henry Campbell, K.C.V.O., C.B., and H.R.H. Princess Louise by Brig.-General Alfred E. J. Cavendish, C.M.G. The pall-bearers were Sir William Llewellyn, P.R.A., Mr. Walter Tapper, A.R.A., P.P.R.I.B.A., the Rt. Hon. John Burns, Sir Arthur S. Cope, R.A., Sir C. Harcourt Smith, the Mayor of Kensington, Sir Frederick G. Kenyon, and Sir Basil Mott. Sir Edwin Lutyens, R.A., and Sir W. Goscombe John, R.A., carried the orders of the past president; and Sir John Short, R.A., Treasurer, and Mr. Walter W. Russell, R.A., Keeper, carried the wreath from the Royal Academy. I understand that a wreath from the R.I.B.A. had been sent earlier in the morning. In addition to the representatives of the Royal Academy, over seventy members of the R.I.B.A. attended the service. (A list appears on p. 317.—ED. A.J.) Among those present I saw Sir Harry Courthope-Munroe, K.C., who represented the Council of the Imperial Society of Knights Bachelor; Sir John W. Simpson, P.P.R.I.B.A.; Sir Mervyn Macartney; Sir Arthur Pinero; Mr. H. Clifford Smith, who represented the Victoria and Albert Museum, and Mr. Henry Ainley, the actor. Representatives also attended from the Warehousemen, Clerks and Drapers' Schools. The service concluded with the Dead March, the first time the organ has been used for this purpose, I believe, since its restoration. The interment was private, at the express wish of the family.

TOWN-PLANNING INSTITUTE'S MAJORITY

The Town Planning Institute celebrates its twenty-first birthday this year, and it is a remarkable thing that the men who formed with Mr. Thomas Adams a group of enthusiasts banded to further the aims of town planning, and win a definite place for it in the legislature of this country, should all be active in the practice of the art today. To Mr. G. L. Pepler, who is the first and only Secretary to the Institute, town planning is heavily

indebted, for no one could have used the position he has occupied to greater effect. During the last few years it is New York, and not London, that has benefited by Mr. Adams's wide knowledge and powers of organization, but it is doubtful whether our own Greater London Town Plan could have eventuated without the example set by New York, and it is a good thing for us here that the termination of the New York Plan should liberate Mr. Adams for active work in England again.

★

One might have hoped that the twenty-first birthday might have been crowned by the passing of an Act that would make town planning more than a name, but fate decrees that the planning of urban areas should be postponed still further—though surely the Parliamentary machine is not so entirely clogged that it will not find time in the near future to pass a measure which time has proved to be not only necessary but inevitable.

CARDIFF'S MILLION-POUND NEW RAILWAY STATION

The Great Western Railway Company are commencing work on a wholesale reconstruction of the General Station at Cardiff, on which they propose to spend over a million pounds. No plans are available as yet, and it is unlikely that the public will know what it is getting until the station is finished. One can only hope that the railway company will break with their bad old tradition of muddle, and design a station fit to compare with the best stations of the Continent and America.

★

The trouble with our railways in the matter of their station buildings lies with the directors, whose touching faith in their engineers' knowledge of architecture and their own comparative ignorance of the station architecture of other countries allow them to accept such a station as Waterloo as the best they could get for the money, whereas, as anyone who has travelled a hundred miles from Dover can tell them, it is a stupid and wastefully-planned engineer's job, with a quite decent architectural dressing.

★

Our English directors will not believe in real grandeur, and until they do, and until they will resolutely banish from their books the entire income they at present derive from catch-as-catch-can advertising, they will never capture the imagination of the travelling public. This new station at Cardiff is spoken of as a fine thing; but is it really to be fine, or merely big? And if it is to be indeed fine, then who is its fine architect—for the two are indissolubly linked? I am myself sceptical and mistrustful, even when I wish I might have reason to be otherwise.

ENNOBLING MANCHESTER

They are starting work on Mr. Webber's Fine Art Gallery at Manchester, and the city will be richer by yet another monumental building. At a time when Manchester is nearly a byword for industrial depression, it is indeed remarkable that so many fine buildings, expressive of so much solid wealth and secure prosperity, should rise together to proclaim the greatness of the north, like a late flowering, or the final expansion of temporarily arrested development. Manchester has got along pretty well with sooty buildings in narrow dirty streets, and more money has flowed into it than will ever again. But what did they do with their money, these hard-bitten merchants that turned a loving C. E. Montague into a viper? Well, perhaps they left a mess for this generation of the light to clear. I, for one, seeing these noble piles rising from dingy, hopeless streets, forbear to challenge the transformation, for there is lasting good to be found in fine architecture; and of how few such things beside can this be said?

A POINT IN TIME

Last week, coming out of my office in Queen Anne's Gate, I saw two men talking on the pavement. And one of them was Sir Edwin Lutyens and the other Cass Gilbert. And I passed them slowly, and turned back as if I had forgotten something, just that I might pass them again. For these little encounters are precious in the life of the ordinary man. Who wouldn't turn back to pass Shakespeare or Wren? Wouldn't posterity have turned back if it had been me? Wouldn't it have liked the chance! Lutyens . . . Cass Gilbert. The men who did the Cenotaph and the Woolworth Building, New York. And I saw them shake hands, and I heard Sir Edwin say, "Well, good-bye, Cass," and Cass Gilbert said, "Well, good-bye, Ed."; and if I could keep just that meeting for a hundred years or so, as one keeps a picture or a book, well, I could sell it to posterity for quite a lot.

A COMPETITION PROMOTED BY THE SOVIET

A competition is announced in this number of the JOURNAL for a "mass-musical" theatre for the town of Kharkov, in Ukrainian Russia. The competition is international, as much, one surmises, for purposes of propaganda as from a desire to find the best architect, for the conditions of competition take the form of a brilliantly clever work of typography and book design, printed in five languages and interspersed with admonitions to all the workers of the world.

★

The theatre itself is to hold 4,000 people and to be equipped with every possible requisite of a great State theatre, and, in addition, with the most scientific means of dealing with large crowds, not only as to their entry and dispersal, but with a view to their proper saturation with Soviet uplift, through the medium of music and massed theatric effects. I quote: "The State Opera Theatre of mass musical stage—as one of the strongest instruments to act on the masses—should mobilize its activity around the basic problems of our epoch." There is a good deal of similar uplift nonsense in the preface, though the actual conditions are very precise and detailed.

★

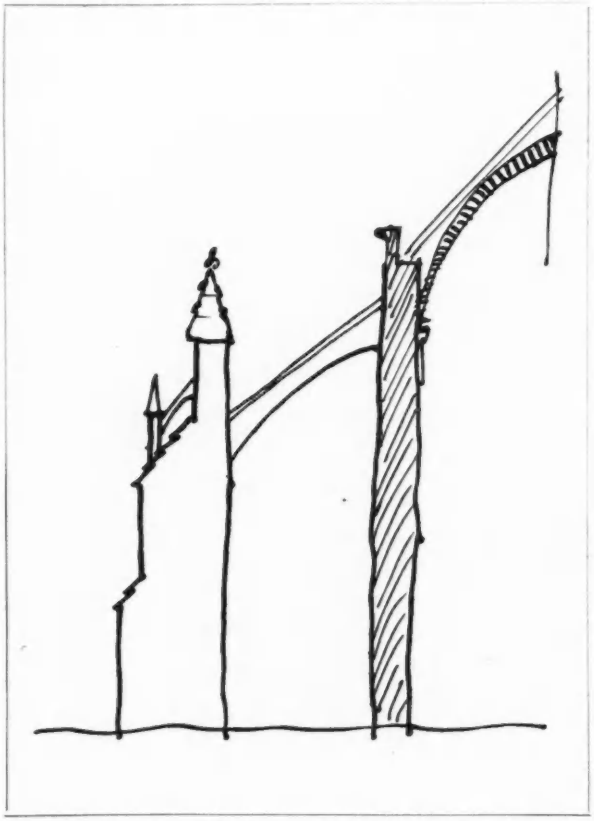
As the theatre is to be finished within the Five-Year Plan of the Soviet Government, the drawings are to be sent in by December 29, 1930, which is little enough time for a very complicated project. The jury numbers fifty-five and seems to include the entire intelligentsia of Kharkov—which is the worst possible advertisement for an international competition.

THE HOUSEWIFE AS CRITIC

The housewives of Watford are to be allowed to satisfy themselves that the new Council houses will be all that a woman's instinct for home-planning can make them. Which is to say that a committee of women councillors and others are to go over the Borough Engineer's (*sic*) plans to look for snags. This is a good idea. Women should know where they want things in the home, and should at least be aware of the common deficiencies of small houses; but I fear the spirit of competition with man that sets them to their task deprived of the humility

that is proper for so difficult a job as the planning of small houses will make their criticism less valuable than it might otherwise be.

★



For instance, one woman is reported as saying that she would count the number of stairs the housewife will have to go up and down during the day with the object of reducing them, which as anyone who has ever worked the variations on three themes that constitute the entire repertoire of cottage staircase design, will recognize as absurd.

★

Another hopes to eliminate unnecessary redundances and so reduce the cost; while another expects to find a dozen things "that appear small, but as every woman knows, are important." Now this point of view is not only rather ungracious to man, but just a little pompous and complacent in woman, and might quite easily be proved to be more a by-product of the many excellent journals on home-building than a genuine revolt of the female house-slave.

A SURPRISE AT BATTLE

In spite of pink asbestos dumped on beauty spots, I am continually surprised at my countrymen's genius for conservation! Visiting Battle Abbey, in Sussex, the other day, I found a young ladies' college in possession. The last of the noble families who have held it since the time of Henry VIII. have disappeared, leaving behind only a fine library, some rustic retainers who act as guides on show days and cultivate the gardens in their spare time, and a few masons and labourers to continue the restoration of the scriptorium and dormitory, very beautiful late Norman work. Although the ghosts of the monks may be a little shocked to see so many pretty girls in the Abbot's Hall, and a feminine occupant of the Abbot's canopied seat, the discipline and daily prayers are not so far from the original using of the place as the too-rich mix of dogs, duennas, old sports and beans, flirts and cocktails in many country houses today.

Humour in architecture; a "pup" flying buttress.

WHY ASPHALT?

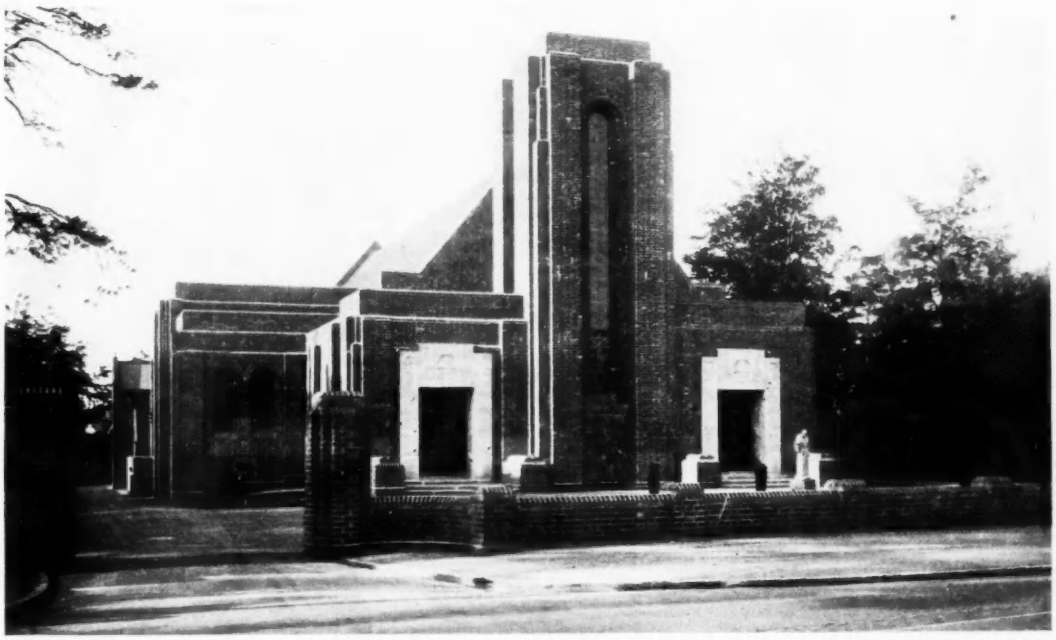
The great entrance gateway with its flanking façades is as mellow as an old espalier hung with ripe pears, and makes the houses which flutter round it on the "green" look as small and as brilliant as butterflies. But who told the local authority to pave the "green" with asphalt? If the motor charabangs (I prefer the democratic spelling) have killed the grass, surely cobble stones would have been more native to such a charming place.

TRIBUTE TO A BUILDER

It is always with the greater pleasure that I spring forward to record good deeds for having so often to inveigh against a naughty world. I like builders and am surprised that, notwithstanding my experience to the contrary, they are often set down as unscrupulous villains, and, I suspect, by that same public that looks upon architects as the most respectable but most plausible rogues that ever induced honest men to part with good money.

★

Let it therefore now be written to the credit of builders that the residents of a building estate at Tilehurst have so far recognized the honesty of their builder as to present him with an illuminated address, in which they set down their appreciation of his integrity and its results in good building, and their belief that they had received the *full benefit of the housing subsidy*. It is enough to say that Mr. Haddock, the builder, was completely overwhelmed by the unexpectedness of the tribute, to know how infrequently there is cause for such congratulation, and, it may also be said, how much is accepted as part of the contract.



WOVEN HORSE-HAIR

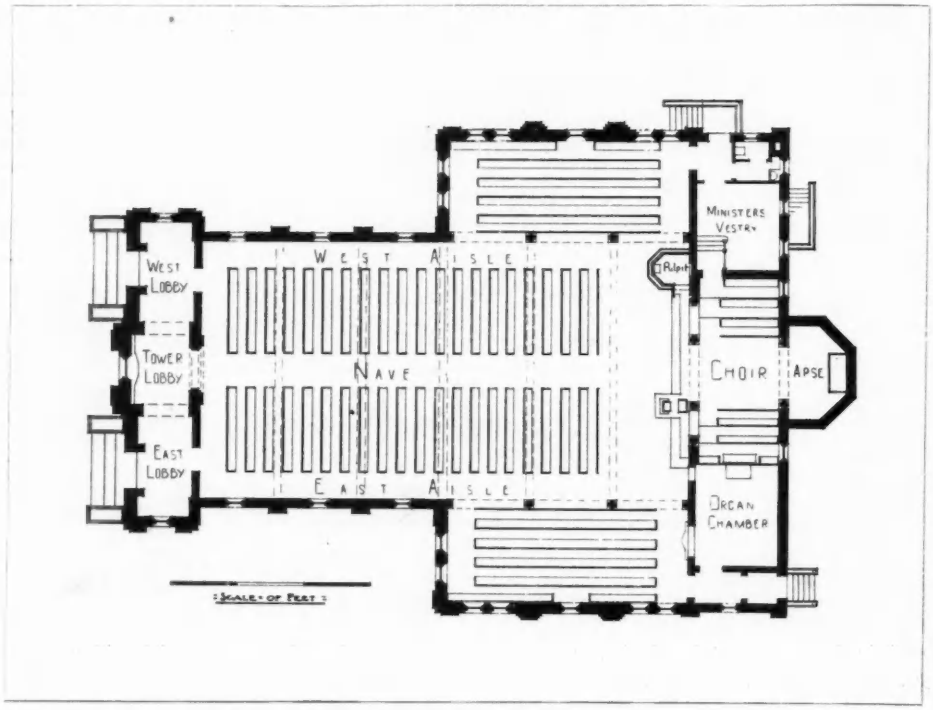
I wonder how many architects know of the horse-hair weaving craft that is still carried on at Lavenham, one of the rarest and most beautiful townships in England. I said "still carried on" carelessly, forgetting how perfectly this phrase has come to betoken a state of final stagnation. The case is far otherwise with this ancient craft, for although it has dwindled and fallen upon evil days, it has survived without real loss, and requires only a more general knowledge of its virtues to make it once more the supporter of a whole rural community. To architects horse-hair has a special appeal, for though it is hard-wearing to an extent not realized by any other material, it is made in many other colours than the discredited black of our forefathers, and can be used to produce just those colours that would be out of the question in less durable materials.

HUMOUR IN ARCHITECTURE

"I note you do not think" (writes a correspondent from South Wales, referring to my note in last week's JOURNAL) "there is scope in building for the comic. It is hard to believe, however, that the construction of the 'pup' flying buttress sketched here was entirely serious. The original may be found at Milton Abbey, in Dorset."

ASTRAGAL

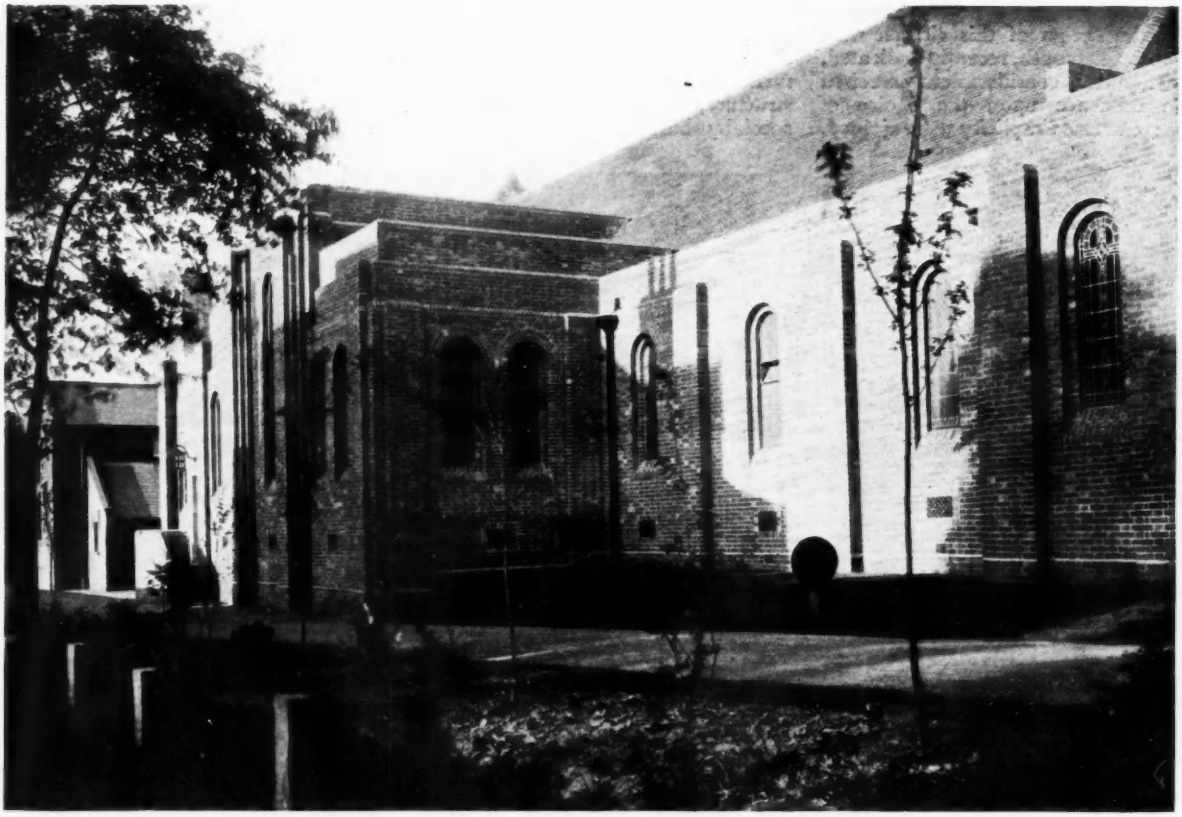
The dominant feature of the frontage presented to Belle Vue Road is the tower, within which is a memorial, with a bronze and purple grille. The doorways are enriched with carved stone surrounds.



CONGREGATIONAL CHURCH, SOUTHBOURNE, HANTS.

DESIGNED BY FREDERIC LAWRENCE

IN the design of this church near Bournemouth, recently dedicated, financial considerations exercised some influence upon the choice of style: extreme simplicity was enjoined. It represents an attempt to achieve dignity by mass rather than by ornament. The exterior lines of the structure, for which the bricks were specially burnt under the architect's direction, would be of classical severity were they not relieved by a tendency towards Byzantine freedom. With such catholicity of fancy the formation of a lily-pool and bird sanctuary in the



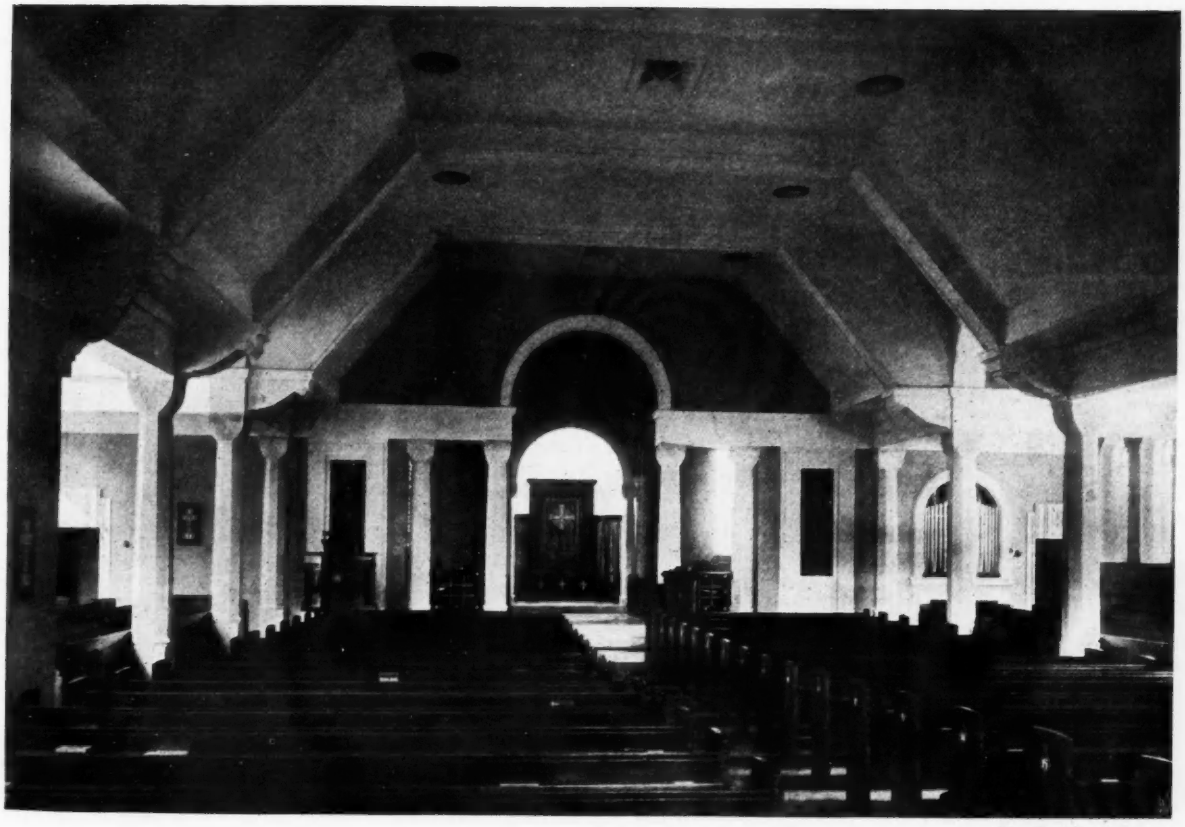
A pottery figure of St. Francis rests on an inscribed pedestal in the centre of the lily-pool and bird sanctuary, immediately before the main entrances.

Some 550 worshippers are accommodated in the pews. The placing of an apse in the head of the T-shaped plan gives the impression that the church is longer than it is.

forecourt, over which the figure of St. Francis of Assisi presides, is in full accord. This statue was modelled in the famous village pottery at Compton, under the care of Mrs. G. F. Watts, and, as will be seen from the illustration, the pedestal is inscribed with a laudatory saying of the Saint.

Within, impressions proper to a sacred building are bound up with the sensation of height produced by the deep coloured glass window in the memorial tower, and the lofty arch connecting the tower to the church, and with the sensation of mystery produced by the golden lighting of the apse. Indeed, this golden note plays an important part in softening and enriching the interior. The pews and other wood-

Immanuel Congregational Church, Southbourne, Hants]

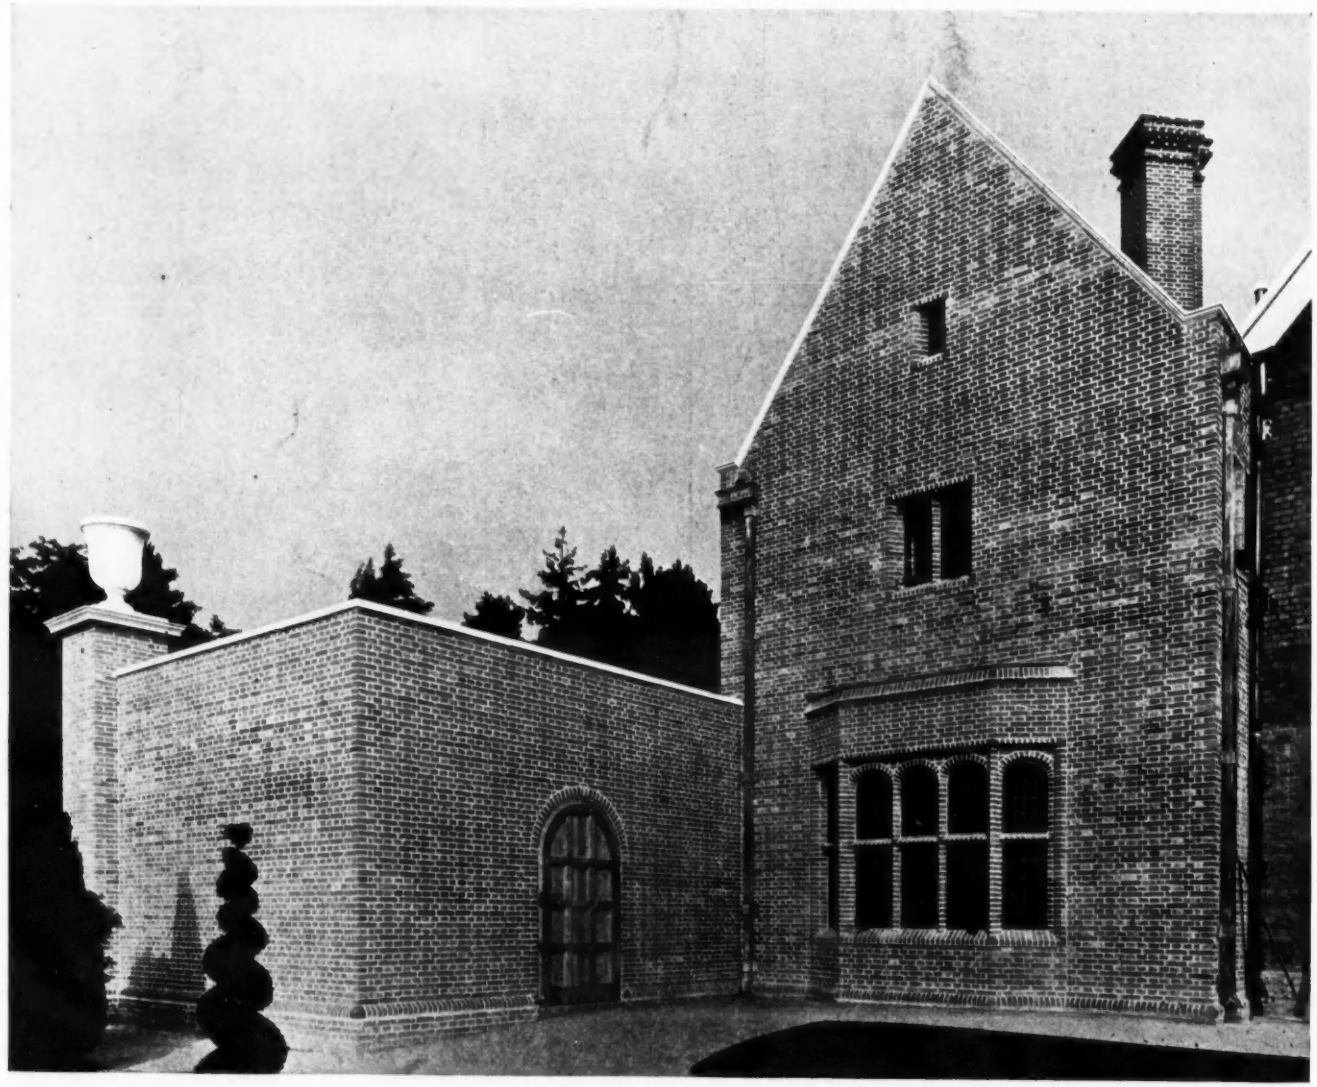


In this view of the western side of the church, with its transept, the setting out of the plan is seen to be a factor in the grouping of simple masses to give an effect of perspective and dignity. The design of the leaded window is visible.

work are in oak. As regards artificial lighting, pendants are conspicuous by their absence. Flood-lights for the nave are placed in the roof, and in other cases are hidden by various projections. Heating and ventilation are combined: the outer air passes over low-pressure radiators before entering the building. The comfort of the congregation has been still further studied by the provision, in the first eight pews, of earphones connected to microphones, for deaf worshippers.

A memorial stone records: "The tribute of the congregation to Frederic Lawrence Architect; F. A. Grigg Builder; H. G. Eaton Foreman and the men who built this Church." The cost was about £8,000.

A near view of the chancel and apse. The capitals of the pillars are enriched with carving, the grilles and railings are gilt, and the hangings are of purple and gold.



[*By Frederic Lawrence.*

The arches to the chancel and the apse distinguish the interior. The organ-pipes are arranged before an arch on the right. No light-fittings are visible: flood-lighting avoids the possibility of glare between the preacher and the congregation.

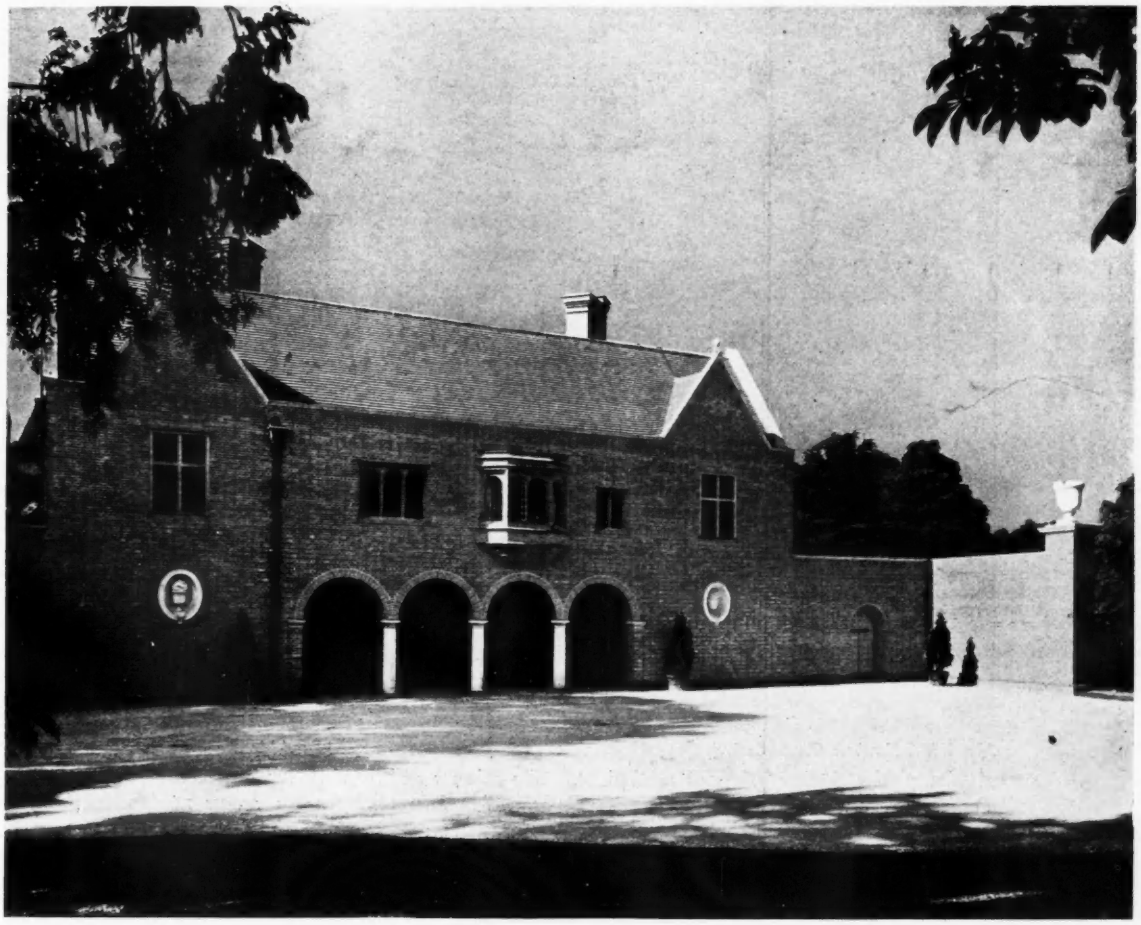
NEW NORTH WING: FARNHAM CHASE, BUCKS.

Designed by *Adshead & Ramsey.*

The west wall and end of the new wing. The mixture of the multi-coloured bricks, obtained from different yards, has resulted in a very pleasing effect, giving a softer and less monotonous appearance than is usually the case with new work. The door shown in the illustration gives access to the north front, a view of which is shown on the facing page. The bay window lights the study.

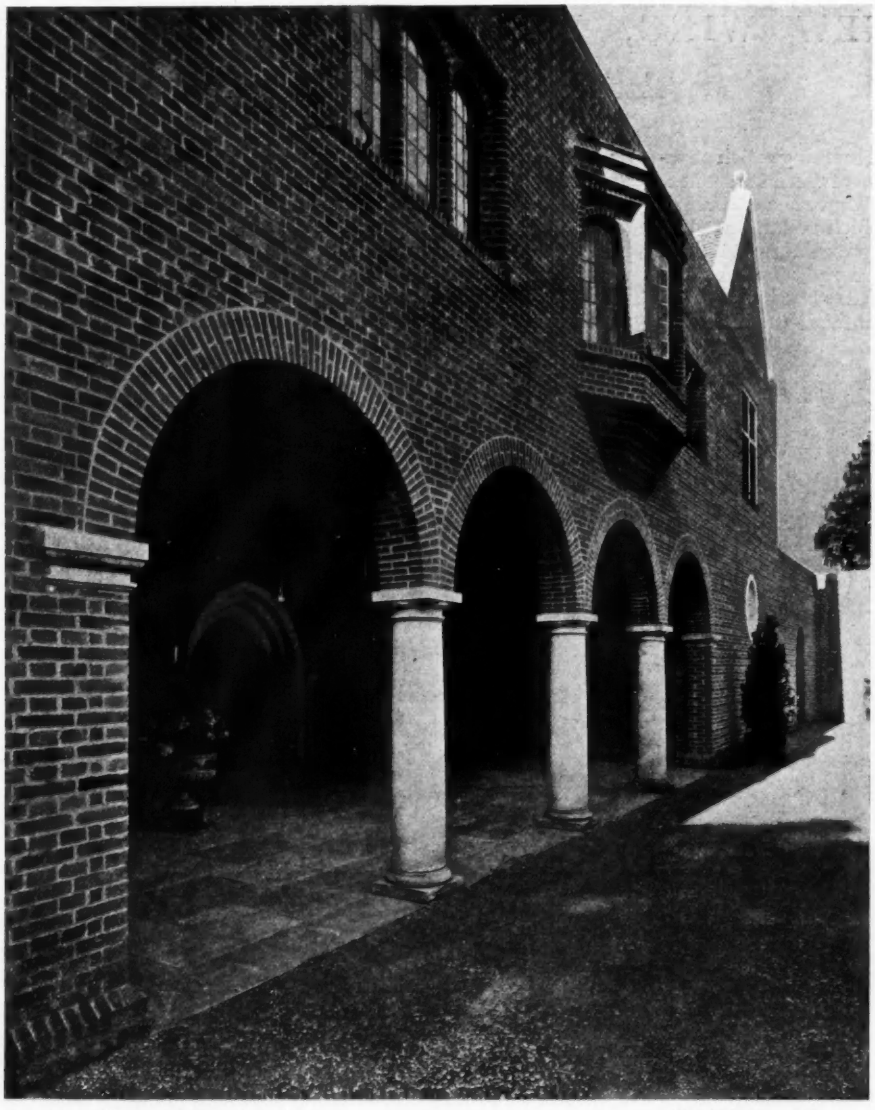
NEW WING, FARNHAM CHASE, BUCKS.

DESIGNED BY ADSHEAD AND RAMSEY



THE original building which occupied the site of Farnham Chase appears to have been a small farmhouse to which additions had been carried out from time to time, until the present large, but not unpicturesque, house has resulted.

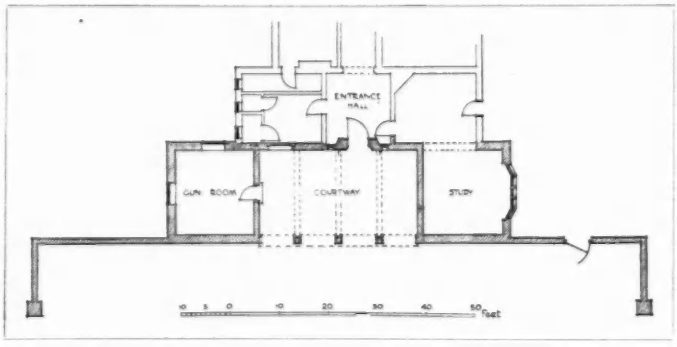
The problem that faced the architects was that of devising a plan that would give the extra bedroom accommodation on the first floor, at a required point, without unduly interfering or extending the ground floor, where only part of the area occupied by the rooms on the first floor was needed. It was decided, therefore, to provide on the ground floor a large covered courtway, or entrance court, between two new projecting bays, with flanking walls.



The picturesque character of the original structure to some extent determined the architectural lines of the new wing. It was felt that a greater dignity than the old, rather meagre, north elevation was necessary, so it was decided to build the new front on the lines of those early manor houses that combined the picturesqueness of the Late Tudor with the refined stateliness of the Early Renaissance.

The walls of the new wing are built of multicoloured bricks which were obtained from different yards, due to the fact that no one yard had sufficient bricks of the size required in hand. The roof is covered with local hand-made sand-faced tiles, and the columns and dressings are executed in Portland stone, the courtway itself being paved with Portland stone and Purbeck, laid in square random in the proportion of about one-third Purbeck to two-thirds Portland. The rainwater pipes and heads are in lead and were specially designed for the work.

The operations had to be carried out in an exceedingly short time, only six weeks being allowed from the handing over of the site to the finishing of the paintwork.



The arcade and oriel above are distinctive features of the new north front. The roof is covered with local hand-made sand-faced tiles; the rainwater pipes and heads are executed in lead. The door on the right of the photograph is that seen in the facing picture.

New Wing, Farnham Chase, Bucks.] *[By Adshead and Ramsey.*

A photographic detail of the new north front. The columns and dressings are carried out in Portland stone; the same material, with Purbeck, has been used for the square random paving. The recessed, arched doorway, seen within the arcade, leads to the entrance hall.

The ground-floor plan of the new north front. The main object of the alterations was to provide extra bedroom accommodation on the first floor. Therefore, it was decided to provide, on the ground level, a large covered courtway between two new projecting wings. The room to the left of the new front was designed as a gun-room, whilst that on the right was extended to form a study.

ENGLISH PRECEDENT No. 130

THE ORANGERY, KENSINGTON PALACE

"There are different reasons for Objects, whose chief View is in Front, and those whose chief View is sideways," says Wren in his Parentalia. *The ever-entrancing orangery at Kensington Palace was certainly meant to be seen from the front; yet this sideways view shows how it was made to cohere with neighbouring features. The punctuating features of the gate-pier and the short length of wall carry on the springing-levels of the two arches in the façade. As at Hampton Court, the homogeneity of Wren's work with that of his predecessors betrays a gift of pliability and self-effacement that has been equalled by no other English architect.*

—[C. BARMAN]

LETTERS FROM READERS

The Mansard Roof

SIR,—The views on the mansard roof which Mr. E. Maxwell Fry expresses so dogmatically in THE ARCHITECTS' JOURNAL for July 30 are not so readily capable of solution in practice.

In many cases the question of floor space is of such vital consequence to the financial success of the building, that vertical set-backs, especially of the magnitude shown on some of Mr. Fry's diagrams, are quite impossible.

On the top story of "flat" buildings, rooms which are treated internally with vertical walls are provided with bed recesses, cupboards and similar amenities in the sloping roof space. These cupboards, etc., are important items in "flat" buildings. No architect with commercial knowledge of developing office buildings could contemplate the excessive sacrifice of floor space shown in figure two. It may be a matter of minor importance to stress the architectural aspects of buildings, but it is not always possible to treat an elevation with vertical planes entirely, and in many cases the roof slope, coupled with certain vertical portions, is architecturally more attractive than a scheme of pure straight lines. On the other hand, many sloping roofs of modern buildings are quite unnecessary, representing ridiculous sacrifice of floor space, and have been used by their designers merely as an easy means of solving an architectural problem with designs that are hidebound by unsuitable traditional forms.

The condemnation of the sloping roof used indiscriminately is entirely in accordance with the practical view of architectural design. The statement that vertical faces can invariably be substituted for sloping roofs without loss in some cases, and with considerable gain in most cases, must be qualified. I have used both methods with success. T. P. BENNETT

Guildford Cathedral Competition

SIR,—The letter signed "Fane," published in your issue of August 13, raises some interesting questions which are not by any means disposed of by the Archdeacon of Surrey in his reply a week later. The question of site alone is of very considerable importance, and it surely should not be necessary in the first instance—though, of course, very desirable later—to journey to Guildford to see it.

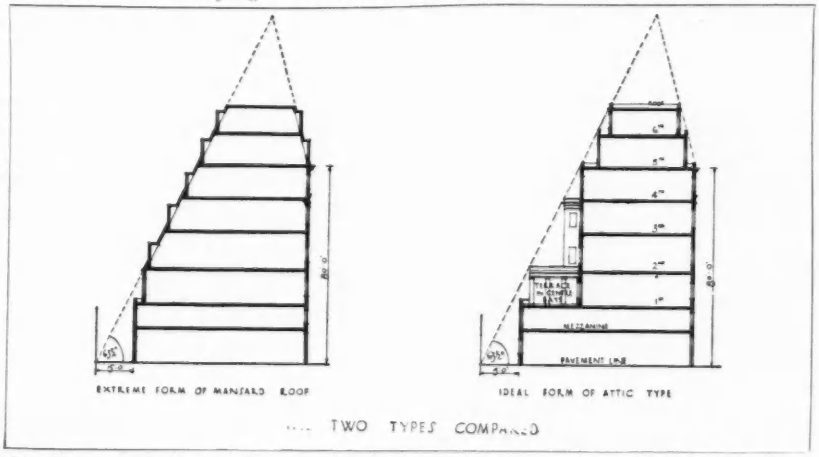
Such information as is available is not only scanty but, as a statement of requirement, positively bewildering.

The committee are desirous of "erecting a cathedral of moderate dimensions," yet the Bishop of Guildford, who will no doubt have some say in this matter, speaking on June 12 last, expressed the hope that the new cathedral would surpass Truro in size. London, he said, is already spilling over into his diocese, and he expected that his diocesan population would increase and multiply during the next thirty-five or forty years to the tune of one million souls; and the cathedral should be large enough to serve their needs.

To return to the question of site, on which point the published conditions are so vague, the Bishop has a hint to give here also; and referred in his speech to the knoll near Guildford known as Stag Hill, from which he said they could "on a clear afternoon" see something like half the diocese. It is a commanding site—a site likely to appeal to architects. But the promoters in their own list of requirements give no hint of it, and the Venerable Archdeacon mentions quite casually that it can "easily be ascertained" by a visit to Guildford.

It is also apparent from the first paragraph of the conditions that the promoters set out to draft these with a view to discouraging anybody but those extremely fortunate (and presumably elderly) gentlemen who have "been engaged in the building of cathedrals and churches" from entering, but set a limit on this display of work achieved, of three sets of drawings. They do not "exclude" photographs.

Later, however, with almost reckless abandon, they are sufficiently incautious as to relent to the extent of permitting architects who have not been thus engaged to submit similar portfolios. It would seem, therefore, that the unfortunates have merely to sit down and design one, two or even three cathedrals *in vacuo*, supplement them with perspectives in lieu of photographs, and enter the lists on or before November 30.



Let us return to the Bishop and his speech (which, in spite of its bewildering inconsistencies, is a set of conditions in itself), and pick up more crumbs.

As to style, for instance. His lordship, though perhaps somewhat bemused, undoubtedly knows what he likes, and offers a grave warning against "foreign" influence, forgetting, in his anxiety to tell us that the cathedral must be designed and built "in the direct line of English tradition," that the best of English Gothic developed under "foreign" influence. And, let it be whispered, French at that.

The Bishop wants no mere copy of a mediæval church, but a great open space, where the pious representatives of a million-souled diocese, after having gazed upon the pulpit, can pause in their exit during the voluntary to contemplate the work of that successful and elderly gentleman who has been able to produce, in the direct line of English tradition, a church interior "without great columns or piers."

Is it too late (cathedrals take a long time a-building) to issue a fresh set of conditions which shall set out exactly all the known requirements and restrictions, and to invite all and sundry who have any opinion of their capabilities to submit ONE scheme in draft and then to select a number for the final; and, above all, to omit the clause "unless there should be good reason to the contrary and under conditions hereafter to be announced"?

P. E. P.

The Mansard Roof: figure two (reprinted from A.J., *July 30, 1930). The left-hand sketch shows the type of building produced by law, and on the right is an attempt to design sanely in spite of the law, drawn by E. Maxwell Fry.* [*See accompanying letter from T. P. Bennett.*]

Sheffield Recants

SIR,—As a Sheffield architect I have read your leading article on the above subject, which appeared in your last

issue, with interest and, may I add, with entire concurrence.

Your view that a public building of this importance should have been offered for public competition is precisely that which was represented by the Sheffield Society of Architects to the City Council over a year ago—it need scarcely be added, without effect.

If what has subsequently happened should help to rouse public opinion, both in Sheffield and elsewhere, to the unreasonable lengths to which the development of official architecture is being pushed, we Sheffield architects will at least have reason to feel that "good has come out of evil," and that the trying conditions under which we have had to do our work in Sheffield during recent years have not been endured in vain.

Whilst we have been practically excluded from all share in an ever-widening field of public building, and this, too, on grounds which you rightly stigmatize as fallacious, our sole protest has been on the ground that what was being done was against the interests of good civic architecture, and I venture to think that a comparison of our city with others, where some encouragement has been given to independent talent and initiative, will prove this to any impartial and duly qualified critic.

Most assuredly architecture cannot flourish in an atmosphere in which all emulation and healthy competition is suppressed.

CHARLES M. HADFIELD

SIR,—Your leading article of August 20 raises in interesting form the question as to whether our local authorities are doing well, and their best for the ratepayers, in employing their officials to design public buildings and schools.

It is the conception and design of a building that ultimately make it worth something, and to spend money on any building that falls short of the best in design is money ill spent. This fundamental fact is often lost sight of.

As long as the best is achieved it matters not if the architect is an official of the authority or an independant man, but, as you point out, the qualifications for which an official is appointed are unlikely to be those of the finest designer.

Public authorities, having lost sight of the value of the finest design, frequently fall into the idea that in employing their official, who was appointed for the routine work of repair and upkeep, they are saving the five per cent. paid to the architect. This is, of course, illusory. After all, an architect provides not only his own services but the services of draughtsmen, clerks, and office accommodation. If the work is done in the public office, it means increase of staff and eventually of accommodation and so forth. Once a public staff is increased it is difficult indeed to reduce it again.

I have lately been to Sweden, and it is a revelation and inspiration to see the fine and distinguished work that is being done there in the building of public buildings, schools and so forth—work that is drawing visitors in thousands to that country, not to look at the old and historic buildings, but to admire the beauty and imagination displayed in the modern work. This is not achieved by reducing the buildings to a level of official architecture, but by giving the work to the best architects to be found in the country. We shall fall far behind our European competitors if we allow our schools to continue in a dull official mould, and it is clear that the municipal buildings of any town should be the finest thing in building (not necessarily the most expensive) that can be achieved. Only then can the citizens have any real pride in their town.

It is not a matter of saving a small sum on an architect's fee, but a matter of a large sum ill spent unless the conception and design are right. The choice as to the architect should be solely governed by the decision as to who can produce the finest work.

OSWALD P. MILNE

Settling-Up Honeywood : xiv

LADY BRASH REALIZES HER IDEAL

BY KARSHISH

(H. B. CRESWELL)

Grigblay, the builder, under the direction of the architect, Spinlove, has dealt with an outbreak of dry rot during the absence of the owner and his wife, Sir Leslie and Lady Brash. The extras account is still in dispute, and the failure of the inside painting is a matter of some seriousness.

SPINLOVE TO GRIGBLAY

Dear Sir, 1/9/26.

I am obliged for your letter covering your foreman's replies to questions. I have, however, to point out that in no case is the fact substantiated that work, stated to have been authorized by me, *was ordered as an extra.* As you are aware, unless work is definitely authorized as an extra *at the time it is done*, the assumption is that there was no understanding that it was to be an extra. I should be glad if Mr. Grigblay would make an appointment here to go into the various points raised with me.

I saw Mr. Tinge two days ago, who calls my attention to the fact that you have charged for re-pointing work damaged by frost; but under the terms of the contract the responsibility for making good damage by frost is *yours.* I overlooked this, or should have objected to the item before. I have told Mr. Tinge that it must be struck out.

Will you ring up tomorrow and let me know whether the work in making good dry rot has been completed as promised.

Yours faithfully,

Spinlove is right on the point of authorization of extras, but, actually, the terms of the contract are more rigid, for they require that, in order to rank as an extra, work must be authorized in writing *as an extra.*

Tinge is right, too, in the matter of damage by frost. Grigblay engaged to "protect from damage by frost," and is therefore responsible for making good damage due to failure to protect.

GRIGBLAY TO SPINLOVE

Dear Sir, 3/9/26.

Mr. Grigblay will call to settle account on the 7th at 2 o'clock, as arranged over phone.

We will ask you to note that we have on many occasions carried out work, charged as extra in Statement, and accepted by you, on your verbal order and have always accepted your word and put in hand as desired without delaying for written order, or where should we be with all the variations there have been ever since the work was begun, waiting for written orders and not getting same. There are not above half a dozen written orders from first to last, and the only orders we have had have been verbal, which we have acted on at your request and to your approval. Now that this does not appear to please you, we shall be glad to have written authority for extra making good dry rot as per your instructions and oblige. The men cleared up yesterday.

If you will look at the Interim Statement we sent you, you will find we have charged only difference in value between plain struck joint and special pointing to your instructions and approval.

Yours faithfully,

Grigblay, in his own way, presents his view of the authorization of extras with clearness—if for "verbal" we read oral—*and the position he takes is just. The contract stipulation that all work that is to rank as extra shall be authorized as an extra in writing when the work is done, is a good one; but like many excellent rules*

it can, in practice, not be always exactly followed; and in cases such as Honeywood —which are the rule rather than the exception—where there are a large number of small variations, its strict enforcement would entail delays and consequent losses which no builder could be expected to tolerate. We know that Spinlove was lax in enforcing the rule and, in the circumstances, it is hard to see how it could have been enforced; but as he has accepted *as extras a number of items in the account which were not formally authorized, he cannot* object *to other claims on the grounds that they were not formally authorized, and accordingly each case will have to be settled by wranglings to decide what the facts giving rise to the work actually were. In that wrangle Grigblay will have the advantage of holding exact records which he can use as may best serve his ends; while Spinlove will have little but his memory to oppose to them.*

SPINLOVE TO LADY BRASH

Dear Lady Brash, 6/9/26.

As I understand you are now home again, I think I ought to write and just let you know about the new "converted attic" which Phyllis showed me—in fact, we all had tea up there. It is delightful, I know; so snug and cottagy with the low sloped ceiling and dingy light and the warming pans and the jolly little boxed-out chimney corner—all most ingenious, I have never seen anything at all like it before; but perhaps you do not know that it is not a *habitable room* as defined by the Regulations of the Local Government Board and required by the bylaws. The roof space arrangement, you see, was only allowed by the District Council on my undertaking that it was to be used as a boxroom or store, *only*, so that you are violating the local building regulations—breaking the law, in fact—by using the place as a habitable room. If I had not promised that the place would *not* be used as a habitable room, the District Council would have refused to allow the house to be built. You see, in order to comply with the minimum requirements of the Model Bylaws, the ceiling would have to be much higher, the roof-slopes much less, the window much larger and the walls, all the way down to the ground, thicker. Of course, if it were an old house built before the bylaws were adopted, you could do as you liked; but, unfortunately, Honeywood is a new house, and if the District Council gets to hear of what has been done I am afraid there will be serious trouble. I feel I ought to write and let you know this, so that you may be prepared.

I hope you enjoyed your visits, but I'm afraid you had wretched weather during the last week.

Yours sincerely,

As Spinlove is evidently afraid of Lady Brash, and is tremulous with anxiety lest he should be misunderstood, it is clear that he only wrote in the belief that it was his duty to give the warning. What poor Lady Brash will make of the Local Government Board, the Local Building Regulations, the Requirements of the Model Bylaws, the thunder-cloud imminence of the District Council and the awful admonition "Prepare for Trouble," it is hard to imagine; but the whole thing is a mare's nest—a figment of Spinlove's imperfect knowledge. If it appears that spaces allocated in the plans to boxrooms, stores, and so forth, are usable as habitable rooms, the Local Authority can require them to comply with the dimensions, lighting and ventilation ordained for habitable rooms; but it cannot prevent owners from screwing up and shuttering windows, or blocking the vent flues. The plans of Honeywood were duly approved, and the house completed and certified as conforming to the building regulations; and if Lady Brash chooses to entertain her friends in the boxroom, or dine in the bath, or sleep in the cupboard under the stairs, it is no business of Spinlove, nor of the District Council, nor of anyone—except possibly of a commissioner in lunacy.

If people are found living in conditions inimical to public health and sanitation, the Health Officer can intervene; but that is another matter.

LADY BRASH TO SPINLOVE

Dear Mr. Spinlove, 7/9/26.

I knew you would admire my ideal home converted attic. I meant it to be a great surprise but Phyllis has told you so now it cannot be. You cannot think what a comfort it is to get away from the servants! I just slip upstairs and know nothing of anything that is going on. Leslie prefers the lounge or the den so we do not sit there in the evenings, I think it is because of all the stairs!! Would it be *very* expensive to put in a lift for the coals as well because there will have to be coals in the winter although it is a delightfully *warm* room, in fact in hot weather it is *too* warm and I cannot sit there so it will be delightfully cosy in the winter. Can anything be done about the noise the water makes; and is it quite *safe* when it whistles all the time and roars and rushes as though it was going to run over the side, particularly when Leslie comes home and is having his bath; and then noises like a man hammering to get in and people choking and dreadful sighs and groans and sometimes cries for help, so *alarming* if anyone was able to get up there without being noticed, but I am sure you would not allow such a thing for one moment.

Your letter is so very clever I could not follow it, but I should certainly object most strongly if the District Counsel tried to interfere; he is only a greengrocer with a *quite* small shop and a nursery garden and he would not *dare* go against Leslie; such a *common* little man too, though always most civil and obliging, but if Mr. Bunseer says *one single word* I shall go to the Stores *instantly*. They send out here twice a week as he knows *perfectly well*, and the idea of this insignificant little man interfering in *my house* is a most unheard of state of things and I would never for one moment allow it. Really I do not know what things are coming to nowadays.

What delightful weather we are having again.

Yours very sincerely,

P.S.—Can you get me some old oak beams for it do you think!

Lady Brash does not appear to have been "psychoed" yet; but she knows well how to stand at bay and, ridiculous as is her view of the matter, she is nearer the truth than Spinlove. Mr. Bunseer is presumably the Chairman of the District Council, or possibly a notorious member of it; at any rate local authority is, for some reason, identified with him by the lady.

The boxroom is evidently cheek by jowl with the tankroom, and the noises complained of are merely manifestations of the healthy, joyous life of cisterns and of ball cocks, and are out of knowledge to all who do not seek community with them. Lady Brash's realization of the Ideal Home presents a charming domestic interior: the fond wife sitting secluded and remote, and lulled by the murmuring song of the cisterns, suddenly warned, by their glad outburst into full triumphant symphony, that her Leslie has returned to her and is having his bath.

Flush tanks are particularly a source of water-noises. The full-toned, reverberating flush tank or "water waste preventer," which is offered in great variety and at most reasonable prices by a large number of manufacturers, appears, however, to be popular; and those in search of a powerful instrument will like to know of Gladdener's "Orchestral" in D flat major with domed resonator and cadenza in harmonics as finale.

Lady Brash is, of course, quite astray in supposing that warmth is inherent in her snuggery. The cause of the room being hot in summer is that its outer fabric is ineffective as an insulator. This will also make it cold in winter, because the wide expanse of roof which allows outside warmth to pass readily in, will equally readily allow interior warmth to pass out. We know that Spinlove hung his tiles to battens hung direct to the rafters, without any intervening boarding and felt, and, although the place is plastered, Lady Brash's snuggery is unlikely to bring perfect content to anyone not previously acclimatized to Arctic exploration and the stoking of battleships in the Persian Gulf.

Experienced architects will recognize in this episode a trait of human nature which leads

certain clients, who are discerning in requiring the nicest efficiency in the work they do for them, to rejoice in makeshifts and discomforts of their own devising. We may be sure that Lady Brash will continue to broil and shiver in her posh cubby-hole up among the cisterns to the limits of her endurance, and, when the stimulant of novelty no longer supports her resolution, will find some other reason than the true one for her defection.

SPINLOVE TO LADY BRASH

Dear Lady Brash, 9/9/26.

Of course there is no harm unless the Authorities find out about the use being made of the boxroom, but I thought you would like to know how things were.

The noises you describe are quite usual. There is no danger of any kind, and you will be glad to hear there is no access to the tankroom except by the door, so that if you lock it and keep the key yourself you can be certain no one is in there.

I expect you will find you want quite a good fire in the winter. You see, there will not be much sun to warm the place then, will there?

A lift would no doubt be a great convenience, as you say; but I am afraid it could only be entered from the kitchen or the dining-room, and that would not be very convenient, would it? Then, of course, it would mean taking square bits out of the dining-room and the bedrooms on the first and second floors; have you thought of that, I wonder?

Yes, the weather has been delightful, but I am sorry to see in today's paper that a change is coming.

Yours sincerely,

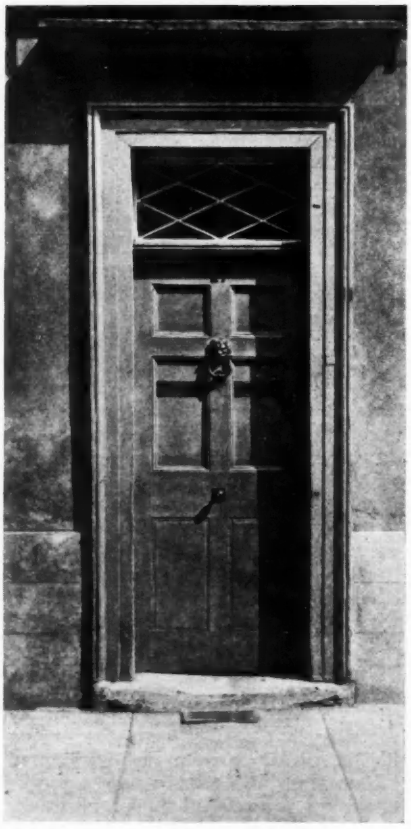
P.S.—If I come across any old oak beams for sale that will fit I will let you know, but I fear that is not very likely.

If Spinlove had any sense of humour he could not write such a letter as this; but we know he has none, and perhaps he is, on this occasion, lucky, for his nervous solicitude is the result of experience that has taught him never to appear to oppose the lady's wishes, and that any indication of decisive contrary opinion will have the effect of opposition. Spinlove writes as though the poor woman were only half-witted, but in doing so he seems—if I may obtrude the opinion—on the safe side.

LADY BRASH TO SPINLOVE

Dear Mr. Spinlove, 10/9/26.

I was so much relieved to get your nice letter as Mr. Bunseer *never* comes to the house and I have now given strict orders that *no one* is allowed further than the passage and keep the cisterns locked up although I am sure he would never *dream* of doing such a thing, and I am bound to say that he is always *fresh* though the Stores is *not* but of course we rely on the garden for most of them.



They all tell me there is dry rot Mr. Grigsby has been seeing about, but I always wanted a dry one so I suppose now it is finished it cannot be helped if it is *too* dry, but that is better than a *damp* one for my dear mother was a martyr and a cousin as well and I take after *both*.

We are giving a small dance on the 27th as the 26th is Sunday and hope to have the pleasure of seeing you and staying the night. We dine at seven.

How quickly the evenings are drawing in though still quite light in the morning!!

Yours sincerely,

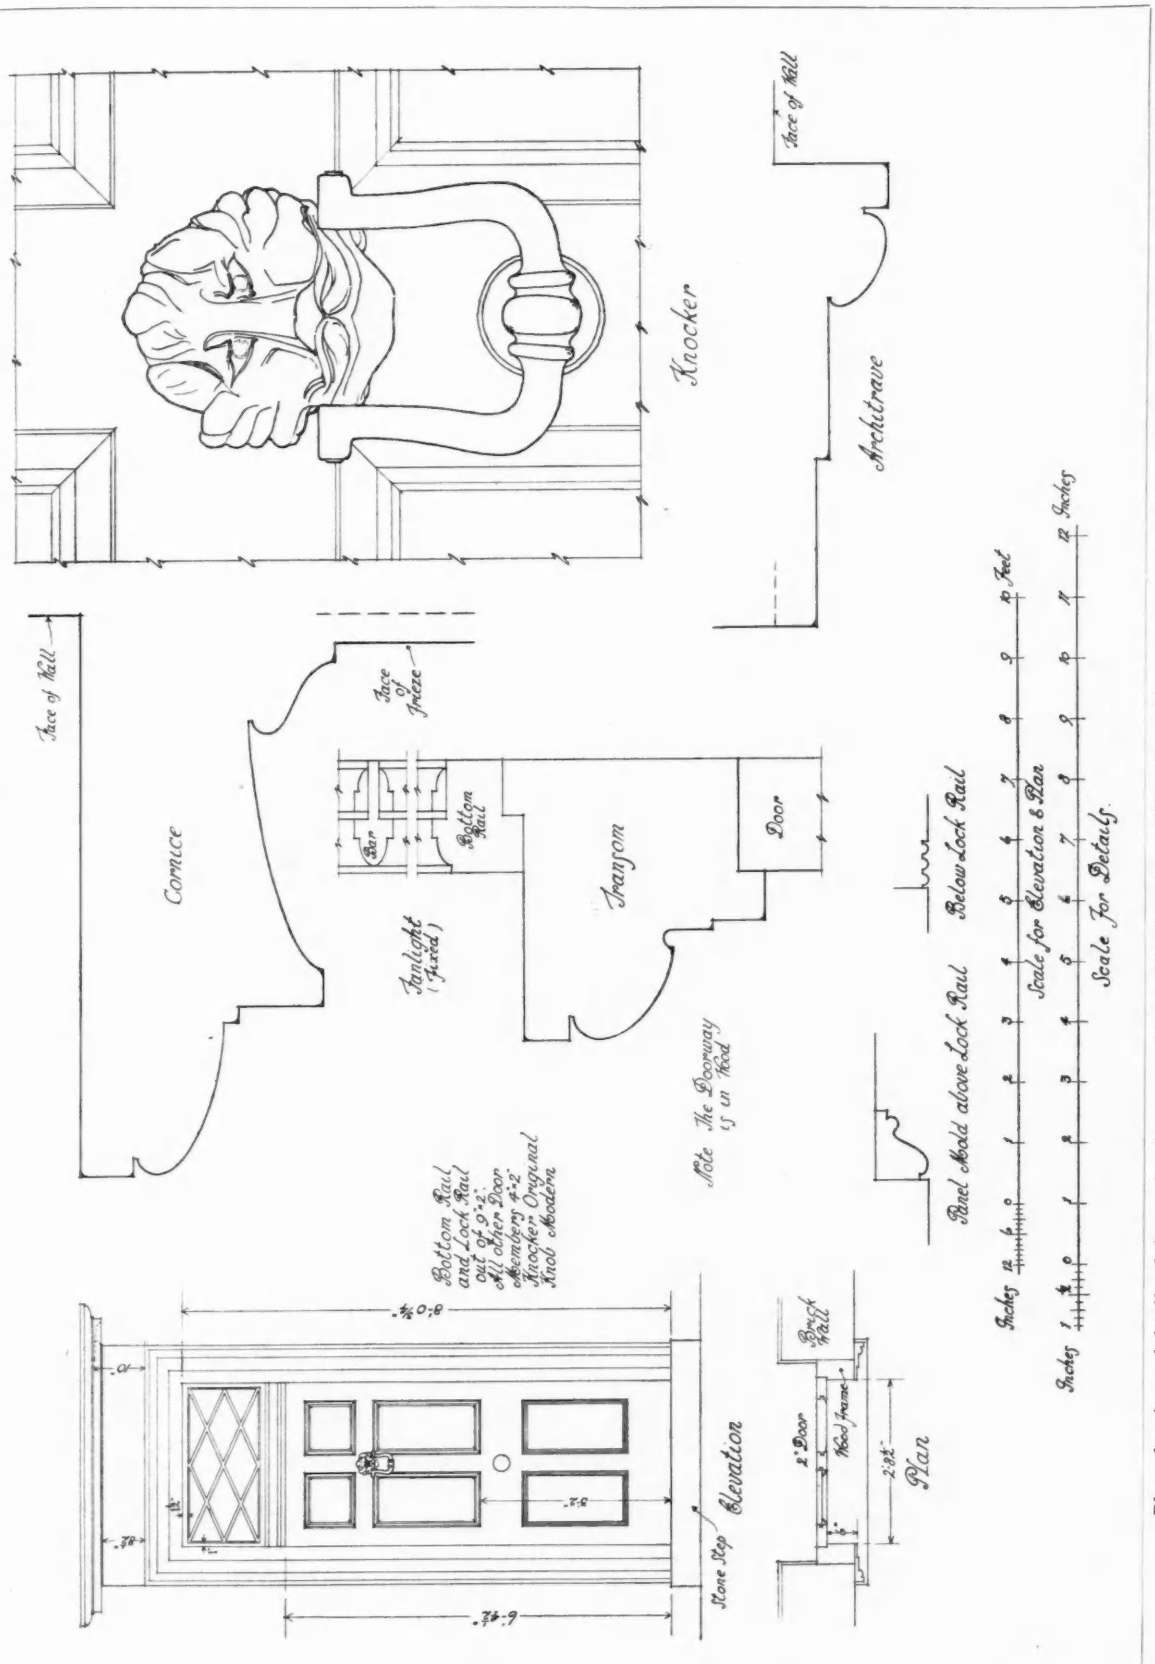
We are not, I think, to understand that the lady has any fear of Mr. Bunseer hiding in the tankroom. What she means to say is that as Bunseer never comes to the house he can learn nothing of the converted boxroom; that to make things quite safe she has forbidden any tradesman to come into the house at all, and that she has ordered the tankroom to be kept locked, but not—*she is careful to let Spinlove understand—*

The doorway of No. 27 Marsham Street, Westminster, of which measured drawings are reproduced on the facing page, belongs to a small group of houses built in the late eighteenth century, and is believed to be contemporary. The design is notable for the Grecian character of the panels.

from any fear of Bunseer, whose vegetables are always fresh although those supplied by the Stores are not. Arguing by analogy from other instances afforded by her letters, I solve the ellipsis of the second paragraph by substituting "house" for "one."

SPINLOVE TO GRIGBLAY

Dear Sir, 10/9/26.



Will you send cheque for £10 to Borter as extra on bird-bath. He came to see me some time ago and called again yesterday with correspondence with the quarry company. It seems that he sent them my sketch and depended on their measures in making out his tender, but they carelessly took the scale to be 1 in. instead of ½ in., and gave him a wrong figure so that he is out of pocket. He is in quite a small way of business, working himself with the help of two or three journeymen, and I have decided he ought to be allowed the cost of the stone he used.

I am expecting to receive Mr. Grigblay's promised proposal for settlement of items still in dispute.

Yours faithfully,

Spinlove has no right to do this. It is to be hoped that neither Brash nor anyone else would wish to profit by the misfortunes of an artist who has made a beautiful thing for him with his own hands, or to take advantage of a technicality which enables him to force an individual craftsman to bear the cost of the work instead of paying for it himself; but it is not for the architect to usurp his employer's discretion and, on an impulse of vicarious generosity, make a present with his client's money, as Spinlove here does. His duty, as Brash's architect (or agent), was to give Borter exact particulars; examine the tender so as to assure himself that Borter understood what was wanted and was not opening his mouth too widely; then set up an exact contract, and see that it was exactly completed. All Spinlove was entitled to do when Borter made his appeal, was to master the facts and lay them before Brash with any representations he thought fit to make. If Brash then elected to pay, payment would more appropriately be made by Brash's cheque drawn in favour of Borter and transmitted by Spinlove, than by making it an extra under the contract; for it is not an extra, but a free gift by Brash, and, as a gift was all Borter was entitled to ask for, it is right he should understand that what he has received is a gift and nothing else. I have assumed Borter's to be a genuine case; but though we may sympathize with him we need not condone his inability to take care of himself. After all, business is business. Borter and his kind bring discredit on a calling which, above all others, deserves well of architects, and, if Spinlove feels as I do, he will employ another craftsman next time he wants a bird-bath or a sun-dial.

Plan, elevation and details of the wooden doorway at No. 27 Marsham Street, Westminster (date : circa 1770). Measured and drawn by R. A. F. Riding.

THE IDEAL MODERN MUSEUM

To House Works of Art and Antiquity

BY AUGUSTE PERRET

IF the museums of antiquity were places of delight, ours are too often places of storage and of study. The scheme of the modern museum, born towards the close of the eighteenth century, when we find it in the competition for the Prix de Rome, was adopted by the Revolution, which wished to make it an instrument of instruction and of education.

This scheme was taken up at the same time by all the nations, who, more than France, were fain to construct buildings specially destined to the uses of museums, whilst up till now, with a few exceptions, such as those at Grenoble, Marseilles, Nantes, Valenciennes, Lille and Algiers, we were content with existing buildings for the installation of our great art collections.

The museums thus created are not ideal: their lighting is often defective, the decorations at odds with the works exhibited; but shall we rediscover, in the modern museum, the atmosphere, the charm, the prestige, of our old palaces?

In our days the abundance of works, of fragments, and the necessity for classifying these numerous pieces, has led to the adoption of chronological display. It is this that has made our museums places of study rather than of delight; their dimensions, even when they are dedicated to no more than a single branch of art, are enormous, and merely to traverse them imposes on the visitor much fatigue and consequent boredom.

Can we not reconcile the two formulæ, ancient and modern, and conceive a building that shall be at the same time a place of pleasure and enjoyment, and a place of study? That is what we have attempted to visualize.

Our museum dedicated to the fine arts would be composed essentially of a central space (C)—which would be the place of pleasure and enjoyment, where the visitor, in a short walk, could see the most famous works — and of numerous galleries abutting on this centre, galleries sacred to study. They would display works classified in chronological order, and at their junctions with the centre one would place the works most representative of their contents. This would form, for the visitor, a centre of selection of the galleries and an invitation to enter them.

What we have called the centre might be a vast rectangular court, surrounded by a double colonnade—the first open, the second closed; it is off the second that the junction halls with the galleries of study would be found.

The junction halls (J) would assume different forms and sizes. The galleries of classification and study need not be confined by two rectilinear walls, but could take the form of a series of compartments, varying in their areas and their height, capable of alteration in case of need, to admit separate collections, and to facilitate classification. Such an arrangement would afford a kind of punctuation which would assist both the curator and the visitor.

It would be unnecessary that these galleries should have many public exits; to leave the gallery one would return to the junction hall, and from there pass to another junction hall, where one would find the entrance to another gallery.

The museum need not be a labyrinth; the visitor need not be haunted by the idea that he is missing halls some of which he has not seen.

At the inner end of the central court and on its axis one would find a vast rotunda (T) from which would radiate short galleries abutting on halls, square or circular in plan, re-connected among themselves by arcades concentric with the rotunda itself. This suite, which would be like the head or heart of the museum, would contain the unique, the rarest, pieces.

Besides the necessary administrative offices, the museum would embrace workshops for examination, repair, measurement, photographing, radiographing, and storerooms, which would be placed as far as possible at the ends of the galleries of study, and by consequence at the opposite ends to the junctions with the centre. One of the workshops should be large enough to contain a table on which could be laid out the largest fabrics exhibited.

This museum, whose area should be capable of containing all that is enclosed by the Louvre, would have, in consequence, a great extent. It would not be possible to find a site for it at the centre of capitals like Paris, London, or Berlin; also we visualize it as placed rather in one of those wide and spacious thoroughfares that every great city possesses.

If it is a question of Paris, we should choose the Bois de Boulogne, of which the extent would accommodate, besides the principal buildings, gardens in which would be erected satellite buildings for certain collections, as well as architectural monuments, sacrificed to the needs of present-day life and to be reconstructed in these gardens. To this collection we should add vast galleries to house the annual salons (nursery-grounds of our museums). One would obtain thus a veritable citadel of art—a place of beauty and of study.

The site chosen, and the programme determined, what must be the specific qualities of the museum building which is to be at once a place of exhibition and of preservation?

Good exhibition demands good lighting.

Good preservation demands constant temperature and humidity, for it is differences of temperature that produce expansion and contraction, the principal cause of the ruin of human works.

A museum, then, must be a building well lit and well protected against external variations of temperature and moisture of the air.

It must be, besides, of a solidity amply sufficient to preserve and hand on to future generations its treasures.

To what *material* should we turn to construct this indestructible building?

We think it is not rash to affirm that the most durable material is concrete, which continues to harden, while the hardest stones—granite, for example—lose their nature in time. There are in Egypt cements which date back to before 3000 B.C. The Labyrinth was thus constructed, and the Pyramid of Ninus rested on a vault of concrete, pierced with channels lined with pottery to drain away the gauging water.

One can see in Roman ruins concrete in great masses which, originally, could only have played a feeble part in their composition, but today defy the pick.

Does one not see, in these same Roman ruins, massive masonry, in which the mortar joints project far beyond the brickwork, this last having been corroded by the weather, while the mortar, on the contrary, having grown harder, has not diminished?

From the Middle Ages there remain, in the city of Carcassonne, lintols of concrete which are still intact while many of those of stone are broken.

It is, then, to concrete and to reinforced concrete that we must look to form the framework of our museum.

It would be walled in reinforced concrete; that is to say, it would be made of columns, widely spaced,

supporting beams and slabbing; thus would be formed the whole of this system that we call the framework.

The composition of this framework is very important, for it is to the structure what the skeleton is to the animal. Just as the animal's skeleton, rhythmical, balanced, symmetrical, contains and supports the most varied organs, most diversely placed, so the framework of our structure must be composed, rhythmical, balanced and symmetrical, and it must be able to contain the most diverse organs demanded by the programme.

Here we touch the very foundation of architecture. If the bones of the building are not fit to remain in evidence, the architect has ill-fulfilled his mission.

The material used for clothing and filling in must complement the framework, but in order not to conceal it, a beam must show itself where there is a beam, a column where there is a column.

Such dispositions will avoid disagreeable surprises on the day when from expansion, contraction, and settling, the bearing members affirm their presence. Architecture makes beautiful ruins. We must not take liberties with the laws of construction if we are not to take liberties with the conditions of the programme. A study of the conditions of the programme and of construction will nourish the imagination of the architect just as the restrictions of verse inspire the poet.

Since the conditions of the programme of a museum include many features common to other buildings, we shall not enumerate them all: that would be veritably to write a specification. We will only concern ourselves with those that are entirely specialized for this style of building.

It is the quality of the lighting which will make a good museum.

Must all parts of the building be lit in the same way? We do not think so.

Paintings, since they often present reflecting surfaces, must be lit from above.

Sculpture will be better lit by a light falling slantwise from above.

Researches made on the occasion of the installation of the La Tour pastels at the Louvre have led to the following observations:

1: Every illuminated object becomes itself a source of light, and its image is reflected proportionately to the relative illumination of that object and to the co-efficient of the reflecting surface.

2: Dark colours absorb light, while light colours and polished surfaces reflect it.

The first observation means that if you walk about in a light dress before a picture, itself dark and brilliant, you will create reflections.

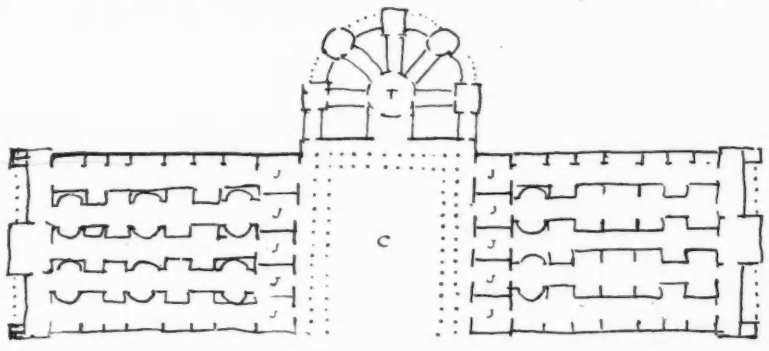
From these two rules it may be concluded that to avoid seeing upon pictures—above all, those that are glazed—reflected images of spectators and surrounding objects, these spectators and objects must be in a reflected light of small intensity in marked contrast with the direct light falling on the picture.

It should be added that this direct light should strike the reflecting surface, which is the picture, in such a manner that reflected rays do not reach the spectator's eye, but rather his feet.

Applying these rules to the La Tour Exhibition, the windows were furnished with prismatic glass, to throw the light direct onto the walls from below. Further, these windows were obscured down to the height of a tall man, the floors blackened and the walls painted in dark tones, as neutral as possible. Finally, all polished or reflecting surfaces were suppressed. These measures gave excellent results. The La Tours, all under glass, appeared in all their lustre; but the whole remained cold. It was more like a laboratory than an exhibition salon.

All the precautions taken for the La Tour Exhibition are rendered necessary by lateral lighting—at least from windows coming down to the height of a man; they become needless if the light falls from the ceiling.

It is beyond doubt that the best lighting for a collection of paintings is that coming from above—provided that it does not fall from so great a height as to lose its intensity, for the intensity diminishes as the square of the distance. That is to say that if one doubles the height of a room, its light will be four times less bright.



It is necessary therefore to proportion the height of the rooms to the dimensions of the works exhibited; that is to say, we must have rooms of varying heights all lit from the top if possible, or by lateral windows placed near to the ceiling.

The defect of toplights is the difficulty of cleaning. One must therefore provide easy access, by numerous gangways, with trap doors above the glazed ceilings. The skylights must have steep slopes of 60°. This disposition, besides giving the maximum of light, retains little dust that rain will not wash away.

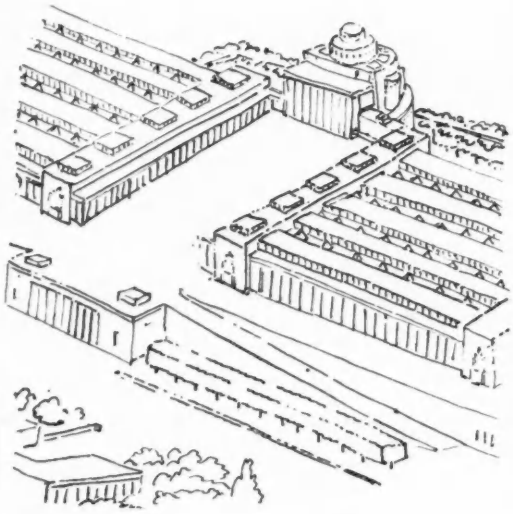
For frequent cleaning, terraced roofs recommend themselves on account of their ease of access.

The lateral windows as well as the roof-lights must be fitted with blinds for moderating sunlight, and with swing or sliding panels controlled mechanically, electrically, or by some other ready means, for securing complete darkness as long as possible.

Darkness is one of the essential conditions for preserving all substances.

"Our museum would be composed essentially of a central space (C), surrounded by a double colonnade—the first open, the second closed; it is off the second that the junction halls (J) with the galleries of study would be found. . . . At the inner end, one would find a vast rotunda (T), from which would radiate short galleries . . . the head or heart of the museum."

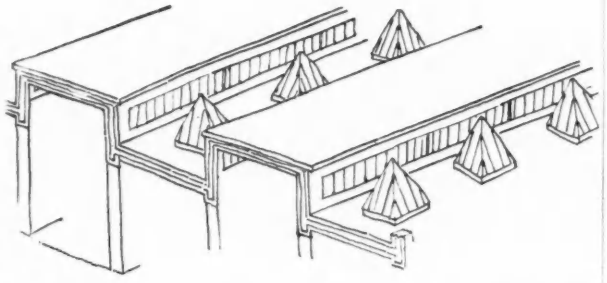
It is the darkness and the dryness of the air of the Egyptian tombs which have preserved to us in all their freshness the objects and paintings they contained.



We must, then, be able completely to darken our galleries and use them as little as possible.

The question has often been raised of illuminating museums in the evening, and certain towns—Lyons, for instance—have done this.

Besides being far from having at our disposal perfect artificial lighting, we see many picture dealers content to utilize it for dark corners.



If a museum is to be inspected at night we must see to it that the artificial light is sensibly from the same direction as the natural light. To obtain this result we shall place batteries of electric floodlights all round the glazed ceilings and below the lateral windows.

The light given by these floodlights could be entirely reflected—this would

" It is to concrete and reinforced concrete that we must look to form the framework. . . . The composition of this framework is very important. . . . If the bones of the building are not fit to remain in evidence, the architect has ill-fulfilled his mission. . . . For frequent cleaning terraced roofs recommend themselves. . . . The skylights must have steep slopes of 60°. This disposition, besides giving the maximum of light, retains little dust that rain will not wash away."

" Our walls must be formed of at least five layers, separated by voids. . . . The slabs of the terraced roofing must have the same number. . . . The glazed ceilings and lateral bays must be fitted with double glazing."

be the least objectionable method, but by far the most costly—otherwise one must be content with semi-direct methods; that is to say, light reflected and diffused at the same time—reflected by surfaces of suitable angle; diffused by frosted or special glass placed in front of the lamps.

The variety of electric light which least affects colour is that obtained by placing daylight lamps and high-voltage lamps alternately. The daylight lamp is bluish, the high-voltage lamp reddish. The light so produced is unfortunately far enough from sunlight—it is, however, what has up to the present given the best results.

We have said above that, together with light, constant temperature and humidity are necessary for the preservation of the treasures in our museums.

It is, indeed, as we have already said, by differences of temperature, giving rise to successive expansions and contractions, that in the long run all human works perish. It is the cause of the cracking of paintings, faience, enamels, etc.

The dryness of the air is equally a condition of the preservation of matter : we repeat that, if it is the darkness of the Egyptian tombs that has preserved the freshness of their pictures, that preservation is equally due to the equable temperature and dryness of the air obtaining in them.

Brought back to the light and air of our climates, how will the treasures from the Tombs of the Kings endure ? We have had one experience that is not reassuring. Descending into one of these tombs, we collected a fragment of a coat of paint of a beautiful red colour. After having wrapped it in paper, we put it in our pocket. On returning to the hotel, we wished to examine this fragment, and to our great surprise we discovered that this painting, which in the tomb had been preserved intact more than 4,000 years, had not resisted a sojourn of an hour or two in our pocket, and had crumbled to dust.

The temperature of the museum must therefore be maintained constant, and its air dry. Constant temperature we should obtain from the constitution of the walls and the roofs of our building. Our walls, to insulate in the measure needed, must be formed of at least five layers, separated by four voids of four centimetres; these voids to be entirely enclosed, so that the air they contain does not set itself in motion.

It is recognized that walls so constructed are better insulators than the thickest masonry. The five layers can be constructed of the most ordinary materials—bricks, tiles, sand or breeze slabs. They must be protected from the ground by the introduction of dampcourses of asphalt or layers of concrete and of treated cement.

The slabs of the terraced roofing must have the same number of layers and voids as the walls. The glazed ceilings and lateral bays must be fitted with double glazing, separated by a damping space of four centimetres.

A building thus constructed will vary little in temperature, and perfect uniformity can be secured by slight heating in winter time.

Temperature, like the condition of humidity of the air, can be maintained constant by mechanical means. Air dried or moistened, heated and filtered, then pumped in through ducts; that is the latest and most popular system.

But for these artificial methods we prefer to substitute natural means which, without human intervention, will secure the perpetuation of the gathered treasures; a system of ventilators, judiciously placed and orientated, should suffice.

Visiting a museum is always fatiguing, and this fatigue arises mainly from the nature of the flooring, which is usually of waxed parquet.

In our opinion the preference should be given to parquetry covered in the gangways with paths of carpet, linoleum or india-rubber.

A question next in importance after lighting is that of the nature of the partitions on which paintings will be hung.

Their values will be best realized when they are affixed upon surfaces the nature of which is not met with in their composition—such as stone, wood and fabrics.

Should the museum be decorated ? We do not think so. The aspect of the galleries should not vie with the works exhibited.

The museum should present itself as a casket strongly moulded by the framework of the building, of which the subdivisions should serve to separate the works, rendering them amenable to examination and study.

The central space or place of recreation and pleasure, in which the pictures and sculpture will not be chronologically arranged, could assume for its construction the more expensive building materials, fit frame for the treasures exhibited, but without departing from the maxim of Fénelon in his address of welcome to the Académie Française : " No single part destined solely for ornamentation should be admitted in a building, but, seeing always its fine proportions, one should turn into ornament all the parts necessary to support the building."

QUESTIONS THAT ARISE

Household Pests

P. E. P. writes: "*In a house I am proposing to alter for my own use, I have discovered a considerable number of bugs and black beetles. Can you please tell me (a) if there is any method of getting rid of them beyond the usual fumigation, which, in this case, the Borough Council will undertake; and (b) is there any likelihood of a reappearance of these pests after treatment?*"

The efficient control of black beetles can only be accomplished by exercising the most scrupulous cleanliness in situations where they are likely to occur, and following systematic hygiene in regard to all stores that may attract them. Their usual hiding-places are behind stoves, fixtures, skirting-boards, and detached wall-paper. In a place where they have been long established, the only really thorough first measure is fumigation with a toxic gas; when the trouble is behind stoves, a very useful eliminator is to spray carbon tetrachloride. This must, however, be most carefully used and not inhaled.

Afterwards the making good of all decaying wall-surfaces, boarding, and floorage must be undertaken. In the case of ordinary dwellings where black beetles are found persistently to congregate behind the wall-paper, the best plan is to remove the wall-paper altogether, and use coloured distemper until the pest has vanished. Wooden floors and skirtings which afford retreats can be made untenable by the simple process of sprinkling and working into the crevices a mixture of equal parts castor sugar and borax, or a powder composed of sodium fluoride 10 parts, ground rice 8 parts, and calcium phosphate 2 parts.

Regarding bugs, rather sweeping statements are sometimes made that the bed-bug is only found in the poorest and most uncleanly houses; but this is not entirely the case, because the insect is not a feeder on dirt. The additional prevalence of these blood-sucking parasites in an unswept house is as much due to immunity from disturbance as anything else, for if they cannot find sufficiently good "fare" in such places they will pass out along the waterpipes or such other means of communication, and try their fortune elsewhere.

To prevent these insects from hiding in bedsteads, the framework, particularly the movable joints, should be brushed over with turpentine, the odour of which will warn them off effectively; but, in an infested room where they have been established for some time, a sulphur candle or other means of fumigation must be resorted to, to clear out the pests from inaccessible places. This treatment should be repeated after a fortnight, in order to destroy any young which may have hatched from eggs in the meantime, as the eggs when first laid are coated with a varnish film by way of protection, and the fumes would not penetrate this.

When bugs are in the floors, a useful sweeping compound is made of sawdust thoroughly moistened with a mixture of crude carbolic and paraffin in equal parts.

[The above remarks have been extracted from Bulletin No. 5 of the College of Pestology.]

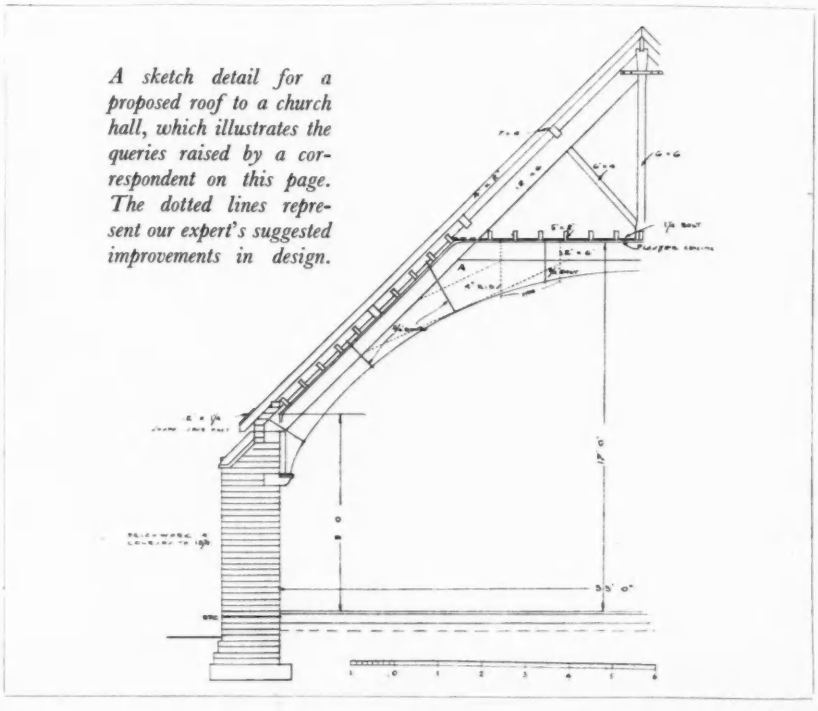
Roof to Church Hall

S. K. H. writes: "*I enclose a sketch detail for a proposed roof to a church hall, and should be glad of your expert's opinion on the following points: (1) Is there any likelihood of the feet of the main rafters spreading? (2) Is it necessary to strengthen the joint at 'A' in any way, and if so, how? (3) Is the tie rod above the tie beam necessary? The trusses are at 10 ft. centres, to be of Columbian pine, walls of building 14 ins. thick, with 18-in. by 18-in. piers to trusses. It is particularly desired that no tie rods show under the plaster ceiling.*"

The roof truss for a church hall is quite a strong construction as shown, and there should be no danger of the feet spreading. While the tie rod above the tie beam is not strictly necessary, it is desirable, in view of the improbability that thoroughly dry timber can be obtained.

The opening of the joint at *A*, through shrinkage, is corrected by the tie bolt. In building up the 4-in. rib it should be constructed with the maximum length across the joint *A*, as marked on the tracing, and instead of the top $\frac{3}{4}$" bolt being in the position shown, it is desirable to put in two in the place of one.

Otherwise the construction can be considered very sound. A. H. H.



Electric Light Main

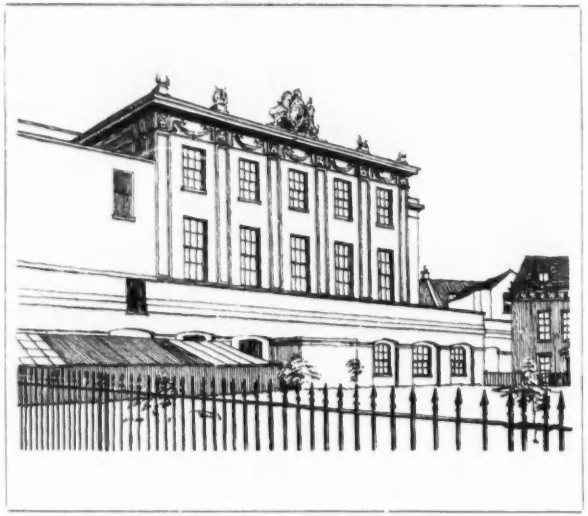
S. C. writes: "*A builder has included an extra of five pounds in his account for 'charges of electric light company for connections to main.' In his contract he was asked to 'connect to the main of the electric light company, and pay all fees, if any.' He claims this extra because he says the position of the house has been altered on the site, but with the foregoing clause in the specification I do not feel inclined to allow an extra.*"

Most electric supply companies state that only a certain number of feet between the main and the meter will be laid free and the additional length required to make a connection is charged at so much a foot.

If the altered position of the house has increased the length of the cable from that shown on the contract drawings, the builder is entitled to an extra.

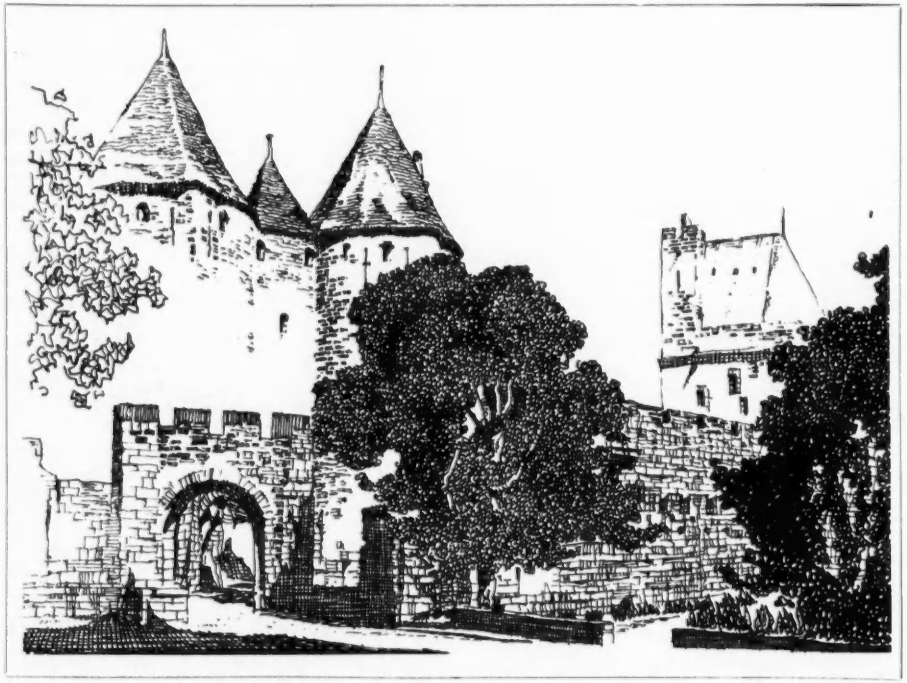
Your correspondent, however, before paying or authorizing payment, should see the receipt from the electric company, and check the length charged for against his claim. D. E. W.

A sketch detail for a proposed roof to a church hall, which illustrates the queries raised by a correspondent on this page. The dotted lines represent our expert's suggested improvements in design.



THE SKETCH CLUB

TENTH SESSION



HEREWITH are exhibited more of the drawings submitted in the first of the Holiday Sketches Competitions, organized by THE ARCHITECTS' JOURNAL *as an outcome of the Sketch Club—a final selection this time.*

The second Competition—that for records of holidays taken in July and August—has now closed, and once more the task of adjudication is in hand. The award will be announced in the issue for September 10, a fortnight hence, and that being a Sketch Club issue, it is hoped to show the winning subjects at the same time.

Meanwhile, there is yet a third, and last, chance for intending competitors; September 15 is the final sending-in day. Rules are printed on page xxxviii, together with motto labels the use of which is obligatory.

LITERATURE

MORE BUILDING THAN DOLES

NORWICH Priory belonged to the Benedictine Order, and the monks numbered from sixty to thirty. About twelve of these were appointed to staff duties, such as the Master of the Cellar, who was really storekeeper; the Sacrist, who was in charge of the fabric and services of the cathedral; the Cellarer, who was responsible for the cooking, and the Chamberlain, whose duty it was to see to the clothing.

The total revenue of the Priory was about £2,500, equal to £50,000, present day. The greater part came as tithes from the churches and manors of the Priory, and these churches and manors were divided amongst the officers as sources of income which enabled them to meet their expenditure. Each officer kept an account of expenses and outgoings, and it is these accounts, dating from 1270, which have come down to us as "rolls," stored in the Muniment Room at Norwich Cathedral, and are now tabulated and brought to our notice in Dr. Saunders' book.

Amongst the functionaries of the Priory there was none specially set aside as architect or clerk of works, but each of them must have had some knowledge of building, for each had parts of the priory and (or) churches and manor buildings in his charge. It is true that at the church was the priest, and at the Grange the bailiff, but there was constant intercourse between the Priory staff and these outlying dependencies.

The Master of the Cellar bought the building materials which could not be produced on the estates, and issued them from his store as required. His account for the year 1274, following the great fire at the Priory, is full of items for building purposes. "The Carpenter £14 for going to Hamburg to buy timber." This is brought to Yarmouth at a cost of £4 17s. 6d., and then to Norwich for 6s. 6d. "Base and his fellow" journey to Caen to buy stone; and seven loads costing £3 1s. 10d. are shipped to Yarmouth. Much stone was also bought from merchants at Yarmouth; reeds were purchased for plastering; iron, and coal for smelting it, is entered in 1285, and Spanish iron in 1316. Nails are of many kinds, as: Splentnayle, tingenayl, midelspykynge, lathenayle. A large amount of timber is bought at Yarmouth and generally is from Riga and Austria.

The Communar, another official, was responsible for the building of the cloisters. The columns, bases, and coigns were delivered wrought and moulded to Yarmouth and brought up the Yare in the Prior's boats, a testimony to the completeness and accuracy of the drawings. But who made these?

Dr. Saunders has given us a fascinating picture of the business side of a religious house. It is interesting to note that more money was spent on building than in doles, surely an excellent proceeding. P. M. S.

THE ELECTRIC WIRING OF BUILDINGS

ELECTRICAL work provides a very interesting subject for study, but I feel that too little is known regarding the manner of its execution by the architect, who is inclined to throw much more enthusiasm into that delightful finishing touch, the selection of fittings. The intricacies of wiring systems for power, heat and light are probably quite safe in the hands of a really good specialist, but to lean too much on the specialist, without a fair knowledge of the subject, is a source of weakness in the architect's armour.

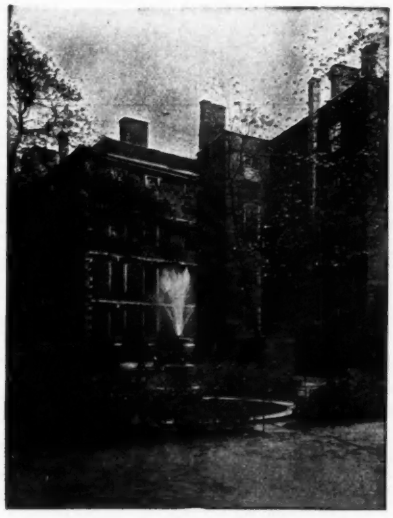
Mr. Raphael, in a short preface, refers to the noble self-sacrifice of reviewers for the technical press, who are (sometimes) forced to read literature from cover to cover. In this case he need have no fear that they will not do so, for the book is admirably produced and written in such a capable form that even the most elementary portions will not be passed over in haste. Included in the pages are over one hundred and fifty illustrations, mostly line drawings, with the addition of a few photographs. The drawings, particularly, are well executed, down to the smallest detail.

I am pleased to observe in a chapter on wiring that Mr. Raphael supports the use of screwed conduit. I always feel that real value is obtained by the use of this tubing, especially for sunk work, as against grip fittings and lead-covered cable, despite the extra expense involved.

The chapter on the layout is instructive, but I have not myself experienced such a high percentage as Mr. Raphael alleges of installations impaired by the lights being placed in wrong positions, where the work is under the control of an architect. I agree that the use of the combined switch and wall-socket at skirting level for electric fires is a matter more of habit than of convenience. There is no real need to place the switch so low, when the extra cost in placing it at a higher level is negligible. W. A. D.

The Electric Wiring of Buildings. By F. Charles Raphael. London: Sir Isaac Pitman and Sons, Ltd. Price 10s. 6d. net.

TOURING LONDON



SO vast are the changes that have been and still are taking place in the face of London by reason of reconstruction and rebuilding, that the old City begins to wear an aspect which is

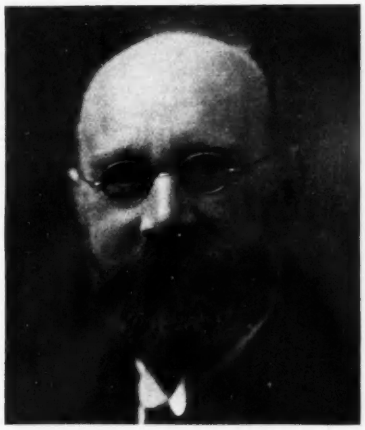
almost as unfamiliar to its older citizens as to visitors.

The city is fast becoming modernized; new buildings are springing up everywhere; we are emerging from a period when events moved so slowly as to be hardly noticeable. Today, few qualms are felt in destroying buildings associated with famous persons or events; our more sentimental feelings are sacrificed on the altar of progress.

If we wish to discharge a duty few Londoners perform, and tour the ever-changing metropolis, it is as well to do so on a set plan. In *Touring London*, Mr. W. Teignmouth Shore's contribution to the many guide-books on London, the author has set down, in concise epitome, an account of how to make a systematic tour of this fascinating city. Mr. Shore has mapped out four routes on the basis of some of the main thoroughfares, taking the points of the compass in turn. The starting point of each is Trafalgar Square, and, with one exception, the sightseer returns there; the remaining tour finishes at the Tower of London. He also shows us the picturesqueness of the river in a chapter entitled "Roving and Rivering."

Mr. Shore often strays from the busy thoroughfares to visit places hidden away unchanged, churches and dwellings still secluded and pleasant, not overpowered by present-day architecture. As you travel with him along the route, he conveys much interesting historical information and many notes on associations with famous folk and various ages of the recent and remote past.



The book is fully illustrated by twenty-five plates reproduced by the half-tone process from photographs and etchings; also reproductions of sixteen drawings by well-known draughtsmen. A foreword has been contributed by the Rt. Hon. John Burns, who rightly commends it to the many lovers of London.

OBITUARY

JOHN TODD: 1867–1930

We regret to record the death of Mr. John Todd, who, following a seizure on August 16, passed away in Staines Hospital on Thursday last.

The late Mr. John Todd

Mr. Todd, it will be recalled, created a sensation in architectural circles when, as Dangerous Structures Surveyor to the Corporation of London, he served a "dangerous structure" notice on the Dean and Chapter of St. Paul's in December, 1924, calling upon them to make the cathedral safe. He pointed to the condition of the dome, and advised that it should be lifted on temporary pillars owing to the dilapidated conditions of the eight supporting piers. Other experts, however, were called in by the Dean and Chapter, and they suggested that certain work should be carried out to the defective piers. A statement was made that structural work would be executed, and the "dangerous structure" notice was suspended by a special committee of the Corporation. Mr. Todd, however, said it was not an adequate remedy, and stated that the trouble would occur again in twenty-five years' time. Mr. Todd's action in serving the notice did not become generally known until March, 1925, when he resigned the post of dangerous structures surveyor while retaining his other office of district surveyor. He was born at Hull sixty-three years ago.

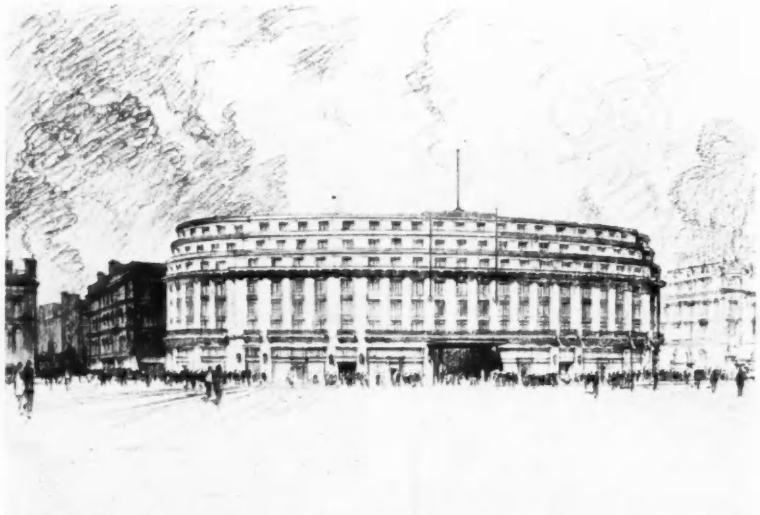
SIR ASTON WEBB'S FUNERAL

Among those who applied to the R.I.B.A. for tickets to attend the service in St. Paul's Cathedral for the funeral of Sir Aston Webb were:

Sir Henry Tanner, Sir A. Brumwell Thomas, Col. Wilfred J. Hardcastle, Col. W. H. Hatchard Smith, Messrs. J. Alfred Gotch, PP.R.I.B.A., Henry M. Fletcher, VP.R.I.B.A., E. Stanley Wall, PVP.R.I.B.A., F. Winton Newman, P.P. Architectural Association, Stanley Hamp, P.P. Architectural Association, J. Arthur Smith, President of the Hampshire and Isle of Wight Architectural Association, J. Goddard Wilson, W. Scott Deakin, E. W. Marshall, W. Henry White, Charles Woodward, E. C. P. Monson, Edward Warren, Percy H. Adams, A. D. Reid, A. B. Hayward, W. H. Hobday, W. Campbell Jones, E. Vincent Harris, Percy J. Waldram, P. E. Palmer, Arthur E. Henderson, J. Hatchard Smith, Sydney Tatchell, Geoffrey C. Wilson, Fredk. Chatterton, C. W. Biddulph-Pinchard, D. Barclay Niven, W. A. Pite, Louis Ambler, H. Gregory Montgomery (HON. A.R.I.B.A.), Clyde Young, T. Raffles Davison (HON. A.R.I.B.A.), John E. Sears, Alfred Cox, Noel Heaton (HON. A.R.I.B.A.), Edward Maufe, E. C. Frere, Edward Unwin, E. J. W. Hider, A. R. Conder, George A. Hall, Howard Robertson, H. Douglas Kidd, Arthur Ashbridge, Lawrence A. D. Shiner, H. Edmund Mathews, C. Ernest Elcock, S. Pointon Taylor, Charles Holden, Francis Hooper, Geoffry Lucas, J. Harold Gibbons, R. Goulburn Lovell, G. A. T. Middleton (HON. A.R.I.B.A.), E. J. Sadgrove, E. A. D. Tanner, F. E. Towndrow, Herbert Shepherd, C. E. Bateman, W. E. Riley, Claude Ferrier, A. R. Myers, C. D. Spragg (Asst. Secretary, R.I.B.A.).

Mr. Robert Banks-Martin, of Gracecourt, Great Nelmes, Hornchurch, architect, left £4,253 (net personalty).

Mr. Vernon March, of Goddondene Farnborough, Kent, sculptor, left £1,772 (net personalty £1,440).



A perspective of Sir Reginald Blomfield's scheme for the widening of Park Lane, Guildford Street, and Upperhead and Lowerhead Rows, Leeds.

ARCHITECTURAL CONTROL IN ENGLISH TOWNS

Bulletin No. 23 of the International Federation for Housing and Town Planning contains a lengthy report dealing with architectural control over town development in Great Britain, and interesting instances of control in various towns are quoted. Extracts from the report, which is printed in English, French and German, are given below.

ALTHOUGH there is no Act conferring general powers on all English local authorities to control the elevations of buildings, such powers can be obtained where the buildings come within the area of a town planning scheme; they have also been obtained by individual local authorities by local Acts (Acts passed by Parliament in respect of a particular town or locality) in connection with street widening and town improvement schemes.

In some cases where a public authority have had control, as owners of the land, e.g. Regent Street, London (owned by the Crown), and Kingsway, London (owned by the L.C.C.), it is noticeable that while many fine buildings have been erected no general harmony of design has been insisted on. This was not so a hundred years ago, when the buildings fronting Regent Street were designed by Nash and formed a harmonious composition. Recent events at Leeds, Bradford, Hull, and elsewhere indicate that the lapse of public concern in such matters is being rectified.

Mr. C. Cowles-Voysey's perspective sketch for the Bradford Central Area Improvement Scheme, reference to which is made in the accompanying article.

Street Widening and Improvement Schemes

In 1925, when the Leeds Corporation secured by Act of Parliament the right to make an important street improvement, they also got powers to buy extra land along the route of the improvement, and instructed Sir Reginald Blomfield, R.A., to prepare designs for the façades of the buildings to front the street. Designs were prepared not only for buildings on frontages to be sold by the Corporation, but also for buildings on land the Corporation had not acquired. Similarly, the Bradford Corporation promoted a competition in 1929 for plans and elevations for rebuilding an important island site they acquired in the central area of the city.

For many years past Parliament, in passing local Acts, has permitted provisions to be included giving the local authority control over elevations of buildings erected fronting on streets that are widened.

For example, in 1899 Parliament passed a local Act for an improvement scheme in Bradford. This Act provided that the elevations of all buildings to be erected in streets that are made, widened, extended or improved under the scheme must be submitted to the Corporation for approval. It also gave similar control over alterations to existing buildings with an external wall fronting on or toward such streets, if the external wall was being altered to the extent of one-half. Similar local

Act powers are possessed by several of the larger local authorities.

In 1913 the Bradford Corporation obtained powers from Parliament to carry out a large improvement scheme in the central area of the city, including power to "lay out and deal with the area and to divert, alter and rearrange the public ways therein." They were also entitled to sell or lease land in this area for the erection of buildings of such size, class, plans, elevations, heights and number of stories as the Corporation thought proper. By an Act passed in 1928 these powers were extended to any lands at any time acquired by the Corporation in connection with the construction of any new street, or the widening, alteration, or improvement of any existing street.

General Powers under Local Acts

In 1921 the Liverpool Corporation obtained the following powers by a local Act:

(1) Any person intending to erect a new building any elevation of which will front to or abut upon any street must submit to the Corporation a plan of the elevation and any other plans that may be required. The building may not be erected until the elevation has been approved by the Corporation.

(2) Appeals against withholding of approval by the Corporation are determined by the Minister of Health or by a person to be nominated by him; the decision is final.

(3) Any person offending against these provisions is liable to a fine not exceeding five pounds, plus a penalty not exceeding two pounds per day during the period of the offence.

In 1925 the Borough of Hastings obtained by a local Act the power to make bylaws requiring elevations to be submitted to them for approval (normally the plans only, not including elevations, have to be submitted to local authorities for approval). The Act provided for an appeal to the Minister of Health, upon which the Minister, or a person nominated by him, must adjudicate within one month.

In 1926, the Corporation of the City of Bath (a city with much fine street architecture) were authorized by Parliament to make bylaws requiring elevations to be submitted to them. These bylaws provided that where the Corporation considered that the height of a proposed building or addition or chimney or the design or the materials to be used would seriously disfigure the city, they might refer the elevations to an advisory committee. (A wooden hoarding used solely for billposting is not covered by this clause.) The advisory committee comprises a Fellow of the Royal Institute of British Architects, a Fellow of the Surveyors' Institution, nominated by the presidents of the respective institutes, and a Justice of the Peace, nominated by the Corporation. No member of the Corporation may be a member of the committee. The advisory committee must make their decision within one month and can approve or disapprove the elevations submitted to them. The penalty for non-compliance with a decision of the Corporation or advisory committee is a fine not exceeding £5, plus a penalty not exceeding £2 per day. The costs of any reference to the advisory committee are paid as the advisory committee may decide.

The composition of the advisory committee is apparently intended to give weight to the combined views of a man skilled in design (architect), a man with knowledge of the value of property (surveyor), and a non-technical man of public spirit (the justice of the peace).

The Bath bylaws were approved in July, 1927. By the end of December, 1929, two cases had been referred to the advisory committee: in one case the proposed elevations were approved, and in the other disapproved. The fact that there were only two cases does not indicate a failure of the Act, but rather that in the majority of cases the city engineer has been able to deal with matters by persuasion and to get the elevations put right before they were formally submitted to the Corporation. Similar powers have since been given by local Acts to other local authorities.

The Brunswick Square and Terrace Act, 1830, is an interesting example of permanent control by a private Act. It provides for the management and maintenance of the squares and terraces of the Wick Farm Estate, Hove. One of the clauses provides for preserving uniformity of appearance in the front façades of the houses erected and to be erected. It governs such matters as front railings and balconies; it also requires the fronts of the houses to be covered with cement of a uniform stone colour and the front elevations to be maintained unaltered and without variation. The outsides of the houses must be painted in uniform colour every three years, and the penalty for not doing this is a fine of £2 per week. The Act was first administered by specially appointed Commissioners; their place has now been taken by the Hove Town Council, and the borough engineer selects the colour and issues the notices to the owners to paint the outside of their premises accordingly.

Control under Town Planning Powers

The first Town Planning Act (1909) empowered local authorities to make schemes "with the general object of securing proper sanitary conditions, amenity and convenience" in connection with the laying out and use of land. It exempted local authorities from liability to compensation in respect of provisions that, *inter alia*, prescribed "the height or character of buildings." The Ruislip–Northwood Town Planning Scheme (passed in 1914) included a clause controlling elevations (as an essential part of the character of buildings); but no general disposition was shown by other local authorities to copy this example.

For some years after the end of the war the authorities were chiefly concerned in getting as many houses erected and as cheaply as possible. Latterly the spread of ugly buildings has roused public opinion, and the Ministry of Health have prepared and issued a model clause for use in town-planning schemes. This clause largely copies the procedure approved by Parliament in the local Act of the Bath Corporation, described above. The words "seriously disfigure" are repeated, which indicates that local authorities are only expected to intervene when serious issues are involved.

The provisions can only be applied to an area for which a town-planning scheme has been made or is being prepared; and the Town Planning Acts apply in general only to land that is in course of development or appears likely to be used for building purposes. A few local authorities, e.g. Newcastle, Blackpool, Birmingham, Chester, have obtained powers direct from Parliament to apply the Act to all land, whether built upon or not. The Town Planning Act also gives power to the Minister of Health to permit a local authority to prepare a town-planning scheme ("prescribing the space about buildings, or limiting the number of buildings to be erected, or prescribing the height or character of buildings") for any area, whether built upon or not, if it appears to him that a scheme is expedient for preserving the special architectural, historic or artistic character of the locality. The Minister has already sanctioned the preparation of schemes under these powers for the historic cores of such cities as Canterbury, Exeter, Oxford, Southampton, and Winchester.

The above-mentioned powers enable the *special character* of an historic area to be preserved, i.e. the local authority may control new building and the alteration of existing façades fronting the streets and may form advisory committees to whom such questions may be referred. They cannot prevent decay or demolition so far as inhabited premises are concerned, except by purchasing the property by private treaty.

A county or town council may pay the whole or part of the cost of preserving a monument, whether they have purchased it or become its guardians or not.

LAW REPORTS

AN ALLEGED CONTRACT

Neale v. *Merrett. Chancery Division. Before Mr. Justice Bennett*

THIS was an action by Dr. J. A. Neale, a barrister, against the defendant, a builder, for specific performance of an agreement to sell plaintiff certain land at Corsham, Wilts, for £280.

Mr. Morton, K.C., for plaintiff, said the contract which his client relied upon was contained in the following letter he sent defendant, viz. : "January 23, 1929. I am much obliged and agree your price £280. I enclose a cheque for £80 and will let you have a cheque for £50 on March 1, April 1, May 1 and June 1. Kindly send me a copy of conveyance to yourself." Counsel contended that that letter to the defendant was a binding offer in which defendant must sell the plaintiff half an acre of land for £280.

Mr. Jolly, for defendant, said his client had sold some of the land elsewhere, as in his view the plaintiff had really not bought it.

His lordship said in his view the plaintiff's letter was not an unqualified acceptance of the builder's offer. It was only an agreement that that was the price and the letter then went on to introduce terms as to payment. The defendant returned the plaintiff's cheque. He dismissed the action with costs.

FALSE SALE OF PAINT

London Chamber of Commerce v. *H. Hancock. Merchandise Marks Acts. South-Western Police Court. Before Mr. Cairns*

In this case, H. Hancock, trading as Herbert's at St. John's Hill, Battersea, was charged in a prosecution under the Merchandise Marks Act with having sold paint with a false trade description of white lead paint, and was fined £5 and £5 5s. costs. The prosecution was instituted by the London Chamber of Commerce and was conducted by Mr. C. W. Measor, barrister, instructed by Messrs. White and Leonard.

Evidence was given of an advertisement in *The South-Western Star* for white lead paint, 7 lb. for 3s., and of an order for a tin as so advertised, the pigment in the paint being found on analysis to contain no white lead at all, but to consist of :

53·50	barium sulphate
35·80	calcium carbonate
8·40	zinc sulphide
2·10	zinc oxide
·20	lead oxide.
100·00	

On receipt of a copy of the analysis, Mr. Hancock wrote that: "As we understand you require *white lead paint* and not leadless, we shall be glad to supply same if you return the paint supplied." For the defence it was submitted that Mr. Hancock had acted innocently, having intended the advertisement to be one for leadless paint.

TRADE NOTES

Messrs. Leyland and Birmingham Rubber Co., Ltd., have laid a considerable quantity of rubber flooring at the Carlton Cinema, Essex Road, London, which is shortly to be opened. The entrance hall is laid in buff and black marble, with a black border to harmonize with the existing scheme of decoration. The stairs, passages and landings have been laid with green and black marble. The work has been carried out from the design of Mr. George Coles, F.R.I.B.A.

The latest showhouse, completely furnished and equipped with modern cooking, heating and lighting appliances, has recently been opened on the Elthorne Heights estate. The houses are being built by the Great Western Land Co., Ltd. Berry's bricks are used for the facings, and "Cassac" art permanent flooring in the halls and bathrooms—a jointless flooring claimed to be fireproof, firm and buoyant to the tread.

THE BUILDINGS ILLUSTRATED

Following are the names of the general contractors, and some of the sub-contractors, for the buildings illustrated in this issue :

Immanuel Congregational Church, Southbourne, near Bournemouth (pages 297–299). General contractors, F. A. Grigg and Sons. Sub-contractors : Thomas Holmyard, carving; Mumford, Bailey and Preston, Ltd., heating and ventilating; A. R. Wilson, electric lighting and telephones for the deaf; C. E. Welstead, Ltd., coloured leaded glass windows; Wake and Dean, and the Parkstone Joinery Co., woodwork; C. E. Bishop, organ; Templeman and Sons, masonry; B. Line & Co., bronze grilles; Archibald D. Dawnay and Sons, Ltd., steelwork; Kinson Pottery Co., burnt bricks.

Farnham Chase, Bucks (pages 300–302). General contractor, H. D. Bowyer. Sub-contractor : Alan G. Wyon, carving; Colliers, bricks and tiles; T. J. Barnes, Ltd., artificial stone; R. E. Pearse & Co., Ltd., patent glazing and casements; Thomas Potterton, Ltd., central heating; Griersons, Ltd., electric wiring and electric heating; J. M. Pirie & Co., Ltd., electric light fixtures; E. H. Samouelle, Ltd., sanitary fittings; Robersons, Ltd., panelling; Samuel Elliott and Sons, antique doors.

ANNOUNCEMENT

Messrs. Marani and Lawson, architects, have taken into partnership Mr. R. S. Morris, B.ARCH. The practice will be carried on under the name of Marani, Lawson and Morris, architects, 38 Bloor Street West, Toronto.

COMPETITIONS OPEN

August 30.—The Carlisle Corporation recently invited British architects to submit designs for the façade to English Street and the Victoria Viaduct, suitable for shops and business premises. Assessor : Francis Jones, F.R.I.B.A. Premiums : £300, £200, and £100. Particulars of the competition, etc., were obtainable from Percy Dalton, A.M.INST.C.E., A.R.I.B.A., City Engineer, 18 Fisher Street, Carlisle. Deposit £1 1s. Latest date for submission of designs, August 30.

September 1.—The Bangor (Co. Down) Borough Council recently invited architects or town planners to submit designs in competition for laying out the sea front within the Borough. Assessor : Professor Patrick Abercrombie, F.R.I.B.A. Premiums : £150 and £50 for first and second places, respectively. Copies of the conditions and plans were obtainable on application to J. Milliken, Town Clerk, Borough Council Offices, Bangor, Co. Down. Deposit £1 1s. Latest date for submission of designs : September 1.

September 8.—The Burton-on-Trent Local Education Authority invites architects to submit competitive designs for a proposed new Council school to accommodate approximately 800 children, to be erected on a site in Clarence Street. Assessor : H. T. Buckland, F.R.I.B.A. Premiums : £150, £100 and £50 for the designs placed 1st, 2nd and 3rd, respectively. Applications for the conditions of the competition and site plan should be made on or before September 8 to L. E. Burgess, Secretary and Director of Education, Education Offices, Guild Street, Burton-on-Trent. Deposit £1 1s. Latest date for submission of designs : October 1, 1930.

October 20.—The Maternity and Child Welfare Committee of the City of Birmingham invites architects to submit competitive designs for two infant welfare centres, one at Warren Farm Road, Kingstanding (Perry Barr), and the other at Trittiford Road (Billesley). Competitors must have occupied offices in Birmingham as their head office for six months prior to July 19, 1930. Assessor : A. T. Butler, F.R.I.B.A. Premiums, £100 in respect of each centre. Conditions of competition and plans of the sites may be obtained on application to Herbert H. Humphries, M.INST.C.E., City Engineer and Surveyor, the Council House, Birmingham. Deposit £1 1s. for each centre. Latest date for submission of designs : October 20.

October 30.—The General Building Syndicate, Ltd., invites architects to submit competitive schemes for the development of a site at Liverpool, fronting St. John's Lane, Queen Square and Rose Street. Premiums : £250, £100 and £50, for first, second and third prizes, respectively. Particulars, etc., are obtainable on application to the Secretary, the General Building Syndicate, Ltd., 36 St. Martin's Lane, W.C.2. Latest date for submission of designs : October 30, 1930.

November 30.—The Guildford Cathedral Committee invites any architect, who has been engaged in the design of cathedrals or churches, to submit for examination drawings and other illustrations of his works; or a design for a cathedral. Not more than three sets of drawings may be submitted, packed in one large portfolio. The Committee, with the assistance of Mr. Walter Tapper, A.R.A., will examine the portfolios, and select a limited number of architects for the Final Competition. Each architect selected for the final competition will receive 500 guineas, whether his design is accepted or not. Portfolios should be addressed to The Venerable the Archdeacon of Surrey, The Diocesan Office,

Lloyds Bank Chambers, Guildford, not later than November 30.

December 25.—A prospectus giving full particulars of the international competition for the Ukrainian State Theatre, organized by the Kharkov Town Council, Russia, has recently been issued. The theatre is to be erected in the centre of Kharkov, on the site of the present Comsomolsky Square (Young Communist Square), and will contain a mass musical stage and seating capacity for 4,000 persons. The competition will be assessed by a jury comprising a president, vice-president and fifty-six members. Prizes: 1st, 10,000 rub.; 2nd, 8,000 rub.; 3rd, 6,000 rub.; 4th, 5,000 rub.; 5th, 4,000 rub.; 6th, 3,000 rub.; 7th, 8th and 9th, 2,000 rub.; 10th, 11th, 12th, 1,500 rub. Drawings should be sent to the Kharkov Town Council on or before December 25. Copies of the prospectus are obtainable from the Embassy of the Union of Soviet Socialist Republics, Harrington House, 13 Kensington Palace Gardens, London, W.8.

December 31.—The Incorporated Association of Architects and Surveyors invites competitive designs for a Model Petrol Filling and Service Depot. The competition has the full support of the Automobile Association, the Scapa Society and other bodies which have at heart the preservation of the countryside, as well as the principal motor-trade journals. Assessors: Alfred Stephens Cross, M.A. (CANTAB.), V-P., I.A.A.S.; Edward H. Fryer, Deputy Secretary of the Automobile Association; and Walter Groves, Editor of *The Motor*. Prizes, 50 guineas, 20 guineas and 10 guineas for first, second and third places, respectively. Smaller awards may also be made on the advice of the assessors, and at the discretion of the Council of the Association. In addition a prize of 10 guineas and two prizes of 5 guineas each will be awarded to laymen for the best suggestions submitted with or without sketches. Full particulars, etc., are obtainable from the Secretary, the Incorporated Association of Architects and Surveyors, 1 Wilbraham Place, London, S.W.1. Latest date for submission of designs: December 31, 1930.

No date.—The Committee of the Foundation Hospital and the Rectorate of the Royal Yugoslavian University of Zagreb invites competitive designs for the general rebuilding plans of the Foundation and Clinic Hospital of Zagreb. Assessors: 1. Dr. Srkulj Stjepan, Burgomaster and Chairman of the Foundation, as president of the jury. 2. Henauer, W., architect, of Zurich (or his representative, Ch. Thevenaz, architect, of Lausanne), for the Swiss Engineers' Association of Germany. 3. Dr. Ing. Kreis Wilhelm, of Dresden, for the Engineers' Association of France. 4. Arch. Expert H.R., of Paris, for the Engineers' and Architects' Association of France. 5. Dr. Culumovic Pavao, Primarius, for the Medical Association of Zagreb. 6. Ing. Gabric Franjo, for the Yugoslavian Association of Engineers and Architects, Zagreb section. 7. Dr. Rasuhin Josip, deputy for the Directors of the Institute of Hygiene of the foundation: "Foundation Hospital of Zagreb." 8. Prof. Dr. Prasek Emil, for the medical faculty of Zagreb. 9. Dr. Durst Franjo, for the medical faculty of Zagreb. 10. Arch. Heinzel Vjekoslav, Alderman of the City of Zagreb. Committee representative of the jury: Ing. Jurkovic Mato, Stadtbaurat in Zagreb. Prizes: 1st, 20,000 Swiss francs; 2nd, 15,000 Swiss francs; 3rd, 10,000 Swiss francs. 15,000 Swiss francs have been set aside for any further work which may be required. Programme and particulars of the competition will be sent on or after August 15, 1930, on application to the Stadtvorstand of Zagreb (Mr. Matica, secretary), Room No. 70, 2nd floor, on payment of 200 dinar. Latest date for submission of designs: January 15, 1931.

THE ARCHITECTS' DIARY

WEDNESDAY, AUGUST 27

ROYAL SOCIETY OF ARTS. At the Imperial Institute, Exhibition Road, South Kensington, S.W.7. Exhibition of designs submitted in the R.S.A. Competition of Industrial Designs. Until August 31. 10 a.m. to 5 p.m. (Sundays 2.30 to 6 p.m.). **10 a.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Exhibition of English Mediæval Art in the North Court. Open until September 21, 10 a.m. to 6 p.m. (Thursdays, 10 a.m. to 10 p.m.) **10 a.m.**

SIR JOHN SOANE'S MUSEUM, 13 Lincoln's Inn Fields, W.C.2. Open every Tuesday, Wednesday, Thursday and Friday until September next. 10 a.m. till 5 p.m. **10 a.m.**

SATURDAY, AUGUST 30

Sunrise, 6.8 a.m. Sunset, 7.53 p.m.

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS, 26 Buckingham Gate, S.W.1. Fourteen-day Tour to Madrid, returning to London on September 13.

CARLISLE STREET FACADE COMPETITION. Latest date for submission of designs.

MONDAY, SEPTEMBER 1

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. September 1 to September 6.

BANGOR SEA FRONT COMPETITION. Latest date for submission of designs.

TUESDAY, SEPTEMBER 2

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "The Composition, Mixing, Methods of Application of Concrete and Reinforced Concrete, as used in the Yards, and the Control of Same." By T. R. Grigson, M.INST.C.E. "Some Notes on the Composition, Mixing and Application of Concrete in Engineering Works." By C. J. Jackaman, A.M.INST.C.E.

WEDNESDAY, SEPTEMBER 3

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Pieces in Concrete Piles." By M. J. C. McCarthy, A.M.INST.C.E., A.M.MECH.E. "Stresses in Dams." By S. D. Carothers. "A Study of Plain and Reinforced Concrete Retaining Walls." By Ewart S. Andrews, B.SC., M.INST.C.E. "Reinforced Concrete in Great Britain." By A. Kirkwood Dodds, M.C., M.SOC.C.E. (FRANCE). "Reinforced Concrete in Engineering: Representative Examples of British Practice." By M. Gerard, M.SOC.C.E. (FRANCE).

THURSDAY, SEPTEMBER 4

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Work of the Building Research Station on Small Movements in Concrete." By Dr. W. H. Glanville, B.SC., A.M.INST.C.E. "The Effect of Temperature on Flat Arches Constructed of Reinforced Concrete." By C. S. Gray, B.SC., A.M.INST.C.E. "Temperature and Cement." By Dr. Oscar Faber, O.B.E., M.INST.C.E.

SATURDAY, SEPTEMBER 6

Sunrise, 6.19 a.m. Sunset, 7.37 p.m.

XII. INTERNATIONAL CONGRESS OF ARCHITECTS. In Budapest. September 6 to 13. Opening of International Exhibition of Architectural Designs in the Picture Gallery of the Hungarian Scientific Academy. **10 a.m.**

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. South-Western District Meeting, to be held at Bath.

SIXTH INTERNATIONAL ROAD CONGRESS, to be held at Washington. Until September 11.

TUESDAY, SEPTEMBER 9

ASSOCIATION OF PUBLIC LIGHTING ENGINEERS. Annual Meeting and Conference, to be held at Leicester. Until October 11.

THURSDAY, SEPTEMBER 11

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Italian Furniture." 12 noon. "Italian Decoration." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

FRIDAY, SEPTEMBER 12

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. North-Western District Meeting, to be held at Runcorn.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "French Furniture." By Miss M. Chamot. 12 noon. "Gothic Woodwork." By T. F. Wilson, F.R.S.A.I. 3 p.m. **12 noon.**

Secretaries of architectural and allied societies are invited to forward particulars of their forthcoming meetings and visits for publication on this page. They should be addressed to the Editor at 9 Queen Anne's Gate, S.W.1.

SATURDAY, SEPTEMBER 13

Sunrise, 6.30 a.m. Sunset, 7.21 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "Later English Furniture." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

WEDNESDAY, SEPTEMBER 17

INTERNATIONAL BUILDING TRADES EXHIBITION, Olympia. Until October 1.

BRITISH GLASS CONVENTION. At Buxton. Until September 20. Morning: Meeting of the Council of the Society of Glass Technology. Afternoon: General Meeting of the Society of Glass Technology. Evening: Informal Presidential Reception of members and their friends at the Palace Hotel.

THURSDAY, SEPTEMBER 18

BRITISH GLASS CONVENTION. At Buxton. Morning: Official welcome by the Mayor and Corporation of Buxton, at the Peak Buildings. Presidential Address. Discussion on "Elimination of Waste in the Glass Industry," to be opened by Dr. Miles. Official luncheon. Evening: Mayoral Reception at the Palace Hotel.

FRIDAY, SEPTEMBER 19

R.I.B.A., 9 Conduit Street, W.1. Exhibition in the Galleries of Drawings submitted in competition for the Archibald Dawnay Scholarship (10 a.m. to 7 p.m.; Saturdays, 2 p.m.). Until September 30. **10 a.m.**

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussions on "Marketing Methods in the Glass Industry" and "Public Propaganda in the Glass Industry," to be opened by Sir Francis Goodenough, C.B.E., and H. Gordon Selfridge, respectively. Afternoon: Golf Competition for championship of the Glass Industry. Evening: Banquet at the Palace Hotel.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. Meeting to be held at Southampton.

SATURDAY, SEPTEMBER 20

Sunrise, 6.41 a.m. Sunset, 7.5 p.m.

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussion on "The Convention—Present and Future," to be opened by Mr. Walter Chance, M.A., J.P.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Stained Glass (1)." 12 noon. "Stained Glass (2)." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. North Wales District Meeting, to be held at Bangor.

FRIDAY, SEPTEMBER 26

NATIONAL SMOKE ABATEMENT SOCIETY. Annual Conference, to be held at Leicester until September 28. During the conference the following papers will be read: "Fuel Research and Smoke Abatement," by Dr. Margaret Fishenden; "The Smoke Problem in Sheffield," by F. J. Bailey and E. C. Evans; "Smoke and the Weather," by a meteorological expert; and "The Smoke Nuisance as the Airman Sees It."

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS. London and Home Counties Branch. Dinner and Dance to be held at the Quadrant Restaurant, Regent Street, W. Tickets, 7s. 6d.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. Yorkshire District Meeting, to be held at Hipperholme.

SATURDAY, SEPTEMBER 27

Sunrise, 6.53 a.m. Sunset, 6.49 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Continental Glass." 12 noon. "English Domestic Glass." 3 p.m. Both lectures by Miss B. Goldsmid. **12 noon.**

TUESDAY, SEPTEMBER 30

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS, 1 Wilbraham Place, S.W.1. London and Home Counties Branch. "The Making of a Cathedral—Liverpool." By E. W. Harvey-Piper. (Lantern Illustrations.) **7 p.m.**

ISLE OF MAN GRAMMAR SCHOOL COMPETITION. Latest date for submission of designs.

WEDNESDAY, OCTOBER 1

BURTON-ON-TRENT SCHOOL COMPETITION. Latest date for submission of designs.

FRIDAY, OCTOBER 3

TOWN PLANNING INSTITUTE. Twelfth Annual Country Meeting, to be held at Leicester. Until October 5. Full particulars are not yet available.

SATURDAY, OCTOBER 4

Sunrise, 7.4 a.m. Sunset, 6.53 p.m.

TUESDAY, OCTOBER 7

R.I.B.A., 9 Conduit Street, W.1. Closing date for applications for admission to the Intermediate Examination.

THURSDAY, OCTOBER 9

C.P.R.E. Third Annual Conference, to be held at Welwyn Garden City. Until October 11. Among the papers to be read are the following: "The Preservation of Commons, Parks, Open Spaces and Nature Reserves, and the Provision of Playing Fields." By Sir Lawrence Chubb. "Town and Regional Planning in their Relation to the Objects of the C.P.R.E." By Sir Theodore Chambers, K.B.E., F.S.I. "Education and Citizenship in their Relation to the Safeguarding of the Countryside, etc.," and "Flora and Fauna, including the Preservation of Trees, Wild Flowers, Roadside Plants and the Protection of Birds." Each paper will be open to discussion.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1*s.* 3½*d. per hour;* LABOURER, 1*s.* 3½*d. per hour;* NAVVY, 1*s.* 3½*d. per hour;* TIMBERMAN, 1*s.* 5*d. per hour;* SCAFFOLDER, 1*s.* 4½*d. per hour;* WATCHMAN, 7*s.* 6*d. per shift.*

Broken brick or stone, 2 in., per yd.	£0	11	6
Thames ballast, per yd.	0	10	0
Pit gravel, per yd.	0	15	0
Pit sand, per yd.	0	12	6
Washed sand, per yd.	0	13	0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

Portland cement, per ton	£2	8	0
Lias lime, per ton	2	0	0

Sacks charged extra at 1s. 9d. each and credited when returned at 1s. 6d.
Transport hire per day:

Cart and horse	£1	3	0	*Trailer*	£0	15	0
3-ton motor lorry	3	15	0	*Steam roller*	4	5	0
Steam lorry, 5-ton	4	0	0	*Water cart*	1	5	0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

RETURN, fill, and ram, ordinary earth, per yd.	£0	1	6
SPREAD and level, including wheeling, per yd.	0	1	6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0	10	6
TRIMMING earth to slopes, per yd. sup.	0	0	6
HACKING up old grano. or similar paving, per yd. sup.	0	1	3
PLANKING to excavations, per ft. sup.	0	0	5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.			
IF left in, add to above prices, per ft. cube	0	2	0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0	2	1
DO. 6 in. thick, per yd. sup.	0	2	10
PUDDLING, per yd. cube	1	10	0
CEMENT CONCRETE, 4-2-1, per yd. cube	1	17	6
DO. 6-2-1, per yd. cube	1	12	6
DO. in upper floors, add 15 per cent.			
DO. in reinforced-concrete work, add 20 per cent.			
DO. in underpinning, add 60 per cent.			
LIAS-LIME CONCRETE, per yd. cube	£1	14	0
BREEZE CONCRETE, per yd. cube	1	7	0
DO. in lintels, etc., per ft. cube	0	1	6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0	3	9
FINE concrete benching to bottom of manholes, per ft. cube	0	3	0
FINISHING surface of concrete spade face, per yd. sup.	0	0	9

DRAINER

LABOURER, 1*s.* 3½*d. per hour;* TIMBERMAN, 1*s.* 5*d. per hour;* BRICKLAYER, 1*s.* 8½*d. per hour;* PLUMBER, 1*s.* 8½*d. per hour;* WATCHMAN, 7*s.* 6*d. per shift.*

Stoneware pipes, tested quality, 4 in., per ft.	£0	0	10
DO. *6 in., per ft.*	0	1	3
DO. *9 in., per ft.*	0	2	3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0	5	6
DO. *6 in., per yd.*	0	8	0
Portland cement and sand, see "Excavator" above.			
Leadwool, per cwt.	£2	0	0
Gaskin, per lb.	0	0	4½
STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft.	0	4	3
DO. 6 in., per ft.	0	5	0
DO. 9 in., per ft.	0	7	9
CAST-IRON DRAINS, jointed in lead, 4 in., per ft.	0	8	3
DO. 6 in., per ft.	0	10	3

Note.—These prices include digging concrete bed and filling for normal depths, and are average prices.
Fittings in Stoneware and Iron according to type. *See* Trade Lists.

BRICKLAYER

BRICKLAYER, 1*s.* 8½*d. per hour;* LABOURER, 1*s.* 3½*d. per hour;* SCAFFOLDER, 1*s.* 4½*d. per hour.*

London stocks, per M.	£4	5	6
Flettons, per M.	2	12	6
White facing bricks, per M.	5	0	0
Multi-coloured facings, per M.	7	7	9
Best red facings, per M.	7	7	9
Rubbers, 9½ in., per M.	12	0	6
Staffordshire blue, per M.	9	5	0

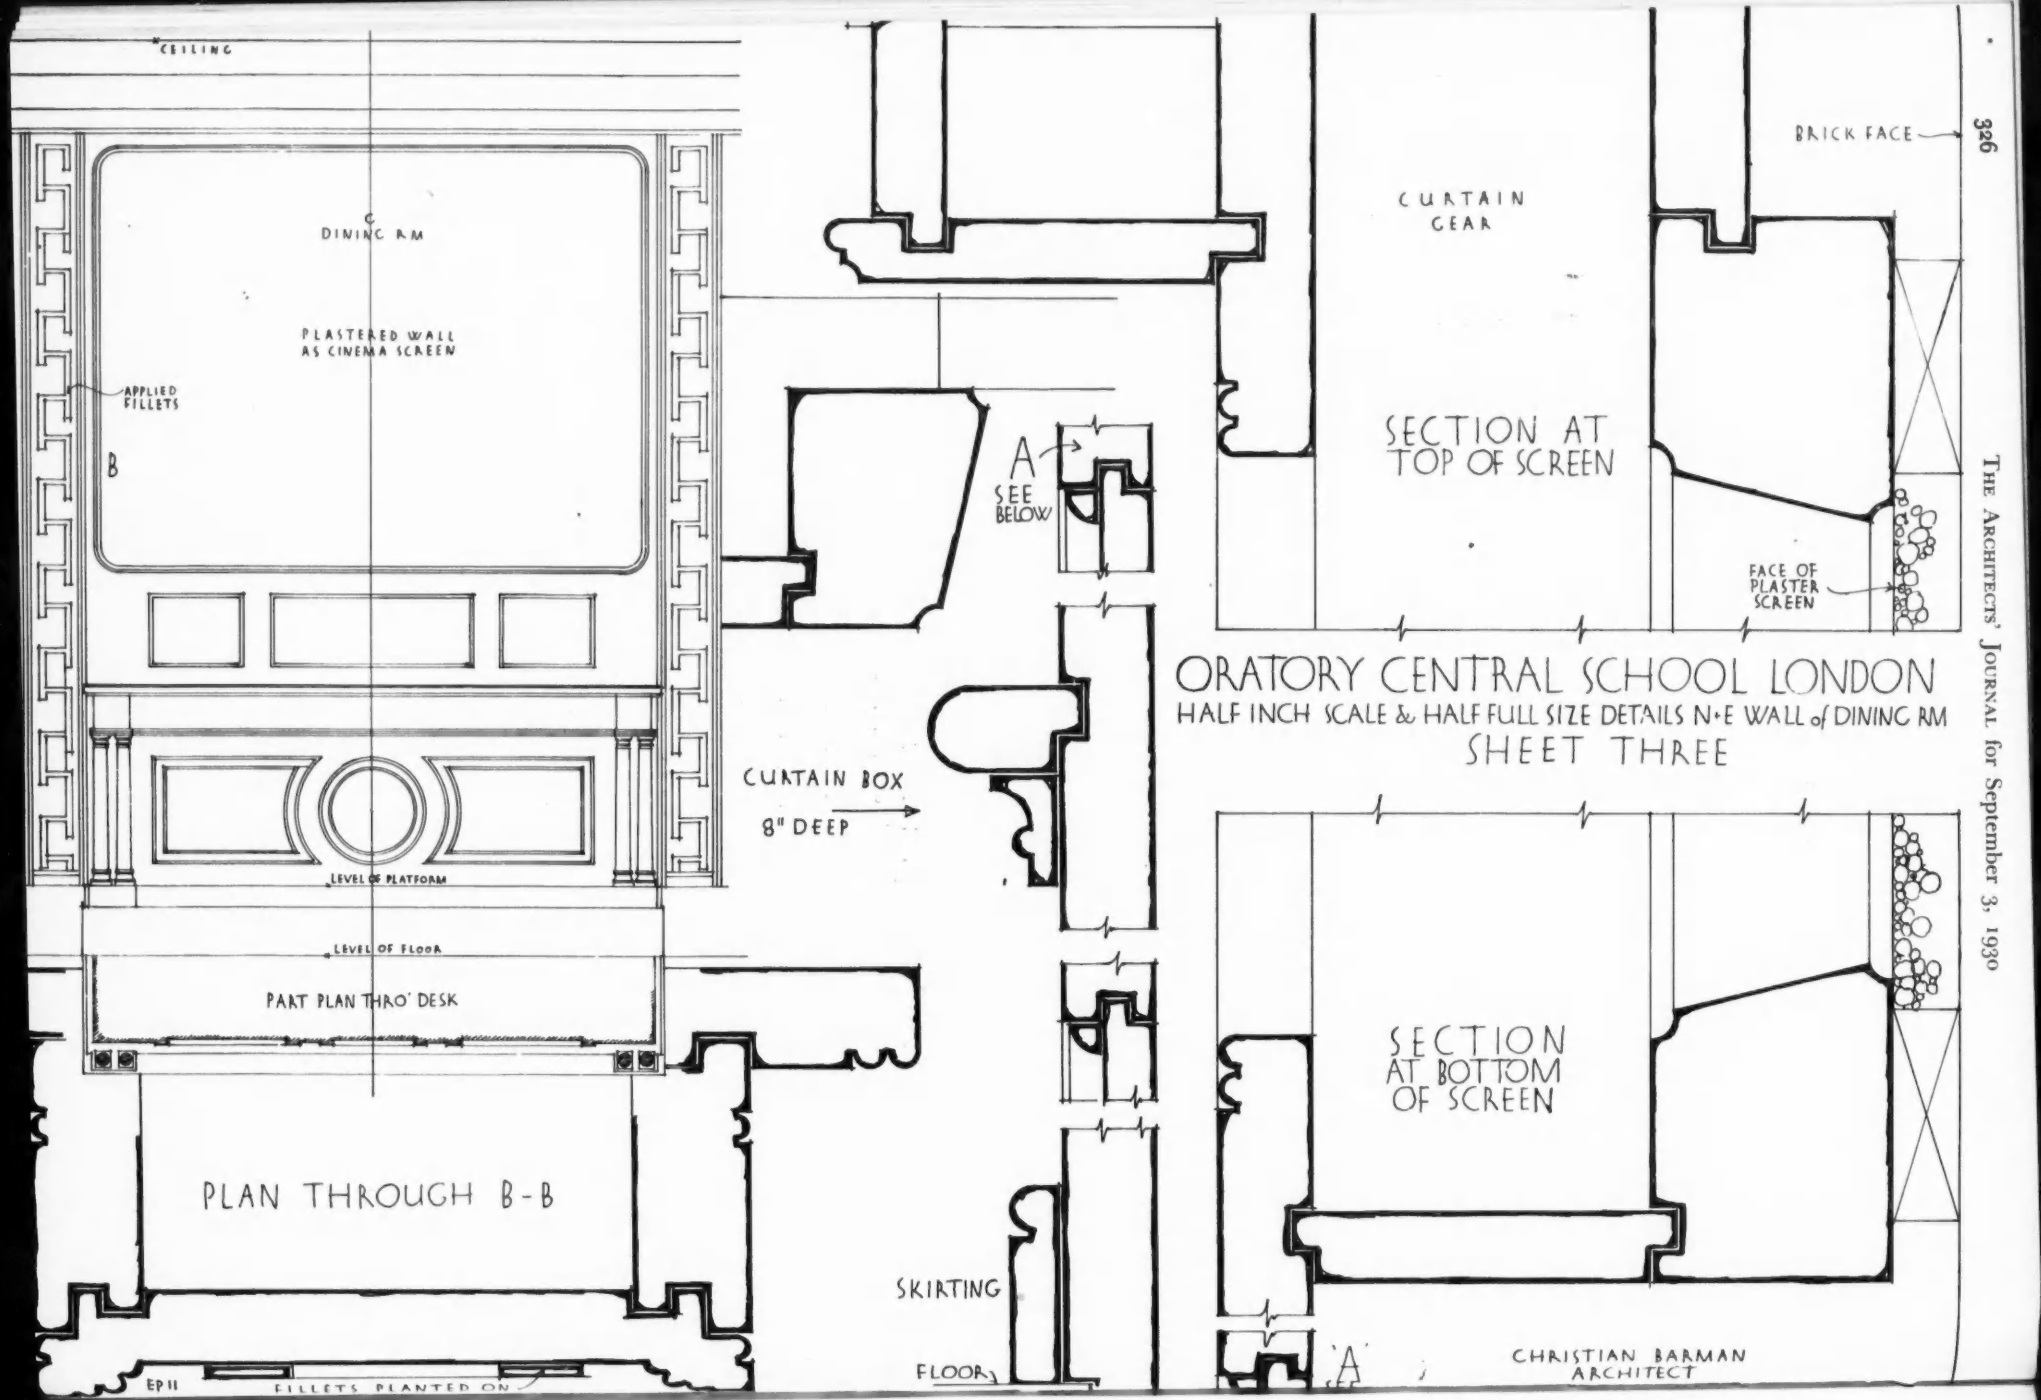
SCALE DETAILS:
A WEEKLY SERIES

ASSEMBLY HALL WITH BOXED-OUT CINEMA SCREEN AT THE ORATORY CENTRAL SCHOOL, CHELSEA, S.W.



DESIGNED BY CHRISTIAN BARMAN

THE photograph which is reproduced above shows a part of the north-east wall of the Assembly Hall, which is a dual-purpose room, inasmuch as, in addition to serving the needs of an assembly hall, in the usual sense, and one, moreover, where cinema entertainments may be given, it is also here that the children of the school enjoy their midday meal.

The working drawings overleaf show ½-in. scale and half full-size details of the cinema screen—with its boxed-out surround to contain the curtains—and the desk. The surround to the screen is of wood, finished in a pleasing tone of buff to match the walls of the room, while the desk, which is of Columbian pine and is raised on a low platform or dais, is treated with a water stain giving a colour akin to walnut.

(Other details from the same building were treated in this series in the issues for July 2 and 30, 1930.)

The drawing may be read with ordinary architects' scales (½ in.; and 6 ins. = 1 ft.)

THE DUAL RÔLE:

The Architect his own Client.

"Near some fair Town, I'd have a private Seat."
—JOHN POMFRET

IF there is one person who experiences delights unknown to the rest of mankind, and unknowable, it is the architect who builds himself a house. "Physician, heal thyself," is an ancient injunction, and one, indeed, that in modern times is rarely heeded, for the ailing physician at once enlists the services of a fellow. But even were he not to do so, would there be a thrill and ecstasy in the process of self-healing comparable to that experienced by the architect who sees his inspiration grow firm and strong and three-dimensional before his gaze, all for his own use and delectation?

And with the lawyer, too, the architect can well afford to sympathize for the joys and delights that can never be his; to make his own will, to convey property to himself, and even to conduct litigation on his own behalf seems to offer to the lawyer little scope for rejoicing.

Nor, if we turn to the other arts, do we find anyone in so happy a position as the architect. Most painters at the beginning of their careers must perforce paint pictures for themselves, and many of them bequeath to the world a Self Portrait or a Portrait of the Artist as a Young Man, but these works are executed as often as not with a view to economizing in models.

With the architect, lucky man, it is different. He is creating something out of his innermost self which is to become an integral part of his life; to become, as says Sir Henry Wotton, "The Theater of his Hospitality, the Seate of his Selfe-fruition, the Comfortablest part of his owne Life, the Noblest of his Sonnes Inheritance, a kind of private Princedome."

And what unique relations will be those between client and architect in an enterprise of this sort! The experience may, moreover, reveal to him certain unsuspected frailties of character; for it is possible that, even with such deep intimacy between client and architect, the dual personality may, for a time, be rent by a schism which may well be the begetter of humility. Probably, in his capacity of client he may in certain respects not vary from others of his acquaintance. At any rate, it is likely that at first he will be assailed by dreadful doubts and fears that the enterprise will land him in financial ruin—fears that the architect will view with chagrin and dismay. But anon this mood will be followed by one of supreme recklessness on the part of the client in him, so that the sanctioning of extras of twenty or fifty pounds will be undertaken with as little hesitation and anxiety as the ordering of a new suit of clothes.

Yet there never was such a thing as an affluent architect, and so our friend will be beset by limitations. His task will become the more exacting and the more bracing just on this very account.

What the architect in the man will particularly rejoice in will be the absence of ambiguity in the programme. For the client here is a man who knows what can and what cannot be done, nor will he demand a synthetic plan of incompatibilities built up of irreconcilable fragments such as is to be noted in houses scattered far and wide. As the work proceeds there will be some chastening doubts mingling with the pleasure of seeing the realization of long-cherished ideas.

Yes, without doubt the enterprise is educative. It is also about as exciting as any architectural enterprise could be.

LONDON'S LATEST THEATRE

The Cambridge Theatre, to be opened to-morrow, September 4, with a Charlot show. It is designed by Wimperis, Simpson and Guthrie, and stands on one of the seven corners of Seven Dials. Seating accommodation is for 1,300, distributed between the stalls, dress circle and upper circle. There is no gallery. The seating is uniform throughout the theatre, and is designed for the supreme comfort of the patrons. As soon as one sits down, the back of the seat slides back to an angle of sixty degrees.

NEWS & TOPICS

HIGHER BUILDINGS AND THE L.C.C.—

THE L.C.C. are being sorely tried over the question of higher buildings. The rebuilding of the Hotel Cecil has occasioned a dispute over the height that will be allowed on the Embankment side of the new building when the ordinary limit is imposed on the Strand, the drop between the two being 40 ft.

*

Then there is the unfortunate attitude of the Canadian Pacific Railroad, who will not build their enormous hotel unless they are allowed to skyscrape and be very, very important. I have wondered whether, if the C.P.R. will wait a little, they may not find their great opportunity in the rebuilding of Charing Cross Bridge. I know of one scheme at least which, if carried out, would present two sites, one on the south bank and one on the north, that would not require Montreal skyscrapers to make them the most important building sites in Europe. It would be a fine thing indeed if the development of the south bank could be given such a push forward as only a great hotel could give it.

—AND OTHERS

As I expected, the conference between representatives of the London Society, the R.I.B.A., and the Town Planning Institute—an interim report of which was published on Monday—entirely agrees with the resolution passed by the Council of the Royal Institute that no general relaxation should be permitted in the conditions governing the height of buildings in London. In fact, the conference is of opinion that it is of the utmost importance to regulate the increase of heights and volumes of new buildings that are permissible under existing conditions.

*

The conference urges that not only should the London Building Act be amended, but it is essential that a comprehensive zoning scheme and plan should also be prepared and adopted to regulate mass, density and user in connection with the rebuilding of London. This zoning ordinance should make it clear that building up to the accepted limit of 80 ft. and two stories in the roof will be limited to certain central districts, subject to non-interference with reasonable light and air. Outside these districts zones of diminishing heights and density should be prescribed.

*

With these exceptions, in a city such as London only wide streets and big lots can carry buildings from 80 ft. to 100 ft. high, but if a comprehensive zoning scheme were prepared the conference would see no serious objection to permission being granted, under certain well-defined conditions, for part of the occupied portion of a new building to exceed the statutory limit of height zoned for any particular district, provided always that: (a) No increase in total volume and floor space over and above that zoned for the area is thereby obtained. (b) Effective protection from fire is assured. (c) Adequate protection is given to the rights of surrounding owners to their fair share of light and air. (d) A reasonable uniform cornice level is maintained in certain classes of streets. The report has been accepted by the Council of the London Society, and is now under consideration by the R.I.B.A. and the Town Planning Institute.

RAILWAY STATION ARCHITECTURE

Apropos my remarks concerning railway architecture in last week's issue, I have been interested to read a more voluminous and comprehensive curse in no less a journal than *The Railway Review*.

*

The author, Mr. Holgate, says that very few English stations were built for anything but utility, the earlier stations being mere wooden coverings for passengers, parcels and officials. I doubt if he can find fact for this assumption, and I think I am right in saying that it would have been better for us had the earlier stations been less substantial and less architectural than they were, for then they might the more easily have been replaced in the rapid expansion which overtook the first efforts of railway pioneers.

*

The monumental expression of the railway station was already perfected when Hardwick's great entrance to Euston was built in 1846, while functionalism could go little farther than the façade of King's Cross, which in its day was acclaimed as a wonder. St. Pancras, coming later, was less a railway station than any, even though its skilful planning and ample dimensions have preserved the design more or less intact. It is, as I said before, the pettiness and ignorance of railway directors (and I say *directors* advisedly) that has shown itself incapable of adding to fine works in a generous spirit.

*

Let me gratefully acknowledge, however, the little things that are being done. One of these is to be seen in the great hall of that same Euston. Here Mr. R. Wynne Owen has designed a new information bureau that has just been put into service. It fits into its surroundings without the air of having elbowed its way in, and, incidentally, is the means of displaying the ten pictures by Norman Wilkinson, R.I., that have been for some time the pride of the L.M.S.

LITTER

They are going to hold a "litter week" in the New Forest. Litter is to be collected and brought to Lyndhurst, where it will be publicly burned. Could anything better illustrate the change of public taste in burning than the gradual retrogression from heretics to old newspapers? Time was when a good witch-roasting brought a large crowd together to enjoy a super-thrill. One cannot predict an enormous gathering for this gentler conflagration, but it is to be a public burning, and maybe the mayor will be present.

*

It has been argued that invocations to motorists to burn their litter are likely to engender a very dangerous practice, and that they should be encouraged to take it home in their cars with them. If this is found to be asking too much of them, it might be found possible to have a bin stationed at the entrance to all villages or towns of any size, so that motorists carrying litter from their feasts might get into the way of dropping it in the first bin they came to on the way home. The bin should be

large enough for its purpose, painted attractively, and fitted with an easily-opened, self-closing lid.

★

Perhaps those who know just how much may be expected of motorists will tell me whether this idea is worth thinking about, but it seems to me that if we are to form such public-minded habits in the bulk of the motoring public one must meet them half-way. I think there can be little doubt that, with common perseverance, the litter problem will be happily solved.

BEAULIEU ABBEY

Repairs are in progress at Beaulieu Abbey, which was founded by King John in 1204. Thirty years ago, under the expert advice of Mr. St. John Hope and Mr. Harold Brakspear, the first Lord Montagu conducted investigations into the ruins. Owing to the excavations which were begun at that time, we have today an almost complete plan of the chief buildings of the abbey. The foundations have been clearly marked out in the turf, and the spaces originally occupied by the walls they supported covered with white gravel. Thus the whole extent of the building may be seen.

★

This summer a large number of visitors go round the abbey daily and have been showing keen interest in the reconstruction. Notices are placed on the parts of the building where there originally stood the pulpitum, the nave, the cloister, the library, the dormitories and the warming-house. Under the present Lord Montagu, who was born in 1926, the same care is being taken of the abbey as under his father.

What the Stockholms Dagblad *says Mr.*

Mr Drage

är en populär och välkänd Londonbo, som f. n. beser Stockholm och utställningen. Hans slutomdöme om vår kära Funkis blir ett enda men mycket uttrycksfullt ord:

Rotten.

Intervju se sid. 3.

Drage thinks about the Exhibition.

MR. DRAGE AT STOCKHOLM

Those readers who found matter for thought in the JOURNAL's account of the Stockholm Exhibition will be interested in the above clipping from a Swedish newspaper, giving a summary of an English visitor's views. The visitor is no less a person than Mr. Drage, Mr. and Mrs. Everyman's idolized benefactor; the journal, the *Stockholms Dagblad*. The Swedish daily found Mr. Drage had quite a good deal to say about English protective tariffs. When, however, it asked him to say something about the Exhibition, it got from him only the one expressive word which appears in heavy type, untranslated, on the front page of the paper.

"SYNTHETIC" GLASS

I lunched, last week, with one who presently produced from his waistcoat pocket what I took to be a rod of glass, some 4 ins. long by ½ in. diameter. "Just bend that," he said. I took it in my hands and applied a bending movement, expecting it to fly. But it *did* bend, and in a few seconds returned to its normal configuration. "Lo!" said I, "what is it?" He fired off a perfect rocket of a name, with phenol and formol in it.

★

It is, in short, a synthetic resin, having many of the properties of glass, such as translucency, non-inflammability, non-conductivity of heat and of electricity; and several peculiar to itself, such as elasticity, practical unbreakability, susceptibility of being sawn, bored, turned and polished. Moreover, according to composition, it can be made to pass or resist the passage of ultra-violet rays and can be coloured any hue, transparent or opaque. And, unlike previous essays in the same direction, it does not discolour or decompose with the passage of time. If it can be produced at the economical price my informant prophesied, we shall hear more of it. We should like to.

A FOOTWAY ROUND BRITAIN

This summer's enthusiasm for "hiking" has raised again the question whether, being an islander, I shall be entitled as of right to a footpath along all my native shores and cliffs. During low tide the sands may be available, but at high tide it is often only possible to view the sea by walking on the heads of Upper and Lower Tooting along Marina Parade, at the extremities of which the private gardens come to the cliff's edge. On other portions of the coast there are, it is true, rights of way, beaten by coast-guards and smugglers in less crowded days, and from these the salt water, "your English heritage" (local M.P.), can be really admired. I wish all hikers would join hands (or should I say feet?) and ask the C.P.R.E. and the C.F.P.S. to keep an eye on these paths, which should be carefully preserved and extended. New paths should be planned by architects, of course.

WHERE IS SMARTERLY?

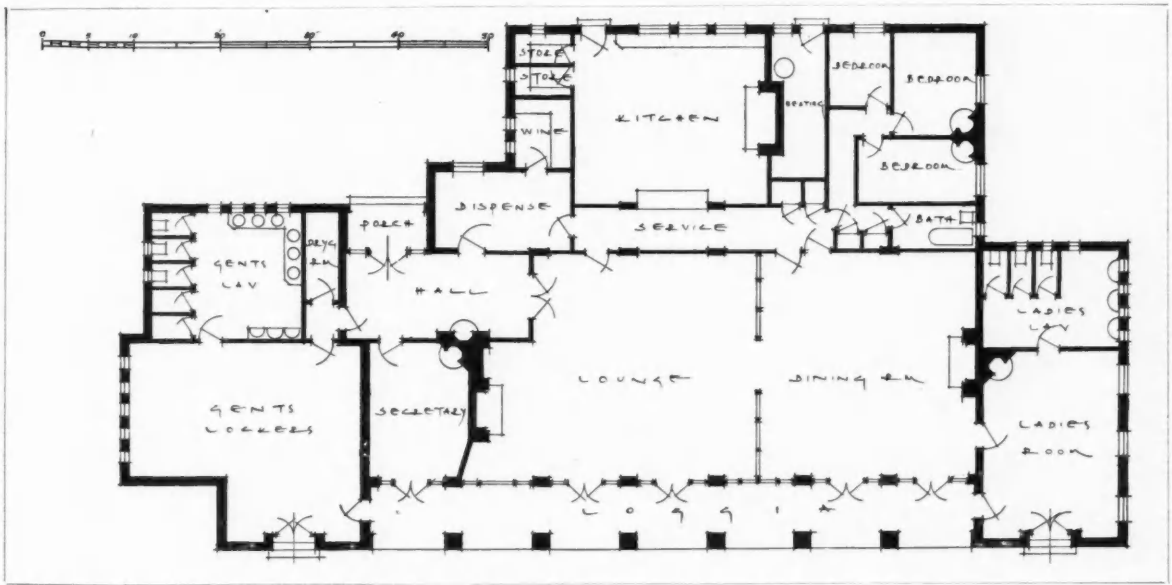
To read the following advertisement gave me pause :—

> TWO ARCHITECT-BUILDERS and BUILDERS.—Who can BUILD a ROOMY HOUSE for £1,000 with forecourt, on Surrey height, near Haslemere; lounge room 30ft.?—Sketches and rough particulars to Box 89, care of Smith's Library, Kensington.

What, I asked myself, do architect-builders do? I do not call to mind an R.I.B.A.B.; who——? And then, of course, I had it. They must belong to that brotherhood "of spurious architects engaged in spurious practice and carrying out spurious designs," typified in the pages of this JOURNAL some three years ago by Smarterly. By the way, where *is* Smarterly? Obviously, this announcement is expressly designed to catch the eye of such as him. Will any reader acquainted with his present whereabouts—for I will be bound he is busy somewhere—communicate them? I should not like him to miss such an opportunity; and it is just possible he does not regularly read the august paper in which this advertisement appeared.

ASTRAGAL

The club house stands high up on the side of a valley and overlooks the golf course in both directions.

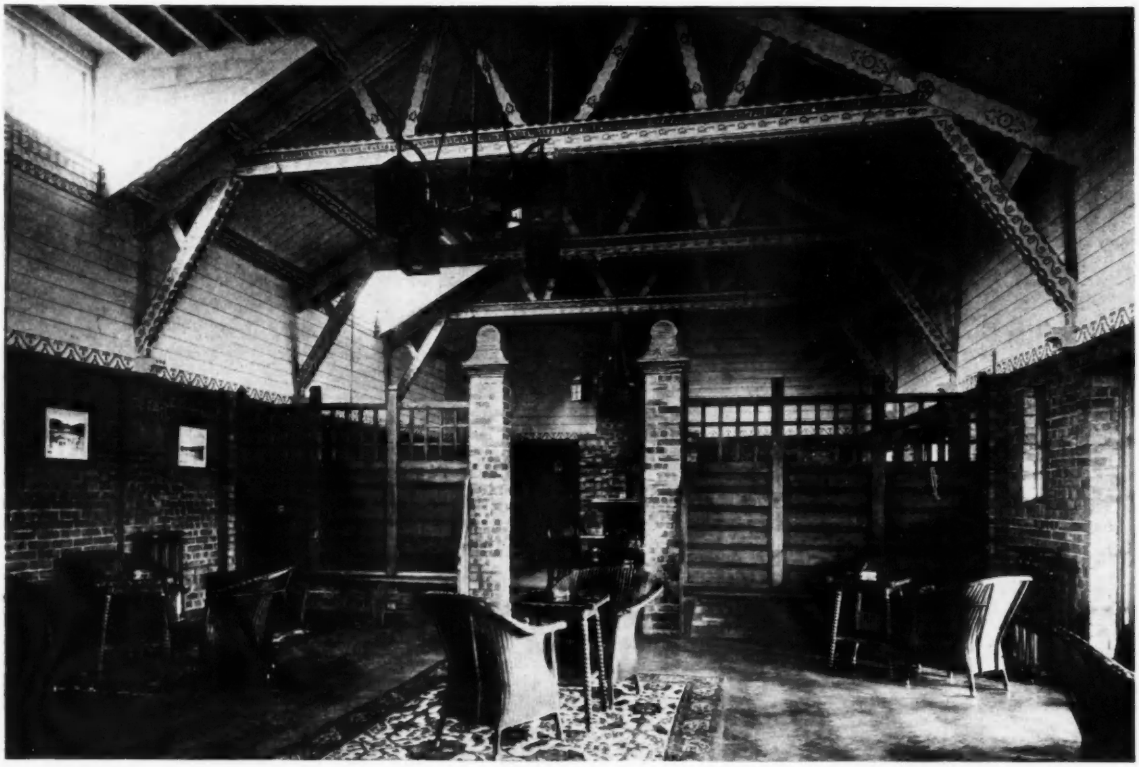


GOLF CLUB HOUSE AT DOWNE, KENT

DESIGNED BY STANLEY HAMP (COLLCUTT AND HAMP)

THIS club house was built on the new course laid down for the Downe Golf Club by Mr. H. S. Colt. Its design was strictly governed by the need for economy both in construction and material. With this end in view it was decided to reduce the finishing materials to a minimum and rely mainly on colour, both externally and internally, for decorative effect. Special structural precautions had to be taken owing to the position of the building on the sloping site.

The roofs are of timber construction, the pitched portions being covered with boarding and dark coloured tiles, and the flats finished in Ruberoid. The ceilings are lined with boarding and the main roof trusses of the lounge are treated with applied colour decoration.



The fireplaces are in brick, of special design, and form interesting features of the various rooms. The whole of the window frames are in timber. A hot-water boiler is installed in the heating chamber for heating and hot water purposes.

The plan. Shower baths are provided in the gentlemen's lavatory, with proper facilities for drying clothes, etc. The floors of the club portions are finished in pitch-pine wood blocks, and the service quarters in patent jointless flooring.

The dining-room. The doorway on the right of the brick fireplace leads to the ladies' quarters; the windows overlook the loggia. Externally and internally the walls of the club house are faced with Fletton bricks of a special texture.

Downe Golf Club House, Kent.] [*By Stanley Hamp (Collcutt and Hamp).*

A feature of the lounge is the screen which separates it from the dining-room beyond. This screen is of timber, painted and treated in colour decoration in keeping with the ceiling. All the fireplaces are in brick.

ADVERTISING AGENCY IN BERLIN

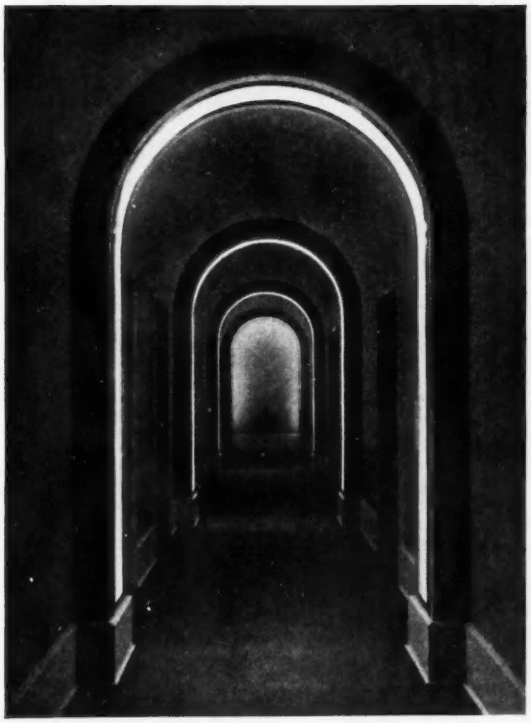
DESIGNED BY ECKART MUTHESIUS

Two old flats in the German capital have been transformed into the modern suite of advertising offices here illustrated and described. The entrance doors and side panels are of highly-polished white metal; the lettering is in blue glass.

AN English visitor to Germany must inevitably be struck by the attention paid to, and the experiments in, commercial architecture. If the taste seems sometimes uncertain, the vitality is always refreshing. Among these experiments, not the least interesting is the new office designed for Crawford's Advertising Agency by the young German architect, Eckart Muthesius.

Actually the building itself is not new, but consists of two old flats which Mr. Muthesius has completely transformed. The sense of display suitable to an office devoted to advertising is aroused at once by the entrance door, which is of white polished metal, with similar polished panels on either side, upon which the name of the firm is written in blue glass letters.

The floor of the entrance hall is covered with a special light red linoleum of German manufacture, underlaid with Ozite as a sound deadener. The colour of the walls is graded from the red of the linoleum below through orange to cream above. In the arches are lights which can be switched on separately, so that either the side or the top of individual arches can be illuminated. There are also skylights above each door. Along the back of the building runs a long passage, the roof of which has been lowered to make it look like a ship's corridor, the walls being painted in horizontal stripes to give an effect of width.



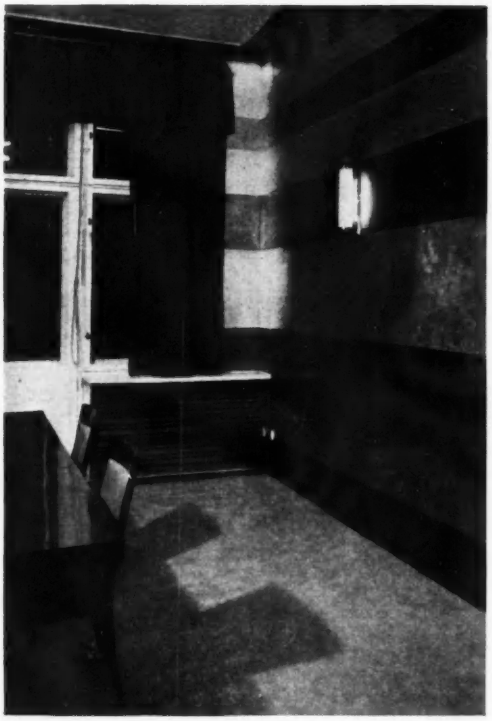
There are two conference rooms, the Silver Room and the Copper Room. In the former the walls are lacquered with silver in horizontal stripes decreasing in width towards the ceiling, the darker stripes having a blue tint. The ceiling itself is covered with glass dust.

In the Copper Room walls and ceiling are of copper, only the ceiling being polished, for the walls are left with a natural surface. Round the room runs a copper rail concealing the general lighting. Sliding wooden strips enable placards of varying sizes to be displayed upon any wall, and these can be specially illuminated by searchlights contained in a box suspended from the centre of the ceiling, the room being darkened for the purpose. All the lighting in this room can be controlled from the table itself. There is on one wall a cinema screen which rolls out of sight.

The furniture in both rooms is of Macassar ebony and is interchangeable. The chairs are upholstered in green saffian leather and the carpets are of thick blue velour.

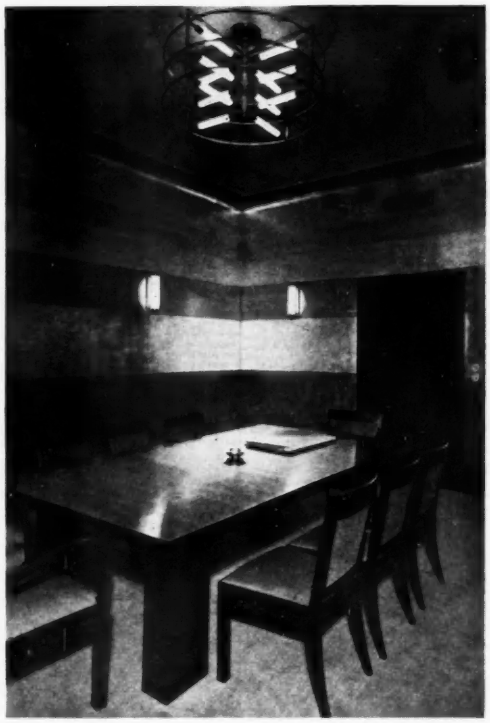
The walls of the directors' room are covered with jute, and those of the other rooms in the office are colour-washed a light grey.

Photographs being monochromatic, it is difficult accurately to judge from them many details which depend largely upon colour for their effect, but they may be enough to show that Mr. Muthesius and Messrs. Crawfords are to be congratulated upon a building which cannot fail to convey to prospective clients an impression of wealth, power, and originality, qualities so essential to any successful business undertaking. W. H. A.



The lighting scheme plays an important part in decorating the entrance hall, otherwise perfectly plain but for the walls, which are graded from red to cream, upwards.

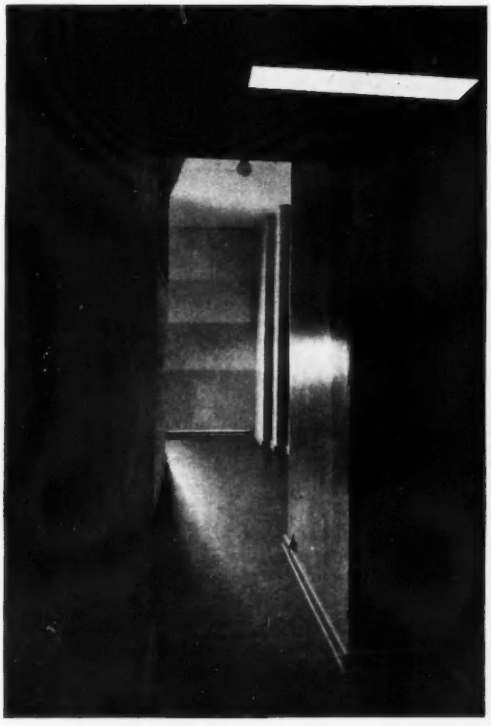
The attention of readers is drawn to the fact that, as the issue of THE ARCHITECTS' JOURNAL for September 17 next will coincide with the opening day of the Building Trades Exhibition at Olympia, it will include a special supplement devoted to the scope of the exhibition and plan of the stands, etc., detailed descriptions of the exhibits, and authoritative articles on aspects of building today. It will be followed by two similar supplements, to be incorporated in the issues for September 24 and October 1. All will be profusely illustrated, and the three together will present to the architect, in concise form, information as to the materials and methods that progress has placed so lavishly at his disposal.



The Copper conference room is lined with that metal, the ceiling polished, the walls left dull. Special means are provided for displaying, under various lighting effects, placards on the walls.

Crawford's Advertising Agency, Berlin.]

In the Silver conference room the walls are silver-lacquered : the darker stripes have a bluish hue.



Another view, showing the conference table and the light fittings. The ceiling is covered with glass dust.

Even the strictly utilitarian quarters have a certain style in keeping with the whole—witness the corridors and this combined outer office and store-room for printed matter.

A corner of the ladies' retiring-room, showing the built-in mirror and pair of toilet tables of special design.

[*By Eckart Muthesius.*

The roof of this long back passage has been lowered and lit by a skylight to make it look like a ship's corridor.

AMERICA,
1928:
THE FILM KINGS
BRING
GREECE TO HOLLYWOOD

Comparisons may be odious; they are often uncommonly instructive. Under the same title borne by this pair of examples, it is proposed

ONE WAY AND

i: Fashions in Sound-

BY HUNTLY CARTER,

SINCE 1927 millions have been spent on new buildings strictly determined by the "talkies." In this example, though the main building is so determined, the exterior trimmings are dictated by the wealth and cultural aspirations of the American Film Kings. The Warner Vitaphone Studio at Hollywood reveals, in fact, the characteristics of present-day American architecture, dictated not by functional purpose, but by the taste of men who have risen from very humble beginnings, as little traders, to the position of owners of fabulous wealth.

It is architecture in which money talks. It says that as soon as a strictly commercial nation gets rich, it sticks its money all over the exteriors of buildings in the shape of frills and furbelows. A glance at the frontage shows that it is obviously an attempt to bring Ancient Greece to Hollywood.

And not a very successful one. The union of Greece and the talkie is not happy; nor the introduction of modern details such as electric lamps and curtained windows; nor the three or four modes of architecture; nor the gay American flag, with its note of publicity and millionaires. Imposing Greek entrances, frontages and elaborate Corinthian porticoes are very common in Hollywood. They are generally stuck on vast sound stages of quite different design, and of dimensions and with technical and scientific equipment that leave one breathless with wonder.

All the stages alike are isolated. The materials of the walls and the fitments are selected to exclude even echoes from speech and music. And there is an elaborate system of ventilation which keeps the Beauty Queens from roasting—but only just.

The Modern U.F.A. Sound Stage at Neubabelsberg, Germany.

ANOTHER

Stage Architecture

Cinema Research Worker

to note all kinds of things, taken two—or more—at a time, as and when opportunity occurs. The Editor will welcome suggestions from readers.

GERMANY, 1929: FUNCTIONALISM WITH ECONOMY

THE German sound stage offers a very sharp contrast with the fashionable American one. The difference in styles of these structures, enormous in size, hermetically sealed, and with no openings of any kind save entrances, is very instructive for architectural, æsthetic, economic and other reasons. At Neubabelsberg in Germany the celebrated U.F.A. Company has recently built one large sound studio, by far the best and most modern in equipment in Europe and, in the matter of ventilation, in the world. It has four production stages. Four additional studios are available for sound-film production, and two small ones for minor work.

The style and material of this building strike a new note in film industry architecture. It is built in the form of a cross, the centre of which contains all the recording apparatus. A feature of this centre is that it is completely isolated and completely vibration-proof. The walls are executed in small, specially hard-burnt bricks, absolutely resistant to sound-waves. All conductors of vibrations, such as iron and steel reinforcements, are rigorously excluded.

Æsthetically, the building will not attract everyone. It looks too like a prison. It reveals a combination of American commercial and German modernist influences. The introduction of a vertical projection would have relieved the monotony of the slab-like front wall. Relief is, however, afforded by the specially constructed sound-proof entrances at the base. Taken as a whole, it is both striking and unusual, and exhibits the novelty of treatment demanded by a mechanical innovation. Besides this, the economy demanded by German financial conditions is apparent in the entire absence of ornamentation.

THE NEW CATHEDRAL FOR LIVERPOOL

A perspective view of Sir Edwin Lutyens's design for the new Roman Catholic Cathedral for Liverpool. Second in size only to St. Peter's, Rome, the cathedral is proposed to be erected in bricks of Roman shape and Portland stone, with the dome cased in stainless steel.

Addressing an open-air service of thanksgiving for the securing of the site, held in Thingwall Park, Liverpool, on Sunday last, the Archbishop of Liverpool said the site would compare even with the ideal spots chosen for the renowned Gothic cathedrals of that golden period of Catholicism, the twelfth and thirteenth centuries. The cathedral which they proposed to build was not something designed to meet merely the spiritual requirements of that great city, nor even merely those wider needs of the teeming Archdiocese of Liverpool; it was to be the Metropolitan Cathedral of the North of England, the rallying point for the Archdiocese of Liverpool, with its Suffragan Sees of Leeds, Middlesbrough, Hexham and Newcastle, Lancaster and Salford. It was to be to them what York Minster was to their forefathers. It was to make Liverpool a great ecclesiastical centre like Rheims or Cologne, where men of all nations might unite under one roof, in one common worship.

ENGLISH PRECEDENT No. 131

No. 28
QUEEN ANNE'S GATE,
WESTMINSTER,
S.W.

No. 28 is one of the houses in the westerly portion of Queen Anne's Gate, which was railed off from the eastern half and known as Queen Square until 1874. They were built about 1704, the date inscribed on a rainwater cistern in the house illustrated. A replica of the contemporary hood, with pendants (a hood peculiar to this thoroughfare), has lately been reset on light steel girders. That in the Victoria and Albert Museum is believed to have come from this house.

An interesting point in the design of the façade, which is almost opposite the offices of THE ARCHITECTS' JOURNAL, *is the narrow bay of blind windows, the purpose of which appears to be to keep the window openings well away from the fireplaces in the front rooms. The strengthening of the walls of this house during the recent renovation is described on another page.* —[C. BARMAN]

LETTERS FROM READERS

Official Architecture

SIR,—I have noticed several notes in THE ARCHITECTS' JOURNAL on the evils of architectural work being undertaken by public officials. Consequently, it may be of interest to learn of the following case which has just been related to me.

A Public Utility Society was formed in Cork, and obtained plans for a housing scheme from a draughtsman, who is a whole time official attached to some public board. When tenders were invited, the South of Ireland Builders' Association declined to allow any of their members to submit estimates. Their reason for this action was that they did not consider that a contractor dealing with such a body would have sufficient protection unless a qualified architect were appointed.

This is an interesting point of view and, I think, a wise one. It is also distinctly complimentary to our profession.

HENRY H. HILL

(*The following is the Association's view.*—ED., A.J.)

SIR,—I beg to state the members of the South of Ireland Builders' Association, acting for their own protection, are bound not to tender for any work exceeding in value £500, unless there is a recognized architect in charge of the work. The reason for fixing the sum at £500 is to enable a builder to execute smaller jobs and repairs, where the client might not consider an architect necessary. But generally, builders, in our opinion, are much better protected, even in such smaller jobs, when a recognized architect is employed. His duty then, and at all times, is to act fairly between builder and client.

THOMAS KELLEHER, CHAIRMAN

SIR,—Your admirable leading article under the heading "Sheffield Recants" (August 20) does not, unfortunately, represent an exceptional case, but indicates the trend of affairs more or less all over the country.

I am not by any means an old man, and within my architectural memory the city in which I had the misfortune to be born and where I now practise—(not Sheffield)—gives a fair sample of the growing tendency to municipalize architecture.

When I was a pupil the city architect's office consisted of a staff of half a dozen; to-day it numbers seventy. The De-rating Bill has now brought the designing of schools within its ambit. Added to this, we have a burgh engineer who carries out architectural work and calls himself an architect and designer.

No doubt they are able, Godfearing men and pillars of the Church, but that does not necessarily confer on them marvellous powers as designers or deny them the right to a little recreation and rest from their labours, neither does it confer on them the infallibility claimed by the Pope.

The question of honorariums is an old one, and it has always appeared to me as unjustifiable that men in a protected industry who cannot be discharged unless for crime or flagrant incompetence should be so specially favoured when, if the truth were known, they owe so much to loyal, competent and hard-working staffs.

To ask an official architect to undertake large commissions only means, in most cases, that he takes on specially qualified temporary assistants at the ratepayers' expense.

Again, in Victorian days, it is true that private architects mostly gained their honours and titles through their ability to select the best men for their staffs. Now, with a higher standard of architectural education, a private architect who gains distinction mostly deserves it, as a right, for personal attainments.

The R.I.B.A. seems powerless to protect the men who have done most for the profession. One has only to glance back over the last forty years to realize that while the status of the architect has improved immensely, it is no longer possible for the scholar to receive an adequate return for his training and ability.

Sooner or later Government and municipal architecture will mean standardized architecture, and that means the end of the real progress of architecture as an art. Anyone who has ever been under official control knows the deadening and soul-killing influence under which he labours. There are many side issues which cannot be dealt with in a mere letter, but the Sheffield case may help to clear the decks for further united action on the part of private architects, and force the R.I.B.A. drastically to deal with this matter.

W. D. CYMA-RECTA

[A writer in *The Sheffield Telegraph*, commenting on our leading article, states that "opponents of the grant contend that the City Architect is already paid an adequate salary, and that the plans for the new building should be regarded as part of his ordinary work without the payment of a special fee. On the face of it this contention appears to be sound. A full-time official is one, presumably, who devotes the whole of his energies to the work of the Corporation, and the lay-mind cannot be expected to grasp those professional niceties which place certain classes of work outside the scope of normal duties.

"An open competition would undoubtedly have avoided controversy, but I am afraid the ratepayers would have been called upon to pay considerably more in fees than the £1,000 honorarium to the City Architect."—ED., A.J.]

Oxford, Past and Present

SIR,—As one who must bear some responsibility for the *D.I.A. Cautionary Guide to Oxford*, and in the absence from town of others better qualified to speak with authority, I cannot help questioning whether the shop front in question deserves the unprintable adjectives Mr. Baillie Scott was tempted to apply in your issue for August 20. We knew that the moment we passed beyond criticism of untidiness to praise of good work that we should "be in for it." But if the D.I.A. is to reserve its commendation only for picturesque survivals and houses built to match their environment, then, indeed, I think it is time to put up the shutters.

But I beg you, sir, to reprint the illustration and the caption which appeared underneath. [Unfortunately, this is impracticable, but readers will find it on page 185, August 6, 1930.—ED., A.J.] What was it we stressed? Why, the tidiness of one corner compared to the welter of advertising on the other.

I am not disposed to sing the praises of Messrs. Warland's premises architecturally, even were I competent to do so. I don't like the top portion very much myself, though the bottom is fit enough for its purpose, the large windows being necessary to display motor cars and cycles, and the lettering on the fascia being distinctly good. I will venture to say that at least it is not an eyesore. I will even go so far as to say that, compared with the work of various distinguished architects, including college buildings which figure on picture postcards, it is creditable to whoever designed it.

That is as far as I am disposed to go, and very much farther than I need have gone, since the point at issue was solely the tidiness of the two premises.

NOEL CARRINGTON

The Industrial South

SIR,—Astragal, in the July 16 issue of THE ARCHITECTS' JOURNAL, referred to the growth of new industries in the South of England. I feel, therefore, that the following figures, taken from the *Ministry of Labour Gazette* for November, 1928, giving the changes in the geographical distribution of persons insured under the Employment Insurance Act, are of great interest.

The 1923 figure is taken as 100, and the percentages of employed for July,

1924, and July, 1928, are given as under:

London	100·4	110·2
South-East England ..	103·8	118·4
South-West England ..	101·3	109·8
North-West England ..	101·0	103·9
North-East England ..	100·9	103·5

This indicates that a greater percentage increase of the insured population occurs in London and South-East England. The report also shows that, of the whole population, 46·7 were employed in the southern section in 1923, and in 1928 it had increased to 48·5, while the numbers in the northern section had declined from 53·3 to 51·5.

This is a matter that has a far-reaching bearing upon the future of the home counties. If this increase continues, and there appear to be indications that it will do so, it is only regional planning which will save the home counties from the fate which has overtaken most industrial areas in the past. The Greater London Regional Planning Committee is fully aware of this tendency and has a sub-committee studying the problem of decentralization.

There is sufficient experience to teach us that an industrial town can be as healthy and beautiful as any other town. Letchworth is an example of this, where there are over a hundred different factories, with more than twenty distinct types of industry. A working population of over four thousand, out of a total population of fifteen thousand who have gone to Letchworth for their work, are more than satisfied with the better health and amenities which the town gives them. Here, then, is the way in which any industrial concentration of the home counties might be provided for.

A. T. PIKE

Guildford Cathedral Competition

SIR,—It is surely becoming obvious to the promoters of the Guildford Cathedral Competition that they will have to revise or reissue their conditions. This may involve them in "eating humble pie," but it may prevent them from ruining a great enterprise at the start.

We were told that Mr. Tapper had been advising the Bishop for some months. It seems incredible that such a hopelessly vague, muddled and contradictory set of conditions should be the outcome of months of work.

The real questions at issue, however, can be reduced to two: One: those competitors who have not actually carried out ecclesiastical work of their own may design a cathedral, or, as "P. E. P." says, three cathedrals, if they choose. That much is clear; but is this cathedral to be designed especially to suit Guildford, or not? If it is, why are we not given definite requirements and a site plan? If not—that is, if it is a purely hypothetical design—why does the Archdeacon, in your columns, drag in the existence of a site at all?

Two: Why is the competition not to be an anonymous one? Let me say at once that I do not for one moment doubt the honesty of either the assessor or the promoters; but there is no doubt that many young men feel that, even before their designs are examined, their chances are slightly prejudiced, if only in the subconscious mind of the assessor, by the fact that "they have never been heard of."

"CATHEDRAL"

The Mansard Roof

SIR,—In my comparison of mansard and attic roofs, I have been at pains to present the case fairly in so far as matters of pure space are concerned, and I am well aware that the mansard roof can be put to all sorts of uses when once you have built it.

The point is whether such an incongruous form of roof should be built at all, and whether it would have arisen had the London Building Act been revised in time to agree with modern construction. I do not for one moment believe that business men would object to attic roofs if they could see enough of them to realize how much finer than the masquerading mansard they can be. The pity is that the fashion has been set.

E. MAXWELL FRY

Regarding Doors and Windows

SIR,—Your correspondent, Mr. Blessington, inquires, in your August 20 issue, who killed the Venetian blind and why don't doors slide. Of course, you can have both if you want them. I presume he means why are they not fitted as standard in the average house. The Venetian blind is out of fashion and, as he suggests, is a dust trap; it is also comparatively complex, with its system of cords and tapes, and these tend to get out of order as well as rotten.

The panelled hinged door is of very ancient origin and is traditional of almost all building systems. Also, sliding is not so easy an action as swinging, and more expensive. Nevertheless, it is interesting to me that he should have asked these questions, for I fitted both in the House of the Future (The Ideal Home Exhibition, 1928), but specially designed so as to avoid the disadvantages above mentioned. The slat blind worked upwards, and when not in use packed into the window board. It was made of thin strips of aluminium. The doors were constructed both to swing and slide as desired.

The importance of Mr. Blessington's remarks lies in the fact that they disclose that he is one of the many laymen who are beginning to regard present-day house construction with a sceptical eye. They demand that a house shall be a convenience for the purposes of living, not a museum of meaningless traditions, which they are rapidly destroying by their "whys" and "why-nots." They are the forerunners of a great army of people who, quite accustomed to the functioning of applied science and logic in other spheres, will expect it at home—why not?

R. A. DUNCAN

SIR,—Mr. Blessington's queries are not, I think, as difficult to answer as some, but I may be in a fool's paradise in that he will probably reject my answers.

(1) Who killed the Venetian blind, and why?

The fresh air movement, I think, killed it. This type of blind is admirable on a breathless day, but if the window is wide open and the wind gets up, the noise is unconscionable—bad in a sitting-room, it is maddening in a bedroom.

(2) Why not sliding doors to all rooms?

The first reason would be on the score of expense. Sliding-door gear is more expensive than hinges. If the door is made to slide on the face, it is unsightly and upsets the arrangement of furniture and pictures. If it is to slide in a cavity, it means double partitions or double walls. Sliding doors are generally noisy, and they are certainly more difficult to open and shut, especially when carrying a tray.

H. D.

Noise Prevention

SIR,—I was interested to read Astragal's paragraph in your issue for August 13 dealing with noise, and I need hardly say that I am fully in accord with his view of the serious effect produced by it on workers of all classes.

The whole problem is exceedingly intricate, involving, as it does, not only the exclusion of noise from buildings or its reduction therein, but also the many sources thereof, which it is almost impossible to deal with except by very slow degrees.

On the other hand, it is readily understood that the general level of "noise intensity" in a room can be greatly reduced by the introduction of a suitable amount of absorbent material, just as glare might be reduced by painting the walls black. Moreover, there is at present at least one very successful noise excluder which can be fitted to almost any sash window. This admits of adequate ventilation while reducing the noise to just about the same intensity it would have if the window were shut.

There is also the possibility of designing blocks of offices, for example,

with artificial ventilation throughout, and this plan, I understand, has been adopted fairly freely in America and occasionally in hospital wards in England. Such a system could be made substantially noiseless, and is well worthy of consideration on the grounds of increased efficiency in staff whenever a big office block is in question.

In my judgment it is on these lines, rather than of those of attacking noise at its source, that immediate relief is most likely to be obtained at the present time. W. WHATELY SMITH

Moisture on Walls

SIR,—The reply, in the JOURNAL for August 20, to a reader who asked for an opinion as to the best method of preventing moisture finding its way through brick walls, seems to indicate a lack of decision which almost equals that of the reader who sought advice.

Most people who have had any extensive practical experience of such matters agree that any liquid application made with a brush or spray is not likely to be permanent; and, in justice to the manufacturers of proprietary solutions sold for this purpose, it ought to be said that they are usually at pains to make it clear to purchasers of such materials that the treatment requires renewal every few years. The temporary nature of these superficial coatings is largely due to their lack of thickness, and the scour of the weather wears them away in time. This applies equally to a film of paint, and it is difficult to see how your contributor can reconcile his opinion that "*painting is probably as efficient as anything*" with his condemnation of other superficial coatings on the score of their transient nature.

The very general experience is that a waterproofed rendering of cement mortar applied to the outer face of a brick wall provides an effective and permanent remedy against the penetration of dampness, except where improper materials or workmanship, or structural movement of the building, result in cracks.

It is obvious that the application of a waterproofed rendering to the outer face of a wall will hinder the escape of moisture that may be already contained in its thickness, and such moisture can, thereafter, only be got rid of by evaporation from the internal surfaces of the walls. In the case of a new wall, this objection seldom arises; but where it is required to treat a wall that is already saturated, the difficulty can be overcome by applying a rendering of waterproofed cement mortar to the internal surface of the wall, and finishing with an absorptive lime plaster skimming, which minimizes the risk of condensation. This internal treatment has the advantage of quickly shutting out the dampness from the room, and obviates any interference with the outside appearance of the building, which is often a matter of vital importance.

L. E. WALKER

Restorations after Fire

SIR,—There appear to be many ways of securing commissions. I have often received advice from older men on various methods which are not in strict accordance with the Code as laid down by the R.I.B.A. Being an altruistic sort of person, I feel compelled to give your cultured and learned readers the benefit of the latest method which has come under my notice.

A fire broke out in a buildin about ten miles from the nearest town.

An architect secured a seat on the fire engine and waited at the scene of the fire until the fire assessor arrived, and secured the job.

Could an F.R.I.B.A. do this and still retain his status in the profession?

Advice to young architects. Marry the local firemaster's daughter!

WILLIAM DAVIDSON

Settling-Up Honeywood: xv

RIDDOPPO TO THE FORE

BY KARSHISH

(H. B. CRESWELL)

¶ *The interior paintwork has gone wrong; and Sir Leslie Brash, the owner, after failing to get the builder, Grigblay, to accept responsibility, has successively consulted his solicitor, Russ; taken Counsel's opinion; sought to place liability on the manufacturers, the Riddoppo Company; and then sent the whole correspondence to his architect, Spinlove, with instructions to make a final demand on Grigblay for restitution, which demand Grigblay has repulsed.*

BRASH TO SPINLOVE

Dear Mr. Spinlove, 18/9/26.

My protracted absence on an unexpected prolonged round of visits to yachting and other sporting acquaintances has postponed the earlier transmission of my correspondence with Messrs. Russ and the Riddoppo Company anent the failure of the paint, which I now eventually enclose herewith for your perusal previous to our anticipated meeting on the 25th. It would be advantageous if you would be so obliging as to allocate the forenoon of the 26th to a discussion of the proposition which will then be assisted by the convenient presence of the defective paintwork.

I am considerably astonished at the attitude now adopted by my friend Mr. Ziegfeld Swatmug, under whose personal recommendation I eventually arrived at the final decision to utilize Riddoppo; but you will see that the failure of the paint is demonstrably due to the remission of Mr. Grigblay to apply Riddoppo by sufficiently workmanlike methods to procure desirable result. This—may I be permitted to remind you—is precisely what I have all along prognosticated.

As you are aware, I have caused the disastrous consequence of the disintegration of the paint to be mitigated by the application of frequent scrubbings, and it is desirable that I should intimate for your information that this arduous duty has made it imperatively necessary to *further augment the domestic staff*, and that I am keeping an exact account of the extra disbursement occasioned. The dilapidated aspect of Riddoppo is, as you must have discerned, a perfect disgrace to *any* gentleman's house, and I desire that Mr. Grigblay should be finally informed that remedial action without any further protracted delay is at once imperatively necessary.

Yours sincerely,

It will be remembered that four months before a deadlock was produced by Grigblay flatly refusing to accept responsibility for, or have any hand in the restoration of, the defective Riddoppo paint; and that Brash then said he was going to take the advice of his solicitors.

(ENCLOSURE 1)

RUSS AND CO., SOLICITORS TO BRASH

Sir Leslie Brash v. Grigblay and Riddoppo, Ltd.

Dear Sir, 28/5/26.

In accordance with instructions you gave to Mr. Russ in interview on May 7th to take Counsel's opinion, we referred the case for the opinion of Mr. Geoffrey Chawlegger, K.C., and this opinion we have now received.

We do not enclose the opinion as it is of considerable length and highly technical, but Mr. Chawlegger holds the same view of the facts as Mr. Russ expressed to you in conversation, and which may be stated as follows:

1: Your letter to your architect of 24th September, 1925, instructing him to order the builder (Grigblay) to use Riddoppo paint, and stating that you accepted responsibility for so ordering after Grigblay had previously, in his letter of 22nd September, 1925, objected to the paint and refused to take responsibility for the results of using it, absolves Grigblay from any liability for defects which subsequently manifested themselves, except defects which can be shown to be due to his neglect to use reasonable care in applying the paint.

2 : The Riddoppo Company is responsible to you for breach of warranty if it can be shown that the paint was not suitable for the purpose for which it was supplied.

·3 : The Riddoppo Company is not responsible to Grigblay for breach of warranty in supplying and Grigblay is not responsible to the Riddoppo Company for negligence in applying the paint.

4 : Your right of action is against the Riddoppo Company for breach of warranty, or against Grigblay for negligence, or you may cite both and make them jointly defendants to an action for damages.

5 : The architect is not responsible to you for breach of warranty by the Riddoppo Company, but action may lie against him for negligence in not seeing that the paint was properly applied, and he may be joined as defendant in any action you may bring against the builder.

In view of this opinion we think it desirable to settle the matter by getting the parties each to agree to bear a portion of the cost of renovation; failing which we think your only course will be to make all three joint defendants of an action for damages.

Yours faithfully,

(ENCLOSURE 2) BRASH TO RUSS AND CO.

Dear Mr. Russ, 2/6/26.

I have perused your communication with some consternation as it intimates, I apprehend, that a considerable period of time must elapse before the desired renovation will be eventually completed. Is there any prohibitive reason why I should not employ some person to carry out the necessary restoration of the paintwork as a preliminary to suing the defendants for the amount of my consequent disbursement ?

Yours sincerely,

(ENCLOSURE 3) RUSS AND CO. TO BRASH

Dear Sir, 5/6/26.

In the event of both Grigblay and the Riddoppo Company refusing to restore, you are entitled to have the renovations carried out, and include the cost of the work in your statement of claim in any action you may take. It is, of course, advisable that the work done should be confined to putting the paintwork into the condition in which it would be if the defendants had fulfilled their obligations. It will also be advisable to have technical evidence that nothing more was done than was necessary to this end.

Yours faithfully,

(ENCLOSURE 4) BRASH TO SWATMUG

My dear Mr. Swatmug, 9/6/26.

I anticipate you will remember that some twelve months ago you were so very obliging as to interest yourself anent a certain small domestic building-adventure of mine, and to strongly recommend a new novelty super-paint manufactured by Riddoppo, Ltd., of which you are, I think, chairman; and that you also most kindly introduced me to an official of the Riddoppo Company who gave me most invaluable advice upon the appropriately suitable variegation of tints to be selected, and for which kind assistance I had occasion to offer you my very sincere appreciation and thanks.

I regret, however, to communicate that a very brief period of time after the completion of the interior painting of my house, Riddoppo commenced to peel off and disintegrate in a most alarming manner, and it is now demonstrably evident, I am pained to say, that the whole work will have to be again renewed, as it is in a deplorable condition and a disgrace to *any* gentleman's domicile, as you would, I am confident in thinking, most emphatically agree. The builder, who is a somewhat rough, obstreperous fellow, disclaims all responsibility, as he asseverates that he used Riddoppo by my orders which—I need hardly tell you—I did not hesitate to give him after so strong a recommendation from yourself.

It will, as you will perceive, be a very great advantage to me under these distressing circumstances if you would grant me the privilege of consulting you and availing myself of your abundant stores of experienced knowledge; and if you could spare us the pleasure of your company at Honeywood for a week-end—or longer if possible—or can at any time concede us a single night of your valuable time, Lady Brash and myself would have most extreme pleasure in entertaining you.

It is a considerable interval since I had the good fortune to meet you, but I often hear from friends of the activities of your busy life, which, I trust, continue to prosper.

Believe me, my dear Mr. Swatmug,

Ever yours sincerely,

(ENCLOSURE 5) BRASH TO SWATMUG

My dear Mr. Swatmug, 17/6/26.

I ventured to indite a missive to you some three weeks ago anent the Riddoppo paint you were so very kind as to recommend for the interior decorations of an unpretentious house I was building. As I have received no expected reply, it occurs to me either that possibly you never received my letter or that, by some unfortunate disaster, yours to me has gone astray.

Lady Brash and myself have been looking forward to the pleasure of offering you the hospitality of Honeywood Grange and live in hopes that the enjoyable event will not long be delayed.

Ever, my dear Mr. Swatmug,

Yours very sincerely,

(ENCLOSURE 6) SWATMUG TO BRASH

My dear Brash, 24/6/26.

Yes, I received your "missive" and must apologize for not having answered it before, but what with being much abroad and having several flotations in hand, and then this wretched divorce action which you must have heard of, I am afraid your letter escaped my attention.

I am delighted to have been of service to you, so please think no more about it, but I am not clear what matter it is you refer to. However, I have nothing now to do with the Riddoppo Company, as I resigned from the Board when they wrote down the capital, so I fear I can be of no further use to you; but in any case I know nothing whatever about paint, though I always understood Riddoppo was a sound proposition, and what you say is news to me.

I should only be too delighted if it were possible for me to accept your and your good Lady's charming invitation, but, alas ! that is quite out of the question, I am sorry to say.

Yours sincerely,

A charming letter : the letter of a super-salesman who knows no virtue that has not passed the test of "Does it pay?" and who has sold the goods (and the buyer) and sees no more profit in the miserable, grovelling Brash.

(ENCLOSURE 7) BRASH TO SWATMUG

My dear Mr. Swatmug, 26/6/26.

Permit me to thank you in acknowledgment of your communication anent Riddoppo. I anticipated that, as it was at your urgent personal recommendation that I adopted the use of Riddoppo, you would be desirous of assisting me in securing elimination of consequent defects ; however, I comprehend that you have now no connection with the Company and that I need have no apprehension that you will interpret any action I take to secure restitution from the Company as in any way involving yourself.

Lady Brash and myself are extremely disappointed to know we may not immediately anticipate the enjoyment of a visit from you, but we still live in hopes that eventually your divers engagements may permit you to give us that pleasurable gratification.

Believe me, dear Mr. Swatmug,

Yours sincerely,

(ENCLOSURE 8)

BRASH TO SECRETARY, RIDDOPPO CO., LTD.

Dear Sir, 5/7/26.

About twelve months ago you supplied me with a quantity of your New Novelty Riddoppo super-paint

for the interior decoration of Honeywood Grange. I regret to inform you that a very brief period after the painting was completed it commenced to disintegrate and peel away from the surface. I shall be glad if your representative will call at an early date to view the disaster, and to know what proposals you will make for immediate renovation.

Yours faithfully,

(ENCLOSURE 9)
BRASH TO RIDDOPPO CO., LTD.

Dear Sirs, 12/7/26.

Permit me to call your attention to my communication of July 5th anent failure of your Riddoppo paint, and to politely request the favour of an immediate reply without any further procrastination.

Yours faithfully,

(ENCLOSURE 10) RIDDOPPO, LTD. (AND REDUCED) TO L. BRASH, ESQ.

Dear Sir, 19/7/26.

We do not find that at any time have we supplied any goods to your order.

Yours faithfully,

We now may begin to understand why there was an interval of four months between the day Brash referred the question of responsibility to Russ and that on which he wrote telling Spinlove liability lay at Grigblay's door.

It will be noticed that the Riddoppo Company describes itself as Ltd. "and Reduced." This means that the Company has, as Swatmug mentioned, written down —or cancelled—part of its share capital. This writing down is equivalent to cutting losses, and will enable the Company to pay the small available dividends on the reduced nominal share value, which would have been swamped as a percentage on the original share capital. The fact suggests that the Riddoppo Company is struggling to keep its head above water.

(ENCLOSURE 11) BRASH TO RIDDOPPO, LTD.

Dear Sir, 20/7/26.

I beg leave to communicate the obvious intimation that your Riddoppo super-paint was not ordered by myself, nor am I aware that it is a customary habit for private gentlemen to order materials for building operations. The paint was appropriately ordered by my builder, Mr. Marston Grigblay, of Maidstone, as—will you permit me to politely remind you?—you could perfectly well have informed yourself had you so desired.

It is also desirable that you should clearly comprehend that attention to this matter brooks no further protracted delay, and that unless I immediately receive a satisfactory proposal for the restoration of the defective paint I shall employ other persons to carry out the necessary undertakings and hold you liable for the cost as well as for the disbursements I have already incurred in *augmentation of the domestic staff* necessary to the prevention of deleterious effects upon carpets, curtains and furniture.

I have also to ask your permission to intimate that you are not addressing "Mr. L." but Sir Leslie Brash Knight Bachelor, which information you could have immediately acquired from the most cursory reference to *Dod's Peerage, Who's Who*, the Post Office and Telephone Directories and numerous other publications.

Yours faithfully,

(ENCLOSURE 12)
RIDDOPPO TO SIR L. B. K. BACHELOR

Dear Sir, 5/8/26.

We regret error in name, which was new to us, and signature hard to decipher.

We have now communicated with Mr. Grigblay and enclose copies of correspondence, which kindly note, as this closes the matter so far as we are concerned, and oblige,

Yours faithfully,

(ENCLOSURE 12A) RIDDOPPO TO GRIGBLAY

Dear Sir, 26/7/26.

Sir Leslie Bachelor of Honeywood Grange has written complaining our N.N. super-paint ordered by you has gone wrong there, and shall be glad of particulars, as this is the first we have heard of same.

Yours faithfully,

(ENCLOSURE 12B) GRIGBLAY TO RIDDOPPO

Gentlemen, 27/7/26.

We painted out Honeywood with your Riddoppo super because we were so ordered, and if you want to know what it looks like better go and see as we only carried out architect's orders and it is no more business of ours and we will have no more to do with it. You may like to know we did not French polish or put fire to it or squirt any acid at it or boiling water or super-heated steam or molten lead, but if that is what is wanted there is still a bit of it left for you to get to work on.

Yours faithfully,

The last paragraph is a characteristic comment of Grigblay's on the advertisements of "Riddoppo New Novelty Super Paint," which held out, for the encouragement of house-owners and decorators, that it was "fire and acid proof, not to be damaged by jets of boiling water and superheated steam and capable of receiving a high polish."

(ENCLOSURE 12C) RIDDOPPO TO GRIGBLAY

Sir, 30/7/26.

We suppose your saucy letter is because you do not know better and want to insult us because your painters do not know how to read instructions when they are printed in clear print on the tins for everyone to see and go by. The paint we sent you was in perfect condition as supplied to others, and if you have made a mess of things by not following instructions, well, that is your affair and not ours, which kindly note as this is the last we have to say to you or anyone else on this matter and oblige,

Yours, etc.,

(*This ends correspondence covered to Spinlove by Brash's letter of 18/9/26.*)

SPINLOVE TO GRIGBLAY

Dear Sir, 20/9/26.

I enclose copy of correspondence on the subject of failure of Riddoppo, which I have today received from Sir Leslie Brash, who considers it to be demonstrated that the defects are due to the painting not having been properly done, and instructs me formally to call upon you to clean off and repaint forthwith.

Will you return enclosures by Friday morning at latest, and let me know what answer I am to give Sir Leslie, as I am meeting him to discuss the matter on Saturday morning at Honeywood.

Yours faithfully,

Spinlove has no business to send what are, in fact, Brash's private papers to Grigblay. By doing so he takes Grigblay behind the scenes and puts him in possession of his client's "case"—as the lawyers call it.

The detachment Spinlove again displays in his letter is now unavoidable. The time has gone by when any architect could hope to smooth things over and effect a settlement.

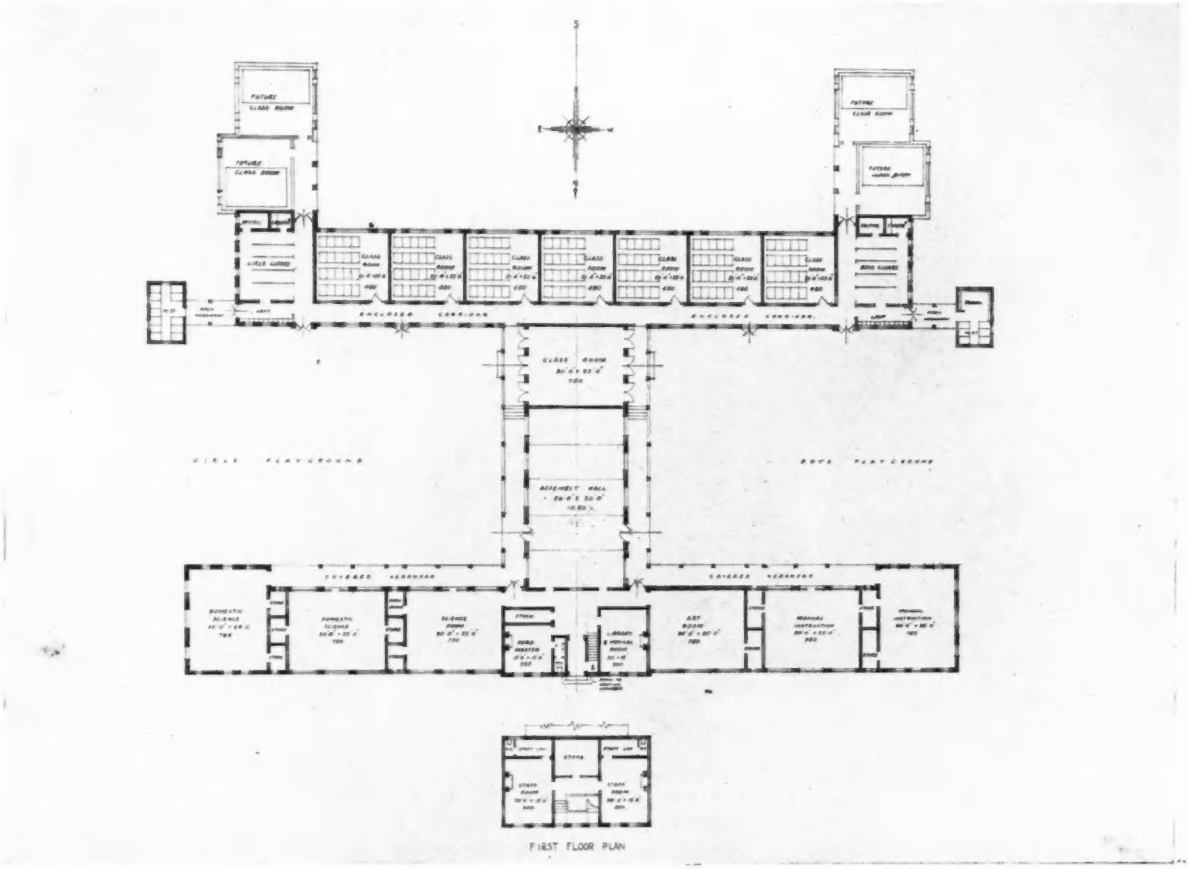
GRIGBLAY TO SPINLOVE

Dear Sir, 21/9/26.

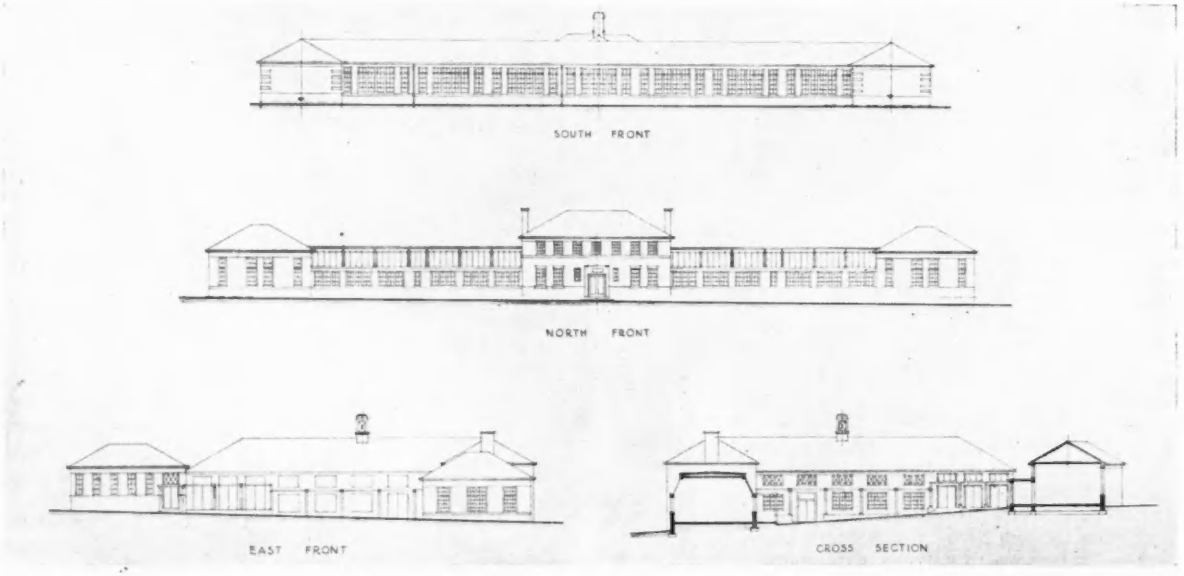
Correspondence *re* Riddoppo returned herewith. We have nothing to add to what we have already said and shall be glad if your client will note same.

Yours faithfully,

And so Sir Leslie Brash is left hanging in the air, which is just what we have been expecting and no more than he deserves, for overriding the advice of his architect and the objections of the builder. If Spinlove had specified Riddoppo and Grigblay had used it without protest, Grigblay—and possibly Spinlove—would have been responsible to Brash; and as Brash holds a substantial sum as security for Grigblay's performance of his covenant to make good defects, he could, if Grigblay failed to make good, employ someone else to do the work and deduct the cost from moneys to become due to Grigblay, so that his position would have been secure. A claim for damages would still lie against the paint company for breach of warranty, if it could be shown that the failure was due to defective paint, but this would be Grigblay's affair entirely, and no concern of Brash.

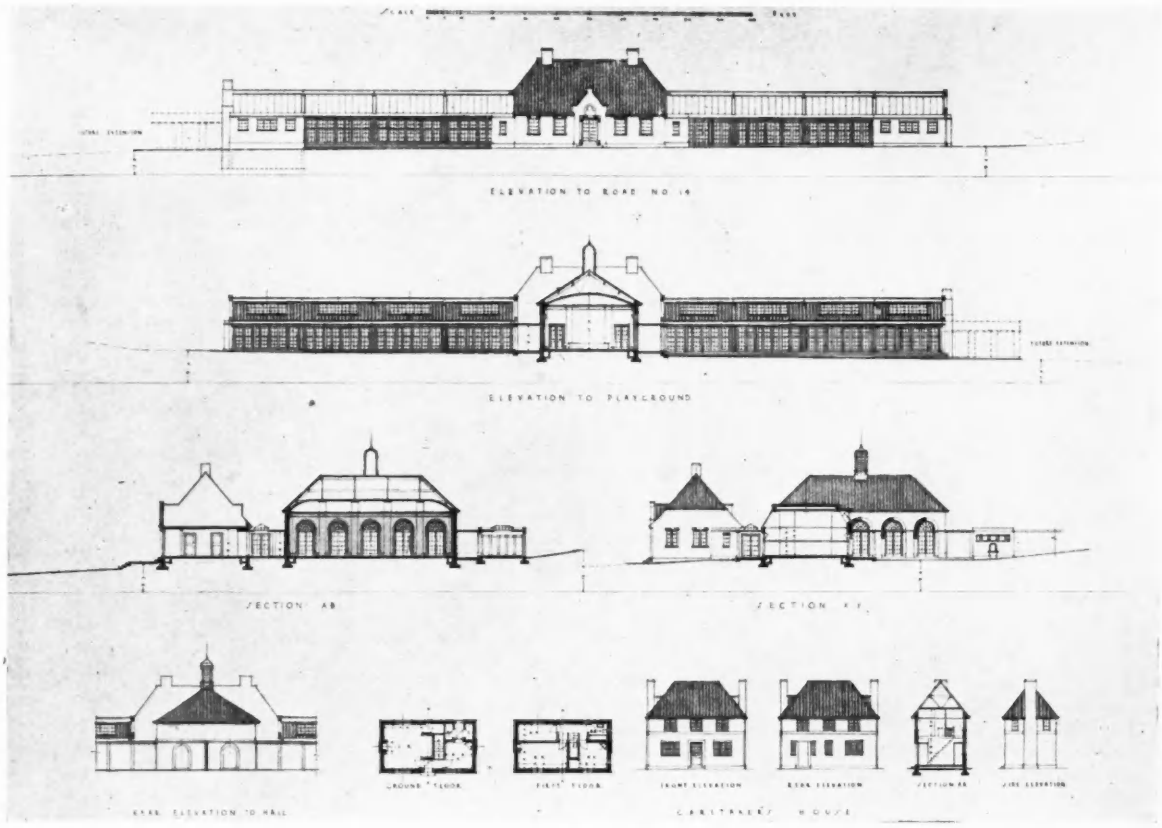


[NEXT WEEK: XVI—A SETTLEMENT AND AN UNSETTLEMENT]

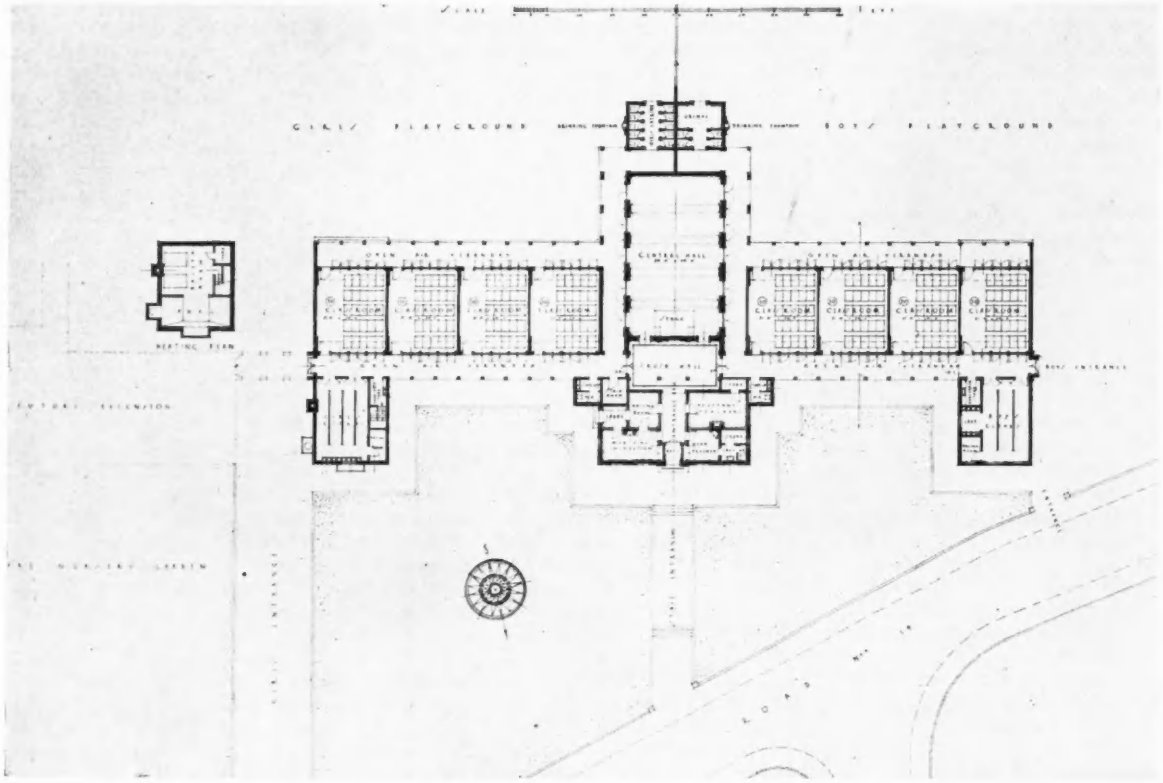


DUDLEY SCHOOLS COMPETITIONS: WINNING DESIGNS

Brewery Fields,
By Crouch, Butler & Savage



H. T. Buckland, Assessor



Priory Estate,
By Albert Bye

Senior Council School, Brewery Fields Estate. The first premiated design (£150) of Crouch, Butler and Savage, Birmingham. The other awards were: second (£100), Scott and Clark, Wednesbury; third (£50), Albert Bye, West Bromwich.

Junior Council School, Priory Estate. The first premiated design (£150) of Albert Bye. The other awards were: second (£100), Webb and Gray, Dudley; third (£50), Cooke and Twist, Birmingham.

THE SPECIFICATION WRITER

Dry Rot: Cause, Prevention, and Cure

BY W. P. K. FINDLAY, B.SC., A.R.C.S., D.I.C.

IN connection with dry rot the "prevention is better than cure" adage applies with great emphasis. Cure is both difficult and uncertain, but prevention is comparatively easy, once the predisposing causes of dry rot are thoroughly understood. "Dry" rot is a bit of a misnomer; it must be most strongly emphasized that dry rot cannot start in timber that is kept continually dry; experiments have shown that even when a floor is artificially infected with the fungus in active form, no attack takes place unless the moisture content of the wood is above 20 per cent. of the dry weight of the wood. But, once an attack has started, it can spread from the decayed area and attack sound dry wood, for the fungus can manufacture water by decomposing the wood and can transport it by means of its strands.

Preventive Measures

First, wood should not be used when in an unseasoned or green condition; decay may start up before it has had an opportunity to dry out. Here it should be noted that should seasoned wood be allowed to become wet again, it is scarcely, if at all, more resistant to decay than unseasoned wood. Hence timber piles should be covered if there is rain during building operations. The moisture content of the timber when it is put in should be as near as possible to the moisture content which it will finally attain in the building. The wood should contain the minimum of sapwood, which is very much more sensitive to decay and to the attacks of insects than heartwood. Sapwood should be bright; "blue stain," which is caused by a fungus that feeds on the contents of the cells and does not damage the walls to any extent, has been said to make the wood more susceptible to decay, but there is no very definite evidence for this; however, its presence does indicate that the timber has been exposed to damp conditions at some time, and it should be carefully examined for traces of decay.

Then the wood must be kept dry when in position in the building: the sources from which moisture may arrive at the timber in a building are as follows: the soil, the walls, the roof, by condensation from the air, and by leaks.

The accession of soil moisture by capillarity may be prevented entirely by the employment of an adequate proof course of slate or bitumen. The necessity of damp proof courses in solid floors upon semi-porous concrete is not always realized, and the Building Research Station have brought out various plans for providing these.

Little dry rot occurs in roofs unless there is an actual leak due to faulty tiles or leading, except in buildings, such as weaving sheds, where there is a high internal humidity with a consequently heavy condensation upon the cold roof; in such a case the provision of extra insulation in the roof will be found helpful.

Porous bricks or stone often lead to damp in the walls, and a cavity wall may be spoilt by the lumps of mortar left in between the two walls, as for instance, on tie wires. Joist ends frequently become decayed owing to the absorption of moisture from a wall, and some form of ventilation to the joist end should be arranged; the brickwork should not come in close contact with the joist on each face.

Condensation is the most difficult source of damp with which the architect has to contend, and it can only be combated by ensuring a circulation of dry air around the wood. Whenever wood is enclosed in such a way that there is not free access of air to it, there is always the risk that moisture will condense on the wood and decay will follow, if there happens to be infection about—as there usually is! The practice of bedding joists into concrete and of laying the floor directly on to the concrete has frequently led to dry rot, and in many places the use of linoleum on such floors is prohibited, at any rate during the first year of the life of a house. The use of these bedded-in joists is to be avoided where possible, and in some cases the wooden floor itself may be omitted with advantage and a material such as cork lino may be fixed directly on to the concrete.

Wall fixing plugs are another source of trouble and should be treated or, where convenient, replaced by breeze fixing blocks.

The maximum ventilation should be provided under floors and ventilating grids, arranged in such a way that there is a through ventilation. Ventilating pipes should be put into solid sleeper walls, which really are better built in honeycomb bond and must of course have their own damp proof courses. On a very wet soil, where the air used for ventilating may itself be damp, it may be very difficult to keep the timber dry without some form of heating, and the installation of central heating in an old house where there has been trouble with dry rot will often insure that there will be no further outbreaks. A word of warning may be given here about the danger of interference with the ventilation under floors by insulation to deaden sound. On no account should sawdust be used for this purpose, and some material such as slag wool, which is non-absorbent or retentive of moisture, should be used; and the wood should be treated.

To sum up the question of ventilation: if you cannot get any ventilation to the timber do not use untreated wood; steel, concrete or wood impregnated with creosote or a toxic salt solution should replace the untreated timber in such cases. As a definite rule never use untreated wood in contact with the soil at any point. It is a good insurance to brush-treat heavily all joist ends and similar danger points with preservative, even where ventilation is good: the cost of such treatment is trifling and may save large replacement costs later, but it should be pointed out that a thin brush treatment does not give full protection and impregnated timber only should be used at points where there is known to be danger.

(*To be concluded*)

IN regard to the ventilation of rooms fitted with gas-fires and geysers, the Minister of Health has circulated to local authorities model clauses in the following terms, with a recommendation that they shall embody them in their existing bylaws:

1: Every person who shall erect a new domestic building and shall fix a geyser or similar gas-heated water apparatus in any room therein shall, for securing the ventilation of the room, construct in connection with the geyser or apparatus an adequate flue:

a: of a diameter not less than that of the flue spigot at the top of the geyser or other apparatus;

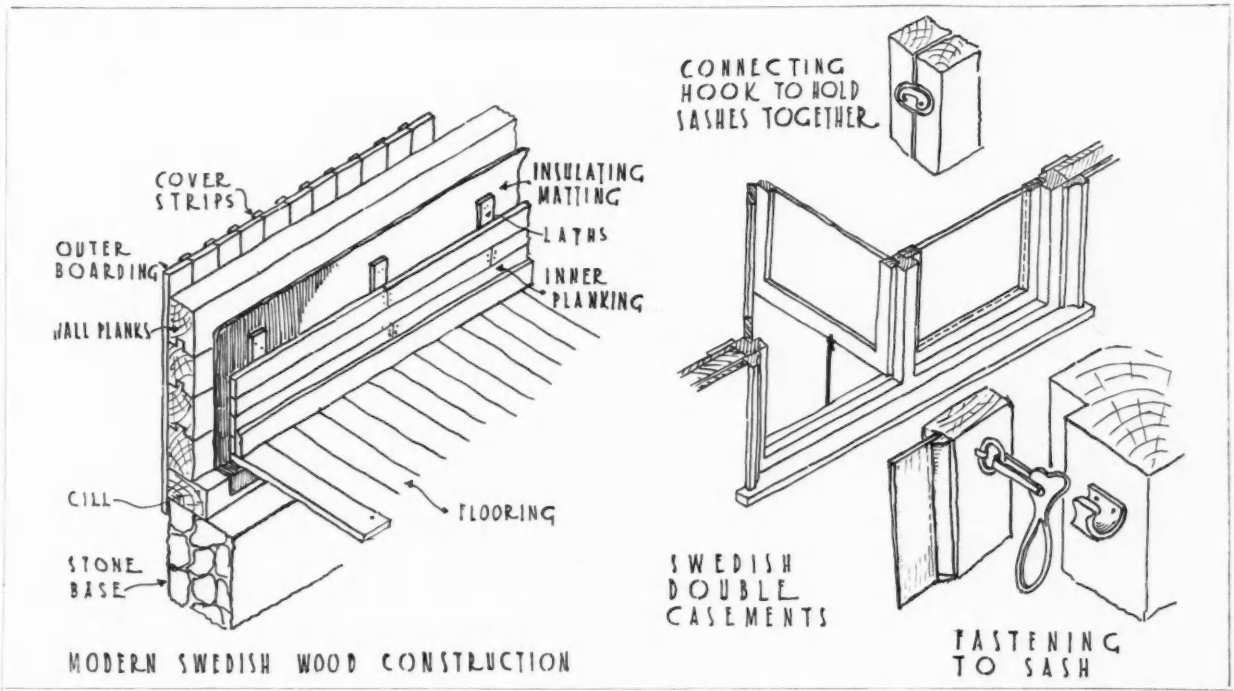
b: fitted with a baffle as high on the flue as possible;

c: discharging either into a chimney not communicating with a habitable room other than that in which the apparatus is fixed, or directly into the external air, in which case the flue shall be fitted with a suitable terminal or outside windguard.

2: Every person who shall erect a new domestic building and shall, for the purpose of heating any habitable room therein, provide a gas-fire or other similar apparatus, shall for securing the ventilation of the room construct an adequate flue in connection with such gas-fire or apparatus. Such flue shall not communicate with any habitable room other than that in which the apparatus is fixed and shall discharge above the roof by means of a chimney or other suitable outlet.

Modern Swedish Timber Construction

NO one who has visited the more remote districts of Sweden can forget the strangeness of that landscape, lake-set, dotted over with timber-built dwellings, each painted a brilliant red. Until recent years wood was the chief building material of the greater part of the country; and although in the towns of the industrial districts brick and stone have superseded the more inflammable material, in the forest areas—which cover two-thirds of the whole—it is still employed in spite of the many disastrous fires which, from time to time, have laid waste whole townships. One result of these recurring conflagrations is the excessive width of many of the streets in such towns as Filipstad or Uddevalla, opening into large, grass-grown, depressing squares.



A typical old wooden house at Vadstena, Sweden. The partition walls, of logs, project through the outer walls ; the ends have been sheeted over.

But the appearance of flimsiness in the Swedish towns is only skin deep, for centuries of experience have taught the secret of making these wooden houses remarkably warm and snug throughout the long, dark winters. In the past the main walls were built of rough logs halved at the angles and placed one upon another. The partition walls, being also halved, often projected through the external walls, as in the illustration from Vadstena, where at a later date these projecting ends have been sheeted over to protect them. Another group of these old houses exists in Vasteras, with their timbers exposed and coloured the original red : all round them are the brick and stone buildings of the modern industrial town.

Internally, the walls had no coverings except in some cases quaint woven hangings, usually depicting some Biblical scene with the figures in the local dress of the periods, such as the Three Magi in riding breeches and shovel hats, and the Wise and Foolish Virgins in crinolines and puffed sleeves. In the country districts the most primitive roofs were composed of larch poles and birch bark covered with grass sods ; and the appearance of these old houses, when the grass sprouts thickly in the spring, gives them an almost human expression of surprise. From such houses one expects to see trolls emerge rather than sober farmers.

The modern builder, who has higher standards of comfort, begins his work by collecting the large glacier-rounded boulders that in prehistoric times have been scattered over the land, and cementing them together to form a low foundation wall a few feet high. On these rough walls are laid the sills and

Constructional details of modern timber construction in Sweden ; and of the special types of double casement-hung windows, with strong latches, described in the accompanying article.

the ground-floor joists. The walls are built of grooved and tongued planking about 9 ins. by 6 ins., laid horizontally one above the other, halved at the angles, and for the cross walls, which do not project beyond the general wall face. The first-floor joists are housed into this timber construction, or "väggplank," without wall plates, and cut off flush with the outer face as the partition wall planking. The flooring is laid directly upon these joists or "golvbjälken."

Roof rafters are also notched directly to the wooden walling, and openings for doors and windows are cut in it, so that the skeleton looks exactly like a large dolls' house. Over this plank wall are nailed externally vertical boards, called "ytterpanel," about 1 in. thick, the butt joints being covered with a thin strip nailed on. This strip is sometimes plain and sometimes chamfered at the edge, and this gives a pleasing variety to the wall of the finished house, especially when it is painted the universal red colour and contrasted with the white of the wide flat window architraves. The inner side of the "väggplank" is covered with some form of insulating felt or wood pulp matting, secured by means of vertical lathing, and to these laths are nailed the horizontal "innerpanel" of narrow planks.

In the best work this felt is taken between the floors and a slag wool filling is packed round the joists as further insulation, for these wooden houses are very noisy with both floor and ceiling covered with boards. The old houses had great stoves of brick with immense chimneys carried up through the roof, and these often occupied the whole end of the living place, and were built up on a raised hearth. Modern houses have dispensed with these great wood-burning hearths and are mostly central heated, or have the tall stoves like tiled wardrobes so common in Germany. But the fuel is still wood except in districts where electricity is cheap and easily tapped.

Windows are a special consideration in all Swedish houses, and the intense cold demands that they shall be double-glazed. The Swedes are an open-air but not an open-window race, and many houses screw up their larger openings and put up a second inner sash in the autumn which is not removed until the spring. Where windows are of the casement type, an ingenious double sash has been invented. This is an ordinary side-hung window with a second casement hinged to the outer side of the first. By means of two little clips these separate windows are held together and open like an ordinary casement. But in windy weather thay can be parted and fixed in the form of a triangle, the opening forming the base, as shown in the sketch. This allows of ventilation top and bottom and baffles even a strong gale blowing directly against the window, and also keeps out driving rain. The latches to these casements are simple and effective. A specially-shaped hook is fixed to the side of the mullion or frame. To the outer side of the casement, by means of a ring, is secured a long oval link pinned through one end to a handle having a specially-shaped head. The link is slipped over the hook with the handle held horizontally, and as the latter is pressed downward the head engages under the curve of the hook and the whole is drawn tight. Each casement is secured by two of these fastenings, which are more weather tight than the cockspur usual in this country.

Sometimes the interiors of the houses are papered and the walls rendered indistinguishable from plastered ones, but in many houses, following an old tradition, the planking is stained and stencilled with conventional patterns. The beautiful greys and greens of these stains set off the bright colours with which the moulded work is usually picked out. One of the most typical of these interiors may be seen in the modern village church of Säro, about twenty miles south of Göteborg.

The Durability of Concrete in Soil

THE acids normally found in soils, classed as the humic acids, are very weak and are without marked effect on cement products, but should the soil be contaminated with sewage or other material giving rise to stronger acids the concrete is liable to be disintegrated. The trouble arising from the presence of alkalies or alkali salts is more common and their effects are more apparent than those due to acids.

Disintegration of concrete in alkali regions is probably due to two causes :

1 : the penetration of saturated liquid into the pores and the crystallization there of the salts. The crystals so formed exert a pressure, similar to that exerted when water freezes in the pores of a stone, and disintegration may ensue.

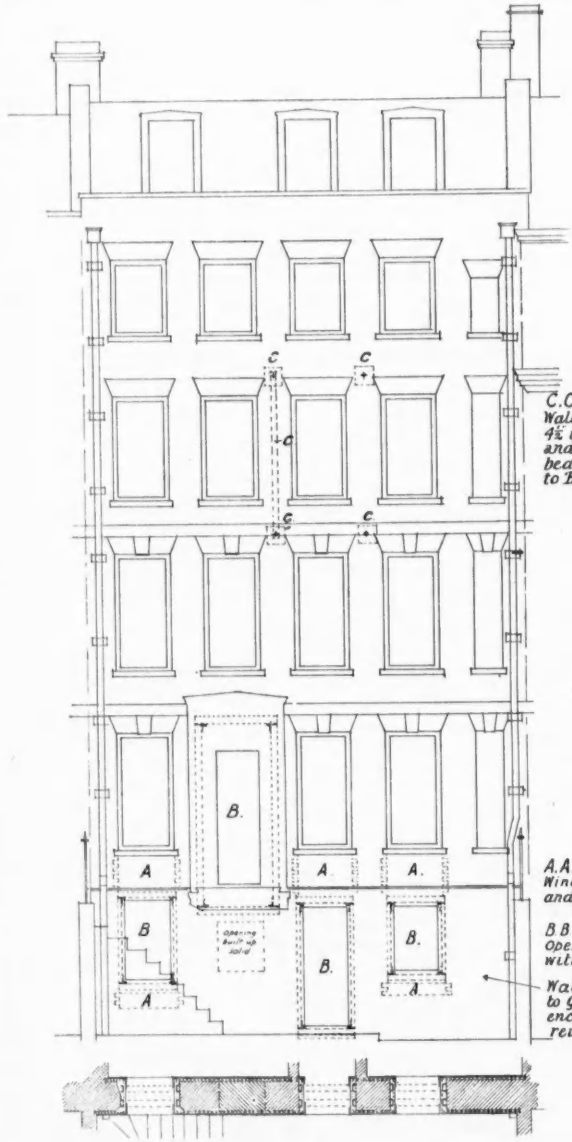
It is thought that the above effect is usually insignificant, but it is possible that under certain conditions it assumes greater importance. The only method of reducing the danger of damage by this cause lies in making the concrete as impermeable as possible by careful grading of the mix and control of the water content. Some advantage might in certain cases accrue from the use of integral waterproofing compounds, but it is possible that increased deterioration might follow from their use in other cases by chemical action with the waterproofing compound.

2 : the chemical action of alkali salts in solution on the lime which is always set free in the setting of Portland cement.

The most frequent cause of trouble is the reaction of a soluble sulphate with the lime, forming hydrated calcium sulphate ($CaSO_4.2H_2O$), which takes place with an increase in volume and, consequently, disintegrates the concrete. This reaction is thought to be the most important cause of disintegration of concrete in alkali regions, and occurs similarly when concrete is attacked by sea-water. The fact that the rate of action is roughly proportional to the sulphate present confirms this view.

If ordinary Portland cement is used, the only methods of reducing the liability to attack lie in making the concrete as impermeable as possible, and, so far as works conditions allow, allowing it to be well cured before being placed in position, care being taken that every facility is given for carbonation of the lime on the surface to take place. In this way an inert layer is formed, and no solution can enter the bulk of the material.

As aluminous cements do not liberate lime on setting, they are less liable to injury in the manner indicated in (2) above, and have been used with advantage in alkali soils in certain districts. As with Portland cement concrete, every care should be observed to obtain a dense impervious mix.



Another method of preventing the disruption of Portland cement concrete is to add pozzolanic material to the cement. Pozzolanas such as trass, burnt clay, burnt shales, etc., contain silica in a form capable of combining with lime in the cold to form calcium silicates, and, therefore, the amount of free lime, if not totally removed, is greatly reduced.

Work is now being undertaken at the Building Research Station with the idea of investigating fully the possibilities of Portland cement and pozzolana mixtures mentioned above.

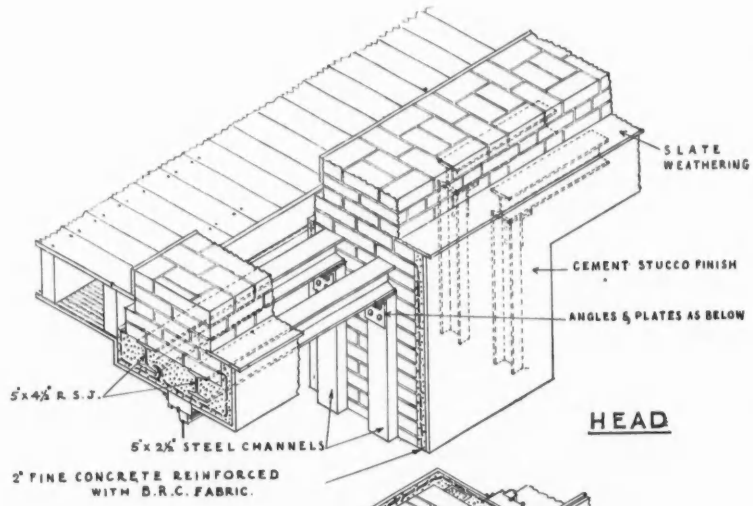
[The above information is extracted from notes supplied by the Building Research Station.]

Underpinning : A Novel Method

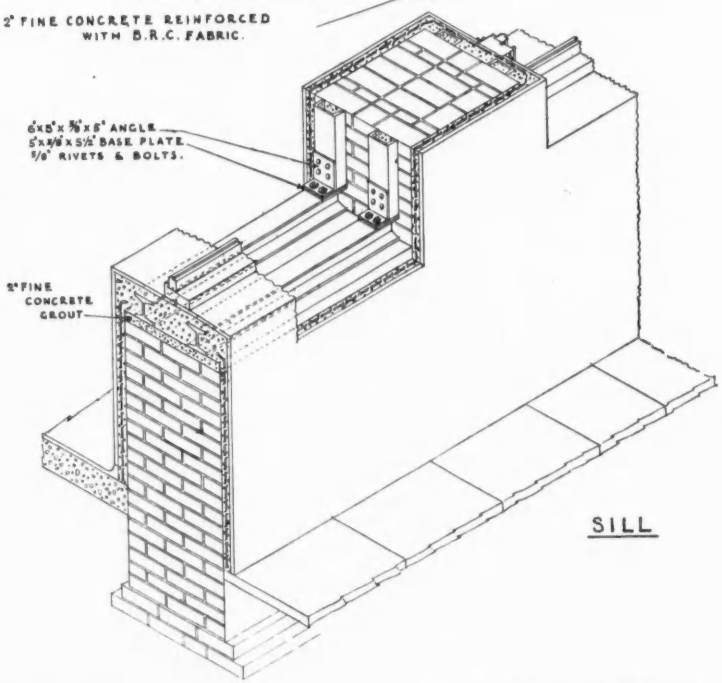
NO. 28 Queen Anne's Gate has recently been renovated under the direction of Sir Aston Webb and Son. During the alterations, it was discovered that the basement piers of the front wall were in a bad condition, showing signs of fracture. It was also found that the ground-floor piers on either side of the entrance doorway had

C.C.C.
Wall plates recessed 4½ into brickwork and connected by beams and tie-rods. to Back Wall

A.A.A.
Window backs built up and bonded to piers



B B B
Openings strengthened with steel frames.



Wall from Basement to Ground floor encased in 2" of reinforced concrete.

UNDERPINNING.

A Novel Method.

The drawing reproduced on the left shows, in elevation and in plan, the general scope of the reinforcing methods described in the note beginning on the facing page. That on the right represents isometrically, on a larger scale, a head and sill.

No. 28 Queen Anne's Gate, S.W.]

[*Architects for renovations: Sir Aston Webb & Son.*

been cut back to accommodate a door of a later date than the original, and that the wall above, which varies from 18 ins. to 14 ins. in thickness, was out of plumb. The front 4½ ins. of this wall is practically a skin with no bond to the inner brickwork, and in all cases the window backs are only 9 ins. thick, with the result that the front wall is nothing more than a series of not too solid piers.

The house has no internal walls between the party walls on either side, all the partitions being of timber, and the weights being carried on heavy chestnut beams, most of which bear upon the narrow piers of the external walls.

Owing to the depth of the made-up ground under the foundations and the difficulty of shoring so as to allow of the basement piers being underpinned, it was decided, in consultation with Mr. B. L. Hurst, M.I.C.E., to retain these piers and stiffen them by means of frames fitted into the openings as shown in the isometric sketch (see page 351). When the frames were in position, the piers and walling from basement to ground floor were wrapped round with steel mesh, spiked into the joints of brickwork and encased in 2 ins. of fine concrete. The doorway on the ground floor was dealt with in a similar manner. As a result of this work, the lower part of the wall forms a solid beam capable of carrying the superstructure with greater safety than at any time since it was first built.

QUESTIONS THAT ARISE

Mixing Plaster

M. F. writes: "*Why do architects and text-books specify 'a pound of hair to 3 cub. ft. of plaster'? Surely, a labourer cannot measure it that way. Can your expert tell me of a suitable way of ensuring that you are putting enough hair in when mixing (other than seeing how much will overhang a trowel)?*"

I know of no other or better way of specifying proportion of hair to bulk of coarse stuff than the current one quoted. It is surely one of the functions of the builder and his representative, the general foreman, to translate specification directions into a form which his workmen can grasp. Hurst's *Architectural Surveyors' Handbook* will supply the proportionate quantities in relation to each yard super of plastering in various thicknesses.

To obtain the finest quality of hair, it is now necessary to specify "hair from an oak-bark tannery" as the normal method of dressing hides now uses sulphuric acid for removal of hair, leaving traces of acid in the hair, which, when mixed with wet plaster, is apt to become brittle or even perish entirely. E. G.

Profit on Doors

"Builder" writes: "*I have just completed a contract for the erection of a pair of houses. In the specification appeared the clause, 'Provide the p.c. sum of £30 nett for standard doors, to be obtained from an approved firm.' I was asked to fix, and add for profit, and so included 10 per cent., i.e., £3, for the latter. The client, however, bought up enough doors for the job, and I formed the openings and made the frames to suit these. He paid carriage to the job, and I unloaded. The architect, in settlement of my account, has refused a profit of 10 per cent. on the cost of the doors, and will only allow for fixing. I contend that I had to accept delivery and had the care of the doors on the job, and am therefore entitled to profit.*"

If "Builder" was asked to be responsible for the safe custody of the doors on the works, I do not think he is unreasonable in asking for a 10 per cent. profit on the doors supplied by the employer.

If the architect or employer did not ask your correspondent to take responsibility, he would not be in any way to blame if they were "stolen or strayed." If any item is provided direct by the employer I consider that the builder should be informed and that an allowance of 10 per cent. (a reasonable profit) should be allowed, to cover unloading, unpacking, care and preservation, etc.

I am, however, all against taking work in this manner out of the builder's hands, and make a practice myself of seeing all work is carried out through him.

W. E. K.

Corrosion of Railings

A. L. P. writes: "*I have noticed that the majority of wrought iron railings, after some years, where leaded into curbing, show signs of corrosion at the feet. Is this caused through carelessness in maintenance as regards painting; galvanic action between lead and iron through moisture; or by inefficient weathering of curbing? Is there any method of building in, other than by leading?*"

The corrosion complained of is to be seen in almost any wrought iron railing that has been caulked to stone or concrete with lead. This is generally regarded as being due to galvanic action set up by the presence of moisture.

In order to avoid such occurrences, many architects specify that the fixing of the bars must be done by pouring in molten sulphur, but, on the other hand, chemists state that sulphur, so used, does not set in a satisfactory manner.

Another method is to caulk with neat Portland cement, but in this case the end of the bar should be first dipped in some bituminous liquid. This, however, I do not consider a good job, for unless care is taken the cement will crack and loosen the bars to the railing.

A number of curbs I have seen are insufficiently weathered, and the caulking is often carelessly done, being pressed in below the level of the curb. Small pin points in the lead are gradually weathered to allow small pools to form.

Despite all the complaints regarding this type of work, I am all for caulking with lead if careful attention is given to both weathering of the curb and the caulking, as well as preservation of the work by painting at the necessary periods.

J. H. G.

Lightning Conductor

D. B. writes: "*I am erecting a church, with a tower, which has four turrets. I have been told that it will be necessary to have a terminal to each of the turrets. I, myself, cannot see any reason for more than one conductor, as this should attract any lightning. What is your expert's opinion on this question, and what are the best materials to use?*"

The science of lightning conductors is seldom understood. They are not pieces of apparatus put up to attract lightning, but a metal through which the discharge most easily reaches the ground.

A lightning flash is only a spark of an arc lamp on a gigantic scale, and when, owing to the unstable conditions of the atmosphere, it takes place between an electrically charged cloud and the ground, it travels by the nearest route.

If an unprotected pinnacle is nearer than one armed with a conductor, the flash will pass through it and not seek the other, therefore the four turrets should each have a terminal coupled to the conductor which runs to earth. Damage is caused by the material struck having what is called a high resistance and presenting a check to the passage of the discharge.

Copper has a low resistance; the lightning, passing more easily through it than through stone or iron, follows the conductor tape to the ground, and no harm is done.

It is particularly important to see that the base plate to the conductor is round and in moist earth, or the discharge, finding a resistance here, may run off the tape on to a rain-water pipe and cause damage.

The material should be copper tape—not copper rope—and be soldered to the base plate. J. E. B.

LITERATURE

REPARATION WORK

IT should not be forgotten that all materials used in the building industry are chemicals of varying activities; all are perishable in varying degrees, and to use them in an intelligent manner the guidance of properly administered scientific knowledge is necessary.

As Mr. Warnes writes, in this exceedingly interesting little booklet, in reparation and also restoration works consideration must be given to (a) the cause or causes of decay, be it in stone, brick, terra-cotta, timber or other building material; (b) the history of the structure and its situation geographically; (c) the stability of the structure and how to carry out stabilizing works satisfactorily with the least disturbance of the original work; (d) the best method of cleaning the various parts of the structure; (e) if the portions requiring attention are in stone, brick or terra-cotta, whether plastic repairs or new material is the better to employ, or if timber, whether by a process of strengthening it can be allowed to remain or if it had better be replaced by material of a similar kind; (f) the special methods of preparation before carrying out the repairs and whether the finished work is to be reproduced to the original detail or to be left to match the aged material in juxtaposition; (g) the best method of dealing with plaster work of historic value, and also of wall paintings and probable frescoes; (h) the somewhat difficult problem of cleaning and refixing, in certain instances, medieval stained glass; (j) the possible need of metal reinforcement in various situations; (k) the erection of special scaffolding and shorings.

The author investigates the causes of decay in stone, brick and terra-cotta, timber, wall paintings, plasterwork and stained glass, and gives some useful hints on reparation work. He shows eight illustrations of work which has been well carried out and of that which has been badly done. One of the illustrations (reproduced below) shows how caustic soda, when used in a cleaning process, ultimately damages stone.

Notes Relative to Reparation Works. By Arthur R. Warnes, F.I.C., A.INST.P., M.I.CHEM.E., A.I.STRUCT.E.

From Notes Relative to Reparation Works] [*By Arthur R. Warnes.*

An example of how caustic soda (used in a cleaning process) ultimately damages stone.

Mr. T. Cecil Howitt, the former Nottingham housing architect, in an article entitled *Municipal Housing Record* which appears in The Trades Union Congress souvenir handbook, claims that Nottingham has produced far more houses per head of the population than any other town in the world.

OBITUARY

JAMES B. DUNN: 1861–1930

It is with deep regret that we record the death of Mr. James Bow Dunn, R.S.A., F.R.I.B.A., who died on August 25, after an operation, at the age of sixty-nine.

Mr. Dunn, who was a native of Pollokshields, was educated at George Herriot's, travelled on the Continent, and was articled to the late Mr. James Campbell Walker, of Edinburgh. He commenced practice in 1895.

Among the competitions for which he received premiums were those for the library of the Society of Solicitors, Edinburgh; the Adam Smith and Beveridge memorial halls, Kirkcaldy, Fifeshire; public library, Edinburgh, and, in 1928, the new buildings for the George Watson's College, Edinburgh. The latter competition was fully illustrated in our issue for June 13, 1928.

His other work in Edinburgh includes the *Scotsman* building (in partnership with Colonel J. L. Findlay); the Wesleyan Methodist halls, the Ladies' Club, the Victoria buildings, and the Dean and Charteris memorial churches. He also built mansion houses at Balnacraig and Glenfarg, Perthshire, Beechholme, Edinburgh, Dromore, Gullane, Nether Caberstone, Peebles-shire, Bellenden, Inverleithen, and Gargrave House, Yorkshire. He was responsible for the reconstruction of Blair Drummond, Perthshire, and Haggerston Castle and Carham Hall, Northumberland.

Mr. Dunn was elected a Fellow of the R.I.B.A. in 1905; president of the Edinburgh Architectural Association in 1910, a position which he occupied for one year; and an associate of the Royal Scottish Academy in 1918. He became a full member of the Academy, in company with another Scottish architect, Mr. James Miller, F.R.I.B.A., last February.

D

He was a keen fisherman, and was also much interested in gardening. He married Catherine Norman, daughter of Mr. John Ballantyne, of Stoneyhill, Walkerburn, and had one son and two daughters.

ALFRED A. HUDSON : 1852–1930

The death of Mr. Alfred Arthur Hudson, K.C., HON. A.R.I.B.A., occurred, after a short illness, on August 21, at the age of seventy-eight.

The eldest son of Mr. Henry Hudson of Winchester, he was educated at private schools and at Morat in Switzerland. He was called to the Bar by the Inner Temple in 1885, and was afterwards elected a Bencher.

Mr. Sydney Tatchell, F.R.I.B.A., in a recent issue of *The Times*, writes : The death of Mr. Alfred Arthur Hudson will, I know, bring a sense of personal loss to those—and their name is legion—who have had the privilege of knowing him as friend and counsellor. Apart from his work at the Bar, he was a man of wide interests and masterly achievement. Whether in the beautifying of the landscape surrounding his delightful home in Buckinghamshire, or in the architectural embellishment of the Benchers' rooms in the Inner Temple, he brought to these tasks the enthusiasm of youth, the spacious outlook of experience, and the cultured taste of an artist.

His early years were devoted to the study of architecture, and the knowledge and interest then acquired enabled him to bring to the solution of the many building problems submitted to him a ready understanding of their technical as well as their legal aspects. The R.I.B.A., in electing him in 1902 an Honorary Associate, acknowledged the valuable services he had rendered to the Institute and the profession generally.

A man of great personal charm, manifest alike in Court and in chambers, Mr. Hudson inspired the utmost affection and loyalty in those with whom he was associated. In the hearts of his friends and colleagues there will remain a fragrant memory of a very great and chivalrous gentleman.

SELWYN IMAGE : 1849-1930

Mr. Selwyn Image, poet, artist in stained glass, and twice Slade Professor at Oxford, died recently at his home in Holloway, at the age of eighty-one. It is a remarkable coincidence that Mr. Image, who was a prominent figure in art circles of the latter part of the nineteenth century, died and was also buried on the same day as Sir Aston Webb.

Mr. Image, born at Bodiam, the son of a country clergyman, was educated at Marlborough and went up to Oxford as an exhibitioner. He took his degree in 1872, and was ordained in the same year to the curacy of All Hallows, Tottenham. He transferred to St. Anne's, Soho, in 1876. After four years at St. Anne's, he gave up the clerical life in order to devote himself entirely to the arts and literature. With his friends Mr. A. H. Macmurdo and the late Mr. H. P. Horne, he founded *The Hobby Horse*. In this journal much of Image's writings appeared. Of his verse he only published one volume, *Carols and Poems*, but, besides this, many of his poems have been from time to time privately printed. But the field of art which Image made particularly his own was that of stained glass. His windows at St. Luke's, Camberwell, and in Morthoe Church, Devon, are excellent examples of his work.

In 1901 he became Master of the Art Workers' Guild. He was also appointed to the Slade Professorship in 1910, and again for a second tenure in 1913. His predecessor in this office was John Ruskin, by whom he was greatly influenced.

CHARLES FLINT : 1873–1930

We regret to record the death of Mr. Charles Flint, L.R.I.B.A., of The Quadrant, Buxton. A son of the late Mr. Thomas Flint, the deceased served his articles at Stoke-on-Trent. Subsequently he became a partner in the firm of Garlick and Flint. He was responsible for a large amount of public and private work in Buxton and the surrounding district.

ELECTRICITY *v.* GAS

Mr. H. R. Kemple, in a recent issue of *The Surrey Mirror*, writes :—

I have often been asked : " Can we not heat our church or building economically by electric, instead of by gas radiators? "

As far as I have been able to find, the answer to this direct question has never been definitely and plainly laid down; for the benefit, therefore, of those who are perplexed in regard to the matter, I give the following :—

If the cost in pence of one unit of electricity is equal to—

(cost in pence of 1,000 cub. ft. of gas) × ·03415 ÷ (therm value of 1,000 cub. ft. of gas)

then the cost of heating by electricity will be precisely the same as the cost of heating by gas.

Take the case of gas as supplied by the East Surrey Gas Company : Their charge in pence for 1,000 cubic feet of gas is " 60," and the therm value of their gas for 1,000 cubic feet is " 4·5d.," therefore—

$$\frac{60 \times \cdot03415}{4\cdot5} = \cdot4553\text{d.}$$

which means that unless we can obtain electricity at ·4553d. (or rather less than ½d.) per unit, it would cost more to heat by electricity than by gas.

A simpler rule, and one easily recollected, is the following : Divide the cost per therm by 30; this will give almost exactly the same result. Thus the East Surrey Gas Company charge is 13·4d. per therm; then 13·4 divided by 30 gives ·45d. as the required cost of electricity per unit.

COMPETITIONS OPEN

September 8.—The Burton-on-Trent Local Education Authority invites architects to submit competitive designs for a proposed new Council school to accommodate approximately 800 children, to be erected on a site in Clarence Street. Assessor : H. T. Buckland, F.R.I.B.A. Premiums : £150, £100 and £50 for the designs placed 1st, 2nd and 3rd, respectively. Applications for the conditions of the competition and site plan should be made on or before September 8 to L. E. Burgess, Secretary and Director of Education, Education Offices, Guild Street, Burton-on-Trent. Deposit £1 1s. Latest date for submission of designs : October 1, 1930.

September 30.—The Isle of Man Education Authority invited architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums : £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs : September 30.

October 30.—The Maternity and Child Welfare Committee of the City of Birmingham invites architects to submit competitive designs for two infant welfare centres, one at Warren Farm Road, Kingstanding (Perry Barr), and the other at Trittiford Road (Billesley). Competitors must have occupied offices in Birmingham as their head office for six months prior to July 19, 1930. Assessor : A. T. Butler, F.R.I.B.A. Premiums, £100 in respect of each centre. Conditions of competition and plans of the sites may be obtained on application to Herbert H. Humphries, M.INST.C.E., City Engineer and Surveyor, the Council House, Birmingham. Deposit £1 1s. for each centre. Latest date for submission of designs : October 20.

October 30.—The General Building Syndicate, Ltd., invites architects to submit competitive schemes for the development of a site at Liverpool, fronting St. John's Lane, Queen Square and Rose Street. Premiums : £250, £100 and £50, for first, second and third prizes, respectively. Particulars, etc., are obtainable on application to the Secretary, the General Building Syndicate, Ltd., 36 St. Martin's Lane, W.C.2. Latest date for submission of designs : October 30, 1930.

November 30.—The Guildford Cathedral Committee invites any architect, who has been engaged in the design of cathedrals or churches, to submit for examination drawings and other illustrations of his works; or a design for a cathedral. Not more than three sets of drawings may be submitted, packed in one large portfolio. The Committee, with the assistance of Mr. Walter Tapper, A.R.A., will examine the portfolios, and select a limited number of architects for the Final Competition. Each architect selected for the final competition will receive 500 guineas, whether his design is accepted or not. Portfolios should be addressed to The Venerable the Archdeacon of Surrey, The Diocesan Office,

Lloyds Bank Chambers, Guildford, not later than November 30.

December 25.—A prospectus giving full particulars of the international competition for the Ukrainian State Theatre, organized by the Kharkov Town Council, Russia, has recently been issued. The theatre is to be erected in the centre of Kharkov, on the site of the present Comsomolsky Square (Young Communist Square), and will contain a mass musical stage and seating capacity for 4,000 persons. The competition will be assessed by a jury comprising a president, vice-president and fifty-six members. Prizes: 1st, 10,000 rub.; 2nd, 8,000 rub.; 3rd, 6,000 rub.; 4th, 5,000 rub.; 5th, 4,000 rub.; 6th, 3,000 rub.; 7th, 8th and 9th, 2,000 rub.; 10th, 11th, 12th, 1,500 rub. Drawings should be sent to the Kharkov Town Council on or before December 25. Copies of the prospectus are obtainable from the Embassy of the Union of Soviet Socialist Republics, Harrington House, 13 Kensington Palace Gardens, London, W.8.

December 31.—The Incorporated Association of Architects and Surveyors invites competitive designs for a Model Petrol Filling and Service Depot. The competition has the full support of the Automobile Association, the Scapa Society and other bodies which have at heart the preservation of the countryside, as well as the principal motor-trade journals. Assessors: Alfred Stephens Cross, M.A. (CANTAB.), V-P., I.A.A.S.; Edward H. Fryer, Deputy Secretary of the Automobile Association; and Walter Groves, Editor of *The Motor*. Prizes: 50 guineas, 20 guineas and 10 guineas for first, second and third places, respectively. Smaller awards may also be made on the advice of the assessors, and at the discretion of the Council of the Association. In addition a prize of 10 guineas and two prizes of 5 guineas each will be awarded to laymen for the best suggestions submitted with or without sketches. Full particulars, etc., are obtainable from the Secretary, the Incorporated Association of Architects and Surveyors, 1 Wilbraham Place, London, S.W.1. Latest date for submission of designs: December 31, 1930.

No date.—The Committee of the Foundation Hospital and the Rectorate of the Royal Yugoslavian University of Zagreb invites competitive designs for the general rebuilding plans of the Foundation and Clinic Hospital of Zagreb. Assessors: 1. Dr. Srkulj Stjepan, Burgomaster and Chairman of the Foundation, as president of the jury. 2. Henauer, W., architect, of Zurich (or his representative, Ch. Thevenaz, architect, of Lausanne), for the Swiss Engineers' Association of Germany. 3. Dr. Ing. Kreis Wilhelm, of Dresden, for the Engineers' Association of France. 4. Arch. Expert H.R., of Paris, for the Engineers' and Architects' Association of France. 5. Dr. Culumovic Pavao, Primarius, for the Medical Association of Zagreb. 6. Ing. Gabric Franjo, for the Yugoslavian Association of Engineers and Architects, Zagreb section. 7. Dr. Rasuhin Josip, deputy for the Directors of the Institute of Hygiene Foundation Hospital of Zagreb. 8. Prof. Dr. Prasek Emil, for the medical faculty of Zagreb. 9. Dr. Durst Franjo, for the medical faculty of Zagreb. 10. Arch. Heinzel Vjekoslav, Alderman of the City of Zagreb. Committee representative of the jury: Ing. Jurkovic Mato, Stadtbaurat in Zagreb. Prizes: 1st, 20,000 Swiss francs; 2nd, 15,000 Swiss francs; 3rd, 10,000 Swiss francs. 15,000 Swiss francs have been set aside for any further work which may be required. Programme and particulars of the competition will be sent on or after August 15, 1930, on application to the Stadtvorstand of Zagreb (Mr. Matica, secretary), Room No. 70, 2nd floor, on payment of 200 dinar. Latest date for submission of designs: January 15, 1931.

THE ARCHITECTS' DIARY

WEDNESDAY, SEPTEMBER 3

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Pieces in Concrete Piles." By M. J. C. McCarthy, A.M.INST.C.E., A.M.MECH.E. "Stresses in Dams." By S. D. Carothers. "A Study of Plain and Reinforced Concrete Retaining Walls." By Ewart S. Andrews, B.SC., M.INST.C.E. "Reinforced Concrete in Great Britain." By A. Kirkwood Dodds, M.C., M.SOC.C.E. (FRANCE). "Reinforced Concrete in Engineering: Representative Examples of British Practice." By M. Gerard, M.SOC.C.E. (FRANCE).

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Exhibition of English Mediæval Art in the North Court. Open until September 21, 10 a.m. to 6 p.m. (Thursdays, 10 a.m. to 10 p.m.) **10 a.m.**

THURSDAY, SEPTEMBER 4

INTERNATIONAL CONGRESS FOR CONCRETE AND REINFORCED CONCRETE. At Liége. "Work of the Building Research Station on Small Movements in Concrete." By Dr. W. H. Glanville, B.SC., A.M.INST.C.E. "The Effect of Temperature on Flat Arches Constructed of Reinforced Concrete." By C. S. Gray, B.SC., A.M.INST.C.E. "Temperature and Cement." By Dr. Oscar Faber, O.B.E., M.INST.C.E.

SATURDAY, SEPTEMBER 6

Sunrise, 6.19 a.m. Sunset, 7.37 p.m.

XII. INTERNATIONAL CONGRESS OF ARCHITECTS. In Budapest. September 6 to 13. Opening of International Exhibition of Architectural Designs in the Picture Gallery of the Hungarian Scientific Academy. **10 a.m.**

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. South-Western District Meeting, to be held at Bath.

SIXTH INTERNATIONAL ROAD CONGRESS, to be held at Washington. Until September 11.

TUESDAY, SEPTEMBER 9

ASSOCIATION OF PUBLIC LIGHTING ENGINEERS. Annual Meeting and Conference, to be held at Leicester. Until October 11.

THURSDAY, SEPTEMBER 11

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Italian Furniture." 12 noon. "Italian Decoration." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

FRIDAY, SEPTEMBER 12

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. North-Western District Meeting, to be held at Runcorn.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "French Furniture." By Miss M. Chamot. 12 noon. "Gothic Woodwork." By T. F. Wilson, F.R.S.A.I. 3 p.m. **12 noon.**

SATURDAY, SEPTEMBER 13

Sunrise, 6.30 a.m. Sunset, 7.21 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "Later English Furniture." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

WEDNESDAY, SEPTEMBER 17

INTERNATIONAL BUILDING TRADES EXHIBITION, Olympia. Until October 1.

BRITISH GLASS CONVENTION. At Buxton. Until September 20. Morning: Meeting of the Council of the Society of Glass Technology. Afternoon: General Meeting of the Society of Glass Technology Evening: Informal Presidential Reception of members and their friends at the Palace Hotel.

THURSDAY, SEPTEMBER 18

BRITISH GLASS CONVENTION. At Buxton. Morning: Official welcome by the Mayor and Corporation of Buxton, at the Peak Buildings. Presidential Address. Discussion on "Elimination of Waste in the Glass Industry," to be opened by Dr. Miles. Official luncheon. Evening: Mayoral Reception at the Palace Hotel.

FRIDAY, SEPTEMBER 19

R.I.B.A., 9 Conduit Street, W.1. Exhibition in the Galleries of Drawings submitted in competition for the Archibald Dawnay Scholarship (10 a.m. to 7 p.m.; Saturdays, 2 p.m.). Until September 30. **10 a.m.**

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussions on "Marketing Methods in the Glass Industry" and "Public Propaganda in the Glass Industry," to be opened by Sir Francis Goodenough, C.B.E., and H. Gordon Selfridge, respectively. Afternoon: Golf Competition for championship of the Glass Industry. Evening Banquet at the Palace Hotel.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. Meeting to be held at Southampton.

SATURDAY, SEPTEMBER 20

Sunrise, 6.41 a.m. Sunset, 7.5 p.m.

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussion on "The Convention—Present and Future," to be opened by Mr. Walter Chance, M.A., J.P.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Stained Glass (1)." 12 noon. "Stained Glass (2)." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. North Wales District Meeting, to be held at Bangor.

WELSH SCHOOL OF ARCHITECTURE, Technical College, Cardiff. Latest date for submission of application forms for the Scholarship Examinations.

MONDAY, SEPTEMBER 22

NORTHERN POLYTECHNIC, Holloway, N.7. Commencement of new term.

FRIDAY, SEPTEMBER 26

NATIONAL SMOKE ABATEMENT SOCIETY. Annual Conference, to be held at Leicester until September 28. During the conference the following papers will be read: "Fuel Research and Smoke Abatement," by Dr. Margaret Fishenden; "The Smoke Problem in Sheffield," by F. J. Bailey and E. C. Evans; "Smoke and the Weather," by a meteorological expert; and "The Smoke Nuisance as the Airman Sees It."

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS. London and Home Counties Branch. Dinner and Dance to be held at the Quadrant Restaurant, Regent Street, W. Tickets, 7s. 6d.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. Yorkshire District Meeting, to be held at Hipperholme.

SATURDAY, SEPTEMBER 27

Sunrise, 6.53 a.m. Sunset, 6.49 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Continental Glass." 12 noon. "English Domestic Glass." 3 p.m. Both lectures by Miss B. Goldsmid. **12 noon.**

MONDAY, SEPTEMBER 29

ROYAL SANITARY INSTITUTE, 90 Buckingham Palace Road, S.W.1. Commencement of Sanitary Inspectors' Course. **6 p.m.**

TUESDAY, SEPTEMBER 30

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS, 1 Wilbraham Place, S.W.1. London and Home Counties Branch. "The Making of a Cathedral—Liverpool." By E. W. Harvey-Piper. (Lantern Illustrations.) **7 p.m.**

ISLE OF MAN GRAMMAR SCHOOL COMPETITION. Latest date for submission of designs.

WEDNESDAY, OCTOBER 1

BURTON-ON-TRENT SCHOOL COMPETITION. Latest date for submission of designs.

FRIDAY, OCTOBER 3

TOWN PLANNING INSTITUTE. Twelfth Annual Country Meeting, to be held at Leicester. Until October 5. Full particulars are not yet available.

SATURDAY, OCTOBER 4

Sunrise, 7.4 a.m. Sunset, 6.53 p.m.

MONDAY, OCTOBER 6

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Commencement of Winter Term.

WELSH SCHOOL OF ARCHITECTURE, Technical College, Cardiff. Commencement of School Year.

ROYAL SANITARY INSTITUTE, 90 Buckingham Palace Road, S.W.1. Commencement of Smoke Inspectors' Course. **6 p.m.**

TUESDAY, OCTOBER 7

R.I.B.A., 9 Conduit Street, W.1. Closing date for applications for admission to the Intermediate Examination.

THURSDAY, OCTOBER 9

C.P.R.E. Third Annual Conference, to be held at Welwyn Garden City. Until October 11. Among the papers to be read are the following: "The Preservation of Commons, Parks, Open Spaces and Nature Reserves, and the Provision of Playing Fields." By Sir Lawrence Chubb. "Town and Regional Planning in their Relation to the Objects of the C.P.R.E." By Sir Theodore Chambers, K.B.E., F.S.I. "Education and Citizenship in their Relation to the Safeguarding of the Countryside, etc.," and "Flora and Fauna, including the Preservation of Trees, Wild Flowers, Roadside Plants and the Protection of Birds." Each paper will be open to discussion.

MONDAY, OCTOBER 20

BIRMINGHAM WELFARE CENTRES COMPETITION. Latest date for submission of designs.

TUESDAY, OCTOBER 28

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS, 1 Wilbraham Place, S.W.1. "English Ironwork." By Edward Yates. **7 p.m.**

Secretaries of architectural and allied societies are invited to forward particulars of their forthcoming meetings and visits for publication on this page. They should be addressed to the Editor at 9 Queen Anne's Gate, S.W.1.

A SURVEY OF HOTEL DESIGN

BY HERBERT W. MATHEWS

IT will be agreed that it is of the utmost importance that the hotel shall make a good "first impression," because in the absence of a previous visit the patron, after satisfying himself upon his survey of the outside of the house that it is such as he thinks will meet his views, is apprehensive and keen in his observation of the atmosphere prevailing upon his entry. The entrance hall should be light, well ventilated, heated, and spacious, without undue encumbrance by way of superfluous or "fussy" fitments or furnishings; the reception bureau should be in view of the entrance and not be cramped.

The lounge should be in close proximity to, and have an appearance of forming part of, the main hall, but screened therefrom by clear glass screens. Care should be taken that, whilst the lounge be "on view" from the hotel entrance, the arrangement of chairs and settees should be such that the incoming guest is not embarrassed by being "sized-up" by the guests already in occupation.

Where a lift is necessary it should be quite close to the reception bureau and should be well lighted, and light in colour decoration, and of ample size. In my opinion the lift should not be in the well of the staircase, which latter, for appearance, light and safety from fire panic, should be entirely free and a distinctly separate unit from the lift shaft.

The dining-room and other principal public rooms should lead directly from the lounge hall, and if possible form "a suite," with wide folding doors from the entrances and from each to the other, and the door to the dining-room should, as nearly as possible, be opposite and near the lift and staircase.

In the planning of the dining-room it is important to have all the window frontage possible; it should be entered by wide folding doors from the hall, and should be a distinct projecting wing so as to provide windows on at least two and preferably three sides; almost every guest likes a table "near the window."

In furnishing the dining room, only the actual articles needed for seating, tables, and service should be included; floral table decorations should be low in height to avoid obstruction of guests' views of each other at the same table; and if space allows, there should be simple displays of palms or other suitable plants in tubs, judiciously spaced, to a height of about 5 ft. in some part of the room to meet the wishes of those who desire some privacy at meals; this need not be general, as the majority of guests like a full view of the room and their fellow-diners.

There should be ample provision for writing in every public room; whilst central heating is essential, an open fireplace should be provided in each room, plainly designed, and in a position to be seen from every part of the room and not adjacent to, but within view of the doorways.

The electric lighting must have special care; there should be no bare lights, all fitments giving a reflected light; and whilst due regard should be had to economy in consumption of current, it should not be stinted; in some parts of the rooms the light should be subdued, and this effect can be best obtained by distribution of floor and bracket fitments, all separately and locally controlled.

Staircases should be open and the risers should be easy.

Landings and corridors should be wide, and lighted and ventilated by windows as much as possible.

Bedrooms are of paramount importance; they should be designed to fit the furnishings, and not the furnishings to fit the rooms.

The positions of doors in relation to bedsteads, fireplaces and windows are points which must have careful study. Every room should have hot and cold running water, the basin being as far as possible from the head of the bed and so placed as to have the maximum of window light.

Electric light and bells should be from plugs at the sides of bedsteads, and thus a table light can be used or an attachment to the head of the bedstead can be made both for the light and bell and so add to the comfort of the occupants. Dressing table lights should be situate so that the light is on the face and not at the back of the head.

Furnishing should be simple but comfortable, and mouldings both in same and in the building joinery should be strictly avoided.

Maids' service should be centrally situated, to avoid delay in answering bells, etc.

There cannot be too many baths, both public and private; simplicity of fittings is desirable from the point of view of both use and maintenance.

Now I come perhaps to the most important of all the departments, viz., the kitchens, services and cuisine. These should be placed in a position close to the dining-room with the disposition of the various sections in convenient juxtaposition to each other; the kitchen and still-room must be distinct and yet placed adjacent to the common services, which must be in close proximity but camouflaged and blocked off by double service doors and in-and-out lobbies from the dining-room.

[The above article, slightly abridged, is reproduced from *The Hotel Review*.]

SOCIETIES AND INSTITUTIONS

R.I.B.A. COUNCIL MEETING

Following are some notes from the minutes of a recent meeting of the R.I.B.A. Council :—

The R.I.B.A. (Henry Jarvis) Studentship at the Architectural Association School of Architecture, 1930.—The Board of Architectural Education reported that in the competition for this studentship conducted at the Architectural Association School of Architecture, two students, Messrs. D. C. McDonald and A. V. Nunn, were placed first, and that, as a matter of urgency, they had approved the division of this studentship of £50 between the two students.

The R.I.B.A. Maintenance Scholarships Committee.—It was decided, on the recommendation of the Board of Architectural Education, to appoint the chairman of the allied societies' conference as an *ex-officio* member of the Maintenance Scholarships Committee.

The New R.I.B.A. Bylaws.—It was formally reported to the Council that the Privy Council had approved the new R.I.B.A. bylaws.

The Code of Professional Practice.—It was decided, on the recommendation of the Practice Standing Committee, to amend the first paragraph of clause 3 of the Code of Professional Practice to read as follows: "An architect must not advertise nor offer his services by means of circulars or otherwise."

Revision of the R.I.B.A. Scale of Charges.—The revised scale of charges, as recommended by the special committee on the scale of charges and the Practice Standing Committee, was provisionally approved and will, subject to the terms of Bylaw 38, be submitted for ratification at the council meeting on October 20.

Students.—The following probationers were elected as Students of the R.I.B.A. :—

Briggs, O. G. V. (University of London).
Burton, J. W. (Northern Polytechnic).
Comber, E. E. (Architectural Association).
Dallas, H. N. (Bombay School of Art).
d'Avoine, P. A. (Bombay School of Art).
Reith, W. J. (Robert Gordon's Colleges, Aberdeen).
Taylor, W. R. H. (Robert Gordon's Colleges, Aberdeen).
Uren, R. H. (Special Exemption).
Walker, W. C. (Robert Gordon's Colleges, Aberdeen).
Worsnip, J. V. (University of Liverpool).

THE WELSH SCHOOL OF ARCHITECTURE

The Welsh School of Architecture, which has been granted the status of "Final Recognition" by the R.I.B.A., is accommodated in excellently furnished and well-equipped new studios, lecture rooms, library, etc., in the new wing at the Technical College, Cardiff.

At this College, ten scholarships, covering tuition fees and maintenance grants of £40 per annum for three years, are offered for competition annually. As candidates for entry to the Welsh School of Architecture are eligible to compete for these scholarships, they are of considerable interest to those contemplating entering the architectural profession. The scholarship examination is a competitive one, and is of about the same standard as matriculation.

The school has now been at work for rather more than ten years, under the charge of Mr. W. S. Purchon, M.A., A.R.I.B.A.; the lecturer in architecture is Mr. R. H. Winder, M.A., A.R.I.B.A., and the assistant lecturer, Mr. Lewis John, M.A., B.ARCH., A.R.I.B.A.

The following local architects assist in the work of the advanced course as honorary lecturers: Messrs. Percy Thomas, F.R.I.B.A., Ivor Jones, A.R.I.B.A., T. Alwyn Lloyd, F.R.I.B.A., M.T.P.I., H. Teather, F.R.I.B.A., A. L. Thomas, F.S.I., M.T.P.I., C. S. Thomas, F.R.I.B.A., J. H. Jones, F.R.I.B.A., C. F. Jones, A.R.I.B.A. Students in the Department also attend courses of instruction in the Departments of Engineering, Technical Chemistry, Mathematics, Physics, and the School of Art, all of which are housed in the same building; while special lectures on (a) Geology of Building Materials, (b) Growth, Characteristics and Diseases of Timbers, and (c) Law as Applied to Professional Practice, are given respectively by Messrs. F. J. North, D.SC., F.G.S. (Keeper of Dept. of Geology, National Museum of Wales), H. A. Hyde, M.A., F.L.S. (Keeper of Dept. of Botany, National Museum of Wales), and E. W. David, LL.B. The external examiners are Professor L. B. Budden and Mr. L. H. Bucknell.

The three years' full-time day course leads to the award of the certificate, to the holders of which the R.I.B.A. grants exemption from its Intermediate Examination, while those students who successfully pass through the diploma course are exempted from the R.I.B.A. Final Examination. This diploma course follows the certificate course and consists of two sessions, the former of these being of six months' duration only, the intervening six months being spent in architects' offices.

There is also an evening atelier for architects' assistants who cannot attend the day courses.

The Department is in close touch with the South Wales Institute of Architects, representatives of this body being on the Advisory Committee of the School, and students of the school are eligible for the prizes awarded by the Institute. In addition to these awards, there are a number of school prizes presented in the main by local architects.

The school year commences on Monday, October 6, but intending students are advised to apply at an early date for the particulars of the courses of instruction and of the entrance and scholarship examinations. Candidates for the latter should obtain application forms, which must be completed and submitted by September 20.

LAW REPORT

ALLEGED OBSTRUCTION OF LIGHT

Groves and Sons v. *C. Jolliffe. Chancery Division. Before Mr. Justice Bennett*

THIS was an action by Messrs. John Groves and Sons, Ltd., of Weymouth, wine and spirit merchants, and Mr. P. S. Graham, of the American Stores, New Street, Weymouth, their tenant, against Mr. Charles Jolliffe and his wife, of the Ritz Café, Weymouth, seeking an injunction to restrain the alleged obstruction of the access of light to the American Stores.

Mr. Preston, K.C., for the plaintiffs, said the plaintiffs complained that the obstruction to the light was caused by a building being erected by the defendants in New Street, opposite the plaintiffs' stores. Plaintiffs' case was that the access of light to the window of the bar would be diminished by the defendant's building, and that a substantial nuisance would be caused because the bar was already inadequately lighted. The premises were fully licensed premises, and the tenant Graham was in occupation under a lease running from January, 1924, for twenty-one years.

Mr. Crickmay, architect, of Weymouth, called for plaintiffs, gave it as his opinion that the defendant's premises would cause such a reduction of light to plaintiffs as to be detrimental to plaintiffs' business.

Mr. A. Ackerman, a lighting expert, also gave evidence in support of plaintiffs' case.

Sir Thomas Hughes, K.C., for the defendants, contended that having regard to the whole facts of the case the defendant's new premises would not appreciably affect the light coming to the plaintiffs' premises, and, further, that no nuisance had here been proved.

Mr. P. J. Waldram, daylight expert, said in his opinion the suggested addition to defendant's premises would not perceptibly reduce the access of light to the plaintiffs' bar, which had always been dark for some half of its length.

His lordship dismissed the action with costs. He said there was no doubt that the bar had always been a badly lighted room. It appeared to him that the plaintiffs' own witnesses had been entirely unable to prove that there would be a substantial deprivation of light from the defendant's proposed building. He was satisfied that the interference with the light coming through the window would be so slight as really not to be noticeable, and under those circumstances he dismissed the action with costs.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

23970. Gibbes, C. E. Device for securing roofing slates. August 11.

24275. Junkers, H. Uniting structural members. August 13.

24230. Roneo, Ltd., and Sellers, J. C. Sheet-metal partitioning walls for buildings. August 13.

SPECIFICATIONS PUBLISHED

333183. Ravier, S. L. Construction of retaining walls made of blocks and, in certain cases, of concrete, reinforced concrete, or masonry.

333320. Broughton, H. H. Dams, weirs, breakwaters, sea and river walls and like structures.

DOWNE GOLF CLUB

Following are the names of the general contractors, and some of the sub-contractors, for the Downe Golf Club House, Kent, illustrated on pages 331–2.

General contractors, F. and H. F. Higgs. Sub-contractors: London Brick Co. and Forders, Ltd., bricks; Williams, Smith and Evans, tiles; Ruberoid Co., Ltd., special roofings; Acme Flooring and Paving Co., wood-block flooring; Ernest G. Walters, patent flooring; Air Vent Heater Co., Ltd., central heating; Rownson, Drew and Clydesdale, Ltd., stoves and sanitary fittings; South Suburban Gas Co., gas-fitting; Dean and Davies, electric wiring; Carter and Aynsley, Ltd., door furniture.

RECENT WILLS

Mr. Charles James Tait, F.R.I.B.A., of Hampstead Way, Golders Green, N.W., left estate of the gross value of £17,193 (net personalty £15,041).

Mr. Joseph Sawyer, F.R.I.B.A., of The Tower, Kenley, Surrey, aged seventy-eight, left estate of the gross value of £129,325 (net personalty, £124,972).

Mr. Alister Macdonald, A.R.I.B.A., represented the Prime Minister at the funeral of Sir Aston Webb at St. Paul's Cathedral on Monday of last week.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1*s.* 3½*d. per hour;* LABOURER, 1*s.* 3½*d. per hour;* NAVVY, 1*s.* 3½*d. per hour;* TIMBERMAN, 1*s.* 5*d. per hour;* SCAFFOLDER, 1*s.* 4½*d. per hour;* WATCHMAN, 7*s.* 6*d. per shift.*

	£	s.	d.
Broken brick or stone, 2 in., per yd.	£0	11	6
Thames ballast, per yd.	0	10	0
Pit gravel, per yd.	0	15	0
Pit sand, per yd.	0	12	6
Washed sand, per yd.	0	13	0

Screened ballast or gravel, add 10 per cent. per yd.
Clinker, breeze, etc., prices according to locality.

	£	s.	d.
Portland cement, per ton	£2	8	0
Lias lime, per ton	2	0	0

Sacks charged extra at 1*s.* 9*d. each and credited when returned at* 1*s.* 6*d.*

Transport hire per day:

	£	s.	d.		£	s.	d.
Cart and horse	£1	3	0	*Trailer*	£0	15	0
3-ton motor lorry	3	15	0	*Steam roller*	4	5	0
Steam lorry, 5-ton	4	0	0	*Water cart*	1	5	0

EXCAVATING and throwing out in ordinary earth not exceeding 6 ft. deep, basis price, per yd. cube . 0 3 0
Exceeding 6 ft., but under 12 ft., add 30 per cent.
In stiff clay, add 30 per cent.
In underpinning, add 100 per cent.
In rock, including blasting, add 225 per cent.
If basketed out, add 80 per cent. to 150 per cent.
Headings, including timbering, add 400 per cent.

	£	s.	d.
RETURN, fill, and ram, ordinary earth, per yd.	£0	1	6
SPREAD and level, including wheeling, per yd.	0	1	6
FILLING into carts and carting away to a shoot or deposit, per yd. cube	0	10	6
TRIMMING earth to slopes, per yd. sup.	0	0	6
HACKING up old grano. or similar paving, per yd. sup.	0	1	3
PLANKING to excavations, per ft. sup.	0	0	5
DO. over 10 ft. deep, add for each 5 ft. in depth, 30 per cent.			
IF left in, add to above prices, per ft. cube	0	2	0
HARDCORE, 2 in. ring, filled and rammed, 4 in. thick, per yd. sup.	0	2	1
DO. 6 in. thick, per yd. sup.	0	2	10
PUDDLING, per yd. cube	1	10	0
CEMENT CONCRETE, 4-2-1, per yd. cube	1	17	6
DO. 6-2-1, per yd. cube	1	12	6
DO. in upper floors, add 15 per cent.			
DO. in reinforced-concrete work, add 20 per cent.			
DO. in underpinning, add 60 per cent.			
LIAS-LIME CONCRETE, per yd. cube	£1	14	0
BREEZE CONCRETE, per yd. cube	1	7	0
DO. in lintels, etc., per ft. cube	0	1	6
CEMENT concrete, 4-2-1, in lintels packed around reinforcement, per ft. cube	0	3	9
FINE concrete benching to bottom of manholes, per ft. cube	0	3	0
FINISHING surface of concrete spade face, per yd. sup.	0	0	9

DRAINER

LABOURER, 1*s.* 3½*d. per hour;* TIMBERMAN, 1*s.* 5*d. per hour;* BRICKLAYER, 1*s.* 8½*d. per hour;* PLUMBER, 1*s.* 8½*d. per hour;* WATCHMAN, 7*s.* 6*d. per shift.*

	£	s.	d.
Stoneware pipes, tested quality, 4 in., per ft.	£0	0	10
DO. 6 *in., per ft.*	0	1	3
DO. 9 *in., per ft.*	0	2	3
Cast-iron pipes, coated, 9 ft. lengths, 4 in., per yd.	0	5	6
DO. 6 *in., per yd.*	0	8	0
Portland cement and sand, see "Excavator" above			
Leadwool, per cwt.	£2	0	0
Gaskin, per lb.	0	0	4½
STONEWARE DRAINS, jointed in cement, tested pipes, 4 in., per ft.	0	4	3

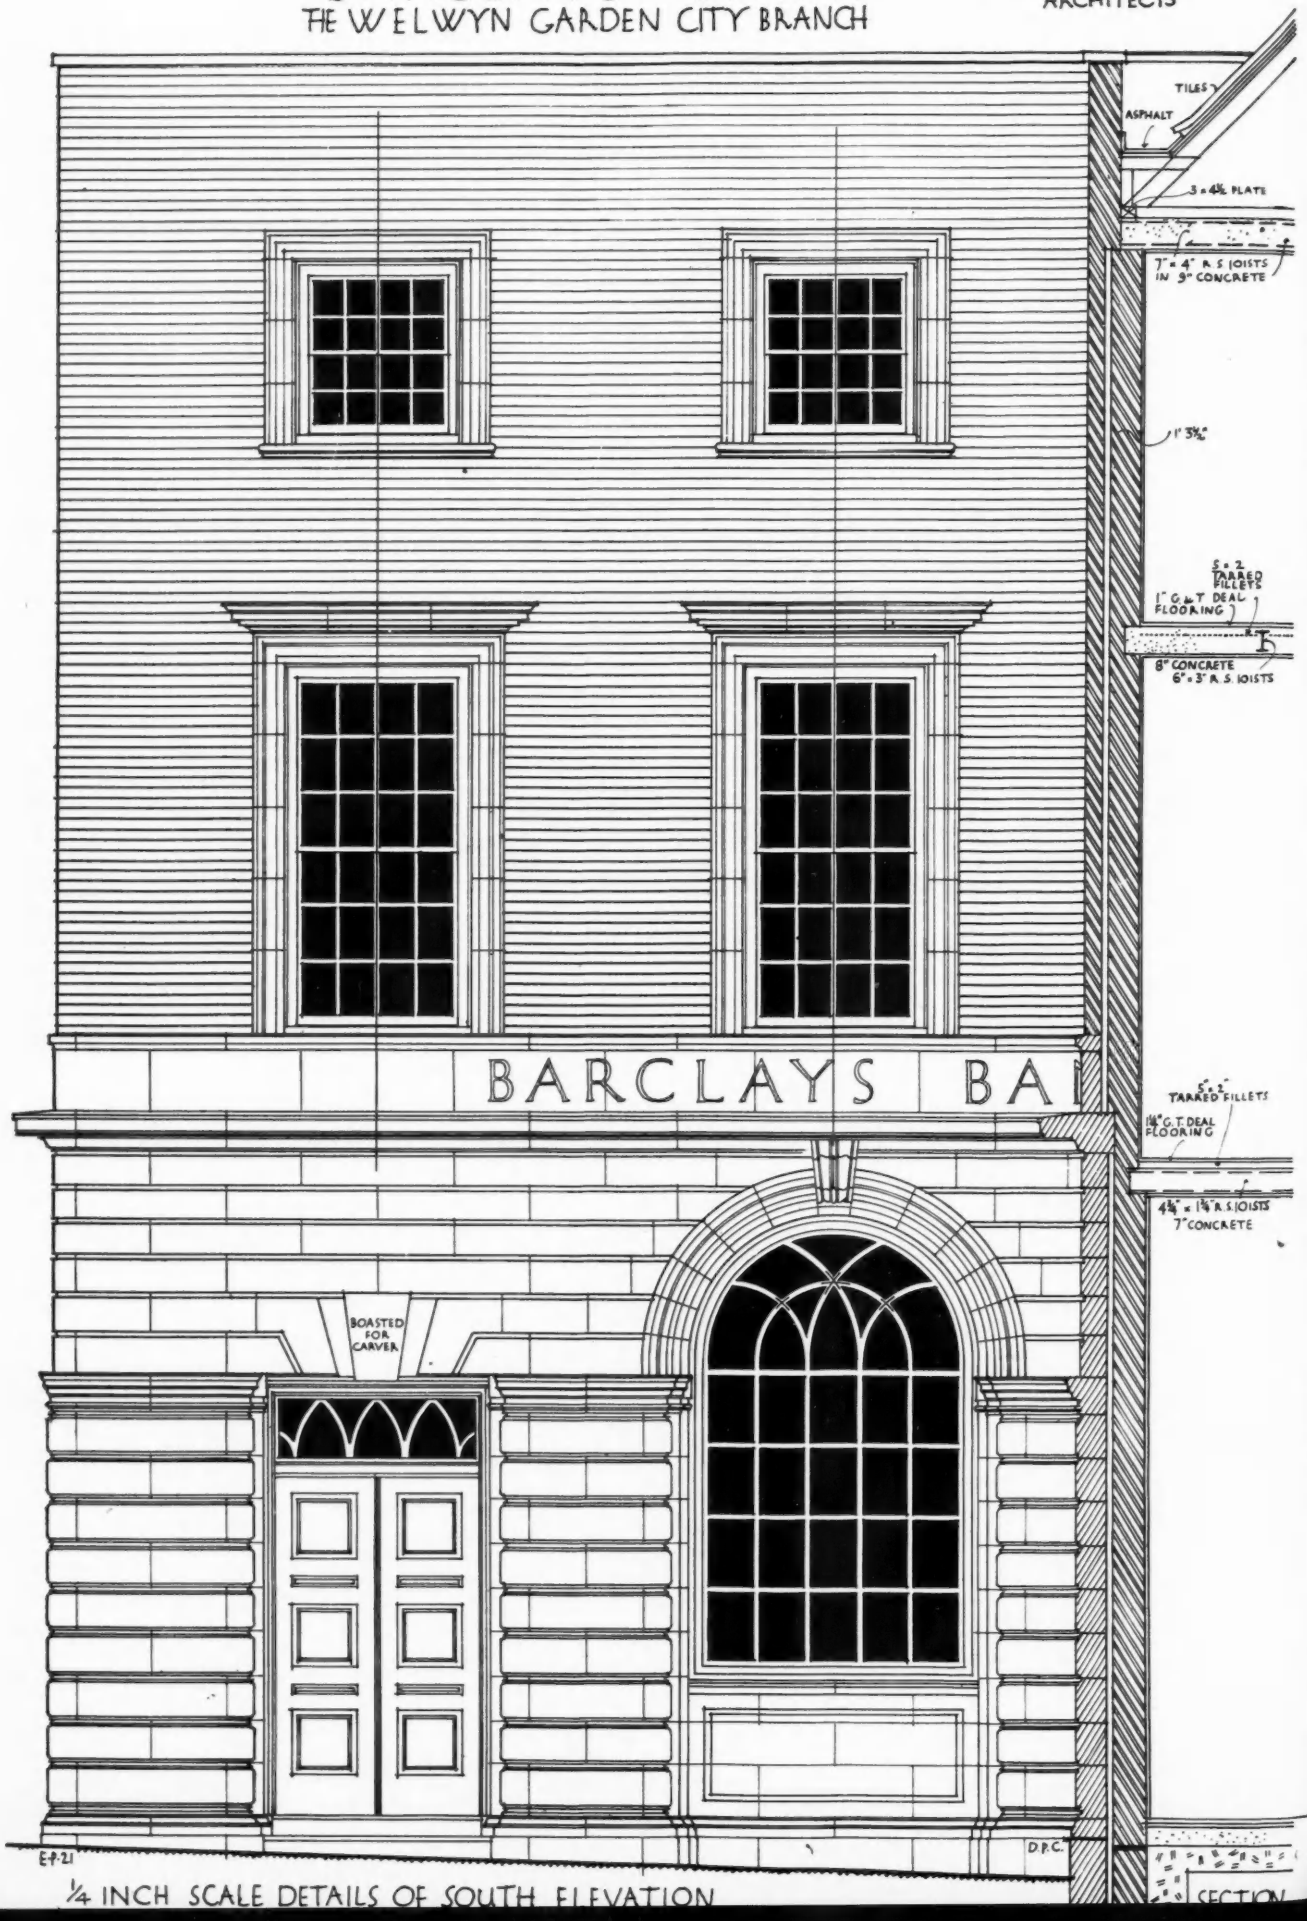
SCALE DETAILS:

A WEEKLY SERIES

SOUTH ELEVATION,

BARCLAYS BANK, WELWYN GARDEN CITY.

DESIGNED BY LOUIS DE SOISSONS AND A. W. KENYON



THIS façade is composed of two main divisions vertically. The upper portion is finished in local brown-red stock bricks, with dressings of Weldon stone to the window openings. The lower subdivision is faced entirely in Weldon stone. This lower portion is again subdivided into two unequal parts, the line of demarcation being a stringcourse at the line of the springing of the central arched window which lights the banking hall.

The doors on the left of the façade lead to the entrance lobby of the bank. The door on the right is the entrance to the manager's quarters, which occupy the first and second floors of the building. The windows are double-hung sashes. The pitched roof seen inside the parapet wall is covered with hand-made orange-red pantiles.

The drawing may be read with an architect's scale, ¼ in.=1 ft.

PRIZE FIREPLACES

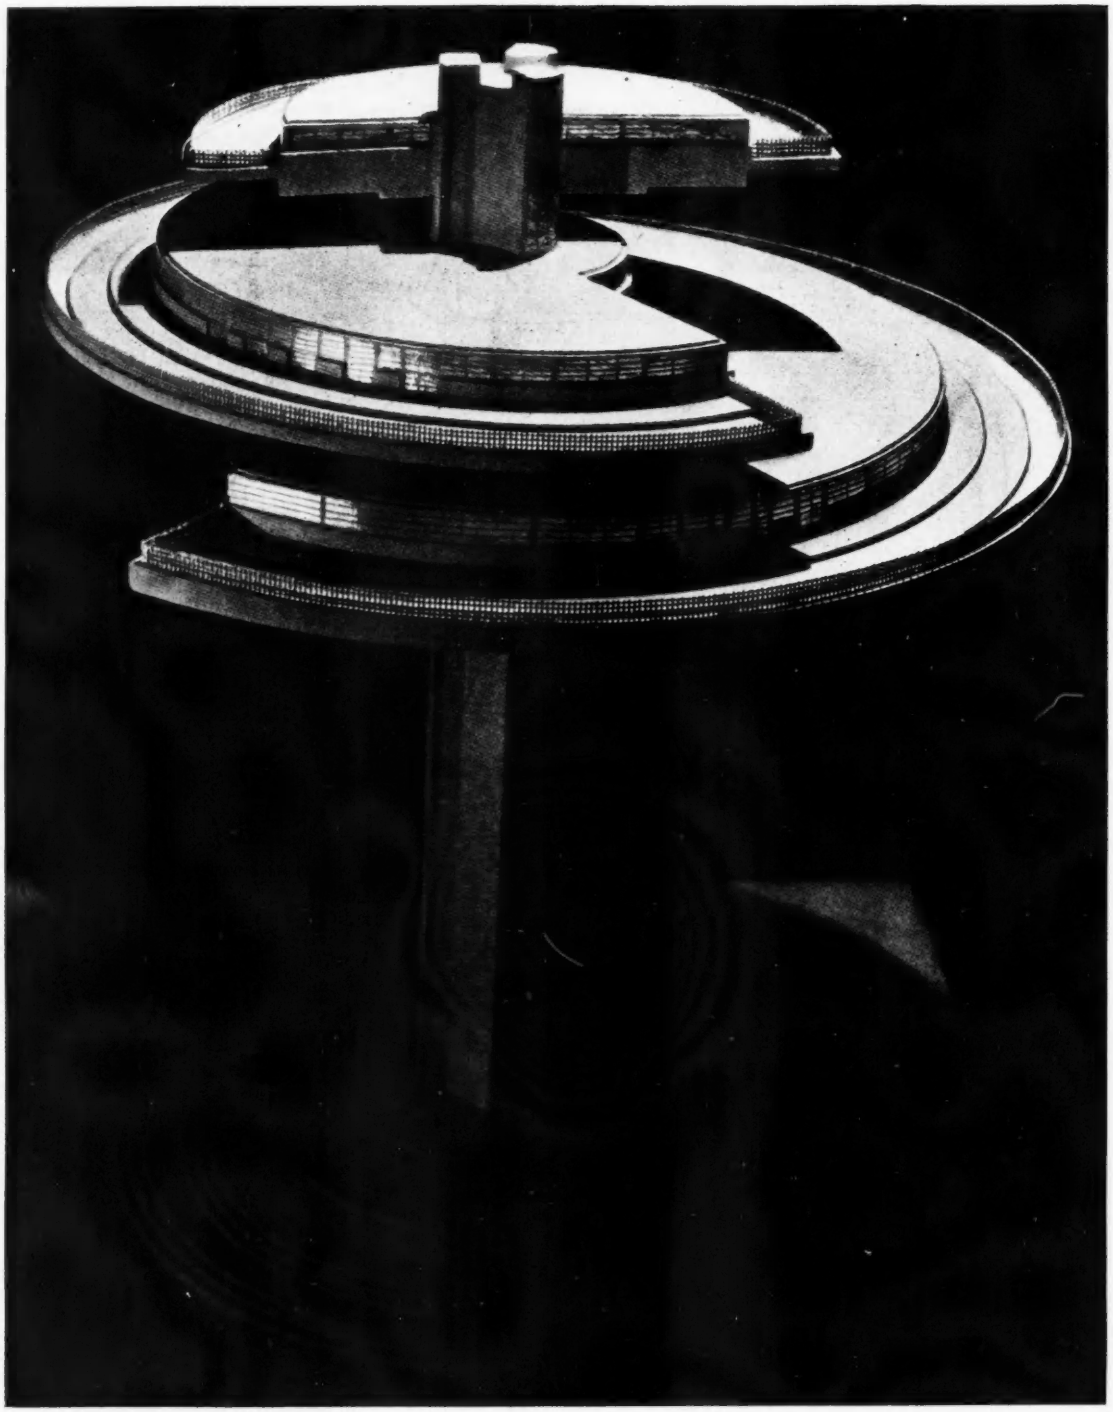
" The tradition of the English fireplace is still alive and, like any really popular thing, keeps branching out, and begetting new shapes, and crystallizing into fresh patterns."

IT is announced that one of the special features of the Building Trades Exhibition, to be opened next week at Olympia, will be a competition in the design and erection of brick fireplaces. The subject is of more than usual interest for several reasons.

The fireplace is, for one thing, a threatened feature of the English house; the housewife (probably the most important person in the national life) condemns it for its dust and its appetite for blacking, and the hygienist for its pollution of the air with smoke. In spite of this, the fireplace flaunts its popularity on the plans of every house and of ninety-nine per cent. of the flats; it has the life and vigour of a popular institution.

In truth, the English fireplace is part of the tradition of heartiness, cosiness and colour which budded in Chaucer and burst into such tropical efflorescence in Dickens, so that when the latter wanted a title for a domestic novel it must have leapt to his pen—*The Cricket on the Hearth.* The epic wanderings of Pickwick and his companions come to their halts before the roaring fires of road hostelries, and all wretchedness is described in the words " cold and wet."

We do not think this tradition will ever die whilst our people remain. Some journalist in Holy Orders, or self-eminent Judge, may announce the defacement of the national character once a week, but our architecture at any rate shows the vitality of a schoolboy as well as the ripeness of a scholar.



The tradition of the English fireplace is still alive and, like any really popular thing, keeps branching out, and begetting new shapes, and crystallizing into fresh patterns. It began as a hearthstone in the middle of the hall; it became an arched opening in the wall; it was surrounded with marble and wood; it was turned into a thing of black iron, and as such became the common grate and surround of Dickens's own time.

Since then it has developed in a way which would have pleased him mightily: it has come to be made entirely of brick.

Dickens would have understood the rightness of this material for the purpose. A red brick is the colour of flame, and suggests warmth on the chilliest day even before a match is struck, and when once the fire has triumphed over logs and coal the whole fireplace realizes a unity with its purpose. It has functionalism to burn.

We expect, therefore, a genuine enthusiasm in this competition for brick fireplaces, but we warn both those who are designing them and those who will be building them that they will be judged by three very competent architects, namely, Sir Banister Fletcher, Mr. Guy Dawber and Mr. Edward Maufe. These gentlemen will not only rule out the essays in bathos which crowd the walls of building merchants, and through which one has firmly to steer one's clients; but as assessors they will surely examine the designs from the point of view of the tired housewife and the active hygienist. Will the fire draw, or is it damned by too great a height between grate and arch? Will it be economical, radiate heat, and stay in all night? Will it allow the dust to float out into the room and down people's lungs when the grate is cleared? Can the fireplace be adapted easily to suit a gas or electric heater?

Out of such questionings there should emerge a new pattern for fireplaces and a new life for the tradition.

A REVOLVING RESTAURANT

A photograph of a model of the aerial restaurant proposed to be erected at the Chicago World's Fair. The architect is Norman Bel Geddes. Three floors on different levels revolve slowly around the elevator shaft and give the diner two complete panoramic views of the fair grounds during his meal.

The lower level seats 700 persons and has a dance floor. The intermediate level has seating accommodation for 400 and is devoted solely to light refreshments. The top level is designed as a restaurant of the highest order. It seats 200. Below the circular entrance terrace are the kitchens, beneath which is the machinery for revolving the structure. The height of the shaft is 278 ft. above the ground.

The tower is intended to be built of steel, glass and aluminium. The illustration is reproduced from Architecture *of New York.*

NEWS & TOPICS

A NEW AND HEALTHY CUSTOM

A FEW months will see the end of the triangular block that houses the Golden Cross Hotel and the Charing Cross Post Office—that rendezvous of long and cherished memory. Sir Herbert Baker is designing the elevations of the entire block, in accordance with a new and very healthy custom among landlords, so that there should be a good chance of preserving for Trafalgar Square the dignity to which these present buildings contribute, what though they parade their century-old stucco amid so much Portland stone. This rebuilding has nothing to do with the great Charing Cross scheme, but it may find itself the centre of a metropolitan improvement of the first magnitude, granted a happier fate for a new and better bridge.

A BANDSTAND IN TRAFALGAR SQUARE

There is some talk in the air of possible improvements to Trafalgar Square at the hands of Mr. Lansbury. Bandstands and flower-beds were mentioned, but the vision they conjure up does not seem to read either with Trafalgar Square or Mr. Lansbury at his best. Trafalgar Square is a dull piece of design, with a not too good column placed at the wrong point; and the National Gallery is too weak a composition to be the background for a layout of steps and fountains in a really fine manner. There is not very much hope, therefore, that Trafalgar Square can be bettered by sticking a bandstand in it, though flowers could be introduced in some appropriately formal way, so that our lives might be brightened without shocking our sense of fitness. The Landseer beasts might, of course, broadcast. That would be bright !

THE PASSING OF THE OLD BRUNSWICK

Talking of hotels and landmarks reminds me that another rendezvous, the old Brunswick Hotel, Blackwall, is in the hands of the breakers. It was one of those early-nineteenth-century buildings that seem to fit into and become the genius of whatever place they embellish. Whether it be a town square, a village street, a gentleman's park or a wharfside, their elegant lines and smooth stucco surfaces have brought new graces to each setting, to educate rusticity and vulgarity, without offence or condescension, to a belief in perfect manners.

★

The great bay windows of the Brunswick Hotel looked over the busy Bugsby's and Blackwall Reaches where, in the early days of the hotel, East India merchantmen sailed past their owners out to sea. It was fashionable enough then to claim the Duke of York, who afterwards became William IV, among its devotees, and whitebait suppers, and good cooking of much else besides, evoked verses from poets. The 'sixties saw the end of it as a place where people of substance ate well before they left for foreign parts. For years it housed the passing emigrant before it fell upon its last period of indigence, and it goes now, years after its days have been numbered.

AMERICAN ARCHITECTS AND ADVERTISEMENTS

Under the caption (in appropriate block capitals), *Architects put weight in favor of clean roads*, an American paper goes on to describe a movement among American architects to remove advertisements from their countryside. It is as bad, or even worse there, than here, and it appears that no sort of law as yet exists to enable the community to deal with the nuisance. A case is pending in Massachusetts that is being eagerly watched by a very small minority of the public, and there is no doubt that this small minority will make a mighty noise until something be done there, as it has been done here.

★

Sporadic attempts are being made continually to clean up some particular district, and one hears of isolated efforts to set face against the invasion of common rights by the motoring public, such as for instance the village where motors are entirely prohibited on Sundays. That I took immediately to be a case of moneyed privilege, but my informant denied that the village was of anything more than the average composition, with a good dash of intelligence.

THE CONTROL OF ELEVATIONS

The Secretary of the Institution of Municipal and County Engineers, in a circular addressed to all members of that body, pours such a volume of cold water over the whole spirit and machinery of the Minister of Health's model clause for the control of elevations that I should be hardly surprised to find that this clause, an adaptation of the famous " Bath Clause," will come in for a deal of discussion in the near future. The chief objections raised on this occasion are—well, they are so wholesale as to leave little in agreement. The idea of a Tribunal denies the right of veto and the chance of negotiation to the council ; it sets up an architect as a judge of his fellows ; its decisions could not be correlated or uniform as those of the Ministry might be ; it would insist upon higher standards than are usually possible ; and it would, finally, take from the local authority the power and right of judging for itself. It is suggested that a clause giving councils power to order alterations to bring buildings in conformity with the council's ideas of fitness and decency is all that is required.

★

I do not propose to enter into any controversial points here. I see weaknesses in the " Bath Clause," in the composition of the tribunal, and in its comparatively sinecure position. On the other hand, I think that many councils cannot act as judges themselves, and have not ideas of what is fitting and decent, still less of what is really good. Therefore, I should think that it behoves the R.I.B.A. to look once again into the provisions of the model clause, and to do its utmost to keep some control over this matter, for the restiveness of the surveyors is a sign that the clause is not to their liking, and this their first step towards ridding themselves of it will weaken a not too strong position.

THE ART OF THE CAMERA

I looked in last week at the coming-of-age exhibition of the London Salon of Photography, which is being held at the galleries of the Royal Society of Painters in Water-colours. The salon has always stood for the advancement of pictorial photography, and has encouraged originality and progress in the art of the camera. In this respect it has achieved a great prestige in all parts of the world. This year, in addition to a notable display from the leading amateur and professional photographers in this country, contributions include works by exhibitors from seventeen other countries. Pictures by practically every known process in photography are shown, and the subjects, which number well over 400, are as varied as the processes; but

in every case the individual pictorial outlook of the artist is the dominant note, even in the case of the architectural work of which there is a fair sprinkling. The result is an exhibition of pictures which will surprise those who have not followed closely the progress of modern photography and who do not realize its position today amongst the arts.

WAS THE HIDDEN HAND SMARTERLY'S ?

The advertisement to which I drew attention last week has had a sequel that may well cloak a development of the kind so glibly termed "dramatic." On Friday last the following appeared in the same columns :

> **£1,000** HOUSE.—To Architect-Builders and Builders.—Lady building wants TENDERS and ROUGH SKETCHES: roomy house, room 30ft. Will those who wrote communicate? Letters lost.—Write Box 14, W. H. Smith, Kensington, W.8.

Should we, for the word "lost" read "purloined"? And was the hidden hand that removed those letters in reality that of Smarterly? Could he, I ask myself, have become so apprehensive of danger from THE ARCHITECTS' JOURNAL that, on reading my note, he went to the length of removing the evidence against himself? For, of course, we may take it for granted his proposals were among the answers received. I dare wager his name will not be found among the fresh applicants; but he may yet pull off the job, under a pseudonym. ASTRAGAL

More Official Architecture

AT a meeting of the Northampton Town Council, last week, the question of increasing the salary of Mr. Cobb, the architectural assistant, from £500 per annum to £600 per annum, in view of a large amount of proposed extra work, as recommended by the Education Committee, gave rise to keen discussion.

The recommendation was moved by Alderman Sykes (Conservative), who referred to Mr. Cobb's increased responsibilities in connection with the Technical School, School of Arts, and two elementary schools. The Education Committee recommended the Council's acceptance of the application.

Alderman Chown (Liberal), seconding, said there was a great responsibility attached to the work.

Mr. Bugby opposed the application, taking into consideration the state of trade and the affairs of the town. The plea put forward by Mr. Chown was absurd. Signalmen and railway drivers also had a big responsibility, and Mr. Cobb had no more duties going on his shoulders than they. Northampton, declared Mr. Bugby, was paying as much as they could possibly afford.

Mr. W. Smith said Mr. Cobb had been treated very generously. He was appointed in May, 1924, at the salary of £350. In July it rose to £400, and in September, 1927, to £450. In 1929 his salary was increased to £500, and his position made permanent.

Mr. T. D. Lewis (Liberal) said the work in contemplation would cost more than £2,000,000, and if an architect had been employed the usual inevitable commission would have been a considerable amount. In his opinion the right line to have been taken would have been to have thrown open such a big work to public competition.

Mr. Lewis moved the reference back of the Education Committee report for further consideration, and Mr. J. G. Dalton, who seconded, said that with the assistance Mr. Cobb now had, he would not be working any harder than when he was appointed. He would, of course, have greater responsibility, but for that he had been already given a larger salary.

Alderman G. W. Beattie said he had not previously opposed a recommendation of a responsible committee for an increase of salary of an official. But in this case he thought the proposal was unjustifiable. He had never known an instance in which an official had received such consideration as Mr. Cobb had during the past six years.

Alderman Harvey Reeves (the Chairman of the Salaries and Appointments Committee, which recommended that the Education Committee's proposal be not approved) said he felt bound to say that the Committee considered the matter with every sympathy. While thoroughly appreciating the excellent services of Mr. Cobb, they felt that the increase proposed by the Education Committee was not justifiable at the present time, and no member voted in favour of it. In six years Mr. Cobb's salary had been raised from £350 to £500. His appointment had been made permanent, and he came under the superannuation scheme.

Mr. W. Barratt (Socialist) said that the salaries of the seven assistants of Mr. Cobb amounted to a sum of £1,500, and with his salary they were paying £2,000 for architectural assistance in connection with the Education Department. They could get most efficient work done by outside architects for £2,000 a year.

Upon being put to the vote, the amendment to refer back was carried by 25 votes to 4.

[The above is condensed from the report appearing in *The Northampton Daily Chronicle.*]

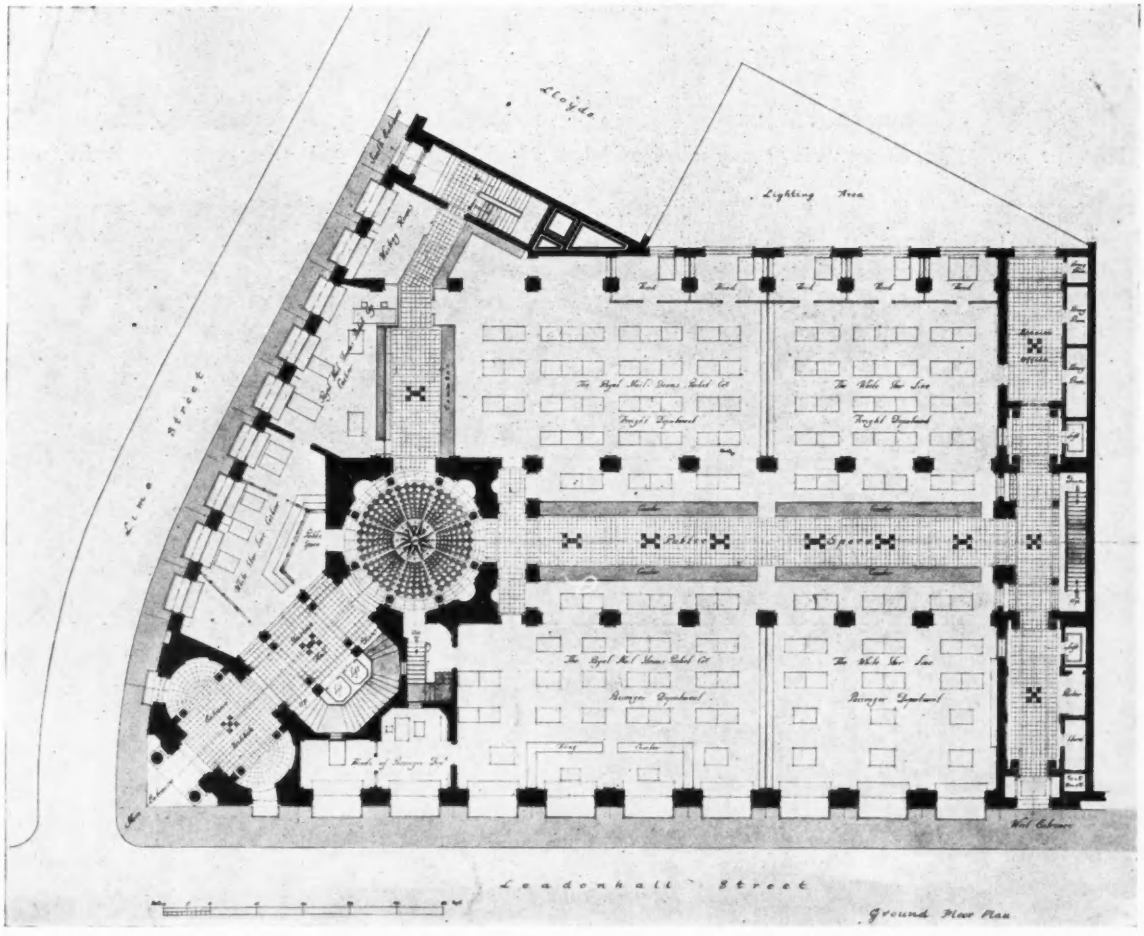
An important relaxation in London building regulations has been made by the Ministry of Health by the confirmation of bylaws submitted by the L.C.C. in respect of sanitary installations. In future it will not be necessary for bathrooms and water-closets to have outside windows, and so it will be easier to provide for a great many more in the planning of hotels. This amendment is one of those to secure which a joint committee was set up by the R.I.B.A., the British Steelwork Association, the London Master Builders' Association, the National Federation of Building Trades Operatives, and the Hotels and Restaurants Association. The point was also emphasized by Mr. Maurice Webb, when the Minister of Health received a deputation from the steel group in the House of Commons to hear the views of the industry upon the urgent necessity for modernizing building bylaws and so increasing the possibilities of employment. A leading article on the subject appeared in THE ARCHITECTS' JOURNAL *for June 11 last.*

A conference on steel structures research, the purpose of which is to promote discussion of the work and objects of the Steel Structures Research Committee of the Department of Scientific and Industrial Research, will be held at the Institution of Civil Engineers, on October 16 next. This Committee has been set up to review existing regulations for the use of structural steel in buildings and bridges, and to investigate the possibilities of more efficient and economical design.

THE R.M.S.P. CO.'S HEADQUARTERS

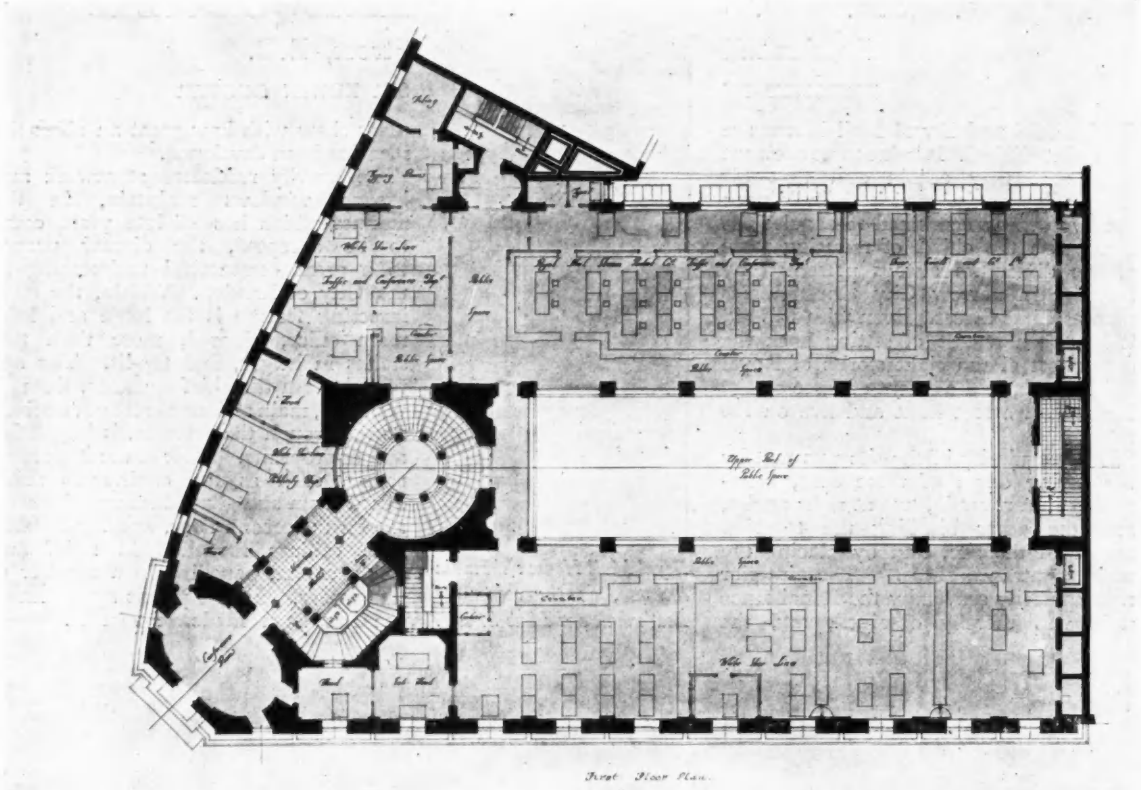
Leadenhall Street, E.C.

DESIGNED BY SIR EDWIN COOPER



LLOYDS and Royal Mail House are interlinked. It is due to no accident that they adjoin and that Sir Edwin Cooper designed both buildings: the two owners combined to acquire the land, with the object of reducing some of the difficulties always presented by building in narrow City thoroughfares such as Lime Street. Even with this aid it has been a case of setting back the uppermost of the eight stories of Royal Mail House, to the extent of three on the Leadenhall Street front and five on the return.

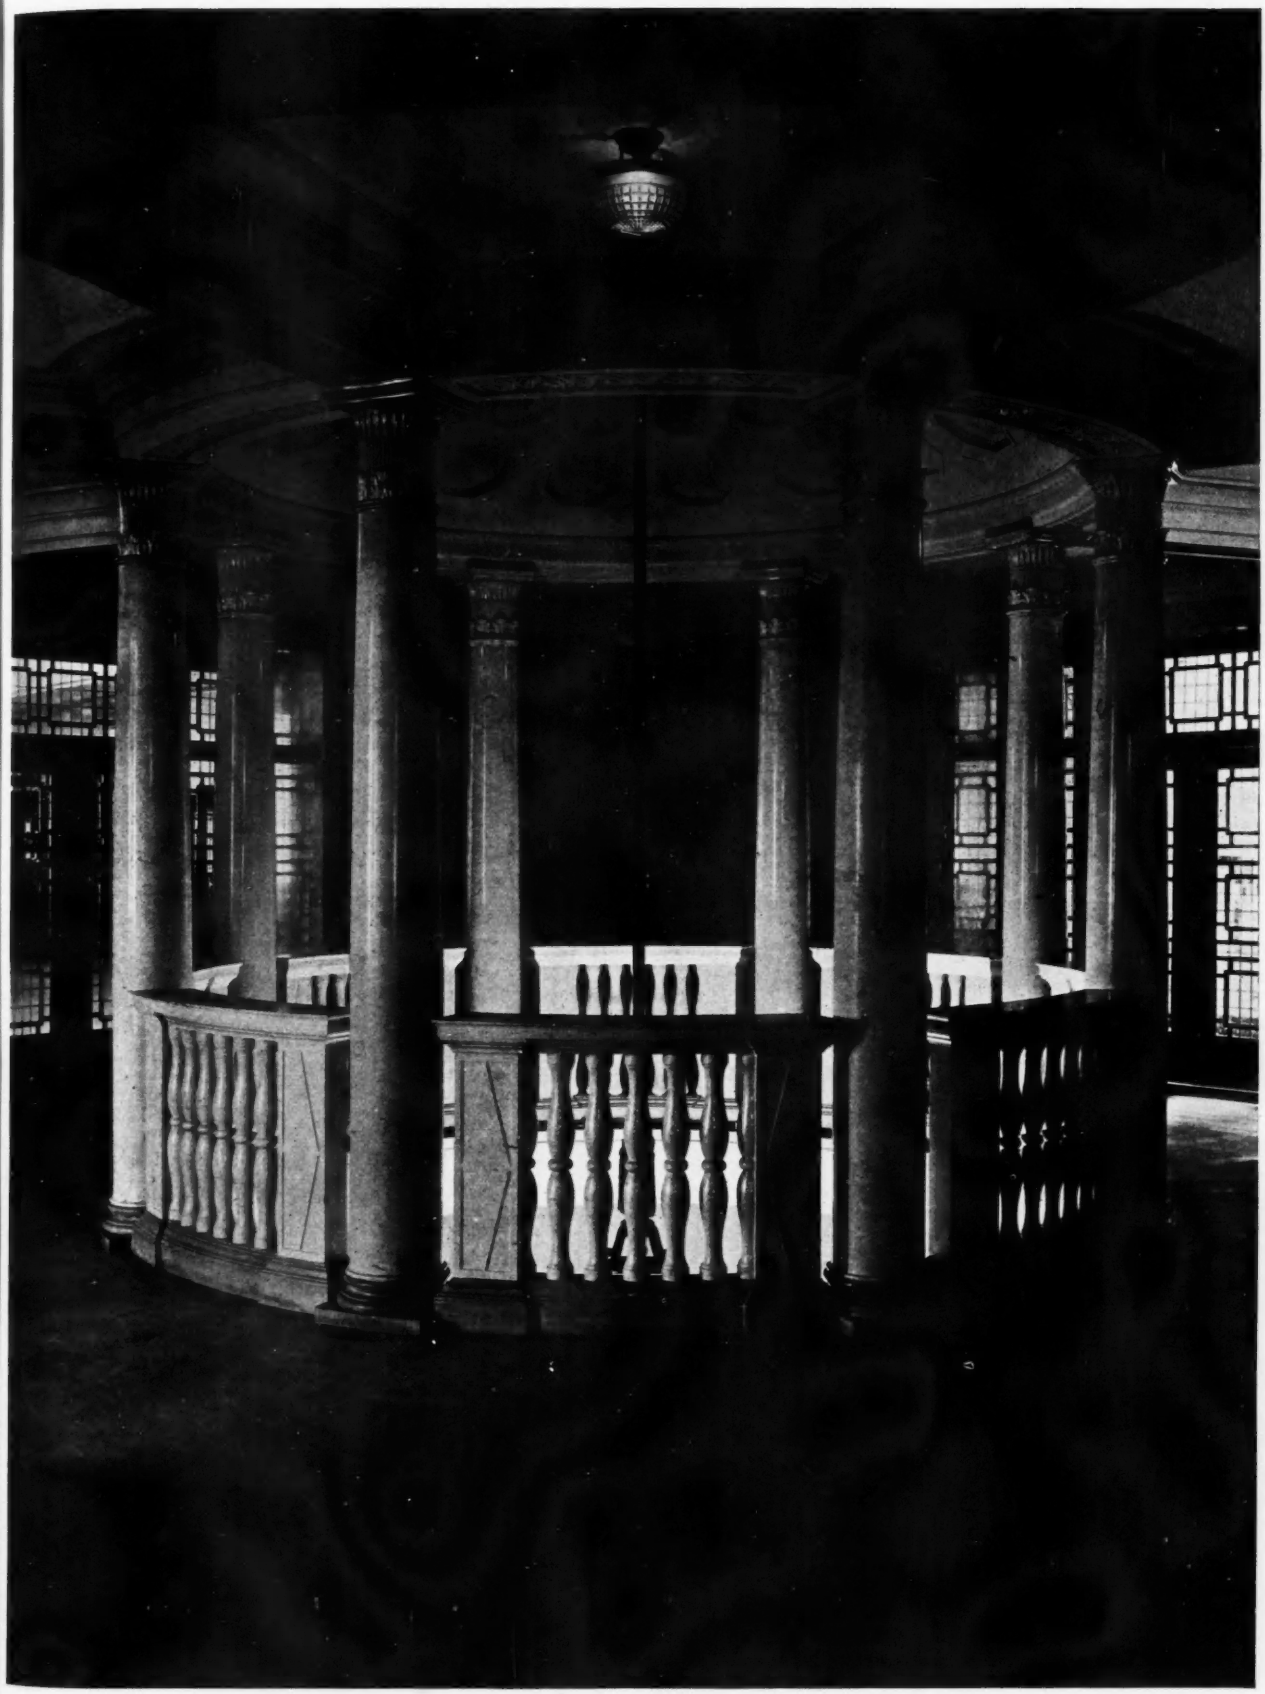
The irregularity of the site was met by the laying down of three axes, intersecting in a rotunda, two at right angles, and the other bisecting the tapering corner of the site, and by placing the main entrance here. The interior rectangularity craved by the Renaissance style was thereby obtained, and the plans show with how great an effect the idea has been developed.



Royal Mail House: the main entrance, on the corner of Leadenhall and Lime Streets.

The heavily rusticated stonework and bronze windows maintain, in the manner which has of late years come to be accepted, the dignity proper to a great commercial undertaking in the City of London. Within, the most imposing feature is the large and lofty main office, pillared, more than two stories in height, and top-lit. The approach from the chief entrance, through vestibule, main staircase hall and, up from steps, through the rotunda, is impressive and appropriate. Most of the important rooms, such as the chairman's suite, board room and general manager's room, are on the second floor, and are finished with ceilings modelled in relief and richly carved panelling in a number of fine woods. In the public spaces much use has been made of marble.

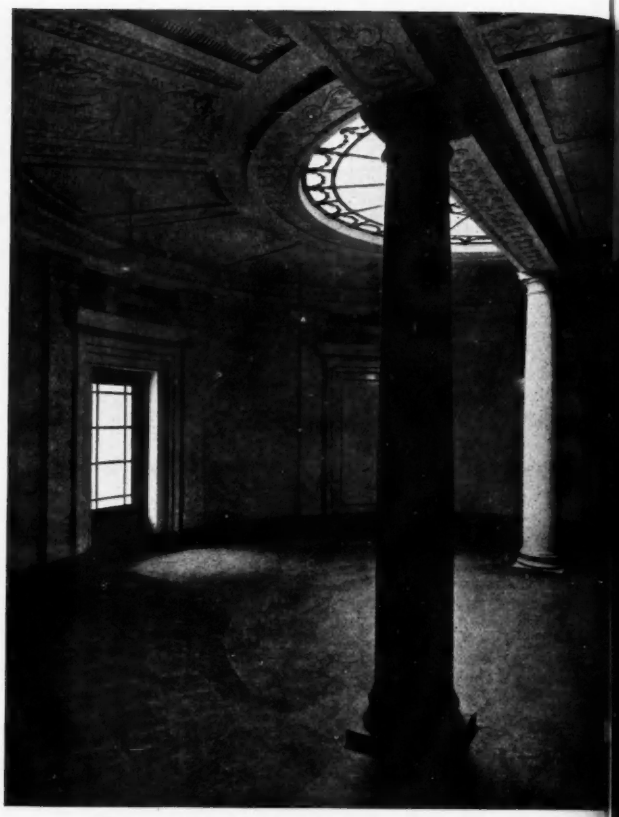
The ground-floor plan. The site, which adjoins Lloyds, also designed by Sir Edwin Cooper, has frontages of some 200 ft. to the south side of Leadenhall Street and of 150 ft., on a slightly curved concave line, to Lime Street, the minimum depth being 120 ft.



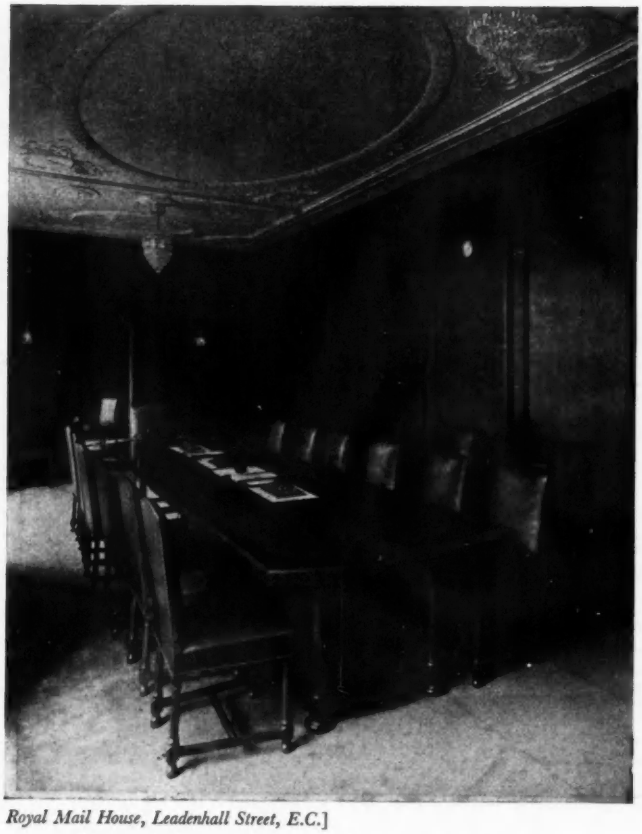
First-floor plan. There are ten stories, two of which are below ground level, and a mezzanine floor over part of the basement.

Royal Mail House, Leadenhall Street, E.C.]

In the main office on the ground floor, looking towards Lime Street. It is more than two floors high.

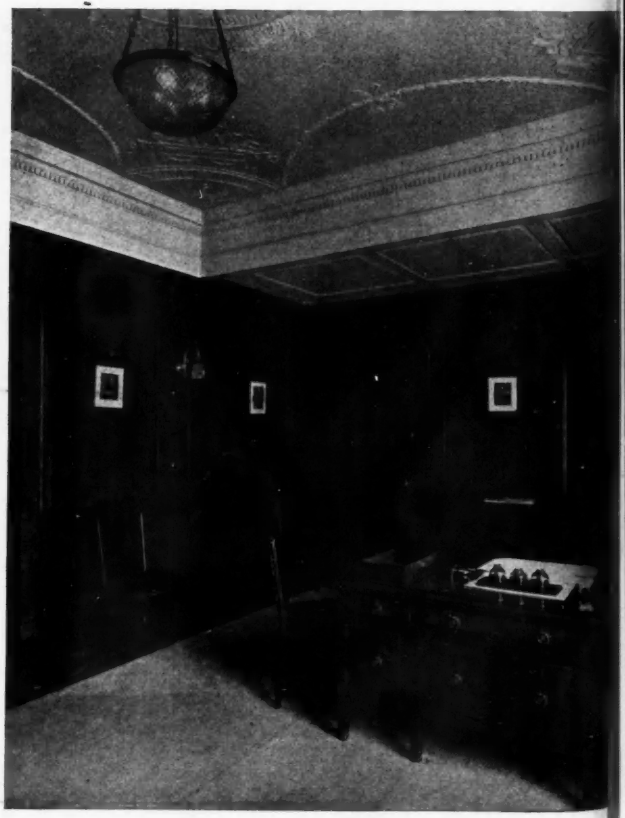


[*By Sir Edwin Cooper.*



The rotunda has, at first-floor level, a central well surrounded by a marble balustrade and eight marble columns of Corinthian character.

The staircase on the second floor, looking west.



The ante-room to the chairman's second-floor suite.

Royal Mail House, Leadenhall Street, E.C.]

The second-floor conference room has panels of Austrian oak.

The general manager's room is panelled in sycamore.

[*By Sir Edwin Cooper.*

The chairman's room, on the second floor, is elliptical in shape. The panelling and furniture are in walnut, and the carving is in lime wood.

C

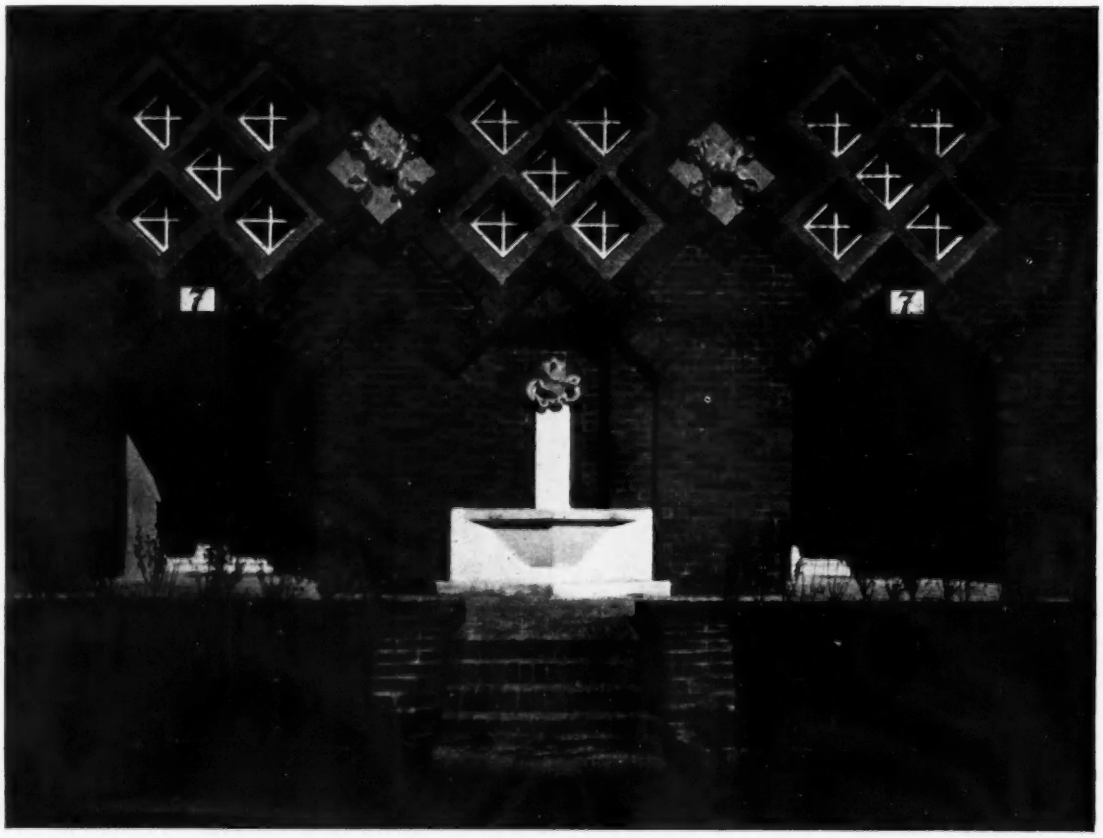
MODERN SCULPTURE

THE art of sculpture, writes Mr. Stanley Casson in the current issue of *The Architectural Review*, is at its turning point. Ten years hence, we shall know where we stand. Such is the moral he draws after perusal of Mr. W. Aumonier's *Modern Architectural Sculpture*, recently published by The Architectural Press.

The modern sculptor in every country, he affirms, is aware of the failure of the merely realistic school. All alike alter and adapt human or animal figures. For they realize (what the realists had forgotten) that the first artist who created a non-existent form —whether centaur, gryphon, cherub, or mermaid—was altering Nature in the most drastic way imaginable to suit the conveniences of art.

The community of character perceptible in modern sculpture is a community not so much of style as of outlook. The apparent similarity between the work of Scandinavian, Yugoslav and British sculptors which is superficially apparent to an untrained eye lies simply and solely in the willingness of the artists in each case to abandon any attempt to copy Nature with exactitude. Where Rodin and Barye copied, as they thought, faithfully, and showed their originality rather in composition and execution than in conception, the modern sculptor will think first of the forms he wants and that suit his material, and of fidelity to his models afterwards; and in this process certain national characteristics do most curiously emerge. From a glance at the work of the Germans it is evident that German Gothic traditions still work strongly in German minds, and the same is true of the Dutch, whose fertility of invention in sculpture is not great. But the German work throughout seems to have a severely practical application : it is essentially architectural and functional. German sculpture in brick and iron harmonizes admirably with modern German architecture.

The same Gothic prejudices are evident in Czechoslovak sculpture.



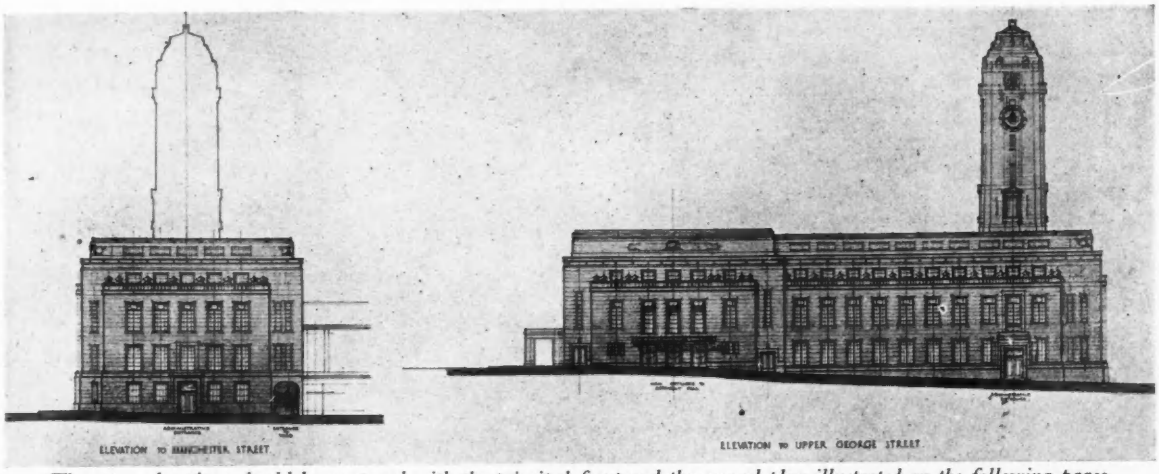
In Jugoslavia, on the other hand, the underlying influences are Byzantine, certainly not Gothic, with an admixture of the peculiar forms and shapes common to the art of Dalmatia.

Italy, France and the other Latin countries seem almost completely sterile in work which can in any way compare with the modern movements in Scandinavia, Germany and England. The reason may be that the Latin races are notoriously conservative and traditional in the worst sense.

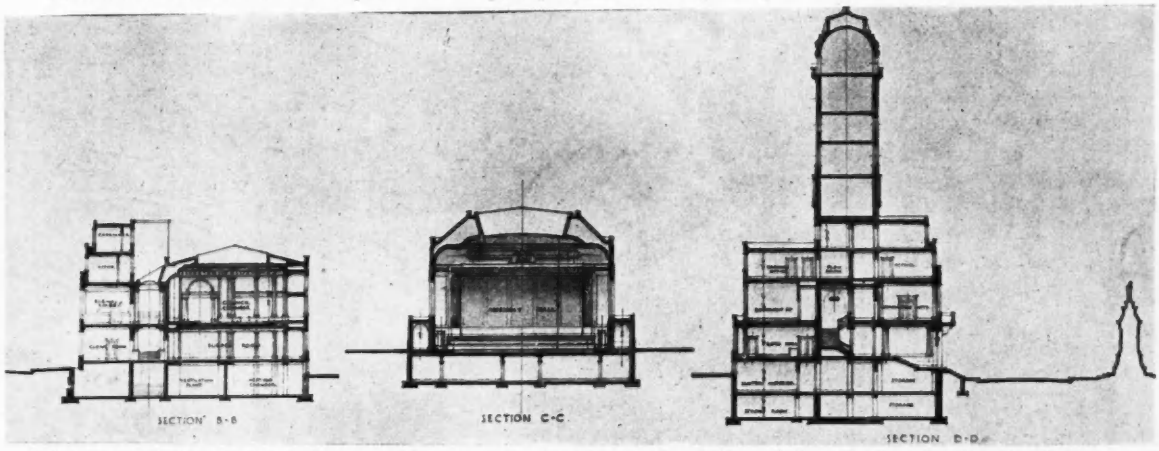
France still has the memory of Bourdelle, and the work of Maillol and Bernard, but of these three only Bernard can be said to be a truly modern sculptor.

Austria, alone among European countries seems to have achieved the perfect unity of sculpture with architecture. Where Epstein will plaster his gaunt figures on to the outside of a building, Austrian sculptors, with their natural grace and delicacy, will make their sculptures an integral part of the buildings they adorn.

Of Sweden it is hardly necessary to speak. Carl Milles dominates Swedish art and, for the matter of that, European art, like a Colossus. He is the most important living sculptor and the greatest influence on the future.

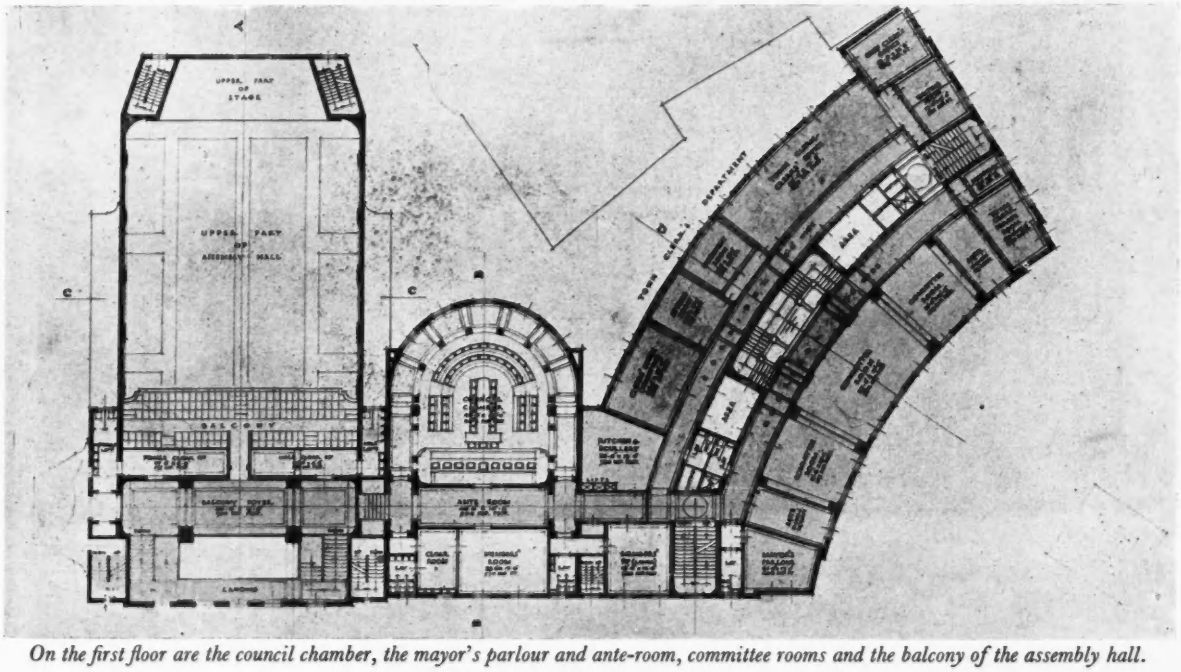


[*From* The Architectural Review.

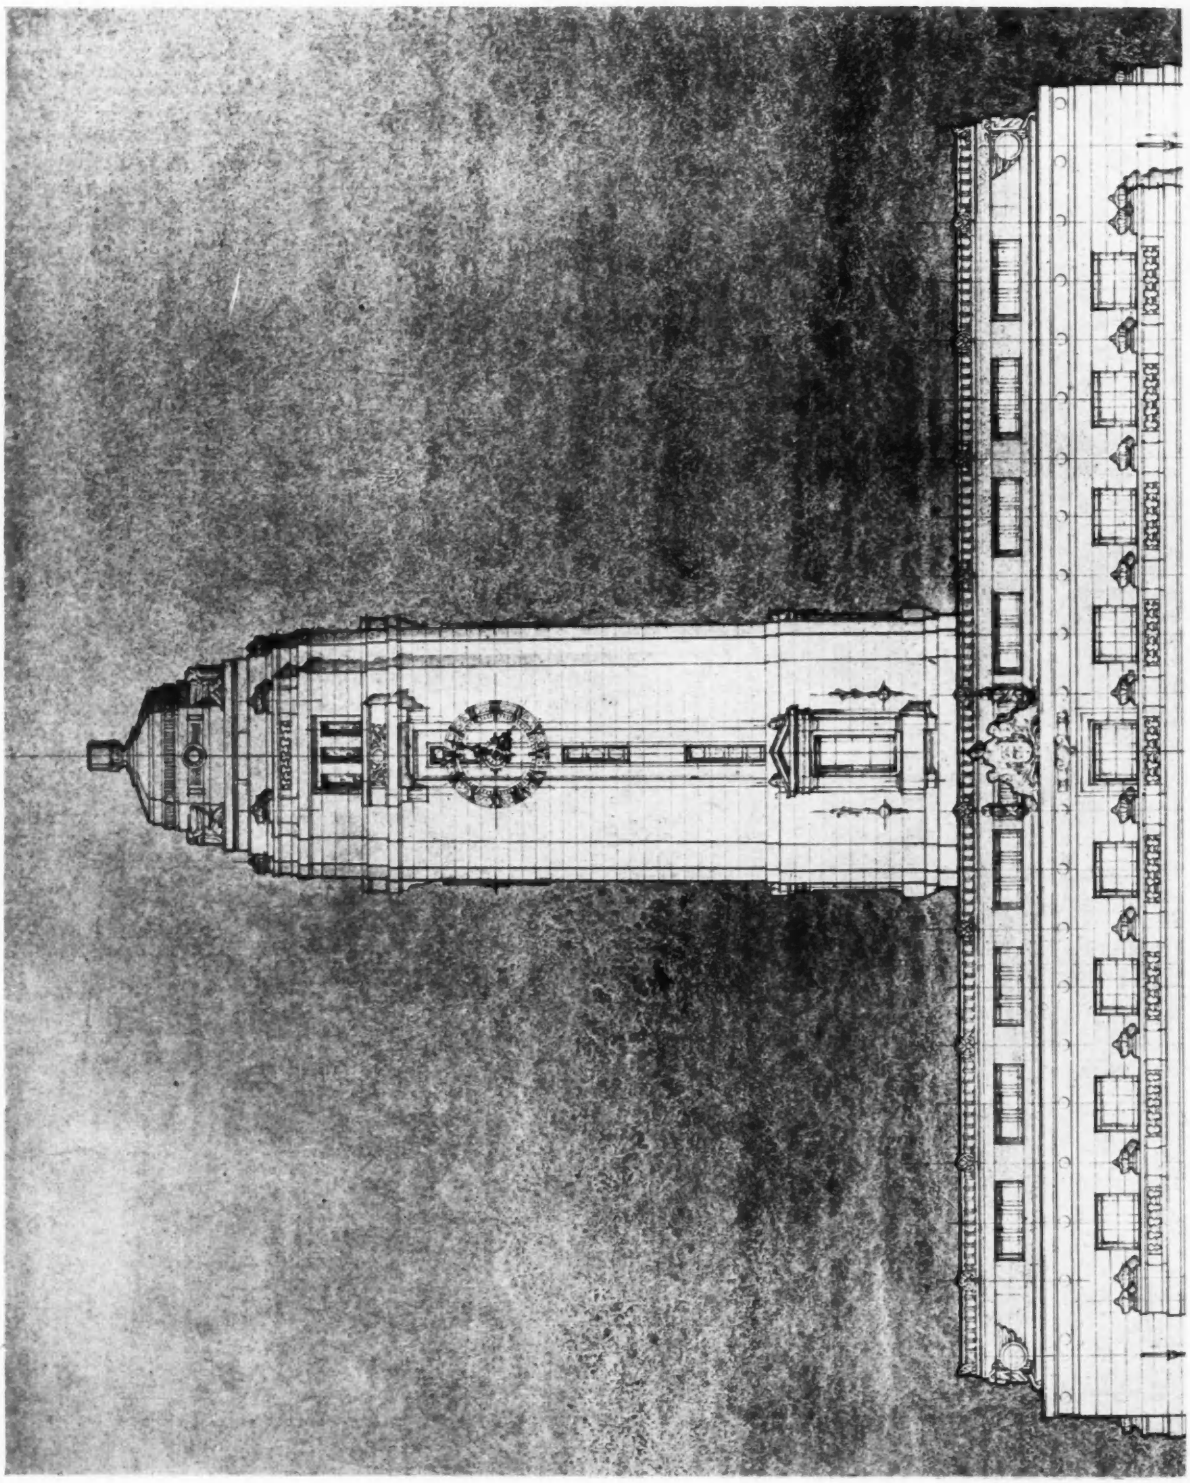


Workmen's Dwellings, Vienna. Cesar Poppovits, architect. Professor Robert Obsieger, sculptor. The fountain and reliefs are carried out in blue and green ceramics.

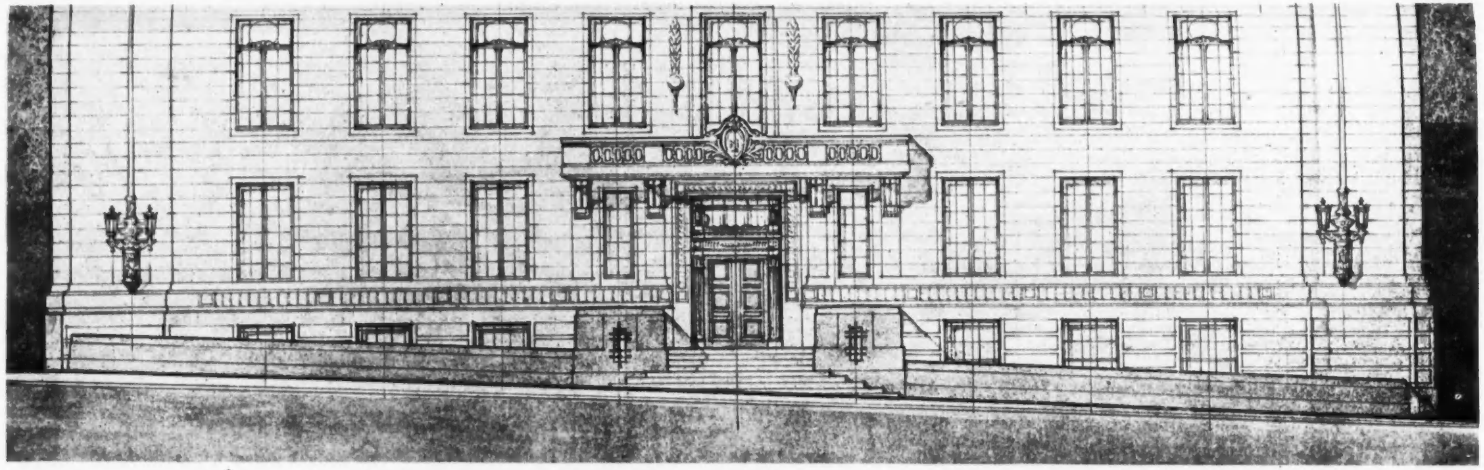
LUTON TOWN HALL COMPETITION



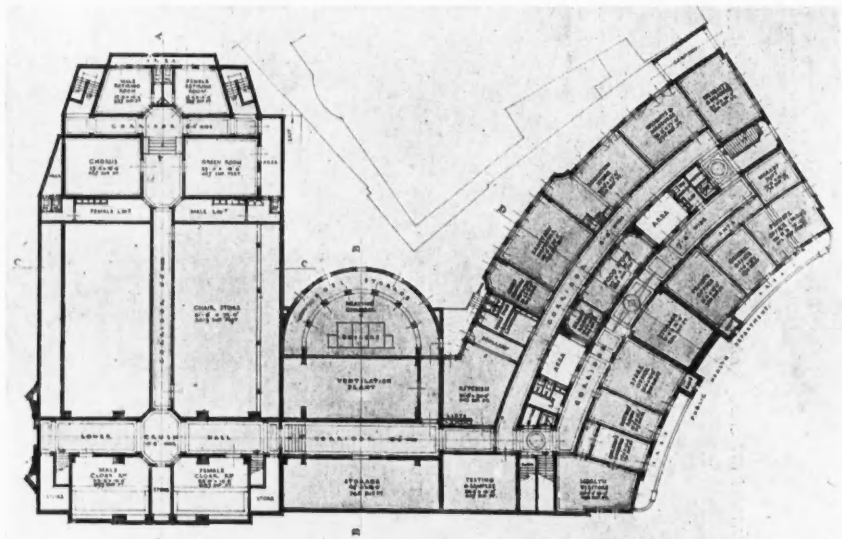
THE WINNING DESIGN: BY BRADSHAW GASS AND HOPE



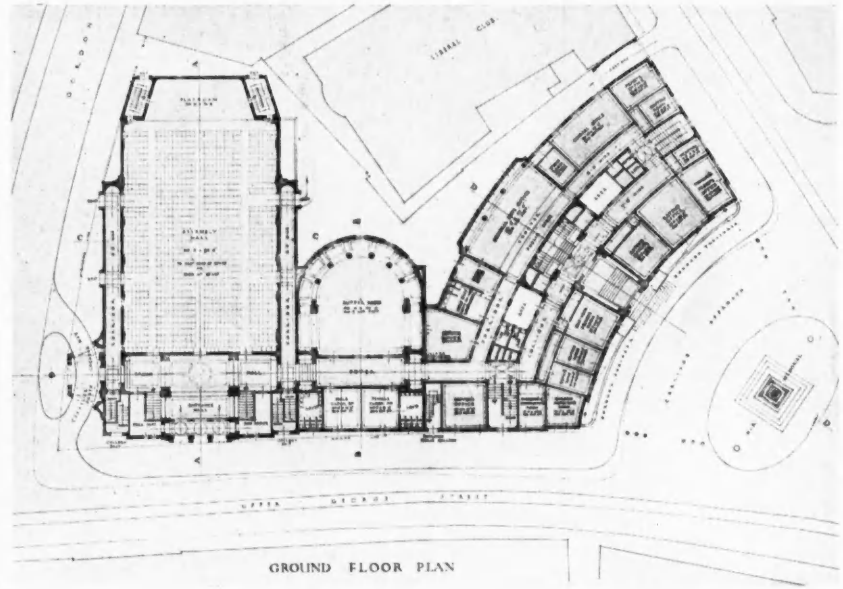
These two elevations should be compared with the principal front and the ground plan illustrated on the following pages.



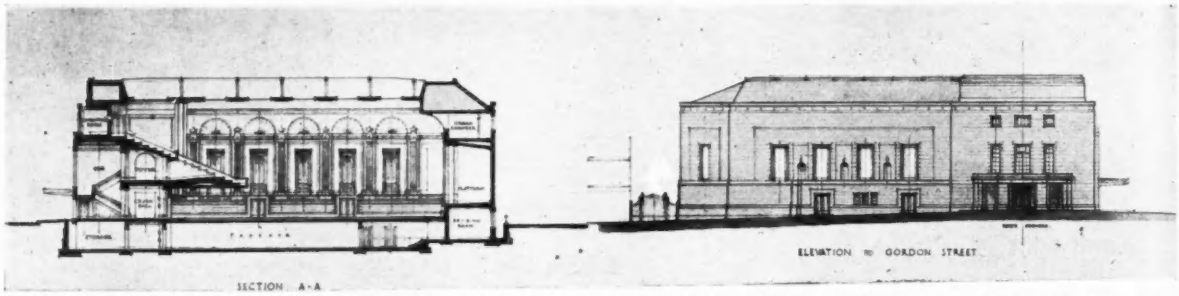
Sections through the council chamber and supper room; through assembly hall, and through the administrative department.



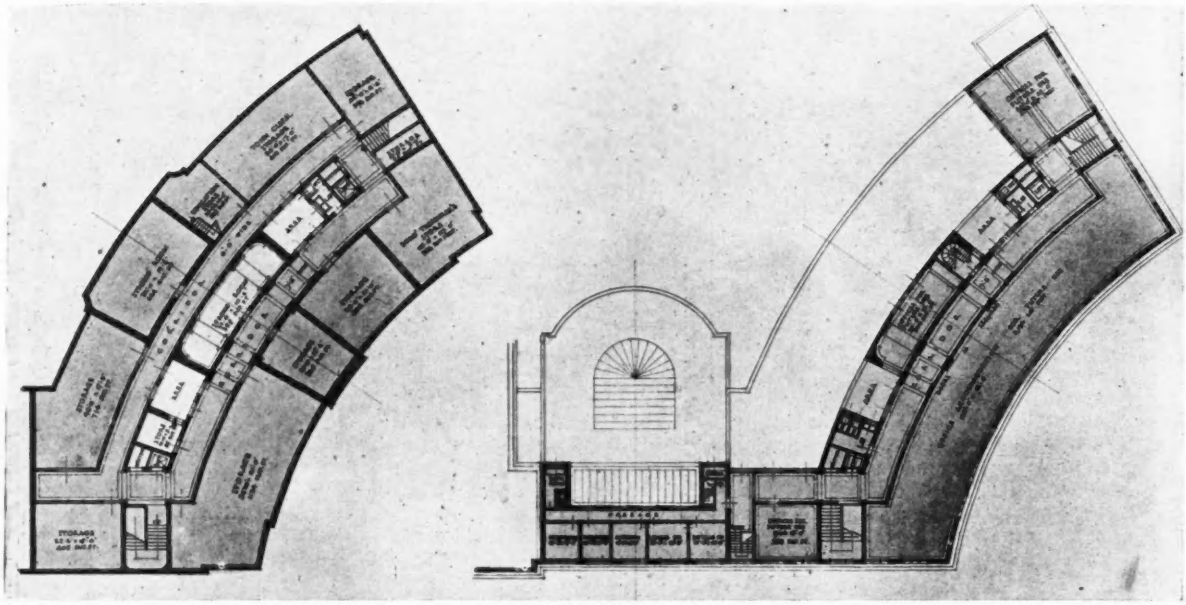
On the first floor are the council chamber, the mayor's parlour and ante-room, committee rooms and the balcony of the assembly hall.



The principal elevation, that of the administrative department, is at the corner of Upper George Street and Manchester Street (see ground-floor plan below). It faces a carriage drive, in front of which is the war memorial.

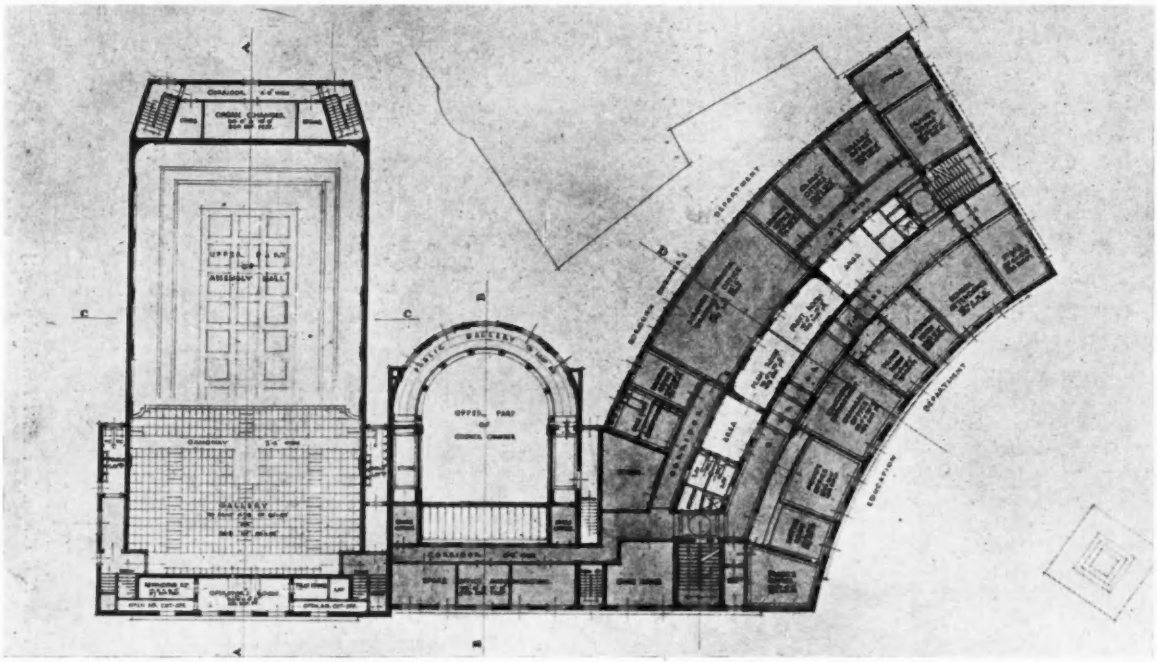


LOWER GROUND FLOOR PLAN



GROUND FLOOR PLAN

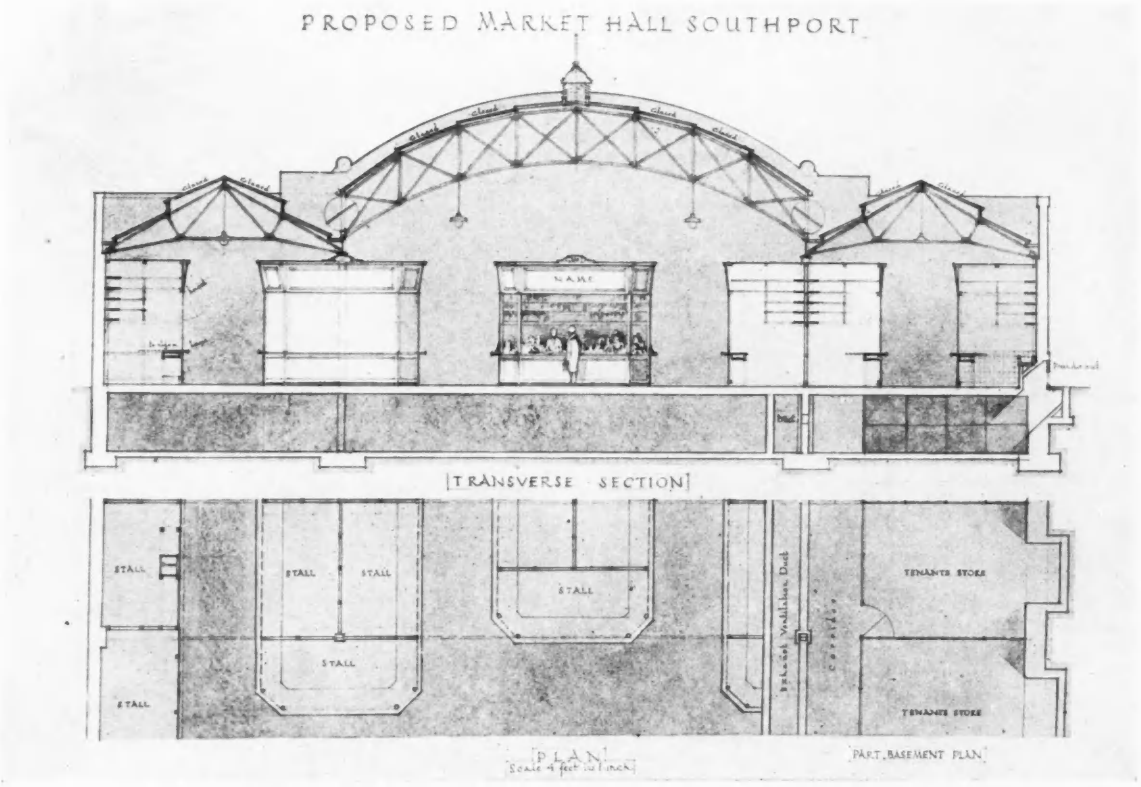
Luton Town Hall Competition: First Premiated Design.] *[By Bradshaw Gass and Hope.*



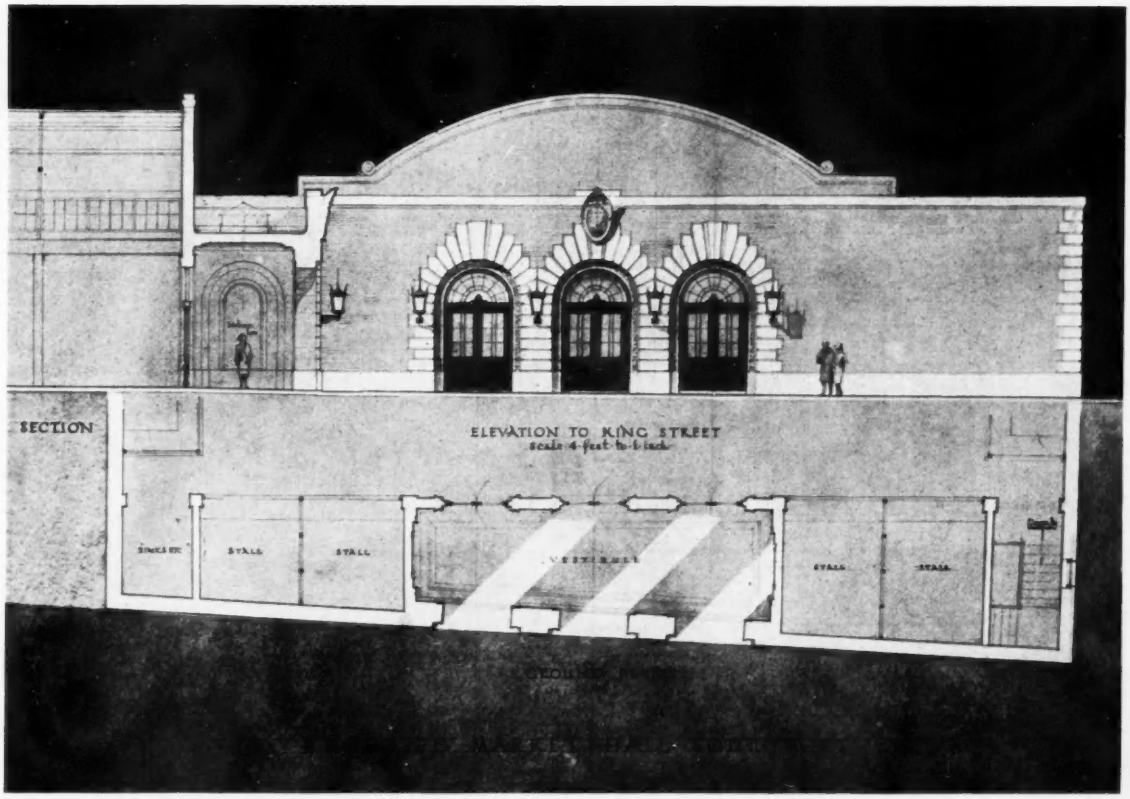
Lower ground and ground-floor plans. Eighty-six competitors took part in the competition. The awards of the assessor, Sir A. Brumwell Thomas, were as follows: First, £500, Bradshaw Gass and Hope, Bolton; second, £300, Lanchester and Lodge, London; third, £200, H. J. Harding, London; fourth, £100, J. Coulson Nicol, Birmingham.

Longitudinal section through the assembly hall, and the elevation to Gordon Street. The assembly hall extends through three floors.

In the basement are storage and strong rooms, and on the third floor are the caretaker's flat and future office accommodation.

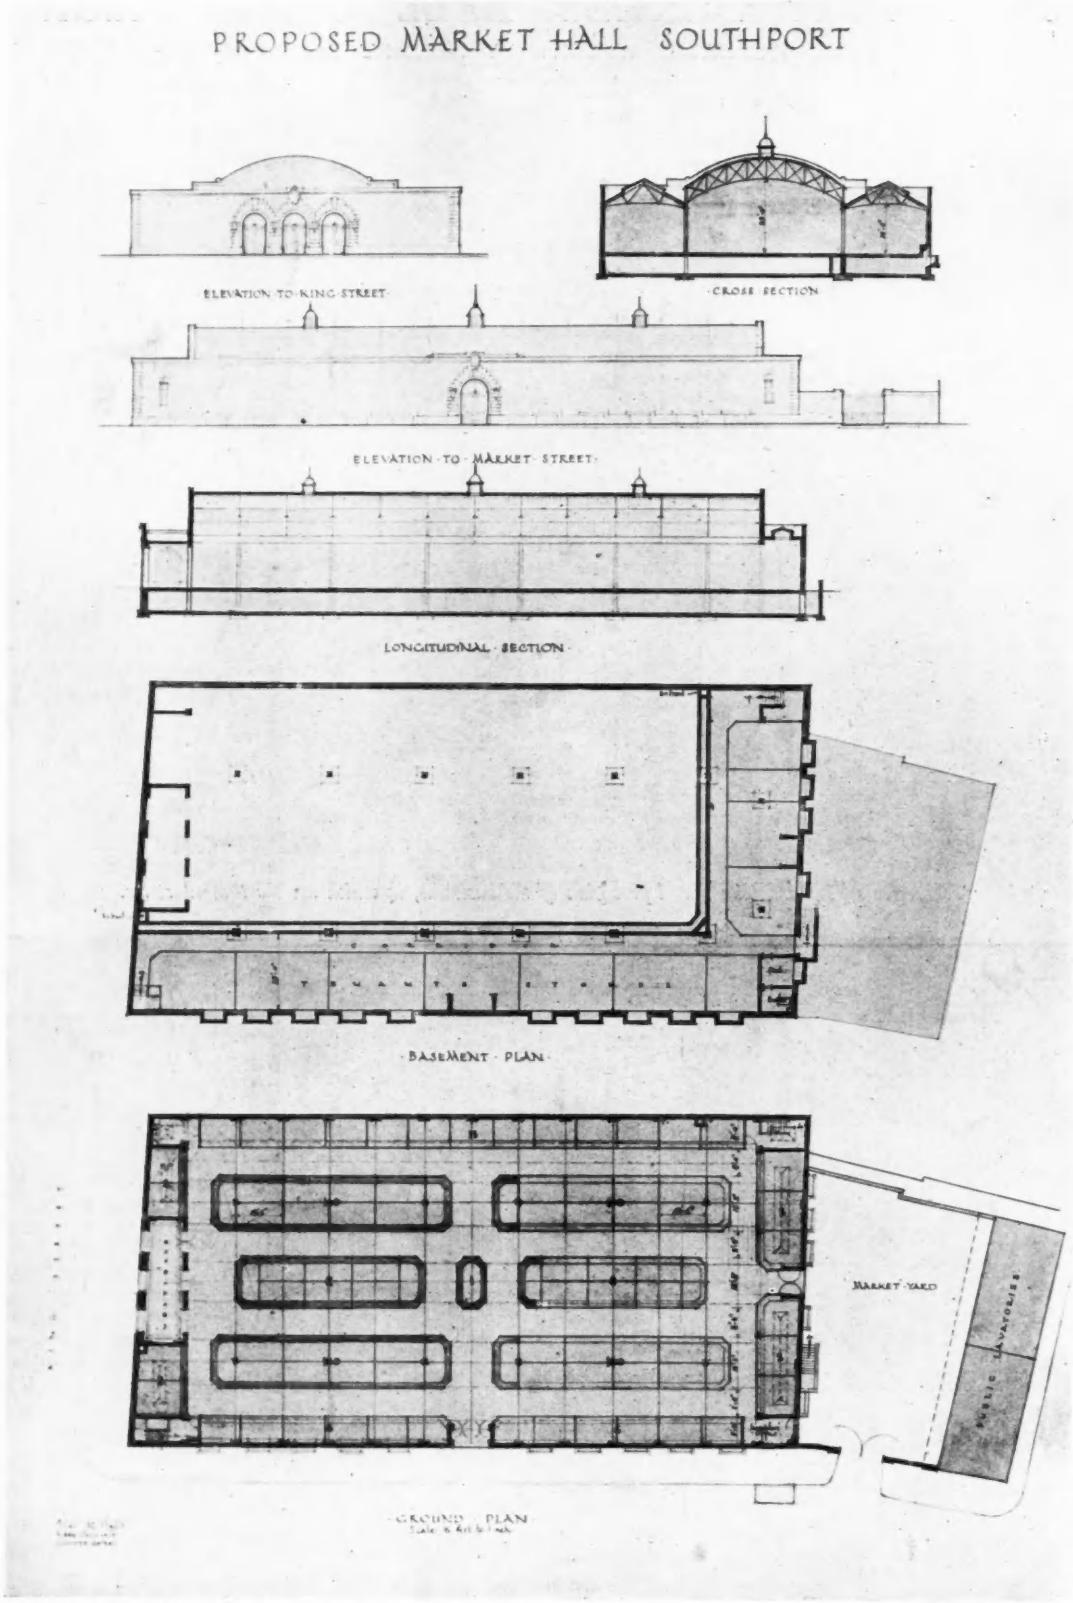


Luton Town Hall Competition: First Premiated Design.] [*By Bradshaw Gass and Hope.*



On the second floor is the gallery of the assembly hall and the upper part of the council chamber.

SOUTHPORT MARKET HALL COMPETITION



FIRST PREMIATED DESIGN: BY HERBERT LANGMAN

Transverse section and plan; and part plan of the basement, in which are the tenants' stores.

The principal entrance is from King Street. Two subsidiary entrances are provided from Market Street; see plans, page 378.

Southport Market Hall Competition: First Premiated Design.] *[By Herbert Langman.*

Plans, elevations and sections. The competition was assessed by Mr. Percy Worthington, whose other awards were as follows: Second, £50, Q. Mangnall Bluhm; third, £35, George E. Tonge; fourth, £20, Packer and Crampton. The first premium was £100. The competition was limited to local architects.

ENGLISH PRECEDENT No. 132

GATE,
WRENCOTE,
CROYDON, SURREY

The man who sets out today to produce ironwork similar to this gate is committing a sin against the gods. It could not be copied for a given sum of money and to a contract date in any but a harmless, lifeless, nearly worthless manner.

Though the study of how such work came to be made is the very core of architectural education, tradition falls into a bog with too much copying. It is better to look long—then go away and do something different.

[E. MAXWELL FRY]

LETTERS FROM READERS

Guildford Cathedral Competition

SIR,—With reference to the letters which appeared in THE ARCHITECTS' JOURNAL for August 13 and 27, it would seem that your correspondents have mistaken the object of the preliminary invitation.

This is intended to serve a dual purpose: (*a*) To enable the committee to select a limited number of architects for a competition, and (*b*) to avoid putting those submitting work to the trouble and expense of preparing special drawings.

As the committee wish the invitation to be as wide as possible, a design for a cathedral (or for that matter, any church) was included, so that younger men, not having had the opportunity of carrying out ecclesiastical work, might show their ability and be invited to compete.

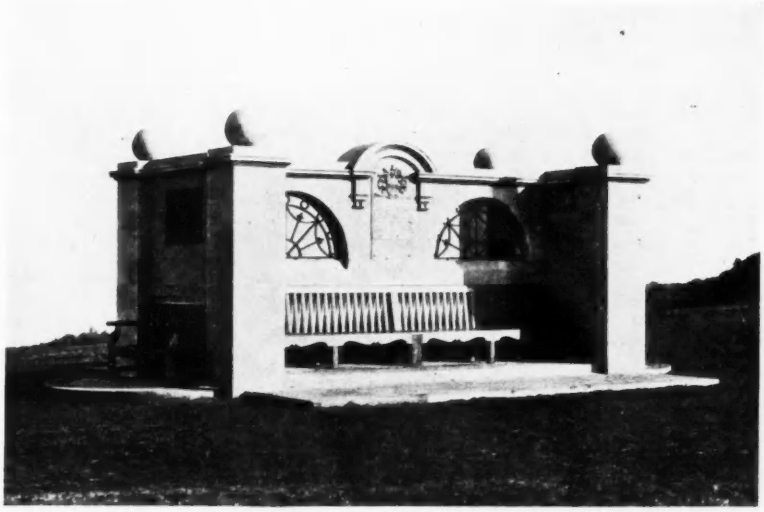
Since no conditions were laid down for such a design, or even a site given, it would seem clear that the intention is that such a design as is submitted would serve merely as an indication of the ability of the author to compete in the competition.

LIONEL E. BLACKBURNE
(ARCHDEACON OF SURREY)

SIR,—I am sorry to see your correspondents falling foul of the Guildford Cathedral competition conditions in what seems surely immoderate language when the conditions themselves are, on the face of it, a model of sweet reasonableness. They are so very calm, straightforward, and plausible that they should surely conciliate everybody. The competition is obviously a limited one and, as such, differs hardly at all from a thousand other competitions of the same kind.

There are many things to be said for limited competitions; and whoever has in this instance advised the promoters that the competition should be a limited and not an open one, cannot lightly be accused of having advised them wrongly. We may not all equally like the idea of the limited competition, sir, but there have been scores of them in the past, and only a few months ago you published the winning design in a perfectly successful one organized by Messrs. Daniel Neal and Sons. I cannot recall that any such fuss was made about that or of any of its recent predecessors.

The mistake made by your correspondents arises, I believe, from the fact that they have somehow been misled into looking upon the first, selective stage of the Guildford competition as an open competition, as that term is usually understood by architects in this country. What has caused them so to regard it, one cannot, of course, very well tell. It may be the mellifluous language used in the Archdeacon's advertisement; it may be the waggish reference to persons whose taste has "led them to study buildings of ecclesiastical character"—a reference obviously not meant to apply to architects at all; it may be the mere fact of the competition being advertised in the Press. It is not, of course, the common practice to advertise limited competitions, and I have heard it said that the public advertising of the present one is tantamount to its masquerading as a public competition. But the merest glance is sufficient to show that it has nothing in common with the public or open type of competition as understood by the R.I.B.A. To judge it by the standards of the public competition, as most of your correspondents seem to have done, is therefore not only patently absurd, but quite unfair to Mr. Tapper and the committee.



I must say that I myself find it difficult to understand why the competition has been publicly advertised, but that is a matter for the Cathedral Committee, and one which need hardly worry us. Some of your readers may remember a travelling scholarship founded by the late Society of Architects some years ago, as a result of a generous gift from Mr. L. Sylvester Sullivan. Entries for that scholarship were invited in exactly the same manner as the entries for the Guildford competition. Portfolios of drawings were sent in accompanied by personal particulars, and the jury chose the man who in their estimation was the best and worthiest. There, indeed, was a case which clearly demanded advertisement and formal entries, for not every architect otherwise qualified would have been willing to throw up his work for several months in order to undertake a tour of study abroad at short notice. The choice had to be made, of course, from a number who were willing and able to go. But I do not think the Guildford Cathedral Committee need fear that any architect, however eminent, whom they may select to compete for a certain fee of 500 guineas, would declare himself unable or unwilling to enter upon the task. And what harm if he did? They have the whole of the profession to choose from. And the executed work of "architects who have been engaged in the design of cathedrals or churches" is quite accessible to them without requiring to be submitted as though it were a birth certificate or an unpublished thesis. It is possible that the submission of portfolios may make the task of selection easier; I should have thought the opposite would be conspicuously true. However, that, as I say, is their affair, and I apologize for tacking this digression to the end of a letter meant to be sparing of words.

T. F. WIGHTWICK

Beachy Head Memorial

SIR,—I am one of those who consider that sufficient credit is not given to those architects who show great ingenuity in utilizing existing examples of ancient craftsmanship in such a way as to enhance the beauty of a new design.

True, you occasionally illustrate in your pages new boardrooms containing Georgian panelling, new houses where an Adam mantelpiece is utilized in the drawing-room, and new banks where early-nineteenth-century screen walls

Commemorative seat at Beachy Head (see accompanying letter by C. H. Neurdein).

are made to take the place of the ground floor. In all these jobs, however, the old work represents only a small proportion of the whole.

The commemorative seat on Beachy Head unveiled last autumn by the Duke and Duchess of York is a good example of the kind of thing I have in mind. Here the architect was obviously faced with the question of composing a pleasant design out of the following elements :

(a) Four gate-piers.
(b) Four stone balls.
(c) One curved pediment.
(d) Four triglyphs with eight *guttae* only between them.
(e) Two lead fanlights.

The accompanying photograph, which I do not think has so far adorned your JOURNAL, shows clearly with what skill these elements have been assembled. Personally, I am inclined to feel that a powerful Kent fireplace in the centre of the design would have supplied a focal point which at present is somewhat lacking.

C. H. NEURDEIN

Professional Etiquette

SIR,—The amendment in the first paragraph of clause 3 of the Code of Professional Practice of the R.I.B.A. Bylaws, as reported on page 356 of the JOURNAL for September 3, is interesting, especially in these days when so many members of our noble profession run their businesses on somewhat similar lines to that of grocers and cheese merchants.

The clause referred to reads : "*An architect must not advertise nor offer his services by means of circulars or otherwise.*"

" Otherwise " is a very comprehensive word. In the event of a breach of this bylaw, what action is to be taken by the Institute?

Who is to report such cases of breach and how is the evidence to be presented? No one wants to be the tale-bearer, even less so when he himself has suffered by the meanness of another. Is it not time we ceased to speak of the business of architecture as a profession or an art? It certainly is looked upon as a mere business by the average lay-man and client, and no wonder.

Most clients are not looking for artists, but for the man who will give the most for the least.

If this new " Code " is to be enforced, is it not time that the Institute cleaned out some of the men who treat the profession as a business without regard to standard fees, *esprit de corps*, or any other consideration of common decency? In the provinces it is certainly a great handicap to the getting of commissions to be a member of the Institute. I could quote many instances to prove this statement.

Do not let us be deceived any longer. Clients, as a rule, unless they want £2,000,000 cathedrals, are not concerned with a man's artistic qualifications or any idealistic code. This is sad but true in the majority of cases.

WILLIAM DAVIDSON

The Mansard Roof

SIR,—May I add fuel to this controversy ? The simple mansard with one row of dormers in the lower pitch (and one in the upper if it be reasonably steep) is an entirely sane, functional and lovely roof. In Bath and Bristol, two of our proudest cities, it is as common as clouds. It belongs to the structure which it covers and is one with it. But in London the badly-written bylaw quoted by Mr. Maxwell Fry, who must have shivered all down his literary spine when he read it, has caused the misuse of which he complains. Heavy dormers, tier above tier, indicating the weight of many stories supported by a sloping plane, would give a cab-horse the staggers—if one were left. Nevertheless, a proper mansard is just as proper in London as in Bath.

The alternative of " building in set-backs," a horrid phrase for a bad job, belongs at present to the realm of stage architecture. No designer has yet convincingly related the terraces to one another, and they resemble walls either sinking down or popping up one behind another. I wish Mr. Maxwell Fry or Mr. T. P. Bennett would produce the synthesis we await.

P. M. STRATTON

Regarding Doors and Windows

SIR,—As far as sliding doors are concerned, I am prepared to yield to the objections raised by two correspondents in your last issue. Mr. H. D., in attributing the death of the Venetian blind to the " fresh air " movement, produces the very arguments which will, I hope, prove fatal to the modern substitute.

The alternatives to the Venetian blind are : (1) a curtain of some heavy material, or (2) a light chintz curtain. The heavy curtain shuts out light and air. If you are changing your clothes by day, you must switch on the electric light, or leave the curtains not quite closed. The light curtain is quite good from the ventilation point of view (not as good as the Venetian blind, of course), but you cannot darken the room by day in, say, the case of an invalid in bed, or for a quiet nap on a Sunday afternoon. In a high wind with the window open, the curtain blows all over the place, and is liable to afford the neighbours (and actually did in my case only last week) a full view of the owner of the house in the midst of his ablutions and an alarming state of négligé.

With the Venetian blind you can control the amount of light and draughts admitted to the room, and if it does rattle on a windy day we may safely leave it to the ingenuity of Mr. Duncan, your other correspondent, to overcome this disability.

While on the subject of ventilation, I should like, sir, with your permission, to start yet another hare. Why, oh why are the bars that control the opening of casement windows made with so few holes ? On a cold night in winter one must perish of cold or shut the window tight, and hope, generally not in vain, that there are sufficient unauthorized draughts to prevent the possibility of suffocation.

HENRY B. BLESSINGTON

Gas v. *Electricity*

SIR,—The letter reprinted from *The Surrey Mirror* in last week's issue of THE ARCHITECTS' JOURNAL provides the architect with a ready formula for calculating the relative costs of gas and electricity for cooking and heating installations.

The calculations will probably be more welcome reading to the gas than to the electric supply companies. The example given of the East Surrey Gas Company with a charge of 13·4d. per therm would necessitate the power supply cost of electricity being ½d. per unit; in large towns gas is relatively cheaper, and would give a still lower figure for electricity to compete with.

The difference in labour saving between up-to-date gas and electric cookers is negligible, but the saving in the initial cost of building must be remembered. It is probable that in view of the memoranda sent by the Ministry of Health to local authorities the bylaws will, in future, insist that all gas flues must be taken above the roof.

The problem of cheap electricity for general use is an urgent one and is not confined to this country. Recently, while staying at a small hotel in Switzerland, in a canton where electricity is generated on most advantageous methods by water power, the proprietor told me he found it cheaper to cook by wood and imported coal. I have also found in Sweden, another country peculiarly well provided with water power, that in a house within forty miles of the great generating station of Trollhätten, while the lighting was provided by electricity the cooking was still more economically done on the old-fashioned wood fuel range.

L. E. WILLIAMS

Forty-five Churches Fund

SIR,—I much regret to learn from the Secretary of the Forty-five Churches Fund that his Committee has decided that " in all the circumstances " my proposal that the matter of designs

should be left to open competition is "impracticable."

Last May the then Secretary of the Fund—which, with the blessing of the London Diocesan Church Extension Appeal, was opened to provide money for the erection of forty-five new churches in Greater London—wrote to me: "I have some sort of rough idea in my head on the lines of stock designs, perhaps three or four at either varying or similar cost."

I, for one, am heartily thankful that the late Sir Christopher Wren did not keep a set of "stock designs" in his drawing office.

G. B. J. ATHOE

(SECRETARY, INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS)

Sheffield City Architect's Honorarium

A further stage in the controversy that has been aroused by the decision to pay an honorarium of £1,000 to the Sheffield city architect has been reached. Alderman E. G. Rowlinson, of Sheffield, in a letter addressed to *The Sheffield Mail*, says: The general demand in the city for a central library to replace the present dangerous structure has been before the city for very many years, and eventually the City Council decided to embark upon a scheme for an up-to-date library.

When the scheme began to take shape, Alderman Graves indicated to me that he was prepared to give a substantial sum towards adding to the library a fine central art gallery, also much needed. Considerable negotiations took place, many visits were paid to the site, and various plans were discussed. The city architect was asked to get out designs, and eventually one was provisionally agreed upon, and Alderman Graves indicated that he would give the sum of £30,000 towards the construction of the art gallery.

As plainly stated by the architects' organization, in recent letters to the Press, large jobs like this are not included in the ordinary duties of a city architect. However, Alderman Graves and the committee, with full confidence in the merit of his plans, were anxious that the city architect should undertake the work, and it was ultimately agreed that a sum of £500 per year for two years should be his recompense for this addition to his normal duties.

The original arrangement with Alderman Graves entailed the commencement of the expenditure of his money when the upper part of the building, the art gallery, commenced.

Greatly daring, I asked Alderman Graves if he would be good enough to allow the city to use his money in the early stages of the building, so that the city's money could be used for the latter part of the scheme, thereby saving the interest on the money otherwise payable by the Corporation during the first year.

Alderman Graves very kindly consented to that arrangement, which, as was pointed out to him, would far more than pay for the grant to the city architect.

If the first part of the building takes only one year it will be seen that at 5 per cent. on the £30,000 the sum of £1,500 represents the additional advantage to the city's finances as compared with the original offer.

General consent having been received to this proposal, the preliminary arrangements have now been proceeding for twelve months.

I was, personally, exceedingly sorry, and I feel sure that Alderman Graves was greatly hurt and surprised (as his speech at the Council indicated) when the speeches were made without regard to facts, and without any consideration for the wishes of one who has been the city's greatest benefactor, and who, in effect, has more than paid the fees referred to, in addition to his original gift.

The alternative to this arrangement would have been to put the design and execution of the architectural work out of competition. Had such a course been taken, the fees would have been roughly £6,000, made up of £1,000 to the city architect and £1,400 for the two temporary assistants for this work, representing a saving of approximately £3,600 to the ratepayers of the city.

Settling-Up Honeywood: xvi

A SETTLEMENT AND AN UNSETTLEMENT

BY KARSHISH

(H. B. CRESWELL)

Grigblay, the builder, has refused to accept responsibility for defects in the interior painting after Sir Leslie Brash, the owner, has failed to fix the blame on the manufacturers. The extras account has been for some time a subject of dispute between Grigblay and Spinlove, the architect.

SPINLOVE TO BRASH

21/9/26.

[*This letter was evidently written before Spinlove received Grigblay's, of the same date, refusing to make good defective painting.*]

Dear Sir Leslie Brash,

I am in receipt of your letter and enclosures and have written to Grigblay. He will, I fear, without doubt, refuse to make good the paint-work, and for the reasons he before gave—namely, that he only painted with Riddoppo when you undertook to accept responsibility for the results. I inspected the painting on several occasions while it was in progress and could find no fault with the way the work was being done; in fact, Grigblay put his foreman decorator in charge so that it should have special attention.

I will set aside Saturday morning to go into the matter with you, as you ask, but as Grigblay will certainly refuse to go back on his decision to have nothing more to do with the painting at Honeywood, and I have no experience of Riddoppo, the composition of which is, as you know, a trade secret, I am afraid I shall not be of much help to you.

Yours sincerely,

We here see Spinlove at his old game of writing letters that are not only unnecessary but are the very soul of tactlessness. The mention of his name by Brash's solicitors as possibly liable, jointly with Grigblay, has made him eager to exculpate himself and consolidate Grigblay's position.

BRASH TO SPINLOVE

Dear Mr. Spinlove, 23/9/26.

With a view to obviating the painful necessity of giving unpleasantly frank indications of my feelings when I receive you, I write to intimate that when I give instructions to my professional adviser I anticipate they will be performed *without* unnecessary refractory comment.

The whole of this infernal muddle anent Riddoppo is sufficiently exasperating without the additional vexation of disparaging opinions which—may I be allowed to asseverate?—I have not invited, and do not desire.

For perfectly logical reasons I require Mr. Grigblay's final answer to my demands, which I apprehend I shall in due course receive; but I do *not* desire to be informed what, in your opinion, that answer is eventually likely to be; I do *not* ask to be told that Mr. Grigblay has previously obstinately refused restitution; I do *not* ask to be reminded that the fellow obstreperously desires to put the blame on me; I do *not* require to be instructed that the composition of Riddoppo is of a secret nature, and I do *not* ask you to reiterate over and over again that you know nothing of the paint, and for the very obvious and comprehensive reason that I am already redundantly informed upon the whole of those matters.

The only intimation that your communication conveys with which I was

not previously conversant is that you espouse the contentious representations of Grigblay in opposition to your employer's interests; and that though you profess to have no acquaintance with the ingredients of which Riddoppo is composed, you asseverate complete confidence in your ability to decide the appropriate method of applying it. This—you must permit me to intimate—causes me considerable astonishment.

Yours sincerely,

We can imagine Spinlove aghast at this reception of his letter, and asking himself, "What on earth have I done now?", but although Brash's expression of irritation may not be excusable, his annoyance certainly is so. We have before observed an engaging generosity and frankness of nature in old Brash of which this letter seems only another example. Spinlove's smug letter has exasperated him, and he acts on an impulse to let Spinlove know what he feels about it, so that there need be no sour reserves in his greeting of his guest. It may be, of course, that his native pepper got the upper hand and that he let fly, as we have often seen him do before; but, even so, there is an ingenuousness and simplicity about the old man which is disarming.

SPINLOVE TO GRIGBLAY

Dear Sir, 27/9/26.

I saw Sir Leslie Brash on Saturday and gave him your answer to his demand that you should repaint. I understand he is going to reconsider the whole question.

Yours faithfully,

GRIGBLAY TO SPINLOVE

Dear Sir, 29/9/26.

We have now further considered the items of the Statement of Account which remained in dispute after your interview with Mr. Grigblay, and as we wish the account to be now settled we offer to reduce certain of our charges, but only supposing you meet us by allowing the others to stand; failing which we must withdraw our offer and hold to our full claim, as we consider our charges fair, and we have already met your views in a reasonable way and think we are entitled to a little consideration, as all give and no take is not the treatment we are accustomed to from architects, and one way and another this job has not been much profit to us, and if we see ourselves clear when all is done it is about as much as we can expect.

MAKING GOOD DRY ROT

We must refuse to withdraw this item. If we did we should be agreeing it was a defect under the contract, which we have all along disputed and cannot take responsibility for.

[*If Grigblay met the cost of this work he would involve himself in liability for all further dry rot due to the same cause. It should be remembered, also, that the Courts have decided that a builder's liability for defects is not limited by the date named in the contract as terminating his liability when it can be shown that the defect existed, or was latent, before the expiration of the time fixed by that date; so that it is of special importance to Grigblay that the architect should, by passing the item as an extra, acknowledge that the cause of the dry rot is not a defect for which Grigblay is responsible. It is, of course, equally important for Spinlove that he should not exonerate Grigblay by allowing the item to rank as an extra; but Spinlove, who is apparently unconscious of the dreadful disaster the dry rot may portend, is probably also unconscious of the consequences of agreeing that Brash shall pay for restoring the first manifestation of it. The amount in dispute is likely to be only ten or fifteen pounds, but if it were only as many shillings Grigblay, who understands well how he stands, would be just as obstinate in claiming payment. The case, in fact, is a good instance of the considerations of policy with which architects must temper discretion, and even sometimes moral justice, in settling up building accounts. The bearing of each detail upon the interpretation of the contract as a whole is always in the mind of the experienced man*].

RAKING JOINTS AND SPECIAL POINTING AFTER FROST

We are willing to knock off £17, making the charge £32 6s. 3d., which is, as near as we can measure, 4½d. a foot for special.

SPECIAL POINTING TO ORDER IN LIEU OF PLAIN STRUCK JOINT

This claim we cannot withdraw. We were willing to point with plain struck where frost pulled out joint, and to finish new to match in place of striking off as specified; but you ordered a special pointing, and we are entitled to extra cost of special over ordinary flat, as already pointed out.

[*Apparently Spinlove specified that the faces should be finished by pressing the mortar out of the joints and striking off surplus with trowel as the bricks were laid. A sharp frost spoilt some of this work while it was new, and the joints had to be raked and pointed, which made it necessary for the whole of the brick faces afterwards built to be pointed to match; and Spinlove, it seems, required a method of pointing which Grigblay claims was more costly than what properly could be required of him under the contract. The justice of this claim seems decidedly doubtful, but it is necessary to know the whole of the facts before forming any opinion. The sum involved, as shown in the statement printed in the seventh instalment of this series (issue for July 9), is £134.*]

ALTERATION TO GROUND-FLOOR WINDOW HEADS

We regret we cannot accept your view of this matter. Your ½-in. joinery detail figured height from ground floor, but this varied from datum level, as the floor had been lowered 1½ in. by your orders, and we cannot accept responsibility for same.

[*As recorded in "The Honeywood File," Spinlove forgot that the floor had been lowered and figured the dimension wrongly; but he always contended that it was Grigblay's duty to see that the frames were made to fit the building. Grigblay's refusal is so worded as to enforce the position the dry rot makes it important for him to hold, namely, that he accepts no responsibility for the lowering of the floor.*]

RENEWING TWO CATCH PITS

We are willing to cut this out.

We have given these matters close attention and this is the last we have to say and hope you will now accept our offer and not oblige us to withdraw it, as we understand Mr. Tinge has been waiting for your decision on outstanding points for a long time and has the whole of account ready several weeks, so that this will now settle everything.

Yours faithfully,

SPINLOVE TO GRIGBLAY

Dear Sirs, 4/10/26.

I have considered your offer and decided to accept it and settle the account on your terms. I saw Mr. Tinge to-day and he says he can have the statement of account ready some time next week.

Yours faithfully,

Spinlove seems to have contested every inch of the ground in this long battle of the extras, and in a way that does justice to his conscientiousness and native tenacity. At the same time he appears to have been a little hard on Grigblay, who, like every builder that takes a craftsman's pride in his work, has given a good deal more than his contract demands of him. However, the figure arrived at is likely to be a fair one; for Grigblay is well able to take care of himself, and Bloggs knows how to take care of him too—in fact, appearances are that no fly of any kind has ever settled on Bloggs.

LADY BRASH TO SPINLOVE

Dear Mr. Spinlove, 10/10/26.

They have all come back again and *more than ever*, even Phyllis says so now, and what is to be done I really do not know, as, after the gentleman who came, they all went away and Leslie said that was the end but now I do not know what he will say as Mrs. Godolphin, who is staying here, notices them very much at night and it affects her *breathing* and I am the *same*, so it must be very bad and something must be done about it but you will know best so will you say *at once* as it is so very unpleasant for everyone and cannot be allowed.

How very cold the weather has been of late.

Yours sincerely,

SPINLOVE TO LADY BRASH

Dear Lady Brash, 11/10/26.

I understand from your letter that you still think there is something wrong with the drains, but that cannot be the case as you will remember that question was settled when the sanitary experts tested the drains four or five months ago. If there had been anything amiss they would certainly have discovered it, so you may dismiss the idea entirely and think no more about it. What you noticed is perhaps some smell from the kitchen. Are you sure the servants, to save trouble, have not been using the range as a refuse-destructor—that is, burning fat and kitchen residues and rubbish there, instead of throwing them into the dustbin? They may do this before they leave the kitchen at night, and it may give rise to most unpleasant smells and should not be allowed, as it burns the fire-bars and cheeks.

Yes, the weather has been wretchedly cold.

Yours sincerely,

This seems a most inadequate reply to Lady Brash's letter.

TINGE (QUANTITY SURVEYOR) TO SPINLOVE

Dear Sir, 11/10/26.

Enclosed find Statement. Copy has been sent Grigblay.

Yours faithfully,

Tinge, at any rate, does not waste words. The statement of account, which must be long and intricate, is not in the file. It is, no doubt, put away with the contract documents.

SPINLOVE TO GRIGBLAY

Dear Sir, 12/10/26.

I have received statement of account from Mr. Tinge showing total £20,242 11s. 9d. I shall be glad if you will confirm that you accept this figure.

Yours faithfully,

As Spinlove has already agreed with Grigblay the items making up the account, and Tinge is in the position of auditor, valuer or assessor, Spinlove's invitation to Grigblay to agree the figure Tinge has arrived at is little more than a formality, though, as a matter of business, a necessary one. Tinge is expressly appointed under the contract to determine the total figure; and neither Grigblay nor Spinlove can object to the account unless it should appear that Tinge has misunderstood instructions or made any mistake.

SPINLOVE TO BRASH

Dear Sir Leslie Brash, 12/10/26.

I have just received the statement of account and am very glad to be able to tell you that I have succeeded in effecting a three hundred and fifty pound saving. The exact figure is £337 3s. 5d., making the account £1,555 11s. 2d., instead of £1,892 14s. 7d., which, you will remember, was the total originally shown. To this have to be added certain items which have come in since the original account was drawn up, totalling £54 2s. 2d., and a few others that Grigblay accidentally omitted—value £112 1s. 8d., so that, after allowing certain profits on the new items (£22 4s. 9d.), the total figure shown is £1,753 19s. 9d., which, after including quantity surveyor's fees, £58 12s., gives a final total of £1,802 11s. 9d. I thought you would like to know the figures at once. With kind regards

Yours sincerely,

Brash must have been glad Spinlove's letter ended when it did, for the vaunted three hundred and fifty pound gain has already dwindled to £90, and, at the pace Spinlove was keeping, another half-dozen lines would have brought him to a three hundred and fifty pound loss. Whether Spinlove's is the best method of making a saving on a building account appetising to a client I am not psychologist enough to determine, but I am disposed to doubt it. If I wanted a hungry lion to receive the highest possible gratification from the gift of a cutlet, I should not first offer him a leg of mutton and then snatch it away.

We have before noticed an adroitness in Spinlove on these occasions, which is so excessive as to be almost unholy. His persistency has no doubt saved Brash money; but the amount for which Spinlove claims credit is the whole of the difference between the totals of the Interim Summary and of the totals of corresponding items in the Final Statement. This difference, however, is not due to Spinlove, but in the main to Grigblay's wisdom in affixing full covering figures to those items in the Summary the exact value of which remained to be ascertained; and it is due to his foresight that, after the inevitable omissions and additions have been set against one another, the Final Statement shows a saving, and not an excess, on the Interim Summary. Spinlove, however, is perhaps unaware of this. With characteristic impulsiveness he rushes in front of the curtain without waiting to reflect whether he deserves the plaudits he invites. It is a pity, in view of the air of masterly elucidation he adopts, that he has made a slip of ten pounds in his manipulation of the figures. An architect who originates or passes inaccurate figures does himself very great damage for, obviously, his client would not entrust him with his affairs at all unless he had confidence in his exactness in handling them. It is to be understood that Spinlove is dealing only with total of extras—£1,802 11s. 9d. This, added to the contract sum, £18,440, makes the total of account £20,242 11s. 9d.

GRIGBLAY TO SPINLOVE

Dear Sir, 14/10/26.

We agree account and Mr. Tinge's figures of total cost, £20,242 11s. 9d., and balance due, £1,242 11s. 9d. As we shall be entitled to said balance on 10th November we shall be glad to have list of any defect outstanding so that we may now get contract completed.

Yours faithfully,

Grigblay has been paid by instalments a total of £19,000, and this balance due is, in main part, money held back as security for making good defects appearing within nine months of completion of the work, which was acknowledged by Spinlove to be accomplished on February 10. Grigblay means to have his money directly it is due on November 10, and his intention is no doubt braced by the dispute about Riddoppo. What we have to expect is that Grigblay will demand his balance on November 10, and Brash will refuse payment on the ground that Riddoppo is a defect for which Grigblay is accountable.

LADY BRASH TO SPINLOVE

Dear Mr. Spinlove, 14/10/26.

It is very kind of you to advise me not to trouble about them, but it is not the kitchen range, for I would *never* allow it and cook says she never does and it is much more in her room which is why she complains so, and something must be done at once as poor Mrs. Godolphin left the house in a terrible fit of coughing as I knew she would, and even the doctor feared asthma and told her she should if it affected her so. It may still be the *drains*, he says, only no one will decide though I have spoken to Leslie time after time, but he comes home tomorrow, I am thankful to say, for something has got to be done or we shall all have to leave too.

How chilly it is for this time of year, but the radiators are a godsend! Would it cost much to put one in the Ideal attic—I wonder? The fire gives out *no heat* up there, I find, but then there are no smells *there*!

Yours sincerely,

MISS PHYLLIS BRASH TO SPINLOVE

Dear Jazz, 14/10/26.

Is it the *architecture* of the house that smells? If so, you ought to choose a different style; the free Tudor, as you call it, is altogether too rather. Mum is getting herself into one of her states over it and you ought to come down and sniff around. It is no good sounding the "all's well" any more. "All's wrong" is the tuney, for we none of us like living in a third class in a S.R. tunnel. You must take this seriously, please, for it *is* serious. Yours,

PUD.

[NEXT WEEK: XVII—SPINLOVE COMES TO HEEL]

THE SKETCH CLUB

ELEVENTH SESSION

DRAWINGS BY PRIZE-WINNERS

WEATHER conditions all too clearly made things difficult for entrants for the second of the Holiday Sketches Competitions. The level of the first entries was reached neither in quantity nor in quality. The judges were placed in the difficulty of finding nothing that they could conscientiously recommend for a first prize, but assessed the two drawings reproduced on this page as worthy of being bracketed for second place. Accordingly, it is proposed to solve the problem thus presented by awarding prizes of five guineas each to—

Mr. Vincent Warrilow ("Rhine"),
50 Carron Street, Fenton,
Stoke-on-Trent, Staffs,

and to—

Mr. Ronald Knight ("Jeux"),
Broadmead, Broadmead Road,
Woodford Green, Essex,

and by transferring the remaining five guineas of prize money to the third Holiday Sketches Competition (closing date : September 15 ; for rules see page xlv). There will, therefore, be three prizes in this event—one of ten guineas and two of five guineas each—in place of the two originally contemplated. Of late the weather has been good ; a bumper result is anticipated.

QUESTIONS THAT ARISE

Colouring Metal

H. R. writes: "*What is your expert's opinion on the following two questions regarding colouring metal? a: A copper dome has turned black instead of green; what will make it green? b: Is there a commercial process which will turn bronze in shop fronts, etc., green, in a manner that is suitable for the wear received in cleaning windows?*"

Assuming that the dome has not previously received chemical treatment, in turning black it is merely following its normal course to acquire a natural green patina. When exposed to the outside air, copper always turns black before it becomes green; the green patina is acquired by the continued action of weather extending over a number of years. Very little can be done to hasten the formation of the natural green patina, but an artificial green colour can be obtained by spraying the surface of the copper with a solution of sulphate of ammonia ($\frac{1}{2}$ lb. of the salt to each gallon of water). This work must be carried out during a spell of dry weather, otherwise rain will remove the corrosion products before they obtain a grip on the metal. Several applications of the solution may be necessary to start the corrosion, and it should be noted that it may take several weeks for the green colour to develop so that it will be visible from ground level. "*Acid*" sulphate of ammonia, only obtainable direct from the local gasworks, must be used—not "neutral" sulphate of ammonia, which is a soil fertilizer.

The above treatment is applicable to copper which is already blackened by exposure, and also to bright, unexposed metal. Where bright metal is in question, the surface should be cleaned prior to treatment, for oil is used in the rolling of the copper sheets and some of it is forced, during the process, into the grain of the metal. It is this oil which often retards the formation of the natural patina, as well as any coloration attempted by artificial means. To remove this oil effectively and so expose the metal, the copper surface of a dome, *in situ*, should be scrubbed with a strong hot potash lye (made by dissolving $\frac{1}{2}$ lb. of potash to each gallon of water) and then well rinsed with hot water before receiving further treatment.

Regarding commercial processes available for producing a green coloration on bronze shop fronts, it is doubtful whether any artificial means can successfully resist possible injury in window cleaning, due either to abrasion or to the nature of cleaning materials employed. The best course is to induce the formation of an artificial patina by a solution and to protect the colour by a coat of white shellac dissolved in spirit, the shellac being applied in dry weather, at least a month after the green colour has developed to its entire intensity. Two books are available in which to find formulæ for solutions: (*a*) *Metal Colouring and Bronzing*,[1] by A. H. Hiorns; (*b*) *The Chemical Colouring of Metals*,[2] by S. Field and S. R. Bonney.

A very close resemblance to the natural green patina, it may be added, can be obtained by merely painting the surface of copper and bronze with French verdigris, finely ground in varnish which has been thinned out with turpentine. The mixture of varnish and turpentine should be in such proportions that an eggshell gloss is produced in the finished coat.

C. H. B.

The Editor invites readers' enquiries on all matters connected directly or indirectly with architectural practice. These enquiries are dealt with by a board of experts to which additions are constantly being made as and when the need arises. Readers must enclose name and address.

Tube-driven Wells

H. A. W. writes: "*Since your expert's reply to my query regarding tube wells* (THE ARCHITECTS' JOURNAL for July 2 last, page 21) *I have had a hole sunk on the site in Devon. I find that the subsoil for a depth of about 8 to 10 ft. is composed of clayish gravel of a reddish colour, mostly small stones up to $\frac{3}{4}$ in. diameter. There are, however, a fair number of larger stones, somewhat like flints, up to 6 to 8 in. in diameter. There appears to be no stiff clay. I am told by a local builder that there is a likelihood of ample water for the small house I have in mind to erect at a depth of not much more than 20 ft. I am hoping that with this additional information your expert might be able to give me more definite advice as to the type of well I should adopt.*"

Further to the information already supplied on the subject of tube-driven wells for water finding in Devon, your correspondent is evidently in a position where a tube-driven well is practicable for at least shallow depths. From his description of the subsoil there should be no difficulty in driving a tube for a depth of about 8 to 10 feet. Should, however, he fail to encounter water before coming on to a hard stratum, boring would be necessary. Since he is so near the depth which local information gives as a likely one for water, it would be a simple matter to drive a tube in the sinking already made, which is presumably a dug pit.

In the event of failure to find water above the sandstone, the safest way is to refer the question to a firm of specialists in well sinking. As a preliminary, however, the cheapness of the driven tube well will justify it to within the estimated range of water location, the bored well being much more expensive.

[2] London: Chapman and Hall, Ltd. (1925).

Boundary Fence

S. G. writes: "*The framework of a boarded boundary fence is on my side. Does this indicate that the fence is my property?*"

The law generally regards a fence rather as a barrier against intrusion, than as a boundary mark of property.

It is usually understood that, in the absence of an agreement, the person who erects a fence must erect it on his own land. Hence a post and rail fence is sometimes supposed to belong to the person who could drive the nails from his own side of the fence, but this rule is not universal.

Possibly some indication will be given on the sale plan of the estate to indicate the ownership of the fences on the various sides of the respective plots, and the original vendor of the estate or his agent should be consulted.

The generally accepted mark is a T-head placed against each line on the plan indicating fences, to show the owner.

If repairs to the fence are done by both the owners of the adjacent properties, a tenancy in common may be established.

A. T. A.

A Damp Wall

N. S. writes: "*I have just erected half a dozen shops with flats over, three stories in height, on a new estate in one of the outlying districts of London. The exposed flank wall at one end is built of Flettons, toothed, for future extensions, and trouble is being experienced with dampness penetrating through this wall. Further shops are not likely to be added for at least five years. What would be the cheapest method of treating this wall? Would a good waterproofing liquid coated on the outside walling last this period?*"

No solid walling in exposed positions, not more than 9 ins. thick, can be guaranteed to keep out dampness. In applying a waterproof liquid coating to the outside face of the walling, it is essential that the wall should be dry, and great care must be exercised in brushing the liquid into all cracks and holes.

I have doubts, too, whether the two necessary coats will last the five years over such a wide and exposed area.

Why not cover the walls with weather-boarding, and treat this material with creosote? Even though this looks an unfinished job, so also do Flettons toothed for future extension. E. S.

LITERATURE

COLOUR BLOCK PRINT MAKING

THIS book is an abridgment of the author's larger work, which was found to be too detailed by those using it as a textbook from which to teach the craft in schools and clubs.

The history of the lino block goes back to the last years of the nineteenth century only, when the Germans substituted lino for wood owing to the greater ease with which the former material is cut. It is a good material for the beginner and for those who wish to obtain only an elementary knowledge of the knife and gouge. Nevertheless, the medium has its own effect—a breadth and softness which is suitable for certain carefully-chosen and simple subjects. When sharpness and refinement are sought, a wood block should be used.

The author, without insisting that his ways of cutting and printing are the best, describes his procedure by means of a photograph of each main motion of the hands with the tools, and on the opposite page by notes explaining the motion. Thus, figure seventeen shows the right hand using the larger gouge to take out a sky, and *vis-à-vis* is the appropriate instruction.

With a little help from a master, any child can follow the method demonstrated in this book, and cut its own blocks and print its own pictures; nor should one of the results be to produce hundreds of mediocre artists, but rather to educate the eye and hand and power of observation of those who will be tomorrow's citizens.

The book is well reproduced and the price is moderate. P. M. STRATTON

Simple Colour Block Print Making from Linoleum Blocks. By Hesketh Hubbard, R.O.I., R.B.A. London: The Forest Press. Price 5s. net.

Cutting the linoleum block. The knife is held at an angle of about 45° with the flat edge against the line to be cut.

SOCIETIES AND SCHOOLS

OFFICIAL ARCHITECTURE

A DEBATE on official architecture, arranged by the Association of Architects, Surveyors and Technical Assistants, will be held at the Building Exhibition, Olympia, on Saturday, September 20. The chair will be occupied by Lord Riddell, and the speakers will include Messrs. H. V. Lanchester, F.R.I.B.A., and Wynn Owen, F.R.I.B.A.

S.P.A.B. RESEARCH SCHOLARSHIP

The newly-instituted scholarship of the Society for the Protection of Ancient Buildings for research work on ancient buildings, which is open to senior students of London Schools of Architecture, has been awarded to Mr. David Nye, of the Central School of Arts and Crafts.

ROYAL SANITARY INSTITUTE

The forty-second Congress and Health Exhibition of the Royal Sanitary Institute will, at the invitation of the Corporation, be held at Glasgow from July 4 to July 11, 1931, under the presidency of Sir Henry Mechan, LL.D.

BRIXTON SCHOOL OF BUILDING

The evening departments of the L.C.C. School of Building, Brixton, which commences on September 22, provide organized courses of training and individual classes for the purpose of instruction in the work of the building industry and of allied vocations and professions.

Although the courses of study and the scope of the instruction have been arranged primarily with a view to fitting the student for the practical duties of the various branches of the building industry, special consideration is given to the requirements of the recognized examinations held by independent bodies. Amongst these examining bodies the following receive special attention:—The Institute of Builders, the R.I.B.A., the Surveyors' Institution, the Institution of Structural Engineers and the Institution of Sanitary Engineers.

The classes of the architecture department are planned to meet all the requirements of the student of architecture as regards design, history of architecture and building, and drawing. The scheme of instruction is so arranged that an architectural course includes certain building subjects which are necessary to an architect's training.

A close co-ordination of the instruction in architecture and building construction is designed to ensure that the student shall obtain an intelligent grasp of the interdependence of the

An illustration of the linoleum key block, after the smoke rings have been cut away.

[*From* Simple Colour Block Print Making from Linoleum Blocks.]

structural and æsthetic elements of his work.

The grouping and scope of all the subjects are adapted to the requirements of the R.I.B.A.

The principal of the school is Mr. F. E. Drury, M.SC., TECH., M.I.STRUCT.E., F.I.SAN.E.; the vice-principal is Mr. A. Everett, B.SC. (Hons.), M.I.STRUCT.E., and the head of the architecture department is Mr. Mathew J. Dawson, F.R.I.B.A. Copies of the prospectus are obtainable on application to the principal.

NORTHERN POLYTECHNIC SCHOOL OF ARCHITECTURE

The Northern Polytechnic School of Architecture is officially recognised by the R.I.B.A., and students who complete satisfactorily the first three years' course of study in the school and pass in the school examinations are exempted from the R.I.B.A. intermediate examination. The new session commences on September 22.

The teaching staff consists of qualified practising architects, assisted by specialists in building science, acoustics, structural engineering, heating, ventilating, and other subjects relating to architectural practice. The department with which the school is associated also provides training for all branches of the building industry, and architectural students are thereby offered excellent opportunities of studying in the workshops and laboratories the many practical processes which they will ultimately be required to supervise.

The curriculum is arranged to provide the fullest possible training, and every aspect of architectural practice is dealt with by means of lectures, demonstrations, visits to buildings in course of erection and studio work.

The architectural department has recently been transferred to a new extension of the Polytechnic. This building contains fine studios and lecture rooms, and in addition up-to-date and fully equipped workshops for the various crafts.

The Head of Department of Architecture is Mr. T. E. Scott, F.R.I.B.A. Copies of the prospectus for the new session may be obtained from him on application at the Northern Polytechnic, Holloway Road, N.7.

L.C.C. SCHOOL OF ARTS AND CRAFTS

The new session of the L.C.C. School of Arts and Crafts, Southampton Row, W.C.1, will begin on Monday, September 22. The evening classes, which are held from 7 to 9 o'clock, provide the following instruction for students of architecture: Architectural design, testimonies of study for the R.I.B.A., and town planning, given by Messrs. S. B. Caulfield, F.R.I.B.A., Basil Oliver, F.R.I.B.A., and E. Frazer Tomlins, F.R.I.B.A.; building construction, by Mr. F. H. Mansford, L.R.I.B.A.; structural mechanics, by Mr. Ewart S. Andrews, B.SC.; modelling and stonecutting, by Mr. Alfred Turner, A.R.A.; general drawing, by Mr. F. W. Farleigh.

Other work of interest to architectural students includes life drawing, wood carving, metalwork, etc.

A series of related lectures and visits dealing with the most recent developments in the manufacture and uses of various building materials are held throughout the session.

Copies of the school's prospectus are obtainable on application to the principal, Mr. F. V. Burridge.

INTERNATIONAL CONGRESS FOR CONCRETE

The first International Congress for Concrete and Reinforced Concrete was held at Liège from September 1 to 6 last. The Congress was held in connection with the celebration of the Centenary of National Independence of Belgium, together with an international exhibition at Liège, which opened last week and will remain open for a period of six months.

The Council of the Institution of Structural Engineers, in the autumn of last year, accepted the formal invitation addressed by the Belgian Government to the Foreign Office, to undertake the formation of a British Section to represent this country at the Congress. The British Organizing Committee comprised: Chairman, Mr. J. Mitchell Moncrieff, M.INST.C.E. Members: Messrs. E. A. Black, A.M.INST.C.E.; E. W. Butler, M.I.STRUCT.E.; S. D. Carothers, M.INST.C.E.; C. S. Chettoe, B.SC., A.M.INST.C.E.; E. W. Monkhouse, M.INST.C.E., M.I.STRUCT.E.; W. Muirhead, M.INST.C.E., M.I.STRUCT.E.; F. H. Rogers, M.I.CHEM.E.; R. H. H. Stanger, F.C.S., A.M.INST.C.E., M.I.STRUCT.E.; H. D. Searles-Wood, F.R.I.B.A., M.I.STRUCT.E.; R. E. Stradling, D.SC., M.INST.C.E.; Major A. F. Day, R.E.; and Lt.-Col. E. B. Martin, D.S.O., M.INST.C.E.

The committee co-operated in securing the various technical reports and papers which were presented at the sessions.

Professor Beresford Pite, F.R.I.B.A., in a paper entitled "The Architecture of Concrete," gave consideration to the effect of the primary distinction in method between an architecture of stone or brickwork and an architecture of concrete. The idea, he pointed out, of internal adhesion belonging to the material producing homogeneity without anxious care, must be novel, and of the nature of a relief to the constructor; its attainment had always been his ideal, but the repugnance to the employment of concealed tie-rods for cohesion in walling was always manifested by the consistent tendency to rely either on trabeated or arcusted lines.

The new idea was revolutionary rather than evolutionary. It raised manifold questionings as to due architectural expression, and necessarily also it involved reconsideration of methods in the study of the practices of design, with the courses of training leading to its fulfilment. It would appear to be consequential, if we had not the experience of antiquity to the contrary, that a fundamental constructive method must deflect the architectural expression of construction from the traditional motives.

COMPETITIONS OPEN

September 30.—The Isle of Man Education Authority invited architects to submit competitive designs for a new Grammar School at Ramsey, Isle of Man. Assessor, T. Taliesin Rees, F.R.I.B.A. Premiums: £250, £150 and £75. Particulars, etc., were obtainable from T. R. Lewin, Clerk of the Authority, Education Office, Strand Street, Douglas, until July 1. Deposit £1 1s. Latest date for submission of designs: September 30.

October 1.—The Burton-on-Trent Local Education Authority invites architects to submit competitive designs for a proposed new Council school to accommodate approximately 800 children, to be erected on a site in Clarence Street. Assessor: H. T. Buckland, F.R.I.B.A. Premiums: £150, £100 and £50 for the designs placed 1st, 2nd and 3rd, respectively. Applications for the conditions of the competition and site plan should have been made before September 8 to L. E. Burgess, Secretary and Director of Education, Education Offices, Guild Street, Burton-on-Trent. Latest date for submission of designs: October 1.

October 20.—The Maternity and Child Welfare Committee of the City of Birmingham invites architects to submit competitive designs for two infant welfare centres, one at Warren Farm Road, Kingstanding (Perry Barr), and the other at Trittiford Road (Billesley). Competitors must have occupied offices in Birmingham as their head office for six months prior to July 19, 1930. Assessor: A. T. Butler, F.R.I.B.A. Premiums, £100 in respect of each centre. Conditions of competition and plans of the sites may be obtained on application to Herbert H. Humphries, M.INST.C.E., City Engineer and Surveyor, the Council House, Birmingham. Deposit £1 1s. for each centre. Latest date for submission of designs: October 20.

October 30.—The General Building Syndicate, Ltd., invites architects to submit competitive schemes for the development of a site at Liverpool, fronting St. John's Lane, Queen Square and Rose Street. Premiums: £250, £100 and £50, for first, second and third prizes, respectively. Particulars, etc., are obtainable on application to the Secretary, the General Building Syndicate, Ltd., 36 St. Martin's Lane, W.C.2. Latest date for submission of designs: October 30.

November 30.—The Guildford Cathedral Committee invites any architect, who has been engaged in the design of cathedrals or churches, to submit for examination drawings and other illustrations of his works; or a design for a cathedral. Not more than three sets of drawings may be submitted, packed in one large portfolio. The Committee, with the assistance of Mr. Walter Tapper, A.R.A., will examine the portfolios, and select a limited number of architects for the Final Competition. Each architect selected for the final competition will receive 500 guineas, whether his design is accepted or not. Portfolios should be addressed to The Venerable the Archdeacon of Surrey, The Diocesan Office,

Lloyds Bank Chambers, Guildford, not later than November 30.

December 25.—A prospectus giving full particulars of the international competition for the Ukrainian State Theatre, organized by the Kharkov Town Council, Russia, has recently been issued. The theatre is to be erected in the centre of Kharkov, on the site of the present Comsomolsky Square (Young Communist Square), and will contain a mass musical stage and seating capacity for 4,000 persons. The competition will be assessed by a jury comprising a president, vice-president and fifty-six members. Prizes: 1st, 10,000 rub.; 2nd, 8,000 rub.; 3rd, 6,000 rub.; 4th, 5,000 rub.; 5th, 4,000 rub.; 6th, 3,000 rub.; 7th, 8th and 9th, 2,000 rub.; 10th, 11th, 12th, 1,500 rub. Drawings should be sent to the Kharkov Town Council on or before December 25. Copies of the prospectus are obtainable from the Embassy of the Union of Soviet Socialist Republics, Harrington House, 13 Kensington Palace Gardens, London, W.8.

December 31.—The Incorporated Association of Architects and Surveyors invites competitive designs for a Model Petrol Filling and Service Depot. The competition has the full support of the Automobile Association, the Scapa Society and other bodies which have at heart the preservation of the countryside, as well as the principal motor-trade journals. Assessors: Alfred Stephens Cross, M.A. (CANTAB.), V-P., I.A.A.S.; Edward H. Fryer, Deputy Secretary of the Automobile Association; and Walter Groves, Editor of *The Motor*. Prizes: 50 guineas, 20 guineas and 10 guineas for first, second and third places, respectively. Smaller awards may also be made on the advice of the assessors, and at the discretion of the Council of the Association. In addition a prize of 10 guineas and two prizes of 5 guineas each will be awarded to laymen for the best suggestions submitted with or without sketches. Full particulars, etc., are obtainable from the Secretary, the Incorporated Association of Architects and Surveyors, 1 Wilbraham Place, London, S.W.1. Latest date for submission of designs: December 31, 1930.

No date.—The Committee of the Foundation Hospital and the Rectorate of the Royal Yugoslavian University of Zagreb invites competitive designs for the general rebuilding plans of the Foundation and Clinic Hospital of Zagreb. Assessors: 1. Dr. Srkulj Stjepan, Burgomaster and Chairman of the Foundation, as president of the jury. 2. Henauer, W., architect, of Zurich (or his representative, Ch. Thevenaz, architect, of Lausanne), for the Swiss Engineers' Association of Germany. 3. Dr. Ing. Kreis Wilhelm, of Dresden, for the Engineers' Association of France. 4. Arch. Expert H.R., of Paris, for the Engineers' and Architects' Association of France. 5. Dr. Culumovic Pavao, Primarius, for the Medical Association of Zagreb. 6. Ing. Gabric Franjo, for the Yugoslavian Association of Engineers and Architects, Zagreb section. 7. Dr. Rasuhin Josip, deputy for the Directors of the Institute of Hygiene Foundation Hospital of Zagreb 8. Prof. Dr. Prasek Emil, for the medical faculty of Zagreb. 9. Dr. Durst Franjo, for the medical faculty of Zagreb. 10. Arch. Heinzel Vjekoslav, Alderman of the City of Zagreb. Committee representative of the jury: Ing. Jurkovic Mato, Stadtbaurat in Zagreb. Prizes: 1st, 20,000 Swiss francs; 2nd, 15,000 Swiss francs; 3rd, 10,000 Swiss francs. 15,000 Swiss francs have been set aside for any further work which may be required. Programme and particulars of the competition will be sent on or after August 15, 1930, on application to the Stadtvorstand of Zagreb (Mr. Matica, secretary), Room No. 70, 2nd floor, on payment of 200 dinar. Latest date for submission of designs: January 15, 1931.

THE ARCHITECTS' DIARY

WEDNESDAY, SEPTEMBER 10

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Special Coach Excursion to Woolwich. Start 2 p.m. It is hoped to visit St. Mary's Parish Church, Royal Artillery Institution, Rotunda Museum, Royal Artillery Barracks, and St. George's Garrison Church. Some of the buildings will be described by Philip C. Bursill. Tea will be provided at Brent House, Shooter's Hill. Return to London about 7 p.m. **2 p.m.**

VICTORIA AND ALBERT MUSEUM, South Kensington, S.W.7. Exhibition of English Mediæval Art in the North Court. Open until September 21, 10 a.m. to 6 p.m. (Thursdays, 10 a.m. to 10 p.m.) **10 a.m.**

ASSOCIATION OF PUBLIC LIGHTING ENGINEERS. Annual Meeting and Conference, to be held at Leicester. Until September 11.

SIXTH INTERNATIONAL ROAD CONGRESS, to be held at Washington. Until September 11.

THURSDAY, SEPTEMBER 11

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Italian Furniture." 12 noon. "Italian Decoration." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

FRIDAY, SEPTEMBER 12

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. North-Western District meeting, to be held at Runcorn.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "French Furniture." By Miss M. Chamot. 12 noon. "Gothic Woodwork." By T. F. Wilson, F.R.S.A.I. 3 p.m. **12 noon.**

SATURDAY, SEPTEMBER 13

Sunrise, 6.30 a.m. Sunset, 7.21 p.m.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Early English Furniture." 12 noon. "Later English Furniture." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

WEDNESDAY, SEPTEMBER 17

LONDON SOCIETY, Lancaster House, St. James's S.W.1. Visits to the Flaxman Automatic Exchange, Mallord Street, Chelsea, and the Holborn Automatic Exchange, 268 High Holborn, W.C. **3 p.m.**

INTERNATIONAL BUILDING TRADES EXHIBITION, Olympia. Until October 1.

BRITISH GLASS CONVENTION. At Buxton. Until September 20. Morning: Meeting of the Council of the Society of Glass Technology. Afternoon: General Meeting of the Society of Glass Technology. Evening: Informal Presidential Reception of members and their friends at the Palace Hotel.

THURSDAY, SEPTEMBER 18

BRITISH GLASS CONVENTION. At Buxton. Morning: Official welcome by the Mayor and Corporation of Buxton, at the Peak Buildings. Presidential Address. Discussion on "Elimination of Waste in the Glass Industry," to be opened by Dr. Miles. Official luncheon. Evening: Mayoral Reception at the Palace Hotel.

FRIDAY, SEPTEMBER 19

R.I.B.A., 9 Conduit Street, W.1. Exhibition, in the Galleries, of drawings submitted in competition for the Archibald Dawnay Scholarship (10 a.m. to 7 p.m.; Saturdays, 2 p.m.). Until September 30. **10 a.m.**

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussions on "Marketing Methods in the Glass Industry" and "Public Propaganda in the Glass Industry," to be opened by Sir Francis Goodenough, C.B.E., and H. Gordon Selfridge, respectively. Afternoon: Golf Competition for championship of the Glass Industry. Evening: Banquet at the Palace Hotel.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. Meeting to be held at Southampton.

SATURDAY, SEPTEMBER 20

Sunrise, 6.41 a.m. Sunset, 7.5 p.m.

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS, 26 Buckingham Gate, S.W.1. Debate on official architecture, to be held at the Building Exhibition, Olympia. Chairman, Lord Riddell. Speakers will include Wynn Owen, F.R.I.B.A., and H. V. Lanchester, F.R.I.B.A. **3 p.m.**

BRITISH GLASS CONVENTION. At Buxton. Morning: Discussion on "The Convention—Present and Future," to be opened by Mr. Walter Chance, M.A., J.P.

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Stained Glass (1)." 12 noon. "Stained Glass (2)." 3 p.m. Both lectures by Miss M. Chamot. **12 noon.**

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. North Wales District meeting, to be held at Bangor.

WELSH SCHOOL OF ARCHITECTURE, Technical College, Cardiff. Latest date for submission of application forms for the Scholarship Examinations.

MONDAY, SEPTEMBER 22

NORTHERN POLYTECHNIC, Holloway, N.7. Commencement of new term.

TUESDAY, SEPTEMBER 23

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to the Church of St. Martin-in-the Fields, Charing Cross, W.C.2. Tea will be served in the Crypt. **3 p.m.**

FRIDAY, SEPTEMBER 26

NATIONAL SMOKE ABATEMENT SOCIETY. Annual Conference, to be held at Leicester until September 28. During the conference the following papers will be read: "Fuel Research and Smoke Abatement," by Dr. Margaret Fishenden; "The Smoke Problem in Sheffield," by F. J. Bailey and E. C. Evans; "Smoke and the Weather," by a meteorological expert; and "The Smoke Nuisance as the Airman Sees It."

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS. London and Home Counties Branch. Dinner and Dance to be held at the Quadrant Restaurant, Regent Street, W. Tickets, 7s. 6d.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS. Yorkshire District meeting, to be held at Hipperholme.

SATURDAY, SEPTEMBER 27

Sunrise, 6.53 a.m. Sunset, 6.49 p.m.

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Visit to the Church Bell Foundry of Mears and Stainbank, 32-34 Whitechapel Road, E.1. **11.30 a.m.**

VICTORIA AND ALBERT MUSEUM, Cromwell Road, South Kensington, S.W.7. "Continental Glass." 12 noon. "English Domestic Glass." 3 p.m. Both lectures by Miss B. Goldsmid. **12 noon.**

MONDAY, SEPTEMBER 29

ROYAL SANITARY INSTITUTE, 90 Buckingham Palace Road, S.W.1. Commencement of Sanitary Inspectors' Course. **6 p.m.**

TUESDAY, SEPTEMBER 30

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS, 1 Wilbraham Place, S.W.1. London and Home Counties Branch. "The Making of a Cathedral—Liverpool." By E. W. Harvey-Piper. (Lantern Illustrations.) **7 p.m.**

ISLE OF MAN GRAMMAR SCHOOL COMPETITION. Latest date for submission of designs.

WEDNESDAY, OCTOBER 1

BURTON-ON-TRENT SCHOOL COMPETITION. Latest date for submission of designs.

FRIDAY, OCTOBER 3

TOWN PLANNING INSTITUTE. Twelfth Annual Country Meeting, to be held at Leicester. Until October 5. Full particulars are not yet available.

SATURDAY, OCTOBER 4

Sunrise, 7.4 a.m. Sunset, 6.53 p.m.

MONDAY, OCTOBER 6

ARCHITECTURAL ASSOCIATION, 34 Bedford Square, W.C.1. Commencement of Winter Term.

LONDON SOCIETY, Lancaster House, St. James's, S.W.1. Motor Coach Excursion: Special Visit to Greenhithe Cement Works. Leave Portland House, Tothill Street, Westminster, S.W.1, at 1.45 p.m Tickets obtainable from the Secretary of the Society. **1.45 p.m**

WELSH SCHOOL OF ARCHITECTURE, Technical College, Cardiff. Commencement of School Year.

ROYAL SANITARY INSTITUTE, 90 Buckingham Palace Road, S.W.1. Commencement of Smoke Inspectors' Course. **6 p.m.**

TUESDAY, OCTOBER 7

R.I.B.A., 9 Conduit Street, W.1. Closing date for applications for admission to the Intermediate Examination.

THURSDAY, OCTOBER 9

C.P.R.E. Third Annual Conference, to be held at Welwyn Garden City. Until October 11. Among the papers to be read are the following: "The Preservation of Commons, Parks, Open Spaces and Nature Reserves, and the Provision of Playing Fields." By Sir Lawrence Chubb. "Town and Regional Planning in their Relation to the Objects of the C.P.R.E." By Sir Theodore Chambers, K.B.E., F.S.I. "Education and Citizenship in their Relation to the Safeguarding of the Countryside, etc.," and "Flora and Fauna, including the Preservation of Trees, Wild Flowers, Roadside Plants and the Protection of Birds." Each paper will be open to discussion.

THURSDAY, OCTOBER 16

L.C.C. SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. Visit to Cement Marketing Company's Laboratory, Portland House, Tothill Street, Westminster, S.W.1. (Party limited to 30.) **7 p.m.**

MONDAY, OCTOBER 20

BIRMINGHAM WELFARE CENTRES COMPETITION. Latest date for submission of designs.

THURSDAY, OCTOBER 23

L.C.C. SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. Lecture by T. J. Clark, A.I.STRUCT.E., of the British Portland Cement Association. **7.30 p.m.**

SATURDAY, OCTOBER 25

Sunrise, 6.40 a.m. Sunset, 4.48 p.m.

L.C.C. SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.1. Visit to the works of Messrs. Johnson, Dartford. **2 p.m.**

TUESDAY, OCTOBER 28

INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS, 1 Wilbraham Place, S.W.1. "English Ironwork." By Edward Yates. **7 p.m.**

LAW REPORTS

LIGHT AND AIR DISPUTE—MANDATORY INJUNCTION GRANTED

Rogers v. *Ice-Drome (Hammersmith), Ltd.—Thames Valley Development, Ltd.* v. *Same. Chancery Division. Before Mr. Justice Clauson*

THESE two actions concerned light and air disputes at premises situate at Brook Green Road, Hammersmith. Messrs. J. and W. Rogers, trading as Rogers' Garage, at 19 and 19A Brook Green Road, and the Thames Valley Co., who owned No. 19A, of which Messrs. Rogers held a lease, sought a mandatory injunction against Ice-Drome (Hammersmith), Ltd., of 17 Brook Green Road, to remove so much of a wall and other buildings erected by them, as obstructed the access of light and air which formerly came to the premises in question, over the adjoining premises of the defendants. Messrs. Rogers also asked for an injunction restraining the defendants from causing a nuisance by noise and fumes.

Mr. Gover, K.C., in outlining the facts of the case, said that the defendants' premises had been a palais de danse, and the plaintiffs' case was that the alterations which had been made and of which complaint was made were rushed up at great speed in spite of protests and warnings as to the interference with the plaintiffs' light. Messrs. Rogers also had to complain of a continuous humming noise from the defendants' engines and smells from the oil of the engines, as well as the escape of water, which did damage to plaintiffs' premises.

The experts called in support of plaintiffs' case were Mr. E. J. Shelmerdine, architect, of Wallington, Surrey; Mr. A. S. I. Ackermann, consulting engineer, of Victoria Street, Westminster; and Mr. T. B. Daniel, architect and surveyor, also of Victoria Street.

Mr. Voisey, K.C., for defendants, said that the defendants' answer was that the claim was an exaggerated one and that there was no actionable nuisance.

The evidence called for the defence was given by Mr. E. Hand, architect and surveyor, Victoria Street, Westminster, and Mr. Percy John Waldram, the daylight illumination expert.

His lordship, in giving judgment, said by consent he had visited the plaintiffs' premises, and his experience there confirmed the opinion he had formed from the evidence given on both sides. He was satisfied and found as a fact that with regard to two of three windows in question there was such a serious diminution of light as to occasion an actionable nuisance. With regard to the noise from the defendants' engines, he had no doubt that it was of such a character as to cause a serious inconvenience in the evening and night hours which the plaintiffs were not bound tamely to submit to and have forced upon them. The plaintiffs, however, had failed to establish any nuisance on the allegation as to the escape of water, and he found that the nuisance from fumes was only occasional and temporary, and not a matter for an injunction. The defendants had urged that it would be oppressive to grant an injunction against them, but they had been warned of the risk they ran in running their building up and in spite of that they took the risk and set the plaintiffs' legal rights at defiance. Under these circumstances he felt that as to the obstruction of light he must grant a mandatory injunction to pull down so much of the defendants' building as occasioned a nuisance in respect of the two windows he had specified and an injunction restraining a nuisance for noise. The defendants must pay the costs of the action.

After hearing counsel, his lordship suspended the operation of the two injunctions for four months.

QUESTION OF NEW LEASE OR COMPENSATION

Hudd v. *Matthews. King's Bench Divisional Court. Before Justices Talbot and Finlay*

This appeal raised an interesting point as to the grant of a new lease or compensation for goodwill. The question arose on an appeal by the defendant from an order of Judge Hill-Kelly, sitting at the Bloomsbury County Court.

Mr. Slade, for the appellant, explained that the matter arose out of a claim under the Landlord and Tenant Act, 1927, by the tenant of shop premises at High Street, Camden Town. It appeared that the lease would terminate at midsummer, 1930, and the tenant accordingly served a notice upon the landlord setting up a claim for a new lease or compensation for goodwill. A Referee, to whom the matter was referred, came to the conclusion that the plaintiff, the tenant, had not established his right to compensation and that the grant of a new lease would not be reasonable. The Referee stated that the grounds of his decision were that the tenant had not proved to his satisfaction that the premises could be let by the landlord at a higher rental by reason of the goodwill which attached to them owing to the manner in which he and his predecessors in title had carried on the business, and which had attached to the premises by reason of his exertions. The county court judge had referred the matter back to the Referee, holding that the question for the Referee was whether the tenant could prove that by reason of the goodwill attaching to the premises owing to the trade carried on there by the plaintiff or his predecessors in title, the premises could be let at a higher rent for the purposes of carrying on the trade alleged, viz., that of a restaurant. Counsel submitted that the learned judge had taken an erroneous view of the law on the point in referring the matter back to the Referee.

After hearing counsel, the Court allowed the appeal, with costs, and entered judgment for the defendant.

Mr. Justice Talbot, in the course of his judgment, said the county court judge's order involved the short point whether the words in the Act, "could be let at a higher rent," did or did not import the qualification that the hypothetical letting, which was to be considered, was a letting in this case as a restaurant, viz., for the purposes for which the premises had hitherto been used. Here the tenant had to prove that he or his predecessor in title carried on a business at the premises for not less than five years, and that by reason of that, goodwill had become attached. In other words, that the premises had acquired such a business connection and reputation that they were lettable by anybody who had power to let them for more than they otherwise would. Then he had to prove that by reason of that the premises could be let at a higher rent than they would have realized had no such goodwill attached thereto. To his lordship's mind, section 4 of the Act was perfectly plain English, and it was certain that what the county court judge had done, correcting the decision of the Referee, was to introduce after the word "let" the words "as a restaurant or eating-house." His lordship added that it appeared to him that a very strong argument indeed would be necessary in order to justify the insertion of those words, and it was very difficult to believe that if Parliament meant to qualify the language in the way suggested, it would not have done so. To his mind, the only safe rule was to go by the words Parliament had used. He was of opinion that the Referee took a perfectly correct view of his duty under the statute, and under those circumstances the appeal must be allowed.

Mr. Justice Finlay concurred.

Mr. Herbert A. S. Fraser, civil engineer and contractor, of Cardiff, left £3,318 (net personalty, £1,518).

R.I.B.A. EXAMINATIONS

SURVEYORS' EXAMINATION

The R.I.B.A. statutory examination for the office of district surveyor under the London Building Acts, and the examination for the office of building surveyor under local authorities, will be held at the R.I.B.A., London, on October 15, 16 and 17, 1930.

The closing date for receiving applications for admission to the examinations, accompanied by the fee of £3 3s., is September 24.

Full particulars of the examinations and application forms can be obtained from the Secretary, R.I.B.A., 9 Conduit Street, W.1.

ARCHIBALD DAWNAY SCHOLARSHIPS

The works submitted by candidates for the R.I.B.A. (Archibald Dawnay) scholarships will be on exhibition in the R.I.B.A. Galleries, 9 Conduit Street, London, W.1, from Friday, September 19, to Tuesday, September 30, 1930, inclusive. The exhibition will be open between the hours of 10 a.m. and 7 p.m. (Saturdays, 10 a.m. and 2 p.m.).

The scholarships are intended to foster the advanced study of all forms of construction, and are tenable at the schools of architecture recognized for exemption from the examinations of the R.I.B.A.

FINAL EXAMINATION : INDIA

The R.I.B.A. Examination Board in India has arranged to hold the R.I.B.A. final examination in Bombay from October 29 to November 6, 1930. The last day for receiving applications, which should be sent to the Hon. Secretary of the R.I.B.A. Examination Board in India, 43 Apollo Street, Fort, Bombay, is October 3.

OBITUARY

WILFRED J. HARDCASTLE : 1854-1930

We regret to record the death of Mr. Wilfred John Hardcastle, F.R.I.B.A., V.D., who died suddenly at Woking, at the age of seventy-six, on August 30. He was articled to the late Mr. Alfred Waterhouse, R.A., and practised at No. 9 Conduit Street, W.1. He also held the position of chairman of the Guildford District of the South-Eastern Society of Architects. He was elected a Fellow of the Royal Institute in 1902.

COMPETITION AWARDS

Two Belfast architects, Messrs. John MacGeagh, A.R.I.B.A., and Benjamin Cowser, A.R.I.B.A., have been awarded the prize of £50 offered by the Masonic body of Enniskillen for the best design for a Masonic Hall, to be erected in that town. The competition was open to architects practising in Ireland, whether members of the Masonic Order or not, and twenty designs were submitted. The drawings entered are at present exhibited in the Enniskillen Town Hall.

TRADE NOTES

In connection with the South-East England Electricity Scheme, the Central Electricity Board has placed a contract with Messrs. W. T. Henley's Telegraph Works Co., Ltd., through Messrs. Merz and McLellan, for the supply and installation of cables for pressures of 3,000 to 33,000 volts, together with auxiliaries, in various towns in the South-East England area. This follows a contract from the same source, placed with Henley's a few months ago, for the supply and erection in the same area of a large quantity of steel-cored aluminium conductors on lattice steel towers for 33,000 volts pressure.

*

A substantial reduction in the prices of Mazda lamps came into effect on Monday, September 1. Many similar announcements have been made since the war; but the extent to which the progressive decline in lamp prices has helped to popularize the use of electricity, and thus to improve the amenities of domestic life, is not generally realized. The substantial reductions in Mazda lamps during the past ten years are extremely interesting. For example, in 1920 a 100-watt clear gasfilled lamp cost 10s. 6d., whereas to-day a Pearl Mazda lamp, better, it is claimed, in every respect than the 1920 product, can be bought for 3s. In the smaller sizes the change is not so great; a 20-watt clear vacuum lamp cost 3s. 9d. in 1920, while in 1930 a 25-watt Pearl Mazda costs only 1s. 10d. The average price per lamp for the five sizes—20, 30, 40 and 60-watt vacuum, and 100-watt gasfilled—in 1920 was approximately 5s. The average price for the five standard Pearl Mazda lamps today is 2s. 1d. Thus, although the lamps have been vastly improved during the last ten years, the reduction in the retail price is nearly 60 per cent. The new prices of Pearl Mazda lamps, all standard voltages, are as follows : 15 watts, 2s.; 25, 40 and 60 watts, 1s. 10d.; 100 watts, 3s. Clear gasfilled lamps up to 1,500 watts, Mazda motor-car bulbs, and various other types are also reduced in price.

ROYAL MAIL HOUSE

Following are the names of the general contractors, and some of the sub-contractors for Royal Mail House, illustrated on pages 367–371 of this issue :

General contractors, Trollope and Colls, Ltd., who were also responsible for the reinforced concrete, foundations, stone, fireproof construction, partitions, plumbing, plaster, joinery, stonework and gas fittings. Wood-carving, George Haughton. Sub-contractors : J. A. Lawford & Co., Ltd., dampcourses, asphalt and special roofings; the London Brick Company and Forders, Ltd., bricks; D. Colville and Sons, Ltd., structural steel; Cope & Co., tiles and tiling; Roberts, Adlard & Co., slates; Nicholls and Clarke, Ltd., glass; British Luxfer Prism Syndicate, Ltd., patent glazing; Hollis Bros. & Co., Ltd., wood-block flooring; Mumford, Bailey and Preston, Ltd., central heating, kitchen equipment, gas fitting, gas fixtures, boilers, ventilation, and water-softening plant; G. Matthews, Ltd., stoves, grates, gas fixtures, and mantels; Higgins and Griffiths, Ltd., electric light fixtures, electric wiring, electric heating, and bells; J. Bolding and Sons, Ltd., sanitary fittings; the Leyland and Birmingham Rubber Co., Ltd., stair treads; James Gibbons, Ltd., door furniture, casements, window furniture, and folding gates; Haywards, Ltd., iron staircases; Heaton, Tabb & Co., Ltd., sunblinds, furniture, and office fittings; F. de Jong & Co., Ltd., decorative plaster; William Smith, metalwork; J. Whitehead and Sons, Ltd., marble; Smith, Major and Stevens, Ltd., lifts; the Hoisting Appliance Co., Ltd., cranes; Gent & Co., clocks; Le Grand, Sutcliff and Gell, Ltd., water supply.

NEW INVENTIONS

[The following particulars of new inventions are specially compiled for THE ARCHITECTS' JOURNAL, by permission of the Controller of H.M. Stationery Office. All inquiries concerning inventions, patents and specifications should be addressed to the Editor, 9 Queen Anne's Gate, Westminster, S.W.1. For copies of the full specifications here enumerated, readers should apply to the Patent Office, 25 Southampton Buildings, W.C.2. The price is 1s. each.]

LATEST PATENT APPLICATIONS

24694. Baumhauer, F., and Schaefer, J. Producing refractory building materials. August 18.

25080. Garside, S. Building blocks. August 22.

SPECIFICATION PUBLISHED

333535. Ros, D. De. Preservation of natural and artificial building materials.

ANNOUNCEMENTS

Mr. W. I. Shearburn, P.A.S.I., has taken into partnership Mr. A. Hughes, architect and surveyor. The style of the firm will be Shearburn and Hughes, architects and surveyors.

Mr. Herbert A. Welch, F.R.I.B.A., of 7 New Square, Lincoln's Inn, W.C.2, has been joined by Messrs. N. F. Cachemaille-Day, A.R.I.B.A., and Felix J. Lander, A.R.I.B.A., of 5 Verulam Buildings, Gray's Inn, W.C.1. The firm will practise at 7 New Square under the title of Welch, Cachemaille-Day and Lander.

RATES OF WAGES

The initial letter opposite every entry indicates the grade under the Ministry of Labour schedule. The district is that to which the borough is assigned in the same schedule. Column I gives the rates for craftsmen; Column II for labourers; the rate for craftsmen working at trades in which a separate rate maintains is given in a footnote. The table is a selection only. Particulars for lesser localities not included may be obtained upon application in writing.

* In these areas the rates of wages for certain trades (usually painters and plasterers) vary slightly from those given. The rates for every trade in any given area will be sent on request.

PRICES CURRENT

The wages are the Union rates current in London at the time of publication. The prices are for good quality material, and are intended to cover delivery at works, wharf, station, or yard, as customary, but will vary according to quality and quantity. The measured prices are based upon the foregoing, and include usual builders' profits. Though every care has been taken in its compilation, it is impossible to guarantee the accuracy of the list, and readers are advised to have the figures confirmed by trade inquiry.

EXCAVATOR AND CONCRETOR

EXCAVATOR, 1*s.* 3½*d. per hour;* LABOURER, 1*s.* 3½*d. per hour;* NAVVY, 1*s.* 3½*d. per hour;* TIMBERMAN, 1*s.* 5*d. per hour;* SCAFFOLDER, 1*s.* 4½*d. per hour;* WATCHMAN, 7*s.* 6*d. per shift.*

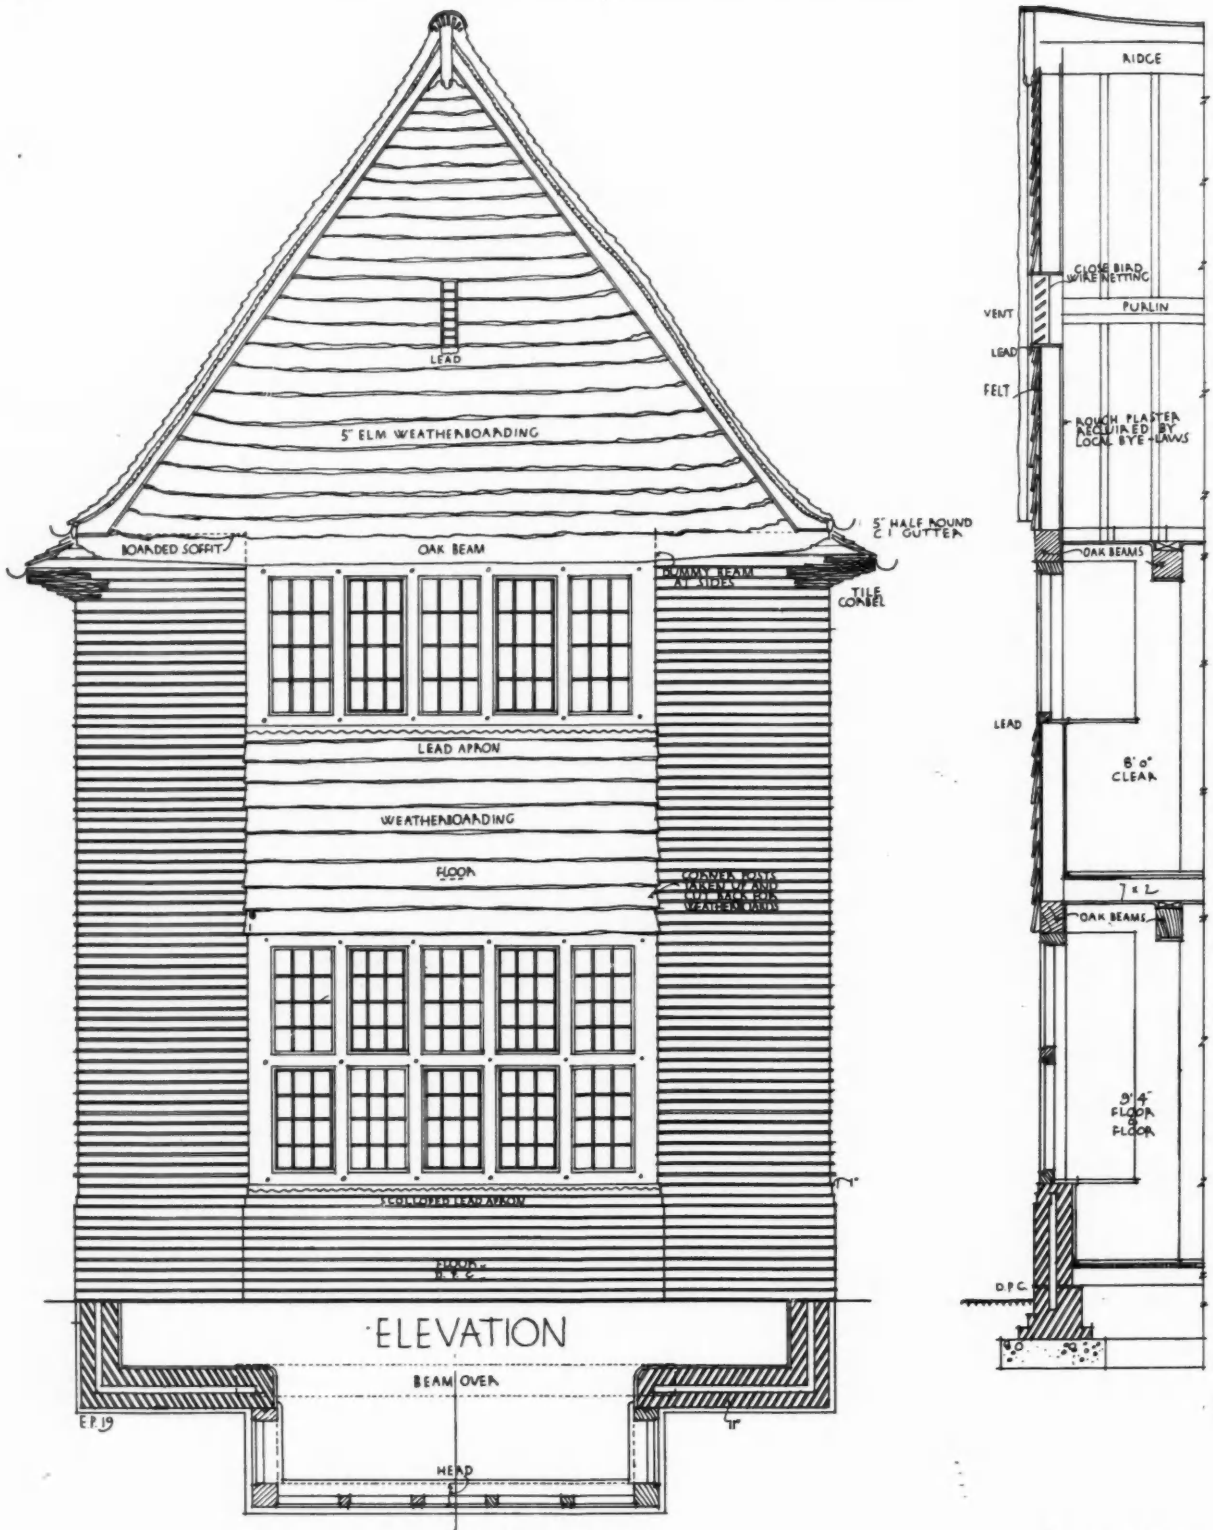
SCALE DETAILS:

A WEEKLY SERIES



GABLE AND BAY WINDOW,
HOUSE AT KNOCKHOLT, KENT
DESIGNED BY P. D. HEPWORTH

THE weatherboarding is of elm, sawn from 1-inch boards. It is backed with inodorous felt, and nailed to studding carried on an oak beam, which is supported in the traditional manner by the corner posts of the bay window. These posts are continuous from the ground-floor cill. They are cut back between the heads of the ground-floor windows and the cills of those on the first floor to allow of the boarding being fixed to them without undue projection. The window framing, posts, heads and transoms are of oak. The casements are of steel, divided into small panes with lead cames. The lead aprons under the oak cills have been cut with a scolloped edge to give added interest. To meet the requirements of the local bylaws the internal face of the studding to the gable has been rough plastered.

Close inspection of the drawing, reproduced overleaf, reveals the existence of a number of subtleties, designed to achieve in execution that softness of outline essential to this style of "formal informality."

The drawing may be read with an architect's scale.

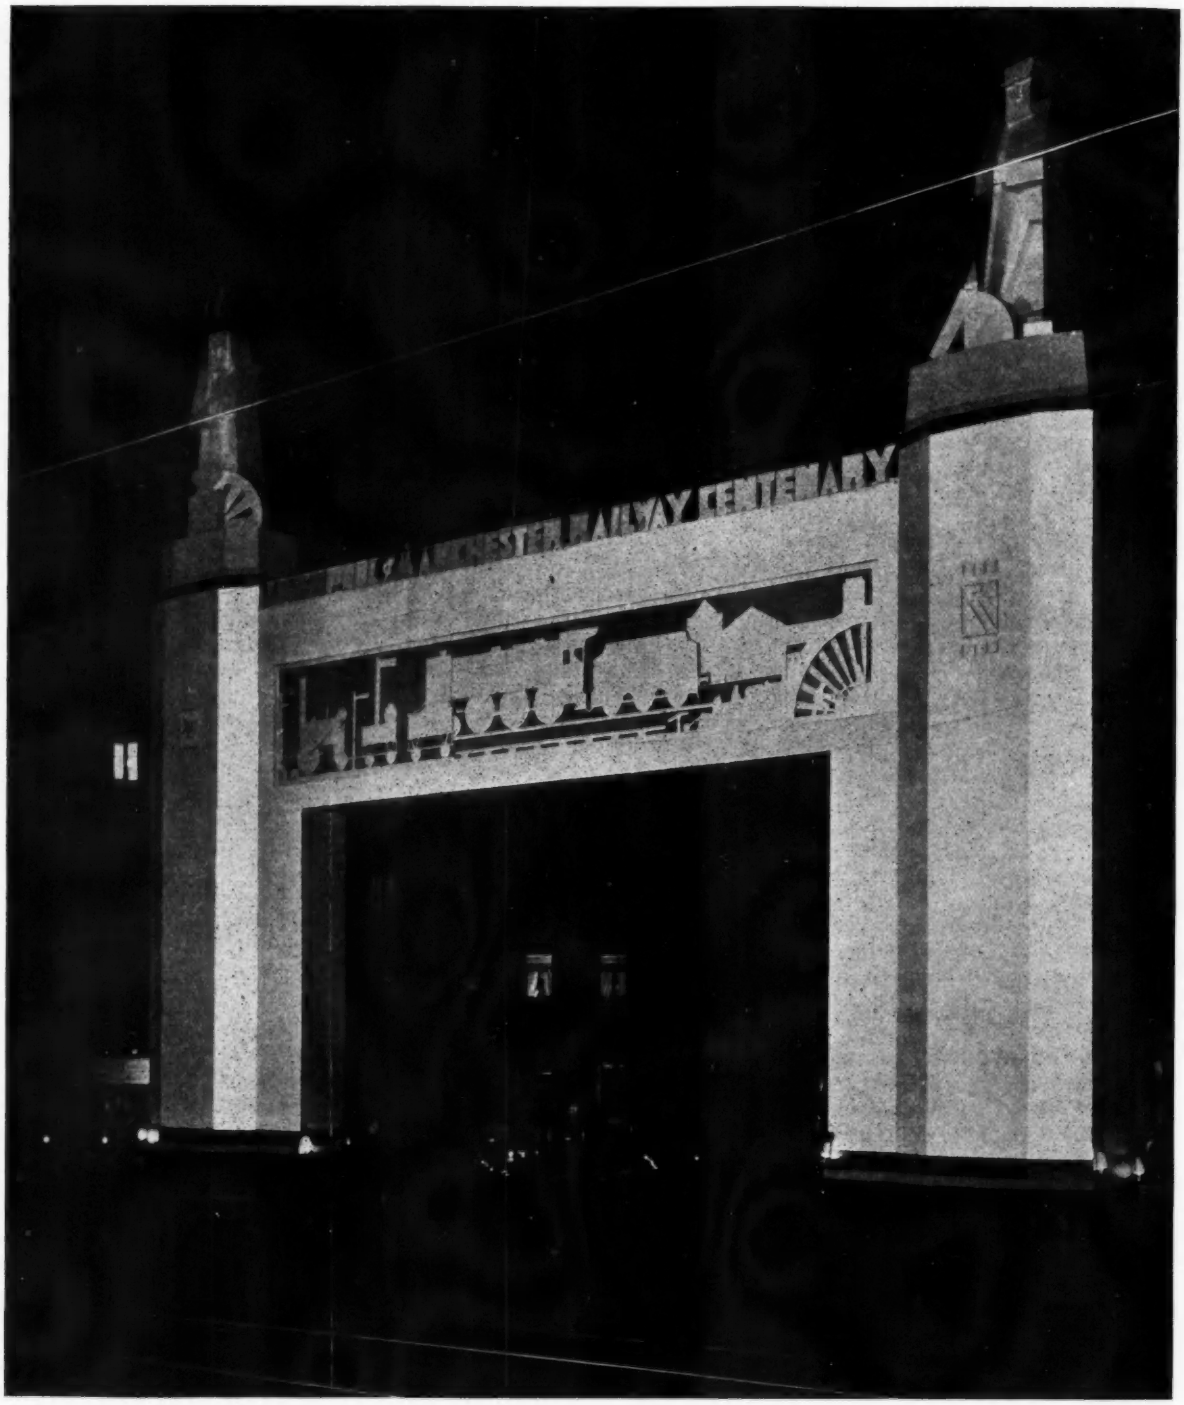
THE FIGHT AGAINST NOISE



" Becoming accustomed to noise is, in reality, becoming deaf."

—THOMAS A. EDISON.

THE problem of noise in the modern city is one to which this JOURNAL has devoted considerable space in the past. Noise means fatigue and lowered efficiency on every side. Most people nowadays realize the enormous loss due to impairment of working capacity and efficiency in city and industrial life; more particularly as to men of affairs, principals and executives, whose capacity for clear thinking, hard work and energetic action is perceptibly weakened by the incessant if unconscious strain upon their nervous system, caused by the din of typewriters and adding machines, and by the babel of noise penetrating into their offices from outside. Even in Government offices, in so comparatively quiet a street as Whitehall, it is impossible to hold a conference in the front rooms with the windows open and the health of the inmates suffers accordingly. Latterly *The British Medical Journal* has had some striking things to say on the matter. " Though the man whose house abuts on the railway will admit that he no longer notices the passing of a train, there can be little doubt that noise has a harmful effect on the mind, even of those who appear to be indifferent to it. The effort of concentration is considerably increased in noisy surroundings, and it has been repeatedly demonstrated that existing neurasthenia is aggravated by noise and improved by a quiet environment. The effects are inevitably serious on young children and infants, whose nervous systems are insufficiently developed to withstand a prolonged strain; the child who has slept in the midst of uproar will awake listless and tired, and if the conditions persist his growth will suffer." These are serious statements, and since they come from one of our foremost organs of medical opinion it is impossible for us to take them lightly.

A telling fact is that local authorities are awakening to the danger. The annual report of the Willesden Urban District Council gives the results of experiments conducted under its auspices. We are told that noise raises the blood pressure in the adult, and that a degree of noise insufficient to waken a sleeping person will cause the muscles to contract and to remain tense for as long as thirty minutes before they relax. Deafness, dizziness, and headache are the lot of those who earn their livelihood by boiler-making or cotton-weaving, and it has been estimated that for normal persons it requires nineteen per cent. more energy to perform duties in noisy surroundings than to perform the same duties in a quiet environment; the strain on those whose mental or physical health is not normal can be imagined. Into the Middlesex County Council Bill, which is to come before Parliament next session, a clause has been introduced to give the local authorities the same powers with reference to noise that they have with reference to nuisance under the Public Health Act. This will apply to excessive, unreasonable, or unnecessary noise, wherever it is injurious to health, or where it is capable of being mitigated, having regard to all the circumstances, such as cost.

Architects have a duty to fulfil in this matter of noise, for both in the planning and in the construction of new buildings it is possible for them to combat the evil to a far greater extent than has hitherto been thought practicable. Office and apartment buildings and even dwelling-houses can be so planned that those rooms where noise is most to be shunned receive a minimum of outside noises and are not contiguous to any internal source of noise. In the construction of their buildings architects have a vast range of sound - absorbing, and therefore quiet - producing, materials from which to choose. This is the side of their task which is so splendidly illustrated in a special section included in the Building Trades Exhibition, which opens at Olympia today. Assembled under the able direction of Mr. A. Trystan Edwards, the devices employed in the Silent House are worth very special study indeed. The sources of noise in modern buildings are not yet sufficiently studied before the building is put up, and sound-insulation too often takes the form of remedial action applied when the defects have thrust themselves on the notice of the occupiers. The place to tackle the problem is the architect's drawing-board, and the means wherewith to do it are here displayed for all to see.

STREET DECORATIONS IN LIVERPOOL

A photograph of an arch forming part of the street decorations in Liverpool this week on the occasion of the Railway Centenary Celebrations. It forms a focal point in the irregularly-shaped Place *in front of the entrance to Lime Street station. The background of the panels is painted turquoise and the caps and bases of the pylons vermilion, turquoise and black, whilst the rest of the arch is painted aluminium. It was designed by E. M. Keith Ellerton, of the staff of the Liverpool School of Architecture, and made by W. R. Burden.*

NEWS & TOPICS

HOW TO DECORATE THE STREETS

STREET decorations, even more than exhibition buildings, are ephemeral things that enliven our drab surroundings for a week or two and then vanish. They provide, or rather should provide, a marvellous opportunity for daring experiment in new forms and brilliant colouring. But how badly they are usually done!—in this country at any rate. I suppose when municipalities decide to don festive attire they call in firms of bazaar-fitters and people like that, who submit designs and estimates at so much a mile. And then a committee of butchers and bakers and undertakers, assisted by the Engineer and Surveyor, selects the one that appears to give the greatest show for the money, and up go the tawdry white-and-gilt pylons, the cardboard shields and trophies and the tired bunting.

★

In Liverpool they seem to do these things better than that. They hold a competition for each of the streets to be decorated, and the designs are assessed by a jury of two architects and a sculptor. In the competition for the street decorations in connection with the Railway Centenary Celebrations this week, all the eight prize-winners were found, when the awards had been made, to be either students or members of the staff of the Liverpool School of Architecture (Professor Reilly, " Naturally ! ").

RECONSTRUCTION OF SLOANE SQUARE

In the days before traffic became a bugbear Sloane Square used to be a tree-planted archipelago of refuges, surrounded by a confusion of roadways. It had even then a certain Continental air on account of its nice bareness, its lean plane trees, and its background of inoffensive architecture. When traffic was made to circulate about, and the channels dried up as it were, the newly-formed island presented a sorry appearance, half-paved, half-broken earth and old curbstones.

★

So it remained for long, while the Council debated what should be done. Now one is heartened to find that they are to do exactly the right thing. New trees are to be planted so as to make a sort of nave of the open space, at the head of which the war memorial, moved from its position on one of the old islands, will be given a much more significant position. The whole of the remaining space is to be paved in blue and brown York stone, and it is difficult to see how anyone could very well do the job better.

TREASURES OF THE DUNCANNON

There are very few mural decorations in London that one would confidently take an interested foreigner to view. The more is the pity that one of the most recent, and unquestionably the best decoration of its kind should be about to be demolished along with the fine Regency buildings that surround it. This mural decoration is in an upper bar of the Duncannon Hotel, and when four years ago I was taken there by a painter-friend I could hardly swallow my drink for gazing at what were surely the liveliest, wittiest and most rollicking illustrations of Pickwick it had ever been my good fortune to see. Many times since then have I leant against the same counter and come away full of fear that some calamity might befall the murals—and now the blow has fallen.

★

Mr. A. R. Thompson who painted them is both deaf and dumb, yet these obvious disadvantages seem to have given an added quality to the expression of those things he has been denied. I have not the slightest doubt that this brilliant piece of invention, though it is not old or venerable, is more worth preserving than many another relic for which money is forthcoming. Unfortunately the paintings were mainly done on paper pasted to the plaster wall and removal will be a costly matter, but for all that it would be more than worth the doing because there is nobody can do them again for us, and I believe that our loss would be considerable.

★

In the hopes that Sir Herbert Baker, who is designing the new buildings, may be able to do what nobody else seems disposed to do, I put forward a very earnest plea for their immediate removal to some place of safety until their future use may be given the consideration it deserves.

THE CRUX OF THE SLUM PROBLEM

The question of housing those people of the slums who can never afford the better housing provided in tenement dwellings or estate cottages is, as Sir John Mann says, the crux of the slum clearance problem. The majority of slum dwellers are decent, hard-working people, doing their best to be clean and orderly in conditions that leave very little chance of success. For these and for the lowest, the " submerged " type, a new class of dwelling is required. Sir John Mann suggests that a lower standard of housing is necessary if these classes are to be affected in any way by re-housing—simpler accommodation, less plumbing and much more economical building.

★

It is with difficulty that one envisages a lowering of the standards reached with so much effort, and yet it is true that little has been done for the very lowest classes, who cost the community more per head through the medium of police and public health administration than their more respectable neighbours. It is maintained that much may be done by reconditioning and converting large houses into several smaller ones, but more still by compelling the owners of existing slums to put them in order, and thereafter seeing that they are kept in good order.

CLEARING SCOTLAND'S SLUMS

The new Housing Act for Scotland has now become operative, and will function very much after the manner of its English progenitor. Unit grants replace the percentage grants of the old Acts, and the new system is in such a form as to be a definite inducement to local authorities to provide a larger type of house at a moderate rent. Slum clearance is its main intention, subdivided in detail into *clearance* areas where all the houses must be demolished, *improvement* areas where some houses may be improved and some only demolished, and the repair and improvement or demolition and re-erection of individual houses.

★

The definition of areas coming within the scope of the Act is carefully laid down, but with wide powers of purchase of property surrounding and adjoining, so that a clearance may be effective over a wider area than would

be otherwise possible. The rehousing of dispossessed occupants of areas to be cleared is, of course, one of the major problems of slum clearance, and is dealt with as carefully as it deserves, especial point being made of the need for adequate alternative accommodation for dispossessed tenants before ever a demolition is started upon. On the whole, the Act seems simple and workmanlike in its machinery, with financial clauses that are inducements to local authorities to take up the long-neglected task of thorough slum clearance.

VENTILATION, SANITATION—

It is humiliating to reflect that it is only a matter of days since modern methods of ventilation have been allowed to reinforce modern methods of sanitation in this country; and that we who have so long lagged behind in regard to the former were once pioneers in the latter. The absurd old L.C.C. building bylaw just abrogated by the Ministry of Health, which insisted on the external ventilation of all bathrooms and w.c.s, recently enabled a friend of mine to renew his lease on exceptionally favourable terms. As a tenant in one of the oldest *ad hoc* blocks of flats in London—notable for having been designed by a qualified, and even an eminent, architect—he was informed that an extension of his lease would be accompanied by an approximately 100 per cent. advance in rent. Being a rather subtle fellow, he drew the landlord's attention to the fact that the lavatory in his flat was ventilated not by an outside window but by one opening directly on to the main staircase. A hint that he might be prepared to refrain from drawing the L.C.C.'s attention to this flagrant structural illegality resulted in his securing a fresh fourteen years' lease with only a 25 per cent. increase of rental.

*

In America, thanks to the perfection of suction and forced-draft ventilation, it has long been the rule to place a bathroom and a private closet on either side of the space between the double doors of every hotel bedroom. This has caused a progressive standardization of sanitary appliances, with a corresponding reduction in the price of plumbing and fixtures. The new "Reichsbahn" hotels at Stuttgart and Beuthen, which may be considered the last word in hotel equipment and efficiency, have a bath and a syphon-flush closet attached to every bedroom, single or double.

—AND STAGNATION

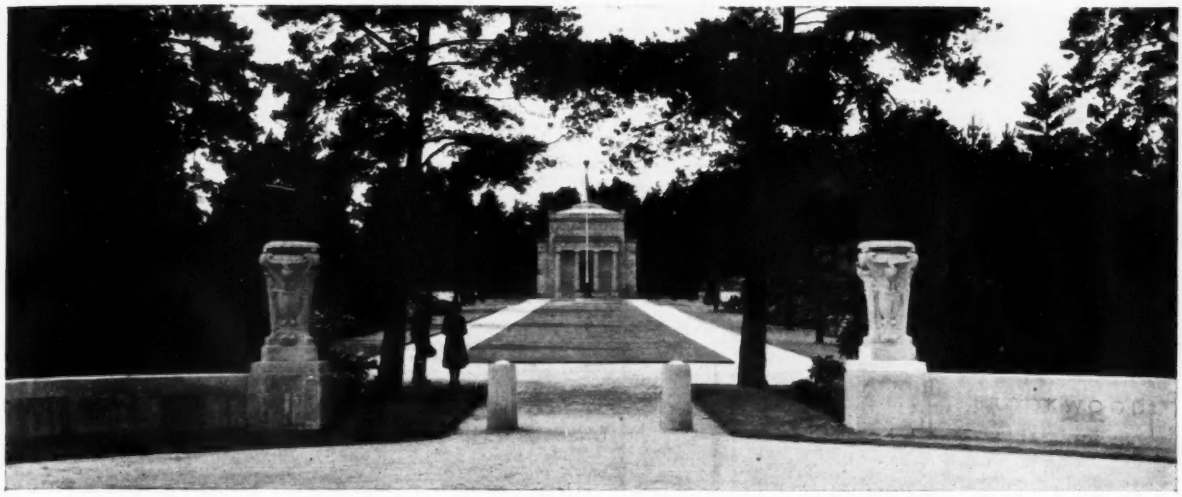
Such sybaritic luxuries—for which (L.M.S. and L.N.E. Railways please note) no extra charge is made in the charmingly decorated and rationally furnished hotels managed by the German State Railway Company—are beyond the wildest dreams of the stay-at-home English traveller, who knowing that the quest of a bathroom entails a pilgrimage through draughty corridors, usually asks no more than a couple of taps. Most London terminus hotels—to say nothing of railway-owned hotels in the provinces—still impose the most scandalously primitive means of ablution on their patrons. Here, *faute de mieux*, the rusty brown hot-water can, so familiar to the Victorians, has to be rung for and patiently awaited by visitors unreasonable enough not to be content with cold.

*

The pious preservation of such curious archaicisms as ewers, hand-basins, slop-pails, hip-baths and tin jugs in a bepinnacled Gothic edifice that might be mentioned is doubtless in deference to the lifelong habits of the company's octogenarian directors. The management is apparently blissfully unaware that travellers from the north are apt to resent a display of crockery and hardware which ought by rights to have long since found a place in some Museum of Hygiene; and make a point of shunning this conveniently situated but inconveniently superannuated hotel in consequence. On the Continent the bedroom without fixed basins and running water has become extinct in even the humblest inns of the sleepiest little market towns. Is it too much to hope that in another decade it may also have disappeared from the principal London hotels? The repeal of this preposterous and vicious bylaw should encourage English hotel proprietors and householders to begin to think of a bathroom and a w.c. as no less integral parts of a bedroom than a built-in wardrobe and fireplace.

WHERE ARE MY SLAVES?

In *Towards Civilization* (Longmans, 12s. 6d.) Dr. Beard, the American publicist, and his collaborators, have boosted the claims of the engineers and mechanics to be the great benefactors, spiritual as well as temporal, of the human race, and cite Edison as a name that should appear in the Kalendar of Saints. It seems that the amount of mechanical power at the disposal of each person in U.S.A. equals a hundred slaves; in Britain, I suppose, about seventy slaves. I told a married lady this, only to find she would give all her electric buttons, her stainless knives and whistling kettles, for one human cook and one flesh-and-blood housemaid, so that she herself could spare time to mend the children's manners and undies.



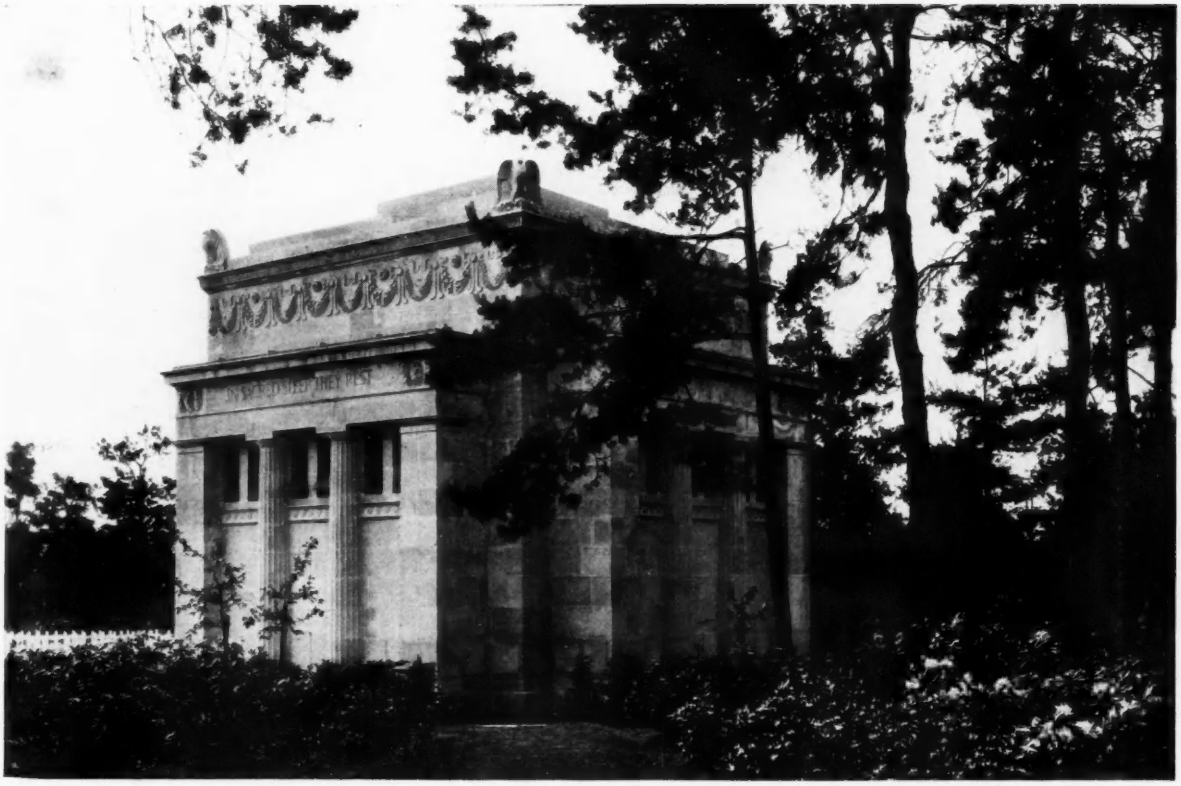
*

The boycott of domestic service has hit architects pretty hard. Where your nobleman or merchant used to roll in and order a mansion of thirty rooms, his descendant suggests a three-bedroomed house and a garage. And where are the religious buildings in response to the spiritual uplift of machinery? Perhaps the parish priest will ask for plans of a bare mission church to serve the New Poor in the Wilderness, and mention the reward of half-fees, and for himself prognosticate an Easter offering of seven shillings and tenpence and not enough buttons for a pair of braces.

ASTRAGAL

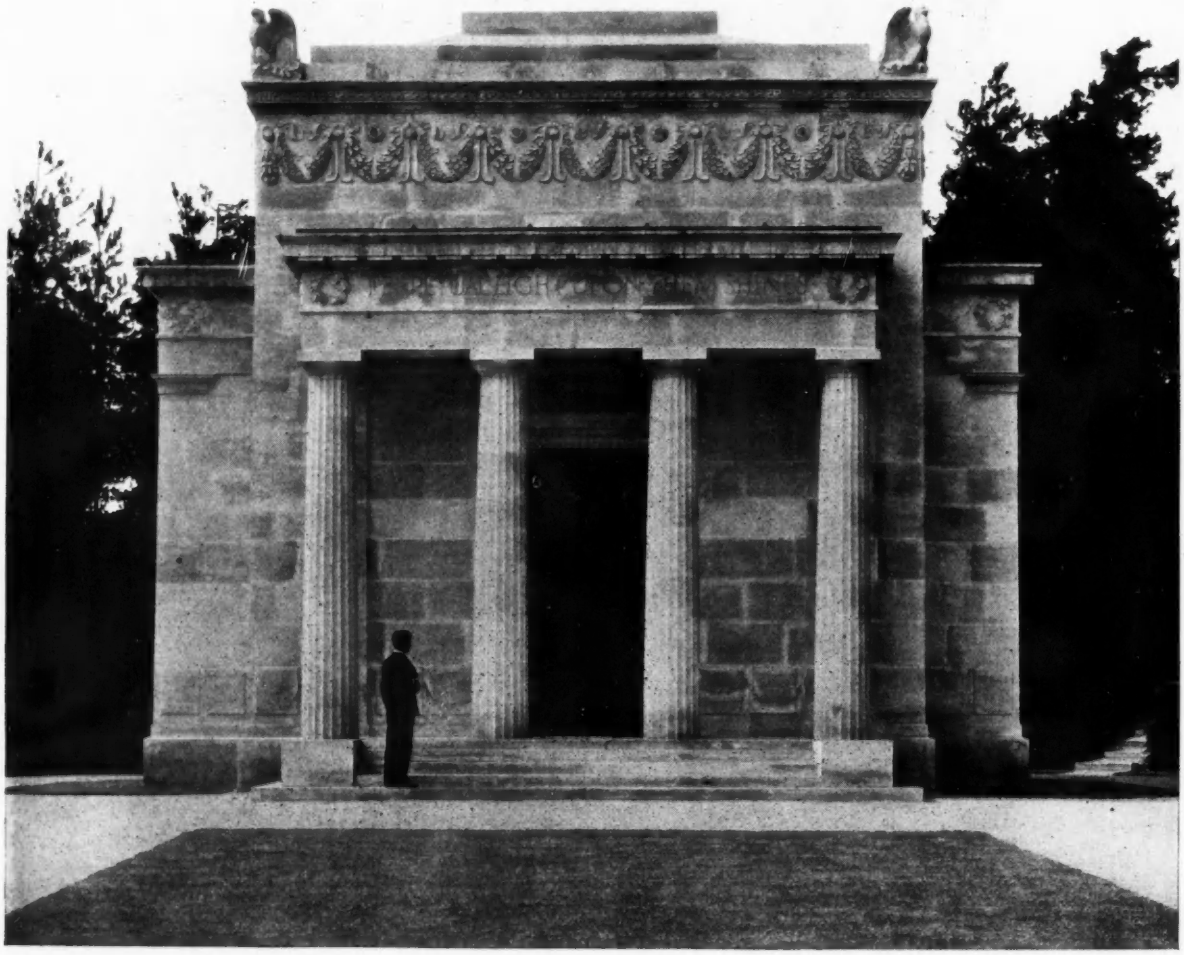
More Official Architecture

"I don't want to be accused of treachery, but I give notice that I am going to make inquiries through the Minister of Health as to why these plans were approved," said Councillor Conlan, at a meeting of the Barnes Council on Tuesday last. He was referring to the plans of a new housing scheme (a block of flats) in Mortlake High Street, and Councillor Conlan, who is an architect by profession, had previously drawn attention to the fact that the rooms would lack sunlight as the living-room windows looked north, while the larders faced south. This is an extract from *The West London Observer* of last Saturday. The flats referred to have been "designed" by the engineer to the Council, despite Mr. Conlan's efforts to persuade the Barnes Council to commission a qualified architect. From its inception he has opposed the scheme on the grounds that the planning was extremely raw and lacked skill. The remainder of the Council, however, were of the opinion that their engineer was quite capable of doing the work. The lay Press seems to extend its sympathy to Councillor Conlan, who is the "baby" member in point of years.



The view looking north from the entrance to the American Military Cemetery.

THE AMERICAN MEMORIAL CHAPEL, BROOKWOOD



DESIGNED BY EGERTON SWARTWOUT

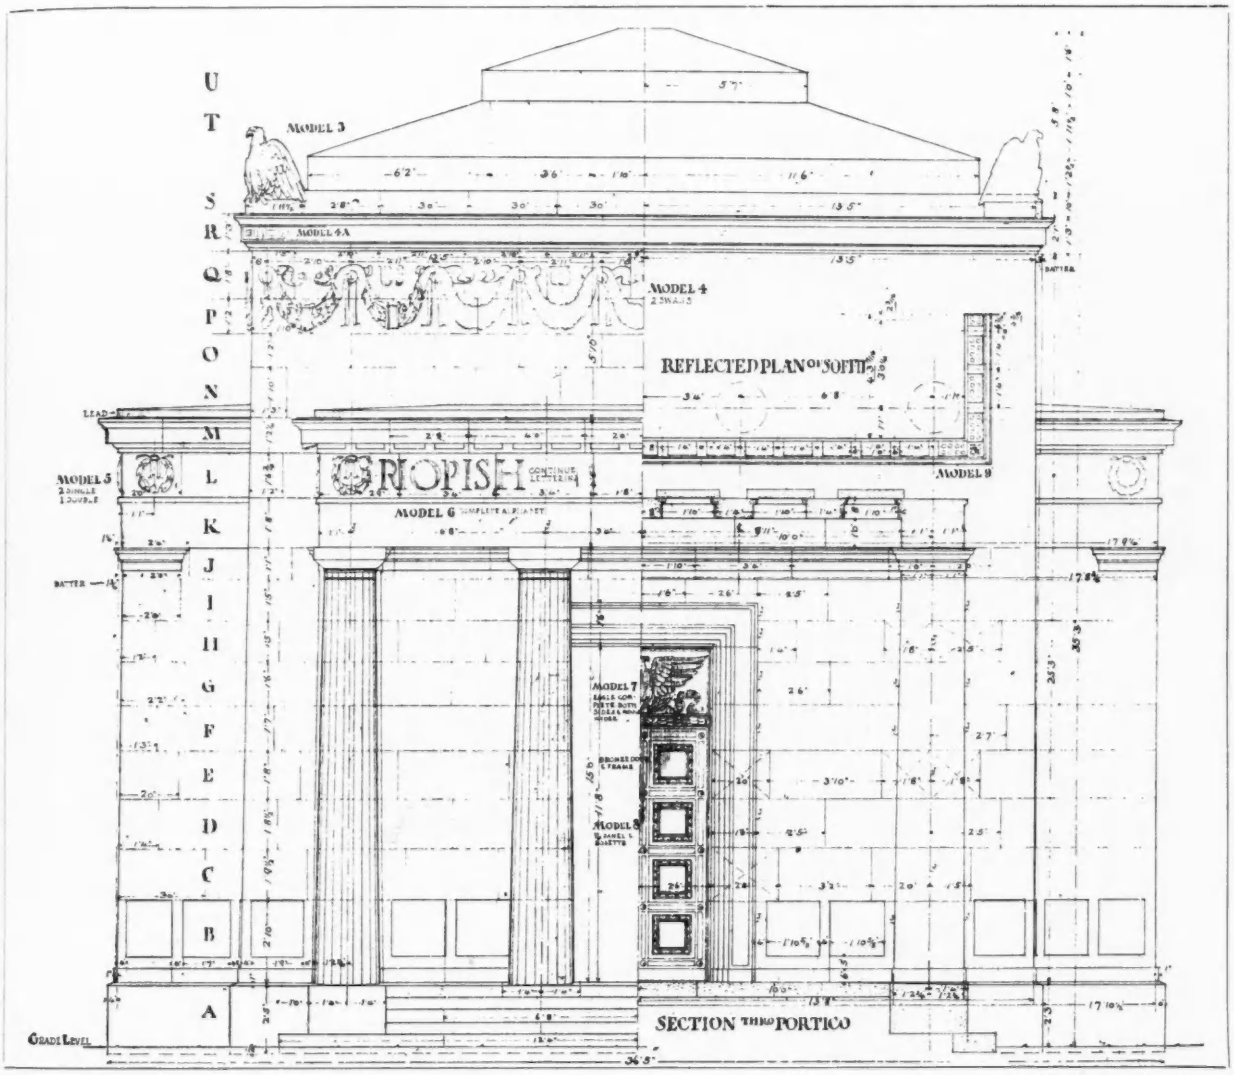
THIS chapel has recently been completed from the designs of Mr. Egerton Swartwout, F.A.I.A., of New York, the well-known architect of the Elks Memorial, Chicago, and other monumental buildings in the United States. The chapel is one of a number of war memorials erected by the American Government, which set up the American Battle Monuments Commission, of which General John J. Pershing is chairman and Major X. H. Price, C.E., U.S.A., is secretary, to organize, direct and supervise the various undertakings.

The European office of the Commission is in Paris, and the memorials take the form of chapels or commemorative monuments in six cemeteries in France, and one in Belgium, where American soldiers are buried; and nine monuments on the battlefields of France and Belgium where American armies fought, in addition to

A view from the north-east, showing how effectively the chapel is set in its surroundings of Scotch firs.

The American Memorial Chapel, Brookwood.]

The south elevation, showing the entrance, which has bronze doors.



four monuments at places where the American navy had bases during the war.

These memorials are the designs of eminent American architects who have been chosen to commemorate their country's achievements and sacrifices in the great European war of 1914–18, the most bloody conflict America has known since her own Civil War; and Mr. Egerton Swartwout, the designer of the Brookwood Memorial Chapel, here illustrated by photographs supplied by the American Battle Monuments Commission and drawings lent by the architect, is the architect also of the Battle Monument now being erected at Montsec (Meuse), France.

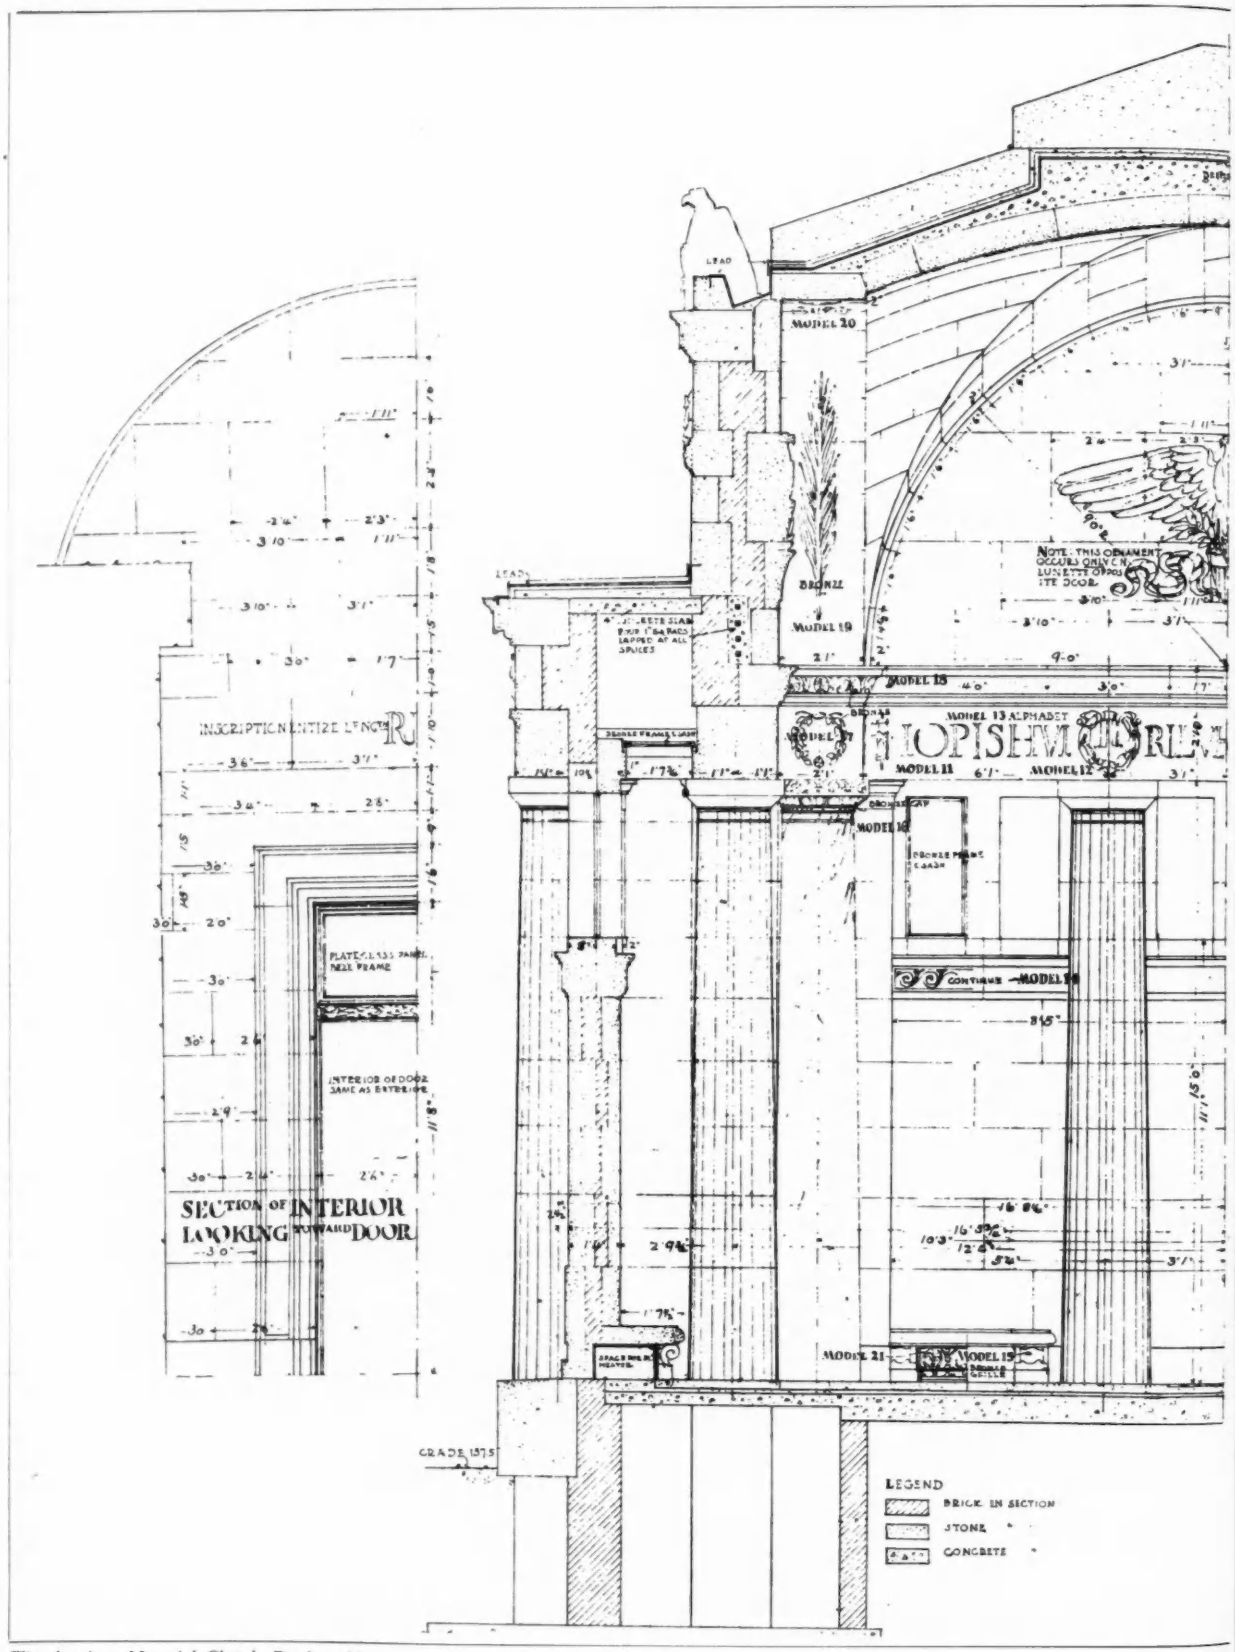
The Brookwood Memorial Chapel is built at the north end of the American Cemetery, which lies at the west of the Necropolis, and next to the British Military Cemetery. It commemorates American soldiers and sailors who lost their lives in Great Britain, or in its surrounding waters, during the war.

Four hundred and fifty-three graves, each marked by a white marble cross of special design, occupy the arms of the cross to which the layout of the cemetery approximates; the chapel standing at the head, the flagpole at the centre of intersection, and the entrance at the foot. The names of approximately 1,060 American soldiers and sailors, who were lost or buried at sea and have no known graves, will be inscribed in panels on the inside walls of the chapel. The bodies of those buried in the cemetery were brought thither after the Armistice from various parts of England, Scotland and Ireland, and lie in ground the freehold of which vests in the Government of the United States.

The photograph giving the general view shows the entrance to the cemetery from the approach road on the south. The layout so avails itself of existing plantations that nothing is seen until the entrance is reached and the chapel and its setting are fully displayed as here shown. The crosses marking the graves, which may be discerned in the photograph on each side of the near approach to the chapel, do not obtrude upon the memorial which the chapel is, in the main, intended to constitute. The building, which is externally of Portland stone, is set back into a plantation of Scotch firs faced with yew, which also partly encloses it upon the east and west; and in being able so to contrive and to arrange the approach and chief elevation on the south, the architect has given his building an ideal setting. The plantations of evergreen shrubs flanking and enclosing the approach

[*By Egerton Swartwout.*

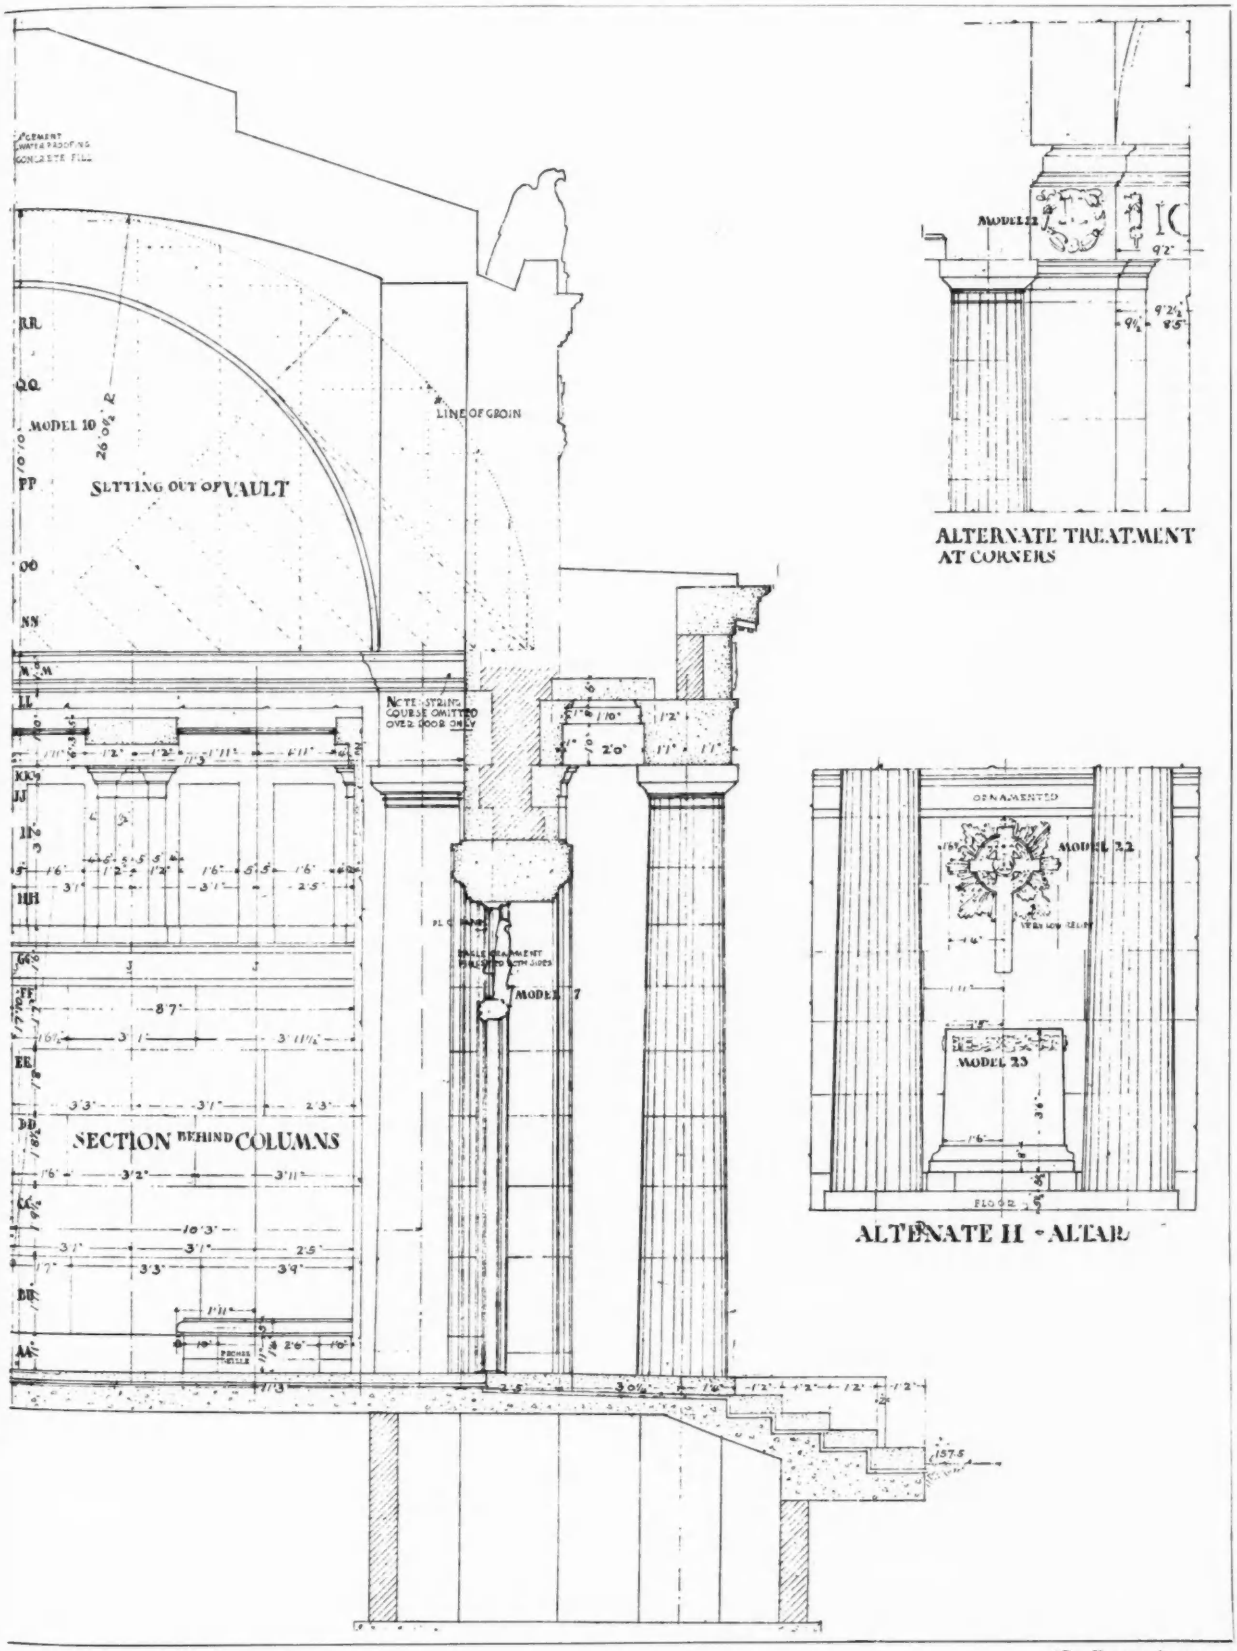
The architect's detail drawing of the south elevation illustrated, photographically, on the facing page.



at its southern end, emphasize the domination of the chapel and give sanctity to the orderly phalanx of white crosses to right and left when a nearer approach to the chapel brings them into view. Skilled designers will also note the gain in scale and effect of spaciousness obtained by the displacing of a central approach by a lawn with paths on each side of it.

The design shows the scholarship untrammelled by stylistic convention, which we in England have learnt to recognize as a characteristic of the work of the leading American architects, who, we are not to forget, are by tradition, if not in fact, the heirs of Les Beaux Arts, Paris. The stone, Portland without and Ham Hill within, and the craft of building, are British; but with that qualification the chapel and cemetery are American—the design, the models of carving and lettering, bronze doors, caps and applied decorations, and the base and finial of the flag-mast came, all of them, from " the other side." The stained-glass windows, however, did not come from America, but were designed and made by Mr. Reginald Hallward, who also carried out the decoration of the memorial altar and of the cross above. The photograph does not, unfortunately, show up the windows, the design of which embodies regimental insignia of the American Army.

The warm colour and variegations of tone and texture of the carefully-chosen Ham Hill stone which lines the interior, is shown up by the columns of uniform, ruddy, chocolate marble, sparsely traced over with thin white veinings, and by the bronze caps, and applied wreaths, palm swags and architrave enrichment, which are gilded.



Artificial lighting is by flood-lights, fixed above the lay-lights in the ceilings of the window bays. These lay-lights are of semi-opaque glass, tinted so that its difference from the general colour of the walling is not conspicuous. The building can be slightly warmed, when necessary, by electric radiators fixed below the stone seats, two examples of which may be seen in the photograph of the interior.

The drawings reproduced in these pages are characteristic of American practice, which definitely and completely, so far as the words may be used in such a connection, fix all parts and details of the whole building before the contract is let. The importance of this will be realized by architects when it is remembered that in America the quantity surveyor is unknown; but the exactness with which a building may so be completed in the contract drawings will not be realized by any

The American Memorial Chapel, Brookwood.]

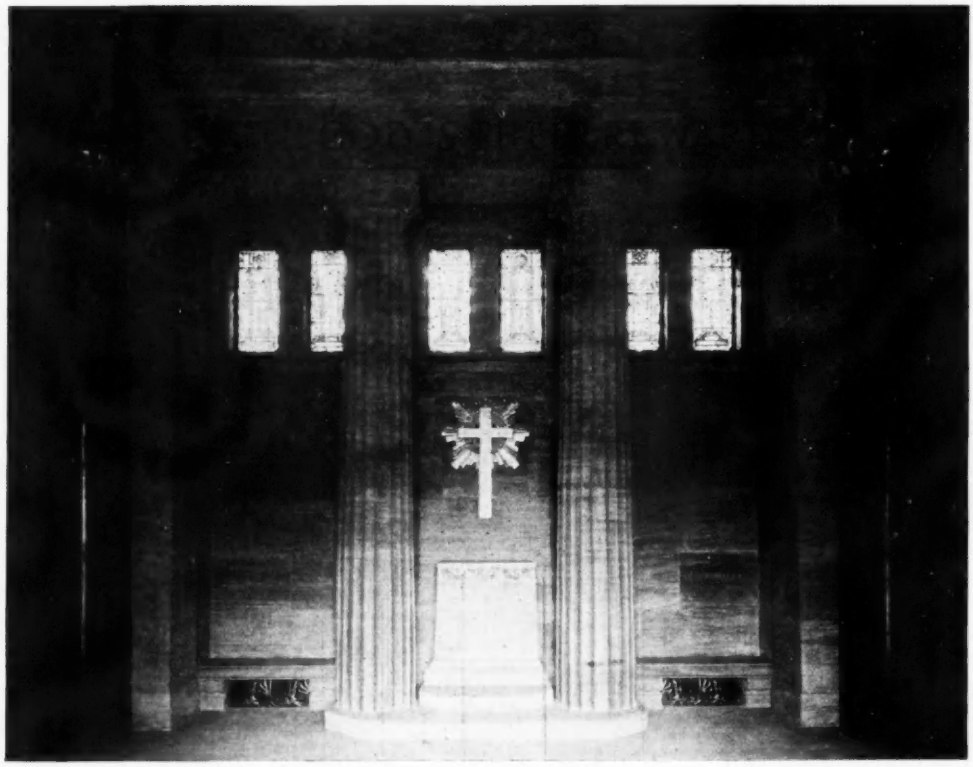
The architect's detail drawings of the section and interior elevation, facing the entrance—

[*By Egerton Swartwout.*

—and of the section through the entrance and side elevation, typify American practice.

who are accustomed, as are English architects, to leave the precise form and dimensions of the details to be decided as the building proceeds.

These drawings, with specifications of separate trades, are duplicated and supplied to various contractors through the intermediary of a general or organizing contractor. Each of these contractors makes his own measurements and prepares his own estimates and tenders, which are embodied in the tender, or "bid" as they call it, submitted by the general contractor to the architect. It will be realized that as the estimating is undertaken by specialists in each particular trade or craft, who have methods of their own of determining what the work will cost them, the science of preparing the elaborate bills of quantities with which we are familiar in England is not called for in America; and the confusion and waste, which our profession of quantity surveying was set up to put an end to here, does not there arise.



Which system is calculated to give the best results in the achievements of architecture it is difficult to say: an architect who is compelled clearly to visualize and determine all parts of his design before the building is embarked upon is likely to give a higher concentration to the perfecting of his conception than one who can avoid facing indecision and escape solving difficulties, by putting the problem aside for a later day; but, on the other hand, the designer who can see his design taking shape before his eyes will be able to exercise a more mature and a better considered judgment in determining its parts than one who is by circumstances strongly discouraged from revising his original conceptions.

A combination of the two systems, when that is possible, would probably give the best results: a strict exactness in all details of the original design as the American usage requires, and a perfect freedom to reconsider and amend, such as practitioners of architecture in England enjoy.

The builders were Messrs. Holloway Bros.; and the work was carried out under the direction of Mr. H. B. Creswell, F.R.I.B.A., who represented the architect in England.

ENGLISH PRECEDENT No. 133

BARN, DOULTING, SOMERSET

Throughout the length and breadth of the West Country the great barns store its garnered wealth. Built, each with materials native of its place, they seem to be a part and parcel of the soil to which they owe their being. Like that illustrated above, they were built, not with stint of time nor of materials, but were well built, and built to last.

The roof principals of these barns seem to have been spaced, one from the other, with the measure which is common in most old rural buildings —the rod, pole, or perch of the multiplication table. It was indeed the most common lineal measure in country use.

The form of the roof truss most often seen seems to be derived from the early type of timber roof construction by "crucks." Each pair of "crucks," curved in outline, rested on the ground at their lower ends and met at the apex of the roof, the building so formed being, virtually, all roof and no walls.

The principal rafters of these barn roofs are generally curved at their bases, which rest on independent "wall plates" or seatings placed about a third of the way down the wall. The upper part of the walls are thus freed from much of the weight of the roof and their tendency to spread under its pressure is proportionately diminished. The high "collar" beam gives an uninterrupted space for storage below it, and in some cases supports above it a "king post" or two diagonal struts.

These ancient barns are memorials of a past age; they are historic evidence of the life of an historic people. Let us therefore preserve our barns. —[G. G.]

LETTERS FROM READERS

Guildford Cathedral Competition

SIR,—An innocent stone may start an avalanche, and yet desire peevishly to maintain its identity, and to contemplate the wreck it has caused.

Your correspondent "Cathedral" gave me hope, but the authorities pursue their way and valuable time is passing. May I point out certain considerations :

1 : That no one has confused the issue, despite Mr. Wightwick's subtle letter. Such were impossible with such an issue. The promoters do not know what they want, and have unwittingly said so.

2 : That the present "conditions" are materially modified from the original advertisement, and the position for the younger men is worse. As a prospective suppliant, I have not been engaged in the design of cathedrals, but in carrying on architectural practice, which has left me no time for such exercise. If not thereby disqualified, I should be prepared to risk submitting an esquisse, if there were proper evidence that it would not be ruled out *a priori* by some gentleman who is to give the money or perform the ritual, and who is offended by this, that, or the other implication in my plan. I have certain views on the right expression for this building which are evidently not those of the diocese. They include a prejudice against floating roofs void of support.

3 : It is not for anyone to say how Guildford shall wreck the finest opportunity since Liverpool, but it is, presumably, for the Competition Committee of the Institute to say clearly and quickly whether or not the present method is approved for those who wish to serve the profession honourably.

4 : That the site (though mentioned with bated breath) has been waiting for centuries for a cathedral. Only those who have seen it can feel really keenly about the matter.

"FANE"

Official Architecture

SIR,—The opening yesterday (September 16) of the newly-developed Branksome Chine Gardens by the Minister of Labour, and the plans then revealed for future development of the coast, suggest that architects in Hampshire and Dorset need to safeguard their interests against borough engineers. In the Poole area the local engineer, who is an exceptionally active man, was recently responsible for the new Pavilion at Sandbanks. He has just drafted a scheme for the development of the East Dorset sea-front by the construction of a sea-wall, artificial chines, a bathing station, and cafés.

Within the past few weeks the Government have agreed to give financial assistance towards the cost of new municipal buildings at Poole for the plans of which the same borough engineer is responsible.

These and other developments in the district mean that hundreds of thousands of pounds of work, which in pre-war days would have been designed by private architects, has now passed to local government officials.

B. S. T.

Surveyors' Scale of Charges

SIR,—Although the Government, quite rightly, insists on, and embodies in all contractors' contracts, the condition that recognized trade union rates be paid to all employees, I find that quantity surveyors (of whom there are many in this Association), in their dealings with Government departments, especially H.M. Office of Works, find their scale of charges cut down to an "impossible" figure. Indeed, so many fully qualified quantity surveyors have lost money over their transactions with the Government that they now refuse such work.

Apart from the principle being decidedly bad and, incidentally, opposed to all tenets of a Labour Government, the best brains in the profession cannot be obtained by such procedure.

The layman may not know what a quantity surveyor's work is. The services of a competent quantity surveyor prevent the employment of the "wrong" firm on a job and ensure that trade conditions be observed, that inexperienced estimating be discouraged, that careless mistakes be discovered, and that sharp practice on a contractor's part be detected and thwarted.

It is evident that practitioners of this important profession are being maltreated by the Government. No trade union would take such treatment lying down.

G. B. J. ATHOE
(SECRETARY, INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS)

Art and Industry

SIR,—In the report of Mr. Henry G. Dowling's lecture on "Are Art Schools Assisting Industry?" (August 13, page 240) there is a suggestion of a national survey and report on art in relation to industry. I would like to endorse and to amplify his suggestion.

Whilst the work of the schools of art is, and must be, many-sided, there can be no question that great importance attaches to the education and training of designers to guide the decorative processes of mass production in industry.

To do this effectively there should not only be close co-operation between the schools and a properly organized Royal College of Art, but, speaking generally, the ties between schools and industry should be strengthened.

Individual schools, in close touch with local activities, are doing excellent work. Something more than this, however, is called for.

An inquiry conducted by the representatives of the Board of Education, Board of Trade, Federation of British Industries, Design and Industries Association and the National Society of Art Masters should reveal the possibilities of the position and result in collective action of the most fruitful kind.

WALTER M. BARNES
(PRESIDENT OF THE NATIONAL SOCIETY OF ART MASTERS)

Canals for Heavy Traffic

SIR,—The plea that to ease the congestion of our roads some of the heavy traffic should be diverted to the canals, will receive, I hope, the consideration and support of all commercial undertakings. Not only are our roadways entirely inadequate to bear the strain of the continually increasing stream of traffic, but, as Sir Frank Baines and others have recently pointed out, the buildings which line the highways will be unable soon to withstand the constant vibration caused by such traffic. Especially is this the case in our University cities, where centuries-old colleges are subject to this great menace.

Unfortunately, it is far too generally believed that canal transport is obsolete and too slow for modern conditions. Yet it is a fact that delivery by this form of transport in many cases is quicker than by train. The craving for speed is a twentieth-century obsession; it is rarely an essential factor in the transport of heavy goods. The building trade, in particular, might study this problem with advantage, for the canal boat is ideally constructed for the conveyance of steel girders and bricks. Non-perishable agricultural produce also might be conveyed conveniently by this means.

It is not too much to say that a volume of traffic greater than that now sent by road between London and Birmingham could be carried by water when the recently authorized development of the Grand Union Canal system is completed. Even now there could be a continuous stream of day and night traffic on our inland waterways without causing congestion.

P. J. HANNON
(CHAIRMAN, NATIONAL COUNCIL OF INLAND WATERWAYS)

Settling-Up Honeywood : xvii

SPINLOVE COMES TO HEEL

BY KARSHISH

(H. B. CRESWELL)

Sir Leslie Brash, the owner, who has strongly resented a bill of extras estimated as likely to amount to £1,892, has been informed by the architect, Spinlove, that the Statement of Account shows a reduction on this amount of £90. This small mercy, for the architect, is however balanced by loud complaint from Lady Brash of the return of certain mysterious smells which formerly pervaded the house and then disappeared. A more serious matter is the failure of the paint-work. Brash ordered the paint; the builder, Grigblay, says it was faulty; the manufacturer that it was wrongly used, and Brash is contemplating an action for damages against one or both of them.

SPINLOVE TO GRIGBLAY

Dear Sir, 15/10/26.

I enclose list of various small defects which have been standing over so that they might all be dealt with together. Sir Leslie Brash agrees with the list and I have sent him a copy of it. Failure of Riddoppo was added by his orders. He understands, of course, that you do not intend to touch the paint.

I have had further complaints of smells in the house. It seems that they are the old smells, but they are now stated to be much worse than they were before. I wish Mr. Grigblay would go to the house on an early day, as he is often in the neighbourhood, and let me know what he makes of it.

Yours faithfully,

Spinlove, as we remember, has held back the making good of defects until they should have fully developed, and so that all might be dealt with at one time; and he then, quite properly, obtained Brash's agreement to what Grigblay was to be required to do. This is a most necessary step, not only to make sure that his client's ideas will be satisfied, and to protect the builder who is entitled to know definitely and finally what is required of him, but to put his client in mind of a fact he is liable to forget—namely, that the builder is not at his beck and call, but that there is a strict limit to the demands that can be made upon him.

It is the duty of the architect to decide what work a builder shall be called upon to do in fulfilment of his covenant to make good defects. The list represents Spinlove's requirements in this particular, and as he does not hold Grigblay to blame for the failure of Riddoppo, he ought not to include that item. It is important for an architect always to maintain a definite position, and to be consistent, and to act in exact accord with the forms prescribed by the contract; but when, as in this case, he knows he may have to justify himself to lawyers, he cannot be too cautious and circumspect. These miserable contests, however, invariably lead to cross-purposes and confusion; and we may suppose that if Spinlove had declined to put Riddoppo on the list, he would have fallen out with Brash, and that he accordingly took the line of least resistance by including it and telling Grigblay it was understood he would refuse to touch the paint. This is consistent with Spinlove's policy, throughout the whole of the affair, of sitting on the fence; but he will cut a sorry figure when lawyers begin pressing their questions.

SPINLOVE TO LADY BRASH

Dear Lady Brash, 15/10/26.

I am so very sorry to know you are troubled with this unpleasant smell, and have arranged for Mr. Grigblay to call on an early day and make a thorough investigation of the cause which I am convinced cannot be far to seek.

Yours sincerely,

In spite of Pud's endorsement of her mother's complainings, it is clear that Spinlove still refuses to believe that the reported smells can be due to any defect in the building. In this his native tenacity seems a little misplaced. He is wise, however, in making no reply to Lady Brash's suggestion of a radiator in the converted boxroom, for such a radiator would be likely to develop the same defect as the fire does, and "give out no heat." "Jazz" seems to have answered Pud's letter in his own hand, for there is no copy of his reply on the file. He has disappointed us in this way before.

GRIGBLAY TO SPINLOVE

Dear Sir, 16/10/26.

We are obliged for list of defects requiring attention to complete contract, and will put same in hand next week, except making good Riddoppo, which, as we have stated, is no business of ours, and which we respectfully refuse to do.

Mr. Grigblay regrets he cannot take any further action *re* reported smells, as he has already obliged once and could find nothing amiss except mischievousness by the servants, which has since been put right.

Yours faithfully,

Grigblay's refusal to investigate the smells is natural. It is not many months since he put himself to some trouble to get to the bottom of complaints for which he could find no justification; and Spinlove's peremptory manner of calling upon him to pacify Lady Brash a second time—which, in any case, is Spinlove's job and not Grigblay's—would properly dispose Grigblay to refuse the favour even if he were otherwise inclined to grant it.

LADY BRASH TO SPINLOVE

Dear Mr. Spinlove, 16/10/26.

I do not want Mr. Grigblay to call any more, he does not wait to listen to me but only says there is nothing wrong and it will be all right in the summer and goes away and nothing is done and all getting worse and worse every day and the fire giving out no heat no matter how much coal so that I cannot sit there it is so *freezing* with the cisterns making a *new* noise and I lie awake and keep wondering what is happening when I am not there, so will you send some *proper* person *at once* to say what it all means, as Leslie comes home tomorrow and will naturally want to know why it all is when he hears about it. You have been *most* kind and considerate I know, but now at last it must really stop for I cannot bear any more.

So depressing with the leaves falling and this cold wind !

Yours sincerely,

The poor lady is fast getting into one of her "states." In spite of her rambling ambiguities we may understand that it is the smells *that are the trouble. There seems to be no doubt that something is wrong, and the probability is that if Spinlove had applied himself to understanding the cause of the complaint when it was first made, instead of discountenancing all idea of smells and allowing the tough sensibilities of Grigblay to discredit the delicate perceptions of the lady, he would have saved his clients great annoyance and inconvenience, and himself much trouble and anxiety.*

BRASH TO SPINLOVE

Dear Mr. Spinlove, 19/10/26.

I returned yesterday from the Shire [*sic*] where I have been engaged in company with various sporting acquaintances in beguiling the wily partridge. A number of hares also fell to my bag, and I was fortunate in securing a polecat, an exploit which my host is commemorating by having the creature set up by Rowlands. The event is the subject of a paragraph in this week's *Field*, you will notice.

Your communication anent extras was forwarded on to me, and I now write to intimate my satisfaction at the amount of the final total. I confess that I anticipated that the previous summary would again be eventually increased, and my gratification at your intimation that there is a reduction of £90 on the previously estimated figure, is considerable. There is also, I have noted, the additional

saving of £92 in respect of over-payment for bricks which you previously reported, making £182 in all. May I point out that the figure £1,753 should be £1,743. This error does not, however, affect the ultimate total of extras £1,802 11s. 9d., which I take to be final and to represent my inclusive liabilities except the residual balance of your own outstanding fees of which I shall be glad to receive particulars.

Anent the list of defects, the question of responsibility for the Riddoppo failure has the further attention of my solicitor, from whom I expect shortly to receive a communication.

I must now, I regret to intimate, request your attention to a serious matter. On my return home I find that the malodorous emanations have returned with such virulence that the whole domicile is involved, our domestic staff almost in revolt, and Lady Brash so affected in health that immediate change of air is imperative, and she is leaving for Brighton tomorrow.

In the past there has been some doubt as to the existence of unsavoury effluviums, but that doubt no longer persists, as both my daughter and myself have experienced disgusting vapours in various parts of the house, which are particularly obnoxious at night and in the early morning. The matter now brooks no further protracted delay, and as a first step towards elimination, I request that you will on the earliest day possible come and sleep in the house and apply your trained discernments to the identification of these nauseating savours, the repulsiveness of which, if they continue, will render the house permanently uninhabitable. I shall therefore anticipate a telephone message from you tomorrow, signifying the earliest day on which we may expect you.

Yours sincerely,

A remarkably urbane letter under the circumstances! Brash's beguiling of the wily partridge and his newly-acquired polecat fame seem to have given ballast to his moral equilibrium; but his surprising acceptance of the extras account must, in the main, be due to quite other causes, and supplies an instance of the entirely unexpected that so commonly sways the affairs of men. It was not to be expected that a reduction of £182—as he supposes—would reconcile Brash to the claim for £1,900 which he had so hotly repudiated; yet this, it appears, has happened, and the explanation, stripped of the subtleties with which the psychologist would load it, is plain enough. First, Brash has already exhausted his indignation, blown off all his steam, fussed away all his available fuss: he is heartily sick of the subject, and having had a respite of some weeks has no wish to lash himself into a renewal of his sense of grievance. This is a common weakness in men who have not the habit of self-control. Second, as he tells us, he had made up his mind that the estimate of extras supplied him would prove to be a mere stepping-stone, or half-way house, to a much larger final claim as, except for Grigblay's honest good sense in preparing the estimate, it might well have been; and the fact that the worst is now revealed to be so much better than was expected has reconciled Brash to the figure and led him to forget how unacceptable it once seemed. Third, with the serious contest over the paint unsettled, and the new trouble of the inexplicable smells to be disposed of, he is glad to settle the question of extras.

SPINLOVE TO BRASH

Dear Sir Leslie, 20/10/26.

This to confirm arrangement by telephone, that I will meet you at Charing Cross on the 5.25 tomorrow. I am astonished at what you tell me. Why these smells should suddenly reappear, and worse than formerly, is extraordinary—as indeed is the fact that there should be *any* smells. I will do my best to get to the bottom of the matter, though I cannot think that the trouble can be due to any defect in the work.

I have also to thank you for your letter. I will let you have particulars of my charges. The final payment to Grigblay falls due on November 10, as you know.

I should mention that the refund of £92 from the brick manufacturer *is included* in the Statement of Account. I will bring the Statement with me tomorrow, for you to see.

Yours sincerely,

We may hope, for Spinlove's peace of mind, that it has not occurred to him that the smells may be those associated with extensive dry rot; but, in point of fact, the early manifestation of the smells, their complete disappearance and their sudden return, does not indicate such a source.

We may also hope that the reflection that this was the last of Spinlove's snatching exploits, reconciled Brash to the vanishing of the £92 with which he had endowed himself.

SPINLOVE TO GRIGBLAY

Dear Sir, 22/10/26.

I went yesterday to Honeywood at the urgent request of Sir Leslie Brash to investigate the smells complained of. I am at a loss to understand Mr. Grigblay's report to me earlier in the year that there were no smells, for there is no doubt whatever that the house is pervaded with a sour, stuffy atmosphere. What the cause of this is I have no idea. The smell was described to me as like that of a third-class carriage in a tunnel on the Southern Railway; and I was myself once or twice reminded of a smoky chimney, but there were no fires in the house except the heating and hot-water furnaces and the kitchen range, and the smell is most noticed at the opposite end of the house, particularly in the bedrooms; in fact, the stuffy odour can be at once detected in Nos. 9, 10, 12, 15 and 16 if they are kept shut for a few hours, but it is scarcely noticeable—if at all—anywhere downstairs. I slept in the small spare room (No. 9 on plan) with the windows shut, and the disgusting atmosphere was proved when in the morning I opened the windows and breathed fresh air. I was conscious of an oppressive sensation in my chest and a listless enervated feeling when I first got up, and had a slight headache.

I may say that Sir Leslie Brash is most tolerant of what must be a great annoyance, but he naturally expects that the state of affairs shall be put an end to at once, and I will ask Mr. Grigblay to meet me at Honeywood either at 3.30 tomorrow afternoon, or in the course of the following day, and I shall expect to hear from you by telephone in the morning.

Yours faithfully,

If we had not such frequent cause to resent the peremptory, ill-mannered tone in which Spinlove addresses those under his direction I should call attention to this instance of it. It is particularly to be regretted when he is addressing Grigblay, to whom he has been in the past greatly indebted.

GRIGBLAY TO SPINLOVE (AUTOGRAPH)

Sir, 23/10/26.

I was away all today, but your letter was sent up to the house so I should see it tonight. I understand they rang up from the office to let you know I could not meet you today, and I now write to let you know I cannot meet you tomorrow and for the following reason.

I may have as good a nose as most, but I don't hold out to have a better and there is no use my joining in any sniffing match up at Honeywood, for that, if you will pardon me, is all it would amount to. If what you say is fact—and I do not doubt it is, for you will find that I dropped a hint of the same in the report I made last spring—I can make a guess what is the matter, and it is no small matter either; but the first thing is to find out whether the trouble is what we think, and to do that we want something a lot better than any nose, and that is a "detector," and my advice, sir, is to ask Mr. F. T. Pricehard, Consulting Analyst (somewhere in Westminster he used to be), to send down and test the air same as they do in mines, and he will tell us what the fumes are—if there are any—or if it's dead mice he will tell us that. He will not charge a large fee, and if the trouble's any fault of mine I will pay it, and if not I take it the old gentleman will.

You will excuse me telling you what I think best, but if Sir Leslie wants the trouble put right the first thing is to find out what trouble it is, and if Pricehard can't say, nobody can.

I am, sir,

Yours faithfully,

In the report he refers to, Grigblay attributes a stuffy smell he noticed to down-draught in the flues carrying smoky air from adjoining chimney-pots into certain rooms, and it now seems that he suspects the smells to derive from smoke fumes. The "detector" he refers to is a simple apparatus for the ready measuring of the deadly monoxide gas that accumulates in sewers, coal mines, and other places. Pricehard's methods, however, would be more exact than those made possible by the use of such an instrument.

SPINLOVE TO GRIGBLAY

Dear Mr. Grigblay, 25/10/26.

Thank you for your letter. I have spoken to Sir Leslie, and have today sent instructions to Mr. Pricehard.

Yours truly,

SPINLOVE TO PRICEHARD

Dear Sir, 25/10/26.

In confirmation of arrangements made over the telephone today, I enclose the full history of the "smells" at Honeywood and particulars of the construction of the building. Plans showing drains and all service pipes are hanging in the kitchen passage.

Sir Leslie Brash has arranged for doors and windows of bedrooms to be kept shut on Thursday, and will send his car to meet the 2.5 from Charing Cross at Wedgfield Junction.

Yours faithfully,

PRICEHARD TO SPINLOVE

Dear Sir, 6/11/26.

I enclose report which gives analysis of samples of air taken in the rooms at Honeywood Grange specified in the report, at the times and under the conditions described.

The slight trace of sulphur dioxide (SO_2) would account for the smell noticeable. The presence of sulphuretted hydrogen (H_2S) was not revealed by the ordinary tests used. Carbon dioxide (CO_2) 0·048 is scarcely more than would be found in normal air. Carbon monoxide (CO) 0·015 (in the worst sample) would be likely to produce headache, giddiness and oppression, after some hours.

I am of opinion that fumes from closed coke fires is present in all the samples of air I took. There are two such coke furnaces in the house, that of the heating service and that of the hot-water supply, either of which might be the source of such fumes; but I am not in a position to say how those fumes are dispersed through parts of the house remote from the furnaces.

I enclose note of my charges.

Yours faithfully,

So Lady Brash is vindicated at last! Carbon monoxide, which is colourless and without smell, is in high favour with suicides who find their most exacting needs supplied at a quite trifling cost by the public gas companies; but the solicitude of an architect who lays on a continuous supply of it to the bedrooms is likely to be regarded as mere officiousness. If the percentage Spinlove appears to have arranged for at Honeywood had been 0·15 instead of 0·015, no one would be likely to have survived one night.

Pricehard's investigation probably took the form of drawing samples of the suspected air through burettes with ball-bellows until the original air in the burette was displaced by the tainted air, and then closing the cocks at each end of the burettes. The contents of the burettes, each of which would have a capacity of about 200 c.cs., would then be subject to analysis in the laboratory.

[NEXT WEEK : XVIII—BRASH IS STRANDED]

CHURCH ACOUSTICS

The following notes on acoustics represent one of many inquiries submitted to the Information Bureau of the Building Research Station, and the reply thereto.

An architect wishes for information regarding materials suitable from the acoustic point of view for use in churches.

THE study of acoustics of buildings has received much attention in late years and, as a result of investigations which have been carried out, the acoustic design of buildings has been established on a definite scientific basis.

The most common defect in buildings which are used for public speaking or musical performances is that due to an excessive period of reverberation (i.e. the time during which sound persists after the source has ceased). This is due to the reflection of sound from hard-bounding surfaces of the auditorium. It has been found that this period of reverberation should not exceed 1½ to 2 seconds, depending on the total volume of the auditorium.

The actual period may be calculated for any known set of conditions from consideration of the volume of the auditorium and the total value of acoustic absorption.

The total absorption is determined by multiplying the area of all bounding surfaces by the absorption coefficient appropriate to the material employed on the surfaces. In addition, allowance must be made for the absorption of sound by the audience, furniture, hangings, etc. Having determined the total absorption actually present in any given case, it can then be ascertained whether this is greater or lesser than the amount shown by calculation to be necessary to reduce the period of reverberation to the required limits. In the event of a deficiency this may be corrected by the introduction of suitable areas of material having a high sound absorption coefficient. It should be noted that sound absorption coefficients are available for a large number of materials in common use.

From these considerations it will be noted that in the actual choice of plasters or other lining materials the designer may be guided by simple arithmetical calculations.

The shape of the auditorium must also be considered, as it is possible that, although the period of reverberation is of the desired order, trouble may be experienced due to echo produced by focussing or reflection of sound from some part of the bounding surfaces. In such cases it may be found desirable to cover the reflecting surface with a good absorbent or to make some modification in the shape of the building. In many cases a certain amount of reflection is desirable as it reinforces the original sound, but it is generally considered that the difference between the length of path of direct and reflected sound should not be greater than about 70 feet, otherwise confusion for the hearer may result.

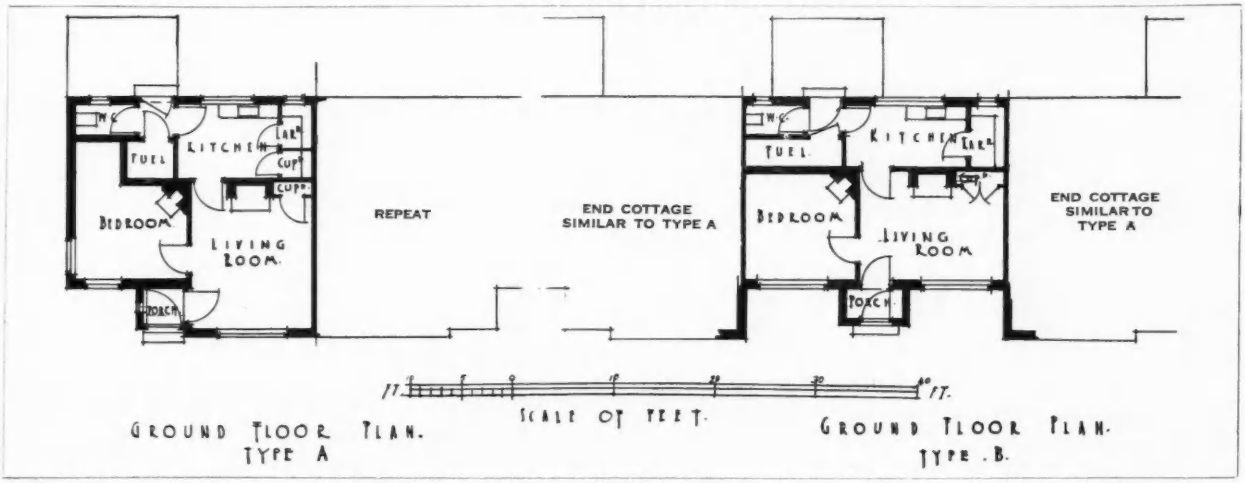
OBITUARY

W. GILBEE SCOTT : 1857-1930

It is with deep regret we record the death of Mr. W. Gilbee Scott, F.R.I.B.A., F.I.A., on August 31, after a brief illness.

Born in 1857, he studied at the Architectural Association and Royal College of Art, South Kensington. He was articled to Messrs. Habershon and Brock, of Bedford Place, and afterwards served under the late Mr. Ewart Christian, until he commenced private practice. He was a recipient of the R.I.B.A. Silver Medal in 1877, for measured drawings.

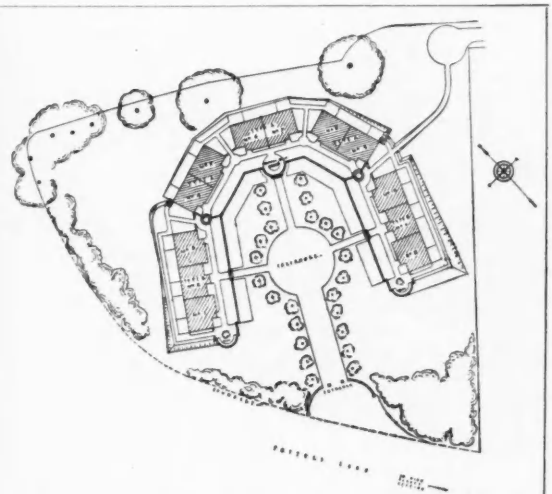
He frequently acted as arbitrator in building disputes, and as an expert witness in the courts. Mr. Scott took a great interest in the question of the Registration of Architects.



During the course of his career he was responsible for the design of many churches, halls, private houses, schools, and business premises. He had been successful in many competitions.

ALMSHOUSES AT POTTERS BAR, HERTFORDSHIRE

DESIGNED BY OSWALD P. MILNE



A view from the south-west. The almshouses have been erected for the Governess and Sisters of the Jesus Hospital Charity.

Ground-floor plans of the two types of cottages. They are erected in groups of two and three as shown in the lay-out plan below.

A view from the terrace; and the lay-out plan. The walls are built of multi-coloured sand-faced bricks with a flush joint; the roof is covered with red sand-faced tiles.

THE SPECIFICATION WRITER

Dry Rot: Cause, Prevention, and Cure

BY W. P. K. FINDLAY, B.SC., A.R.C.S., D.I.C.

AN architect is frequently called in by an intending purchaser to survey a house for the presence of dry rot. This is a task requiring a good deal of care, as quite a severe outbreak may show practically no signs on the exterior of the wood and so escape unnoticed. A panel may be perfectly rotten, yet the surface and $\frac{1}{16}$ in. behind the paint be unaffected. A wavy surface, which may be felt by passing the hand over it, is a frequent indication of shrinkages due to rotten wood beneath. The "ring" of the wood when struck is a very useful sign as decayed wood gives a sort of dead sound, but perhaps the surest method is to probe all suspected places with a sharp-pointed tool, or to use a small auger. A sort of "mushroomy" or mouldy smell which is noticeable on entering a house that has been shut up for some time should make one suspicious of the presence of dry rot. Moulds, though not in themselves detrimental to the wood, except in so far as they discolour it, are an indication that conditions are damp and hence favourable for an outbreak of dry rot should infection be present.

A sagging of guttering or flooring or any form of settlement or displacement of timbering should arouse suspicion.

Special attention should be given to all enclosed timbers such as wall plates or built-in wood lintels; and any unevenness in the floors, especially those covered with linoleum, should be investigated. Parts of the house which are very commonly attacked by dry rot are the cellars, bathrooms, lavatories, larders and wherever there is any danger of condensation of moisture, such as in the skirting at the foot of painted or tiled walls and around piping.

When decayed wood is discovered in a house, an attempt should be made to determine what fungus has been responsible and, if *Merulius lacrymans* is discovered, immediate steps must be taken to get rid of the infection completely.

A careful survey should be made of the house and the origin and the focus or foci of the decay traced out. It is often most difficult to decide what has been the source of the infection to the house; the timber may have been already infected when placed in position—the fungus can remain dormant for years—or timber used for replacements may have been infected. The trouble is sometimes traced to the coal cellar, where spores of the fungus may have been introduced with the coal which has been infected in the mine, where there is often much rotten timber. Another source of infection is from firewood or it may have come from scraps of timber in the soil, where the fungus can remain alive for a considerable time.

As indicated above, dry rot always begins in a place where damp has reached the timber and the source of this must be sought out and removed. Any accidental leakage of water, as from a cistern, must of course be put right at once.

Cracks in rough cast or cement facing may have admitted rain to porous bricks, broken tiles or faulty guttering may let in water to roof timbers, while damp proof courses may be rendered inoperative by the heaping up of the soil in a flower bed above the level of the course. Such sources of moisture as these are easy to detect and to stop, but the moisture derived from condensation due to lack of suitable ventilation is much more difficult to deal with.

The next step is to remove all infected timber and fungus remains and to burn them. When cutting out infected timbers it is necessary to cut away for a distance of 12–18 inches beyond the last visible signs of decay, because the infection is usually present beyond the visible decayed area. It is strongly advisable to remove every scrap of infected timber, for trouble may break out again if there is a trace of infection left. In certain cases where a main timber, such as an important roof or floor beam, is suspected to be infected but is mechanically sound and, on account of the expense involved, cannot be removed, this should be treated with some antiseptic: the surface should be scraped and given several heavy dressings of preservative applied hot, with a brush or spray. A series of small holes should be drilled diagonally across the beam in such a way that the whole transverse section of the beam receives treatment. These holes should be filled several times with hot preservative and then plugged. But it must be strongly emphasized that in all possible cases every scrap of decayed wood should be removed; to leave any infection in is merely to invite further attack at a later date. Wall fixing plugs and blocks are often infected and should be removed and replaced with treated wood or by breeze blocks.

When all the decayed material has been removed, the wall surfaces and any sound timber exposed should be sterilized; strands of the fungus may be present in the mortar and they have even been found in the interior of a brick. The sterilization of a brick wall may be effected by heat applied by means of a blow lamp. It is difficult to sterilize the surface of timber by heat without charring it, and this can best be done by means of an antiseptic. In considering the most suitable wood preservative to use there are several points to be considered: for all exterior work creosote is about the best material; it is highly toxic to the fungi, penetrates fairly well, waterproofs to some extent and does not wash out; for interior work it may also be used, provided that there is no objection to its smell and that there is no danger of its coming in contact with plaster or paint, which it may easily ruin. Some of the proprietary wood preservatives, prepared from tar-oil distillates, of which there are several well-known brands, are also excellent; they penetrate somewhat better than the straight creosote, are cleaner and smell less pungently, but they are, of course, much more expensive and, like creosote, must not come near plaster or paint.

When it is desired to preserve the woodwork of a place where any smell is objectionable, such as a cold store for food, one of the water soluble salts, toxic to fungi, should be used. These have the advantage that the treated wood may be painted over, but as they are water-soluble they are not so suitable for very wet situations, where they wash out.

Sodium fluoride (commercial) is one of the safest and most efficient of these salts and should be used in a 2 per cent. solution in water. Acid magnesium silico-fluoride is somewhat more toxic to fungi, but in using this, care must be taken to prevent its coming into contact with metal (nails) or glass, and it should be mixed in a wooden tub; it is used in 5 per cent. solution ($\frac{1}{2}$ lb. of salt in one gallon of cold water) and has no ill effect upon wood, mortar or plaster. Certain proprietary mixtures of salts containing sodium fluoride and dinitrophenol derivatives are extremely efficient and may be used without difficulty. Corrosive sublimate (mercuric chloride) is most effective, but, on account of its terribly poisonous nature, is seldom used nowadays.

All timber used for replacements into positions where there has been dry rot should be well treated with one of the preservatives mentioned above. In situations exposed to severe risk of decay, timber impregnated in a cylinder or in a tank should be employed, but in all cases the wood should receive at least two generous brush treatments *after* being shaped up to the final dimensions.

Every effort should be made to increase the ventilation to all parts of

the timber. Additional ventilating bricks and grids may be put in, and all unnecessary obstructions to the free passage of air should be cleared away. Shavings of wood left by builders under a floor form a suitable place for dry rot to start and should be carefully removed.

In conclusion, one may sum up as follows: never use untreated timber in situations where adequate ventilation cannot be supplied; in treating a house infected with dry rot, do all that is possible to dry out the building and to keep it dry, and use nothing but preserved timber for all replacements.

Bibliography.

Dry Rot in Wood. Bulletin No. I. of the Forest Products Research Laboratory. Published by H.M. Stationery Office, price 1s. 6d. (gives useful practical hints as to treatment, etc.).

Hausschwammforschungen, Vols. 1–8, by Drs. Moller and Falck. Contains the classical work of Dr. Falck and others, describing all aspects of the dry rot question in great detail (in German).

White Paint Tests

THE results of weathering tests made in America during the past six years on a large number of laboratory-made white paints, are reprinted in the July issue of *Building Science Abstracts*[1] by the Department of Scientific and Industrial Research. The paints have been applied either in three coats on carefully selected wood panels, or in two coats on thoroughly cleaned metal panels.

The results observed indicate that pure white lead paints are satisfactorily durable. Lead-zinc paints, with zinc oxide contents not exceeding 30 per cent., are also satisfactory. An increase of the zinc oxide content to 50 per cent., however, results in cracking and scaling in paints on wood panels. On metal, lead-zinc paints (zinc oxide content not exceeding 30 per cent.) are better rust preventives than are pure white lead paints. Titanium-zinc paints, provided that the zinc oxide content does not exceed 30 per cent., are weather-resistant and remain clean and white longer than do lead-zinc or white lead coatings.

After three years' exposure titanium-zinc paints—some containing a mixture of titanox, zinc oxide, and white lead—are giving good results. Among the best of these is a mixture of titanox, 45 per cent., zinc oxide, 20 per cent., and white lead, 35 per cent., this coating being free from cracks and having worn, by slight chalking, to a smooth, clean surface. Increase in the zinc oxide content, while retaining the ratio of the other constituents, results in cracking.

Pure titanium oxide, calcium titanox and barium titanox paints chalk excessively. The vehicle used in these paints consisted of 60 parts raw linseed oil, 20 parts heavy-bodied linseed oil, and 20 parts turpentine and drier.

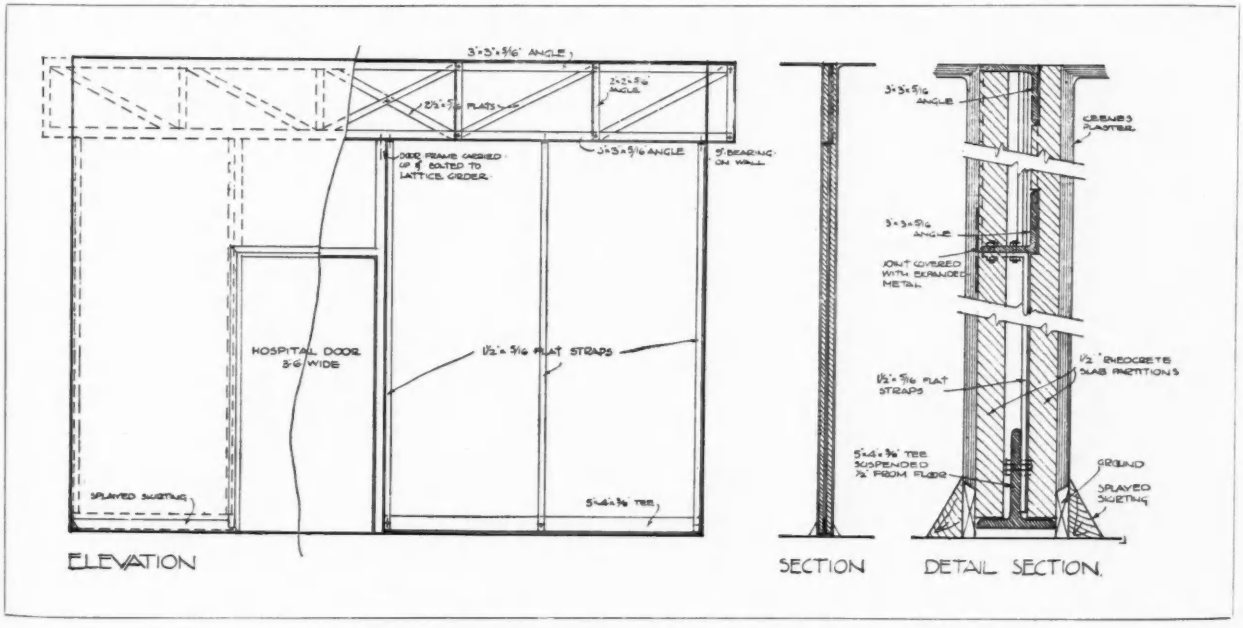
Suspended Partitions



The following details of an interesting method of constructing partition walls, where floors are of inadequate strength to support the weight entailed, have been received from Mr. A. Saxon Snell (Messrs. Alfred Saxon Snell and Phillips, FF.R.I.B.A.):

IT happens, not infrequently, that it is necessary to divide a large room into smaller ones, and if (*a*) the existing floor joists are of sufficient strength to bear the extra weight of partitions; or (*b*) it is possible to insert a steel or other joist to support the partition; or (*c*) to erect a trussed partition, no difficulty arises.

None of these solutions was possible in a case we had to deal with lately; and the method we adopted is shown on the accompanying drawing. The main support was a light section lattice girder carried from wall to wall (in one case, 40 ft.), from which 1½ in. by $\frac{5}{16}$ in. flat steel rods were hung at intervals, and bolted to a 5 in. by 4 in. T-iron at the floor-level; or, rather, ½ in. above the floor, so that no weight at all came upon the floor. On the flanges of the T-iron, 1½ in. Rheocrete concrete blocks were built on each side, tied together, of course, at intervals, and finished in Keene's cement.

These hanging partitions were kept in position by 3 in. by 1½ in. splayed skirtings nailed to the floor; but for temporary stability, a few wedges were driven between the T-iron and the floor.

We find these partitions sound, with no "give" in them; and there is not the slightest sign of sagging in the girders, although in some cases they have to bear the weight of cross partitions in addition.

Typical elevation and sections of a suspended partition.

QUESTIONS THAT ARISE

Claim to Materials

P. K. writes: "*A builder, carrying out a contract (under R.I.B.A. conditions of contract), has become bankrupt during the course of the job. For his convenience he has stored a quantity of bricks, timber, etc., on an adjoining plot, as the building area is somewhat restricted. There is little likelihood of the builder completing the job, but he has not yet attempted to have these materials removed from the adjoining site. Can I claim these materials on behalf of my client, for use on his property?*"

If the builder is unable to complete the works he contracted to carry out, only the materials on the site can be retained by "P. K." on behalf of his client. He has no right to any claim to the materials stored by the builder on an adjoining plot, even though they were intended for the work.

M. W. R.

Cesspool

M. G. writes: "*A house was erected in 1895 with a cesspool which complied with the model bylaws prohibiting the placing of a cesspool within 50 ft. from a dwelling-house. It is now proposed to build a house on the adjoining land, back from the building line, the rear wall of which is 15 ft. from the cesspool belonging to the original house adjoining. Have the local authorities any powers to insist on the last-built house being erected 50 ft. from an existing cesspool?*"

The local authorities have no power to prevent the erection of the building in this position, on the grounds of nearness to the cesspool. If they could do so, it would be detrimental to land, with a narrow frontage adjoining property with a cesspool near the boundary, as regards value for building purposes.

J. E. K.

Electric Lamps

J. A. writes: "*Electricians from the supply company in this town come to repair and look at my lamps from time to time, and talk of gas-filled and metal filament lamps. To me they all look alike. Can you explain the advantages of one over the other?*"

The original electric lamp bulb was what is known as a carbon lamp, and has now been superseded by the metal filament lamp. The filament in the bulb, which is the lighting power, is formed from a rare metal, known as tungsten, which becomes intensely hot and glows in the vacuum of the bulb.

The latest form of lamp, more efficient than the metal filament, is one in which the bulb is filled with an inert gas in place of the vacuum. The filament, instead of being shaped like a hairpin, is coiled into a close spiral, and by this means a higher filament temperature is gained, and therefore a brighter light for the same amount of current consumed.

R. H.

Errors in Quantities

M. G. writes: "*In a number of contracts I have settled, based on bills of quantities, I have found errors on the part of the builders in pricing. In one instance there has been a considerable extra on one item which has been wrongly extended. One hundred feet run of an item, priced by the builders at 15s. per foot run, was extended as £7 10s., having been taken in error as ten feet run. Should any extra on the item be priced at 15s. or one-tenth of that amount?*"

Your correspondent hardly shows a sense of fairness in raising the question regarding the reduction by one-tenth of the value of extras, owing to an error by the builders in the bills of quantities.

Errors in quantities stand as priced by the builder, by reason that the builder contracts to carry out certain building works for a stated lump sum.

Where extras occur, and it is obvious that there is an error in the bills, it is ridiculous to suggest penalizing the builders on that account.

In the case quoted above it is not the rate per foot run which is in error, but a mistake in extending, therefore the rate of 15s. per foot run will have to be the base for extras.

H. S.

A Garden Fence

F. P. R. writes: "*A and B are adjacent owners of freehold property, consisting of adjoining semi-detached houses with gardens at the rear of each. The separating fence between the gardens is 5 ft. high and of cleft wood. A proposes to erect a greenhouse on his side of B's fence, 20 ft. from the house. This will involve a concrete wall 8 ft. in height. Has B any right to object?*"

In order that B shall have no legal ground for complaint, it will be necessary for A so to erect the wall that its footings (if any) do not project upon B's land. Further, if the greenhouse should be constructed with a gable roof, or otherwise sloping back towards B's land, there must be sufficient clearance between the boundary fence and the wall to take the rain-water guttering, for B can object to the water from the roof falling on to his land.

The fence is stated to be B's property, and in such case A must not damage it in any way by the erection of the structure. The distance from the house and the height of the new wall would apparently rule out the possibility of B having any easement of light and air, which, in any case, would require nineteen years and one day for establishment.

It may be noted that the local authority have no jurisdiction over the erection, as any building erected and used exclusively for the purpose of a plant-house, summer-house, etc., and being wholly detached from any other building is exempt from the operations of the building bylaws.

A. T. A.

Measuring for Certificates

A. P. writes: "*I am responsible for the interim payments on several large housing schemes. I find, however, that it is getting too much for me to go round each month, taking notes and working the amounts out from these. I shall be glad to hear of any good system for keeping a check of the works done, which may save me valuable time.*"

I have been worried in the past by the question of interim certificates on large housing work, but have been greatly relieved by the following simple method. I take it for granted that "A. P." has several types of houses to deal with.

I arrange to divide the contract price of each type into stages, and have found that about thirty stages have worked very well, the amount of each stage being agreed with the builders.

A progress book is the next thing, and a page is kept for each type, similar to the following example:

TYPE "A"

	Block No.	1	2	3	4	5	6	
Stages	No. of houses	3	2	3	4	2	4	Totals
Site excavation	Here the clerk of works fills in number of stages done.							
Trench digging								
Filling to scully								

The clerk of works can easily fill in this book, and it only remains a matter of totalling up the number of stages of each type, and extending out at the agreed figures.

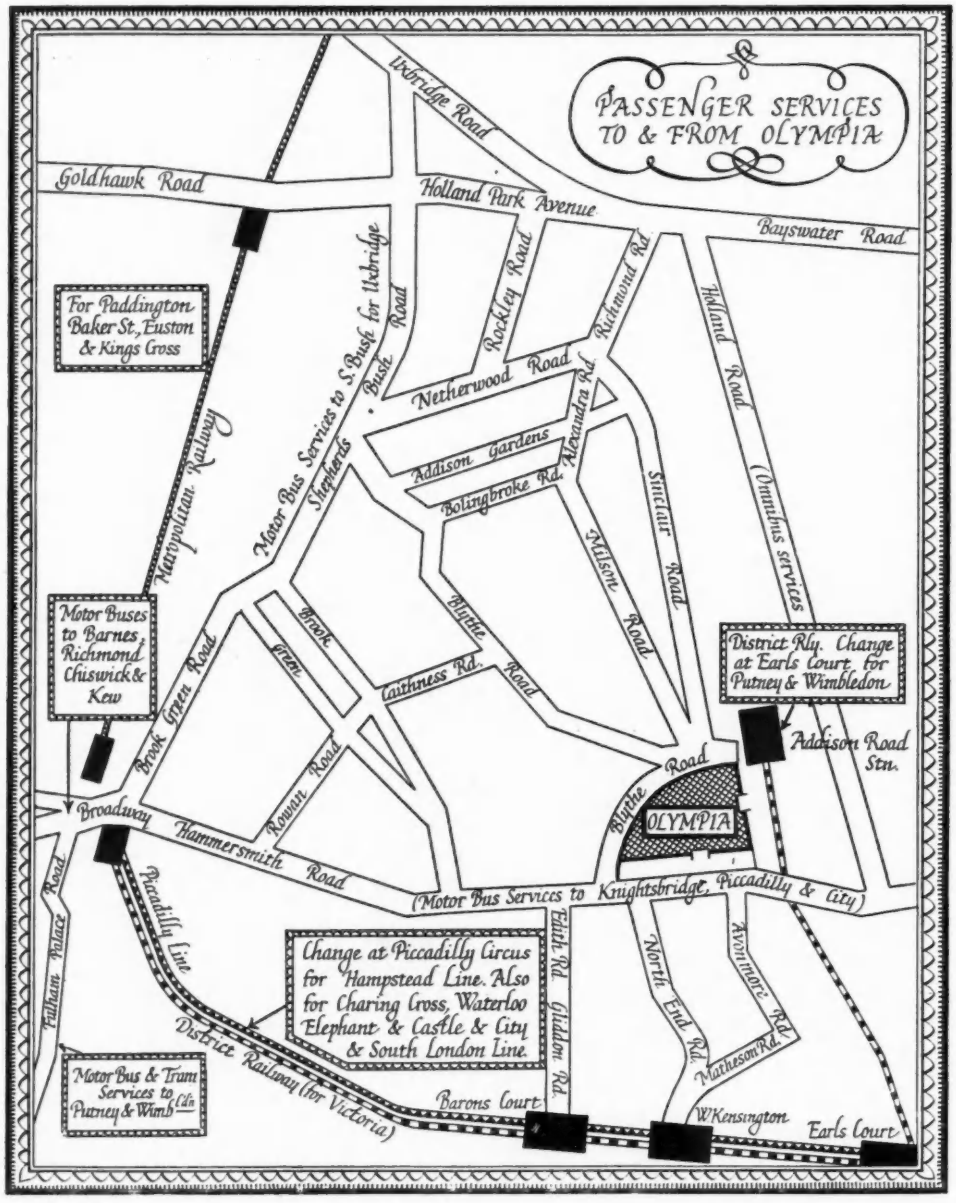
Library Architecture

The fifty-third annual conference of the Libraries Association will be held at Cambridge from September 23 until September 27 inclusive.

On Tuesday, the opening day, a special session, to be held in the Arts School, is to be devoted to the consideration of the architecture of large libraries, under the chairmanship of the president, Mr. L. Stanley Jast, F.L.A.



A display of architectural plans and models, arranged by the Association, will remain open throughout the week.

BUILDING EXHIBITION

SUPPLEMENT THE FIRST

How to get to Olympia

EXHIBITION ARRANGEMENTS

TODAY the Building Trades Exhibition will be opened at Olympia by Lord Burnham, HON. F.R.I.B.A., to whom a vote of thanks will be proposed by Mr. A. B. H. Colls, president of the London Master Builders' Association, and seconded by Mr. Thomas Barron, president of the National Federation of Building Trades Operatives.

The present exhibition will be found to be the biggest and most representative ever held. Thirty-five years ago the exhibitors numbered eighty-seven; today they reach nearly four hundred. Following is a list of the principal conferences and visits:

Thursday, September 18: Southern Counties Federation of Building Trades Employers.

Saturday, September 20: Essex Society of Architects; Association of Architects, Surveyors, and Technical Assistants; London Builders' Foremen's Association.

Monday, September 22: Ceramic Society; British Refractories Research Association.

Tuesday, September 23: Ceramic Society; London Master Builders' Association; Visit of the Lord Mayor and Lady Mayoress.

Wednesday, September 24: Ceramic Society; Institute of Clayworkers, National Federation of Clay Industries, ball, evening; National Federation of Master Painters and Decorators of England and Wales.

Thursday, September 25: Institution of Sanitary Engineers.

Friday, September 26: Institution of Structural Engineers.

Saturday, September 27: Incorporated Clerks of Works Association of Great Britain; Incorporated British Institute of Certified Carpenters.

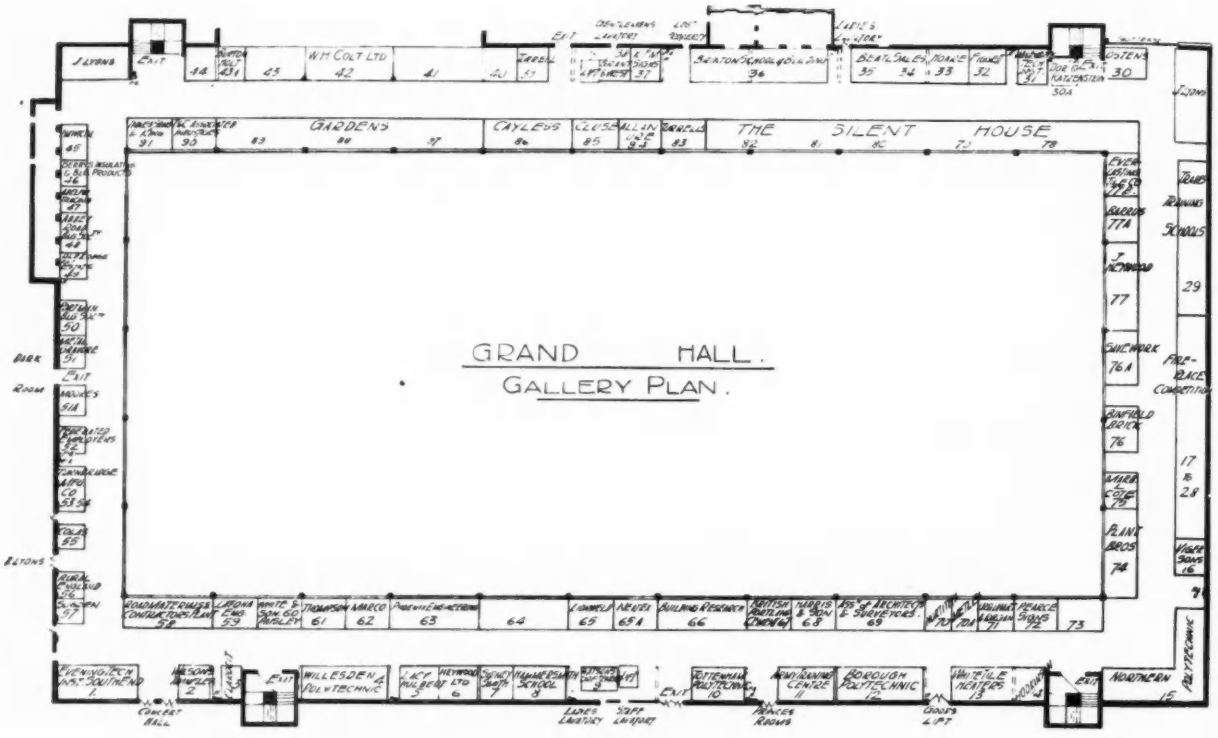
The photographic study, by Dell and Wainwright, of the Empire Hall, Olympia (page 419), is reproduced by courtesy of the London Brick Company and Forders, Ltd. Mr. Joseph Emberton was the Architect.

STANDARDIZE THE BUILDING INDUSTRY

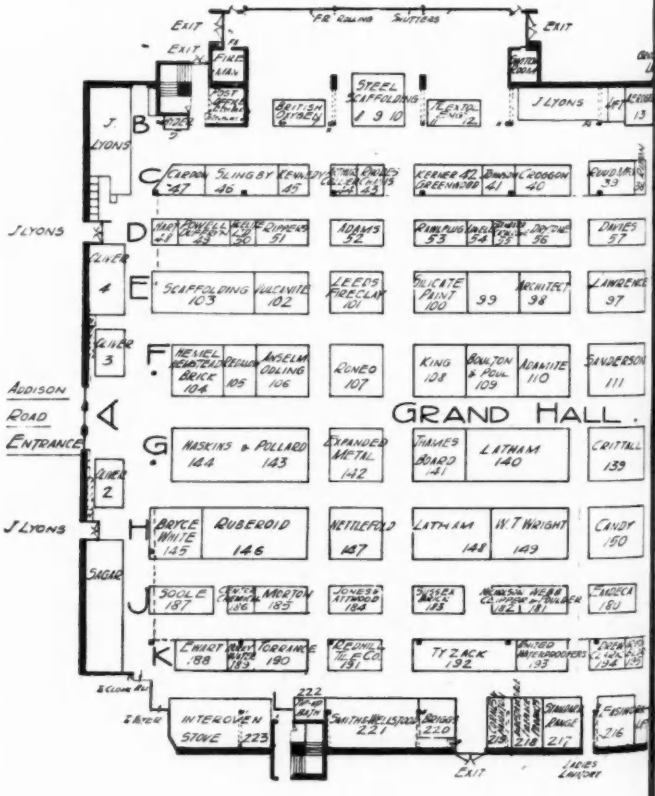
THE Building Trades Exhibition, an event which few architects can afford to miss, takes place this year in the autumn. For ourselves, we think the time more suitable. Winter lies in front of us, to be sure, but a mighty proportion of the year's building work is planned during the winter months. Architects, cheered and invigorated by a holiday of sorts, will be settling down in front of their drawing-boards. To many of these this exhibition will come as a godsend. It is the outcome of friendly co-operation between the management, manufacturers, merchants, architects, and builders, in the same sense in which trade is the result of co-operation between buyer and seller. Such an exhibition promotes the best interests of trade; and this one those of the building industry in particular. Good workmanship, fair dealing, keenness and alertness, inventiveness, receptiveness to new ideas and readiness to make new experiments, improved processes of manufacture, new materials, just conditions of labour, up-to-date business methods in selling and delivery—all such are encouraged and advanced.

In what sections of the building trades may we expect the greatest advance to have been made since the last exhibition was held in April, 1928? Certainly much has been done towards flooring improvement, in the greater use of mechanical aids in building, in the greater use of plywoods, plate-glass and asbestos composition sheeting. Here architects and builders are giving property owners values in materials and services which have never been exceeded in past years. In flooring construction, whereby sound- and fire-proofness have been contrived within a minimum depth never anticipated years ago, the rent-yielding or useful cubic content of buildings has been increased. By the use of rubber flooring the utility, comfort and silence of public buildings have been enhanced. With further use of mechanical aids by builders and contractors, costs of erection should be reduced.

Sir Banister Fletcher, P.R.I.B.A., Chairman of Building Trades Exhibition.

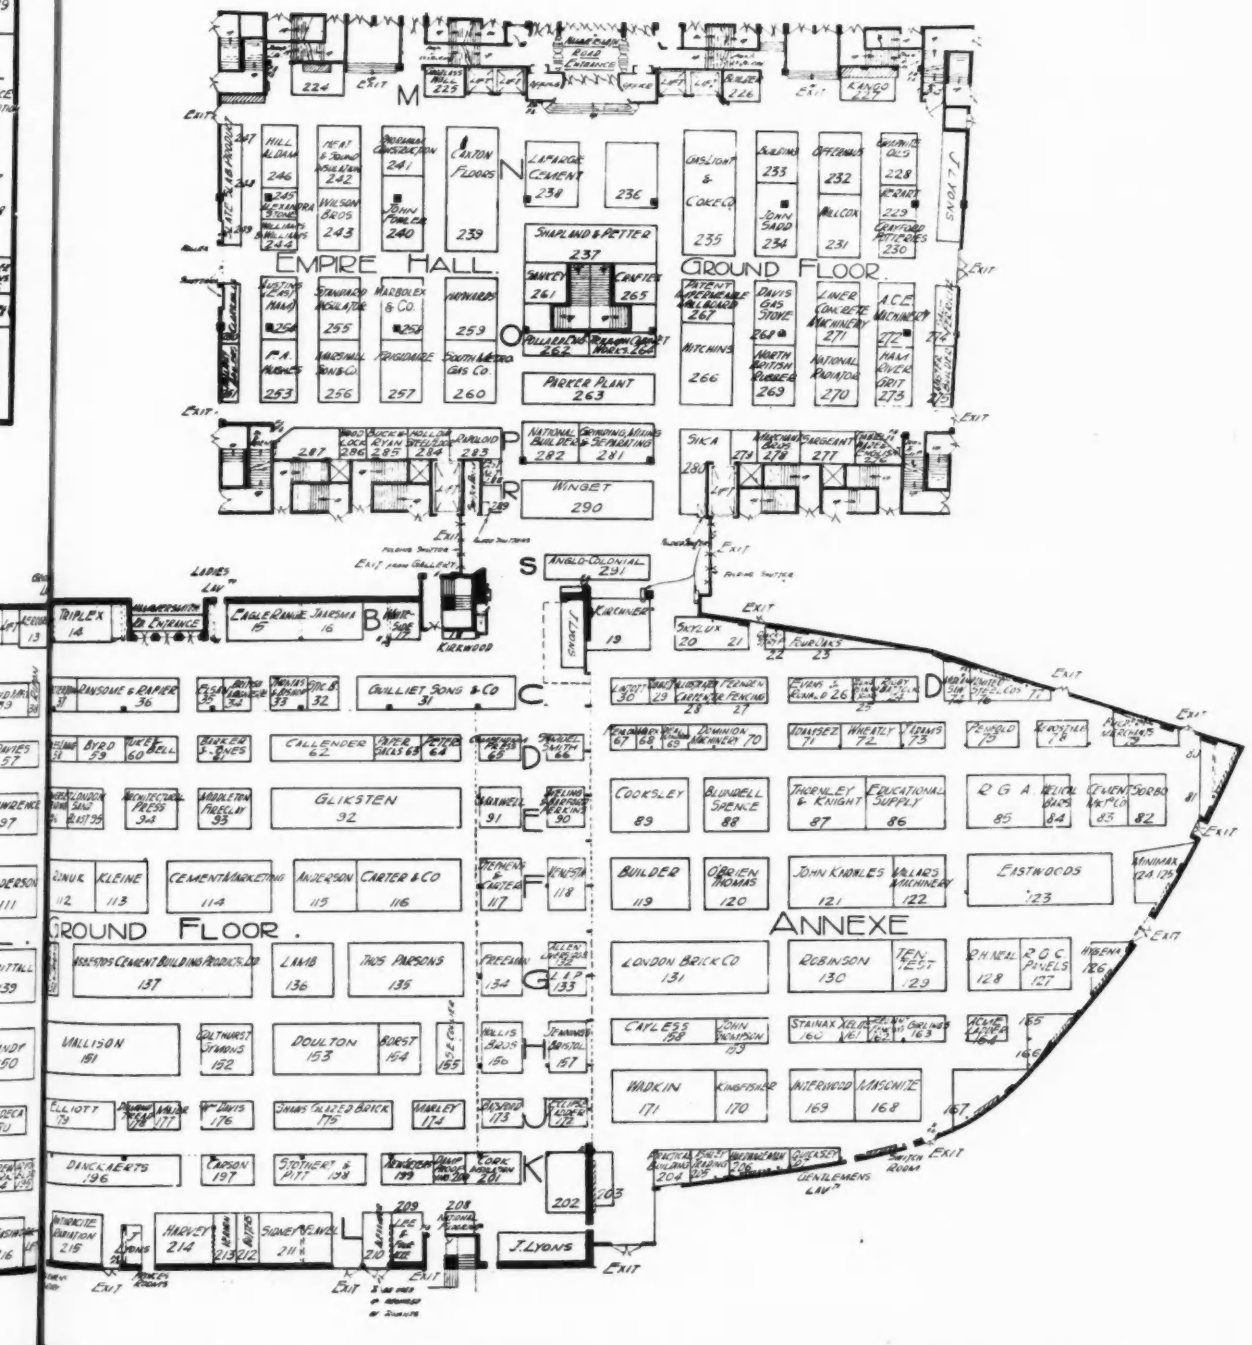


More than ever it will seem clear to architects this year that the time is over-ripe for a large degree of standardization in the building and allied industries. An easy direction in which to commence would be with builders' hardware and ironmongery. The large stocks of these goods and accessories, which the house engineers and resident architects of buildings are obliged to keep on hand to meet emergencies, are due to needless multiplicity of design and dimensions. Only through properly planned simplification and standardization may we reach higher levels of building economy and more creditable levels of æsthetic fitness. The primary objects of several standardization committees—not in England alone—have been lost sight of by men whose minds were too involute, men who dallied with detail and forgot the general view of things. Nor need we fear that the reduction of variety will necessarily imply monotony. If the dimensional variations of our primary building materials were reduced to half, if the variations in outward and inward form of the anatomy architectural, both ornamental and organic, were similarly reduced, there would still remain an overwhelming choice. In the selection and arrangement of that choice the artist-architect is still able to make such combinations and permutations as extinguish possibility of monotony at once from the imagination. No; the truth is that the present lack of coherence, needless multiplicity of form and dimension, has negligible æsthetic recommendation when balanced against its uneconomic and anti-rational effects. The steel casement manufacturers have shown the way. Steel windows are continually being improved upon as to durability, cost of upkeep, and design. How far would it be an exaggeration to say that the design of whole suburbs of houses has been dictated by standard steel window-frames? Manufacturers of standard steel windows have a responsibility and an opportunity for producing an article not only strong and durable, but as well-proportioned and well-designed as possible, in accordance with the best architectural principles. This is important, especially as the elevations of small houses depend in the main upon the proportions of their window openings. And these windows are standardized in the most thoroughgoing fashion. No needless multiplication of patterns here, no pointless and infinitesimal variations of size and shape.



Mr. A. B. H. Colls, President of the London Master Builders' Association, will propose the vote of thanks to Lord Burnham.

Lord Burnham, who opens the Building Trades Exhibition today.



For list of Exhibitors see page 424.

THE SILENT HOUSE

DESIGNED BY A. TRYSTAN EDWARDS

THERE are several reasons why the organizers of the Building Trades Exhibition make a special feature of the Silent House. In the first instance, the problem of noise has come upon us suddenly and is getting rapidly more urgent. Secondly, the effects of noise are serious and result in a loss of health and efficiency. And in the third place, architects, builders and members of the general public are all interested to see modern methods of combating noise.

Householders disturbed by factory noise, or traffic noise, or by drilling, or riveting; men and women disturbed by stentorian concerts in neighbouring apartments; school teachers who find their year's work slowed up by the interference of street noises which penetrate into the classrooms—all have a grievance against the twentieth-century conditions which are responsible for this nuisance. It is doubtful, however, if these people suspect how much noise affects them in their daily lives. Physicians from the earliest times have known that noise is especially injurious to invalids and convalescents. In an industrial civilization such as our own there are many who are ill, many more who are not ill but are without great physical resistance—young children, aged men and women, those who are not properly nourished, those who are exposed to particularly hazardous occupations—and noise is often the last straw that breaks the camel's back, the determining factor of physical and mental health.

Yet not until recent years have scientists turned their attention to the effects of noise on human beings. Ten years ago there were listed twenty-five definitely noisy trades, the noise in most instances being the results of machinery in the factory. To-day, however, the greater part of the noise nuisance is caused by the traffic in the streets, which has increased so enormously in recent years. Although this does not actually cause deafness, as in the so-called noisy trades, it has been shown to effect people in a subtle way, whether they are conscious of it or not. Experiments have proved that it affects them at their work, although they may go on with their task and get it done somehow. And it has also been established that noise affects people in their sleep, whether or not they are awakened by it.

It is significant that the demand for industrial efficiency revealed the extent to which noise can interfere with the activities of apparently healthy people. It is recorded that when comparative tests were made computing the relative amount of work performed by operatives in an English factory under the conditions of noise and of quiet, a group of men working next to a boiler-shop was found to produce as many as sixty imperfections in assembling eighty temperature regulators. Removed to a quiet place, the same group was found to assemble 110 regulators in the same time as it had formerly taken them to assemble eighty, and with only seven imperfections. In another instance it was suspected that a low output in a factory was due to the noise of an electric fan. The fan was stopped and production jumped 12 per cent. in spite of the poor ventilation. It has also been demonstrated that in a noisy hotel kitchen the breakages in washing up dishes were reduced by 50 per cent. after careful elimination of noise and disturbance.

These instances especially appeal to the commercial mind, but they may be supplemented by others which concern the average man more closely. In the noisy office or private dwelling the interruption to work or rest is obviously injurious to the health of those who suffer from it; while during the daytime the noise nuisance is most apparent in its interference with conversation. To strain one's ears in order to ascertain what the other person is saying is very fatiguing, and, moreover, considerable time is wasted in asking for repetitions of words already said.

The men who are striving to attain the solution of this problem of noise, whether they be scientists in the laboratory or manufacturers of building materials designed to exclude noise from human habitations, are doing a most useful and necessary work. There are two noise problems, namely, the external and the internal. In the case of internal noise the room in which we are working or resting is the unit to be considered. Noises arising within that room are internal and can only be remedied by sound absorption of the room itself. This is in part accomplished by walls and ceilings of specially constructed material, and by heavy carpets and upholstery. The noise which is external to the room, such as noises in the street or the next apartment, can only be remedied by sound-proof walls, floors and windows. This is prevention of sound transmission and must not be confused with sound absorption.

It was not an easy matter to plan a suite of rooms in a public exhibition hall in such a manner that there could be free circulation through each of them while at the same time providing facilities for testing the sound-resisting qualities of the walls. The L.C.C. regulations for fire escape necessitate permanently open doorways, so it was only possible to test the walls by planning cubicles adjacent to all the rooms which have the quality of sound boxes; noises can be made in these cubicles so that visitors to the exhibition are enabled to judge in what degree the occupants of the various rooms are exempt from the effects of such noise. Architects will find it profitable in the exercise of their profession if they can spare time to examine the various sound-resisting materials which are here exhibited.

The Silent House comprises a series of rooms planned and devoted to the display of sound-resisting materials manufactured by a number of British firms. In each room sound-tests may be applied to the partition walls and ceilings, and visitors will be able to judge of the sound-proof qualities of specially constructed partitions of insulating bricks and blocks, thatchboard, fibre-board, mill-boards, plywood, and other materials. The following firms participated in the construction: Venesta, Ltd., Patent Impermeable Millboard Co., Ltd., Tentest Fibre Board Co., Ltd., London Brick Co. and Forders, Ltd., J. H. Sankey and Son, Ltd., Heat and Sound Insulation, Ltd., Kleine Patent Fire Resisting Flooring Syndicate, Ltd., The Standard Insulator Co., Ltd., Crittall Manufacturing Co., Ltd., Troughton and Young, Ltd.

E

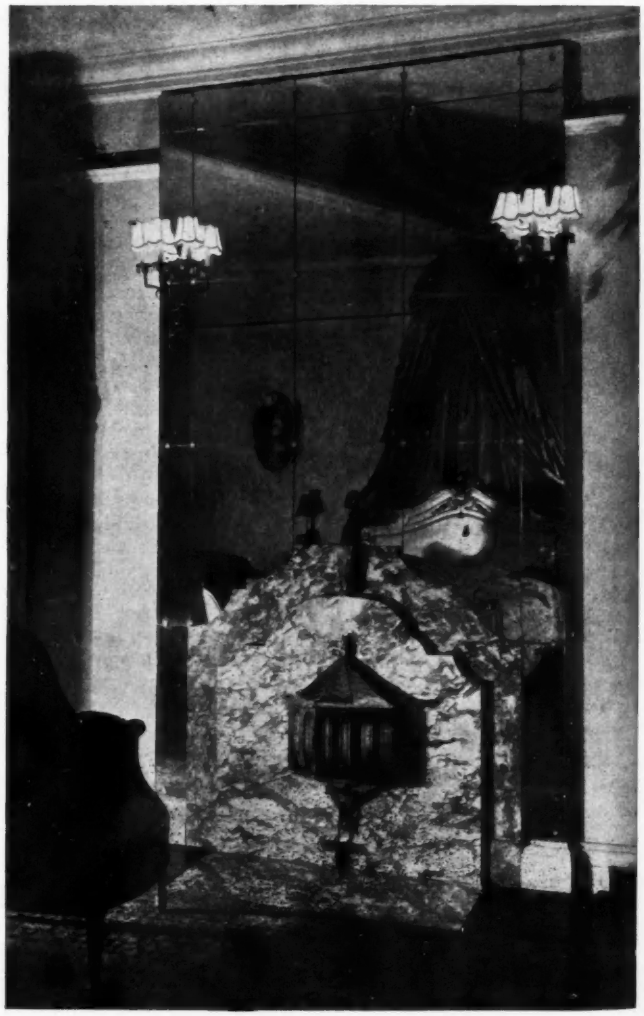
ELECTRICITY IN MODERN LIFE

BY WARWICK HOLMES

Although nearly every architect nowadays has more than a superficial knowledge of electric cooking, water heating, and refrigerating equipment necessary to electrically-operated houses, the value of other switch-operated and motor-driven appliances needs emphasis. Architects must make provision at an early stage in planning for the fullest utilization of electrical conveniences.

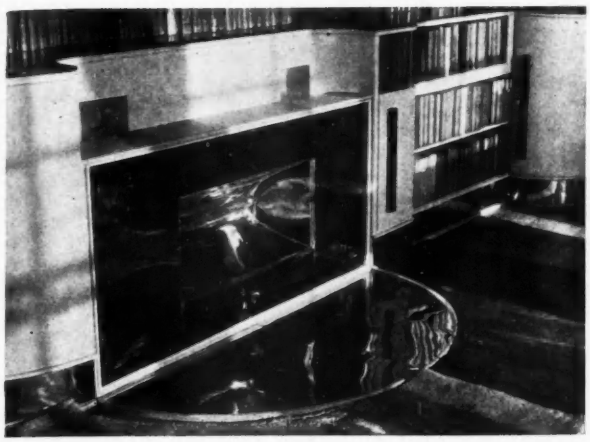
THE bare possibility that people should bring machinery into their *soi-disant* modern homes, only to find, either that they cannot use it or that they must stop using one appliance in order to provide power connections for another, is one that the architect will do well to prevent. This he can only do by intelligent anticipation of the miscellaneous power needs of his clients, by providing for a sufficiency of plug-points to which the power-driven apparatus may be connected, and by planning the room spaces so that they may conveniently house the large types of appliance.

A further step might well include a more general application of the " built-in " principle, particularly in properties built for selling and not letting. Sinks, baths, wash coppers and cooking ranges are usually provided as integral parts of the house. Why not give, in addition, built-in electric washers, ironers, clothes dryers, washing-up machines, and refrigerators?



In order to plan the work department of houses and flats to the best advantage, an architect must be familiar with the following principal electrical appliances for which to provide accommodation. Clients will often seek advice on the choice and use of this equipment.

Usually accommodated in or near the kitchen, a popular domestic appliance is the electric suction cleaner, which finds employment in every room of the house. Despite its familiarity, there are thousands of homes doing without it because there are no proper plug-points to feed it with electricity, and other thousands where it is " hitched-up " to inconveniently situated sources of power supply, whereby its easy operation is hindered. Every room requires at least one plug-point at skirting-board level to permit proper suction-cleaner service.



Several types of these appliances are made. There is the all-suction cleaner, the suction cleaner with the motor-driven brush, and the machine with the friction-driven brush. There are also different types of brush : straight and screw-shaped, stationary and revolving. The choice between types is not material, and obviously depends largely on individual requirements and predilections. What is of importance is that there should be enough plug-points to enable the cleaner to be used in every part of the room.

In large town and country houses the cleaning problem is best overcome by installing a stationary motor-driven dust-suction plant, and by providing piping to all parts of the house. Hose connections are fixed in the principal rooms, corridors and staircases, and these enable not only floors and carpets, but also upholstery, curtains, bedding, walls, cornices, and even clothing to be cleaned with the minimum of effort. In smaller houses a semi-stationary equipment is often used, the cleaner in this case being connected by a short length of flexible hose to fixed piping, which is run to all parts of the premises. The machine can be placed in a basement or in an under-stairs cupboard. In smaller houses one connecting point on the ground floor, generally in the hall, and one on the landing, will usually meet most requirements if provided with about 30 ft. of flexible suction hose. The fixed piping necessary for installations of this kind varies in size from 2 ins. up to about 6 ins. bore, according to the number of operators using the system. These sizes may seem large, but trouble is often experienced with small-bore piping, due to chokages caused by pins, matches and other solid litter.

The ordinary domestic-type cleaner is never used as much as it should be unless architect and electrical contractor have planned to make special provision for it. The less preliminary work there is in getting the cleaner on the job, the more frequently will it be used. Bearing this in mind, it should be planned at floor-level in a cupboard, or in some equally accessible spot

An electric fire in chromium plating on a marble surround placed against a mirror backing. Designed by Basil Ionides.

An electric fire in a stainless steel setting. Designed by Easton and Robertson.

where it can be wheeled out whenever necessary and started into action. If possible, there should be a plug-point provided on a wall inside the cupboard, at about the level of the cleaner handle; if there is also fixed on the wall a large hook where the flexible cord of the cleaner may be loosely coiled and hung, use will be further facilitated. When a cleaner is kept ready for action like this, many a quick clean-up job may be done that otherwise would be shirked in the day's routine.

Parquet and hardwood floors can also be polished with some makes of cleaner to which a special attachment can be fitted. Otherwise, special machines which plug into wall sockets are used.

Next to the task of dust and dirt removal, that of dish-washing is one of the most irksome. Electric power can do the major part of this unpleasant job. It has not proved popular in this country, because people have expected too much of it. Obviously, it will not remove the dirty glass, china and plate from the table and scrape and arrange it ready for washing; nor will it replace the washed utensils on their shelves. It will, however, wash, rinse and dry all table utensils in an entirely satisfactory manner.

Electric dish-washers are of two types, stationary and portable. The first-named particularly concern architects and builders, since they are built in beside the kitchen sink or are a part of it. They save individual faucets, and empty into the drain by the simple opening of a trap. The portable type of dish-washer is usually purchased by clients who rent their houses. It has to be separately connected to the plumbing to permit drainage, and is filled and emptied by hand.

A portable type which is a satisfactory compromise is equipped with a swinging and detachable arm, the latter being a combination inlet and outlet pipe. This may be swung into position directly under the hot-water tap, permitting the washer to be filled without any lifting. The amount of water admitted is controlled automatically, any excess flowing out immediately through an ejector pipe. This same pipe serves to empty the water after the dishes and utensils have been washed, the draining being accomplished automatically by the ejector.

In the home laundry, where electric washer, ironer and dryer are installed, there should be proper provision for lighting and for electrical connection of the equipment. This lighting plan should be flexible, permitting lights to be turned on and off with ease as they may be required in different parts of the room. The ironing board should be supported on a metal wall-bracket which leaves the other end of the board entirely open. A table should be provided with strong castors, and a bench similarly equipped is useful for moving heavy baskets of clothes.

A very useful and therefore important electric-power application is in the ironing of clothes. In most homes, even when most of the laundering is sent out, a hand-iron is necessary. Care should be taken in the placing of the plug-point to which the electric iron is connected, so that it shall be at a convenient height and close to the place where the right-hand end of the ironing board or ironer will be placed. This position should enable the operator to be near a window, and should be in close proximity to a light source which will throw strong shadowless light on the work. As a refinement, the plug-point may have a red indicator lamp which remains alight until the current is switched off.

Where the whole of the washing is done at home, an electric ironer is a most useful appliance. This machine consists essentially of a padded roll, varying in length from 26 ins. to 30 ins., which corresponds to the ironing board. This roll is revolved by power supplied by an electric motor, and is controlled by the operator by a slight touch of either hand, foot or knee. Accompanying the roll is a small metal "iron" shaped to fit exactly over the roll, and hinged and adjusted so that it can be raised and lowered at will. This iron or "shoe" is heated by electricity to the correct ironing temperature. When ironing, the operator spreads the article on the roll and starts it moving with the heated shoe lowered. The shoe then remains stationary, while the moving roll carries the work swiftly across the hot iron to be smoothed, dried and burnished.

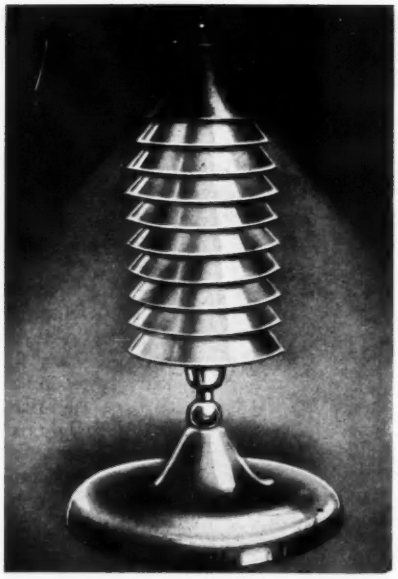
The planning of electric kitchens and the choice of equipment is continually concerning architects, and information on electrical appliances may therefore be of service. More of these are available every year, and all help to make the task of cooking less laborious. There are light-duty mixers for whipping eggs, cream, etc., and appliances for kneading and blending stiffer mixings such as batters, dough and cake mixings. None of these devices occupy much horizontal space, and most are normally used on a kitchen table or cabinet. The mixing is done by blades, wire whisks or curved sections of metal. These appliances are driven by a small electric motor.

One of the most comprehensive of these portable devices is accompanied by a separate motor, to be connected up to several different tools. It will drive a small kitchen fan which accompanies it, and it will run a beater, a buffer for polishing silver, and an emery wheel for sharpening knives. The same motor may be used to drive a sewing machine. More elaborate devices include attachments which break ice and freeze ice-creams, an oil-dropping device for use in mixing mayonnaise, a juice extractor, vegetable pulper, grater, and bacon slicer. A separate motor-driven freezer for ice-cream and an electric coffee-grinder are other mechanized servants.

The standard and familiar type of electric fan will do a great deal to stir up and freshen devitalized air, but the use of fans is much more effective when the ventilation system comprises an exhaust fan to draw off the stale air. In addition to the problem of providing fresh air for health reasons, the nuisance caused by cooking smells and smoke is very acute and no fault of the cook. More often than not, the opening of kitchen windows to blow out cooking smells only results in blowing them in through the rest of the house. The smoky, greasy residue settles into curtains, clothes and upholstery. The accumulations of cooking grease which can be observed on kitchen walls and woodwork are not confined to that room, and, if looked for, may often be detected in other rooms. To avoid this,

it is only necessary to fit a single exhaust type ventilating fan, for if this is properly arranged it will move the entire air contents of a house.

It is obvious that when air is forced out of any room, other air will take its place. Therefore, the action of a suction fan which draws the air from one room must eventually result in drawing the air from the other rooms—if doors are arranged to facilitate this. Fresh outside air is simultaneously given ingress by a moderate opening of windows in other rooms. The value of ventilating fans is exceptional in stormy weather, when it is impossible to have many windows open. By running the ventilating fan at low speed and having one room window open a few inches from the top, the house can be filled with air freshly washed by rain or snow.



The type of fan under review is generally mounted in the kitchen, since this is the place where most of the smoke and smell originates. It can be had mounted on a panel which fits in the upper sash of a window, but the best form of installation is one in which the fan is mounted in a box-like fitment, which is built into the wall and shuttered or louvred on the outdoor side. Some types of ventilating fan are reversible, so that they may be used for drawing in air when desired.

In addition to ventilating fans, there is use for the smaller types of desk or bracket fans. An efficient and comfortable installation consists of one fan for every room in the house, mounted permanently on its own wall-bracket and controlled by a wall-switch. Its colouring and finish may be made to harmonize with the decoration and furnishings of the room. For most reception and bedrooms oscillating fans are more satisfactory than the older form of stationary pedestal. The sweep of air from oscillating fans is thrown completely round the room. It thus covers a greater effective area and prevents draughts. When non-oscillating fans are used, their breeze should be directed towards the ceiling.

It is useful to remember, and to remind clients, that electric fans can be employed for a variety of purposes besides their best-known function of keeping rooms cool. They can be used to hasten the drying of paint or of washing hung indoors to dry. They make quick work of drying fruits and vegetables, and discourage the entrance of flies and other insects. Butchers' and fishmongers' premises should always be provided with plug-points for the use of fans. In winter an electric fan directed against a radiator speeds up the radiation of heat. Placed in front of a "sulky" coal-fire, it will start a draught which will soon promote bright burning. The cost of running is very low, the current consumption being one unit for every ten to fifteen hours.

Electricity will run sewing machines economically at home and in manufacturers' workrooms. The machines do not differ from hand or foot-operated types except that the drive is from an electric motor. Standard 5-amp. wall sockets will provide current service, and foot-operated switches are part of the motor attachment equipment.

A reliable electric bell or signal system is obviously essential in every house,

A lamp which throws out heat as well as light. Designed by A. F. Berry.

hotel, club, or other premises where service is provided. In places where an alternating current supply of electricity is not available, the bell system is operated by primary batteries such as the Leclanché and dry cells. When an alternating current supply is provided in the building, the bells are best operated by connection to the mains. Since only a very low voltage—usually about 2 or 3 volts—is needed to operate them, a special bell transformer is connected between the mains and the bell wiring. Cheap and needing no attention, this little instrument is much more effective in use than primary cell installations.

To avoid the necessity of running bell wiring round the house on staples attached to the walls, architects should see that electrical contractors make provision for bells during the erection of the building. This is frequently overlooked. A good method is to run the wires in light socket-joint tubing, generally of zinc, fixed to the walls beneath the plaster.

In these days of greater efficiency in hotel management, it is interesting to architects to study innovations which improve service and reduce the nervous irritation of needless noises. Mr. Arnold Bennett, in referring to hotel bells and their horrors, once wrote: "No bell ought ever to be heard by any visitor to any hotel." Visible signals are by no means a monopoly of aircraft industry, but are an established fact in modern hotel planning, especially in Germany.

There are now many progressive hotels installed with the coloured-lamp system of "signalling"; valet, chambermaid or waiter can be summoned by the switching-up of blue, yellow and white lights. Projecting at the corner of every corridor are triple branches of lamps which guide the staff to the corridor from which the "bell" has been rung. Finally, a light over the door of the exact room indicates where the service is required, and is then instantly extinguished by the maid or waiter. The system not only obviates noisy bells, but, since a cluster of lamps is always within sight everywhere, saves endless footsteps backwards and forwards to the indicator in the service rooms.

In private houses, flat buildings and office blocks of suitable size, the possibility of installing electrically-operated lifts will obviously have been considered in the drawing-board stage.

In the earlier days when electric lifts demanded the constant attendance of an operator, many people were obliged to do without them, but now that reliable and easily-controlled passenger elevators are available, which can be operated entirely by the passenger, there is greater scope for their use. These lifts are provided with safety devices which entirely eliminate the possibility of opened gates on landings.

Some Continental lift-makers have evolved continuously-moving lifts consisting essentially of a series of lift cages mounted on a revolving mechanism. The distance between individual cages is occupied by a shutter which prevents anyone from falling down the shaft or becoming entangled in the machinery. The speed of operation is arranged to give ample time for stepping into the cage as it rises or descends.

Another direction in which foresight about electrical equipment can avoid unnecessary interference with internal decorations is in the installation of telephones. It will be found that the Post Office authorities are anxious to co-operate in this matter, and, if given an advance notification of contemplated constructions and of the proposed development of estates for building purposes, will arrange to do the internal wiring during construction.

There are many power applications of

electricity in office and commercial buildings similar to those domestic utilities referred to previously. Suction-cleaner installations resembling those recommended for use in large country houses are usually employed.

An important function achieved by electrical means in large buildings, warmed by central heating from coke or oil-fired boilers, is attention to and control of the combustion. Where a coal-fired furnace is used for central heating, an electric motor and an electric blower fan together feed fuel to the fire and set up a forced draught. The latter ensures even burning and automatically clears out the ashes, dropping them into a suitable receptacle.

Electricity has also made the oil burner into a satisfactory appliance, capable of operating efficiently with any type of heating plant—steam, hot water, or hot air.

Electricity combined with the rapid adoption of oil fuel has enabled a fully automatic oil burner to be produced which, it is claimed, will maintain any desired temperature throughout the building without any attention, noise, soot or smoke, and eliminate the dirt and dust in dealing with the ashes.

When the Government scheme for providing electric power is complete there is bound to be a demand for wiring and appliances on a scale hitherto unprecedented. There can be no doubt, however, that if the wiring of houses, farm-buildings, factories and workshops, and the distribution of equipment are to be carried through on a really large scale, as they must be if the Government scheme is to be a success, then financial facilities must be made available. There will be a great need for credit, and one firm has already formulated plans for hire-purchase transactions and for sales by deferred payments. In each case the plan provides for the instalments either to be collected by the firm who have devised the credit scheme or by the suppliers of the electrical equipment.

NOTABLE EXHIBITS: i

THE ARCHITECTURAL PRESS cordially invite all architects and readers visiting London for this exhibition to pay a visit to their Stand No. 94, Row E, where a complete range of all their publications will be found. The stand, which has been designed by Professor A. E. Richardson, F.R.I.B.A., is specially arranged to enable visitors to glance through the various publications at their leisure and in comfort without being disturbed by people passing from one stand to another. In addition to the well-known periodicals, THE ARCHITECTS' JOURNAL, THE ARCHITECTURAL REVIEW, and SPECIFICATION, there will be on view all the new books such as *Modern Architectural Sculpture*, by William Aumonier; *Modern French Decorative Art*, vol. ii; *Elements of Domestic Design*, by A. J. Penty; *Architectural Shadow Projection*, by J. M. Holmes; *Mouldings of the Tudor Period*, by Small and Woodbridge; *Isometric Drawing of St. Paul's Cathedral*; and *The Ancient Bridges of the South of England*, by E. Jervoise, published on behalf of the Society for the Protection of Ancient Buildings, together with many others of interest alike to the architect, student of architecture, and all concerned in building and interior decoration.

A ceramic panel in Shaws faience.

*

THE ADAMITE CO., LTD. (Stand 110, Row F), have on view "The Spirit of the Rocks," a statue by Doyle-Jones (cast in Atlas White, and first exhibited on their stand in 1924) which, after six years in the open, buffeted by the elements, gives testimony to the permanence of the whiteness of Atlas. Those interested in non-slip treads and flooring, whether from a colour decorative, utilitarian, wear-proof or other point of view, will find the possibilities of Alundum non-slip treads demonstrated in an original manner in the form of a staircase of fifteen steps, in five series of three each. Every step shows a different aspect of the material, in the form of tiles in seven possible colourings, ceramic mosaic tiles, a number of terrazzos in which Alundum is incorporated and cement granolithic in which Alundum aggregates are employed, with risers in marble and stainless steel as well as terrazzo and granolithic. The visitor is by this means given a vision of every possible treatment and price, whether he has in mind a palace, a factory or a slaughterhouse. Colemanoid, the liquid waterproofing and hardening compound—for concrete of all sorts—is also shown.

*

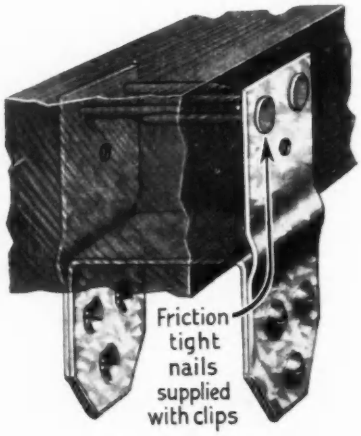
For some time past SHAWS GLAZED BRICK COMPANY, LTD., have been developing their material with a view to its use for interior decoration, and after a long period of experience and research they have now succeeded in producing it in many new and interesting forms. Their stand (Row J, 175) has been designed by ceramic artists, and the whole design, together with the treatment of the material, is a unique feature of the exhibition, and should not be missed by any visitor who wishes to be conversant with the latest developments of materials for interior decoration.

*

The exhibit of the GAS LIGHT AND COKE COMPANY (Stand 235, Row N) is designed to emphasize the necessity for carcassing all new houses with pipes of adequate size, so that the gas supply is available at convenient points to allow for the installation, with the least difficulty, of all gas appliances that are likely to be required by future occupants. The stand has a number of recesses which contain either indivjdual gas- or coke-fired appliances, or sections of model kitchens, dining-rooms, drawing-rooms, bedrooms and bathrooms equipped with approved gas appliances such as all-enamel cookers, thermal storage gas water heaters, refrigerators operated by gas, wash-coppers, washing machines, gas irons, clothes-drying and airing cabinets, gas fires, central heating apparatus, gas-lighting fittings of modern design with switch control and the like. Considerable space is set

apart for the display of the new thermal storage gas water heaters, which, on account of their high efficiency and remarkably low running costs, are now being installed in very large numbers in housing schemes, housing estates and private houses throughout the country. A new development in this direction is a small and very economical gas-fired water-heating unit, somewhat similar to that used in the thermal storage gas water heaters, for connecting up to the ordinary hot-water storage cylinder. It can be used advantageously for heating the water in the household circulating system during the summer months when the heat given out in the kitchen or scullery by a coke-fired boiler may be more than is desirable.

*



ALLEN LIVERSIDGE, LTD. (Row G, Stand 132), exhibit their oxy-acetylene and acetylene apparatus for welding and metal-cutting and lighting. The lighting equipment includes Alda lights (dissolved acetylene flarelights which are claimed to be storm-proof and can be turned on or off simply by giving the valve on the cylinder a twist and striking a match) and imperial light (low pressure acetylene flarelights employing a generator). The former light enjoys a very considerable popularity. Alda oxy-acetylene welding and metal-cutting equipment, employing oxygen and dissolved acetylene in cylinders, are portable and can be used in places relatively difficult of access. This is of particular importance where cutting operations are concerned. Of interest also are the Alda oxy-acetylene lead-burning outfits. With these small portable outfits a good stiff and hot flame enables the operator to carry out very intricate lead-burning work in all positions at great speed. This process is being used increasingly by architects for lead work on buildings.

*

REDALON, LTD., are exhibiting on Stand 105, Row F. The firm's Bull Dog floor clips are used for anchoring joist and wood floors to fireproof floors. By using them it is not necessary to use a "fill" or to plug the floors, and they are claimed to ensure solid wood floors which will not creak. Photographs are shown of Bull Dog floors, such as the Auction Rooms at Spitalfields Market; Film Studio for British Talking Films at Wembley; Berkeley Court at the corner of Marylebone Road and Baker Street, and the Shakespeare Memorial Theatre at Stratford-on-Avon. Sections of floors are on view, demonstrating the Bull Dog method of construction for solid concrete floors, hollow tile floors, and continuous beam floors. Redalon liquid, another speciality of the firm, is made in two grades. Redalon grade A is used for removing the cement skin from the face of poured concrete buildings, thus exposing the aggregate beneath. Numerous panels are on view showing the effects which can be obtained with some of the aggregates which are more easily procurable. Redalon grade B is used for obtaining a key for bonding cement or plaster renderings to concrete, without the necessity of hacking or using other mechanical means. Examples of various renderings bonded to Redalon-treated concrete slabs are shown. A special

Concrete surface treated with Redalon grade A.

A Bull Dog floor clip.

slab is on view to demonstrate the Redalon method of bonding renderings to ceilings where heating panels are employed. Progress photographs of more recent contracts where Redalon has been used are on view. These include Thames House, Millbank; Middlesex County Council School at Hanwell; Daily Mirror Building, Back Hill, E.C.; Dominion Theatre, Tottenham Court Road; Queen Mary's Hospital at Carshalton, etc.

*

The Caxton hollow tile reinforced concrete floor, exhibited by CAXTON FLOORS, LTD. (Row N, Stand 239), has been used on many important buildings, erected in all parts of the country, from the designs of the most prominent architects. These buildings include every class of structure up to the heaviest types of warehouses and factories. The special hollow tiles employed in the floors are made from dense quarried clay and form continuous parallel voids running the whole length of the floor. This, it is claimed, gives the most effective heat- and sound-insulating qualities. It is claimed that the floors offer great resistance to fire, and that the speed of construction and the reduction of dead weight enable considerable savings to be made. Erected *in situ*, Caxton hollow tile, reinforced concrete floors, standard type, are laid on temporary timber centering and constructed *in situ* simultaneously with the haunching and fireproofing of the steel girders. The firm provide, erect and strike the centering, together with the formwork necessary for haunching and fireproofing the girders. The methods employed by the firm enable the whole of the centering to be struck in four to five days after the placing of the concrete. The soffit of the floors and roofs is left in good condition to receive ceiling plaster, the underside of the hollow tiles being roughened. Concrete is placed between and over the hollow tiles and the surfaces of the floors are finished with a spade face or rough screed, sufficient concrete being laid over the hollow tiles to comply with the district fireproofing regulations. Where practicable, the firm design their floors with reinforcement, continuous from bay to bay, thereby making possible the thinnest and lightest construction and knitting together the entire building. When required, the firm also design and construct reinforced concrete staircases ready to receive tread and riser finishings. The firm carry out all work with their own materials and hoisting tackle, only requiring to be accommodated with a convenient supply of water.

*

The stand of MASONITE, LTD. (Row J, Stand 168), is constructed entirely of Masonite products, *i.e.* Presdwood insulation board and quartrboard. The interior is arranged to exhibit all the varied uses of these materials in the field of building and architectural design. There are three ceiling sections—1: To exhibit the application of plaster on Masonite insulation lath in lieu of wood lath; 2: to exhibit the natural use of Masonite insulation board for a decorative ceiling; 3: to exhibit the use of quartrboard distempered for ordinary ceilings. The wall sections show various decorative treatments of Masonite products, with paints, varnishes, distempers, etc., also various methods of jointing the boards when used for panelling. There is an exhibit of Masonite insulation boards used as a base for wallpaper or plaster. The principal exhibits, however, illustrate the uses of Masonite insulation boards for insulation and the prevention of condensation on brick walls, concrete, etc. The uses of Presdwood is also shown for floor coverings and furniture construction; in addition to ordinary building work. Another exhibit illustrates the use of Presdwood as a facing for shuttering in concrete wall construction. There are also doors of Presdwood and insulation boards.

*

VULCANITE LIMITED (Row E, Stand 102) show specimens of their patent vulcanite roofing for waterproofing flat roofs, finished with mastic to receive gravel, shingle covering, or tar-macadam finish, and also with grit embedded. Rexilite is self-faced bitumen roofing felt for covering sloping or Belfast-shaped roofs. It is made in three substances and supplied in rolls containing 24 square yards, with cement and nails ready to fix. Leatherite, Apex, Parex and Pyramid, other brands of roofing felts shown, are suitable for the same purpose. For underslating there are Tilex, a tough and durable bitumen felt, S. and V. qualities bitumen sheetings; and for dampcourses are exhibited Reliance lead and bitumen, Bituna, a pure bitumen on a hessian base, Fibakore, a bitumen on a felt base, P.V. asphaltic sheet dampcourse,

and many other brands. Among other waterproofing specialities on view are standard rock asphalt for cavity wall filling, Pelican bitumen compound, and Rexoid bitumen paint. Grip flash wedges, a metal compound wedge for fixing metal flashings into brickwork or stone, is also exhibited.

*

Seldom have such a variety of textures in faience, and such a galaxy of colours, been collected and built as those used to construct the office of the LEEDS FIRECLAY CO., LTD., on Stand 101, Row E. It is very unlikely that there will be one architect who will not find, somewhere in this miniature building, a texture or some permanent colour that does not meet with his approval. Leeds fireclay sanitary ware is so well known that only new fitments are exhibited : the bed pan washer, for instance, meeting a definite need for private nursing homes; and the sink with a metal basket automatically to collect meal refuse. Fireplaces of new design are to be seen for the first time.

*

Pavement lights take a leading place on Stand 259, Row O, of HAYWARDS, LTD. Special attention is drawn to the lenses of Haywards W glass, which is guaranteed to resist "fledding" for long periods. Haywards international fire-resisting stairs is another speciality that will attract attention. This is intended for stores, offices, theatres, public buildings, etc. The design of the stairs is adaptable to meet varying conditions. It permits the use of different surface finishes to the treads and risers, and provides for exceedingly quick and economical erection. Among the metal windows is Haywards hospital-type window, which is divided into two opening portions, pivoted, balanced and interlocked. This has important advantages for institutional work. Collapsible gates show a fresh development in Haywards mid-bar gate. A vertical bar is fitted between each pair of pickets, halving the space between them and increasing the safety of the gate, especially when used for lift work. Examples of other Haywards products include architectural metalwork, Reform glazing and lanterns, lead lights, copperlite, fire-resisting and ornamental glazing, and sheet metalwork.

*

Lap, exhibited by LAP (C.I. PROCESS), LTD. (Row G, Stand 133), is a permanent material for external and internal architectural or decorative use, which is new to this country. It is shown in various forms, such as decorative panels, table-tops and coloured slabs. Lap is a pre-cast substance possessing a slightly translucent glazed surface. It can be obtained in almost any colour, or combination of colours, and in many textures, embodying metals in powder or leaf form, thus enabling an architect, artist or sculptor to have his own designs or models faithfully reproduced to his own ideas, instead of being entirely dependent on the natural materials which are available. The material may be used for the construction of fireplace surrounds and mantelpieces, and lends itself to table-tops and other accessories to modern decoration. It can be cast in slabs of varying thickness, from $\frac{5}{8}$ inch upwards, according to the nature of the work, and of any size up to 10 feet by 5 feet. It is claimed that there is no limit to size in slabs, other than cost of production and practicability of fixing; and that designers, who have been compelled to subordinate their conceptions of proportion to the limited and uncertain sizes of natural material, will find a long-denied freedom in designing shop fronts or interiors in Lap where such demand or invite bold proportion. In the form of tiles Lap is available in patterns, colours, and textures that offer new possibilities in decorative work. Lap is manufactured in England under process covered by letters patent at Willowbank Wharf, Putney Bridge, Fulham, London, S.W.6.

*

WALTER CARSON AND SONS (Row K, Stand 197) exhibit all their standard lines and introduce a new product in Carson's lacquer paint. This is a quick-drying glossy paint for all kinds of interior and exterior decoration and can be applied over previously painted surfaces. It dries with a hard, smooth finish and leaves no unpleasant odour. It is supplied in sixteen standard colours, all of which can be mixed to produce intermediate shades. It is claimed that owing to the exceptionally pure quality of the medium used, the colours are much cleaner than it is possible to obtain with ordinary paints.

*

Details of the important works which have been carried out with Ciment Fondu during the past seven years are obtainable on the Stand No. 238, Row N, of the LAFARGE ALUMINOUS CEMENT CO., LTD., where also many interesting photographs and records are exhibited. Concrete users are shown the many ways in which this cement can not only save them time, but, it is claimed, enable them to produce concrete of remarkable strength and quality in twenty-four hours. Independent tests by engineers and Government authorities throughout the world are available to those interested. Ciment Fondu is claimed to be the aluminous cement which ensures that all concrete made with it is rock-hard twenty-four hours after placing, with a continuous increase of strength with age. The cement is British made at the company's works at West Thurrock, Essex.

*

A fish pond in brickwork, lined throughout with Callendrite sheeting, will be under a practical water test on the stand of GEORGE M. CALLENDER & CO., LTD. (Row D, Stand 62), for the duration of the exhibition. In the centre of the pond is a column of loose, porous bricks dampcoursed with Callendrite. Visitors should note the dry bricks above the dampcourse. Another dampcourse exhibited is named Ledkore. This is composed of a core of sheet lead with a special bitumen covering both sides. It contains no coal tar or pitch. Special attention is directed to the complete unification of the lead core with the bitumen covering. A wall shows the application of Protex. One portion is treated with Protex applied directly on to the brick and afterwards rendered with plaster; another portion shows the Protex applied to plaster and papered over. The wall is standing in water with which the brickwork is saturated, and practically demonstrates the effectiveness of Protex as a damp-resister. The iron railing surrounding the fish pond is treated with Callendure coloured bitumen paint, a preventive of rust. Examples of roof construction are exhibited to demonstrate the application of Veribest roofing on sloping surfaces and Veribest multiple roofing on flat surfaces.

The stand of G. M. Callender and Company, Ltd.

There is also a model showing the application of Bitubond to cavity walls. It is claimed that when poured hot into cavities formed by two brick or stone walls, Bitubond searches and fills every interstice in the inner wall faces, rendering the wall impervious, non-conducting, sound and temperature proof. It is also claimed to have enormous tensile and crushing strength, and to add considerably to the strength of walls to which it is applied.

*

On Stand 214, Row L, G. A. HARVEY & CO. (LONDON), LTD., show ventilators, ventilating piping, zinc roofing, and a selection of steel equipment, suitable for the office, the works or the home. There are also steel cupboards, steel tables, shelving, adjustable and fixed storage bins, steel works offices, filing cabinets, steel clothes lockers for works and staff, and steel lavatory partitions. They can be dismantled and re-erected when and where desired without the slightest depreciation whatever. Perforated metals, another speciality of the firm, are represented by screens and screen plates suitable for gravel, sand and ballast, and by cement machinery plates. Wire window guards are produced by this firm, and representative designs are exhibited on model factory and church windows. Mild steel tanks, cisterns and cylinders are also shown, also gutters from 18-gauge material to ⅜-in. plate. Corrugated bends of all sizes and dustbins of the standard Harco quality are also exhibited.

*

Following is a list of the exhibits of the RUBEROID CO., LTD. (Row H, Stand 146): Ruberoid bitumen roofing, for use on large commercial and industrial buildings. It is claimed to be efficient on flat, pitched or curved roofs of wood or concrete, and to be unaffected by fumes of acids or alkalis, or by sea air. Starex roofing, suitable for use on garages, large sheds, farm buildings and workshops. Pluvex roof felt, for all small buildings about the farm, factory or home. It is also claimed to make an excellent lining under lino on concrete, preventing rot, and when used under slates or tiles to make an efficient underslating, giving sound protection to the roof. Ruberoid strip slates, a form of Ruberoid roofing having a slate surface and cut in the shape of tiles. It is manufactured particularly for sports and pleasure buildings, and is supplied in two colours—sage green and venetian red. Ruberoid dampcourse, for foundation, is claimed to fill all the requirements of a permanent dampcourse, to be purely bituminous, yet unaffected by pressure or temperature. Pluvex bitumen dampcourse. This is made in four qualities: No. 1 quality on woven base, No. 2 quality on fibre base, No. 3 quality lead-lined, woven base, and No. 4 quality lead-lined, fibre base.

*

CRAFTEX, LTD. (Row O, Stand 265), exhibit Craftex plastic paint for interior wall decoration. By means of this paint it is claimed the finest results can be readily obtained and any desired texture can be carried out. It is sold in powder form, and is mixed with warm water to the desired thickness. By using different brushes a huge variety of textures can be obtained, and colour schemes are unlimited. The material is marketed as a medium for the decoration of cinemas, theatres, public buildings, offices and private houses.

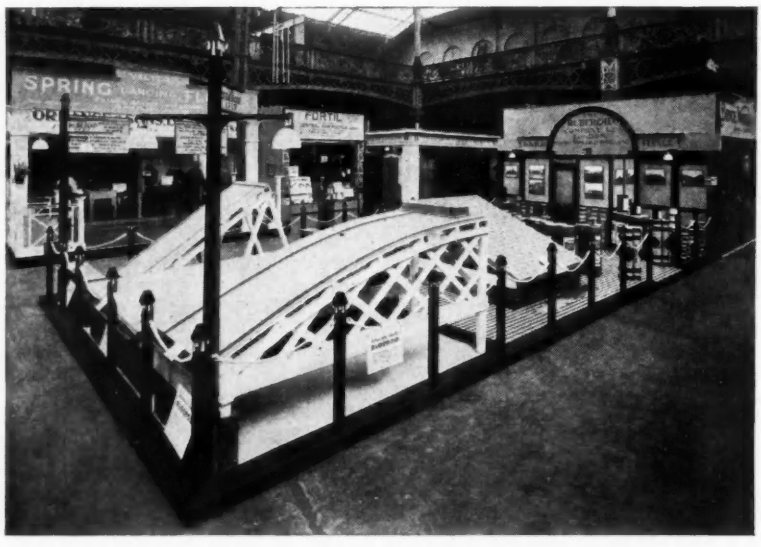
*

The stand (156, Row H) of HOLLIS BROS. & CO., LTD., comprises a display of wood-block parquet and hardwood floors. A special feature is made of Empire timbers for flooring. The firm also show several woods of Empire origin which have been extensively employed by prominent architects. By a patented system of interlocking the firm are able to introduce a greater variety of patterns in wood-block flooring, which have hitherto been confined to parquet. A small layout of a roller skating rink is exhibited in narrow width maple flooring. This is laid to the correct "follow the grain" pattern. The firm have been responsible for laying some twenty roller rinks in all parts of the country during the last twelve months or so. A miniature house is shown to illustrate the effect secured by using hardwood floors for domestic work.

*

As before, JAMES ADAMS AND SON, LTD., exhibit (Row D, Stand 73) their Slave door springs. The springs are shown in both double- and single-action types. In addition to the pneumatic check floor springs, the firm also exhibit samples of their patent Slave oil check floor springs, in which the checking fluid is totally enclosed and cannot escape into the spring casing or stain the floor. The firm now use a stainless, non-freezing checking fluid, so that floor stains are doubly safeguarded against.

*



On Stand 284, Row P, the HOLLOW STEEL FLOOR CO. are exhibiting their hollow steel beam fireproof floor. The hollow steel beams are designed to carry dead and live loads with safety factor of four, whilst the reinforced concrete casing, which is virtually a reinforced concrete floor, is given the same moment of resistance as the steel beam which it encases. The combined result is claimed to be a floor which carries ten times the designed load without collapse in an official test, although 50 per cent. lighter than a solid floor. The floor is said to have emerged successfully from all tests, and has been installed in public and private buildings, cinemas, theatres, factories and offices in various parts of the country. The installation of the floor is simple, and as no specialist knowledge is required the work can be carried out by the general contractor. The company supply complete designs and estimates, and take full responsibility for completed floors.

*

A variety of attractive designs for marble paving form the base of the stand (Row F, 106) of ANSELM ODLING AND SONS, LTD. The back wall is in the form of a marble shopfront of the modern style. The filling contains suggestions for marble linings to walls opened out to obtain the most decorative effect. On the stand are numerous varieties of marbles, onyx and alabaster, including turned pedestals, pedestal lamps, and richly-carved figures. Specimens of the rarer and more valuable marbles, such as Lapis Lazuli, Malachite, and Blue John, are also shown.

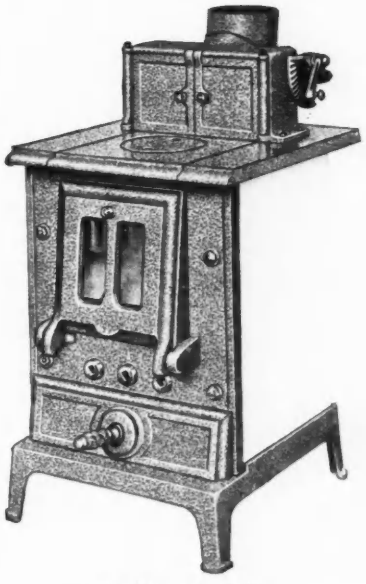
*

HEAT AND SOUND INSULATION, LTD. (Row N, Stand 248), have erected an office room of Thatchboard (compressed reed panels). This room contains a sound-proof wall and a sound-proof door. There are also sound-absorbent ceilings and wall panels of a composite device, shortly to be manufactured under the name of Silenite, which consists of eel-grass, enclosed in perforated metal. A "noise-trap" for open windows, with Silenite as the medium, is also shown. Practical demonstrations of the insulating properties of Thatchboard against heat, cold and noise are provided by means of two separate apartments—one formed of breeze and the other of Thatchboard. Bells, horns and other instruments of piercing noise are freely employed in both chambers to prove the sound-resistance of

The stand of the Ruberoid Company, Ltd.

reeds in the scientific form of Thatchboard. Electric heaters, thermostatically controlled, are installed to show the insulating properties, and the consequent heating economy of the same reed material. An exhibit is made of the official report of the Government Department of Scientific and Industrial Research, which in May last testified that a Thatchboard house, in comparison with a standard brick house required only 62 per cent. of produced heat to maintain a corresponding temperature. Similarly, the report of the National Physical Laboratory, showing equally favourable results in the use of Thatchboard and Temperac Quilt respectively for sound absorption, is displayed. Loaded panels of both straw and reed Thatchboard demonstrate their resistance to transverse bending loads, as when used in shuttering instead of timber or to withstand the pressure or shock normal to its surface.

*



The interior walls and ceiling of the stand of the SILICATE PAINT CO. (Row E, 100) are decorated with Duresco. The ceiling is treated with No. 421 ivory white. The walls are in modern style, the colours used being No. 415 gold, No. 86 cream, No. 408 sea green, No. 409 reseda, and No. 511 violet. The metallic effects are obtained by using almium, the special aluminium paint manufactured by the company. The woodwork is stained with No. V. 266 dark oak oil stain and varnished with No. V. 224, fine copal varnish of the company's Silkas brand. The ceiling of the small room is in No. 46 white Duresco, and the walls are in No. 47 light stone, E suede grey and No. 81 slate. The woodwork is painted with two coats of white Silpaco flat oil paint. The exterior of the stand is painted with two coats of No. 1055 pale grey Silpaco. The decorated panels shown on the sides of the stand are the prize-winning panels of the 1929 Duresco Competition, held at the National Federation Exhibition at Leeds. Inside the stand is a slab of Duresco of 1,500 coats all carried out by brushwork, showing that Duresco does not flake when applied on a clean ground. There are also a few small samples of work done in almium.

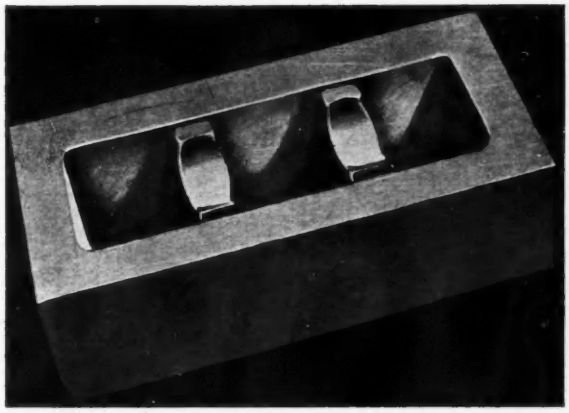
*

The BRITISH MAGNESITE FLOORING CO., LTD., have covered the whole of the floor to their stand (Row C, 34) with their Magnestic jointless flooring, laid $\frac{3}{4}$ in. thick in two layers, each $\frac{3}{8}$ in. thick and reinforced with wire mesh in between the two layers, in order to eliminate cracking. At the back of the stand, fixed as a dado, are samples of imitation marble and terrazzo floors. The former is a new departure in floors and is intended for corridors, bathrooms, etc.

*

The new No. 0 size Nautilus coke-heated domestic boiler is exhibited by the NAUTILUS FIRE CO., LTD. (Row O Stand 268), for the first time. Like the other sizes of the Nautilus boiler, it is made of welded mild steel and has the rotating fire bottom bars, which enable the fire to be cleaned and clinkered with the fire door shut. It has an additional advantage, in that by opening the doors of the smoke hood and placing the centre portion of the hot-plate upon them and lowering the top portion of the front fire bars, an open fire may be obtained. The boiler will then warm the kitchen as well as provide supplies of hot water. It has a damper control with a minimum adjustment for night running. It is claimed that once

Nautilus coke boiler.



this is set, the damper may be closed each night without fear of the fire going out through lack of draught or burning out through excess of it. The sides of the boiler are fitted with white enamelled steel plates; all other parts are finished in grey mottled porcelain enamel, flint hard and with a high gloss.
